DISTRICT CENSUS HANDBOOK
1951

JHANSI DISTRICT

FOREWORD

Several States, including Uttar Pradesh, have been publishing village statistics by districts at each census. In 1941 they were published in U. P. under the title "District Census Statistics" with a separate volume for each district. In the 1951 census, when the tabulation has been more elaborate than ever in view of the requirements of the country, the district-wise volume has been expanded into a "District Census Handbook", which now contains the District Census Tables (furnishing data with break-up for census tracts within the district), the District Index of Non-agricultural Occupations, agricultural statistics from 1901-02 to 1950-51 and other miscellaneous statistics in addition to the usual village population statistics. The village population statistics also are given in an elaborate form giving the division of the population among eight livelihood classes and other details.

2. It may be added here that a separate set of district-wise volumes giving only population figures of rural areas by villages and of urban areas by wards and mohallas and entitled "District Population Statistics" has already been published. This separate series was necessitated by the urgent requirements of the U. P. Government for elections to local bodies.

3. The number of District Census Handbooks printed so far is fourteen. Special arrangements for speeding up the printing have now been made and it is hoped that the remaining Handbooks will be printed before the end of 1955.

RAJESHWARI PRASAD, I.A.S.,
Superintendent, Census Operations,
Uttar Pradesh.

RAMPUR:
February 28, 1955.

INTRODUCTION

A—The District

1. The district of Jhansi lies in the extreme south-west corner of Uttar Pradesh. The Lalitpur Sub-division (Tehsils Lalitpur and Mahroni), which is connected by a narrow neck with the south-west of tehsil Jhansi and was formerly a district, forms a top-shaped appendage. The district is bounded on the east by Dhasan river which separates it from the Hamirpur District; and on the south-east lies the State of Vindhya Pradesh. To the north its boundaries march with those of the Jalaun District; and to the west with that of Madhya Bharat and for some distance with that of Vindhya Pradesh. On the southern side lies the Saugor District of Madhya Pradesh. For revenue purposes the district is divided into six tehsils—Garautha, Jhansi, Lalitpur, Mahroni, Mau Ranipur and Moth. The total area of the district in 1951 was 3,905 square miles and the total population 8·78 lakhs. There are in all 12 parganas and 27 thanas.

Topography

2. The general landscape is that of bare, undulating plains, relieved by confused rocky hills or ravine-edged river beds and succeeded by an unattractive level expanse of black cotton soil which reaches northward to the Yamuna through Jalaun. Throughout the district the slope of the land is roughly from south to north. On the extreme south in Lalitpur Sub-division lies the Vindhyan Plateau which has peaks of which the highest Lakhanjhir is 2,064 feet above sea leavel. Just north of the plateau on the black soil plain the level is 1,400 feet. Except for a fringe of red soil and jungle in the south-east this black soil plain, cut up and intersected by many rivers and streams stretches north beyond Lalitpur where a rocky red soil tract begins and continues still sloping northwards, to the Betwa which separates Lalitpur Sub-division from Jhansi proper. North of the Betwa, the same rocky, uneven red soil tract dotted with numerous bare or scrub clad hills continues except for the broad boulder strewn channel of Betwa, to the north of Jhansi town embracing also the south-western part of Mau tehsil. Further north this gives place to a fairly level belt of light soil and beyond it to a black soil plain still heavily interesected by *nalas* and fringed by barren ravines along the Betwa and Dhasan rivers. The black soil itself is traversed by two main lines of hills—one of them runs north-eastwards through Jhansi and Moth tehsils and the other follows a parallel course to the east through Mau Ranipur and Garautha tehsils.

From the above description it will be evident that the different tracts in the district are not homogeneous. Jhansi tehsil has two distinct tracts. To the north is a level expanse of good soil. This is the best tract in the northern portion of the district. With the exception of some inferior villages along the Betwa, homesteads are plentiful, population close, embankments numerous and cultivation intense. To the south great stretches of rocky and broken ground offer a marked contrast. The villages generally resemble these in the north of Lalitpur Sub-division. The Garautha tehsil interesected by a net work of *nalas* is a poor and broken tract. To the north-east of Jhansi tehsil and west and north-west of Garautha tehsil lies the Moth tehsil. The tract between Betwa and Pahuj approximates to that of northern Jhansi and is diversified here and there by steep red hills. The eastern portion of the tehsil has much in common with Garautha. The Mau Ranipur tehsil adjoins Garautha and the Dhasan forms the eastern boundary separating it from Hamirpur. The southern portion is generally wild and hilly dotted with artificial lakes and fertile irrigated valleys but displaying also great tracts of barren waste. The northern portion of the tehsil though crossed by hills is more open and level and fairly well wooded. The appendage to the south of the district comprising of Lalitpur and Mahroni tehsils have already been described. The latter is very largely composed of jungle and rock with very poor soils.

Drainage

3. With its rivers the Betwa, Dhasan, Jamni and Pahuj and their tributaries and with the comparatively steep gradient the district is everywhere excessively drained. No part of the district suffers from over saturation and the problem has always been to arrest erosion. These rivers with innumerable minor streams swell during the rains. In the upper portion of their courses their numerous tentacles extend well into the level plains of soil and collect the water during monsoon over a wide area. Swollen by the floods thus brought down they gather force and cut deep channels with abrupt sides well below the surface of the surrounding country which they sometimes flood. As the streams approach the main rivers their beds become broader, their banks more broken, and their streams more swollen by tributaries on the either side. Besides rendering a large area of land uncultivable by forming ravines, the streams by the scour they produce have been gradually thinning the upper stratum of good black soil and the deterioration still continues. In tehsils Moth and Garautha the damage caused by overdrainage is probaly more rampant than elsewhere.

Soils

4. Following the physical characteristics of the country, the district may be divided into five soil tracts—the Black soil tract, the Red soil tract, the Light soil tract, the Riverain tract and the Pathar tract. The black soil is highly argillaceous and somewhat calcareous

clay ; it is very adhesive when wetted, and, from its very absorbent nature, expands and contracts to a very great extent under the successive influence of moisture and dryness. It becomes fissured by huge cracks in the hot weather. *Mar* and *kabar* are its main varieties. In Lalitpur Sub-division it is known as *moti*. Wheat is grown in the best soil without irrigation (except in the small canal circles of the tract). Juar is also sown extensively. The soil is liable to water-logging during years of excessive rainfall. Erosion is a problem and so *bandhis* are common. The tract is also peculiarly liable to the ravages of the *kans* weed. The Black soil tracts comprise the largest total area and easily the largest cultivated area in the district. The Red soil tract is dotted all over with numerrous scrub-clad rocky hills and is traversed by long quartz reefs. The soil is mostly poor and reddish grit with oases of *taretas* of manured homelands, which are heavily worked and irrigated with wells. The *taretas* grow wheat, barley, etc., but the parts are precarious and *til, kodon* and millets are the main crops. The predominant soil in the light soil tract is yellowish-light loam locally known as *parua*. It responds easily to manure and irrigation and can grow wheat, but it can grow almost nothing without water. The riverain tract consists of a narrow strip of land along the Betwa and near the junction of the Betwa and the Dhasan. The soil is poor alluvium cut up by ravines and generaly grows inferior *kharif* crops. It is not a stable soil. *Rakar* is the name given to refuse soil found on the edges of ravines or the banks of *nalas* or any place where the soil is subjected to erosion. The *Pathar* tract consits of a small belt of villages in tehsil Lalitpur lying on the plateau in the extreme south which forms the northern edge of the Vindhya hills. The soil is mainly black soil, but this tract, like the Riverain tract, is very precarious.

Classification of area

5. The figures of classification of area for the last fifty years are given in Table 2 of Part III of this volume. The proportion of area under the various categories for 1950-51 works out as follows :

	Actual figures (in acres)	Percentage
Cultivated area	921,184	36·2
Culturable waste (excluding current fallow)	895,339	35·2
Current fallow	237,552	9·3
Forest	185,201	7·3
Area not available for cultivation of which—	305,375	12·0
(a) *Covered with water*	*75,744*	*3·0*
(b) *Under sites, roads and buildings*	*39,253*	*1·5*
(c) *Barren*	*190 378*	*7·5*

The figure in the above table regarding culturable waste taken from the Season and Crop Report, is, however, misleading. The State Agriculture Department conducted in 1949-50 a detailed enquiry through the District Officers regarding the nature of this area in each district. The following analysis of the area resulted from this enquiry :

Particulars	Area (in acres)	Percentage
**Total culturable waste (A + B + C) .. ..

From the above it will appear that of the total area recorded as cultivable waste, only 59·3 per cent. was really capable of being brought under immediate cultivation after some improvements.

Thus the land area cultivated and cultivable including current fallow *per capita* works out to 234·1 cents of which 132·0* cents have already been brought under cultivation and only about 53·2 cents can be further brought under the plough after some improvements.

Climate and rainfall

6. The climatological features are, high variability in rainfall from year to year and excessive heat during the summers. The barrenness of the soil and its rocky nature makes the summer very hot and dry. Over the whole district the hot wheather begins somewhat earlier and lingers somewhat longer than in the *doab*. The close of rains is accompanied by fairly general outbreak of fever.

The whole of the district is precarious and agriculture is not much stable. Vagaries of rainfall account for it to a great extent. Heavy rainfall makes the Black soil oversaturated and when it happens its miry nature renders tillage impossible. The lighter soils are intractable and ungracious needing an evenly distributed and consistent rainfall to render agricultural operations successful. The average rainfall for the last quinquennium (1946—51) was 36·26 inches. During the last fifty years the rainfall has been usually about 35 inches. The rainfall was heaviest in 1919-20 (51·25 inches) and lowest in 1913-14 (14·46 inches). It is generally heaviest in the south and decreases gradually as we proceed to north.

Irrigation

7. The irrigated area is very small and is only 13 per cent. of the cultivated area. However, it should be borne in mind that firstly irrigation is of importance only in the red soil or light tracts and is unnecessary in the black soil. Secondly there are no dependable canals and whatever there are, are fed from small rivers (the Betwa and Pahuj) or from reserviors or *sagars* which mainly depend for their supply on rainfall and may fail in dry year when canal irrigation is more needed. Thirdly, the number of wells which provide a stable source of irrigation is limited as they are difficult to dig owing to the substratum being rocky. The area returned as irrigated in 1950-51 by canals was 41·7 per cent. while that irrigated from wells was 53·7 per cent., from reserviors 4·2 per cent. and from other sources 0·4 per cent. of the total irrigated areas.

Crops

8. More acreage is shown under *kharif* crops than under *rabi* crops. The area under *kharif* in 1950-51 was 517,686 acres,that under *rabi* was 479,808 acres and that under *zaid* crops was 4,304 acres. In *kharif juar* is the main crop with 22·9 per cent. of the total cropped area under it. The principal *rabi* crop is gram (23·2 per cent. of cultivated area) followed by w. eat (18·8 per cent.). The area under sugar-cane was only 1,528 acres. The principal non-food crop is cotton. There are extnsive *pan* gardens in tehsil Lalitpur.

B—Analysis of the Statistics

Population-General distribution and density

1. The table below shows the two basic figures—land area and population—and the derived figures of land area *per capita.*

Tehsil	Population (in lakhs)	Density (number per square mile)	Land area (in lakhs of acres)	Land area *per capita*
Garautha	1·09	183	3·80	3·50
Jhansi	2·33	483	3·09	1·33
Lalitpur	1·87	177	6·78	3·62
Mahroni	1·27	144	5·68	4·46
Mau Ranipur	1·19	281	2·71	2·28
Moth	1·03	234	2·80	2·73
Jhansi district	*8·78*	*226*†	*24·86*	*2·82*

The district though fifth in area in the State occupies forty-first place in respect of population. Its density is much below the State average. It stands at 226 persons per square mile where as the State figure is 557 persons per square mile. The physical features of the district account for this difference. The rural density of the district is 172 persons per square mile, the density of the rural parts of tehsils being : Garautha 170, Jhansi 204, Lalitpur 153, Mahroni 140, Mau Ranipur 231, Moth 194. Mau Ranipur, Jhansi and Moth have comparatively larger level expenses of soil suitable for cultivation. It may also be noted that the land area *per capita* is relatively large but quite a large part of it is rocky and broken ground. (*Vide* Tables A-I and E)

*This figure also includes the area classed as current fallow.

†According to the area given by the Surveyor General, it is 225.

Growth of population

2. The growth of population in the district during the last fifty years has been considerable. The population of the district in 1951 was 32·6 per cent. higher than what it was fifty years ago. Compared to this the increase in the population of the State during the corresponding period has been only 30 per cent. The table below exhibits the variation in the total, rural and urban population for the last five decades.

Census year	Population			Variation		
	Total	Rural	Urban	Total	Rural	Urban
1901	**661,934**	546.051	115.883			
1911	**726,377**	585.298	141.079	+**64,443** (+**9·7**)	+39,247 (+7·2)	+25,196 (+21·7)
1921	**654,050**	518.312	135.738	−**72,327** (−**10·0**)	−66,986 (−11·4	−5,341 (−3·8)
1931 ..	**740,614**	588.133	152.481	+**86,564** (+**13·2**)	+69,821 (+13·5)	+16,743 (+12·3)
1941	**831,043**	659.041	172.002	+**90,429** (+**12·2**)	+70,908 (+12·1)	+19,521 (+12·8)
1951	**877,607**	664.355	213.252	+**46,564** (+**5·6**)	+5,314 (+0·8)	+41,250 (+24·0)

During the period 1901—21, the population of the district declined slightly by 1·2 per cent. when that of the State decreased by 4 per cent. It appears that there was heavy mortality from the influenza epidemic of 1918-19, especially in the rural areas. Since 1921 the population of the district increased by 34·2 per cent. as against an increase of 35·5 per cent. in the population of the State during the same period. During the last decade the population of the district increased only by 5·6 per cent. as compared to the increase of 11·8 per cent. in the population of the State. It will be seen that during this period the rural population has recorded only a small increase of 0·8 per cent. It appears that while the birth-rate declined the decline in the death-rate lagged behind. Besides, at the time of the census migration of labour for harvesting of crops in the neighbouring States was in full swing.

The variation in the population of the tehsils during 1941—51 is shown in the marginal table. Jhansi and Mau Ranipur show large increases. The larger increase in Jhansi tehsil is chiefly due to the growth of Jhansi city. It may, be noted, on the other hand, that tehsils Garautha and Mahroni have shown a decline in their population of—5·8 per cent. and—1·2 per cent. respectively.

Tahsil	Percentage variation 1941—51
Jhansi district	+5·6
Garautha	−5·8
Jhansi	+16·9
Lalitpur	+4·7
Mahroni	−1·2
Mau Ranipur	+9·0
Moth	+2·9

Vital Statistics

3. Births and deaths mianly account for the trends in population growth. Migration also is a factor of lesser importance. The following table gives the mean decennial registered birth and death rates and the calculated natural increase rates and population growth rates of the last three decades for the district as a whole and for its rural and urban areas.

	Total	Rural	Urban
Mean decennial birth-rate—			
1941—50	**33·5**	31·7	39·7
1931—40	**44·4**	44·0	45·5
1921—30	**41·7**	44·8	30·3
Mean decennial death-rate—			
1941—50	**24·4**	23·2	28·3
1931—40	**30·3**	29·8	32·4
1921—30	**31·9**	34·0	23·8
Mean decennial rate of natural increase—			
1941—50	**9·1**	8·5	11·4
1931—40	**14·1**	14·2	13·1
1921—30	**9·8**	10·8	6·5
Mean decennial growth-rate			
1941—50	**5·5**	0·8	21·4
1931—40	**11·3**	11·1	11·9
1921—30	**12·9**	13·1	**12·2**

There are large omissions in the registration of births as well as deaths and so the above rates do not represent the true picture at all. They may, however, be taken to be roughly indicative of trends. Both birth and death rates have fallen during the last decade but the fall in the birth-rate is relatively more steep.

The figures of natural increase and growth rate suggest some gain during 1921-30 and a loss of population by migration during 1931—40 and 1941—50.

The average yearly mortality from various causes in the district during 1941—50 was as follows :

Causes	Number of deahs	Percentage of total deaths
Fever	15,474	75·4
Dysentery and diarrhoea	218	1·1
Respiratory diseases	594	2·9
Plague, cholera and small-pox	1,111	5·4
Others	3,120	15·2

As in the rest of the State fever is responsible for a majority of deaths. But ' fever ' covers a number of ailments wich the reporters are unable to identify. Plague, small-pox and cholera seem to have lost their importance in the district as epidemics. (*Vide* Table I, Part III of this Volume)

Migration

4. In this district, about 87·3 per cent. of the people enumerated in the district at the census of 1951 were born there, 3·3 per cent. were born in the other districts of the State, 8·2 per cent. were born in other parts of India and only 1·2 per cent. were born in other countries outside India. Of the immigrants from the districts of the State as many as 15,897 (males 4,421, females 11,476) are from the other districts of the same natural division and 13,131 (males 7,784 and females 5,347) are from other parts of the State. Most of the migration from neighbouring districts is marriage migration. Of 68,167 immigrants from the adjacent States 36,904 (males 8,253, females 28,651) are from Vindhya Pradesh, 17,854 (males 5,086, females 12,768) are from Madhya Bharat and 7,260 (males 2,513, females 4,747) are from Madhya Pradesh. The movement to the city of Jhansi from these adjacent States appears to be mostly semi permanent labour migration as the sex proportion of the migrants to the city tends to equality. Most of the migration from Vindhya Pradesh to this district appears to be marriage migration.

Of the immigrants who have come from territories beyond India 8,510 (males 4,739, females 3,771) were born in Pakistan. The displaced persons who numbered 8,339 have inflated this number. Of the remaining 1,953 (males 1,332, females 621) immigrants from other countries, a large number is Nepal-born who are semi-permanent labourers.

Of the 2,019 non-Indian nationals, 1,906 belong to Nepal and 76 are British.

It appears that during the last two decades emigration from Jhansi has exceeded immigration to it. Unfortunatly the correct figures of emigration are not available. However, it is an established fact that people from this district go to Madhya Pradesh and Bombay for earning their livelihood. Besides, a large labour contingent moves every year to the Malwa tract for harvesting of crops. According to the vital statistics the district gained about 20,000 persons on the balance of migration during 1921—30 but it lost on this account about 20,000 persons during 1931—40 and about 31,000 persons during 1941—50. At the time of the 1931 census the exodus to Malwa had not started, while it appears, that during the last two decades harvesting had commenced early and labour had moved out of the district. (*Vide* Tables D-IV and D-VI)

Decline of cultivation *per capita*

5. We may now analyse the growth of population in the district during the last thrity years in relation to the growth of cultivation during the same period. The figures are exhibited in the marginal table. (Figures of area shown under census years are quinquennial averages for the five years ending with the crop year immediately preceding the census year). It is obvious that cultivation has failed to keep pace with population. The cultivated area *per capita* has gone down to 92·5 cents in 1951 from 127·8 per cents. in 1921. The magnitude of this drop is more than one third of 1921 level. It means that (other things being equal) every man, woman and child must expect to get less food and other agricultural produce from the land in 1951 than in 1921.

Census years	Population*	Net area sown (in acres)	Area of cultivation *per capita* (in cents)
1921	606,499	775,410	127·8
1931	690,413	713,494	103·4
1941	773,002	785,715	101·6
1951	877,607	811,128	92·5

*The figures of population of the various censuses relate to the then lay-out of the district.

Double cropped area *per capita*

6. It may be examined whether this shortage has been compensated by an increase in the yield per acre. Increase in yield can be brought about by more double cropping, more irrigation, better fertilization and better culture. The average (quinquennial) area sown more than once was 99,371 acres in 1921. It slightly increased to 102,679 acres in 1931. There was a fall to 90,695 acres in 1941 and in 1951 it again rose to 104,534 acres. The figures of double crop cultivation *per capita* in cents are given below :

Particulars	Quinquennial averages for the year preceding			
	1951	1941	1931	1921
Double crop cultivation *per capita* in cents	12·0	11·7	14·9	16·4
Unirrigated double crop cultivation *per capita* in cents	11·5	11·3	14·1	16·0
Irrigated double crop cultivation *per capita* in cents	0·5	0·4	0·8	0·4

It is evident that the double cropped area has not kept pace with the rate of growth of population.

Irrigated area *per capita*

7. The average area irrigated in the district was 73,002 acres in 1921. The figures were 77,695 acres for 1931, 88,242 acres for 1941 and 88,213 for 1951. The average area irrigated more than once was 2,531 acres for 1921, 5,345 acres for 1931, 3,366 acres for 1941 and 4,032 acres for 1951.

The figures of irrigation *per capita* are shown in the table below :

Particulars	Years			
	1951	1941	1931	1921
Irrigated single crop cultivation *per capita* in cents	9·6	11·0	10·5	11·6
Irrigated double crop cultivation *per capita* in cents	0·5	0·4	0·8	0·4

The trend is distinctly towards a decline.

Cropped area

8. It is also significant that in spite of the rapid population growth, there has been almost no change in the cropping pattern of the district. During the quinquennium 1916—21, 87·1 per cent. of the cropped area was under food crops and only 12·9 per cent. of it was under non-food crops. Thirty years after during 1946—51 the cropped area under food crops was 90·7 per cent. and that under non-food crops was 9·3 per cent.

The proportionate area under different crops in the district between 1911 and 1951 was as below :

Quinquennial average of	Total cropped area	Percentage of cropped area under							
		Rice	Wheat	Barley	Juar	Bajra	Maize	Gram	Others
1911—16 ..	**818,170**	1·2	10·1	3·3	26·6	1·0	2·1	15·2	40·5
1916—21 ..	**846,580**	1·6	11·3	3·8	30·6	1·1	2·2	15·7	33·7
1921—26 ..	**839,181**	2·1	14·8	3·5	25·9	0·6	1·9	19·4	31·8
1926—31 ..	**832,288**	2·3	11·3	3·9	29·2	0·7	1·9	16·9	33·8
1931—36 ..	**868,933**	1·9	14·7	3·4	26·0	0·4	2·1	18·4	33·1
1936—41 ..	**876,259**	2·6	16·7	3·0	24·8	0·4	2·4	17·3	32·8
1941—46 ..	**904,123**	2·5	13·0	3·0	31·7	0·6	2·4	17·1	29·7
1946—51 ..	**938,125**	3·6	16·1	3·6	25·0	0·3	2·2	22·7	26·5

On the whole, since 1911—16 the area under rice, wheat, barley, maize and gram has increased while that under *juar* and *bajra* has declined. Of the non-food crops the area under cotton has greatly declined from 32,749 acres in 1901-02 to 522 acres in 1950-51. In 1901-02 91 acres were under Indigo but in 1950-51 it was not being cultivated at all. *Til* is one of the important crops of the district. 88,430 acres were under this crop in 1950-51 as against 87,032 acres in 1901-02.

Live-stock, ploughs and carts

9. Live-stock in this country live for a large part of the year on by-products of agriculture supplemented by green fodder crops. They have, therefore, to be correlated not only with the grazing available but also with the total area under cultivation which carries a major portion of the burden of supporting cattle population.

As will appear from Table 3 of Part III, the total number of cattle and buffaloes has been increasing since 1930 with the exception of 1944 when a decrease was recorded. During 1944—51 the number increased from about 8 lakhs to 9 lakhs.

The number of working cattle and buffaloes in the district has been increasing since 1935. It has increased to 2·4 lakhs from about 2·2 lakhs in 1944. The number of working cattle appears to be governed by the number of ploughs and carts. The number of ploughs has gone up from about 88 thousands in 1944 to over one lakh in 1951 due aparently to progressive fractionalization of holdings. The number of carts has been rising since 1920. The average net cultivated area per plough works out to 8·6 acres in 1951 as against 9·4 acres in 1920 and the average net cultivated area per pair of working cattle works out to 7·6 acres in 1951 as compared with 7·2 in 1935.

Breeding cows and she-buffaloes which fell from 2·78 lakhs during 1935—44 to 2·74 laksh have gone up to 3·30 lakhs in 1951. The cows and female buffaloes in milk per 1,000 of human population are 94 and 35 respectively. Owing to the poor milk yield the share of milk per head is only a few ounces per day.

The number of sheep which had been stationary at 99 thousand during 1935—44 has gone down suddenly to 84 thousand in 1951 due apperently to shortage of pastures. Goats have been going down in number since 1935 when their number was about 2·4 lakhs. Their number in 1951 was about 1·7 lakhs, the reduction during 1944—51 alone being 25·5 per cent.

Horses and ponies are also declining since 1935. There was a fall during 1944—51 from about 5,400 to about 4,600. Donkeys during the same period remained stationary.

Since 1944, poultry has almost doubled to 27,000 in 1951.

Distributed on 1,000 of human population the figures of the main categories of livestock in 1951 are as follows :

Cattle	Buffaloes	Sheep	Goats	Poultry	Others
833	180	96	198	31	17

10. To sum up, the population of the district is going up almost steadily since 1921. But on the other hand the land area *per capita*, the double crop area *per capita* and the irrigated area *per capita* are steadily declining. There is at the same time no evidence that crop yield per acre has increased nor has there been a great change in the cropping pattern. The cultivated area *per capita* in the district has been steadily declining. Furthermore, erosion of the top soil is a growing menace for the district. *Kans* is another danger. There has certainly been a marked advance in stability of cultivation during recent years, which is likely to increase under the new schemes of the Government for the reclamation of eroded land and eradication of *kans* in Bundelkhand. Nevertheless the district is one of the precarious tracts of the State and there is a long way to go before real stability of cultivation can be reached.

Villages and towns

11. The district has 1,472 villages and 15 towns. Out of about 8·8 lakhs of people who were counted at the census of 1951 about 6·7 lakhs were found in the villages and 2·1 lakhs in the towns, i.e., there are as many as 757 people per 1,000 of the population who live in the rural areas and only 243 of them live in the towns. The corresponding figures for the State as a whole are : rural 864, urban 136.

The rural population per inhabited village works out to 451. Some of the villages are not comprised of single compact agglomeration. There are 1,913 hamlets in the district. The population per hamlet is only 347. The medium-sized village—with inhabitants numbering between 500—2,000—is the dominant type in this deistrict. Of the rural population 56·4 per cent. live in such villages ; 34·5 per cent. live in small villages of population under 500 ; 8·3 per cent. live in large villages of population between 2,000—5,000 ; and only 0·8 per cent. of them in villages of population over 5,000.

Towns vary in number of inhabitants even more widely than villages. Jhansi city (including Jhansi cantonment and Railway Settlement which have been treated as separate towns) has a population of 127,365 i.e., 59·7 per cent. of the urban population of the district. Only 10·4 per cent. of urban population lives in towns of population under 5,000 (viz., Gur Sarai, Mahroni, Moth, Erich, Talbehat and Babina); 20·2 per cent. of the urban population lives in towns of population between 5,000 and 20,000 (viz., Mau Ranipur, Samthar, Barwasagar, Ranipur and Chirgaon) ; and 9·7 per cent. of the urban population lives in Lalitpur whose population was 20,792 in 1951. It is significant to note that Jhansi city has recorded 23·4 per cent. increase in population since 1941. The increase in its population since 1921 is 70·1 per cent. Lalitpur (23·2 per cent), Mau Ranipur (21·9 per cent.). Chirgaon (16·8 per cent.) and Gur Sarai (13·3 per cent.) have recorded an increase in their population since 1941. Samthar, Babina and Erich were declared towns only at the 1951 census. The other towns show small increases of below 10 per cent. (*Vide* Tables A-III and A-IV)

Occupations Livelihood pattern

12. Out of the total population of 877,607 (rural 664,355, urban 213,252) 559,516 (rural 534,473, urban 25,043) or 63·8 per cent. depend on agriculture for their means of livelihood and 318,091 (rural 129,882, urban 188,209) or 36·2 per cent. depend on non-agricultural sources. The following table gives the distribution of 100 persons of the total,

rural and urban population of the district and also of Jhansi city under the different livelihood classes :

Description	Total	Agricultural classes				Non-agricultural classes				
		I	II	III	IV	Total	V	VI	VII	VIII
1	2	3	4	5	6	7	8	9	10	11
Total	**63·8**	**53·9**	**4·2**	**4·3**	**1·4**	**36·2**	**12·1**	**6·3**	**2·9**	**14·9**
Rural	**80·5**	68·6	4·8	5·5	1·6	**19·5**	7·7	2·3	0·6	8·9
Urban	**11·7**	8·3	2·1	0·6	0·7	**88·3**	25·9	18·7	9·9	33·8
Jhansi city	**3·5**	2·4	0·5	0·3	0·3	**96·5**	28·1	18·3	14·2	35·9

In this district only 63·7 per cent. of the people depend on agriculture as against 74·2 per cent. in the State as a whole.

Of the total population of the district 439.310 persons (males 182,447, famles 256,863) or 50·1 per cent. have been classified as non-earning dependants. The percentage of non-earning dependants in the agricultural population works out to 45· 3 and that among the non-agricultural classes as 58·5. It will be observed that in the main they consist of women. The male non-earning dependants are mostly children. 173,228 persons (males 36,395, females 136,833) or 19·7 per cent. of the population are earning dependants. Among the agriculturists their proportion is 26·0 per cent. and among the non-agriculturists they form only 8·6 per cent. Agriculture is a family occupation and it provides work to the women and grown up children in the family. The remaining 265,069 persons (males 237,867, females 27,202) or 30·2 per cent. of the population consists of the self-supporting persons. Their proportion among agriculturists is 28·7 per cent. and among non-agriculturists 32·9 per cent. Of the self-supporting persons 160,382 (males 148,510, females 11,872) belong to agricultural classes and 104,687 (males 89,357, females 15,330) to the non-agricultural classes. On an average a self-supporting person maintains two non-earning dependants.

Of the 104,687 self-supporting persons belonging to the non-agricultural classes 2,831 persons (rural 1,137 urban 1,694) earn their livelihood from non-productive sources. Of the remaining 101,856 self-supporting persons (rural 43,008, urban 58,848) 1,100 (rural 120, urban 908) or 1·1 per cent. are employers, 31,209 (rural 7,908, urban 23,301) or 30· 6 per cent. are employees and 69,547 (rural 34,980, urban 34,567) or 68·3 per cent. are independent workers.

The distribution of 10,000 self-supporting persons of non-agricultural occupations, classified according to the Economic Divisions is as follows :

Name of division	Self-supporting persons by divisions
All Industries and Services	**10,000**
0—Primary industries not elsewhere specified	532
1—Mining and quarrying	152
2—Processing and manufacture—foodstuffs, textiles, leather and products thereof ..	1,322
3—Processing and manufacture—metals, chemicals and products thereof	456
4—Processing and manufacture not elsewhere specified	755
5—Construction and utilities	486
6—Commerce	1,556
7—Transport, storage and communications	718
8—Health, education and public administration	1,308
9—Services not elsewhere specified	2,715

The figures under Divisions 0, 1, 3, 7, and 8 are higher than the corresponding figures for the State as a whole. Jhansi is, an important railway centre and has got railway workshops. Stone-quarrying in the Pathar tract is a sizeable industry.

This district has no large scale industry worth the name. Industries are small and localised. Among them the principal are weaving and dyeing of cloth, blanket weaving, stone-quarrying, basket and *chik* making, *biris*, wood furniture, scissors and razors, leather working, boots, shoes, harness and saddlery and suit and attache cases. The *pan* industry in Lalitpur tehsil yields considerable profit locally.

Variation in the livelihood pattern

13. In this district the proportion of population depending on agriculture for their livelihood was 62·4* per cent. in 1951. The unfortunate fact is that the agricultural proportion has been increasing ever since 1901 when the figure stood at 56·2 per cent. It was 58·6 per cent. in 1911 and 63·1 per cent. in 1921. The actual number of persons who depend on agriculture has increased to 548,022 in 1951 from 382,523 in 1921 or by 43·3 per cent. when the cultivated area has increased only by 4·6 per cent. during the corresponding period. This has resulted in the progressive fragmentation and sub-division of holdings and increased pressure on the soil. There appears to have been a gradual decline in village arts and crafts. The cumulative result is a fall in the proportion of workers and a corresponding rise in the dependency. The proportion of workers in the total population in 1951 was only 49·9 per cent. (agricultural 33·5 per cent., non-agricultural 16·4 per cent.) against 58·0 per cent. (agricultural 38·5 per cent., non-agricultural 19·5 per cent.) in 1921. The proportion of non-earning dependants has consequently increased from 42·0 per cent. (agricultural 24·6 per cent., non-agricultural 17·4 per cent.) in 1921 to 50·1 per cent. (agricultural 28·9 per cent., non-agricultural 21·2 per cent.) in 1951. All this is an index of increasing unemployment and under-employment. It is only by the diversion of the population to cottage and other industries and by providing secondary occupations to the agricultural population that the present lot of the people can be improved. (*Vide* Tables B-I, B-II and B-III)

Houses and households

14. There were 153,032 occupied houses in the district, 117,815 in villages, 35,217 in towns. That gives an average of 5,639 persons per 1,000 houses or 5·6 persons per house in the rural areas and 6,055 persons per 1,000 houses or 6·1 persons per house in the urban areas.

There were 187,446 households in the district, 143,004 in villages and 44,442 in towns. That gives an average of 4,627 persons per 1,000 households or 4·6 persons per household in rural areas and 4,694 persons per 1,000 households or 4·7 persons per household in the urban areas. The marginal table shows the developments in the size of the household since 1921. The rural household has been increasing during 1921—41 in size but in 1951 shows a fall and is considerably lower than the average State rural household (5·07). The urban household has also registered a decrease since 1941.

Census year	Persons per 1,000 households of	
	Rural population	Urban population
1921 ..	4,372	4,044
1931 ..	4,573	4,370
1941 ..	4,681	4,711
1951 ..	4,627	4,694

Out of 4,627 persons in every 1,000 rural households 2,386 are males and 2,241 are females. There is a male excess numbering 145 in every 1,000 households. Out of 4,694 persons in every 1,000 urban households 2,482 are males and 2,212 are females. There is a male excess numbering 270 in every 1,000 households. The type of migration will will account for the difference.

Information regarding types of household and household relationship was also collected at this census with the help of a sample of about 4 per cent. According to this, in every 1,000 sample households there are 4,572 persons (males 2,382, females 2,190) in the district. The corresponding figure for the total count is 4,643.

The table below shows the distribution by size of 1,000 sample households:

Description	Small with 3 members or less	Medium with 4—6 members	Large with 7—9 members	Very large with 10 members or more
Total	**312**	**502**	**141**	**45**
Rural	305	518	136	41
Urban	332	453	158	57

*The figure includes earning dependants according to their secondary means of livelihood, while the figure 63·8 in paragraph 12 includes earning dependants according to their principal means of livelihood and hence the difference.

Medium households are the dominant type in the villages as well as in the towns. Family composition of 1,000 sample households is as follows :

			Number in 1,000 households
A	Heads of households	Males (married)	643
		Males (widowers)	277
		Females	80
	Wives of heads of households		643
			1,643
B	Sons of heads of households		972
	Daughters of heads of households		687
			1,659
C	Male relations of heads of households (other than sons)		447
	Female relations of heads of households (other than daughters)		703
			1,150
D	Persons unrelated to the head of the household	Males	43
		Females	77
			120
		Grand Total	*4,572*

Sons outnumber the daughters of the heads of the households. The latter leave the homes of their parents after marriage. Female relations (other than daughters) outnumber the male relations (other than sons). Such females are generally those who become members of these households by marriage. (*Vide* Tables A-I and C-I)

Sex-ratio

15. In the district as a whole, the sex-ratio was 922, i.e., there were 922 females to every 1,000 males. It varied among the tahsils. The lowest value was 873 in Jhansi tahsil due to Jhansi city which has quite a large migrant population and among the migrants the males predominate. The highest value was 962 in Garautha tehsil. The ratio was 929 in Lalitpur, 931 in Moth, 936 in Mahroni and 948 in Mau Ranipur.

The sex-ratio is smaller in towns than in villages. For the district as a whole the sex-ratio in villages is as high as 937 while that in towns is only 876. The sex-ratio for Jhansi city works out to 858.

The corresponding figure of sex-ratio for the district was 924 in 1921, 932 in 1931, 935 in 1941 against 922 in 1951. The sex-ratio has been slowly rising from 1921 to 1941 but shows a fall in 1951.

Age-structure

16. The number in each age-group in the district is shown below as a percentage of the total number of all ages in the total, rural and urban population separately.

Age-group	Total population			Rural population		Urban population	
	Persons	Males	Females	Males	Females	Males	Females
Infants and young children 0—4 ..	14·4	7·6	6·8	7·5	6·7	7·8	7·1
Boys and girls .. 5—14 ..	24·6	13·3	11·3	13·5	11·6	12·7	10·4
Young men and women .. 15—34 ..	34·2	18·1	16·1	17·7	16·0	19·4	16·3
Middle-aged men and women 35—54 ..	20·3	10·8	9·5	10·8	9·8	10·8	8·9
Elderly persons .. 55 and over	6·5	3·0	3·5	2·9	3·5	3·4	3·3

It will be seen that the population is progressive. As much as 39 per cent. of the population is of age under 15 and only 6·5 of it consists of elderly persons. Again it may be noted that proportionately larger numbers in the working ages (15—54) are found in the rural areas. This is the effect of migration of workers to towns from the villages. (*Vide* Table C-II)

Marital status

17. Out of every 10,000 persons in the district there are 5,276 males and 4,724 females*. Among them 2,463 males and 1,629 females are unmarried. If we reckon males and females together, the unmarried people are 40·9 per cent. of the population.

Of the males 46·7 per cent. were unmarried, 47·3 per cent. were married and 6·0 per cent. were widowed or divorced. Among the females 34·5 per cent. were unmarried, 50·5 per cent. were married and 1·5 per cent. were widowed or divorced.

Of the married males 3·6 per cent. were of ages below 15, 53·4 per cent. were of ages 15—34, 35·7 per cent. were of ages 35—54 and 7·3 per cent. were of ages 55 and over. Among the married females 9·6 per cent. were below 15, 62·0 per cent. were of ages 15—34, 25·9 per cent. were of ages 35—54 and 2·5 per cent. were elderly women.

*The corresponding figures for the total count are 5,204 and 4,796.

Marriage is universal. Among males and females aged 35 years and over only 4·0 per cent. of the males and 0·3 per cent. of the females were found unmarried. Most of the females are married before they attain the age of 25. Child marriage is still prevalent. 4·4 per cent. of the males of ages 0—14 and 12·7 per cent. of the females aged 0—14 were returned as married. (*Vide* Table C-III.)

Languages.

18. Over 98·0 per cent. of the people of district returned Hindi, Hindustani or Urdu as their mother-tongue. Among the other mother-tongues spoken the main are Punjabi (0·80 per cent.), Bengali (0·07 per cent.), Sindhi (0·29 per cent.) and Gujarati (0·04 per cent.). Of about 8·8 lakhs of the people in the district only 10,414 or 1·1 per cent. were bilingual (in an Indian language). Those whose mother-tongue is other than Hindi, Hindustani or Urdu are generally the migrants who are able to speak any of these as subsidiary language. Persons returning Hindi, Hindustani or Urdu as secondary language were 9,291 or 89·2 per cent. of those who were bilingual in some Indian language. (*Vide* Table D-I).

Religion and special groups

19. Out of 10,000 population of the district the number of people belonging to different religions is : Hindus 9,331, Muslims 448, Sikh 51, Christians 41 and others 129 ; of 10,000 population in villages the numbers are : Hindus 9,709, Muslims 181, Sikh 1, Christians 4 and others 105; and of 10,000 population in towns the numbers are : Hindus 8,154, Muslims 1,278, Sikhs 208, Christians 157 and others 203. Proportionately the Muslims, Sikhs and Christians are concentrated in the urban areas of the district as is the case in the other units of the State.

There are 178 thousand persons belonging to the Scheduled Castes in the district. Their number per 10,000 of population works out to 2,024. In the villages they are 2,418 for every 10,000 and in the towns their number per 10,000 is only 796. In the district there are 575 Anglo-Indians a large majority of whom belong to urban areas. (*Vide* Table, D-II and D-III).

Displaced persons.

20. The number of displaced persons in the district at the census of 1951 was 8,339 (males 4,616, females 3,723). As many as 8,056 or 9·66 per cent. live in the urban areas of the district most of whom are concentrated in Jhansi city alone. Of them 83·7 per cent. have come from West Pakistan, 1·3 per cent. from East Pakistan and 15 per cent. from the districts which could not be traced. (*Vide* Table D-V).

Literacy.

21. In 1951 the percentage of male literacy was 22·1 while that of female literacy was 4·3. As against this in 1931, the percentage of male literacy was 11·8 and female literacy was 1·3.* On January 1, 1951 there were 246 primary schools in the district with enrolment of 20,669. (*Vide* Table D-VII).

C—Explanatory Note on the Statistics

1. The statistics in this volume have been presented in three parts :

I—District Census Tables.

II—Village, Town, Pargana and Thana Statistics.

III—Miscellaneous Statistics.

Parts I and II contain census data. A brief account of the system of sorting of census slips and preparation of tables and abstract therefrom is given below.

Part III contains statistics throwing light on special aspects of population and its growth. These have been derived from miscellaneous soures. Table 1, "Vital Statistics" has been prepared from the published a d unpublished records of the Director of Medical and Health S rvices, Table 2, "Agricultural Statistics", from the Annual Season and Crop Reports, Table 3, "Live-Stock, Ag icultural Machinery and Im lements", from the published figures of Live Stock Census and Table 4 "List of Primary Schools" from information specially supplied by District Inspector of Schools.

There are certain limitations in the Agricultural Statistics relating to cropped area (Table III). As figures for the hill portion of the district for the years 1901-02 to 1906-07 not available, the details in the table are only for the plain portion. Furthermore, the totals for *kharif*, *rabi* and *zaid* for the years 1907-08 to 1950-51 are also only for the plain portion of the district; the totals for cropped are (column 61) and net cropped area (column 63 are for the whole district; and the figures for individual crops are only for the plain portion for years 1907-08 to 1930-31, while for the years 1931-32 to 1950-51, they are for the whole district.

Processing of census data.

2. The census data pr sented here has been derived from the census slips by a process of sorting compilation and tabulation. In previous censuses the slips were first sor ed by religion and this division was maintained throughout so that all data was cross-tabulated by religon. This pro ed ure has b n abandone at this census and substituted

*The numbers per mille (of the 10 per cent. sample population) of each sex aged 5 years and over who were returned as literate are as below :

Males		Females	
1951	1931	1951	1931
257	137	51	16

by a division based on economics characteristic of the population. The whole population has been divided into eight livelihood classes, four of which are of the agricultural category and four of non-agricultural category as follows :

Agricultural classes—

I—Cultivators of land wholly or mainly owned, and their dependants.

II—Cultivators of land wholly or mainly unowned, and their dependants.

III—Cultivating labourers, and their dependants

IV—Non-cultivating owners of land; agricultural rent receivers; and their dependants.

Non-agricultural classes—

V—Production (other than cultivation).

VI—Commerce.

VII—Transport.

VIII—Other services and miscellaneous sources.

Another special feature of the sorting of this census was the separation, from the very start, of slips of displaced persons and of a 10 per cent. random sample from the remainder. This has enabled the data of displaced persons to be presented separately while the 10 per cent. sample has been utilized for the preparation of Age Tables.

The slips of this census have been copied by Households into a National Register of Citizens, which has been prepared village-wise for rural areas and mohalla/ward-wise for urban areas. Table C-I is based on a 4 per cent. sample extracted from this Register.

Tracts.

3. The slips were first sorted by villages for the preparation of the Primary Census Abstract. For the purpose of further sorting the State was divided into tracts consisting of (*a*) *rural tracts*, comprising the rural population of each tehsil, (*b*) *urban city tracts*, comprising the population of areas which had been declared as cities, (*c*) *urban non-city tracts*, comprising the population of urban areas of a district excluding areas declared as cities. Each tract was treated as a unit for sorting of slips. All data were compiled first by tracts and then by districts. This volume presents the tract-wise data for one district (with the exception of A and E Tables, which have been presented tehsil-wise), while the district-wise data for the whole State is contained in the following State volumes :

Part I-B—Subsidiary Tables.

Part II-A—General Population Tables.

Part II-B—Economic Tables

Part II-C—Age and Social Tables.

Explanatory notes.

4. Detailed explanatory notes are appended to each State table in the printed volumes of State tables. They apply to the tables in this volume also and should be referred to when necessary. A few notes of some of the tables are reproduced below :

Table A-I—Column 5 relating to "hamlets" has been introduced for the first time. Any distinctive cluster or agglomeration of houses has been treated as a "hamlet".

A clear distinction has been made in this census between a "House" and a "Household". A house is any human dwelling having a separate main entrance while a household is any commensal unit living in a census house. In previous censuses the figures under "Occupied Houses" used to be that of households, while the figures under columns 7—9 of the present table refer to occupied census houses as distinct from households.

The Economic Tables—The Indian Census Economic Classification Scheme, 1951, together with the occupational division and sub-division adopted for this census are given in Part II-B of the Report.

Table B-I—Each of the eight livelihood classes mentioned above has been divided into three sub-classes, with reference to the economic status, as follows :

(i) Self-supporting persons;

(ii) Non-earning dependants, and

(iii) Earning dependants.

These were defined in the Instructions to Enumerators as follows :

"A 'self-supporting person' is one who is in receipt of an income and that income is sufficient at least for his own maintenance. To be 'self-supporting' a person need not be able to support his family. All that is necessary is that he should be earning sufficient for his personal needs. For purposes of this question the person enumerated is the unit and not the family of household. Any one who is not a 'self-supporting' person in this sense is a 'dependant'. A 'dependant' may be either an 'earning dependant' or a 'non-earning dependant'. The test is whether he secures a regular (and not casual) income, even though it may be small. Such income may be in cash or kind ; it may be continuous or seasonal employment. When the income which he secures is not sufficient to support him that person is an 'earning dependant'. A person who does not earn any income either in cash or kind is a 'non-earning dependant'. Where two or more members of a family

household jointly cultivate land and secure an income therefrom, each of them should be regarded as earning part of the income. None of them is, therefore, a 'non-earning dependant.' Each of them should be classed either a 'self-supporting person' or 'an earning dependant' according to the share of income attributable to each. The same applies to any other business carried on jointly. The share of the income is what the head of household deems it to be. This does not mean that every one who works is necessarily a self-supporting person or an earning dependant. Thus, for instance, a housewife who cooks for the family, brings up the children or manages the household is doing very valuable work. Nevertheless, her Economic Status is that of a 'non-earning dependant,' if she does not also earn an income, and should be recorded as such."

Economically active, Semi-active and Passive persons—All non-earning dependants are economically passive. They include persons performing house-work or other domestic or personal services for other members of the same family household. But they do not include "unpaid family workers" or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise.

All earning dependants are economically semi-active only. Though they contribute to the carrying on of economic activities, the magnitude of their individual contribution is deemed to be too small to justify their description as economically active. (Their contribution to economic activity is, however, taken into account in the tabulation of data based on secondary means of livelihood.)

All self-supporting persons are, ordinarily economically active with the exception of the following classes and groups :

(*a*) All self-supporting persons of Agricultural Class IV.

(*b*) The following groups of self-supporting persons who are included in Non-agricultural Class VIII and derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity) :

(i) Persons living principally on income from non-agricultural property ;

(ii) Persons living principally on pensions, remittances, scholarships and funds ;

(iii) Inmates of alms-houses and recipients of doles ;

(iv) Beggars and vagrants ; and

(v) All other persons living principally on income derived from non-productive activities.

Table B-II—For a self-supporting person who has more than one means of livelihood the *secondary means* of livelihood is the livelihood next in importance to his principal means of livelihood. For an earning dependant it is the source from which he secures his own income, where there are more than one subsidiary occupations only the one providing the largest income has been taken into account.

Table B-III—"Employers", " Employees " and " Independent Workers " have been defined as follows in the Instructions to Enumerators :

An " employer " is only that person who has necessarily to employ other person in order to carry on the business from which he secures his livelihood. Thus if a person employs a cook or any other person for domestic services, he should not be recorded as an " employer " merely for that reason.

An " employee " is a person who ordinarily works under some other person for a salary or a wage in cash or kind as the means of earning his livelihood. There may be persons who are employed as managers, superintendents, agents, etc., and in that capacity control other workers. Such persons are also employees only and should not be regarded as employers.

An " independent worker " means a person who is not employed by any one else and who also does not employ anybody else in order to earn his livelihood. (Sweepers, *dhobies, kahars,* etc., who work for several masters are independent workers. If, however, any of them accepts whole-time employment under one master he becomes " employee ". Daily wage-earners who work for different masters are likewise independent workers. But if they accept employment under one master, e.g., under a factory, they become " employees ").

Tables C-II, C-III, C-IV and C-V—The figures presented in these tables are based on single year age returns and have not been smoothed.

Tables D-V(i) and (ii)—For the purpose of these tables a "displaced person" has been defined as follows :

" A displaced person means any person who has entered India having left or being compelled to leave his home in Western Paskistan on or after the 1st March, 1947, or his home in Eastern Pakistan on or after the 15th October, 1946, on account of civil disturbances or on account of the setting up of the two Dominions of India and Pakistan "

PART I
