A N A L Y T I C A L N O T E

Introduction :

Since times immemorial, the census data have been considered as the basic source of information unsurpassed for its authenticity as a single source. Its main purpose is to provide quick results to the various agencies of the government, planners, researchers, scholars and others. Towards this end, it has been our constant endeavour to bring out the results as quickly as possible. After the completion of 1991 Census on the 5th March, 1991, the Provisional Population Totals were released in Paper-1 of 1991 on 26th March, 1991 and its supplement on 22nd January, 1992 wherein data upto tahsil and town level was presented. The data presented in those papers however, based on the totals arrived at by the concerned Charge Officers in the field. Previously, it used to take a lot of time to release village/ward-wise final figures in the shape of various publications brought out by the Census Organisation, therefore, this time, after the release of the supplement, the entire data after quick manual Tabulation have been computerised to facilitate its early release.

As far as final figures relating to our State are concerned, the salient features of this data have been given in this handout. An appraisal of the data brings out the following major salient features about the State of Himachal Pradesh :

1) Spatial Distribution of Population :

The State has an area of 55,673 Sq. Kms. and is divided into 12 districts comprising 103 tahsils/sub-tahsils, 58 towns, including one Census Town and 69 CD blocks. Its population was 4,280,818 persons on the sunrise of Ist March,1981 and on the sunrise of Ist March, 1991 it has risen to 5,170,877 persons. There has been a total addition of 890,059 persons during the decade. Out of this 447,536 are males and 442,523 females. Among the districts, Kangra is the most populous district with a population of 1,174,072 persons. The second place is occupied by Mandi district with a population of 776,372 persons and it is followed by Shimla district with 617,404 persons. These three districts account for about fifty percent of the total population of the State. Lahul & Spiti district having a population of 31,294 is at the tail end.

2) Growth Rate of Population :

During the decade 1981-91 the growth rate for the entire population has been +20.79 percent as compared to +23.71 percent during the previous decade. As per the present Census, it has been +20.62 percent for males and +20.96 percent for females as compared to +22.31 percent for males and +24.65 percent for females during the decade 1971-81. Further, this has been +19.39 percent for the rural population and +37.80 percent for urban population during the decade 1981-91. The corresponding figures for the decade 1971-81 are +22.88 percent and +34.76 percent respectively.

The maximum growth rate has been recorded in Kullu district which is +26.68 percent, whereas, the minimum is in district Lahul & Spiti which is -2.51 percent. This is perhaps because of sizeable migration of population from this district to Kullu. The growth rate of more than 25 percent has been observed in the districts of Kullu, Chamba and Solan respectively. It is between 20 to 25 percent in Shimla, Mandi and Sirmaur districts and between 15 to 20 percent in Bilaspur, Una, Kangra, Kinnaur and Hamirpur districts.

3) Rural-Urban Composition :

Himachal Pradesh being a hilly area, majority of its population live in villages. Out of a total population of 5,170,877 persons, 4,721,681 (91.31 percent) live in the rural areas and 449,196 persons (8.69 percent) live in the urban areas. In the Pradesh there are in all 19,388 villages out of which 16,997 are inhabited and the remaining 2,391 are uninhabited. There are 58 towns including Pandoh which is a Census Town.

4) Density of Population :

The density of population has been returned as 93 persons per Sq. Km. for the whole State and the highest density has been recorded in the district of Hamirpur which works out 330 persons per Sq. Km. followed by Bilaspur with 253 persons per Sq. Km.. The lowest density has been recorded in Lahul & Spiti district which is 2 persons per Sq. Km.

followed by Kinnaur which is 11 persons per Sq. Km.

5) Sex Ratio :

The sex ratio is defined as the number of females per thousand males. The sex ratio for 1991 Census is 976 for the State as a whole, 990 for rural areas and 831 for urban areas. The corresponding figures for 1981 Census are 973; 989 and 795 respectively. The highest sex ratio has been recorded in the district of Hamirpur with 1,105 females per 1,000 males followed by Kangra, Una, Mandi and Bilaspur which all have recorded higher sex ratio. In the remaining districts, it is less than the State average.

6) Literacy :

For considering a person literate, the minimum criteria was that he/she should be able to read and write a simple letter in any language with understanding. However, the children in the age-group 0-6 were treated as illiterate.

It is worthwhile to mention that the overall literacy rate has increased from 51.17 percent in 1981 to 63.86 percent for total population and the same is 75.36 for males and 52.13 for females as compared to 64.27 percent for males and 37.72 percent for females in 1981. It may be of interest to mention here that these rates are higher as compared to all

India percentages as well as even higher from the States of Punjab and Haryana. The highest literacy rates have been recorded in Hamirpur district with 74.88 percent for the total population - 85.11 percent for males and 65.90 for females. The lowest literacy percentage is in the district of Chamba i.e. 44.70 for total population - 59.96 for males and 28.57 for females. The districts of Mandi, Kullu, Lahul & Spiti, Solan, Sirmaur and Kinnaur have returned less than the State average. The remaining districts have registered higher literacy rate than the State average. For working out the literacy rate the population in the age group 0-6 has been excluded from the total population. Further analysis shows that apart from Chamba, the female literacy rates are less than the State average in the districts of Kullu, Lahul & Spiti, Shimla, Solan, Sirmaur, Kinnaur and Mandi and special drives for improving the female literacy are required to be undertaken in these districts.

7) Scheduled Caste and Scheduled Tribe Population :

The total scheduled caste population has been returned as 1,310,296 persons as compared to 1,053,958 persons in 1981 which works out to 25.34 percent of the total population. The total population of scheduled tribes has been returned 218,349 persons as compared to 197,263 persons in 1981 which is 4.22 percent of the total population.

8) Main Workers, Marginal Workers and Non-workers:

As per 1991 Census, 34.41 percent of the total population are main workers, 8.42 percent marginal workers and the rest 57.17 percent are non-workers. Their rural and urban break-up reveals that 34.50 percent are in the rural areas and 33.39 percent in the urban areas. In other words if we combine main and marginal workers then they constitute 42.83 percent for the state as a whole, 43.57 percent in rural and 34.98 in urban areas.

Of the total main workers, majority of them i.e. 63.25 percent are cultivators, 3.30 percent agricultural labourers, 1.43 percent engaged in household industries and 32.02 percent in other activities.

9) Dissemination of Data :

It has also been decided by the Census Organisation to expedite the dissemination of census data as early as possible to facilitate its use for various purposes. Therefore, the whole Primary Census Abstract data for 1991 Census was got computerised in collaboration with the National Informatic Centres for the first time. The same has been released at the National level on 14th January,1993 by the Registrar General-cum-Census Commissioner, India, New Delhi. It was also decided that the Primary Census Abstracts for 1991 Census be also released at the State level throughout India by presenting data to the State

authorities formally. For district/block level P.C.As the village/wardwise data for whole of the State has been stored with National Informatic Centres in all the states. This computerised data have been duly verified and authenticated by exercising various checks. The villagewise P.C.As are now available for final use with all the N.I.C. centres in the States.

Village/wardwise all India data have been stored with N.E.C. at the N.I.C. headquarters at New Delhi. These data could be accessed on all the N.E.C. terminals throughout the country including GISNIC terminals with the help of standard menu driven queries. These data have also been stored with the NIC computors installed in various Bhawans of government of India New Delhi.

Village/wardwise data for each district have also been stored in the personal computors of the Census Directorates wherever these computors are available. Floppies will also be stored in the Census Directorates for making more copies for supplying to the users on their requests. The district centres of N.I.C. can also supply the district floppies on request for the use of the district administration. The demands of the users for print out copies as well as floppies of the relevant data will be met on requests on payment of actual costs by the Census Directorates with the help of N.I.C. State Unit. The

cost of each floppy presently is approximately Rs. 60-70 whereas for print-out it will be Rs. 1/- per printed page. Efforts are also afoot with the collaboration of NIC Lucknow to supply the P.C.A.s in Hindi also. The basic purpose for disseminating the P.C.A. data through the computor net work is to expand its accessibility to the data users.

I am confident that the release of the final Primary Census Abstracts will meet the basic immediate requirements of all the data users who have constantly been waiting for these figures and making repeated requests and enquiries. Various types of data are still being computerised from the individual slips for the entire population and we will be making the same available in the times to come in various census publications and till, then, I am sure, the present data will be of immense use for various official developmental agencies.

I shall be failing in my duty if I do not place on record my gratitude towards the whole hearted cooperation of the State government authorities particularly Shri M.S.Muknerjee, Chief Secretary to Himachal Pradesh government who extended me his whole hearted cooperation as well as an army of enumerators and supervisors who were entrusted in collecting the basic field data. I am also grateful to Shri A.R.Nanda, I.A.S., Registrar General-cum-Census Commissioner of

India and his team of officers whose constant guidance and encouragement has helped me in completing this job. I am also grateful to the officers and staff of the Census Directorate including the staff on consolidated wages whose constant hard labour and devotion to duty has resulted in quick and timely compilation and release of thesedata. Last but not the least, I also place on record my thanks to the N.I.C. organisation with whose collaboration we have been able to computerise this data within a very short span of time.

Place: SHIMLA
Date : 15.1.1993.
