PREFACE

Housenumbering and houselisting has been an indispensable preliminary of Indian censuses since 1881. Upto 1951, each state was at liberty to design its own houselist form because of the difficulty of adopting a set of uniform definitions for the entire country. Differences in definitions and consequently methods led to non-comparability. As a result although some information was always collected on the eve of each population census, it was not considered worthwhile to analyse and print it.

Of late, there has been a great demand for statistics for the country as a whole to help formulation of housing schemes. The United Nations has made recommendations for collecting reliable basic data on the existing levels of housing development available in various parts of the country. At the time of the 1961 Census, a uniform houselist was canvassed for the first time throughout the country and some basic statistics on housing were collected and presented.

Following the 1961 precedent, the census organisation again took the opportunity of collecting housing statistics in 1970, six to eight months earlier than the population count, by canvassing a uniform houselist throughout the country. As it was not possible to conduct any intensive or detailed survey on housing, only broad details of the purposes for which a census house is used such as dwelling, shop, etc., the predominant material of wall and roof, the number of rooms occupied by the household, tenure status of household, etc., were collected through the houselist. The opportunity was also taken in 1971 to collect information about each establishment by canvassing a separate establishment schedule.

Four tables have been generated from the data regarding the basic characteristics of census houses and households. They are published in the present volume. The tables generated from the data collected through the establishment schedule will be published separately in Part III of the all-India volume.

The volume was conceived, designed and guided by my distinguished predecessor, Shri. A. Chandra Sekhar. It is going to the press when I happen to be the Registrar General. This volume is the product of hard labour put in by a large army of census officials. If I were to name them, it would run into several pages. All I can do is to place on record my grateful appreciation of the useful services rendered by all of them.

NEW DELHI
15 *November* 1974

R. B. CHARI
Registrar General, India

INTRODUCTORY NOTE

House numbering and houselisting have been an indispensable preparatory feature in all Indian Censuses since 1881. The United Nations has emphasised the need for collecting baseline data on housing from time to time and said that housing censuses are best carried out alongwith the population censuses which are generally taken by countries decennially.

The objectives of the housing censuses as laid down by the United Nations are as follows.

First to make an inventory of all the various kinds of premises in which people live and which together constitute the stock of housing accommodations by their geographic location, structural characteristics, available facilities, installations and services. Secondly, to obtain indicators of housing conditions in which the population lives—living space per inhabitant and per household, the equipment provided and the services laid on, i.e., lighting, supply of gas, water, cooking equipment, etc.

Till the decennial census of 1961, there was no uniform or standardised schedule for the listing of the houses throughout India. The purpose of the houselist was essentially to assist the population census enumerator to cover his jurisdiction without omission or overlapping. Hardly any other use was made of the houselist. One reason why no extensive use of this operation was attempted in the past seems to have been the flexible concept and definition of the census house itself, which rendered its uniform application throughout the country difficult.

The 1961 census, laid the foundations for a uniform housing census in India. The participants in the pre-census preparatory conference of the 1961 census recommended collection of some basic data on housing and industrial establishments. A standardised houselist form was prescribed for the first time in 1961 and uniformity of definitions was sought to be ensured throughout the country.

At the 1971 census, houselisting was taken up in 1970 six to eight months in advance of the population census enumeration. This was preceded by an operation called house-numbering which involved the affixing or painting of numbers on the door of each house and all structures in a systematic manner. Layout plans and notional maps of areas of the smallest jurisdiction indicating the housing units and their numbers were prepared to provide a systematic and geographical frame that would ensure complete coverage of the population during census. The canvassing of the houselist form gave an advance estimate of the population and provided the frame for carving out census enumerators' blocks. Information relating to the uses to which census houses are put, the material of wall and roof of each census house, whether the census household lived in an owned or rented house, the number of living rooms, the name of the head of household and the number of members in each household was collected through the houselist. The houselist of 1971 by and large followed the pattern of the 1961 houselist. The improvement were that in respect of a vacant house, the reasons for vacancy were ascertained. If the head of a household belonged to a scheduled caste or scheduled tribe, it was specifically recorded in 1971. The households engaged in cultivation were recorded as such so that the list might serve as a frame for any sample survey of agricultural households if found necessary. In the 1961 houselist some simple data on census houses used as factories or workshops were collected. In 1971, a separate schedule called the 'Establishment schedule' was canvassed along with the houselist form and its scope was much larger, covering all establishments in industrial as well as trade and service establishments.

A facsimile of the houselist form used in 1970 and the instructions to enumerators on the mode of filling it are reproduced in Appendix 1. It may be useful to reproduce here the concepts and definitions relating to some of the terms used in the form.

Building: A "building" is generally a single structure but sometimes made up of more than one component unit, which are used or likely to be used as dwellings (residences) or establishments such as shops, workshops, factories, etc., or as godowns, stores, cattle-sheds, etc., or in combination with any of these such as shop-cum-residence or workshop-cum-residence, etc. Sometimes a series of different buildings may be found along a street which are joined with one another by common walls on either side looking like a continuous structure. These different units are practically independent of one another and likely to have been built at different times and owned by different persons. In such cases though the whole structure with all the adjoining units apparently appears to be one building, each portion should be treated as a separate building.

Census house: A "Census house" is a building or part of a building having a separate main entrance from the road or common courtyard or staircase, etc., used or recognised as a separate unit. It may be inhabited or vacant. It may be used for residential or non-residential purpose or both. If a building has a number of flats or blocks which are independent of one another having separate entrances of their own from the road or a common staircase or a common courtyard leading to a main gate, they will be considered as separate census houses. If within a large enclosed area there are separate buildings, then each such building will be one or more separate census houses. If all the structures within an enclosed compound are together treated as one building then each structure with a separate entrance should be treated as a separate census house.

Census household: A household is a group of persons who commonly live together and would take their meals from a common kitchen unless the exigencies of work prevented any of them from doing so. There may be 'one-member household, two-member household or multi-member household'. For Census purposes each one of these types is regarded as a "household". Again, there may be

a household of persons related by blood or household of unrelated persons; the latter are boarding houses, hostels, residential hotels, orphanages, rescue homes, ashrams, etc. These are called "Institutional households".

Tabulation of data

The tabulation of data collected in the houselist has been done on the basis of a 20 per cent systematic sample of houses in the houselist. Unbiased estimates have been worked out by inflating the sample frequencies in each cell uniformally by 5. All the census houses whether occupied or vacant have been taken into account for the purpose of marking the 20 per cent sample. A technical note on the level of precision of the estimates of the various characteristics presented in the H-series tables is reproduced below:

The figures given in the table of the 'H' series are unbiased estimates of the various characteristics based on 20 per cent sample of census houses. These estimates have been obtained by multiplying the sample figures by 5. The following statement indicates the broad level of precision of the estimated frequency of any cell directly from the size of the universe (i.e., district/state).

STATEMENT

District / state size (N), value of proportion (P) and the related size of cell estimate (NP) at 20% relative standard error (p.r.s.e.)

N	∠16567	4900∆N	∠16567	4900	3233	2400	1900	1567	1327	1150	1010	900
P	∠0·006	0·006∆P	∠0·02	0·02	0·03	0·04	0·05	0·06	0·07	0·08	0·09	0·10
NP	100	99	..	98	97	96	95	94	93	92	91	90

Notes : 1. This statement has been drived from the detailed statement given in Appendix II setting the acceptable level of precision at 20 per cent. For any 'N' falling between 900 and 4900 read of the value of 'NP' corresponding to the nearest value of 'N' tabulated above. For example if N=1352. NP=93 corresponding to N=1327 in the statement. For N< 900 and other levels of precision the detailed statement may be consulted.

2. Whatever the universe size there is a maximum value of the estimated cell frequency associated with a specific level of precision as shown below :—

p.r.s.e.	1	2·5	5	10	20	30	50
NP	40,000	6,400	1,600	400	100	45	16

These values read along with those in the statement will provide a better appreciation of the level of precision of the estimate in any cell of the table. For example for a district size N=1352 (vide note 1 above) cell frequencies between 93 and 400 will have a relative standard error of 10—20 per cent, while those equal to or greater than 400, a relative standard error of 10% or less, etc.

The following tables (known as H-series tables) have been prepared from the data collected in the houselist. These have been presented in this book:

1. Table H-I: Census houses and the uses to which they are put.

2. Table H-II: Distribution of census houses by predominant material of wall and predominant material of roof.

Appendix to Table H-II

Distribution of residential census houses by material of wall cross-classified by material of roof.

3. Table H-III: Households classified by number of member and by number of rooms occupied.

4. Table H-IV: Households classified by size and tenure status.

There are some minor discrepancies in the number of cities (towns having population 1 lakh or more) between the housing tables and the population tables for which data have been presented. It is possible that in a few of states the data for those cities which had less than one lakh of population in 1961 but crossed the limit of one lakh in 1971 have been omitted in the housing tables. In some states the reverse has also happened. This is due to the fact that on the eve of houselisting the Director of Census Operations of state/union territory were required to estimate the probable population size of localities by inflating the 1961 population to the extent of 25 per cent. While assigning codes for cities and towns, they went by these estimates and, it is possible that these estimates might have varied from the final population of such urban units as revealed by the subsequent census enumeration. This could not be helped particularly because they had to pre-assign codes for mechanical processing of the houselist data without waiting for the actual population count.

The following statement gives an account of the above discrepancies:

STATEMENT

Name of State/Union Territory	Name of city below 1 lakh of population in 1961 and not shown in the housing table of 1971 census	Population		District in which situated	Name of city below 1 lakh population in 1961 & shown in the housing table	Population		District in which situated	Remarks

M.B.	Municipal board
N.A.	Notified area

APPENDICES

APPENDIX I

Instructions to Enumerators for filling up the Houselist, 1971 *Census*

HOUSELIST

General

Census is a national undertaking of great importance, indispensable to intelligent and efficient public administration apart from the other multifarious ways it serves the scholar, the businessman, industrialist, the country's planners, the electoral authorities, etc. Census has become a regular feature in every progressive country, whatever be its size and political set-up and they are conducted at regular intervals to fulfil well-defined objectives.

2. The job entrusted to you, *viz.*, the house-numbering and houselisting is an essential preliminary step to the population census. Apart from mere listing of houses, you will be collecting some essential data on housing, as also separately on manufacturing, trading and service establishments which will be useful to the country's planners. You have, therefore, an important role to play. The quality and quantity of your contribution depends on how well you apply yourself to this task, understand the instructions thoroughly and carry out your responsibilities with the care that it demands.

3. You will be required to prepare lay-out sketches showing the location of houses within the area allotted to you and number all the houses, residential or otherwise and list them and fill up some essential particulars in the schedules given to you. The house-numbering sketches prepared by you may form the basis for a permanent system of house-numbering that may be introduced and maintained by the local bodies concerned in future.

House-numbering and preparation of notional maps

4. *Rural areas:* The first operation will be allotment of distinguishing numbers to each building, house and household.

5. Before the actual affixing of house numbers on doors an essential step to be taken is to prepare a rough notional map of the entire village and decide on whether the village should be sub-divided into blocks and if so, how? Normally, a small village of less than 125 houses need not be sub-divided into blocks. But if a village has one or more hamlets, irrespective of the size, it is desirable to divide the area of the village into blocks so that each hamlet with the adjoining area is recognised as a separate house-numbering block of the village. It is important that the dividing lines between one block and another should be clearly demarcated. Such dividing lines, besides following some natural boundaries wherever possible should also be indicated by the survey number that fall on either side of the dividing line in cadastrally surveyed villages. In villages which are not cadastrally surveyed, the line can be indicated by the name of the owners of the fields on either side of the line or by the name of the field, if any. A notional map showing the general topographical details of a whole revenue village particularly if a survey map is already available with the village revenue officials, will greatly help. This notional map should indicate the prominent features and land marks such as the village site, roads, cart tracks, hills, rivers, *nallahs*, etc. Clear demarcation lines of blocks are important so that any to define at the foot of the map the boundaries of a particular block is covered by a specific block without giving scope for any doubt. It may be desirable to define at the foot of the map the boundaries of each block clearly.

6. Having thus prepared the village map, each block of the village as demarcated on the village map should be taken up for a detailed sketching of the lay-out. In this detailed sketch the emphasis is mainly on the lay-out of the houses on the village site. The sketch should show all the roads, streets and cart tracks. The names of the streets, if any, should be shown on these sketches. All topographical details, important features and public buildings should be prominently shown. Then every single building or house should be located on this sketch. It will be of advantage if the *Pucca* and *Kachha* houses are shown by some conventional signs like a square □ for a *Pucca* house and a triangle △ for a *Kachha* house, further depicting them as residential or non-residential as follows:

□ *Pucca* residential house; for *Pucca* non-residential house, shade the square.

△ *Kachha* residential house; for *Kachha* non-residential house, shade the triangle.

It is difficult to evolve a comprehensive definition of the terms 'Pucca' and 'Kachha' houses to cover different patterns of structures all over the country. The categorisation of the houses as *Pucca* or *Kachha* for the purpose of depicting them on the lay-out sketches is purely to facilitate identification. Also, as *Kachha* houses are not likely to be long-lasting, any one referring to the lay-out sketches a few years later can easily distinguish settlement areas which are likely to have undergone a change. For the purpose of the

preparation of lay-out sketches, a *Pucca* house may be treated as one which has its walls and roof made of the following materials:

Wall material : Burnt bricks, stone (duly packed with lime or cement), cement concrete or timber, etc.

Roof Material: Tiles, GCI* sheets, asbestos cement sheets, RBC*, RCC* and timber, etc.

Houses, the walls and/or roof of which are made of materials other than those mentioned above such as unburnt bricks, bamboo, mud, grass, reeds, thatch, etc., or loosely packed stone, burnt bricks, etc., may be treated as *Kachha* houses.

7. When once the location of every building/house is fixed on the plan, it will be a simple matter to decide on a convenient method of numbering the buildings/houses in one series following certain principles. No hard and fast rule can be laid as to the direction in which the house numbers should run *i.e.*, left to right or in a clockwise order or north-east to south-west and so on. Much depends on the lay-out. So long as some convenient and intelligible order is followed it should be all right. The numbers allotted to each house should be marked on the sketch and with the help of arrow marks at convenient intervals, the direction in which the house numbers run should be indicated. This is particularly important when streets cut across one another and the house numbering series along a street get interrupted. It will be of advantage if the numbers are roughly marked in pencil on this sketch and later verified with the actual state of things on ground to see if the order of numbering indicated on the sketch would be convenient or if any slight changes are needed, for, after all the sketch is only a rough one and the actual state of buildings on ground may suggest a more intelligible order of numbering at some places.

8. Where villages are not cadastrally surveyed and the village boundaries not fixed by survey, it is essential that the limits of each village are defined by some permanent features so that it may be known that any house falling in any such areas may be reckoned along with a particular village.

9. In the forest areas, all habitations are not on settled pattern. There are forest villages which may be just like other revenue villages or *mauzas*. For such villages procedure for preparing normal lay-out plan sketches may be followed. But apart from such villages, there would be clusters of habitations spread out in the forest. It will be facilitating, if for the purpose of netting such clusters a lay-out plan is prepared of the Forest area comprising the lowest administrative unit (such as, beat of a Forest Guard in some States). Then the clusters should be drawn on the lay-out sketch. Name of the cluster should also be written, if there be one. If there be no name, then it would be necessary to identify it with reference to any known permanent feature such as a hill stream, a range of hills, road and so on. After drawing the boundaries of such clusters on the lay-out, the location of each of the houses should be indicated on it and number assigned to each house. Habitations (clusters) falling within the area of the smallest forest administrative unit should be taken as one village for the purpose of house-numbering and houselisting.

Since it is likely that some of the tribal habitations may change their locations now and then, it is necessary to define the location of a habitation area with reference to any known permanent feature as indicated above in regard to the clusters in Forest areas.

10. *Urban areas:* The preparation of national maps and the house-numbering sketches in urban areas should essentially follow the same procedure as in the rural areas excepting that in most urban units the draughtsman of the Municipal Administration might have already prepared town maps perhaps even to scale and these may come extremely useful. It has been found from experience that the boundaries of towns are often times loosely defined and not properly demarcated giving rise to several doubts regarding the areas lying on the out-skirts of towns. It is important that the map should very clearly indicate the boundaries by means of definite survey numbers and also other permanent features. Sometimes one side of a road falls within the town limits and the other side excluded as it may be outside the defined boundary of the town. All these should be carefully verified on ground before the maps are certified to be correct by the supervising authorities. Cases of suburban growth adjoining the limits of a town and such cases as one side of a street falling outside the limits of a town should be brought to the notice of the superior officers who will have to ensure that such built up areas are properly accounted for within the administrative units in which they fall.

11. But what is essential is that very detailed plans showing the location of every building and census house along every road and street in each ward, locality or *mohalla* of a town should be clearly prepared. In view of the very large number and close location of houses in urban areas it may be necessary to have a large number of sketches each covering a limited area. Each town would probably have already been divided into some permanent *mohallas* or localities or wards. A large map of the entire town indicating the boundaries of each of the sub-units into which the town has been divided should be prepared. On this map, the main roads and other topographical details and important public buildings, etc., may be shown for clear identification of the boundaries of each *mohalla*/locality/ward, etc. Next, a skeleton map of each locality/ward or block should be prepared in which all the roads and streets should be clearly indicated and their names also written. Then each building and house should be located on this skeleton map. May be that even a locality/ward may be too large an area to indicate all houses on a single map. In such a case a ward map showing the segments and separate lay-out map for each one of the segments may be

*NOTE: G.C.I.—Galvanized Corrugated Iron, R.B.C.—Reinforced Brick Concrete and R.C.C--Reinforced Cement Concrete.

prepared and on these segments the buildings and houses should be clearly located and the house-numbers shown. It may be an advantage if the non-residential houses are distinguished from the residential houses as indicated in para 6 of these instructions. Here again the important permanent buildings may be indicated such as say, town-hall, large office building, court building, post office, hospital, school, church, market building, etc.

12. As stated earlier most towns may already be having a satisfactory house numbering system. This need not be disturbed and may be adopted for the purpose of preparation of the house-numbering maps referred to above. The house numbering can be brought up-to-date with the help of these lay-out maps. If there be no proper system of house numbering in the town, then you will have to assign numbers to the houses in the lay-out sketch(es) of your jurisdiction in the manner indicated hereafter.

Numbering of buildings and census houses in rural as well as urban areas

13. You have to give numbers to "Buildings" and "Census houses" in all areas. The instructions below will guide you to determine what a building and a census house are for the purpose of houselisting. The building is a readily distinguishable structure or group of structures which is taken as the unit for house-numbering. The entire building may be deemed one census house or sometimes parts of it, as will be explained. The objective is to ultimately number and list out all physical units of constructions which are used for different purposes, residential or otherwise.

14. *Building*: A "building" is generally a single structure but sometimes made up of more than one component unit, which are used or likely to be used as dwellings (residences) or establishments such as shops, workshops, factories, etc., or as godowns, stores, cattle-sheds, etc., or in combination with any of these such as, shop-*cum*-residence, or workshop-*cum*-residence, etc.

15. Sometimes a series of different buildings may be found along a street which are joined with one another by common walls on either side looking like a continuous structure. These different units are practically independent of one another and likely to have been built at different times and owned by different persons. In such cases though the whole structure with all the adjoining units apparently appears to be one building, each portion should be treated as separate building and given separate number.

16. If there are more than one structure within an enclosed or open compound (premises) belonging to the same person, *e.g.*, the main house, the servant's quarters, the garage, etc., only one building number should be given for this group and each of the constituent separate structures assigned a sub-number like 1(1), 1(2), 1(3) and so on provided these structures satisfy the definition of a 'Census House' given hereafter.

17. The buildings should be numbered as follows:

(i) If the locality consists of a number of streets in a village, the buildings in the various streets in a village, should be numbered continuously. Streets should be taken in uniform order from North-east to South-west. It has been observed that the best way of numbering the buildings is to continue with one consecutive serial on one side of the street and complete the numbering on that side before crossing over to the end of the other side of the street and continuing with the serial, stopping finally opposite to where the first number began.

(ii) In a town/city, enumeration block, the numbering will have to respect the axis of the street and not any preconceived geographical direction like North-east, etc.

(iii) Arabic numerals *e.g.*, (1, 2, 3..... should be used for building numbers.

(iv) A building under construction, the roof of which has been completed should be given a number in the serial.

(v) If a new building either *Pucca* or *Kachha* is found after the house numbering has been completed or in the midst of buildings already numbered, it should be given a new number which may bear a sub-number of the adjacent building number, *e.g.*, 10/1.....

NOTE: These should not be numbered as 10(1) or 10(2), etc., as such numbering would apply to census houses within the same building. On the other hand, 10/1 would mean a separate building that has come up after building No. 10.

18. *Census House:* A "Census house" is building or part of a building having a separate main entrance from the road or common courtyard or stair case, etc., used or recognised as a separate unit. It may be inhabited or vacant. It may be used for a residential or non-residential purpose or both.

19. If a building has a number of flats or blocks which *are independent of one another* having separate entrances of their own from the road or a common staircase or a common courtyard leading to a main gate, they will be considered as separate census houses. If within a large enclosed area there are separate buildings, then each such building will be one or more separate census houses. If all the structures within an enclosed compound are together treated as one building then each structure with a separate entrance should be treated as a separate census house.

20. Each census house should be numbered. If a building by itself is a single census house, then the number of the census house is the same as the building number. But if different parts or constituent units of a building qualify to be treated as separate census houses, each census house should be given a sub-number within brackets to the building number as 10(1), 10(2), etc., or 11(1), 11(2), 11(3), etc.

21. The order in which census houses within a building are to be numbered, should be continuous, preferably clockwise or in any convenient manner if it is difficult to do it clockwise.

22. The definition of census house may sometimes be difficult of application in its literal sense in the context of varying patterns of structures and their usage. For example, in cities and towns, one does come across a situation when a flat in the occupation of one household as residence may be made up of four rooms or so and all the rooms may have direct entrance from a common courtyard, or staircase. In terms of the definition of a census house each of these rooms having entrances from the common stair case, etc., may qualify to be treated as census houses. But it does not realistically reflect the situation of the number of houses. In such case, 'singleness' of use of these rooms alongwith the main house by the household should be taken into account and the entire flat comprising four rooms should be treated as one census house only and assigned one number. If on the other hand each one of these rooms had been separately occupied by independent households and if each portion had separate main entrance then each will be justified to be treated as a separate census house. In a hostel building even if the door of each room in which an inmate lives opens on to a common verandah or staircase as it happens almost invariably, the entire hostel building may have to be treated as one census house only. In some parts of the country in the rural areas, the pattern of habitation is such that a single household occupies a group of huts within an enclosed fence which has one main entrance. Each of the apparently separate structures is an integral part of the housing unit as such. In such cases it may be more realistic to treat the group as one census house. Care should be taken to ascertain if only one household occupies such a unit or shared by more than one household. Thus the definition of a census house will have to be applied having due regard to the actual situation in such exceptional cases.

23. It is usual to find in municipal towns/cities that every site whether built upon or not is numbered by the municipal authorities on property basis. Such open sites even if they are enclosed by a compound wall should not be listed for census purposes. Only where a structure with four walls and a roof has come up, should it be treated as a census house and listed. But in some areas the very nature of construction of houses is such that, for example, a conical roof almost touches the ground and an entrance is also provided, and there may not be any wall as such. Such structures should of course be treated as buildings and houses and numbered and listed.

24. *Household*: A household is a group of persons who commonly live together and would take their meals from a common kitchen unless the exigencies of work prevented any of them from doing so. There may be 'one-member household, two-member household or multi-member household'. For census purposes each one of these types is regarded as a "Household". Again, there may be a household of persons related by blood or household of unrelated persons; the latter are boarding houses, hostels, residential hotels, orphanages, rescue homes, *ashrams*, etc. These are called "Institutional Households".

Each household will be listed according to the instructions that follow (*see* paras 44 & 45) and a distinguishing number allotted to each household. As each household will be related to the physical structure of a census house, the household number as such need not be painted on the door of each census house. Only the building and census house number will be painted.

Houselisting

25. After the preparation of the notional house-numbering maps and the numbering of the houses, the next step is to list them in the prescribed form (Houselist).

26. At the 1971 Census, a houselist schedule and an establishment schedule will be canvassed on universal basis. Specimen forms of the schedules to be so canvassed are given at the end of this book.

The following instructions will guide you in filling the houselist :

27. On the top of the houselist form, provision is made to note the name of District with Code No., name of Taluk/Tehsil/Thana/Anchal/Island/Code No., name of Village/Town/Code No., name or No. of Ward, *Mohalla*, Enumerator's Block Code No. The entries here are to be filled in by you very carefully. The Location Code is the method by which every village or town in any tehsil or police station in every district of a State is identified by a combination of numbers. For this purpose every district, tehsil or police station, village or town/ward/*mohalla*/enumerator's block in your State would have been allotted code numbers. Your charge Superintendent or the Supervisor would have indicated to you the district, tehsil or police station and the village or town/ward/*mohalla*/ enumerator's block code numbers pertaining to you. You shall have to enter them in the relevant spaces against the names of the various jurisdictional units. *Please note that the town number is to be given in Roman figures to distinguish it from the village number which will be indicated by Arabic numerals.*

NOTE: *Please do not write anything in spaces enclosed by dotted lines in column Nos.* 4, 5, 6, 10 *and* 12. *These are meant for writing code numbers in the tabulation offices.*

Col. 1: *Line number*

28. Every line in the Houselist is to be numbered serially. The line numbers should be continuous for your block. Arabic numerals should be used for this purpose, *e.g.*, 1, 2, 3, 4, etc.....

Col. 2: *Building No. (Municipal or local authority or census No.)*

29. Before you start houselisting, every building will bear a number. Some Municipal towns may have satisfactory system of numbering the buildings and

after preparation of the lay-out sketch of your area, you would have given the same number to the building located on the sketch.

30. There would be cases where the Municipal numbers or local authority numbers are not found satisfactory and therefore you would have given numbers to various buildings by way of updating the numbering or revising it. In any case you would have assigned a number to every building in the lay-out sketch. The third contingency is that numbering did not exist earlier and you have numbered the buildings and assigned them the number on the lay-out sketch and marked them on the building itself.

31. The number which has been assigned in the lay-out sketch in any of the three modes described above and marked or put on the building should be written in this column.

32. If the building has a well-known name then the name of the building should also be recorded in this column in addition to the number of the building.

The purpose of this column is to readily identify every building by the number found on it and by local name if any the building may bear.

Col. 3: *Census house number*

33. The attributes of a census house have been described earlier and in accordance with those instructions you would have allotted census house number to a building or to a part of a building.

34. If there is only one census house in the building, then the number of the census house will be the same as the building number, which will be repeated in this column.

35. If there be more than one census house in a building (as mentioned in paras 19 and 20), *e.g.*, in building No. 10, there are three census houses—then against the first census house, you will record "10(1)", for the second "10(2)" and for the third "10(3)" in this column. Column 2, Building number, will be entered in the first line only against which census house No. 10(1) would have been mentioned in Col. 3. Column 2 will remain blank against census house No. 10(2) and 10(3).

NOTE: You should *not* indicate them as 10/1 or 10/2, etc, as that would be followed in the allotment of a number to a new building not previously numbered that has come up after building No. 10.

Columns 4-5: Predominant construction material of census house.

36. In these columns you will have to note the materials of wall and roof.

Col. 4: *Material of wall*

37. Under this column, the material out of which the major portion of the walls of the house are made, as for example, grass, leaves, reeds, bamboo, unburnt bricks, mud, burnt bricks, stone, cement concrete, timber, etc., should be written. Where a house consists of separate structures each having walls made out of different materials, the material out of which the walls of the main portion of the house mostly used for living or sleeping are made, are to be recorded.

Col. 5: *Material of roof*

38. The material out of which most of the outer roofs, exposed to the weather and *not the ceiling* is made, *i.e.*, tiles, thatch, corrugated iron, zinc or asbestos cement sheets or concrete, slate, tiles, etc., should be written. In the case of a multi-storeyed building the intermediate floor or floors will be the roof of the lower floor. If the roof is mainly made of bricks, stone, etc., and has a mud plaster, cement plaster or lime plaster exposed to the sky, the material of roof in such cases will *not* be "mud", "cement", or "lime", respectively but it will be "bricks", "stone", etc., which constitute the fabric of the roof.

Col. 6: *Purpose for which census house is used, e.g., residence, shop, shop-cum-residence, business, factory, workshop, workshop-cum-residence, school, bank, commercial house, office, hospital, hotel, etc., or vacant*

39. The actual use to which a census house is put is to be recorded here keeping in mind the broad categorisation such as: (these are purely illustrative);

(1) Residence, shop-*cum*-residence, workshop-*cum*-residence.

(2) Factory/workshop and workshed, etc. Factory should be written if it is registered under Indian Factories Act. A 'workshop' is a place where any kind of production, repair or servicing goes on or where goods and articles are made and sold, but is not large enough to be a factory. It is not necessary that some machinery should exist. Even a place where some household industry (as defined in para 78) such as say, handloom weaving, *biri* rolling, *papad* making, toy making, etc., is carried on, it should be noted as a workshop here. If it is also used as a residence it should be noted as workshop-*cum*-residence. Make searching enquiry if a house is used for the purpose of production of any goods or engaged in some processing or repairing even on a Household Industry basis as these are not likely to be apparent to a casual observer.

(3) Shop: A shop is a place where articles are bought and/or sold on cash or for credit.

(4) Office, business house, bank, etc. Business house is that where transactions in money or other articles take place.

(5) Hospital, dispensary, Health centre, Doctor's clinic, etc.

(6) School and other educational institution.

(7) Hotel, *sarai*, dharamashala, tourist house, inspection house, etc.

(8) Restaurant, sweetmeat shop and eating place. (A sweetmeat shop where sweetmeat is being made and sold should be recorded as a Workshop.)

(9) Places of entertainment such as cinema house, theatre, community-gathering (Panchayatghar), etc.

(10) Place of workshop, *e.g.*, temple, church, mosque, gurudwara, etc.

(11) Institution such as orphanage, rescue home, jail, reformatory, children home, etc.

(12) Others *e.g.*, cattle-shed, garage, godown, laundry, petrol bunk, passenger shelter, etc., the exact use to be fully described.

(13) If the census house is found vacant, *i.e.*, if no person is living in it at the time of enumeration and it is not being used for any of the purposes listed above, write 'vacant' in the Col. If the census house is locked because the occupants have gone on journey or pilgrimage, then it may *not* be treated as "vacant", but the use to which it is put recorded here and the fact that the occupants have gone on a journey/pilgrimage, noted in the 'Remarks' column as "House locked, occupants on journey/pilgrimage, etc."

NOTE: The reason for vacancy such as 'dilapidated', 'under repair', 'incomplete construction', 'want of tenant', etc., may be recorded in the "Remarks" column.

Col. 7: *Is it used wholly or partly as an Establishment? Yes or No.*

If yes, enter further details in the Establishment Schedule and indicate the Serial No. of that entry here.

Definition of an Establishment

40. An "Establishment" is a place where goods are produced or manufactured not solely for domestic consumption or where servicing and/or repairing is done such as factory, workshop or household industry or servicing and/or repair workshop or a place where retail or wholesale business is carried on or commercial services are rendered or an office, public or private or a place of entertainment or where educational, religious, social or entertainment services are rendered. It is necessary that in all these places one or more persons should be actually working. Thus an establishment will cover manufacturing, trade and other establishments where people work.

Examples :

A factory or a workshop or workshop-*cum*-residence or a trading or other establishment, *i.e.*, where some kind of production, processing, repair or servicing is undertaken or where goods or articles are made and sold, or some business is being carried on such as a grocery shop, a *pan* shop, restaurant, bank, hotel, or an office is functioning such as Government office, commercial office, or an institution is being run such as school, college, hospital, dispensary, etc., and where one or more persons are working.

An Establishment may occupy a census house or a group of census houses or a part of a census house.

41. This column applies only in cases where the census house is used as an Establishment as defined above. Sometimes the act of production, processing or servicing may not be apparent especially if carried on as a household industry, *e.g.*, when a handloom is located inside a house and is not in operation at the time of enumerator's visit or if some other type of household industry such as *papad* making or toy manufacturing or *bidi* rolling, etc., is done, say in some interior portion of the house. You should make searching enquiries to see if any production, processing or servicing is done or any business is carried on or any institution is being run in any part of the house not readily seen from outside.

If 'Yes' is recorded here, go to the Establishment Schedule, and fill up further particulars in that Schedule. Please fill in the Serial No. of the entry as given in the Establishment Schedule in this column after 'Yes'.

42. It is possible that some kind of production or processing is undertaken in the house by the members of the household for *purely domestic consumption*. For example, hand pounding of rice, preparation of spices like, *haldi* (turmeric), chillies, etc., or say, knitting of woollen garments, embroidery work, loin-loom weaving and so on, meant for household use only and not for sale. In such cases, the house should not be treated as an 'establishment'.

COLUMNS 8 to 16

43. These columns will relate to census houses which are used wholly or partly as a residence. If, therefore, a particular census house is not being used for residential purposes at all even partly, as will be evident from entry in Col. 6, put 'X' in each of the columns 8 to 16.

Col. 8: *Household No.*

44. A 'household' is a group of persons who commonly live together and would take their meals from a common kitchen unless the exigencies of work prevented any of them from doing so. It may be made up of related or un-related persons. A cook or a servant living in the house of his employer and taking his food there is part of that household. A hostel where a number of un-related persons live together is an institutional household. So also a Jail.

45. There may be more than one household in a census house. Each household should be given a separate number. This can be done by using the alphabets as (a), (c), etc., as affixes to the census house No. For example, if building No. 2 is also a census house and has three households, the household numbers will be 2(a), 2(b) and 2(c). If building number 4 has two census houses, the houses will be numbered as 4(1) and 4(2). If within these houses there are respectively 3 and 2 households then they will be numbered as 4(1)(a), 4(1)(b), 4(1)(c) and 4(2)(a) and 4(2)(b) respectively. If , however, building No. 3 is also a census house and has only one household, the household No. to be entered in this column will be No. 3 only.

46. In the above cases of households Nos. 2(b), 2(c), 4(1)(b), 4(1)(c) and 4(2)(b), there will be no entries against them in Col 3 to 7. Cols. 3 to 7 will be filled for the entire census houses, 2, 4(1) or 4(2) as the case may be, once. There is no need to repeat Cols. 3 to 7 in each line for which entries are made for more than one household against that census house in Cols. 8 to 16.

Col. 9: *Name of the head of household*

47. The name of the Head of each household should be written. The Head of the household for census purposes is a person who is recognised as such in the household. He is generally the person who bears the chief responsibility for the maintenance of the household and takes decisions on behalf of the household. The Head of the household need not necessarily be the eldest male member, but may even be a female or a younger member of either sex. You need not enter into any long argument about it but record the name of the person who is recognised by the Household as its Head. In the case of institutions like boarding houses, messes, chummeries which should be regarded as households of un-related persons living together and which may be called Institutional Households, the manager or superintendent or the person who has administrative responsibility or who by common consent is regarded as the Head should be recorded as the Head of the household. In the case of an absentee *dejure* 'Head', the person on whom the responsibility of managing the affairs of the household falls at the time of enumeration, should be regarded as the Head.

Col. 10: *If S.C. or S.T., write name of caste/tribe*

48. You will have been furnished with a list of Scheduled Castes and Scheduled Tribes notified for your area. Ascertain if the head of the household belongs to a Scheduled Caste or a Scheduled Tribe and check whether the Caste/Tribe is scheduled as per your list. If so,

for Scheduled Caste write "S.C." and record name of caste,

for Scheduled Tribe write "S.T." and record name of tribe,

for others write "X"

For a household belonging to Scheduled Caste, check religion of the head of the household. He or she should be either a Hindu or a Sikh. There cannot be a S.C. in any other religion. Scheduled Tribes may belong to any religion.

49. In a case where the head of the household belongs to Scheduled Caste/Scheduled Tribe even if any other member of the household (except institutional households) does not belong to SC/ST then write SC/ST as the case may be and mention the Caste/Tribe to which he belongs. On the other hand if the head does not belong to SC/ST but any other member of the household does belong to SC/ST: write 'X' in this column.

50. In the case of all 'Institutional Households' write 'X' in this column irrespective of whether the head belongs to a S.C./S.T. or not.

Col. 11: *No. of living rooms in the occupation of census household*

51. A room should have four walls with a door way with a roof over head and should be wide and long enough for a person to sleep in, *i.e.*, it should have a length of not less than 2 metres and a breadth of at least 1½ metres, and 2 metres in height. An enclosed room, however, which is used in common for sleeping, sitting, dining, storing and cooking, etc., should be regarded as a room. An unenclosed verandah, kitchen, store, garage, cattle-shed and latrine and rooms in which a household industry such as a handloom is located which are not normally usable for living or sleeping, etc., are excluded from the definition of a room for the purpose of this column.

52. If, there is only one household in a census house the counting of rooms will not be difficult. But if a census house consists of a number of households, the number of rooms occupied by each household has to be entered against the name of each Head of household. In cases where a room is occupied by more than one household or they share more than one room, the number of rooms should be given together against a bracket as common to such household.

53. One is likely to come across conical shaped hut or tent in which human-beings reside. In such improvised accommodation, there will be no four walls to a room and, therefore, the above definition would not strictly apply to such types of accommodation. In such cases, the tent or conical hut, etc., may in itself be construed to be a room.

Col. 12: *Does the household live in owned or rented house ? (i) Owned (O), (ii) Rented (R)*

54. If a household is occupying a census house owned by itself and is not paying anything to anybody in the form of rent then the household may be considered as living in own house. This should be recorded by 'O'. A household living in a flat or a house taken on 'ownership' basis on payment of instalments, should be regarded as living in its own house, notwithstanding that all instalments have not been paid.

55. If the household lives in rented house write 'R'. A housing unit is rented if rent is paid or contracted for, by the occupants in cash or in kind. Where an owner permits a household to live in a house, rent free even then the household should be treated as living in a rented house. For example, rent free accommodation provided to employees by Government, Institutions, Companies, etc. In such cases, you should treat the house as rented and write 'R'.

Col. 13 *to* 15: *No. of persons normally residing in census household on day of the visit of the enumerator*

56. Enter the number of males normally residing in the household in column 13; females in col. 14 and total number of persons in column 15 (Col. 13+Col. 14).

57. In these columns normal residents are to be recorded even though some of them may be absent on the day of enumerator's visit. Casual visitors should be excluded as they will be considered at their respective places of normal residence. But a person who has stayed with the household for a period of 3 months or more should, however, be included. Correspondingly normal residents absent for over 3 months or more should be excluded from the household in which they normally reside.

Total of these columns should be struck at the end of each page and after completion of houselisting grand total of the block should be struck at the bottom of the last form.

Col. 16: *Does the household cultivate land*? (*Yes or No*)

58. If the household is cultivating any land then you have to record the answer 'Yes' otherwise 'No'. For determining whether a household is cultivating or not, it should be necessary to ascertain if one or more persons in the household are engaged in cultivation of land or supervision or direction of cultivation of land owned or held from Government or from private persons or Institutions for payment in money, kind or share. Encroachers, who cultivate land encroached upon will be regarded as cultivating households for the purposes of this column. If the household has a visitor who cultivates land elsewhere, it cannot be deemed that the household as such is a cultivating household, unless the Head/or other members of the household are engaged in cultivation of their own, the household should not be reckoned as a cultivating household. A household whose members merely work on somebody else's land for wages should not be treated as a cultivating household.

Col. 17: ***Remarks***

59. If there is an entry in Col. 6 as "Vacant", you have to record the reason such as "dilapidated", "under repair", "incomplete construction", "want of tenant", etc., in this column.

60. After you have completed filling up of the houselist for your block, you will prepare a duplicate copy of the houselist, for which you would be given adequate number of blank forms.

·9 . . .	4,444	711	178	44	11	5	2

Note: Given district size 'N' (i.c. total of table) and the percentage relative standard error (p.r.s.e.) to determine the size of a cell 'NP' where 'P' is the associated proportion.

(i) p.r.s.e. =20%

(ii) $N > 16567$, $NP = 100$

(iii) $4900 < N \leq 16567$, $NP = 99$

(iv) $900 \leq N < 4900$, NP corresponds to that of the nearest tabulated district size, e.g., if $N = 2879$, $NP = 2400 \times .04 = 96$

(v) For $N < 900$, let N_1P_1 and N_2P_2 be the cell size for the immediately larger (N_1) and immediately smaller (N_2) tabulated district sizes.

Then:—

$$NP = \frac{N_1P_1(N - N_2) + N_2P_2(N_1 - N)}{(N_1 - N_2)}$$

e.g., let $N = 527$, then $N_1 = 900$, $N_2 = 400$, $N_1P_1 = 90$ and $N_2P_2 = 80$.

By substitution $NP = 82:54$, i.e., 83 approximately.

(vi) Similar rules may be formulated for any other p.r.s.e. desired.

H-I

CENSUS HOUSES AND THE USES TO WHICH THEY ARE PUT

H-I CENSUS HOUSES AND THE USES TO WHICH THEY ARE PUT

FLY-LEAF

This table gives statistics of census houses according to the uses to which they are put for total, rural and urban areas separately for India, each state/union territory, districts and for each city with a population of 100,000 or more. The figures given in this table are unbiassed estimates of the characteristics based on a 20 per cent sample of census houses. These estimates have been worked out by multiplying the sample figures by 5. All the census houses whether occupied or vacant have been taken into account for the purpose of marking the 20 per cent sample. A technical note on the estimates of the various characteristics presented in the H-Series tables has been incorporated in the introductory note.

The data for this table were collected through column 6 of the houselist, viz., 'Purpose for which census house is used, e.g., residence, shop, shop-*cum*-residence, school, bank, commercial house, office, hospital, hotel, etc., or vacant'. The instruction to the enumerator on the mode of recording entries in this column was as follows:

The actual use to which a census house is put is to be recorded here, keeping in mind the broad categorisation such as [these are purely illustrative]

1. Residence. Shop-*cum*-residence, workshop-*cum*-residence.
2. Factory/workshop and workshed, etc. Factory should be written if it is registered under Indian factories act. A 'workshop' is a place where any kind of production, repair or servicing goes on or where goods and articles are made and sold, but is not large enough to be a factory. It is not necessary that some machinery should exist. Even a place where some household industry such as, say, handloom weaving, *biri* rolling, *papad* making, toy making, etc., is carried on, it should be noted as a workshop here. If it is also used as a residence, it should be noted as workshop-*cum*-residence. Make searching enquiry if a house is used for the purpose of production of any goods or engaged in some processing or repairing even on a household industry basis as these are not likely to be apparent to a casual observer.
3. Shop: A shop is a place where articles are bought and/or sold on cash or for credit.
4. Office, business house, bank, etc. Business house is that where transactions in money or other articles take place.
5. Hospital, dispensary, health centre, doctor's clinic, etc.
6. School and other educational institution.
7. Hotel, *sarai*, dharamashala, tourist house, inspection house, etc.
8. Restaurant, sweetmeat shop and eating place. (A sweetmeat shop where sweetmeat is being made and sold should be recorded as a workshop.)
9. Place of entertainment such as cinema house, theatre, community-gathering (Panchayatghar), etc.
10. Place of worship, e.g., temple, church, mosque, gurudwara, etc.
11. Institution such as orphanage, rescue home, jail, reformatory, children's home, etc.
12. Others, e.g., cattle-shed, garage, godown, laundry, petrol bunk, passenger shelter, etc. (the exact use to be fully described).
13. If the census house is found vacant, i.e., if no person is living in it at the time of enumeration and it is not being used for any of the purposes listed above, write 'vacant' in this column. If the census house is locked because the occupants have gone on a journey or pilgrimage, then it may not be treated as "vacant", but the use to which it is put recorded here and the fact that the occupants have gone on a journey/pilgrimage, noted in the 'Remarks' column as "House locked, occupants on journey/pilgrimage, etc."

NOTE: The reason for vacany such as 'dilapidated' 'Under repair' 'incomplete construction', 'want of tenant', etc., may be recorded in the "Remarks" column.

Census houses which were found vacant at the time of houselisting have been shown separately in column 4 of the table. It is difficult to describe all categories of houses that may have been returned as vacant because an enquiry as to the use to which the vacant house is usually put is extremely difficult in a mass operation of the size as houselisting or a country wide basis.

The data for the following categories of the uses to which the census houses are put are given in this table:

1. Residence

2. Shop-*cum*-residence
3. Workshop-*cum*-residence including household industry
4. Hotels, *sarais*, dharamashalas, tourist houses and inspection houses
5. Shops excluding eating houses
6. Business houses and offices
7. Factories, workshops and worksheds
8. Restaurants, sweetmeat shops and eating places
9. Places of entertainment and community gathering (panchayatghar) excluding places of workshop
10. Places of worship, e.g., temple, church, mosque, gurudwara, etc.

In addition to the above categories, a column has been earmarked for the residual uses under 'others' which includes garage, godown, gate-keepers, shed, cattle-shed, kitchen, baithak, educational institutions, public health and medical institutions, etc.

The term 'census house' has been defined in the introductory note of this book. Other terms signifying the uses in the ten categories mentioned above have the same meaning as they possess in common parlance.

This table corresponds to Table E-I of 1961, subject to certain changes. Most important among them is that educational, public health and medical institutions are not being shown separately in 1971. This is so because this information is available from the establishment table (E-Series) on a full-count basis.

H-I CENSUS HOUSES AND THE USES TO WHICH THEY ARE PUT

H—II

DISTRIBUTION OF CENSUS HOUSES BY PREDOMINANT MATERIAL OF WALL AND PREDOMINANT MATERIAL OF ROOF

TABLE H-II

DISTRIBUTION OF CENSUS HOUSES BY PREDOMINANT MATERIAL OF WALL AND PREDOMINANT MATERIAL OF ROOF

FLY-LEAF

This table gives statistics of the distribution of census houses according to their structural pattern as revealed by the predominant material of wall and the predominant material of roof. The data have been presented for total, rural and urban separately for India each state, union territory and their districts and corresponds to Table E-IV of 1961 with the difference that in 1971 the table has been prepared for census houses unlike in 1961 when it was done for census households. It also gives figures for all cities with a population of 100,000 and over. The figures given in this table are unbiassed estimates of the characteristics based on a 20 per cent sample of census houses. All the houses whether occupied or vacant were taken into account for the purpose of marking of sample. The estimates as mentioned earlier have been worked out by multiplying the sample figures by 5. A technical note on estimation has been incorporated in the introductory note.

This table is constructed from the material recorded in columns 4 and 5 of the houselist. The relevant instructions for filling up these columns are reproduced below:—

Columns 4 and 5: Predominant construction material of census house.

Column 4 : Material of wall

Under this column, the material out of which the major portion of the walls of the house are made as, for example, grass, leaves, reeds, bamboo, unburnt bricks, mud, burnt bricks, stone, cement concrete timber, etc., should be written. Where a house consists of separate structures, each having walls made out of different materials, the material out of which the walls of the main portion of the house mostly used for living or sleeping are made, are to be recorded.

Column 5 : Material of Roof

The material out of which most of the outer roofs, exposed to the weather (and not the ceiling) is made *i.e.*, tiles, thatch, corrugated iron, zinc or asbestos cement sheets or concrete, slate, tiles, etc., should be written. In the case of a multi-storeyed building the intermediate floor or floors will be the roof of the lower floor. If the roof is mainly made of bricks, stone etc., and has a mud plaster, cement plaster or lime plaster exposed to the sky, the material of roof in such cases will not be "mud", "cement", or "lime" respectively but it will be "bricks", "stone" etc., which constitute the fabric of the roof.

The census houses have been divided into the following nine categories according to the matrial of walls:—

(i) Grass, leaves, reeds or bamboo;
(ii) Mud;
(iii) Unburnt bricks;
(iv) Wood;
(v) Burnt bricks;
(vi) G. I. sheets or other metal sheets;
(vii) Stone;
(viii) Cement concrete and
(ix) All other material and materials not stated.

Similarly census houses have been divided into the following eight categories according to the predominant material of roof:—

(i) Grass, leaves, reeds, thatch, wood, mud, unburnt bricks or bamboo;
(ii) Tiles, slate, shingle;
(iii) Corrugated iron, Zinc or other metal sheets;
(iv) Asbestos cement sheets;
(v) Brick and lime;
(vi) Stone;
(vii) Concrete, R.B.C./R.C.C. and
(viii) All other materials and materials not stated.

The table has been supplemented with an appendix (appendix to table H-II) which cross-classified material of wall with material of roof. In this appendix, figures of certain materials of wall have been clubbed to represent figures for broad categories. Similarly figures for certain materials of roof have been combined.

The total number of residential houses as printed in the appendix will not tally with the sum total of the houses falling in the categories, residence, shop-*cum*-residence and workshop-*cum*-residence including household industry as printed in Table H-I because residential census houses in the appendix includes combination of residence with other uses also, such as temple-*cum*-residence, dispensary-*cum*-residence, school-*cum*-residence, etc. These uses have been included in the residuary group 'others' in Table H-I. The appendix has been prepared for India, each state and union territory.

H-II DISTRIBUTION OF CENSUS HOUSES BY PREDOMINANT MATERIAL OF WALL

H-III

HOUSEHOLDS CLASSIFIED BY NUMBER OF MEMBERS AND BY NUMBER OF ROOMS OCCUPIED

H-III HOUSEHOLDS CLASSIFIED BY NUMBER OF MEMBERS AND BY NUMBER OF ROOMS OCCUPIED

FLY-LEAF

This table gives statistics of the households by the number of rooms occupied and also shows the number of persons living in such households. It corresponds to Table E-V of 1961 excepting that additional information about households with unspecified number of rooms and households with details unspecified are being given in 1971. The number of rooms in the table stands for the number of living rooms. It presents data for total, rural and urban separately for India, each state, union territory and their districts. It also gives figures for each city having a population of 100,000 and above. The figures given in this table are *unbiased estimates of the characteristics based on a* 20% sample of census houses. All the households located in the sample houses were included in the sample table. But institutional households have been excluded from the data processed for the purpose of this table. As already mentioned in earlier fly-leaves these estimates have been derived by multiplying the sample figures by 5.

This table has been constructed from the details recorded in columns 11, 13, 14 and 15 of House list. The instructions for filling up these columns were as follows:—

Column 11 : *No. of living rooms in the occupation of census household.*

A room should have four walls with a doorway, with a roof over head and should be wide and long enough for a person to sleep in, i.e., it should have a length of not less than 2 metres and a breadth of at least 1½ metres, and be 2 metres in height. An enclosed room, however, which is used in common for sleeping, sitting, dining, storing and cooking, etc., should be regarded as a room. An unenclosed verandah, kitchen, store, garage, cattleshed and latrine and rooms in which a household industry such as a handloom is located which are not normally usable for living or sleeping, etc., are excluded from the definition of a room for the purpose of this column.

If there is only one household in a census house, the counting of room will not be difficult. But if a census house consists of a number of households, the number of rooms occupied by each household has to be entered against the name of each head of household. In cases where a room is occupied by more than one household or they share more than one room, the number of rooms should be given together against a bracket as common to such households.

One is likely to come across conical shaped huts or tents in which human beings reside. In such improvised accommodation, there will be no four walls to a room and, therefore, the above definition would not strictly apply to such types of accommodation. In such cases, the tent or conical hut, etc., may in itself be construed to be a room.

Columns 13 *to* 15 : *No of persons normally residing in census household on day of the visit of the enumerator.*

Enter the number of males normally residing in the house-hold in column 13; females in col. 14 and total number of persons in column 15 (Col. 13+ Col. 14.)

In these columns normal residents are to be recorded even though some of them may be absent on the day of enumerator's visit. Casual visitors should be excluded as they will be considered at their respective places of normal residence. But a person who has stayed with the household for a period of 3 months or more should, however, be included. Correspondingly, normal residents absent for over 3 months or more should be excluded from the household in which they normally reside.

Total of these columns should be struck at the end of each page and after completion of houselisting grand total of the block should be struck at the bottom of the last form.

The households have been divided into the following seven ranges depending on the number of rooms in occupation.

(i) Households with one room;
(ii) with two rooms;
(iii) with three rooms;
(iv) with four rooms;
(v) with five rooms and above;
(vi) Households with unspecified number of rooms; and
(vii) No. of households with details unspecified.

The sex-wise break-up of the total number of members of households falling in categories I to VI are given in the table. Columns 22-24 include figures of households which have no regular rooms.

It has been observed in the case of some of the states/union territories that number of members have come out to be less than the number of households in the category "Households with unspecified number of rooms". This may be because the households were away on pilgrimage, tour, etc., at the time of houselisting and the number of members could not be ascertained.

H - IV

HOUSEHOLDS CLASSIFIED BY SIZE AND TENURE STATUS

H-IV HOUSEHOLDS CLASSIFIED BY SIZE AND TENURE STATUS

FLY-LEAF

This table shows the distribution of census households by tenure status, cross-classified by size of households. It somewhat corresponds to Table E-II of 1961 Census. In 1961 Census households living in census houses used wholly or partly as dwelling were classified by tenure status, whereas in this table census households with number of members will be cross-classified by tenure status. The table has been prepared for total, rural and urban separately for India, each state, union territory and their districts. Additionally it covers the data for each city having a population of 100,000 and over. The figures given in this table are again unbiased estimates of the characteristics based on a 20% sample of census houses. All households falling in the sample houses have been included in the sample table. The figures of institutional households have been excluded from this table. As already mentioned in the introductory note, the estimates have been obtained by multiplying the sample figures by 5.

The relevant census questions and instructions to fill them up were as follows:

Column 12 of Houselist

Question: Does the household live in owned or rented house : (i) Owned (O) (ii) Rented (R)?

If a household is occupying a census house owned by itself and is not paying anything to anybody in the form of rent, then the household may be considered as living in own house. This should be recorded by 'O'. A household living in a flat or a house taken on 'ownership' basis on payment of instalments, should be regarded as living in its own house, not withstanding that all instalments have not been paid.

If the household lives in rented house, write 'R'. A housing unit is rented if rent is paid or contracted for, by the occupants in cash or in kind. Where an owner permits a household to live in a house, rent free even then the household should be treated as living in a rented house. For example, rent free accommodation provided to employees by government, institutions, companies, etc. In such cases, you should treat the house as rented and write 'R'.

The households shown in this table have been classified into the following size of ranges:

(i) One person;

(ii) Two persons;

(iii) Three persons;

(iv) Four persons;

(v) Five persons;

(vi) Six and more persons; and

(vii) Number of persons unspecified.
