PART II-C (ii)

SOCIAL AND CULTURAL TABLES

(Tables C-I to C-VI & Fertility Tables)

V. S. VERMA

OF THE INDIAN ADMINISTRATIVE SERVICE

Director of Census Operations, Rajasthan

PREFACE

Some fundamental, social and cultural aspects of population, which are of basic importance in the analysis of Census data with a view to making it more meaningful for demographic and sociological interpretation are the subject-matter of this book. The tables presented in this volume relate to the composition of households by relationship to the head of household, classified by age-groups at urban and rural levels ; age and marital status at district level ; age, sex and education for all areas at district level and separately for urban areas ; single year age returns at the State level ; mother tongue upto tehsil and town levels ; and, bilingulism at the State level. Five, F-series tables based on fertility of currently married women have also been presented in this volume at the State level.

My sincere thanks are due to Shri V. S. Verma, the then Director of Census Operations of Rajasthan under whose able guidance and stewardship, the 1971 Census Operations were conducted in Rajasthan successfully. I would also like to acknowledge my gratitude to Shri U. B. Mathur, the then Deputy Director, Census Operations, and Sarvshri S. R. Luhadia and R. C. Bhargava, Assistant Directors for supervising the preparation of the tables and making this volume press worthy.

I am greatly indebted to Shri A. Chandra Sekhar and Shri R. B. Chari, Ex-Registrar-Generals of India for their valuable guidance and support. I am also grateful to Shri K. K. Chakravorty, Assistant Registrar General, India for expeditiously scrutinising the tables and for valuable suggestions.

Several persons of this office listed overleaf have laboured hard in the processing of the data presented in this volume.

My thanks are also due to the Deputy Controller, Printing and Stationery Department, Union Territory, Chandigarh, for the printing of this volume.

Rambagh Palace Annexe,
Jaipur.

Dated 15th August, 1981.

I. C. SRIVASTAVA,
Director,
Census Operations, Rajasthan,
Jaipur.

INTRODUCTION

The Social and Cultural Tables of the 1971 Census are being published in two volumes. viz., Part II-C(i) and Part II-C (ii). In Part II-C (i), two full-count tables based on data pertaining to Religion and Scheduled Castes and Scheduled Tribes have been given, while in this Part II-C(ii) volume remaining Social and Cultural Tables and Fertility Tables prepared on sample basis have been reproduced.

Each of the tables presented in this Volume has been preceded by a fly-leaf which provides a gist of the table as also the scheme of its presentation. The procedure followed for sampling and estimation are given in separate notes after this introduction.

Social and Cultural Tables

C-VII Table on Religion and C-VIII Table on Scheduled Castes and Scheduled Tribes prepared on full count were published in volume Part II-C(i). In this volume table C-V which has been prepared on full count basis and the remaining tables on 10 per cent sample for rural areas and 20 per cent sample for urban areas have been given. These tables are listed below :

C—Social and Cultural Tables

1.	Table C-I Part A	.. Members of households by relationship to head of Household classified by Age-group for State and districts.
2.	Table C-I Part B (i) and B (ii)	Households where the head is a Male/Female by relationship of members with the head for State and districts.
3.	Table C-II	Age and Marital status for State and districts.
4.	Table C-III Part A	.. Age, Sex and Education in all Areas
5.	Table C-III Part B	.. Age, Sex and Education in Urban Areas only.
6.	Table C-IV	Single Year Age returns (State level only).
7.	Table C-IV (Appendix)	Distribution of persons by five year age-group for State and districts.
8.	Table C-V Part A(i)	Distribution of Languages (inclusive of mother tongues grouped under each) specified in Schedule VIII to the Constitution of India for State and districts.
9.	Table C-V Part A (ii)	Speakers of Languages/Mother tongues (inclusive of mother tongues where grouped) specified in Schedule VIII to the Constitution of India for districts, taluks and city/towns.
10.	Table C-V Part B (i)	Speakers of Languages/Mother tongues (inclusive of mother tongues where grouped) other than those specified in Schedule VIII to the Constitution of India for State and districts.
11.	Table C-V Part B(ii)	Speakers of Languages/Mother tongues (inclusive of mother tongues where grouped) other than those specified in Schedule VIII to the Constitution of India for districts, taluks and city/towns.
12.	Table C-VI	B-illingualism (State level only).

FERTILITY TABLES

These tables are mainly based on the information collected through two questions canvassed for the first time at the 1971 Census in respect of all currently married women. These questions are (a) age at mariage , (b) any child born in the last one year. These data are helpful for calculating the crude birth rate and finding out the fertility level. It is also necessary to relate the number of births to the age of the mother at the time of each child birth. This gives at the age specific fertility level for a better understanding of the process of population growth than the mere birth rate per 1,000 persons. For this purpose the data about the number of children born to all married women and the ages of the mothers at each birth are required. The question on age at marriage provides information as to the productive life of women and the second question i.e., any child born during last one year helps to have an idea about the reproductive performance of mothers at a given age. A part from these purely demographic considerations, the information on age at marriage is also important from sociological point of view since it helps to know if with the passage of time, the average age at marriage of girls is increasing and if so, what are the implications of such an increase.

The instructions given to enumerators for filling these two questions were as follows :

"Q. 6. For currently married women only.

This question has to be answered in respect of all currently married women only, i.e., all women whose marital status is shown as 'M' against Q. 5. For all others a cross may be put through the two sub-parts of this question.

6. (a) Age at Marriage.

You should ascertain the age at which the currently married women whom you are enumerating was married and record that age in completed years. If the currently married women had been married more than once, the age at which she got married for the first time should be recorded.

6. (b) Any child born in the last one year.

You should ascertain if the currently married women whom you are enumerating gave birth to a child in the last one year prior to the date of enumeration. Since it may be difficult for a person to reckon the exact year with reference to the English calendar dates. the period of one year may be ascertained with refernce to a well known festival day which falls close to February-March, as determined by the Census Director of the State. You should ask if a child was born on or after this festival day last year to the date of enumeration. Only if the child was born alive, even if the child has died soon after birth should the answer be 'Yes' to this question. Still birth, i.e. a child which is born dead should not be t aken into account for this purpose. So while you should make sure that every case of birth of child born alive, even if it is not alive on the date of enumeration is reported, you should not reckon it if the child was born lifeless.

It is common experience that the birth of the child may not be reported readily if the child is not actually surviving at the time of enumeration. Infant deaths are still high in the country. There is a chance of a number of such cases being missed unless specifically questioned about them. It is necessary to record all live births even if the child had died soon thereafter or had not survived to the day of enumeration. Therefore where the initial answer to this question is 'No', you should ask a specific question if there has been a case of child having been born alive in the last one year and later dying before the enumeration date. This is a delicate question and should be asked with tact in a manner not to offend the sensibility of the respondent. Where a currently married woman first answers that she had no child born in the last one year you may perhaps question her as follows :

> "It has been found in some houses that a child was born and hao died soon after or a few days or months later and such cases had not been reported. It is my hope that there are no such cases here. Am I right?"

This may bring in the required response. If she reported 'No' then you can be sure that no birth has been missed. You have to make sure that any live birth that has occurred to the currently married woman in the last one year is netted whether the child is surviving till the date of enumeration or not. Similarly, probe to eliminate still births may be necessary. For example, when the answer is 'Yes' under Q. 6 (b) the enumerator might ask if the child is here in this house. If the answer is 'Yes' no further question is needed, If 'No' the enumerator might ask where he has gone. The answer may be 'dead' or he has gone elsewhere. If 'dead' then the enumerator might ask when did the child die and this will bring out the fact whether or not it was a still birth.

Write 'Yes', if the currently married woman had given birth to a live child from the prescribed festival day last year to the date of enumeration or 'No', if she had not. In case of twin or multiple births, write 2, 3, etc. as the case may be within round brackets after the entry 'Yes'.

Note : You may find on your revisional round from 1st to 3rd March, 1971 that a child is born to a married woman in a household after your last visit but before the sunrise of 1st March, 1971. You will have to take this into account and correct the answer against the Q. 6 (b) accordingly. You must enquire specifically if any such birth has taken place. While ignoring still births all other births where the child was born alive even if it did not survive long should be taken into account".

The following five tables prepared on the basis of information so collected on the fertility of currently married women have been given in this volume :—

F—Fertility Tables (State level only)

1. Table F-I	Distribution of currently married women and the related births during the last year by religion, present age and age at marriage. (Part A for Rural areas and Part B for Urban areas).
2. Table F-I (Appendix)	Distribution of currently married women and the related births during the last year by S.C./S.T., present age and age at marriage (Rural/Urban).
3. Table F-II	Distribution of currently married women and the related births during the last year by education, present age and age at marriage (Part A for Rural areas and Part B for Urban areas).
4. Table F-III	Distribution of currently married women and the related births during the last year by religion, duration of marriage and age at marriage (Part A for Rural areas and Part B for Urban areas).
5. Table F-III (Appendix)	Distribution of currently married women and the related births during the last year by S.C./S.T., duration of marriage and age at marriage (Part A for Rural areas and Part B for Urban areas).
6. Table F-IV	Distribution of currently married women and the related births during the last year by education, duration of marriage and age at marriage (Part A for Rural areas and Part Bfor Urban areas).
7. Table F-V	Distribution of currently married women and the related births during the last year by religion, education groups, present age and age at marriage. (Part A for Rural areas and Part B for Urban areas).

A NOTE ON THE SAMPLING PROCEDURE (FOR C SERIES TABLES)

Sample size : A ten percent sample of the slips was selected linear systematically with a random start from the individual slips relating to the rural parts of a tehsil. In the urban part of the district, a twenty percent systematic sample of the individual slips was selected with a separate random start. The sample sizes were adopted on consideration of required precision, available resources and operational convenience.

Selection procedure : The sample design adopted in the 1971 census was a stratified systematic sample of individual slips. For the purpose of sample selection, each district was divided into three sub-regions : (1) Tehsil (rural) ; (2) Non-city urban district and (3) City (urban unit with 100,000 and more population).

These sub-regions were termed as operational units. If, however, any of the operational unit was unduly large, it was split into sub-operational units of at least 20,000 persons. Similarly, small-sized operational units were either clubbed together or tagged on to a contiguous larger unit so as to form an "effective operational unit" of the required minimum size. Adoption of these operational units ensured accuracy in sample selection, maintaining at the same time stability in the sampling fraction within the sampled areas. This procedure has ensured effective control over sample selection within each block, as also in the entire operational unit.

For the purpose of the Primary census abstract (PCA) the individual slips were sorted into a ten broad industrial categories and nine broad age groups for each of the sexes. The ten industrial categories of workers and non-workers were as follows : (I) Cultivators ; (II) Agricultural labourers ; (III) Livestock, forestry, fishing, hunting and plantations ; orchards and allied activities; (IV) Mining and quarrying ; (Va) Manufacturing, processing , servicing and repairs in **household industry** ; (Vb) Manufacturing , processing, servicing and repairs in **other than household industry** ; (VI) Construction ; (VII) Trade and commerce ; (VIII) Transport, storage and eommunications (IX) Other services and (X) Non-workers.

The nine age-groups into which the slips belonging to each industrial category were sorted were 0—14, 15—19, 20—24, 25—29, 30—39, 40—49, 50—59, 60+and 'age not stated'. Thus the individual slips of a particular operational unit were sorted into $11 \times 9 = 99$ cells, separately for males and females. Sampling was done in each of the operational units independently by taking separate random starts. The slips were then distributed into 10 (or 5) pigeon-holes for rural/urban samples and one pigeon-hole was selected at random. The slips falling in the selected pigeon-hole constituted the sample. For operational details of the sampling procedure and instructions, the 'Manual of instructions on sorting, compilation (manual processing) and sampling procedures' may be consulted. All tables except A-I to A—V (Pop. tables), B-I Part A-B II (economic tables), CV (mother tongue) , C-VII (Religion) and C—VIII (scheduled castes and tribes) have been prepared on a sample basis.

Estimation procedure : The tables prepared for each of the districts/states from the ten per cent rural and twenty per cent urban sample slips have been inflated to give the final estimated tables. Estimates have been obtained by making use of the cell frequencies (usually labelled as 'controls') available from the tables prepared on full count basis, namely, PCA and B-I Part A. In order to ensure the maximum possible inter-table consistency, it became necessary to use the estimated frequencies of a few of the final tables as controls for estimating some cell frequencies of other tables.

This way of estimating the cell frequencies ensured that marginal totals of estimated tables allied with that of the full-count tables. This is convenient to the user because after adjustment, the identical marginal totals are found in tables having the same marginal specifications. "The adjustment diminishes the sampling variance to some extent ; the more the controls, the smaller the sampling variance of the adjusted frequencies[1]". Further, adjustment to known control totals has at the same time the effect of eliminating basis in the nature of inherent differences between the sample and complete count.

For the purpose of estimation of final tables, a set of multipliers was prepared for each table. A multiplier is the ratio of full-count frequency of some characteristics from PCA or Table B-I Part A and the corresponding sample frequency of the same characteristics from the sample table. The following statement gives the level of presentation of the tables and the related controls on which the multipliers are based. The details will be presented in the report on sampling procedures to be published later :—

Table	*Level of presentation*	*Control based from tables*
C II	District	B I Pt A & PCA
C III A	Do	,,
C III B	Do	,,
C IV	State	,,
C IV App.	District	,,

As on such control was readily available for C VI (bilingualism,) these were estimated by multiplying the sample values by 10 and 5 in rural and urban areas respectively .

Reliability of estimates : No exact formula can be given for the precision of the estimates in view of the systematic sampling design adopted. The relative standard error can be estimated roughly on the basis of sample random sampling, as $\sqrt{(1-f)\frac{1-p}{np}}$, where 'f' is the proportion samples, (0·10 in case of rural areas and 0·20 in case of urban areas; 1·p' is the estimated proportion in any cell and 'n' the sample size being equal to ten per cent of individual slips in rural areas and twenty per cent in urban areas. In the present census, slips were sorted by sex, industrial category and age-group before sampling, It is expected that the efficiency must be considerably higher than a simple random sample of identical size. Extensive studies conducted have indicated that systematic sampling of individuals is more efficient than random sampling especially when the slips were pre-sorted for most of the socio-economic characteristics-covered in a census[2]. Thus the estimates prepared on the basis of the systematic sampling in the present census can be exepected to be quite reliable.

A NOTE ON THE SAMPLING PROCEDURE ADOPTED IN 1971 CENSUS FOR C-I PART A, C-I PART B(I) AND C-I PART B(II)

Sample size : For the preparation of tables C-I Part A, C-I Part B(i) and C-I Part B(ii) on household composition, a sample of residential households was drawn in two stages. In the first stage, a twenty per cent systematic sample of effective enumeration blocks (defined later) was selected systematically. In the second stage, a twenty per cent sample of population records relating to residential households was selected from each of the sample block. again systematically.

Selection procedure : For the purpose of sample selection, the rural and urban parts of each district were treated as separate strata. Within each stratum, a list of blocks was prepared by merging those containing less than 50 households with the neighbouring blocks. Blocks formed in this way were called 'effective enumeration blocks' or simply 'effective blocks'. The list of effective blocks so formed served as a frame for the selection of the first stage unit. A twenty per cent sample of effective blocks was then selected systematically. Having identified the first stage units, the population record books for the selected effective blocks were assembled. Within each selected effective block, the population records relating to residential households were serially numbered. To do this effectively, instructions were issued to fold the population record relating to 'houseless households or institutional households'. Care was also taken to see that only one serial number was assigned to a population record, whenever the record relating to a household covered more than one page. In cases where 'effective blocks' were formed by merging two or more blocks, the population record books corresponding to all the census enumerations blocks constituting the effective block, were assembled together and then the households were selected. Fresh random numbers were selected for each effective block. The population records corresponding to the selected households were marked 'S' at the right hand top corner with a stamp provided.

Estimation procedure : The tables prepared for each of the stratum were multiplied uniformally by 25 to give the final estimated table.

A NOTE ON THE SAMPLING PROCEDURE (FOR F SERIES TABLES)

Sample size : A ten per cent sample of the slips was selected linear systematically with a random start from the individual slips relating to the rural parts of a tehsil. In the urban part of the district, a twenty per cent systematic sample of the individual slips was selected with a separate random start. The sample sizes were adopted on consideration of required precision, available resources and operational convenience.

Selection procedure : The sample design adopted in the 1971 census was a stratified systematic sample of individual slips. For the purpose of sample selection, each district was divided into three sub-regions : (1) Tehsil (rural) ; (2) Non-city urban district and (3) City (urban unit with 100,000 and more population).

These sub-regions were termed as opeational units. If, however, any of the operational unit was unduly large, it was split into sub-operational units of at least 20,000 persons. Similarly, small sized operational units were either clubbed together or tagged on to a contiguous larger unit so as to form an "effective operational unit" of the required minimum size. Adoption of these operational units ensured accuracy in sample selection, maintaining at the same time stability in the sampling fraction within the sampled areas. This procedure has ensured effective control over sample selection within each block, as also in the entire operational unit.

For the purpose of the Primary census abstract (PCA) the individual slips were sorted into ten broad industrial categories and nine broad age groups for each of the sexes. The ten industrial categories of workers and non-workers were as follows : (I) Cultivators ; (II) Agricultural labourers ; (III) Livestock, forestry, fishing, hunting and plantations, orchards and allied activities (IV) Mining and quarrying ; (Va) Manufacturing, processing, servicing and repairs in household industry ; (Vb) Manufacturing, processing, servicing and repairs in other than household industry ; (VI) Construction ; (VII) Trade and commerce ; (VIII) Transport, storage and communications ; (IX) Other services and (X) Non-workers.

The nine age-groups into which the slips belonging to each industrial category were sorted were 0—14, 15—19, 20—24, 25—29, 30—39, 40—49, 50—59, 60 + and 'age not stated'. Thus the individual slips of a particular operational unit were sorted into $11 \times 9 = 99$ cells, separately for males and females. Sampling was done in each of the operational units independently by taking separate random starts. The slips were then distributed into 10 (or 5) pigeon-holes for rural/urban samples and one pigeon-hole was selected at random. The slips falling in the selected pigeon-hole constituted the sample. For operational details of the sampling procedure and instructions, the 'Manual of instructions on sorting, compilation (manual processing) and sampling procedures' may be consulted.

Estimation procedure : All the tables FI to FV are presented at state level. The sample table FI to FV have been multipled by '10' in case of rural area and by '5' in case of urban area to estimate the final tables.

Reliability of estimates : No exact formula can be given for the precision of the estimates in view of the systematic sampling design adopted. The relative standard error can be estimated roughly on the basis of simple random sampling, as $\sqrt{(1-f)\frac{1-p}{np}}$ where 'f' is the proportion samples, (0.10 in case of rural areas and 0.20 in case of urban areas); (8 'p' is the estimated proportion in any cell and 'n' the sample size being equal to ten per cent of individual slips in rural areas and twenty per cent in urban areas. In the present census, slips were sorted by sex, industrial category and age-groups before sampling. It is expected that the efficiency must be considerably higher than a sample random sample of identical size. Extensive studies conducted have indicated that systematic sampling of individuals is more efficient than random sampling especially when the slips were pre-sorted for most of the socio-economic characteristics covered in a census. Thus the estimates prepared on the basis of the systematic sampling in the present census can be expected to be quite reliable.

TABLE C-I PART A

MEMBER OF HOUSEHOLD BY RELATIONSHIP TO HEAD OF HOUSEHOLD CLASSIFIED BY AGE-GROUP

This table based on 20 percent sample has been prepared for total, rural and urban population at the state and district levels. It gives the composition of the households by relationship to the head of the household classified by three broad age-groups viz., less than 30, 30—49 and 50+ and above. Related and unrelated members of the households and the single member households are shown separately. The relationship to the head of the household is given for sons, brothers, son's wife, brother's wife, daughter, sister, daughter's husband, sister's husband, father, mother and other male and female members separately for married persons and for other marital status combined. Among the married relations, the spouses of the heads of the household are also given separately.

This table is of great sociological interest as it indicates the extent of the joint family system. The age distribution of the heads of the household and their relations classified by martial status is of great utility in studying the future trend of the joint family system.

This table corresponds to some extent to Table C-I of 1961 Census which was presented on 20 percent sample for total, rural and urban population separately. The relationship to the head was then shown as "Married sons" and "other married relations" and were not classified by broad age-groups.

C-I PART A—MEMBER OF HOUSEHOLD BY RELATIONSHIP TO

State/ District	Age-group of the Head of Household	Number of members by: Heads of Households		Total Number of House-holds	Total Household Population		Spouses of Heads of Households		Married relations of Heads		
		Males	Females		Males	Females	Males	Females	Son	Brother	Father

TABLE C-I PART B

HOUSEHOLDS WHERE THE HEAD IS A MALE/ FEMALE BY RELATIONSHIP OF MEMBERS WITH THE HEAD

This table is prepared in two parts. Part (i) relates to households where the head is a male while Part (ii) deals with those having a female head. Both these parts taken together corresponds largely to Table C-I of 1961 Census. It gives composition of households where the head is male/female by relationship of members with the head of the household. This table is also based on 20 percent sample and is prepared at the state and the district level. The data will be of much interest to sociologists as it reveals composition of households having married relations also.

C-I PART B (i) HOUSEHOLDS WHERE THE HEAD IS A MALE

State/District	Total Population	Total Number of Households	Single Member Households	Households with Spouse living therein	Households having currently

TABLE-CII

AGE AND MARITAL STATUS

This table which corresponds to Table C-II of 1961 (prepared on full count), is an important demographic table which has been prepared from 10 and 20 percent sample for rural and urban areas respectively. It gives the distribution of population both by age-groups and marital status separately for total, rural and urban areas at the state and the district levels.The population has been distributed into 14 age-groups, further classified by types of marital status. The age-groups followed in this table largely conform to the international requirements recommended by the United Nations Organisation. All persons falling in age-group 0-9 have been treated as "Never Married" for the purpose of this table.

This table is useful for studying the trends in the age at marriage. The data compiled here can also be used for studying mortality in different marital status and also in different age-groups. The data on married females by age-groups can well be utilised for forecasting the future births from age specific birth rates.

TABLE C-III

AGE, SEX AND EDUCATION

This table, which corresponds to Table C-III of 1961 Census (prepared or full count) with slightly different educational levels and age-groups, gives the distribution of population by broad educational levels, sex and age-groups. It has been prepared from 10 and 20 per cent sample for rural and urban areas respectively at the state and the district levels. The table has been compiled in two parts. Part A relates to total areas while Part B deals with urban areas. The age-groups are 0—4, 5—9, 10—14, 15—19, 20—24, 25—34 and 35+. The educational levels are the same in both the parts and correspond to Table B-III Part A and B-III Part B of 1971 Census.

This table can be utilised to measure the growth of literacy in the total population as a whole as well as in the urban areas and in the different age-groups since the last Census. The table is of special interest to the educational authorities for future planning and also to study the public attitudes towards the adult education.

Age-group	Total Population			Illiterate		Literate (without educational level)		Educational: Primary

TABLE C-IV

SINGLE YEAR AGE RETURNS

This table which corresponds to Table C-IV of 1961 (prepared on full count) is prepared at the State level separately for total, rural and urban areas. The table is based on 10 and 20 per cent sample for rural and urban areas. respectively. The data in this table is presented for each age starting from age 0. The infants below one year have been shown against age 0.

The data presented in this very important demographic table is useful for the census Actuary for computing mortality rates from the age data of the earlier censuses and for the preparation of life tables. It also provides data for studying bias in age returns at the Census.

An appendix to this table, prepared at the district level separately for total, rural and urban areas gives information at five year age interveels.

TABLE C-V

MOTHER TONGUE

THIS table prepared on full count corresponds to the All-India Language tables of the Census of India 1951 published in Census of India Paper I of 1954 and the language tables C-V of the Census of India 1961 published in Volume I Part II-C(ii)-Language tables, and in volume XIV-Rajasthan Part II-C(i)-Social and cultural tables. The definition of Mother-Tongue and the instructions to enumerator's for filling up this question are given in the extracts of Instructions to Enumerators appended elsewhere in this volume.

The table has been compiled in two parts, namely Part A-Distribution of languages (inclusive of mother-tongues grouped under each) specified in Schedule VIII to the Constitution of India and Part B- Speakers of languages/ mother-tongues (inclusive of mother-tongues where grouped) other than those specified in Schedule VIII to the Constitution of India.

Table C-V Part A is prepared in two sections: (i) shows the distribution of speakers of langua ges (inclusive of mother-tongues grouped under each) specified in Schedule VIII to the Constitution of India for the State and its districts separately for total, rural and urban areas cross-classified by sex, and (ii) gives the distri bution of speakers of these languages for all the districts, tehsils and t owns in the State for total areas only, cross-classified by sex. The data for the rural areas of the tehsil are not presented but can be derived by substracting data in respect of towns within the tehsil from the total tehsil figures.

Table C-V Part B presents speakers of languages/mother-tongues (inclusive of mother-tongues where grouped) other than those shown under Part A for the State, districts, tehsils and towns. This table is also being presented in two sections. (i) showing the speakers of these languages/ mother-tongues for the State and its districts for total, rural and urban areas cross-classified by sex and (ii) showing the distribution of these languages/ mother-tongues for total areas of districts, tehsils and towns cross-classified by sex.

In both the parts A and B, mother-tongues have been grouped in some cases under the relevant language(s). This has been done on the basis of information readily available or in the light of studies already made. Those 'identifiable' mother-tongues which returned 10,000 or more speakers each at the all-India level have been grouped in parts A and B as shown below: —

Part A

Hindi	..	Awadhi; Bagri-Rajasthani; Banjari; Bhojpuri; Braj- Bhasha; Bundelkhandi; Chhattisgarhi; Dhundhari; Garhwali; Harauti; Jaipuri; Kangri; Khairari; Kumauni; Lamani/Lamba i ; Magadhi/ Magahi; Maithili; Malvi ; Marwari; Mewari; Mewati; *Pahari; Rajasthani; Sondwari
Sindhi	..	Kachchhi

Part B

Bhili/Bhilodi	..	Garasia; Wagdi
Bodo/Boro	..	Kachari
Lahnda	..	Multani

All other mother-tongues falling under Part B and which returned less than 10,000 speakers each at the all-India level or were not 'identifiable' on the basis of information available as of date are included in the category ' Others' occurring as the last entry in Part B.

*Pahari is a combination of various speeches spoken over long stretches of areas where the speakers preferred to give a general name as Pahari. Similar is the case with NAGA appearing in table C-V Part B and marked by asterisk therein.

Footnotes:

1. Hanumangarh Town Outgrowth (District Ganganagar) consists of the urbanised though non-municipalised portion of 3 NWN village.
2. Suratgarh Town Outgrowth (District Ganganagar) consists of the urbanised though non-municipalised portion of Suratgarh village.
3. Gangapur Town Outgrowth (District Sawai Madhopur) consists of the urbanised though non-municipalised portion of Gangapur village (Railway Colony).
4. Man Town Outgrowth (District Sawai Madhopur) consists of the urbanised though non-municipalised portion of Chak-Chainpura village (Cement Factory).
5. Phulera Town Outgrowth (District Jaipur) consists of the urbanised though non-municipalised portion of Phulera village (Railway Colony).
6. Bandikui Town Outgrowth (District Jaipur) consists of the urbanised though non-municipalised portion of Bandikui village (Railway Colony).
7. Ajmer city Outgrowth (District Ajmer) consists of the urbanised though non-municipalised portion of Ajmer village (Regional College).
8. Lakheri Town Outgrowth (District Bundi) consists of the urbanised though non-municipalised portion of Lakheri village (A.C.C. Factory).

TABLE C-VI

BILINGUALISM

This table corresponds to Table D-I Part II of the 1951 and C-VI of the 1961 Censuses.

In this table, data on Bilingualism are presented only for selected languages/ mother-tongues. The selection of these languages/mother-tongues has been done on the basis of all India table C-VI-Bilingualism of 1961 and a list of languages/mother-tongues was devised for all India. This list formed the basis for preparing the table on Bilingualism as estimated from the processing of 10% rural and 20% urban sample slips. The rural table was processed manually and the urban table on the computer. The estimated table for rural and urban areas as pooled are presented here.

Columns 2, 3 and 4 of the table give the total number of speakers of languages/mother-tongues inclusive of mother tongues grouped under it. Columns 5, 6 and 7 give figures of such of the speakers who returned a second language, that is to say, any other languages/mother-tongues not accounted for in columns 2, 3 and 4. Column 8 contains in 'run on' fashion the names of subsidiary languages/mother-tongues inclusive of languages/mother-tongues wherever grouped by number of male and female speaker within brackets.

The instructions to the enumerators for filling up the answer for this question is given elsewhere in this volume under the head 'Extracts of Instructions to the Enumerators'.

C-VI—

TABLE F-1

DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY RELIGION, PRESENT AGE AND AGE AT MARRIAGE

This table, which is an innovation of 1971 Census and prepared at the state level only from 10 and 20 per cent sample for rural and urban areas respectively, gives the distribution of currently married women and births during the last one year by religion, present age and age at marriage of the mother. This table is presented in two parts. Part A relates to the rural areas while Part B deals with the urban areas.

The data presented in this table will be of great help in deriving differentials by religion in median age at marriage and in age specific fertility rates, total fertility rate and general fertility rate for various ages at marriage groups.

An appendix is also provided for the table presenting similar data separately for scheduled castes and scheduled tribes for rural and urban areas.

F-I PART A--DISTRIBUTION OF CURRENTLY MARRIED WOMEN LAST YEAR BY RELIGION, PRESENT AGE

TABLE F-II

DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY EDUCATION, PRESENT AGE AND AGE AT MARRIAGE

at This table, which is an innovation of 1971 Census and prepared at the e level only from 10 and 20 per cent sample for rural and urban areas stespectively, gives the distribution of currently married women and births by reducation, present age and age at marriage. This table is presented in two parts, Part A relating to the rural and Part B relating to the urban areas.

The data presented in this table helps in deriving differentials by education in median age at marriage and in age specific fertility rate, total fertility rate and general fertility rate for various ages at marriage groups.

TABLE F—III

DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY RELIGION, DURATION OF MRRIAGE AND AGE AT MARRIAGE

This table, which is an innovation of 1971 Census and prepared at the state level only from 10 and 20 per cent sample for rural and urban areas respectively, gives the distribution of currently married women and births by religion, duration of marriage and age at marriage of mother. This table is presented in two parts, Part A relating to rural and Part B relating to urban areas.

The data presented in this table helps in deriving differentials by religion in duration specificfertility rates for various age at marriage groups.

An appendix to this table provides similar information separately for Scheduled Castes and Scheduled Tribes for rural and urban areas.

TABLE F-IV

DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY EDUCATION, DURATION OF MARRIAGE AND AGE AT MARRIAGE

This table, which is an innovation of 1971 Census and prepared at the state level only from 10 and 20 per cent sample for rural and urban areas respectively, gives the distribution of currently married women and births during the last year by education, duration of marriage and age at marriage of mother. This table is prepared in two parts; Part A relating to rural and Part B relating to urban areas.

The data presented in this table will help in d eriving differentials by education in duration specific fertility rates f or various age at marriage groups

F-IV PART A– DISTRIBUTION OF CURRENTLY MARRIED YEAR BY EDUCATION, DURATION OF
