B-VI OCCUPATIONAL DIVISIONS OF PERSONS AT WORK OTHER THAN CULTIVATION CLASSIFIED BY SEX, BROAD AGE-GROUPS AND EDUCATIONAL LEVELS IN *URBAN AREAS ONLY*

Fly-Leaf

This is a new Table introduced for the first time in 1961 Census. It presents the occupational distribution of persons at work other than cultivation by sex, broad age-groups and educational levels in *urban areas*. It gives data for the State, Administrative Divisions and Districts. Age-groups used for cross-tabulation are 0—14, 15—34, 35—59, and 60 and above. Data for Age Not Stated' have also been given. Cross-tabulation by educational levels is shown by the total literate workers followed by a breakdown of literate workers for seven educational levels. The seventh educational level has been further split up into seven different branches of Science and Technology. The educational levels are given below:

(i) Literate (without educational level),

(ii) Primary or Junior Basic,

(iii) Matriculation or Higher Secondary,

(iv) Technical Diploma not equal to Degree,

(v) Non-technical Diploma not equal to Degree,

(vi) University Degree or Post-graduate Degree other than Technical Degree, and

(vii) Technical Degree or Diploma equal to Degree or Post-graduate Degree:

(*a*) Engineering, (*b*) Medicine, (*c*) Agriculture, (*d*) Veterinary and Dairying, (*e*) Technology, (*f*) Teaching and (*g*) Others.

2. The occupational breakdown is limited to the ten Occupational Divisions of the *National Classification of Occupations* briefly styled as N.C.O. The description of the Divisions is given below:

0 Professional, Technical and Related Workers

1 Administrative, Executive and Managerial Workers

2 Clerical and Related Workers

3 Sales Workers

4 Farmers, Fishermen, Hunters, Loggers and Related Workers (excluding families 400, 401 and 414 relating to 'Cultivators' and 'Agricultural Labourers')

5 Miners, Quarrymen and Related Workers

6 Workers in Transport and Communication Occupations

7—8 Craftsmen, Production Process Workers, and Labourers not Elsewhere Classified

9 Service, Sport and Recreation Workers

X Workers not classifiable by Occupation (excludes group X0)

3. The distribution of literate workers is given for each age-group and educational level for males and females separately. Literacy is defined as ability to read and write a simple letter. If the person could both read and write and had in addition passed one or more examinations, the highest examination passed was recorded against Question 6 of the Individual Slip. The classification by educational levels is based on these returns.

4. So far as total workers are concerned, age-group breakdown is shown against 'All Occupational Divisions' only, but has not been shown for each Occupational Division because the figures for them have not been compiled separately.

5. The large figures under 'Others' below Technical Degree or Diploma equal to Degree or Post-graduate Degree is due to the inclusion of B. Sc., M. Sc., etc., in general Science subjects like Chemistry, Physics, Mathematics, Botany, Zoology, Geology, etc., in this category.

6. For economy of space, age-group lines with 'nil' entries have been omitted. Where an Occupational Division has no workers at all, the entry for that Division has been omitted completely.

7. Occupational Division and age-group breakdown of illiterate workers has not been shown.

8. An attempt has been made through this Table to establish a direct relationship between educational levels and various sectors of occupation with reference

to age. Because urban areas are pockets of concentration of educated persons with varied educational levels and occupations, this Table has been prepared for them only and was not extended to rural areas.

9. It is an important Table, because it reveals occupations attracting the educated personnel in the urban areas. Incidentally it also throws light on manpower misutilisation in urban areas. The distribution by age-groups under each Division gives an idea about the incoming working force (age-group 15-34) and working force on the verge of going out (age-group 35-59).

10. In the 1951 Census data were collected for literates in the different livelihood classes by educational standards. But there was no collection of data on literates with reference to their age and occupational structure. The age-groups mark the different stages of life which have special significance with reference to capacity to work in different occupations and attainment of various educational levels.

11. The actual figures of Occupational Divisions and the distribution of 1,000 literate non-agricultural workers in the urban areas of the State by broad age-groups are given below:

Occupational Division (N. C. O.)		Total Literate Workers	Age-groups				
			0—14	15—34	35—59	60+	Age not stated

N=Negligible
Figure in brackets indicate proportion.

The above Table shows that among the Occupational Divisions, the proportion of workers in the age-group 0—14 is highest (28) in Division 4 followed closely (27) by combined Divisions 7-8 and the lowest (1) in Division 2. Similarly, the proportion of workers in the age-group 60 + is highest (93) in Division 5 followed closely (86) by Division 3. In all Occupational Divisions, the proportion of workers in the age-group 15—34 is higher than that of workers in the age-group 35—59. In the age-group 15—34 barring Divisions 0 and 3 the proportion in all other Divisions exceeds 500 per 1,000. The above Table also brings out the fact that in all Occupational Divisions entry is possible only through maturity. Such trends may, perhaps, appear if the data are analysed by Occupational Groups and Families.

12. The actual figures of each Occupational Division cross-classified by educational levels, and the distribution of 1,000 literate non-agricultural workers

In the urban areas of the State is given below:

13. An analysis of the above Table shows that among all the Occupational Divisions, the proportion (525) of literate (without educational level) is the highest. Of those with Primary or Junior Basic level is 214 and of Matriculation or Higher Secondary 185. The proportion under Agriculture, Veterinary and Dairying, Technology and others is negligible. Among the Occupational Divisions, the proportion of literate (without educational level) is higher in Occuaptional Divisions 3 to 9. But even in Occupational Division 1 of Executive and Managerial group of workers, literate workers (without educational level) are 31·5 per cent

and in Division O 23·7 per cent of the total literate workers. Similarly, the proportion of workers with only Primary or Junior Basic level is the highest (268) in Occupational Division 1, followed by the next highest (252) in Division 9. The proportion of workers who have attained the educational level Matriculation or Higher Secondary is 429 in Division 2 of Clerical and Related Workers, and 289 in Division 1 of Administrative, Executive Officials, etc. The proportion of Matriculates is only 237 in Division 6 of workers in transport and communications and only 91 in Division 9.

B-VII PART A—PERSONS WORKING PRINCIPALLY (i) AS CULTIVATORS, (ii) AS AGRICULTURAL LABOURERS OR (iii) AT HOUSEHOLD INDUSTRY CLASSIFIED BY SEX AND BY SECONDARY WORK (i) AT HOUSEHOLD INDUSTRY, (ii) AS CULTIVATOR OR (iii) AS AGRICULTURAL LABOURER

Fly-Leaf

This Table presents a cross-tabulation of persons working principally (i) as Cultivators or (ii) as Agricultural Labourers or (iii) at Household Industry, by their secondary work (i) as Agricultural Labourers and at Household Industry, (ii) as Cultivators and at Household Industry and (iii) as Cultivators and Agricultural Labourers, respectively. Presentation of figures is limited to workers engaged in Categories I, II and IV as principal work. Similar information in respect of categories III, V, VI, VII, VIII and IX has been given in Table B-VII (B) in which the data have been presented for persons working in the aforesaid categories as principal work and additionally working in Household Industry. In the case of a person engaged in more than one productive activity the one which occupied most of his time has been considered as his principal work. It was distinguished in the enumeration slip by a circle round one of the four economic questions, viz., 8, 9, 10 or 11. The secondary work was defined as economic activity which occupied his second largest time. Persons working principally at Household Industry have further been classified by Divisions and Major Groups of *Indian Standard Industrial Classification* as adopted for Census purposes. Figures for total, rural and urban areas of the State, each administrative Division and District have been given separately. Divisions or Major Groups with 'Nil' entries have been omitted altogether from presentation. In order to minimise the size of the Table, Major Groups of Household Industry, where persons having secondary work are less than 5 per cent of persons having the Major Groups as principal work, have not been printed in the Table, but are given in the Appendix to this Table. Divisions thus affected are marked with an asterisk (*).

2. In the under-developed Indian economy the excessive dependence on agriculture is a cardinal fact. Surplus manpower is employed in agriculture resulting in undue pressure on land and under-employment. In this context it was considered necessary to cross-tabulate these data for the first time in Census history. They will not only give an idea of under-employment in agriculture, but also indicate the quantum of engagement in Household Industry as a subsidiary occupation with a view to augment earnings. They will also show how the seasonal dull periods so characteristic of agricultural occupations in small-sized holdings are utilised in the rural areas. It is expected to be of use in agricultural planning.

3. The following Table shows the extent of participation in secondary work of Cultivators, Agricultural Labourers and workers at Household Industry :—

Principal Work		Secondary Work			
	Total Rural Urban	Total Engaged in Secondary Work	At Household Industry	As Cultivator	As Agricultural Labourer
Cultivator	**Total**	**10·13**	**2·70**	..	**7·43**
	Rural	10·17	2·71	..	7·46
	Urban	4·19	1·13	..	3·06
Agricultural Labourer	**Total**	**15·28**	**0·99**	**14·29**	..
	Rural	15·39	0·99	14·40	..
	Urban	4·41	0·52	3·89	..
Household Industry	**Total**	**11·77**	..	**9·87**	**1·90**
	Rural	13·72	..	11·48	2·24
	Urban	1·45	..	1·37	0·08

The proportion of workers engaged in agricultural labour as principal work and doing secondary work is significant in cultivation. In rural areas the proportion of such workers is 15·39 per cent.

4. Out of the total cultivators, 10·13 per cent are engaged in secondary work, i.e., 2·70 per cent in household industry and 7·43 per cent in agricultural labour. In rural areas, the extent of dependence of cultivators on secondary work is 10·17 per cent. In urban areas, the percentage of cultivators doing secondary work either as agricultural labourers or at household industry is 4·19. Similarly, out of total agricultural labourers 15·28 per cent are engaged in secondary work, i.e., 0·99 per cent in Household Industry and 14·29 per cent in cultivation. In the rural areas, the extent of dependence of agricultural labourers in secondary work is 15·39 per cent, while in the urban it is 4·41 per cent. Thus it reveals that Cultivators and Agricultural Labourers have their mutual predominance in secondary work with each other than either of them have with Household Industry workers.

5. Out of those earning their livelihood principally from Household Industry, 11·77 per cent are engaged in secondary work, i.e., 9·87 per cent in cultivation and 1·90 per cent as agricultural labourers. In the rural areas the extent of dependence of those engaged principally in Household Industry, 11·48 per cent have cultivation as

secondary work, and 2·24 per cent as agricultural labourer; while in the urban areas the extent of those having secondary work is only 1·45 per cent. Thus the concentration of persons who have secondary work is in rural areas. Most of the household industry workers have cultivation as a secondary work.

6. The following Table gives the distribution of secondary work of 1,000 persons engaged principally as cultivators or as agricultural labourers or at household industry, who also have secondary work either of the other two activities :

Out of every 1,000 cultivators engaged in secondary work, 733 are working as agricultural labourers and 267 at household industry. Similarly, out of every 1,000 agricultural labourers engaged in secondary work 936 are working as cultivators and only 64 are engaged in household industry.

Note: Major Groups of Household Industry, where persons having secondary work as Cultivator or Agricultural Labourer, are less than 5% of the persons having the Major Group as principal work, have not been shown in this Table, but are given in the Appendix to this Table. Divisions thus affected are marked with an asterisk(*).

TABLE B-VIII PART A

PERSONS UNEMPLOYED AGED 15 AND ABOVE BY SEX, BROAD AGE-GROUPS AND EDUCATIONAL LEVELS IN *URBAN AREAS ONLY*

TABLE B-VIII PART A—PERSONS UNEMPLOYED AGED 15 AND ABOVE BY SEX, BROAD AGE-GROUPS AND EDUCATIONAL LEVELS IN *URBAN AREAS ONLY*

Fly-leaf

The activities of non-workers have been divided into eight types. Table B-VIII-A deals with only two of those eight types, namely, (*i*) persons seeking employment for the first time; and (*ii*) persons employed before but now out of employment and seeking work. This Table presents the distribution of unemployed persons aged 15 years and above in each of the two types by sex, age and various educational levels. It gives data for the urban areas of State, Divisions and Districts. For persons seeking employment for the first time the age-groups are 15—19, 20—24, 25—29, 30—34 and 35+; and for persons employed before but now out of employment and seeking work they are 15—19, 20—24, 25—34, 35—44, 45—59 and 60+. The age-group 'Age Not Stated' is shown under both the types for persons who have not returned their ages. In the first case the pooling of figures after age 35 has been made because normally there will be very few unemployeds seeking employment for the first time after that age. Cross-tabulation by educational levels is shown by the total unemployeds followed by a break-down of literate unemployeds for seven educational levels. The seventh educational level has been further split up into seven different branches of Science and Technology. The educational levels are given below :

(*i*) Literate (without educational level),

(*ii*) Primary or Junior Basic,

(*iii*) Matriculation or Higher Secondary,

(*iv*) Technical Diploma not equal to Degree,

(*v*) Non-technical Diploma not equal to Degree,

(*vi*) University Degree or Post-graduate Degree, other than Technical Degree, and

(*vii*) Technical Degree or Diploma equal to Degree or Post-graduate Degree :

(*a*) Engineering, (*b*) Medicine, (*c*) Agriculture, (*d*) Veterinary and Dairying, (*e*) Technology, (*f*) Teaching (*g*) Others.

2. An unemployed person is one who is not doing any work and is in search of it. The group does not include persons who are

(*i*) under-employed and hence seeking extra work or some other work,

(*ii*) in search of better employment, and

(*iii*) neither at work nor seeking it.

3. The following Table gives the actual figures and the distribution of 1,000 unemployed persons aged 15 and above by sex and age-groups for the State :

Age-Groups	Total Unemployeds			Persons seeking employment for the first time			Persons employed before but now out of employment and seeking work		
	Persons	Males	Females	Persons	Males	Females	Persons	Males	Females
Total	47,037 (1,000)	46,077 (1,000)	960 (1,000)	27,615 (587)	27,087 (588)	528 (550)	19,422 (413)	18,990 (412)	432 (450)
15—19	14,228 (1,000)	14,026 (1,000)	202 (1,000)	10,819 (760)	10,687 (762)	132 (653)	3,409 (240)	3,339 (238)	70 (347)
20—24	14,127 (1,000)	13,887 (1,000)	240 (1,000)	9,810 (694)	9,644 (694)	166 (692)	4,317 (306)	4,243 (306)	74 (308)
25—34	9,417 (1,000)	9,147 (1,000)	270 (1,000)	4,858 (516)	4,722 (516)	136 (504)	4,559 (484)	4,425 (484)	134 (496)
35+	9,258 (1,000)	9,012 (1,000)	246 (1,000)	2,127 (230)	2,034 (226)	93 (378)	7,131 (770)	6,978 (774)	153 (622)
Age Not Stated	7 (1,000)	5 (1,000)	2 (1,000)	1 (143)	.. ..	1 (500)	6 (857)	5 (1,000)	1 (500)

The proportion of the first type of unemployeds decreases with increase in age while that of the second type increases with it. The highest proportion (760) in the first type is in the age-group 15—19. It is, however, significant that even in the age-group 15—19, 24 per cent of the unemployeds are 'persons employed before but now out of employment'.

4. Distribution of 1,000 unemployed persons aged 15 and above by educational levels for persons, males and females is as follows :

Educational Level	Total Unemployed

Literacy in the general population of ages 5 and above is 469 per 1,000 population, whereas in ages 15 and above it is 480. In the unemployed of ages 15 and above literacy proportion is 729 which reveals that unemployment among the educated classes is considerably higher than among the illiterate. Among the literates of 15+, the largest proportion (269) is of those who have not acquired any educational level followed by those attaining the Primary or Junior Basic Standard (216). The proportion of literacy among males of age-group 5+ in the general population is 578 and in the age-group 15+ it is 607. The proportion among unemployed males in the age-group 15+ is 733. Among females the literacy proportion in the general population of 5+ is 331 as against 311 in the age-group 15+ which shows that literacy is lower in the higher age-groups. Female unemployeds in the State are only 960, nearly half of which are literate and seeking employment. The proportion of unemployed males with educational level Matriculation and above is 244, and of those possessing Technical Diploma not equal to Degree is negligible. The proportions of unemployed persons, males, and females possessing University Degree or Post-graduate Degree (other than Technical Degree) are 51, 51 and 89 respectively.

5. In the 1951 Census similar data were presented in Table B-IV under different livelihood classes; but the total population were classified as (*i*) persons outside the labour force, (*ii*) persons in the labour force with break down for (*a*) gainfully employed and (*b*) unemployed. In 1961, however, a departure has been made by presenting data of the two categories of non-workers by age-groups. Thus the 1961 Table gives an idea of unemployment by educational attainments. It may serve the important purpose of assessing the available manpower for various kinds of work.

TABLE B-VIII PART B

PERSONS UNEMPLOYED AGED 15 AND ABOVE BY SEX AND EDUCATIONAL LEVELS IN *RURAL AREAS ONLY*

B-VIII PART B—PERSONS UNEMPLOYED AGED 15 AND ABOVE BY SEX AND EDUCATIONAL LEVELS IN *RURAL AREAS ONLY*

Fly-leaf

This Table gives the number of persons unemployed aged 15 and above by sex and educational levels in the rural areas of the State, Divisions and Districts. It deviates widely from Table B-VIII Part A (urban), obviously, due to the difference in dimensions and type of unemployment in the rural and urban areas. Instead of separate figures for 'persons seeking work for the first time' and 'persons employed before but now out of employment and seeking work', data of the total unemployed persons have been given in this Table for rural areas. Unemployment is not such a problem of rural areas as it is in the urban areas. Therefore, lesser details have been shown in this Table, *i.e.*, only broad educational levels have been adopted and age-groups have been omitted. The educational levels presented in this Table are (*i*) Literate (without educational level),(*ii*) Primary or Junior Basic (*iii*) Matriculation and above as in Table B-III Part B.

2. The figures of unemployed persons aged 15 and above and their distribution of 1,000 by educational levels is given below for persons, males and females :

Educational levels	Persons	Males	Females
Total Unemployed aged 15 and above	37,435 (1,000)	34,952 (1,000)	2,483 (1,000)
Illiterate	12,156 (325)	10,020 (287)	2,136 (860)
Total Literate and Educated persons	25,279 (675)	24,932 (713)	347 (140)
Literate (without educational level)	6,574 (176)	6,366 (182)	208 (84)
Primary or Junior Basic	8,584 (229)	8,502 (243)	82 (33)
Matriculation and above	10,121 (270)	10,064 (288)	57 (23)

Out of 1,000 unemployed males, 182 are literate (without educational level), 243 educated up to Primary or Junior Basic level and 288 up to Matriculation and above; whereas in the general population the proportions are 176 for literate without educational level, 77 for Primary or Junior Basic 23 for Matriculation and above. Among the female unemployed of ages 15 and above the proportion of total literate and educated persons is 140 as against 42 in the general population. Thus Matriculates and above form the highest proportion of the unemployed in the rural areas. They are the educated section of the rural areas unable to take up rural occupations and, therefore, seeking employment.

3. Table B-IV of 1951 Economic Tables was the precursor of the present Table. A comparison of the two will show that duration of unemployment of 1951 has been replaced by educational levels of 1961. The other important deviation is the switch over from the livelihood classes to categories of workers and non-workers.

TABLE B-IX

PERSONS NOT AT WORK CLASSIFIED BY SEX, BROAD AGE-GROUPS AND TYPE OF ACTIVITY

B-IX PERSONS NOT AT WORK CLASSIFIED BY SEX, BROAD AGE-GROUPS AND TYPE OF ACTIVITY

Fly-leaf

This Table has been prepared separately for total, rural and urban non-working population of the State, Divisions and Districts. Non-workers are divided into eight categories according to their 'activities' cross-classified by sex and four broad age-groups, viz., 0-14, 15-34, 35-59, 60 and above. The figures in respect of persons who did not return their ages have been shown separately under 'Age Not Stated'. These eight types of 'activities' have been adopted on the recommendations of the United Nations to ensure international comparability. This Table is expected to be of immense use to the Ministries of Education, Labour and Employment and Planning.

2. The eight types of activities of non-workers are as follows:—

(i) Full-time students or children attending school, who do no other work, such as make articles at home for sale, nor even help part-time in their own family cultivation, industry, trade or business;

(ii) Persons engaged in unpaid home duties (like housewives or other adult females) who do no other work, such as make articles at home for sale or wages, nor help regularly even part-time in family cultivation, industry, trade or business;

(iii) Dependants, including infants and children not attending school, persons permanently disabled from work because of illness or old age, etc;

(iv) Retired persons who are not employed again, rentiers, persons living on agricultural or non-agricultural royalty, rent or dividend and other persons of independent means for securing which they do not have to work and who do no other work;

(v) Beggars, vagrants, independent worker without indication of source of income and others of unspecified means of existence;

(vi) Convicts in jail and inmates of penal, mental or charitable institutions. (Under-trial prisoners have been shown as workers if they used to work before they were apprehended);

(vii) Persons who have not been employed before but are seeking employment for the first time; and

(viii) Persons employed before, but now out of employment and seeking employment.

The above classification of non-workers is based on the answer recorded against Question 12 of the Individual Slip in respect of Non-workers.

3. The cross-tabulation of categories by age-groups brings to surface the peculiarities of this segment of population in a wider and broader perspective. This makes available figures of children attending school; housewives and other members of household though engaged in household duties, but not classified as economically active; the sector of population earning without working; beggars and vagrants; inmates of penal, mental and charitable institutions; and persons in the working age-group who are not working. It is hoped that the data will provide useful information on all the aspects of the non-working population which has come to arouse more than academic interest in this era of social reform and all-round planning.

4. The 1951 Census gave information regarding unemployment by livelihood classes in Table B-IV. This table gave data on the number of persons (i) outside the labour force, (ii) gainfully employed and (iii) unemployed, by livelihood classes, with separation for sex and rural/urban breakdown. In the case of 'unemployed' data were presented by duration of unemployment. All persons below 16 or above 60 years of age, housewives, permanently disabled persons, etc., who were not gainfully employed and all persons who although unemployed were not in search of employment were classified under the category of 'outside the labour force'. A person was classified as 'gainfully employed' (i) if he had an existing means of livelihood with or without intermittent seasonal break of employment or (ii) an earning dependent having some income. A statement on 'non-productive source of livelihood' was also given. It presented data of the following types:—

(i) persons living principally on income from non-agricultural property;

(ii) persons living principally on pensions, remittances, scholarships and funds;

(iii) Inmates of asylums, alm houses and rece ipients of doles,

(iv) beggars and vagrants; and

(v) all other persons living principally on income derived from non-productive activities.

It will be observed that the above data do not compare with that of 1961 chiefly due to the basic difference in the economic classification adopted in the two Censuses.

5. Data are presented in the Table for State, each division and district. Figures at tahsil level (for rural areas only) will be found in the corresponding Table in district Census Hand book of each district.

A word by way of elaboration is indicated in regard to the figures of 'full-time students' in age-group 5-14. In a few districts these figures are greater than the figures of literates (without educational level) in age-group

5-14. This is, presumably, due to the fact that children below 5 years of age attending nursery or kindergarten schools and those in initial years of primary schools have been treated as full time students but were treated as illiterate according to the definition of the term adopted for the 1961 Census viz., 'one who can neither read nor write or can only read but cannot write'.

In few other districts, a reverse trend is noticeable, in that, figures of literates (without educational level) exceed those of full-time students in the same age-groups. Here it seems that females after 10 years of age abandon schooling and take to Household duties. This trend seems to obtain among males too, specially in the rural areas of Kheri, Sitapur, Varanasi and Mirzapur districts and even in the urban areas of Aligarh district.

6. In the State, Dehra Dun district (urban) stands out as a solitary example of a larger number of male students in the age-group 0-14 than the total number of males in age-group 5-14. This appears to be due to the enlightened social conditions in the urban areas of the district where most of the children appear to start their nursery education from an early age.

7. Out of the total population of 73,746,401 in this State, 44, 896,260 or 60·9 per cent are non-workers. The proportions of non-workers among males and females are 41·8 per cent and 81·9 per cent respectively. The distribution of 1,000 non-workers in each sex by broad age-groups for total, rural and urban areas of the State is given below:

Distribution of Non-workers by Age-groups

	All Age-groups		0—14		15—34		35—59		60+		Age Not Stated	
	M	F	M	F	M	F	M	F	M	F	M	F
Total	1,000	1,000	888	472	78	290	11	176	22	61	1	1
Rural	1,000	1,000	910	476	61	284	9	176	19	63	1	1
Urban	1,000	1,000	773	449	165	327	24	175	38	49	N	N

Out of every 1,000 male non-workers in the State,888 are in the age-group 0-14, 89 in the two age-groups 15-34 and 35-59, and 22 in the age-group 60 and above. Similarly, out of 1,000 female non-workers, 472 are in age-group 0-14, 466 in the two age-groups 15-34 and 35-59 and 61 in the age-group 60 and above. The proportion of non-workers in rural areas both for males and females in the age-group 0-14 goes up to 910 and 476 respectively, but in later age-groups it is smaller for males and a bit higher for females in age-group 60+. In urban area the proportion of non-workers in the age-group 0-14 both for males and females is smaller than in the rural area, but in the age-group 15-34 the proportion is higher in urban area. In the age-group 60+ the proportion in males is higher, but in females it is lower. These rural-urban differences are due to concentration in urban areas of students in the age-group 15-34, rentiers and retired persons in the higher age-groups.

8. The distribution of 1,000 non-workers in each sex by eight types of 'activities' of the non-working population for total, rural and urban areas of the State is shown in the Table given below:

	Total Non-working Population		Full-time Students		Household duties		Dependants, infants and disabled		Retired, rentiers or independent means		Beggars, vagrants etc.,		Inmates of penal, mental and charitable institutions		Persons seeking employment for the first time		Persons employed before but now out of employment and seeking employment

Urban	1,000	1,000	369	111	2	491	577	393	22	4	3	1	8	N	11	N	8	N

N=Negligible

The proportion of male and female dependents, infants, etc., is higher in rural than in urban areas. This is due to most of the migrants working in urban areas leaving behind their dependents in the rural areas thereby augmenting their numbers. The proportion of male and female full-time students, retired, rentier and persons of independent means are substantially higher in urban than in rural areas because most of the rentier classes and persons of independent means owning house and other landed property prefer to live in urban areas. Nearly half of non-workers among females are engaged in household duties. In the State among full-time students, dependents, infants and disabled form 98 per cent of the total non-working male population, whereas among females 97 per cent of non-workers are distributed among household duties, dependants, infants and disabled. The proportions of males seeking employment for the first time (11) and persons employed before but now out of employment and seeking work (8) are also higher in urban than in rural areas. For females, their proportions are negligible both in rural and urban areas. This is due to the prevalence of unemployment among the literate and educated persons who are in greater proportion in the urban areas.

9. The three important categories of non-workers are full-time students, persons engaged in household duties and unemployeds. A detailed study of unemployeds by educational levels has been made in Table B-VIII. The following Table gives the distribution of the other two

types of non-workers by sex and broad age-groups for total, rural and urban areas of the State:

N—Negligible

The proportion of full-time students continuing higher studies in the age-group 15-34 are greater both for males and females in urban than in rural areas on account of better facilities of higher education available in urban areas. In the rural areas, both male and female students are restricted mostly to the age-group 0-14. The proportion of full-time students in the age-group 15-34 both in rural and urban areas are considerably higher for males than for females. Thus it reveals that females do not go in for higher education to the same extent as males do. In household duties most of the females are concentrated in age-groups 15-34 and 35-59 both in rural and urban areas. The figures for males in Household duties have not been given because they are of little importance for this type of activity.
