MOTIF

Lalinga Fort

The Fort, built in 1st Faruki Era in the 14th Century, is situated 10 Kms away from Dhule City on Mumbai-Agra Highway. Though it is in dilapidated condition now, its natural surrounding is very green and beautiful. A nearby waterfall is an attraction for tourists; and people can enjoy splendid wild life in its natural surroundings, hues and colours.

Foreword

The District Census Handbook (DCHB) published by Census Organisation since 1951 census, is one of the important publications in the context of planning and development at grass-root level. The publication, which is brought out for each district, contains several demographic and socio-economic characteristics village-wise and town-wise of the district alongwith the status of availability of civic amenities, infrastructural facilities, etc.

The scope of the DCHB was initially confined to a few Census Tables and Primary Census Abstract (PCA) of each village and town within the district. Thereafter, at successive censuses, its scope and coverage has been enlarged. The DCHB published at the 1961 census provided a descriptive account of the district, administrative statistics, census tables and a village and town directory including PCA. The 1971 census-DCHB series was in three parts: Part-A related to village and town directory, Part-B to village and town PCA and Part-C comprised analytical report, administrative statistics, district census tables and certain analytical tables based on PCA and amenity data in respect of villages. The 1981 census DCHB was in two parts: Part-A contained village and town directory and Part-B the PCA of village and town including the SCs and STs PCA up to tahsil/town levels. New features alongwith restructuring of the formats of village and town directory were added into it. In Village Directory, all amenities except electricity were brought together and if any amenity was not available in the referent village, the distance in broad ranges from the nearest place having such an amenity, was given. Information on new items such as adult literacy centres, primary health sub-centres and community health workers in the village were provided so as to meet the requirements of some of the Revised Minimum Needs Programme. Information on approach to the village was provided for the first time in the Village Directory so as to give the details on number of inaccessible villages in each district. In the Town Directory, a statement (IV-A) on slums was introduced to provide the details on civic and other amenities in the notified slums of Class I and Class II towns.

The 1991 census DCHB, by and large, followed the pattern of presentation of 1981 census, except the format of PCA was restructured. Nine-fold industrial classification of main workers was given against the four-fold industrial classification presented in the 1981 census. In addition, sex-wise population in 0-6 age group was included in the PCA for the first time with a view to enable data users to compile more realistic literacy rate as all children below 7 years of age had been treated as illiterate at the time of 1991 Census. One of the important innovations in the 1991 census was the Community Development Block (CD block) level presentation of village directory and PCA data instead of the traditional tahsil/ taluk/PS level presentation. It was expected that the presentation of village directory and PCA data at CD block level will help the planners in formulation of micro level development plans, CD block being lowest administrative unit.

The present series of 2001 census DCHBs have been made more informative and exhaustive in terms of coverage and content. The Village Directory has been enlarged in scope by including a number of other facilities like banking, recreational and cultural facilities, newspapers and magazines and 'most important commodity' manufactured in village. Income and expenditure of gram panchayat, wherever possible, has been provided. Apart from these, more details on distance(s) at which basic amenities are available (if not available in the village), are given. This includes educational facilities (namely primary and middle schools and collage), medical facilities (viz. Allopathic Hospital, Maternity & Child Welfare

Centre and Primary Health Centre), drinking water, post & telegraph (post office and phone), communication, bank, credit societies and recreational facilities. In Town Directory, the statement on Slums has been modified and its coverage enlarged by including details on all slums instead of 'notified slums'. The information is given in case of all statutory towns irrespective of their class, against only Class I and Class II towns in 1981 and 1991 censuses. The basic amenities available in the villages and towns are analysed in depth with the help of a number of cross-classified inset tables and statements. Two other significant additions in the publication are inclusion of 'motif' highlighting significant characteristic of the district and analytical notes as annexures. The analytical notes on (i) fertility and mortality and (ii) various measures of fertility and mean age at marriage are prepared based on 1991 Census. Whereas in the notes relating to (i) percentage distribution of migrants by place of birth/place of last residence, (ii) main religions, (iii) marital status of population, (iv) age, sex and education, and (v) distribution of spectrum of mother tongue, nature and extent of changes occurred in the district in its basic socio-demographic features during the decade 1991-2001 are analysed. The eight digits permanent location code (PLCN) to all the villages and towns have been assigned keeping in view the future needs.

The village and town level amenity data have been collected, compiled and computerised in prescribed record structure under the supervision of Shri Samir Kumar Biswas, Director of Census Operations, Maharashtra. Thereafter, efforts have been made to ensure comparability of the information with that of 1991 census data and the information brought out by the respective State Governments in their annual reports and statistical handbooks for various years after 1991. The task of planning, designing and coordination of this publication was carried out by Shri R.G. Mitra, Deputy Registrar General (C&T) and Dr. I.C. Agrawal, Senior Research Officer of Social Studies Division. Dr. R.P. Singh, Deputy Registrar General (Map) provided the technical guidance in the preparation of maps. Whereas, Shri Anil Kumar Arora, Deputy Director of Data Processing Division who worked under the overall supervision of Shri Himakar, Addl. Director(EDP) helped in preparation of record structure for computerisation of village and town directory data and the programme for the generation of Village Directory and Town Directory statements including analytical inset tables. The draft DCHB manuscripts received from the Census Directorates have been scrutinised in the Social Studies Division under the guidance of Shri S.L. Jain, Deputy Director and Shri R.K. Mehta, Assistant Director. I am thankful to all of them and others who have contributed to make this publication possible.

Preface

The Registrar General and Census Commissioner of India has in his foreword to this series of publications, not only provided the reader with the historical background of the District Census Handbooks but has also explained at some length the scope and coverage envisaged for this country-wide project. This volume contains the salient results based on the data gathered at the actual head-count and in addition contain a wealth of other non-census information in respect of Villages and Towns of the District. It is hoped that this volume would go a long way to meet the ever-increasing demand for the micro-level data in this era-planned development.

District Census Handbook of Maharashtra is a joint venture of the Government of Maharashtra and the Census Organization of the Government of India. The design for the 2001 District Census Handbook was evolved centrally by the Census Commissioner, India. In the preparation of the District Census Handbook, the role played by the Census Organization is that of data gatherer. In accomplishing this task we have had the ready and whole-hearted co-operation of the staff at various levels of different departments of the State Government. Much of the data so provided by this field –level officers have been cross checked with the data obtained from various departments and an attempt has been made to reconcile the discrepencies as well. The Village Directory data in addition were also examined logically and possible errors list generated village wise for select facilities was rechecked and revalidated with the revenue officers in the respective collectorate.

I am extremely grateful to Shri D.K. Sikri, Additional Secretary and Registrar General, India for his guidance in bringing out this publication. I am equally grateful to Shri J. K. Banthia, I.A.S. the former Registrar General and Census Commissioner, India for his constant inspiration, help and guidance at every stage.

I also express my thanks to Dr. R.P. Singh, Dy. Registrar General, India (Map), Shri R.G. Mitra, Dy. Registrar General, India (Census Division), Dr. I.C. Agrawal, Assistant Registrar General (SS Division), Shri S.L. Jain Deputy Director (SS Division), Shri C.S. Arora, Director (EDP), Shri Himakar, Additional Director (EDP), Shri M.R. Balakrishnan, Joint Director (EDP), Shri Anil Kumar, Deputy Director (EDP) and their colleagues for their co-operation and support in bringing out this volume.

Shri Samir Kumar Biswas, IAS held the office of Director of Census Operations, Maharashtra and guided the operations of the 2001 Census. The data presented in this handbook were collected and compiled under the direction and guidance of Shri Biswas. We would deem it our duty; therefore, to offer him our sincere and grateful thanks for all that he did for this project.

In this Directorate, Shri R.S. Meena, Joint Director guided this project in a meticulous manner and received all help from Dr. S.S. Hiremath, Deputy Director. The DCHB unit was spearheaded by Smt. Sushma Monga, Assistant Director, who was on deputation from the Planning Commission, New Delhi.

The physical features have been concurred by the Map section, after incorporating necessary changes, wherever required. The Maps, inserted are prepared by the Cartography section under the guidance of Shri D.N. Chaurasia, R.O.

I take this opportunity to offer my grateful thanks to all officials in various grades who have been actively involved in voluminous work of compilation and preparation of this volume. The list of the officials of this Directorate closely associated with this work is given separately.

ANALYTICAL NOTE

Analytical Note

(i) History and Scope of District Census Handbook

The origin of DCHB lay in the 1951 Census when it began as a joint venture between the Government of India and the State Government. The present volume pertaining to 2001 Census is sixth in series since then. The District Census Handbook (DCHB) is a unique publication from the Census Organisation that, in a condensed form, gives details of the Census and non-Census information from the village level upwards to the district level. It has therefore, been acclaimed and recognised as one of the best source of information next only to the district gazetteer.

The District Census Handbook as published in 1951 incorporated, some basic demographic and economic information of the district, village wise and town wise separately, besides having some important Census Tables. However, it underwent a radical change in the 1961 Census as a much more descriptive account of the district and a lot of non-census information on climate, rainfall, agriculture, industry, education, etc. was added to it besides a number of cross tables being picked up from various series of Census tables. In 1971 the District Census Handbook was divided into Part - A relating to Village and Town Directory, Part - B containing village and town wise Primary Census Abstract and Part - C reported on the administrative aspect and Census tables based on Primary Census Abstract etc. For the state of Maharashtra only Part A and B were published. The 1981 Census again saw the scope of it increasing to contain the data on literacy rate, Primary Health Centers etc. It was published as part A and B and the same pattern was again followed in 1991. However, in 1991 some of the non-census data included information on girl schools, social forestry area etc. as separate Appendices. The DCHB, 2001 Census have been made more informative and exhaustive in terms of coverage and content. The scope of village directory has been broadened by including more types of facilities such as Bank, Recreational and Cultural facilities, Newspapers and Magazines available in villages. Information on most important commodity manufactured in village and also income and expenditure of Gram Panchayat, wherever possible are provided.. Specific details on distances, in case a basic amenity is not available in the referent village is also given. These include distances in respect of availability of primary and middle school and college (in respect of the educational facility), Allopathic Hospital, Maternity & Child Welfare Centre and Primary Health Centre (in respect of the medical facility), Drinking water, Post Office and Phone, Communication, Bank, Credit societies and Recreational facilities. The Non-Census information collected at the village level or town level by the Tahsildar/ Chief officer was scrutinized and verified in each district by the District Planning Officer and District Statistical Officer. The Collectorate were also requested to once again verify this in case serious discrepancies were observed. Logical checks were applied to the data and the scrutiny points which emerged after this exercise were further verified in the field by officials of this Directorate. With reference to the town concerned, the nearest city with 5 lakh and above population has also been given in addition to 1 lakh and above population. The non-census information was cross-checked with parent department also. For example, information on electricity was cross-checked with Maharashtra State Electricity Board, that on roads with Public Works Department, on health with the Directorate of health and so on. It is felt that because of this extra validation, information provided in the 2001 District Census Handbook should become more reliable and can be used without any hitch by Scholars and Planners alike.In town directory, information on all types of slums, whether notified/ recognised by the respective town authority or not

and in respect of all statutory towns irrespective of their class as against only Class I and Class II towns of the 1981 and 1991 Censuses are provided. The varied basic amenities available in the villages and towns are analysed in depth with the help of a number of cross-classified inset tables and statements. A number of tables based on Primary Census Abstract are also made to correlate data with geography of the tahsils. A significant addition in the publication is inclusion of analytical notes as annexures on important aspects concerning Census data on (i) fertility, mortality and migration, (ii) various measures of fertility and mean age at marriage, (iii) percentage distribution of migrants by place of birth/place of last residence, (iv) main religions, (v) marital status of population, (vi) age, sex and education, and (vii) distribution of different mother tongue, all based on 1991 Census. The eight digits permanent location code (PLCN) to all the villages and towns have been assigned keeping in view the future needs.

The Village and Town Directory as also the Primary Census Abstract included in this Handbook should quench the thirst of the planners involved in micro level planning.

(ii) Brief History of The District

The district Dhule was previously known as the West Khandesh district. The ancient name of this region was Rasika. Varahamihira places Rasika coupled with Vidarbha and Mahisaka. Later under the Yadavas, it was called as Seunadesa after king Seunachandra who ruled over it. With the advent of Muslims, the name was changed to Khandesh to suit the title Khan given to the Faruqi Kings. The entire area of Khandesh included two-districts viz., Dhule and Jalgaon and was administered as one district with headquarters at Dhule. However, in 1906 for administrative purposes, the Khandesh was divided into two districts known as West Khandesh and East Khandesh. Later, on 1st July 1998 Dhule district was divided in two districts viz. Nandurbar and Dhule. Dhule district thus, comprised of Dhule; Sakri, Shirpur and Sindkheda tahsils with headquarter at Dhule.

Headquarter of Pimpalner tahsil was transferred to Sakri earlier and in 1908, the name was also changed to Sakri tahsil. In the year 1950, a new tahsil of Akkalkuwa was created and in the same year four villages from Nashik District and one village from Broach District of Gujarat State were added to this district. However, two villages from this district were transferred to Broach District.

With the re-organisation of the States in 1956, the district was included in Bombay State and subsequently i.e. in 1960 it became a part of Maharashtra State. While doing so 38 villages each from Nandurbar and Nawapur Tahsils, 43 villages from Talode and 37 villages from Akkalkuwa tahsils, were transferred to Gujarat State. In 1961 the name of the district was changed from West Khandesh to Dhulia and later to Dhule district with Dhule as its Headquarters. Since 1961, the number of tahsils in the district continued to be 10 till 1991Census.

The district was bifurcated after 1991 Census, in July 1998,into two districts namely Dhule and Nandurbar. The bifurcation left Dhule district with 4 tahsils having 670 villages of 1991 Census. In addition, in July 1998, 16 new villages were created and 5 villages were merged in Municipal Councils. At present, Dhule district comprises of four tahsils viz. Shirpur, Sindkhede, Sakri and Dhule each having 147, 141, 225 and 168 villages respectively. The number of villages in 4 tahsils, which was 670 in 1991, increased to 681 in 2001.

(iii) Administrative Set up

There were major changes in the administrative set-up in Maharashtra after the 1991 census resulting in increase of 5 districts in 2001 census. There are 6 Divisions in 2001 Census. Konkan Division included 6 districts; Nashik division 5 districts, Pune division 5 districts, Aurangabad division 8 districts, Amravati division 5 districts and Nagpur division included 6 districts. Thus in 2001, the State has 35 districts spread over 6 divisions; Dhule district is located in Nashik division. Dhule district has 3 towns and 681 villages spread over Shirpur tahsils (147), Sindkhede (141), Sakri (225) and Dhule (168). The

following statement indicates the changes, which occurred after 1991 census in the number of villages, towns in each tahsil and also the reasons for variation in brief :

JURISDICTIONAL CHANGES DURING 1991-2001

4. Dhule	166	166	168	2	1	1	2 new villages created after 1991 census

For administrative purposes, the district is divided into two sub-divisions, viz. Dhule and Shirpur. Dhule sub-division includes Dhule and Sakri tahsils, while Shirpur sub-division includes Shirpur and Sindkhede tahsils. The District collector along with Additional District Judge, Superintendent of Police, Chief Executive Officer of Zilla Parishad and other Senior Officers of the State Government look after the development and regulatory functions in the district. At the tahsils level, Tahsildar, Block –Development Officer, Judicial Magistrate, Deputy Engineer and other Officers look after their respective department and regulatory functions.

Local self Governments, its composition, jurisdiction and the role in the Development.

Gram Panchayat is the lower most rung of the democratic set-up of India. It is governed by the 'Bombay Village Panchayat Act, 1958'. The 'Sarpanch' and in the absence of Sarpanch, the 'Upa-Sarpanch' preside over every meeting of 'Gram Sabha'. At least four meetings of the 'Gram Sabha' are held every year. Sarpanch and Upa-Sarpanch are elected from amongst the elected members of the Panchayat.

73rd Constitutional Amendment

To make Panchayat Raj Institutions strong and to give more power to the people, the State Panchayat Act has been amended in confirmation with the 73rd Constitutional amendment, which is implemented in the State in April 1994. The Main fundamental provisions of the 73rd Constitutional amendments are as follows:

1. Constitution of Panchayat Raj Institutions at Village, Intermediate (Development Block) and district level.

2. The seats and the offices of the chairpersons in the Panchayats at all the levels to be reserved in favour of Scheduled Castes and Scheduled Tribes in proportion to the percentage of population of the Scheduled Caste or Scheduled Tribes, as the case may be.

3. The elections to these Panchayat Raj Bodies to be held at the interval of every five years.

4. Powers, Authority and Responsibilities of Panchayats: -

(a)The preparation of plans for economic development and social justice

(b)The implementation of schemes for economic development and social justice as may be entrusted to them including those in relation to the matters listed in the Eleventh Schedule.

5. An independent State Election Commission to conduct the elections.

6. Powers to impose taxes by, and funds of, the Panchayats.

7. Constitution of Finance Commission by the State at the expiry of every five years term to review the financial position of the Panchayats and to make recommendation regarding distribution of State resources between the State and the Panchayat.

Constitution of Gram Panchayat

The gram panchayat consists of not less than seven and not more than seventeen members elected from wards on the basis of adult franchise. They hold office for a term of five years. Among these a few seats are reserved for persons belonging to the Scheduled Castes, the Scheduled Tribes, Backward Class of citizens and Women, as may be determined by the State Election Commission in the prescribed manner.

Administrative powers and duties of Panchayats

Administrative powers and duties of Panchayats are - to take care of the funds at its disposal, to take over and maintain water supply schemes through "Village Water Supply Fund", to make provision for carrying out within/outside the village any work subject to any directions made by State Government for any scheme or for any purpose sponsored by the Government, to make provision for carrying out work which is likely to promote health, safety, education, comfort, convenience or social or economic or cultural well- being of the inhabitants of the village, to make provision for entertainment, public reception, contribution towards annual gathering, to encourage farmers and co-operative societies to increase and improve agricultural production etc.

Powers and duties of Panchayats in the scheduled areas

Powers and duties of Panchayats are - to obtain from the Gram Sabha a certification of utilization of funds for the plans, programmes and projects, prospecting licence or mining lease for minor minerals, control on erection of building, to remove any obstructions and encroachments upon public streets and open sites etc.

Establishment, Budget and Accounts

The day to day work of the Panchayat is done by Secretary of panchayat. The Chief Executive Officer of Zilla Parishad appoints the secretary of Panchayat. His salary is paid from the district fund.

The budget of the village Panchayat is submitted to the Panchayat samiti. It covers opening balance in the fund, estimated income, proposed expenditure and the amount to be contributed to the District Village Development Fund. The sanctioning authority of the village budget is panchayat samiti.

Taxation and Recovery of Claims

The taxes levied by the panchayat are - tax on buildings and lands, betterment charge or the lands benefited from schemes or projects undertaken by

Panchayat from 'Village Fund', pilgrim tax, tax on fairs, festivals and other entertainments, tax on bicycles and on vehicles drawn by animals, tax on professions, trades, callings or employments, shop keeping and hotel-keeping, general sanitary cess, general water rate, a lighting tax, fee on markets and weekly bazars, fee on car stands/tonga stands, special water tax for water supplied through pipes, fee for the supply of water from well and tank for purposes other than domestic use and for cattle, fee for temporary occupation on public street, special sanitary cess upon private latrines, fee for cleaning cess pool, fee for grazing cattle, fee on the registration of animals, lump sum contribution by factories in lieu of taxes levied by Panchayat, farming of fees on markets, collection of cess on every rupee of land revenue etc.

Financial Assistance to Panchayats

Gram Panchayat receives financial assistance from the State Government, loan by Zilla Parishad, Equalisation grant, Village water supply fund and District village development fund.

Gram Panchayat-role in the Development of the village

Since the Gram Panchayat controls the village fund, it has an immense role in the Development of the villages. It makes reasonable provision within the village and submits to the Panchayat Samiti for approval. It supervises the village water supply scheme. It makes provision for carrying out within the village any work which promotes health, safety, education, comfort, convenience or social or economic or cultural well-being of the inhabitants of the village.

Gram Panchayat can make provision for any public reception, ceremony or entertainment within the villages or make contribution towards at annual gathering or such other gathering of Panchayats in the district or the state.

It encourages farmers of the village to make use of co-operative societies in increasing and improving agricultural production. It supervises primary schools situated within the area of its jurisdiction.

Last but not the least, it is duty bound to take measures for the amelioration of the condition of Scheduled Castes and Scheduled Tribes and other Backward Classes and in particular, in the removal of untouchability carry out the directions issued in this regard from time to time by the State Government.

Objectives of the Local Self Government

With a view to promote development of democratic institutions and to secure greater measure of participation by the people in Development Plans and in local and governmental affairs by decentralization of powers and functions, Zilla Parishad and Panchayat Samities (C. D. Blocks) have been established in the district of Maharashtra in the year 1962 under the Maharashtra Zilla Parishad and Panchayat Samiti Act of 1961. The jurisdiction of Zilla Parishad and Panchayat Samiti i.e. C.D. Blocks corresponds to the district and tahsil boundaries except that the statutory towns are not covered by them.

The local self bodies are working as agencies of State Government. The 73rd Constitutional Amendment gave local self bodies the constitutional status. The new power bestowed upon them gave a great impetus to the development plans and its implementation.

Zilla Parishad

The Zilla Parishad has the authority for the purposes of the Act over the area for which it is established. The authorities charged with carrying out the provision of this Act for each district are–

a) The Zilla Parishad
b) Panchayat Samitis
c) The Standing Committee
d) The Subjects Committees
e) Presiding authorities
f) The Chief Executive Officer
g) Block Development Officer

The Zilla Parishad is assisted in its function by number of departments and each department is headed by class I or class II officers of the State Services.

Zilla Parishad consists of councillors directly elected on the basis of adult franchise from electoral divisions in the district for a term of five years. The number of councillors being not more than seventy-five and not less than fifty. Some seats of councillors are reserved for the persons belonging to Scheduled Castes, Scheduled Tribes, Women and Backward Class citizens.

Grants to Zilla Parishad

1. Grant of 7 percent of forest revenue to Zilla Parishad

2. Purposive grant – State Government pays every year to Zilla Parishad a grant for works and development schemes transferred to Zilla Parishad

3. Establishment grant – State Government pays by way of establishment grant, the average cost on account of the salaries and allowances

4. Local cess matching grant – State Government pays a local cess matching grant to be paid to Panchayat Samiti through the Zilla Parishad

5. Incentive grant – State Government pays to Zilla Parishad an incentive to speedier development

6. Grants for plan schemes – State Government pays grant for such works and development schemes relating to any subject enumerated in the district List as are included in the development plan of the State.

7. Block grant – State Government pays to each Panchayat Samiti through Zilla Parishad for carrying one such work and development scheme.

The development work of the district is carried out through the various committees appointed for the purpose by the Zilla Parishad. The executive power for the purpose of carrying out the provisions of the Act lies with the Chief Executive Officer, who is appointed by the State Government.

All the development work within the district is carried out by the Zilla Parishad through the District Fund at its disposal.

The Deputy Chief Executive Officer works as the ex-officio secretary of the Zilla Parishad.

Panchayat Samiti

Panchayat Samiti Consists of members elected by direct election, its jurisdiction being the C.D. Block. The term of the members is five years. The Block Development Officer is the ex-Officio Secretary of the Panchayat Samiti. The Chairman and Deputy Chairman are elected by and from amongst the members of the Panchayat Samiti.

The overall plan of work and development schemes within the block is prepared and executed by the Panchayat Samiti.

Devolution of Powers and functions.

As per the 73rd Constitutional Amendment, Articles 243-G and Schedule 11 of the Constitution, 29 subjects are to be transferred to the Panchayat Raj Institution. The State Government implemented this amendment in April 1994 and provisions were made in the State Panchayat Raj Act to transfer these subjects to the Zilla Parishads, Panchayat Samitis and the Village Panchayats.

3. 73rd Constitutional Amendment.

Urban Local Bodies

The statutory urban local bodies are Cantonments, Municipalities or Municipal Corporations. The urban local bodies elect a councillor from each of the wards, and his term is 5 years. The President of the Municipal Council or Mayor of the Corporation as also his Deputy are elected from amongst elected Councillors.

The Chairman of various committees are also elected from amongst the elected Councillors. Although for day-to-day administration the Chief Officer is responsible in Municipal Council, he works under the administrative control of the President of Municipal Council. In corporations a senior IAS officer is deputed by the State Government as a Municipal Commissioner, who is responsible for day-to-day administration, and the executive authority lies in him.

(iv) Physical features

Location and Size

Dhule district lies between 20° 35' and 21° 42'-north latitudes and 73° 45' to 75° 15' east longitudes.

The district is surrounded by Jalgaon district to its east, Nashik district to its south, Nandurbar district to its western side and Mewad district of Madhya Pradesh State on its northern side.

The headquarters of Dhule district is located at Dhule, a city with population of 341,755 as per Census, 2001. Dhule city is situated on the southern bank of the Panjhra River, 57 kms. north of Chalisgaon on the Mumbai- Nagpur route of the Central Railway which is connected by a broadguage line. The Mumbai - Agra National Highway also passes through Dhule.

The district has an area of 7,195.00 sq. km. and a population of 1,707,947 as per Census 2001. The density of the population is 237 persons per sq.km.

Physiography

India has been divided into four macro level physical divisions i.e. The Northern Mountains, The Great Plains, The Deccan Plateau, and The Coastal Plains and Islands.

Maharashtra falls under two of these macro level divisions 1)The Deccan Plateau, and 2) The Coastal Plains and Islands. The north-south running Sahyadri range separates these two divisions. The Deccan Plateau lies to the east while the Coastal Plains and Islands lie to the west up to the Arabian Sea. The Deccan Plateau is much larger of the two divisions and includes twenty nine districts of the State while only six districts lie in the Coastal Plains and Islands.

The whole Deccan Plateau is sub-divided into 12 meso regions. Of these, only 2 meso regions i.e. Northern Maharashtra and The Maharashtra Plateau lie within the State. Northern Maharashtra is further divided into 2 micro regions i.e. The Tapi-Purna Valley and The Wardha-Penganga-Wainganga Plain. The Maharashtra Plateau is also further sub-divided into 2 micro regions i.e. The Eastern Plateau and The Western Plateau with Protruded Hills.

The Coastal Plains and Islands is divided into 4 meso regions i.e. Gujarat Region, Western Coastal Region, Eastern Coastal Region and The Islands. Of these, The Western Coastal Region covers Maharashtra. This region is divided into 4 micro level regions i.e. Maharashtra Littoral, Goa Coast, Karnataka Coast and North Kerala Coast. Only Maharashtra Littoral falls within the state of Maharashtra.

The hierarchy of these macro, meso and micro level physiographical divisions within Maharashtra State are as below:-

(A) Deccan Plateau :

(i) Northern Maharashtra :

(a) Tapi-Purna Valley : Includes the districts of Nandurbar, Dhule, Jalgaon, Buldana, Akola, Washim and Amravati.

(b) Wardha-Penganga-Wainganga Plain : Includes the districts of Wardha, Nagpur, Yavatmal, Bhandara, Gondiya, Gadchiroli and Chandrapur.

(ii) Maharashtra Plateau :

(a) Eastern Maharashtra : Includes the districts of Aurangabad, Jalna, Parbhani, Hingoli, Nanded, Bid, Osmanabad, Latur, Solapur, Sangli and Kolhapur.

(b) Western Maharashtra with Protruded Hills: Includes the districts of Nashik, Ahmadnagar, Pune and Satara.

(B) Coastal Plains and Islands:

(i) Western Coastal Plains:

(a) Maharashtra Littoral : Includes the districts of Thane, Mumbai (Suburban), Mumbai, Raigarh, Ratnagiri and Sindhudurg.

Dhule district falls under Tapi –Purna valley, the micro level physical division of Deccan plateau. In general, the district has two types of topography : (1) The hilly tracts, which includes the foot hills of the Satpuda Range in the northeast of the district and the western ghats (Sahyadri Hills) in the south western part of the district. (2) The Tapi river valley which is a relatively smooth part of the district.

Satpuda Range includes only a part of Shirpur tahsil in the northern portion of the district. These foot hills slope towards the southwestern direction and attain heights varying between 400 and 600 meters. The area is drained by numerous small streams. Arunavati River and Kordi Nadi are the main streams. These hills are covered with dense mixed forests.

The western ghats (Sahyadri Hills) spread over the south and southwestern parts of the district and include part of Sindkhede, Sakri and Dhule Tahsils. The hills in the southern part of the district run parallel to the course of the Panjhra River and are locally known as the Galna Hills. They form the southern boundary of the district. The height varies between 500 and 800 meters and are partly covered with forests. There are no well marked peaks but curious and picturesque outlines of ridges are seen in the area. An interesting feature is the occurrence of chains of dykes, which are found in the western part of Sindkhede Tahsil and a few but very long ones in Sakri and Dhule Tahsils. A very long dyke, about 80 kms in length, runs parallel to the course of the Panjhra River on its northern side and is responsible for the eastward course of the river. Due to the dykes, the distribution of ground water in uneven in the area.

The Tapi Valley occupies the central part of the district and spreads over major parts of all the four tahsils i.e. Sindkhede, Sakri, Dhule and Shirpur. The valley can be grouped into three parts within the district i.e. the Tapi Valley itself, the Panjhra Valley and the Bori Basin. Panjhra and Bori are tributaries of the Tapi River. The Tapi Valley has an altitude varying between 100 and 300 meters. This portion of the valley is almost plain in nature and slopes towards the west in general. However, the river has cut down below the general level leaving in places almost vertical walls. Hence it is of little use for irrigation and has also led to the lowering of the ground water level near the river. The Panjhra Valley and Bori Basin attain heights varying between 300 and 600 meters. They slope towards the east and then towards north. The valley, in general, has soil derived from Trap rocks, which is known as Black Cotton Soil.

Drainage

River Tapi traverses through the north and middle of the district for about 65 km. It is joined by rivers / streams both on the left and right banks. Panjhra and Kan rivers rise from the Western Ghats and the later joins the former near village Sakri of Sakri tahsil and flows towards the east. Near Dhule town it turns northwards almost at right angles to meet the Tapi River. Other important tributaries are Bori and Arunavati, which also originate in the western ghats and flow northwards till they meet the Tapi River. These rivers have been crossed by small dams and are widely used for irrigation. On the northern side, a number of streams join the Tapi River. Of them Aner and Kordi are amongst the more important. These are short in length and are not of much use.

Climate

The climate of the district is generally dry except during the southwest monsoon season. The year may be divided into four seasons. The cold season starts from December and ends by February, which is followed by the hot season from March to May. The period from June to September is the monsoon season while October and November constitute the post monsoon season.

From November temperatures fall rapidly. January is the coldest month of the year. Sometimes due to cold waves over north India the temperature may drop to about 8 to 9 degrees centigrade. From March and by May temperature rises steadily. May is hottest month of the year. Mean daily temperature reaches 42.5 degree Celsius, with on set of monsoon the temperature drops again and weather becomes pleasant.

The average annual rainfall in the district is 592 mm. There is heavy rainfall in the Satupada Ranges. In 1998 the highest rainfall of 1167 mm. was recorded in Shirpur Tahsil while 756 mm. of rainfall was recorded in Sakri Tahsil. In 1999, the average annual rainfall was 894 mm. More than 85 percent of the annual rainfall is received during the southwest monsoon season.

From about the later half of February, temperatures increase steadily till May, which is the hottest month of the year. Hot dry winds blow during April and May and the heat is intense. The maximum and minimum temperature of the district is 34.1 degree centigrade and 19.5 degree centigrade respectively.

Natural Wealth

The hills are entirely composed of sandstone with shale beds appearing at places near the summits. The sandstones are hardened and frequently cut up by dykes and large irregular intrusions of trap.

A major part of the district is occupied by Deccan Traps. These volcanic lava flows are spread out in the form of the horizontal sheets or beds. Spheroidal exploitation is a characteristic feature of weathering in trap. The alluvium along the Tapi thins out westwards. The soil derived from the trap is black cotton soil and is very fertile as it is rich in Lime, Manganese, Iron and Alkalies.

Minerals

There are no precious minerals found in Dhule district. Stone quarries, stone crushing, Khadi and sand making are the main activities in the district. These are used as road metal, railway ballast and as an aggregate in cement concrete.

Fisheries

The district does not have a coastline and is not richly endowed with impounded water resources. Inland water fishing is carried out by Nylon or cotton thread nets. In some of the streams connecting the Tapi River, good catches of Tor-Tor, the Mahaseer of India, which is locally known as Vadis are reported. From sandy beds, loaches are also collected by Bhil women for sale to the public.

Soil and Cropping pattern

To the south of the Tapi river the soils are derived from the trap rock, while to the north they are derived from trap as well as sedimentary formations of Satpuda ranges. The soils of the district can broadly be classified into three groups viz. (i) Light type soils (ii) Medium black soil and (iii) Deep black soil.

Light soils are partly alkaline in reaction, light loams to clay looms in texture. Structures of these soils are blocky. They are low organic matter and nitrogen and require judicious supply of manures and fertilizers. These soils are mostly found in Dhule and Sakri and northern part of Shirpur tahsils. Bajri, Kharif Jowar, Groundnut and Cotton are grown in these soils.

Medium black soils are largely found in Sindkhede and western part of Dhule tahsil. They are loamy to clay loam in texture, blocky in structure and alkaline in reaction. These soils are poor in nitrogen, organic matter and phosphate contents and hence require adequate doses of the same for a good harvest.

Deep black soils are largely found on the banks of Tapi and Panjhra river particularly in Shirpur, Sindkhede and eastern part of Dhule tahsil. These soils cover a width of about 15 kms. on each side of the Tapi river and are very fertile. The soil in Shirpur is supposed to be extremely rich. Rabi Jowar, Wheat and Groundnuts are grown in these soils.

Land and land use pattern

The Ministry of Food and Agriculture, Government of India has recommended a standard pattern of land use classification for the maintenance of records. Columns 19-23 of the village directory give land use pattern in each village in the district. The data furnished here are based on the village records and pertain to the year 1999. The total area reported under these columns tallies with the total geographical area of the villages as noted in column 3 of the village directory.

Forest

This includes all land classified as forest under any legal enactment dealing with forest or administered as forest, whether state owned or private and whether wooded or simply maintained as forest land. Within the forest area itself there may be occasionally cultivated patches or grazing lands, but such area are shown under column 19 as forest. The process of regularization of land grants and effecting relevant changes in the basic records of survey and settlement are somewhat protracted and time consuming. Therefore the information based on records is in some cases at least, likely to be different when compared with the actual field situation.

Irrigated by Source and Unirrigated land

Column 20 and 21 of the Village Directory give all the agricultural land and when added together would correspond to the net area shown plus the current and other fallow lands. Area shown more than once during the same year, if any, in the village is connoted only once under this column. In column 20 source wise breakup of the irrigated area is furnished by using abbreviation. All lands that are lying uncultivated as fallow for more than 5 years in succession are recorded as permanent fallow (Cultivable waste) and are covered under column 22.

The Concept of irrigation implies the existence of source of water supply within a reasonable distance and an arrangement to regulate the supply of the water according to the day-to-day needs of the crops raised in these fields. Naturally therefore all areas, which are cultivated under purely rain fed conditions, are treated as unirrigated lands.

Animal Husbandry

As per sixteenth Quinquennial census of livestoack of 1997, the information on important number of livestock and livestock indicators are given below.

Statement showing no. of Livestock (Position as on 15th Oct. 1997) Dhule.

1)	Total Cross bred / Indigenous Cattle	840,859
2)	Total Buffaloes	207,016
3)	Total Goats	635,566
4)	Total Sheep	197,584
5)	Total Pigs	35,216
6)	Total Equine	6,589
7)	Total Camel	25
8)	Total Rabbits	122
9)	Total Livestock (excluding dogs)	1,922,977
10)	Total Poultry (including Ducks)	1,697,451

Source: Sixteenth All India Livestock & Farm Equipment Census 1997.

The total livestock (excluding dogs) are 1,922,977 and total poultry (including ducks) are 1,697,451 in the district. Out of the total livestock, the total crossbred/indigenous cattle are 840,859, total buffaloes are 207,016, and goats 635,566, sheeps 197,584, pigs 35,216, equine 6,589, and camels 25 and rabbits are 122.

Statement showing Selected Livestock indicators (Position as on 15th Oct. 1997).

	Category	Value
1)	Density of Livestock population (per sq.km.)	146
2)	Average Livestock per village	1,212
3)	No. of livestock per thousand human population	758
4)	No. of in-Milk cows per thous and human population	45
5)	No. of in-Milk buffaloes per thousand human population	24
6)	No. of poultry fowls per thousand human population	669
7)	No. of Bullocks and male Buffalloes per hundred hectares of gross cropped area	52
8)	No. of tractors per thousand hectares of gross cropped area	4
9)	No. of Veterinary Institute per lakh livestock	10

Source: Sixteenth All India Livestock & Farm Equipment Census 1997.

The density of livestock population per sq. km. works out to 146, while average livestock per village is 1212. For every thousand human population, there are 758 livestock, 45 in-milk cows, 24 in-milk buffaloes and 669 poultry fowls. While there are 52 bullocks and male buffaloes per hundred hectares of gross cropped area and 4 tractors per thousand hectares of gross cropped area, the number of Veterinary institute per lakh livestock has reported to be 10.

Industry

The important cottage and small-scale industries are handloom, powerloom, dyeing and printing, blacksmith, carpentry, cane and allied products bricks and tiles manufacturing and soap making. These are located at Dhule, Dondaicha and Shirpur towns.

Trade and Commerce

Cloth, Vanaspati ghee, Starch, Chilly powder,

Groundnut oil, Foodgrains, Cotton, Oilseeds, Pulses, Groundnut etc. are the important items of export from this district. These are mainly exported to Mumbai and Gujarat.

The chief import articles are fertilizers, sugarcane, medicines, cloth, chilly, wheat, maize, Petroleum products, pulses etc. Most of these goods are imported from Mumbai, Nashik and Gujarat.

Transport

Number of Motor Vehicles registered in the district (as on 31.03.1999)

Motor Vehicles 1999		
	Item	No. of Vehicles
	1	2
1	Buses	732
2	Cars and Station Wagons	3,359
3	Jeep	2,951
4	Taxies	616
5	Autorickshaw	5,239
6	Moped	14,411

9	Total Goods Vehicles	6,457
10	Tractors	6,331
11	Trailors	6,116
12	Others	99
	Total :	**92,770**

Source: Transport Commissioners Office.

It may be seen that the district had 32,908 Motor Cycles , 14,411 Mopeds and 13,551 scooters. There were 732 buses, 3,359 Cars and Station Wagons, 2,951 Jeeps , 616 taxies and 5,239 autorickshaws. Besides, 99 other modes of transport, the district also had 6,331 tractors and 6,116 trailors as means of transport.

Electricity & Power

All the 3 towns and 673 (99.3 percent) villages are enjoying the power supply facility.

(v) Census concepts

Building :

A 'Building' is generally a single structure on the ground. Sometimes it is made up of more than component unit which are used or likely to be used as dwellings (residences) or establishments such as shops, business houses, offices, factories, workshops, worksheds, schools, places of entertainment, places of worship, godowns, stores etc. It is also possible that building which have component units may be used for a combination of purposes such as shop-cum-residence, workshop-cum-residence, office-cum-residence, etc.

Usually a structure will have four walls and a roof. But in some areas the very nature of construction of houses is such that there may not be any wall. Such is the case of conical structures where entrance is also provided but they may not have any walls. Therefore, such of the conical structures are also treated as separate buildings.

Permanent houses :

Houses, the walls and roof of which are made of permanent materials. The material of walls can be any one from the following, namely, galvanized iron sheets or other metal sheets, asbestos sheets, burnt bricks, stones or concrete. Roof may be made of from any one of the following materials, namely, tiles, slate, galvanized iron sheets, metal sheets, asbestos sheets, bricks, stones or concrete.

Semi-permanent houses :

Houses in which either the wall or the roof is made of permanent material and the other is made of temporary material.

Temporary houses :

Houses in which both walls and roof are made of materials, which have to be replaced frequently. Walls may be made from any one of the following temporary materials, namely, grass, thatch, bamboo, plastic, polythene, mud, unburnt bricks or wood. Roof may be made from any one of the temporary materials, namely, grass, thatch, bamboo, wood, mud, plastic or polythene.

Dwelling Room :

A room is treated as a dwelling room if it has

walls with a doorway and a roof and should be wide and long enough for a person to sleep in, i.e. it should have a length of not less than 2 metres and a breadth of at least 1.5 meters and a height of 2 meters. A dwelling room would include living room, bedroom, dining room, drawing room, study room, servant's room and other habitable rooms. Kitchen, bathroom, latrine, store room, passageway and verandah which are not normally usable for living are not considered as dwelling rooms. A room, used for multipurpose such as sleeping, sitting, dining, storing, cooking, etc., is regarded as a dwelling room. In a situation where a census houses is used as a shop or office., etc., and the household also stays in it then the room is not considered as a dwelling room. But if a garage or servant quarter is used by a servant and if she/ he also lives in it as a separate household then this has been considered as a dwelling room available to the servant's household. Tent or conical shaped hut if used for living by any household is also considered as dwelling room.

A dwelling room, which is shared by more than one household, has not been counted for any of them. If two households have a dwelling room each but in addition also share a common dwelling room, then the common room has not been counted for either of the households.

Census house :

A 'census house' is a building or part of a building used or recognised as a separate unit because of having a separate main entrance from the road or common courtyard or staircase, etc. It may be occupied or vacant. It may be used for residential or non- residential purpose or both.

In certain peculiar situations, the manner in which buildings and census houses were identified for numbering in the field by the enumerators is described hereunder:

Sometimes a series of different buildings are found along a street which are joined with one another by common walls on either side looking like a continuous structure. These different units are practically independent of one another and are likely to have been built at different times and owned by different persons. In such cases, though the whole structure with all the adjoining units apparently appears to be one building, each portion was treated as a separate building and its constituent units as separate census houses.

On the other hand, one may come across cases, particularly in large cities of multi-storeyed ownership flats. In these cases while the structure looks like one building, different persons own the flats. In case of such multi-storeyed structures, having a number of flats owned by different persons, the entire structure was treated as one building and each flat as a separate census house.

If within a large enclosed area, there are separate buildings owned by different persons then each such building is treated as a separate building. There can be a situation where within an enclosed compound there are separate buildings owned by an undertaking or company or even government that are actually in occupation of different persons. For example, Indian Oil Corporation colony where the buildings are owned by the Corporation but these are in occupation of their employees. Each such building was treated as a separate building. But if in any one of these buildings there were flats in occupation of different households, each such flat was reckoned as a separate census house.

Sometimes it becomes difficult to apply the definition of census house strictly in certain cases. For example, in an urban area, if a flat has five rooms, each room having direct entrance from the common staircase or courtyard. By definition, this has to be treated as five census houses. If all these five rooms are occupied by a single household it was not realistic to treat them as five census houses. In such a case,'singleness' of use of these rooms along with the main house should be considered and the entire flat was treated as one census house. On the other hand, if two independent households occupy these five rooms, the first household living in 3 rooms and the second household occupying 2 rooms, then considering the use, the first three rooms together were treated as one census house and the remaining rooms as another census house. But if each room was occupied by an independent household, then each such room was treated as a separate census house.

In case of hostels, hotels, etc., even if the door of each room in which an inmate lives opens to a common verandah, staircase, courtyard or a common

room, as it happens almost invariably, the entire hostel/ hotel building was treated as one census house. but if such hostels/ hotels have out- houses or other structures used for different purposes or the same purpose, then each such structure attached to the main hostel / hotel was treated as a separate census house.

In some parts of the country, in rural areas, the pattern of habitation is such that a group of huts, located in a compound, whether enclosed or unenclosed, is occupied by one household. While the main residence may be located in one hut, other huts may be used for sleeping, as a kitchen, bath room, baithak, etc. Though each of the huts was a separate structure, they form a single housing unit and therefore, have to be treated collectively as one building and one census house. If some of the huts are used by one household and the others by a second household as residence, then the two groups of huts were treated as separate census houses. However, if there were also other huts in the compound used for other purposes and not as part of the household's residence such as, cattle shed, workshed, etc., these were treated as separate census houses.

On the other hand, in urban areas, where more than one structure within an enclosed or open compound (premises) belonging to the same person, e.g., the main house, the servant's quarter, the garage, etc., only one building number was given for this group and each of the constituent a separate census house number.

Only cases where a structure with roof and pillars has come up was treated as a building.

Village

The basic unit for rural areas is the revenue village which has definite surveyed boundaries. The revenue village may comprise of one or more hamlets but the entire village is treated as one unit for presentation of data. In unsurveyed areas, like villages within forest areas, each habitation area with locally recognized boundaries is treated as one village.

Rural-Urban area

The data in tables on Houses, Household Amenities and Assets are presented separately for rural and urban areas. The unit of classification in this regard is 'town' for urban areas and 'village' for rural areas. In the Census of India 2001, the definition of urban area adopted is as follows:

a) All places with a municipality, corporation, cantonment board or notified town area committee, etc.

b) A place satisfying the following three criteria simultaneously:
   i) A minimum population of 5,000.
   ii) at least 75 per cent of male working population engaged in non-agricultural pursuits; and
   iii) a density of population of at least 400 per sq. km.(1,000 per sq.mile)

For identification of places which would qualify to be classified as 'urban' all villages, which, as per the 1991 Census had a population of 4,000 and above, a population density of 400 persons per sq. km. and having at least 75 per cent of male working population engaged in non-agricultural activity were considered. To work out the proportion of male working population referred to above against b) (ii), the data relating to main workers were taken into account.

Apart from these, the outgrowths (OGs) of cities and towns have also been treated as urban under 'Urban Agglomerations'. Examples of out-growths are railway colonies, university campuses, port areas, military camps, etc., that may have come up near a statutory town or city but within the revenue limits of a village or villages contiguous to the town or city. Each such individual area by itself may not satisfy the demographic criteria laid down at (b) above to qualify it to be treated as an independent urban unit but may deserve to be clubbed with the towns as a continuous urban spread. Thus, the town level data, wherever presented, also includes the data for outgrowths of such towns.

City

Towns with population of 100,000 and above are called cities.

Urban Agglomeration

An Urban Agglomeration is a continuous urban spread constituting a town and its adjoining urban outgrowths (OGs) or two or more physically contiguous towns together and any adjoining urban

outgrowths of such towns. In some cases railway colonies, university campuses, port areas, etc., may come up near a city or statutory town outside its statutory limits but within the revenue limits of a village or villages contiguous to the town or city. Each such individual area by itself may not satisfy the minimum population limit to qualify it to be treated as an independent urban unit but may deserve to be clubbed with the town as a continuous urban spread.

For the purpose of delineation of Urban Agglomerations during Census of India 2001, following criteria are taken as pre-requisites:

(a) The core town or at least one of the constituent towns of an urban agglomeration should necessarily be a statutory town ; and

(b) The total population of all the constituents (i.e., towns and outgrowths) of an Urban Agglomeration should not be less than 20,000 (as per the 1991 Census).

With these two basic criteria having been met, the following are the possible different situations in which Urban Agglomerations would be constituted:

i) a city or town with one or more contiguous outgrowths;

ii) two or more adjoining towns with their outgrowths; and

iii) a city and one or more adjoining towns with their outgrowths all of which form a continuous spread.

Household

A 'household' is usually a group of persons who normally live together and take their meals from a common kitchen unless the exigencies of work prevent any of them from doing so. Persons in a household may be related or unrelated or a mix of both. However, if a group of unrelated persons live in a census house but do not take their meals from the common kitchen, then they are not constituent of a common household. Each such person was to be treated as a separate household. The important link in finding out whether it was a household or not was a common kitchen. There may be one member households, two member households or multi-member households.

Institutional household

A group of unrelated persons who live in an institution and take their meals from a common kitchen is called an Institutional Household. Examples of Institutional Households are boarding houses, messes, hostels, hotels, rescue homes, jails, ashrams, orphanages, etc. To make the definition more clearly perceptible to the enumerators at the Census 2001, it was specifically mentioned that this category of households would cover only those households where a group of unrelated persons live in an institution and share a common kitchen.

Houseless household

Households who do not live in buildings or census houses but live in the open on roadside, pavements, in hume pipes, under fly-overs and staircases, or in the open in places of worship, mandaps, railway platforms, etc., are treated as Houseless Households.

Scheduled Castes and Scheduled Tribes

Article 341 of the Constitution provides that the President may, with respect to any State or Union territory, specify the castes, races or tribes or parts of or groups within castes, races or tribes which shall for the purposes of the Constitution be deemed to be Scheduled Castes in relation to that State or Union territory. Article 342 similarly provides for specification of tribes or tribal communities or parts of or groups within tribes or tribal communities, which are to be deemed for the purposes of the Constitution to be Scheduled Tribes in relation to the various States and Union territories. In pursuance of these provisions, the list of Scheduled Castes and / or Scheduled Tribes are notified for each State and Union territory and are valid only within the jurisdiction of that State or Union territory and not outside.

It is important to mention here that under the Constitution (Scheduled Castes) Order, 1950, no person who professed a religion different from Hinduism was deemed to be a member of a Scheduled Castes in addition to every member of the Ramdasi, Kabirpanthi, Majhabi or Sikligar caste resident in Punjab or Patiala and East Punjab States Union were in relation to that State whether they professed the Hindu or the Sikh religion. Subsequently, in September 1956, by an amendment, the Presidential

Order of 1950 and in all subsequent Presidential Orders relating to Scheduled Castes, the Hindu and the Sikh religions were placed on the same footing with regard to the specification of Scheduled Castes. Later on, as per the amendment made in the Constitution (Scheduled Castes) Order 1990, the Hindu, the Sikh and the Buddhist were placed on the same footing with regard to the recognition of the Scheduled Castes.

The lists containing the names of the Scheduled Castes and the Scheduled Tribes applicable for the Census of India 2001 in the State are given below:

Scheduled Castes

1) Ager
2) Anamuk
3) Aray Mala

Language and Mother tongue

As per the census concept, each language is a group of mother tongues. The census questionnaire collects information on the mother tongue of each person and mother tongue is defined as the language spoken in childhood by the person's mother to the person. If the mother died in infancy, the language mainly spoken in the person's home in childhood will be the mother tongue. In the case of infants and deaf mutes, the language usually spoken by the mother is considered as mother tongue. It is not necessary that the language spoken as mother tongue should have a script. The mother tongues returned by the respondents in census are classified and grouped under appropriate languages according to their linguistic characteristics.

Literate

A person age 7 years and above who can both read and write with understanding in any language is taken as literate. A person who can only read but cannot write is not literate. It is not necessary that to be considered as literate, a person should have received any formal education or passed any minimum educational standard. Literacy could also have been achieved through adult literacy classes or through any non-formal educational system. People who are blind and can read in Braille are treated as literates.

Literacy rate

Literacy rate of the population is defined as the percentage of literates in the age group seven years and above. For different age groups the percentage of literates in that age group gives the literacy rate.

Educational level

The highest level of education a person has completed.

Work

Work is defined as participation in any economically productive activity with or without compensation, wages or profit. Such participation may be physical and/or mental in nature. Work involves not only actual work but also includes effective supervision and direction of work. It even includes part time help or unpaid work on farm, family enterprise or in any other economic activity. All persons engaged in 'work' as defined above are workers. Persons who are engaged in cultivation or milk production even solely for domestic consumption are also treated as workers.

Reference period for determining a person as worker and non-worker is one year preceding the date of enumeration.

Main worker

A person who has worked for major part of the reference period (i.e. six months or more during the last one year preceding the date of enumeration) in any economically productive activity is termed as 'Main worker'.

Marginal worker

A person who worked for less than six months of the reference period (i.e. in the last one year preceding the date of enumeration) in any economic activity is termed as 'Marginal worker' .

Non worker

A person who has not worked at all in any economically productive activity during the reference period (i.e. last one year preceding the date of enumeration) is termed as 'Non worker'.

Cultivator

For purposes of the Census a person is classified as cultivator if he or she is engaged in cultivation on land owned or held from government or held from private persons or institutions for payment in money, kind or share. Cultivation includes effective supervision or direction in cultivation.

A person who has given out her/his land to another person or persons or institution(s) for cultivation for money, kind or share of crop and who does not even supervise or direct cultivation in exchange of land, is not treated as cultivator. Similarly, a person working on another person's land for wages in cash or kind or a combination of both (agricultural labourer) is not treated as cultivator.

Cultivation involves ploughing, sowing, harvesting and production of cereals and millet crops such as wheat, paddy, jowar, bajra, ragi, etc., and other crops such as sugarcane, tobacco, ground-nuts, tapioca, etc., and pulses, raw jute and kindred fiber crop, cotton,

cinchona and other medicinal plants, fruit growing, vegetable growing or keeping orchards or groves, etc. Cultivation does not include the following plantation crops – tea, coffee, rubber, coconut and betel-nuts (areca).

Agricultural labourer

A person who works on another person's land for wages in money or kind or share is regarded as an agricultural labourer. She/he has no risk in the cultivation, but merely works on another person's land for wages. An agricultural labourer has no right of lease or contract on land on which she/he works.

Household industry worker :

Household industry is defined as an industry conducted by the head of the household herself/himself and or by the members of the household at home or within the village in rural areas and only within the precincts of the house where the household lives in urban areas. The larger proportion of workers in household industry should consist of members of the household including the head. The industry should not be run on the scale of a registered factory which would qualify or has to be registered under the Indian Factories Act and should be engaged in manufacturing, processing, servicing and repairs of goods.

It does not include professions such as a Pleader, Doctor, Musician, Dancer, Waterman, Astrologer, Dhobi, Barber, etc. or merely trade or business, even if such professions, trade or services are run at home by members of the household.

Other worker :

A person who has been engaged in some economic activity during the reference period but not as a cultivator or agricultural labourer or in Household Industry is termed as a 'Other Worker (OW)'. The type of workers that come under this category of 'OW' include all government servants, municipal employees, teachers, factory workers, plantation workers, those engaged in trade, commerce, business, transport, banking, mining, construction, political or social work, priests, entertainment artists, etc. In effect, all those workers other than cultivators or agricultural labourers or household industry workers, are 'Other Workers'.

Work participation rate :

Percentage of workers (main + marginal) to total population.

Population density :

Population density is the number of persons inhabited per square kilometre of the area.

Age :

Age is measured in terms of the completed number of years.

Sex -ratio :

Number of females per 1000 males in a population.

(vi) Non Census Concepts

Improved drinking water :

If the household had access to drinking water supplied from a tap, hand pump, tube well or well (protected or covered) situated within or outside the premises, it is considered as having access to improved drinking water.

It may be mentioned that such uniform definition may not be valid across all states.

System of sewerage :

Generally, a sewerage system would mean a network of mains and branches of underground conduits for the conveyance of sewerage to the point of disposal. Sewers that carry only household and industrial wastage are called separate sewers; those that carry storm water from roofs, streets and other surfaces are known as storm water drains, while those carrying both sewage and storm water are called combined sewers. However, in some towns which are not provided with such underground sewerage system, it is served by open surface drain, box drain, sylk pattern drain, etc., in these towns.

Type of latrine and Method of disposal of night soil :

There are three prevalent systems of disposal of human wastes, viz.(i) underground sewerage, (ii) sanitary water flush latrines with individual disposal systems, like septic tank, leaching cess pool and collecting well, and (iii) dry type of latrines with manual scavenging.

The system of underground sewerage provides for the street sewerage with which are connected the sanitary latrines constructed in the houses having water closets and fitted with flushing cistern (or hand flushing). Through this sewer the faecal matter is transported without the need for scavenging. This system generally exists in cities and big towns.

Where the streets sewer does not exist these sanitary water flush latrines are connected to a local septic tank with a sub-soil dispersion system or a leaching pit. Here the liquid wastes from the water closet is disposed of locally in leaching pit, a septic tank with a soil dispersion system is constructed. This dispersion requires an optimum travel through the pores of the soil which renders the harmful liquid bacterially innocuous by the slow process of filtration through the soil traversed.

Where the soil is impermeable, collecting wells are constructed and the sanitary water flush latrines are connected with them. These wells are cleaned at periodic intervals by a suitable device. The dry type of latrines are of service type latrines from where human excreta is removed by scavengers from house to house, in most cases carrying it on their heads or shoulders or in baskets with handle or wheel barrows. These are then collected in bullock carts or trucks or tractors and trolleys for being carried to the dumping grounds.

Fertility :

In demography, the word fertility is used in relation to the actual production of children or occurrence of births specially live births. Fertility is a measure of rate at which population adds to itself by births and normally assessed by relating the number of births to a full or part of the population, such as number of married women or number of women of child bearing age. The definitions of the terminology used in computing different fertility rates are mentioned below:

Crude birth rate(CBR) :

Ratio of the number of live births in a year to the mid year population, normally expressed per 1000 population.

$$CBR = \frac{\text{Number of live births during the year}}{\text{Mid –year Population.}} \times 1000$$

Crude death rate(CDR) :

Ratio of the number of deaths in a year to the mid year population, normally expressed per 1000 population.

$$CDR = \frac{\text{Number of deaths during the year}}{\text{Mid- year Population}} \times 1000$$

Natural growth rate :

Growth rate is obtained as the difference between crude birth rate and crude death rate in the absence of migration.

Age specific fertility rate (ASFR) :

Number of live births in a year to female population in any specified age group normally expressed per 1000 women.

$$ASFR = \frac{\text{Number of live births in a particular age-group}}{\text{Mid-year female population of the same age-group}} \times 1000$$

Age specific marital fertility rate (ASMFR) :

Number of live births in a year to married female population in any specified age group normally expressed per 1000 married women .

$$ASMFR = \frac{\text{Number of live births in a particular age-group}}{\text{Mid-year married female population of the same age-group}} \times 1000$$

General fertility rate (GFR) :

Number of live births per 1000 women in the reproductive age-group (15-49) years in a given year.

$$GFR = \frac{\text{Number of live births in a year}}{\text{Mid-year female population in the age-group (15-49) years}} \times 1000$$

General marital fertility rate (GMFR) :

Number of live births per 1000 married women in reproductive age-group (15-49) years in a given year.

$$GMFR = \frac{\text{Number of live births in a year}}{\text{Mid-year married female population in the age-group (15-49) years.}} \times 1000$$

Total fertility rate (TFR) :

It is obtained as the total of the age specific fertility rates (number of children born per woman of the particular age) for the entire reproductive age span. It provides the average number of children that will be born to a woman under the fertility levels indicated by the age specific fertility rates assuming that there is no mortality of women till the completion of reproductive period.

$$TFR = 5 \times \frac{\sum_{15\text{-}19}^{45\text{-}49} ASFR}{1000}$$

Total marital fertility rate (TMFR) :

Average number of children that would be born to a married woman if she experiences the current fertility pattern throughout her reproductive span (15-49) years assuming that there is no mortality of women till the completion of reproductive period.

$$TMFR = 5 \times \frac{\sum_{15\text{-}19}^{45\text{-}49} ASMFR}{1000}$$

Age-specific mortality rate (ASMR) :

Number of deaths in a particular age and sex group per 1000 population of the same age group.

$$ASMR = \frac{\text{Number of deaths in a particular age-group}}{\text{Mid-year population of}} \times 1000$$

q1 Probability of dying between birth and age 1. This can be used as approximate value of Infant Mortality Rate (IMR) which gives the ratio of number of deaths in a year of children aged less than one year to the number of births in that year.

q2 Probability of dying between birth and age 2.

q5 Probability of dying between birth and age 5. This indicator is also known as Under Five Mortality Rate (U5MR)

Infant mortality rate (IMR) :

Ratio of the number of infant deaths (deaths of children below one year) in a year to the number of live births in that year.

$$IMR = \frac{\text{Number of infant deaths during the year}}{\text{Number of live births during the year}} \times 1000$$

Infant mortality rate comprises of two parts, viz., Neo-natal mortality rate and Post neo-natal mortality rate. The neo-natal mortality rate also comprises of two parts viz., Early neo-natal mortality rate and late neo-natal mortality rate. These are defined as :

Neo-natal mortality rate (NMR) :

Number of infants dying within the first month of life (28 days or under) in a year per 1000 live births of the same year.

$$NMR = \frac{\text{Number of infant deaths aged 28 days or under during the year}}{\text{Number of live births during the year}} \times 1000$$

Early neo- natal mortality rate :

$$= \frac{\text{Number of infant deaths of less than 7 days during the year}}{\text{Number of live births during the year}} \times 1000$$

Late neo-natal mortality rate :

$$= \frac{\text{Number of infant deaths of 7 days to less than 29 days during the year}}{\text{Number of live births during the year}} \times 1000$$

Post neo-natal mortality rate (PNMR) :

$$= \frac{\text{Number of deaths of 29 days to less than one year during the year}}{\text{Number of live births during the year}} \times 1000$$

Peri-natal mortality rate (PMR) :

Number of still births plus deaths within 1st week of delivery per 1000 births in a year.

$$\text{PMR} = \frac{\text{Number of still births and infant deaths of less than 7 days during the year}}{\text{Number of live births and still births during the year}} \times 1000$$

Still birth rate (SBR) :

$$= \frac{\text{Number of still births during the year}}{\text{Number of live births and still births during the year}} \times 1000$$

Maternal mortality rate(MMR) :

Number of deaths of women in the age group 15-49 while pregnant or within 42 days of termination of pregnancy from any cause related to pregnancy and child birth per 100000 live births in a given year.

$$\text{MMR} = \frac{\text{Number of maternal deaths to women in the age group 15-49}}{\text{Number of live birth}} \times 100000$$

Eligible couple (Couples per 1000 population) :

Number of currently married females in the age group15-44 years per 1000 persons of all ages.

Child woman ratio (0-4) :

1. Number of children in the age group 0-4 years per 1000 women in the age group 15-49 years.

Child woman ratio (5-9) :

2. Number of children in the age group 5-9 years per 1000 women in the age group 15-49 years.

Migration :

Migration is the third component of population change, the other two being mortality and fertility.

A person is considered as a migrant by place of birth if the place in which he/she is enumerated during the census is other than the place of his/her birth.

Similarly a person is considered as a migrant by place of last residence if the place in which he/she is enumerated during the census is other than his/her place of immediate last residence outside the village or town and not simply in another house or locality in the same village or town.

Certain aspects concerning temporary movement/ migration of people has been explained below as these are important components concerning migration :-

(i) Migration of persons in search of job is high in the country. In many cases such migrants are only seasonal in nature. People migrate to other places for work in a particular season and come back again to their usual place of residence after three or four months. All such workers are treated as migrants. Similarly, if a person moved to any other place for attending short term vocational or educational course that lasted for only few months of a year, she/he too were considered as a migrant.

(ii) Where a person had merely gone out to another place or had been shifting from one place to another purely on tour, pilgrimage, visit to hospital for treatment or for temporary business purposes, such persons are not deemed to have had another residence different from the place where she/he or her/his family normally resides. She/he is not considered as migrant.

(iii) A woman temporarily moves into a hospital or to her parents or other relative's house for delivery and if the hospital or the parents/relatives houses is in a place different from usual place of residence, the place where the hospital or parents/relative's house is the place of last residence of the child but not of the mother.

A new response category 'Moved after birth' was added in Census of India 2001 in the question on 'reasons for migration' to bring out additional migration patterns. Natural calamities or distress migration as a reason for migration for last residence migrants included in 1991 Census, is covered under

category of 'Others'. The reason for migration has been determined as applicable at the time of migration and not in reference to any point of time after that. For example, if a person had moved from the place of her/his last residence for the purpose of education and subsequently at some point of time got employment there only, the reason for migration would be 'education' and not 'work/employment'.

Internal and International migration :

The migrational movements are of three types (i) Migration within the state itself with its components (a) Migration within the district of enumeration (intra district migration) (b) Migration from one district of state to another district of state (inter district migration), (ii) Migration from one state to another State of the country (inter-state migration), (iii) Migration from one country to another country. The first two streams together constitute internal migration, while the last type of movement is called international migration. The present name of the country, state or district and not the name by which they were known at the time of her/his birth or last residence were recorded.

Rural - Urban components of migration:

Rural or Urban status in respect of migrants have been determined as applicable at the time of migration and not with reference to any point of time after that.

The flow of migrants consists of four streams viz. rural to rural, rural to urban, urban to rural and urban to urban.

Civic status of urban units :

Civic Status of a town/city is determined on the basis of Civic Administrative authority of the town e.g., Municipal Corporation/Corporation, Municipal Committee/Municipal council, Municipality etc.

Size class of UA / town :

Size-class of UA/Town is based on the population size of the UA/City/Town UAs./Towns with 1,00,000 and above population are classified as Class I UAs. / towns. These Class I UAs. / towns are now further sub classified in to seven sub classes namely M1 to M7 depending on the population size of UA/City/ Town. These are M7(5,000,000 and above); M6(2,000,000 to 4,999,999); M5 (1,000,000-1,999,999) M4 (500,000-999,999); M3(300,000-499,999), M2 (200,000-299,999) & M1 (100,000-199,999). towns with, 50,000 to 99,999 population are classified as Class II towns, 20,000 to 49,999 population are Class III towns, population with 10,000-19,999 are Class IV towns, population with 5,000 and 9,999 are Class V towns and towns with less than 5,000 population are Class VI towns.

Slum area :

The Slum Areas (Improvement and Clearance) Act, 1956 which was enacted by the Central Govt. defined slums as a) Areas where buildings are in any respect unfit for human habitation; or b) are by reasons of dilapidation, overcrowding, fault arrangement and design of such buildings, narrowness or faulty arrangement of streets, lack of ventilation, light or sanitation facilities, or any combination of these factors, are detrimental to safety, health or morals.

Mega city

The concept of 'Mega city' is a recent phenomenon in the Urban Sociology and is defined in term of metropolitan city in the form of large size, problem of management of civic amenities and capacity to absorb the relatively high growth of population. Indian Census in 1991 treated the population size of 5 million and above as the cut off point to identify a place as the mega city. Whereas, for the purpose of inclusion in Centrally Sponsored Scheme for Infrastructure Development in Mega cities the Ministry of Urban Affairs and employment, Department of Urban Development adopted the criteria of 4 million and above population as per 1991 Census for Mega Cities. In 2001 Census, cities with 10 millions and above population have been treated as Mega cities.

(vii) 2001 Census Findings – Population, its distribution

Brief Note on Census

Census taking is a massive operation carried out in a short span of time with the active participation of a veritable army of enumerators. The reference moment for the 2001 Census was the 00.00 hrs. March 1, 2001 i.e. the census provides a snapshot of the population of the country, as on 1st march 2001. Actual enumeration was spread over a period of 20

days from 9th February 2001 to 28 Feb.2001, followed by a revisional round up to 5th March 2001 for updating of the population figures with reference to 00.00 hours of March 1, 2001. Household schedule having 23 questions regarding each and every person in the family is newly introduced in this Census. These questions are mainly self-explanatory and answers are in code language. Question No. 1 to 15 are related to general and socio-cultural characteristic individual. Question 16 to 20 is about economic activity of the person. Question 21 and 22 about migration and question no. 23 is for women, related to fertility. In addition one question is added in 2001 census which is related to household engaged in cultivation/plantation in part III.

As a prelude to the actual Census, the urban and rural areas were identified and listed out in respect of each administrative unit. The Director of Census Operations has prepared the list of urban area (which is generally referred to as town list) and simultaneously, a list of villages. These lists form the basic frame for the organization of the Census Operations. Thereafter geographical area that could be conveniently covered out to constitute the enumerator's block.

The next major step was the house listing Operation that was carried in the state during May-June 2000. Thereafter, in order to adhere to the prescribed workload norms, the actual Census enumeration's blocks were carefully demarked on the basis of the layout sketches and the notional maps prepared was also utilised to collect wealth of information on items such as predominant construction material used for houses, amenities available to the Census households, number of living rooms etc. Information regarding number of bedrooms in the household, if couples having separate room, availability of amenities like telephone, TV, Car/Scooter was asked first time in this Census. From this information we can have an idea of standard of living of the people in the country.

Distribution of Population in Rural-Urban Areas.

According to Census 2001, the district Dhule has a total population of 1,707,947, comprising of 829,575 females and 878,372 males. The population of the district in Census 2001 is 15.9 percent higher than the district population of 1,473,170 in 1991 Census. The district has been bifurcated after 1991 Census and a new district Nandurbar carved out with six tahsils from district Dhule. At present, the district has four tahsils and the recasted population of four tahsils in 1991 Census have been taken for comparison. Tahsil Dhule is most populous with a population of 719,785. As much as 42.1 percent of the population is concentrated in tahsil Dhule. Other tahsils in order of population size are Tahsil Sakri (363,092), Shirpur (337,553) , and Sindkhede (287,517).

An examination of the rural-urban distribution of population reveals that 1,262,062 persons constituting 73.9 percent of the total population concentrated in rural areas, while 445,885 persons (26.1percent) are living in urban areas of the district. Although in absolute numbers, the number of people living in rural areas has increased from 1,116,966 in 1991 to 1,262,062 in 2001. In terms of percentage, the people residing in rural areas has decreased from 75.8 percent in 1991 to 73.9 percent in Census 2001.

While Tahsil Sakri has no urban population, Tahsil Dhule has 47.5 percent urban population. Tahsil Shirpur and Sindkhede have 18.3 percent and 14.8 percent population respectively.

The average growth rates for the rural and urban areas of the district are 13.0 percent and 25.2 percent respectively. Shirpur Tahsil has registered the highest rural growth rate (19.7 percent), while Sindkhede Tahsil has the lowest growth rate (7.1 percent). Rural growth rates are above the district average in two tahsils and below the district average in two tahsils. In urban areas, the growth rate is above the district average in two tahsils i.e., Shirpur and Sindkhede and below in Dhule Tahsil. The highest urban growth rate 39.4 percent is registered by Shirpur Tahsil, while Dhule Tahsil has the lowest urban growth rate (22.8 percent). The proportion of urban to total population in Dhule district stands at 26.1 percent as against 24.2 percent in 1991 census indicating a very slow pace of urbanization in the district.

Percentage are given in brackets.

Among the 678 inhabited villages, 12 (1.8 percent) are small sized with a population below 200, 74 (10.9 percent) are in the size class 200-499, 163 (24.0 percent) are in the size class 500-999, 225 (33.2 percent) are in the size class 1000-1999, 170 (25.1 percent) are in the size class 2000-4999, 27 (4.0 percent) are in the size class 5000-9999 and the remaining 7 (1.0 percent) are in the size class of 10,000 and above. There are 12 villages with less than 200 inhabitants each constituting 1.8 percent of the total inhabited villages with 0.1 percent (1,694 persons) of the rural population of the district. 74 villages with population size 200-499 accounting for 10.9 percent of the total villages and 2.1 percent of the total rural population. There are 163 villages in size 500-999, constituting 24.0 percent of the total inhabited villages with 9.8 percent of the rural population and 225 villages in size 1,000-1,999 constituting 33.2 percent of the total inhabited villages with 25.7 percent of the total rural population, 170 villages in size 2,000-4,999 constituting 25.1 percent of the total inhabited villages with 39.4 percent of the total rural population, 27 villages in size 5,000-9,999 constituting 4.0 percent of the total inhabited villages with 14.9 percent of the total rural population, and 7 villages in size 10,000 and above constituting 1.0 percent of the total inhabited villages with 8.4 percent of the total rural population.

Among the 4 C.D. Blocks of the district the percentage of less than 200 population size villages is the highest in Dhule C.D. Block (3.0 percent) and lowest in Sakri C.D. Block (0.4 percent). The percentage of population size 200-499 villages is highest in Sakri (12.9 percent) C.D. Block and lowest in Shirpur (7.6 percent) C.D. Block. The percentage of population size 500-999 villages is the highest in Sakri C.D. Block (31.6 percent) and lowest in Shirpur C.D. Block (18.6 percent). The percentage of 1,000-1,999 sized villages is the highest in Sakri C.D. Block (37.3 percent) and lowest in Dhule C.D. Block (24.0percent). The percentage of 2,000-4,999 sized villages is the highest in Shirpur C.D. Block (34.5 percent) and lowest in Sakri C.D. Block (13.8 percent). The percentage of 5,000-9,999 sized villages is the highest in Dhule C.D. Block (7.2 percent) and lowest in Sindkhede C.D. Block (2.1 percent). The percentage of 10,000 and above sized villages is the highest in Dhule C.D. Block (1.8 percent) and lowest in Sindkhede C.D. Block (0.7 percent), while Shirpur C.D. Block has no villages in this range.

Population Density (Rural) of the district : 195

The density of population in rural areas of Dhule district is 195 persons per sq. km. The density of villages by density ranges indicates that those with medium densities in ranges 101 to 300 account for 52.4 percent of the total inhabited villages, while very low densities of less than 20 persons per sq. km. are noticeable in 8 villages constituting 1.2 percent of the villages. At the same time there are only a few villages that can be classified as having very high densities. 12.7 percent of villages have a density of 501 and above persons whereas 12.4 percent villages have density range of 301 to 500.

Note: Sex ratio has been defined here as the number of females per 1000 males.

Table 5 shows the sex ratio for the district and the state. 2001 census recorded a sex ratio of 944 females per 1,000 males in the district. This is higher compared to the state average (922). The sex ratio in Dhule district has remained higher than that of state since 1901. Total sex ratio at the state level declined by 56 points and at district level it declined by 36 points during the last 100 years. Similarly the sex ratio for the rural areas of the state decreased by 43 points and for the district by 41 points during 1901-2001. A reverse trend is seen for the urban areas in sex ratio. For the state it increased by 11 points and for the

district it decreased by only 1 point during the above period. From 1901 to 2001 the sex ratio in Dhule district has been fluctuating between 980 in 1901 census and 944 in 2001 census indicating a declining trend in general. The state sex ratio has also been fluctuating between 978 in 1901 to 922 in 2001 also indicating declining trend.

In Dhule district as a whole, there are 944 females for every thousand males. Within the district sex ratio varies from 970 in Sakri followed by Shirpur (954), Sindkhede (950), and Dhule (926). The rural areas in general have a higher proportion of females than urban areas. Dhule district also confirms to this pattern. The sex ratio figures for rural and urban areas of Dhule district are 953 and 922 respectively. In rural areas three out of four tahsils have higher sex ratio than the district rural average. Only one tahsil i.e., Dhule has lower sex ratio than the district rural average. In urban areas the sex ratio in Dhule tahsil is equal to district urban average.

For the district as a whole, literacy rates for males are substantially higher compared to females in both rural and urban areas. The tahsilwise break up shows that Dhule tahsil has the highest literacy rate of 78.1 percent and it is also above the district average rate of literacy. Sakri tahsil has the lowest literacy rate (61.7 percent). Male Literacy rate is highest in Dhule tahsil (86.8 percent). Two tahsils have male literacy rates above the district average (Sindkhede and Dhule). Female literacy is highest in Dhule tahsil (68.8 percent) and lowest in Sakri tahsil (50.8 percent). Two out of four tahsils have female literacy rate above the district average (Dhule and Sindkhede).

As regards rural areas of the district, the literacy rate is 67.1 percent for the district with male and female literacy rates of 78 percent and 55.7 percent respectively. Sindkhede tahsil has the highest literacy rate of 72.6 percent. In this tahsil 84.1 percent of males and 60.7 percent of females are literates. The lowest rural literacy rate is noted in Sakri tahsil (61.7 percent). As far as male literacy is concerned Sakri tahsil is at the bottom of the list with 72.4 percent males and 50.8 percent in female literacy. There is significant difference in literacy rates between males and females in all the tahsils. Females are lagging behind the males in literacy in all the tahsils; however, the gap varies from tahsil to tahsil.

There has been no conceptual change in defining the workers between 1991 and 2001 census. At 2001 census there has been mainly three-fold classification of population namely main workers, marginal workers and non-workers, which was adopted for 1991 also. The main workers of 2001 are distributed in four categories of economic activities instead of nine industrial categories in earlier census 1991. Table 31 shows the distribution of main workers, marginal workers and non-workers for total, male and females in 2001 census.

2001 census recorded 33.6 percent of the districts' population as main workers, 9.6 percent as marginal workers and the remaining 56.8 percent as non-workers. Among the 33.6 percent main workers, male participation rate in the district is 45.6 percent while that of females is 20.9 percent, as per 2001 census.

The percentage of main workers is highest in Sakri tahsil (40.9 percent) and the lowest in Dhule tahsil (30.9 percent). The sex wise break-up shows that among male and females 6.1 percent and 13.3 percent are repectively marginal workers. It is seen that the percentage of marginal workers is substantially higher than that of males. The percentage of marginal workers is the highest in Sindkhede tahsil (12.6 percent) and the lowest in Dhule tahsil (7.1 percent) among four tahsils of the district.

2001 census recorded 25.8 percent of the district population as main workers, 2.9 percent as marginal workers and the remaining 71.3 percent as non-workers.

In urban areas Dondaicha-Warwade town has the highest participation rate of 27 percent while Dhule town has the lowest rate of 25.5 percent in the district. The work participation rate for main workers in urban areas for the district is 25.8 percent. Among the three towns of the district, two towns are above the district average i.e., Dondaicha-Warwade (27 percent) and Shipur-Warwade (26.7 percent) while only one town Dhule (25.5 percent) has main workers percentage below the district average (25.8 percent).

The sex wise break-up shows that among males and females, 43.5 percent and 6.7 percent of the population are main workers. The percentage of marginal workers is the highest in Dondaicha-Warwade town (4.1 percent) and the lowest in Dhule (2.7 percent). The work participation rate for marginal workers in urban areas for the district is 2.9 percent. Only two towns have participation rate above the district urban average and remaining only one town has participation rate below the district urban average. 2.9 percent males and 3 percent females are working as marginal workers in the district.

Note: Percentage of Workers to total workers are given in brackets.

Table 34 indicates the distribution of male and female workers by four categories of economic activities for the district.

The relative importance of the main spheres of economic activity may be gauged from the pattern of distribution of workers according to the broad four-fold classification, namely cultivators, agricultural labourers, household industry workers and other workers. The economy of the district is primarily agricultural which is supported by fact that cultivators (27.7 percent) and agricultural labourers (42.8 percent) together constitute 70.5 percent of the workers in the district. The agricultural sector has absorbed more than seventy percent of the total workers in the district.

The proportion of both cultivators and agricultural labourers differs considerably from tahsil to tahsil. The proportion of cultivators varies between 47.4 percent for Sakri tahsil and 19.3 percent for Dhule tahsil. The proportion of agricultural labourers varies between 59.8 percent for Shirpur tahsil and 33.1 percent for Dhule tahsil. It may be seen that 29.5 percent workers are engaged in work other than agriculture. Among them, 2.9 percent are household industry workers and remaining 26.6 percent are in other workers.

Note: Percentage of Workers to total workers are given in brackets.

Table 35 indicates the distribution of workers by male and female workers by four categories for the district. The economy of the district is primarily agricultural which is supported by the fact that cultivators (33.3 percent) and agricultural labourers (50.6 percent) together constitute 83.9 percent of the total workers of the district. The remaining 16.1 percent of workers are engaged in household industry and other work.

The proportion of cultivators varied between 47.4 percent for Sakri C.D.Block and 22.1 percent for Shirpur C.D.Block. The proportion for agricultural labourers varies between 65.6 percent for Shirpur C.D.Block and 37.9 percent for Sakri C.D.Block. Over 83.9 percent of the workers in the district are directly engaged in agriculture as cultivators and agricultural labourers, which is but natural in the context of the agricultural economy of the district.

* Based on the improved drinking water source, drinking water supply has been classified as `Improved' or otherwise. If the household has access to drinking water supplied from a tap or a hand pump / tube well situated within or outside the premises it is considered as having access to `Improved drinking water source'. However, the concept of improved drinking water is state specific and this is to be considered accordingly.

Post office includes Post office, telegraph office and Post and telegraph office.

$ Transport communications includes bus service, rail facility and navigable waterways.

Educational

The educational facility is available in 669 villages, which constitute 98.7 percent of the total 678 inhabited villages of the district. In Sindkhede and Sakri C.D. Blocks the educational facility is available in all the inhabited villages. This is followed by Shirpur C.D. Block with 97.9 percent and Dhule C.D. Block with 96.4 percent villages with educational facility (Table 37). The educational facility is available to 99.8 percent population in the district (Table 38).

There are only 9 villages, which do not have primary school facility. The students of these 9 villages have to cover a distance of atleast 5 kms. to reach a place with such facility (Table 39).

According to the distance range from nearest statutory towns, the educational facility is available in all 10 villages (100 percent) within 5 kms., 138 villages have educational facility within 5-15 kms., 429 villages within 16-50 kms., and 92 villages at a distance of 51 and above kms. (Table 40).

78 inhabited villages constituting 90.7 percent of the total 86 inhabited villages in population range upto 499 have the educational facility available to them within their revenue units. All the 163 (100 percent) villages with population size 500-999, 170 (100 percent) villages in 2,000-4,999 population size, 27 (100 percent) villages in 5,000-9,999 population size and 7 villages in 10,000 and above population size have the availability of educational facility within the

revenue limits of the village. Out of 225 villages in population size 1,000-1,999, while 224 villages have the educational facility available, one village does not have the educational facililty available within the revenue limits of the village.

Medical

Medical institutions of one or the other type are functioning in 276 (40.7 percent) villages out of 678 inhabited villages in the district. Sakri C.D. Block has reported the medical facility for 117 (52.0 percent) villages which is higher than the district average (40.7 percent) and 70.7 percent of its population gets the benefit (Table 38).

Medical facilities of any type specified in the village directory is 40.7 percent and it covers 62.0 percent of the rural population having this facility. The villages enjoying this facility through primary health centers, sub-centres and dispensaries serve not only the resident population of concerned villages but also those residing in surrounding villages.

276 villages out of 678 inhabited villages have medical facility in their respective village limits and 402 villages do not have any type of medical facility. Of these as many as 61 and 189 villages are situated at a distance of less than 5 kms. with reference to the nearest place with medical facilities such as hospital and PHC respectively. Another 115 and 261 villages are located at a distance of 5-10 kms. for the same medical facilities. But in the case of 500 and 188 villages, the residents have to travel more than 10 kms. to reach a place with these medical facilities (Table 39).

According population range, the medical facility is available for 12 villages (14.0 percent) covering population range up-to 499, 43 villages with population range 500-999, 80 villages with population range 1,000-1,999, 107 villages with population range 2,000-4,999 and remaining 34 villages with population range 5,000 and above have medical facility available within their revenue limits (Table 41).

* Based on the improved drinking water source, drinking water supply has been classified as `Improved' or otherwise. If the household has access to drinking water supplied from a tap or a hand pump / tube well situated within or outside the premises it is considered as having access to `Improved drinking water source'. However, the concept of improved drinking water is state specific and this is to be considered accordingly.

Post office includes Post office, telegraph office and Post and telegraph office.

$ Transport communications includes bus service, rail facility and navigable waterways.

Drinking Water

Water supplied from a tap or hand pump or tube well situated within or outside the premises is considered as improved water facility. The improved drinking water source is available in 648 villages (95.6 percent) out of 678 inhabited villages.

Postal

As regads rural areas of the district as a whole, the facility of post and telegraph is available to 251 villages (37.0 percent) out of 678 inhabited villages surving 60.6 percent of rural population of the district. Within four C.D. Blocks of the district the percentage of villages having facilities of post and telegraph varies considerably. In Dhule C.D. Block, the post office amenity is available to as high as 65.3 percent of the total population. This is followed by Sindkhede, Sakri and Shirpur C.D. Blocks covering 63.2 percent, 61.0 percent and 51.2 percent of the total rural population respectively.

Postal facilities are not available at all in 427 villages. Out of these, 310 villages are situated at a distance of less than 5 kms., 76 villages have to cover a distance between 5 to 10 kms. to avail the postal facility. People of 41 villages have to cover a distance more than 10 kms. for availing postal facility. Among the 251 villages with facility of post and telegraph 2 villages are having less than 500 population, 18 villages are in population range of 500-999, 80 villages are in the range of 1,000-1,999, 119 villages are in the range of 2,000-4,999 and remaining 32 villages have the population range of 5,000 and above.

Telephone

The amenity of telephone is available in 308 (45.4 percent) villages of the district. These villages serve 64.5 percent of rural population of the district. Shindkhede C.D. Block with 63.8 percent has the highest proportion, whereas Sakri C.D. Block with 29.3 percent holds last rank. Sindkhede and Dhule are only two C.D. Blocks having proportion of villages more than district average.

Telephone amenity is not at all available in 370 villages. Out of these as many 154 villages are situated at a distance of less than 5 kms., 99 villages have to cover a distance between 5 to 10 kms. to avail the telephone facility. People of 117 villages

have to cover a distance of more than 10 kms. to get telephone facility. Among 308 villages with the amenity of telephone, 16 villages are having less than 500 population, 151 villages are in the size class 500-1,999, 108 villages are in the size class of 2,000-4,999 and 33 villages having population of 5,000 and above.

Transport and Communication

Transport communication includes bus service, rail facility and navigable waterways. If a bus stop or railway station or navigable waterway is located within the territorial jurisdication of a village, it is considered to have been served by such facility even if it is a little away from the actual settlement. 596 (87.9 percent) villages have communication facility available serving 95.5 percent of the rural population of the district. 149 villages of Dhule C.D.Block constituting 89.2 percent of total villages have the highest proportion of villages where transport and communication amenity is available, while the Shirpur C.D.Block with 86.2 percent coverage of villages holds the last rank.

Out of 678 inhabited villages 82 vilages do not have any communication amenity. Of these 82 villages, the residents of 72 villages have to cover a distance upto 5 kms. to reach a place with such amenity, for 4 villages it is between 5 to 10 kms. and for 6 villages it is more than 10 kms. The availability of this amenity depends upon the location of the village with reference to road. Among the 678 villages which have the availability of communication amenity within their respective limits, the population for 50 villages is less than 500, for 345 villages in the range of 500-1,999, 167 villages in the range of 2,000-4,999 and the remaining 34 villages fall in the range of 5,000 and above. Thus the population size of a village has an impact on the availability of communication amenity.

Banking

The amenity of banking service is available in 83 (12.2 percent) villages out of 678 inhabited villages serving 32.3 percent of rural population of the district. 29 villages (12.9 percent) having banking amenity available in Sakri C.D.Block and 15 villages (11.7 percent) having banking amenity available in Sindkhede C.D.Block.

Out of 678 inhabited villages the people of 224 and 242 villages have to cover a distance up to 5 kms. for availing the amenity of commercial bank and co-operative bank respectively. For 235 villages

and 229 villages, the amenity is available at a distance of 5-10 kms. and for remaining 165 villages and 141 villages the amenity of commercial bank and co-operative bank respectively is available at a distance of more than 10 kms. 19 villages are having banking amenity at a distance up to 15 kms. from the nearest statutory town and 49 villages are having the amenity available to the distance range of 16-50 from the nearest statutory town.

In Dhule district, the villages with less than 500 population do not have banking amenity. 4 villages having banking amenity are in the range of 500-999, 38 villages in the range of 2,000-4,999 and remaining 31 villages in the range of 5,000 and above.

Agricultural Credit Societies

There are 454 villages having agricultural credit societies in the district. These villages serve 83.4 percent of the population. The highest proportion of villages 126 (75.4 percent) have the amenity available in Dhule C.D.Block and lowest i.e., 96 (66.2 percent) in Shirpur C.D.Block. 224 villages are not having this amenity. Out of these as many as 126 villages are situated at a distance upto 5 kms., 60 villages within 5-10 kms. and 38 villages at a distance of more than 10 kms., where the amenity is available.

7 villages are situated at a distance of less than 5 kms. from the nearest statutory town, 392 villages at a distance of 5-50 kms. and only 55 villages are at a distance of 51 kms. and above. This amenity is available to 19 villages with population less than 500, 242 villages with population of 500-1,999, 161 villages with population 2,000-4,999 and the remaining 34 villages with population 5,000 and above.

Approach by Pucca Road

Roads whether "pucca or kuchcha" are nerve system of a district. They act as pull factors for the dvelopment and upliftment of the areas. Roads with cement concrete, Black top, water bound macadam etc. come under pucca roads and the remaining are treated as a kuchcha roads.

Pucca road amenity is available to 539 villages (79.5 percent) out of 678 inhabited villages in the district. Shirpur, Sakri and Dhule C.D. Blocks are having pucca road facility to 125, 183 and 153 villages respectively. In Sindkhede C.D. Block, pucca approach road is available to 78 villages constituting 55.3 percent of the total 141 villages in the tahsil. A population of 1,141,444 persons (90.4 percent) avail of the approach road amenity (Table 38). Of the 539 villages, 10 villages at a distance of less than 5 kms. from the nearest statutory town, 452 villages at a distance of 5-50 kms. to approach nearest statutoty town by pucca road, 77 villages are at a distance range of 51 and above kms. from nearest statutory town. The population of 45 (52.3 percent) villages served by pucca road is less than 500, for 113 (69.3 percent) villages is in the range of 500-999, 184 villages (81.8 percent) in the population range 1000-1999, 163 villages (95.9 percent) in the range of 2,000-4,999 and 34 villages (100 percent) having population range 5,000 and above. It may be seen that smaller the population size of the village, lesser is the availability of amenity of pucca approach road. There is an improvement in respect of pucca road facility in rural areas. Population size is an important factor direcly associated with availability of pucca road facility. Larger the size of a village, greater are the chances of its having this facility.

Power Supply

673 villages are having power supply facility in the district. While the power supply is available to the highest proportion of villages 166 (99.4 percent) in Dhule C.D. Block, in Shirpur C.D. Block a lowest proportion of villages 141 (97.2 percent) have the facility available. Sindkhede and Sakri C.D. Blocks are having cent percent electrification facility available. While cent percent population in Sindkhede, Sakri and Dhule C.D. Blocks have the power supply facility available to them, in Shirpur C.D. Block it is accessible to 99.1 percent of the population (Table 38).

The facility of power supply is available to cent percent villages in the population ranges 500-999 (163 villages), 1,000-1,999 (224 villages), 2,000-4,999 (170 villages), 5,000-9,999 (27 villages) and 10,000 and above (7 villages). However all small villages with population size 1-499 do not have the power supply facility. Of the 86 villages in this category, only 82 villages constituting 95.3 percent of total villages (86) in the category have the facility available to them. There are 4 villages with population less than 500, which do not have the power supply available to them.

It may be summed up from foregoing paragraphs that in respect of availability of different types of amenities and facilities considered, the larger villages have an advantage over the smaller ones. Population size and availability of amenities are directly associated with each other.

TABLE 42: DISTRIBUTION OF VILLAGES ACCORDING TO LAND USE, 2001

	District Total :	**678**	**648,778.48**	**65.6**	**8.6**

Note : - Cultivable area = irrigated area + unirrigated area

For the district as a whole 65.6 percent of the total area is cultivated. While 78.1 percent of the total area in tahsil Sindkhede is cultivable, it is 75.1 percent in tahsil Shirpur. The remaining two tahsils are below the district average. Barely 8.6 percent of the cultivated area of the district is irrigated. Shirpur and Sakri tahsils have a higher proportion of the cultivated area under irrigation (16.1 and 10.4 percent respectively). The remaining two tahsils (Sindkhede and Dhule) are below the district average.

* Based on the improved drinking water source, drinking water supply has been classified as `Improved ' or otherwise. If the household has access to drinking water supplied from a tap or a hand pump / tube well situated within or o utside the premises it is considered as having access to `Improved drinking water source'. However, the concept of improved drinking water is state specific and this is to be considered accordingly.

Bathroom means bathroom within the house

Toilet means toilet within the house

Drainage means closed and open drainage

This table gives the number and percentage of households having improved drinking water source, electricity, bathroom, and toilet and drainage facility available in district. According to 2001 census, the facility of improved drinking water is available for 288,815 households constituting 87.6 percent of the total households. In rural and areas of the district, this facility is available for 220,481(87.2 percent) and 68,334 households (88.8 percent) respectively. The facility of electricity is being enjoyed 239,519 households (72.6 percent). In rural and urban areas of district, electricity is available to 167,069 households (66.1 percent) and 72,450 households (94.2 percent) respectively.

The facility of bathroom is available in 202,572 households constituting 61.4 percent. For rural and urban areas this facility is available for 136,925 households constituting 54.1 percent and 65,647 households constituting 85.3 percent respectively.

The facility of toilet is available in 70,128 households, which constitute 21.3 percent of the total households in the district. In rural and urban areas toilet facility is available for 31,963 (12.6 percent) and 38,165 households (49.6 percent) respectively.

The facility of drainage is available for 205,303 households, constituting 62.2 percent in the district. For rural and urban areas, drainage facility is available for 150,371 households (59.5 percent) and 54,932 households (71.4 percent) respectively.

Data source: Census of India 2001, H- series: "Tables on Houses, Household amenities and Assets."

Table 51 gives the number and percent of households by type of fuel used for cooking in rural and urban areas.

Of the 329,868 households 194,636 (59.0 percent) households use firewood for cooking, 32021 households use crop residue (9.7 percent), 5995 (1.8 percent) use cowdung cake, 721 (0.2 percent) electricity, 62639 (19.0 percent) use cooking gas, 603 (0.2 percent) biogas, 32124 (9.7 percent) households use kerosene, 259 (0.2 percent) use other means. 748 households reported no cooking (0.2 percent) being done by them.

In the rural areas 182,445 households constituting 72.1 percent of the total households use firewood for cooking. This is followed by use of crop residue (12.2 percent), cooking gas (9.0 percent), kerosene (3.7 percent), cowdung cake (2.3 percent), biogas (0.2 percent). In the urban areas, 39,813 households (51.7 percent) use LPG, followed by kerosene 29.6 percent, firewood 15.8 percent, crop residue 1.6 percent.

It may be seen that while firewood continues to be the predominant fuel used in rural areas, it is the cooking gas in urban areas.

Table 52 gives the number of households availing banking services and number of households having each of the specified assets 2001.

There are 329,868 households, of which 252,920 are rural and 76,948 urban. Of these banking facilities are being availed by 93,367 households, of which 57,156 households are rural and 36,211 urban. It may be seen that a higher proportion of households in urban areas (47.1 percent) of total urban households utilize the banking facilities as compared to the rural areas (22.6 percent) of the total rural households.

In the district 84,597 have radio/transistor, 106,650 have television, 20,632 households have telephone, 84,743 households have bicycles, 31,882 households possess scooters, 4,990 households possess car, jeep or van. It may be noticed from the information available in the table that a higher proportion of households in the urban areas possess these specified assets. Of these 329,868 households, 168,523 households possess none of the above-specified assets. In the rural and urban areas, there are 152,893 and 15,630 households respectively who do not possess any of the specified assets.

(viii) Major Social and Cultural events, Natural and Administrative developments and significant activities during the decade.

A new district namely Nandurbar was carved out from Dhule District vide Govt. Notification number REN-3197/CR-74/M-10 dated 30th June 1998. Six tahsils namely Akkalkuwa, Akrani, Talode, Shahade, Nandurbar and Nawapur were transferred from Dhule district to newly formed Nandurbar district. The district Dhule thus retained remaining four tahsils namely Shirpur, Sindkhede, Sakri and Dhule under its jurisdiction.

(ix) Brief description of places of Religious, Historical or Archeological importance in the villages and Places of Tourist interest in the towns of the district.

Forts

In Dhule district there are four forts, two of which are quite famous. In Songir village on Dhule–Agra road in Sindhkhede tahsil is a hilly fort called songir fort. Govind Maharaj Samadhi Mandir is located in this fort. Another fort is located in Shirpur tahsil. Thalner fort located in Village Thalner is a land fort, on the bank of Tapi river and capital of Faruki king of Khandesh. There are two other forts in the district viz. Laling in Dhule tahsil/ and Bamner in Sakri tahsil. In Shirpur tahsil Balaji temple is located at Shirpur.

(x) Major characteristics of the district, contribution of the district in the form of any historical figure associated with the district

Dhule district is endowed with two major economic resources, the agricultural land and abundance of mineral deposits. The district is famous for cotton, Milk and Milk products, Groundnut and Oil-seeds. There is a rapid and dramatic increase in the area under cultivation of cotton, Groundnut and oil-seeds. Large areas of the land have been brought under cultivation.

In addition, major part of the district is covered by Deccan traps, which have plagioclase felspe labrodorite and pyroxene agnate as the main minerals. The trap being dense, hard and durable is used as building stone and road metal etc. No minerals of economic importance have so far been recorded in the district; the mining activities are therefore, restricted to quarrying of stones and clay etc.

Ahirani is the local language of the district.. Staple food of practically all sections of people in the Dhule is jowar, wheat and rice. A spicy curry i.e. buttermilk boiled with salt and spices is a favourite dish of all people in Dhule. Several special dishes are prepared from milk products. Pola, Dassera, Diwali, Holi, Akshaya-Tritiya, Ramnavmi, Hanuman Jayanti, Christmas, Muharrum are the religious festivals of the district. Akshaya-Tritiya, Holi and Pola are the most important festivals of the district. In general the social and cultural life of the people has been quite placid during the decade.

(xi) Scope of Village Directory and Town Directory

Information on this aspect is furnished in detail in the village and town directory statements and in a consolidated form in the appendix and also in the tables presented. The non-census information collected at the village level or town level by the Tahsildar/chief officer was scrutinized and verified in each district by the district planning officer/district statistical officer. The Collectors were also requested to once again reverify the data in case serious discrepancies were observed. Logical tests were applied to the data and the officials of this directorate visited the districts to revalidate the data. Besides this, the non-census information was cross-checked with the parent department. For example information on electricity was cross checked with Maharashtra State Electricity Board, that on roads with Public Works Department, on health with the Directorate of Health and so on.

PART B
PRIMARY CENSUS ABSTRACT

Brief note on Primary Census Abstract

The first census of the third millennium and twenty first century the Census of India, 2001 was the 14th continuous and uninterrupted Indian census since 1872. Thus, 2001 Census will provide data on population and its characteristics marking transition from one century and millennium to another.

The gigantic operation of Population Enumeration (considered by many to be the single largest and complex peace time administrative exercise in the world) was made possible due to the door to door universal canvassing of the Household Schedule by about 2 million enumerators and supervisors covering 593 districts, 5,463 sub-districts, 5,161 towns and 638,588 villages. The comprehensive Household Schedule which replaced the individual slip had three parts and two sides A and B. Part I contained the Location Particulars; Part II related to the Individual Particulars and Part III contained questions for Household engaged in Cultivation/Plantation . The part II of the Household Schedule had 39 columns and 23 questions all of which were universally canvassed and no sampling was resorted to during enumeration.

Data Processing

A quantum leap was made in the technology front while processing the Census 2001 data both for Houselisting and Population Enumeration. The Census schedules for both the phases were scanned through high speed scanners in fifteen data centers across the country and hand-written data from the schedules were converted into digitized form through Intelligent Character Reading (ICR) software for creation of ASCII records for further processing. The designing and formatting of the Household Schedule had to be done very carefully using specialized software so as to ensure uniformity, which was an essential pre-requisite for scanning. The selection of appropriate state-of-art technology in data processing has made it possible to produce all the Houselisting as well as Population Enumeration tables on full count basis for the first time in the history of Census. For Census 2001, about 202 million schedules consisting of about 1,028 million records were scanned and processed within a span of only 10 months starting October, 2002.

Task Force on Quality Assurance

After the data is processed, it is expedient on the part of the data producing agency to satisfy itself about its quality before putting the same in public domain. This has to be done mainly through the process of internal consistency, comparison with similar data in the past and also through validation with likewise data if available, from external sources. Quite often the local knowledge and perception has to be brought into play to understand both the existing and the new emerging trends of population distribution and characteristics. The other very important aspect of the data quality is to ensure complete coverage of all geographical areas especially for the population enumeration phase where the data is disseminated right up to the village level in the rural areas and the ward level in the urban areas. Thus ensuring the complete coverage and correct geographical linkage of each enumeration block was one of the major planks of the quality control, specially for small area population statistics.

A very comprehensive check and edit mechanism was put in place to objectively examine the preliminary Census 2001 Population Enumeration results and finally clear them for use. The responsibility of the final clearance of data was with the Task Force on Quality Assurance (TFQA), headed by the Registrar General and Census Commissioner, India. The other members of the TFQA were the Heads and senior officers of the Census Division, Data Processing Division, Map Division, Demography Division and Social Studies Division. The Directors of Census Operations were co-opted as members whenever the TFQA discussed the data for their States/Union territories. The Directors and their senior officers were required to make detailed presentations of data for their own state both in respect to the

quality and the coverage and only after the full possible cleared.

There has been a major departure in Census 2001 from the past in respect of the procedure followed for finalization of the Scheduled Castes and the Scheduled Tribes population. In the earlier censuses, the total Scheduled Castes and Scheduled Tribes populations were finalized at the time of the manual compilation of the Primary Census Abstracts (PCA) at the Regional Tabulation Offices which were specially set up for this purpose. The individual Scheduled Castes and the Scheduled Tribes population for each state was finalized much later based on manual coding done by the coders. In 2001 Census, each individual Scheduled Caste and the Scheduled Tribe have been coded directly on the computers by the Data Entry Operators through a process known as Computer Assisted Coding (CAC) and taken up along with the processing of PCA data. The CAC process involves pulling down, from the relevant dictionary of the Scheduled Castes and the Scheduled Tribes, on the computer screen and coding from the dictionary by referring to the image of the specific individual entry in the Household Schedule appearing on the screen. The CAC of the response on Religion wherever required, was also undertaken along with the processing of PCA. This is because the Scheduled Castes status had to be determined in relation to the religion of the individual. Two Special Task Forces, one on Religion and the other on Scheduled Castes/ Scheduled Tribes were constituted for scrutiny and appropriate classification of these responses.

The main task of the Special Task Force on Religion was to appropriately merge or group the new responses encountered and code it into the appropriate religious community based on available literature and local knowledge. The Special Task Force on Scheduled Castes and Scheduled Tribes examined the different Scheduled Castes and Scheduled Tribes entries encountered and classified these into appropriate category of the Scheduled Castes or the Scheduled Tribes principally based on the Presidential Notification and the available literature. Thus a very systematic and scientific mechanism was operationalised to firm up the individual religion and the individual Scheduled Castes/Tribes returns. The Scheduled Castes and the Scheduled Tribes population in 2001 Census, is thus being finalized by aggregating the population data for individual Scheduled Castes and the Scheduled Tribes at appropriate geographical levels.

The entire work relating to the data validation and scrutiny was completed by all the States/Union Territories under the overall supervision and monitoring of the Census Division of the Office of the Registrar General, India with active cooperation and support of the Social Studies Division, Data Processing Division, Data Dissemination Division and Map Division.

Primary Census Abstract

The Primary Census Abstract which is yet another important publication of 2001 Census gives basic information on Area, Total Households, Total population, Scheduled Castes, Scheduled Tribes population, Population in the age group 0-6, Literates, Main workers and Marginal workers classified by the four broad industrial categories, namely, (i) Cultivators, (ii) Agricultural labourers, (iii) Household Industry Workers, and (iv) Other workers and also Non-workers. The characteristics of the Total Population includes Scheduled Castes, Scheduled Tribes, Institutional and Houseless population and are presented by sex and rural-urban residence. This data is presented at different levels, namely, India, States/Union territories, Districts and Cities, Urban Agglomerations (Population 1,00,000 and above) in three different tables. In addition, the Appendix of said publication provides Houseless and Institutional Households and their population by residence and sex for 2001 for India, State and Union territory.

Apart from the India and State/Union Territory volumes for Primary Census Abstract, the District Census Handbook contains District Primary Census Abstract, Appendix to District Primary Census Abstract, Primary Census Abstract for Scheduled Castes, Primary Census Abstract for Scheduled Tribes, Village Primary Census Abstract and Urban Primary Census Abstract of the concerned district in the state.

It was for the first time at the 1981 Census that the Primary Census Abstract (PCA) was brought out for the Scheduled Castes and the Scheduled Tribes separately on the pattern of General Primary Census Abstract. This practice was continued in 1991 also. In the 1961 and 1971 Censuses, such data were made available in Table C-VIII-Social and Cultural table and to some extent in the series 'Special Tables for Scheduled Castes/Scheduled Tribes'.

The format of Primary Census Abstract has been restructured slightly in the 2001 Census as compared to that of 1991 Census. The nine-fold industrial classification of main workers given in the Primary Census Abstract of 1991 Census has been discontinued and its place, four-fold industrial classification of both 'main workers' and 'marginal workers' are included. In 1981 census only main workers were presented in to four categories. One of the novel features of the primary census abstract of 1991 census was the presentation of data of the population of age group 0-6 is continued in 2001 Census also. This will help the data users in better analysis and understanding of this literacy data.

Level of presentation in District Census Handbooks:

The Primary Census Abstract data in different PCAs are presented at different levels. The level of presentation of Primary Census Abstracts are as under:

	Name of the Primary Census Abstract	Level of presentation
1.	District Primary Census Abstract	District/CD Block/UA/City/Town
2.	Primary Census Abstract for Scheduled Castes	District/CD Block/Town
3.	Primary Census Abstract for Scheduled Tribes	District/CD Block/Town
4.	Village Primary Census Abstract	CD Block/Village wise
5.	Urban Primary Census Abstract	Town/Ward level

The PCA Data for villages was presented CD Block wise for the first time in 1991 Census. This practice is continued in 2001 Census also. The data for each CD Block is presented both for rural and urban areas separately. All the villages within the CD Block constitute the rural portion and the Census Towns and Outgrowths are shown under the urban portion of the CD Block. In case a CD Block is spread over two or more districts, than portion which falls within the district is presented, the data pertaining to remaining portion of the CD Block is presented in the concerned District Census Handbook. The data in the Urban Primary Census Abstract for each town as well as for town with outgrowths in the district are presented. The data for all the wards and the outgrowths of the town(s) are also presented separately below the concerned town(s).

The District Primary Census Abstract is presented in 59 columns. The Primary Census Abstract for Scheduled Castes and Primary Census Abstract for Scheduled Tribes are presented in 52 columns. The Village Primary Census Abstract and Urban Primary Census Abstract are presented in 58 columns.

The concepts and definitions used in the column heading are explained under the sub heading 'Census Concepts' in the Analytical Note. The term 'Total Population' includes the Scheduled Castes, the Scheduled Tribes, the Institutional and the Houseless populations. The explanation regarding area figures presented at various level in the Primary Census Abstracts are as follows:

Area Figures

The area figures supplied by local revenue authorities of the district in respect of tahsils, Police Stations and by the local bodies in respect of towns are given in square kilometres. The area figures of the villages supplied by the Tahsildars in acres have been converted and shown in hectares. The area figures of the CD Block is the total of the village areas coming under each CD Block. The area figures for the district are the same as adopted by the Surveyor General of India to maintain uniformity at the national level. The total area figures of all the tahsils/CD Blocks within the district may not tally with area figures of the district because former represents land use area only. Similarly, the total of all the villages may not tally with the entire rural of Police Station/ Tahsil. The difference may be due to the fact that while the area covered by hills, forests and rivers etc, have been accounted in the Tahsils and P.S. level the same may not be covered under the area of the villages. Apart from this it may also differ due to varying methods of computation adopted at different levels.

An appendix to District Primary Census Abstract has also been furnished showing urban enumeration block-wise particulars on Total Population, the Scheduled Castes Population and the Scheduled Tribes Population for each town.

Fertility and Mortality 1991 Census

Fertility Levels :

Fertility is a major component of Population growth. In the 1991 census, questions of fertility related to age at marriage, number of surviving children, ever born alive and children born alive during the last year were tasked. The first three questions were asked to all ever married women and the last question related to currently married women. The measures of fertility worked out are based on the F-series tables of 1991 census pertaining to Maharashtra state.

Mortality Levels :

Information on questions on children ever born and children surviving canvassed for all ever a married woman has been tabulated by age of the mother. From this, estimates of child mortality have been worked out using Brass technique.

Fertility :

As perusal of the various fertility measures namely GFR (General Fertility Rates), GMFR (General Marital Fertility Rate), TFR (Total Fertility Rate), TMFR (Total Marital Fertility Rate), CBR (Crude Birth Rate) for the district vis-à-vis State reveals higher rates for the district as compared to State as a whole in 1981, the GFR, GMFR, TFR, TMFR & CBR were 154, 188, 4.8, 5.7 and 36.1 respectively as compared with State average 134, 168, 4.3, 5.2, and 31.8 in Census 1981. Similar trend is observed in 1991 Census. In 1991 GFR, GMFR, TFR, TMFR & CBR were 139, 171, 4.2, 5.5, and 32.5 respectively for the district as against the State average of 124, 157, 3.7, 5.2, and 29.8 respectively.

It may be seen that, while during both Census 1981 and 1991 the fertility rates are higher for the district than the State as a whole. But the gap in fertility rates between the district and the State has reduced in 1991.

Mean age at marriage

Mean age at marriage continuous to be lower for the district than the State in 1991 Census.

Child Women Ratio

The Child Women Ratio for the district is recorded higher than the state in 1991 Census.
