

CENSUS OF INDIA
1971

SERIES - 2

ANDHRA PRADESH

PART II-C (ii)

SOCIAL AND CULTURAL TABLES
AND
FERTILITY TABLES

T. VEDANTAM
OF THE INDIAN ADMINISTRATIVE SERVICE
Director of Census Operations, Andhra Pradesh

PREFACE

The present Volume Part II C(*ii*)—*Social and Cultural Tables* is in the 1971 Census series of publications relating to Andhra Pradesh. This volume contains six of eight cultural tables of 'C' series and all the fertility tables known as 'F' series tables. The remaining two cultural tables C-VII and C-VIII prepared on full count basis were published in combined volume of Part II C(i) & V(A) of Andhra Pradesh. The tables that are included in this volume are C-I Parts A & B, C-II, C-III Parts A & B, C-IV & its Appendix, C-V Parts A & B and C-VI. Of these six tables, the table C-V—Mother-tongue was prepared on full count basis and the remaining were prepared on sample basis. The method of sampling and estimation adopted for preparing them is explained in detail in a separate note given after the introduction to this volume.

A team of enthusiastic and devoted staff gave their best in the processing of the data presented in this volume within the stipulated time. They worked under the guidance of S/Sri K. K. Sarma, Syed Roshan Ali and C. S. Bose, Tabulation officers who were assisted by S/Sri K. Sreemannarayana, Md. Jamalullah, N. C. Hanumantha Reddy, V. L. Narayanacharyulu and Smt. T. Suseela, Statistical Assistants and Smt. D. Sarojini, Computor. The fair copying of these tables was done by S/Sri M. A. Ghani, M. V. Subba Rao, V. S. R. Sastry and others under the close supervision of Sri N. V. Manohar Rao, Jr. Steno. Sri Akhlaq Ahmad, Assistant Director of Census Operations closely supervised the planning and execution of tabulation and preparation of these tables. I have great pleasure in acknowledging the excellent work done by them.

I am greatly indebted to Sri A. Chandrasekhar, Registrar General, India for his invaluable guidance all through the Census taking and finalisation of the data collected. I am grateful also to Sri K. K. Chakravorty, Asst. Registrar General, Sri R. C. Nigam, Asst. Registrar General (L) and the Research Officers concerned for getting the tables scrutinised expeditiously and communicating their clearance to me with their suggestions.

Sri C. S. Bose, Investigator has seen this volume through the press with the assistance of Smt. T. Suseela, Smt. P. Nirmala and Sri M. Hanuma Naik, Statistical Assistants, Smt. P. A. M. Tayaru, Computor, Smt. J. Madhubala and Kumari Arifa Sultana, Assistant Compilers.

I am also thankful to the Manager, Government of India Press, Coimbatore and the concerned staff for printing this volume neatly.

T. VEDANTAM,
Director of Census Operations.

INTRODUCTION

This volume contains Social and Cultural Tables under C-Series and Fertility Tables under F-Series.

Social and Cultural Tables

Tables on Religion (C-VII), Scheduled Castes and Scheduled Tribes (C-VIII) of C-Series and Special Tables on Scheduled Castes and Scheduled Tribes were published in the combined volume Part II C(i) and Part V (A). The remaining tables of C-Series are included in this volume. Table C-V is prepared on full count basis and the remaining tables on 10 percent sample for rural areas, 20 percent sample for urban areas. The procedures followed for sampling and estimation are given in a separate note after this introduction. These tables are listed below.

1.	Table C-I Part-A	Household by relationship to head of household classified by age-group
2.	Table C-I Part-B(i)	Distribution of households where the head is a male by relationship of members with the head
3.	Table C-I Part-B(ii)	Distribution of households where the head is a female by relationship of members with the head
4.	Table C-II	Age and marital status
5.	Table C-III-Part-A	Age, sex and education in all areas
6.	Table C-III-Part-B	Age, sex and education in urban areas only
7.	Table C-IV	Single year age returns
8.	Table C-IV Appendix	Distribution of persons by five year age-groups
9.	Table C-V-Part-A(i)	Distribution of languages (inclusive of mother-tongues grouped under each) specified in Schedule VIII to the Constitution of India
10.	Table C-V-Part-A (ii)	Distribution of languages (inclusive of mother tongues grouped under each) specified in Schedule VIII to the Constitution of India for districts, Tahsils, etc., and towns (as the case may be)
11.	Table C-V-Part B (i)	Speakers of languages/ mother tongues (inclusive of mother tongues where grouped) other than those specified in Schedule VIII to the Constitution of India for State and Districts
12.	Table-C-V-Part-B (ii)	Speakers of languages mother tongues (inclusive of mother tongues where grouped) other than those specified in Schedule VIII to the Constitution of India for District/Tahsil/Taluk/Division Block/Police Station and town (as the case may be)
13.	Table C-VI	Bilingualism

Fertility Tables

These tables are mainly based on the information collected through two questions canvassed for the first time at the 1971 Census in respect of all currently married women. These questions are : (a) age at marriage, (b) any child born in the last one year. These data are helpful for calculating the crude birth rate and finding out the fertility level. It is also necessary to relate the number of births to the age of the mother at the time of each child birth. This gives the age specific fertility level for a better understanding of the process of population growth than the mere birth rate per 1,000 persons. For this purpose the data about the number of children born to all married women and the ages of the mothers at each birth are required. The question on age at marriage provides information as to the productive life of women and the second question i.e., any child born during last one year helps to have an idea about the reproductive performance of mothers at a given age. Apart from these purely demographic considerations, the information on age at marriage is also important from sociological point of view since it helps to know if with the passage of time, the average age at marriage of girls is increasing and if so what are the implications of such an increase.

The instructions given to enumerators for filling these two questions were as follows :

"*Q. 6 For currently married women only*

This question has to be answered in respect of all currently married women only i.e., all women whose marital status is shown as 'M' against Q.5. For all others a cross may be put through the two sub-parts of this question.

6(a) *Age at Marriage*

You should ascertain the age at which the currently married women whom you are enumerating was married and record that age in completed years. If the currently married women had been married more than once, the age at which she got married for the first time should be recorded.

6(b) *Any child born in the last one year.*

You should ascertain if the currently married woman whom you are enumerating gave birth to a child in the last one year prior to the date of enumeration. Since it may be difficult for a person to reckon the exact year with reference to the English calendar dates, the period of one year may be ascertained with reference to a well known festival day which falls close to February-March, as determined by the Census Director of the State. You should ask if a child was born on or after this festival day last year to the date of enumeration. Only if the child was born alive, even if the child has died soon after birth, should the answer be 'Yes' to this question. Still birth, i.e., a child which is born dead should not be taken into account for this purpose. So while you should make sure that every case of birth of child born alive, even if it is not alive on the date of enumeration, is reported, you should not reckon it if the child was born lifeless.

It is common experience that the birth of the child may not be reported readily if the child is not actually surviving at the time of enumeration. Infant deaths are still high in the country. There is a chance of a number of such cases being missed unless specifically questioned about them. It is necessary to record all live births even if the child had died soon thereafter or had not survived to the day of enumeration. Therefore where the initial answer to this question is 'No' , you should ask a specific question if there has been a case of child having been born alive in the last one year and later dying before the enumeration date. This is a delicate question and should be asked with tact in a manner not to offend the sensibility of the respondent. Where a currently married women first answers that she had no child born in the last one year, you may perhaps question her as follows :

> "It has been found in some houses that a child was born and had died soon after or a few days or months later and such cases had not been reported. It is my hope that there are no such cases here. Am I right ?"

This may bring in the required response. If she reported 'No' then you can be sure that no birth has been missed. You have to make sure that any live birth that has occurred to the currently married woman in the last one year is netted whether the child is surviving till the date of enumeration or not. Similarly, probe to eliminate still births may be necessary. For example, when the answer is 'Yes' under Q. 6 (b) the enumerator might ask if the child is here in this house. If the answer is 'Yes' no further question is needed. If 'No' the enumerator might ask where he has gone. The answer may be 'dead' or he has gone elsewhere. If 'dead' then the enumerator might ask when did the child died and this will bring out the fact whether or not it was a still birth.

Write 'Yes', if the currently married women had given birth to a live child from the prescribed festival day last year to the date of enumeration or 'No', if she had not. In case of twin or multiple births, write 2,3, etc., as the case may be within round brackets after the entry 'Yes'.

> *Note*: You may find on your revisional round from 1st to 3rd March, 1971 that a child is born to a married woman in a household after your last visit but before the sunrise of 1st March, 1971. You will have to take this into account and correct the answer against the Q. 6 (b) accordingly. You must enquire specifically if any such birth has taken place. While ignoring still births all other births where the child was born alive even if it did not survive long should be taken into account."

For the purpose of this question, it has been decided to take Sankranti of 1970 as the well known festival of the State and the enumerators were instructed to consider all births occurred thereafter to the currently married women till the 1971 Census Reference date i.e., the Sunrise of 1st April, 1971.

Owing to the limited nature of the enquiry the following births occurred during the aforesaid period have been omitted from the purview of this question.

1. The births occurring to women who are widowed, divorced or separated.
2. The births occurred after 14-1-1970 to the mothers who unfortunately expired before the Census enumeration.
3. Cases of failure to report the births to the mothers at the time of enumeration due to any reason.

In addition to the above limitations which are innate in the Census enumeration, a content error about the reporting of age at marriage and present age of the currently married women. It is a known fact that the age reporting largely suffers from digital preferences and other age biases. The quinquennial grouping of ages as presented in the F-Series Tables helps to reduce to some extent the effect of age bias. It is quite reasonable to expect correct reporting of age is very much related to the literacy level of the informants or the enumerated. Keeping in view the above limitations, the following Fertility Tables presented in this volume are to be studied:

1. Table F-I	Part A & B
2. Table F-I	Appendix (Rural and Urban)
3. Table F-II	Part A & B
4. Table F-III	Part A & B
5. Table F-III	Appendix (Rural & Urban)
6. Table F-IV	Part A & B
7. Table F-V	Part A & B

A note on the sampling procedure adopted in the 1971 census for social and cultural tables (except C-I & C-V)

Sample size: A ten percent sample of the slips was selected linear systematically with a random start from the individual slips relating to the rural parts of a tehsil/anchal/police station. In the urban part of the district, a twenty percent systematic sample of the individual slips was selected with a separate random start. The sample sizes were adopted on consideration of required precision, available resources and operational convenience.

Selection procedure: The sample design adopted in the 1971 census was a stratified systematic sample of individual slips. For the purpose of sample selection, each district was divided into three sub-regions: (1) Tehsil/anchal/police station (rural); (2) Non-city urban district and (3) City (urban unit with 100,000 and more population).

These sub-regions were termed as operational units. If, however, any of the operational unit was unduly large, it was split into sub-operational units of at least 20,000 persons. Similarly, small-sized operational units were either clubbed together or tagged on to a contiguous large unit so as to form an "effective operational unit" of the required minimum size. Adoption of these operational units ensured accuracy in sample selection, maintaining at the same time stability in the sampling fraction within the sampled areas. This procedure has ensured effective control over sample selection within each block, as also in the entire operational unit.

For the purpose of the Primary census abstract (PCA) the individual slips were sorted into ten broad industrial categories and nine broad age groups for each of the sexes. The ten industrial categories of workers and non-workers were as follows: (I) Cultivators; (II) Agricultural labourers; (III) Livestock, forestry, fishing hunting and plantations, orchards & allied activities (IV) Mining and quarrying;(V)(a)Manufacturing, processing, servicing and repairs in *household industry*; (V)(b) Manufacturing, processing, servicing and repairs in *other than household industry*; (VI) Construction; (VII) Trade and commerce; (VIII) Transport, storage and communications (IX) Other services and (X) Non-workers.

The nine age groups into which the slips belonging to each industrial category were sorted were 0—14, 15—19, 20—24, 25—29, 30—39, 40—49, 50—59, 60+ and 'age not stated'. Thus the individual slips of a particular operational unit were sorted into $11 \times 9 = 99$ cells, separately for males and females. Sampling was done in each of the operational units independently by taking separate random starts. The slips were then distributed into 10 (or 5) pigeon-holes for rural/urban samples and one pigeon-hole was selected at random. The slips falling in the selected pigeon-hole constituted the sample. For operational details of the sampling procedure and instructions, the 'Manual of instructions on sorting, compilation (manual processing) & sampling procedures' may be consulted. All tables except A-1 to A-V (General Pop. tables), B-1 Part A & B II(Economic tables) C-V (Mother tongue), C-VII (Religion) and C-VIII (Scheduled Castes and Tribes) have been prepared on a sample basis.

Estimation procedure: The tables prepared for each of the districts/States from the ten percent rural and twenty percent urban sample slips have been inflated to give the final estimated tables. Estimates have been obtained by making use of the cell frequencies (usually labelled as 'controls') available from the tables prepared on full count basis, namely, PCA and B-1 Part A. In order to ensure the maximum possible inter-table consistency it became necessary to use the estimated frequencies of few of the final tables as controls for estimating some cell frequencies of other tables.

This way of estimating the cell frequencies ensured that marginal totals of estimated tables tallied with that of the full-count tables. This is convenient to the user because after adjustment, the identical marginal totals are found in tables having the same marginal specification. "The adjustment diminishes the sampling variance to some extent; the more the controls, the smaller the sampling variance of the adjusted frequencies"[1]. Further, adjustment to known control totals has at the same time the effect of eliminating biases in the nature of inherent differences between the sample and complete count.

For the purpose of estimation of final tables, a set of multipliers was prepared for each table. A multiplier is the ratio of full-count frequency for some characteristics from PCA or Table B-1 Part A and the corresponding sample frequency of the same characteristics from the sample table. The following statement gives the level of presentation of the tables and the related controls on which the multipliers are based. The details will be presented in the report on sampling procedures to be published later:—

Table	Level of presentation	Control based from tables
C II	District	B-1 Part A & PCA
C III A	District	B-1 Part A & PCA
C III B	District	B-1 Part A & PCA
C IV	State	B-1 Part A & PCA
C IV Appendix	District	B-1 Part A & PCA

As no such control was readily available for C-VI (bilingualism), these were estimated by multiplying the sample values by 10 and 5 in rural and urban areas respectively.

Reliability of estimates: No exact formula can be given for the precision of the estimates in view of the systematic sampling design adopted. The relative standard error can be estimated roughly on the basis of simple random sampling, as $\sqrt{(1-f)\ \frac{1-p}{np}}$, where 'f' is the proportion samples, (0·10 in case of rural areas & 0·20 in case of urban areas); 'p' is the estimated proportion in any cell and 'n' the sample size being equal to ten percent of individual slips in rural areas and twenty percent in urban areas. In the present census, slips were sorted by sex, industrial category and age-group before sampling. It is expected that the efficiency must be considerably higher than a simple random sample of identical size. Extensive studies conducted have indicated that systematic sampling of individuals is more efficient than random sampling especially when the slips were presorted for most of the socio-economic characteristics covered in a census[2]. Thus the estimates prepared on the basis of the systematic sampling in the present census can be expected to be quite reliable.

2. Lahiri, D.B. "An experimental approach on the basis of census enumeration slips". Studies in population sampling, Vol. I.

A note on the sampling procedure adopted in the census for C-I Part A, C-I Part B(i) and C-I Part B(ii)

Sample size: For the preparation of tables C-I Part A, C-I Part B (i) and C-I Part B (ii) on household composition, a sample of residential households was drawn in two stages. In the first stage, a twenty percent systematic sample of effective enumeration blocks (defined later) was selected systematically. In the second stage, a twenty percent sample of population records relating to residential households was selected from each of the sample block, again systematically.

Selection procedure: For the purpose of sample selection, the rural and urban parts of each district were treated as separate strata. Within each stratum, a list of blocks was prepared by merging those containing less than 50 households with the neighbouring blocks. Blocks formed in this way were called 'effective enumeration blocks' or simply 'effective blocks'. The list of effective blocks so formed served as a frame for the selection of the first stage unit. A twenty percent sample of effective blocks was then selected systematically. Having identified the first stage units, the population record books for the selected effective blocks were assembled. Within each selected effective block, the population records relating to residential households were serially numbered. To do this effectively, instructions were issued to fold the population record relating to 'houseless households or institutional households'. Care was also taken to see that only one serial number was assigned to a population record, whenever the record relating to a household covered more than one page. In cases where 'effective blocks' were formed by merging two or more blocks, the population record books corresponding to all the census enumeration blocks constituting the effective block, were assembled together and then the households were selected. Fresh random numbers were selected for each effective block. The population records corresponding to the selected households were marked 'S' at the right hand top corner with a stamp provided.

Estimation procedure: The tables prepared for each of the stratum were multiplied uniformally by 25 to give the final estimated table.

A note on the sampling procedure adopted in the 1971 census for Fertility tables

Sample size: A ten percent sample of the slips was selected linear systematically with a random start from the individual slips relating to the rural parts of a tehsil/anchal/police station. In the urban part of the district, a twenty percent systematic sample of the individual slips was selected with a separate random start. The sample sizes were adopted on consideration of required precision, available resources and operational convenience.

Selection procedure: The sample design adopted in the 1971 census was a stratified systematic sample of individual slips. For the purpose of sample selection, each district was divided into three sub-regions: (1) Tehsil/anchal/police station (rural): (2) Non-city urban district and (3) City (urban unit with 100,000 and more population).

These sub-regions were termed as operational units. If, however, any of the operational unit was unduly large, it was split into sub-operational units of at least 20,000 persons. Similarly, small-sized operational units were either clubbed together or tagged on to a contiguous larger unit so as to form an "effective operational unit" of the required minimum size. Adoption of these operational units ensured accuracy in sample selection, maintaining at the same time stability in the sampling fraction within the sampled areas. This procedure has ensured effective control over sample selection within each block, as also in the entire operational unit.

For the purpose of the Primary census abstract (PCA) the individual slips were sorted into ten broad industrial categories and nine broad age groups for each of the sexes. The ten industrial categories of workers and non-workers were as follows: (I) Cultivators; (II) Agricultural labourers; (III) Livestock, forestry, fishing, hunting and plantations, orchards and allied activities (IV) Mining and quarrying; (V)(a) Manufacturing, processing, servicing and repairs in *household industry*; (V)(b) Manufacturing, processing, servicing and repairs in *other than household industry* (VI) Construction; (VII) Trade and commerce; (VIII) Transport, storage and communications (IX) Other services and (X) Non-workers.

The nine age groups into which the slips belonging to each industrial category were sorted were 0—14, 15—19, 20—24, 25—29, 30—39, 40—49, 50—59, 60 + and 'age not stated'. Thus the individual slips of a particular operational unit were sorted into $11 \times 9 = 99$ cells, separately for males and females. Sampling was done in each of the operational units independently by taking separate random starts. The slips were then distributed into 10 (or 5) pigeon-holes for rural/urban samples and one pigeon-hole was selected at random. The slips falling in the selected pigeon-hole constituted the sample. For operational details of the sampling procedure and instructions, the 'Manual of instructions on sorting, compilation (manual processing) & sampling procedures' may be consulted.

Estimation procedure: All the tables F-I to F-V are presented at state level. The sample table F-I to F-V have been multiplied by '10' in case of rural area and by '5' in case of urban area to estimate the final tables.

Reliability of estimates: No exact formula can be given for the precision of the estimates in view of the systematic sampling design adopted. The relative standard error can be estimated roughly on the basis of simple random sampling, as $\sqrt{(1-f)\ \frac{1-p}{np}}$ where 'f' is the proportion samples, (0·10 in case of rural areas & 0·20 in case of urban areas); ('p' is the estimated proportion in any cell and 'n' the sample size being equal to ten percen- of individual slips in rural areas and twenty percent in urban areas. In the present census, slips were sorted by sex, industrial category and age-group before sampling. It is expected that the efficiency must be considerably higher than a simple random sample of identical size. Extensive studies conducted have indicated that systematic sampling of individuals is more efficient than random sampling especially when the slips were presorted for most of the socio-economic characteristics covered in a census. Thus the estimates prepared on the basis of the systematic sampling in the present census can be expected to be quite reliable.

TABLE C-I PART A

HOUSEHOLDS BY RELATIONSHIP TO HEAD OF HOUSEHOLD CLASSIFIED BY AGE-GROUPS

TABLE C-I PART A

HOUSEHOLDS BY RELATIONSHIP TO HEAD OF HOUSEHOLD CLASSIFIED BY AGE-GROUPS

This table is prepared on 20% sample basis for total, rural and urban populations separately for each district in Andhra Pradesh. It largely corresponds to Table C-I of 1961 Census. It helps to study an important sociological aspect of the extent of joint family system in the State. It gives the composition of the households by relationship to the head of the household classified by three broad age-groups viz., less than 30, 30-49 and 50 and above. Age not stated is included in 'All Ages.' The age distribution of heads of the households and their relations classified by marital status will further help to assess the future trend of the joint family system. In this table the number of related and unrelated members of the households and the single-member households are shown separately. The relationship to head of household is given separately for currently married relations and never married, widowed, divorced or separated relations. The relationship is given for son, brother, daughter, sister and for their spouses and for father and mother in case of married relations. The same categories of relationship are given for never married, widowed, divorced or separated relation except those indicating the spouses of son, brother, daughter and sister.

TABLE C-I PART B

HOUSEHOLDS WHERE THE HEAD IS A MALE BY RELATIONSHIP OF MEMBERS WITH THE HEAD

TABLE C-I PART B

This table corresponds to the table C-I of 1961. This table is divided into two parts—C-I part B(i) and B(ii) showing the composition of households where the head is male and female respectively by relationship of members with the head of the household. Related and unrelated members of the households and the single member households were shown separately. The currently married relations of the head of the household covered son, brother, son's wife, brother's wife. daughter, sister, daughter's husband, sister's husband, father, mother and other male or female members. Never Married, Widowed, Divorced or Separated relations have been shown in similar categories Except those indicating spouses of son, brother, daughter and sister which are naturally not relevant to these classes of marital status. Besides, the number of households with spouses of the head of the households living therein is also shown in these two Tables.

TABLE C-I

TABLE C-II

AGE AND MARITAL STATUS

TABLE C-II

AGE AND MARITAL STATUS

This table corresponds to table C-II of 1961 Census and gives the particulars relating to marital status of males and females by 15 different age groups: (1) 0—9, (2) 10—14, (3) 15—19, (4) 20—24, (5) 25—29, (6) 30—34, (7) 35—39, (8) 40—44, (9) 45—49, (10), 50—54 (11) 55—59, (12) 60—64, (13) 65—69, (14) 70+ and (15) Age not stated. These data are presented for total, rural and urban populations separately. This is an important demographic table providing very useful information particularly about the age distribution of females by marital status for forecasting future births from age specific birth rates. It also helps to study whether the proportions in various marital status have increased or decreased since last Census and whether any trend is observed in the age at marriage. This will indicate the trend of mortality in different marital status and also in different age-groups.

In 1961 Census, the table C-II was prepared on full count basis whereas in 1971 Census it is prepared on 10% and 20% sample basis for rural and urban areas respectively.

Question No. 4 in the individual slip relates to age. Instructions were given to the enumerators to record age as the number of years completed on the last birth day. In the case of infants below one year the age was recorded as '0'. Persons whose age could not be elicited even after stimulating their memory by referring to important historical incidents or religious events were classified under 'Age not stated'.

In Q·5 of the individual slip the marital status of a person is determined, Under this there are five categories viz., (1) Never Married; (2) Married; (3) Widowed; (4) Divorced or Separated; and (5) Unspecified Status. The following instructions were issued to the enumerators for eliciting marital status of the people.

"Q·5 Marital Status

In answering this question use the following abbreviations:

NM	:	Never Married
M	:	Married
W	:	Widowed
S	:	Separated or Divorced

For a person who has never been married at any time before, write 'NM'. For a person currently married, whether for the first or another time and whole marriage is subsisting at the time of enumeration wise spouse living, write 'M'. Write 'M' also for person who are recognised by custom or society as married and for the persons in stable de facto union. Even if a marriage is disputed in the locality write 'M' if the person concerned says he or she is married or is in stable *de facto* union. For a, widowed person whose husband or wife is dead and who has not been married again, write 'W'. For a person who has been separated from wife or husband and is living apart with no apparent intention of living together again or who has been divorced either by a decree of a court or by an accepted social or religious custom but who has not remarried, write 'S'. For a prostitute return her marital status as declared by her."

For purposes of this table, persons in the age-groups 0-9 have been treated as "Never Married" Irrespective of the entries made against Q·5 of the individual slip. If there was an omission in the individual slip relating to marital status of males under 21 and females under 16 years were treated as ' Never Married' and others as 'Married'.

The statement on the next page gives the proportion of males and females under different marital status per 1000 males and 1000 females in the respective age-groups.

DISTRIBUTION OF 1000 MALES/FEMALES IN DIFFERENT AGE-GROUPS BY MARITAL STATUS

Age-Group	Never Married		Married		Widowed		Divorced or Separated		Unspecified Status

TABLE C-III

AGE, SEX AND EDUCATION

TABLE C-III

AGE, SEX AND EDUCATION

This table gives the distribution of population by sex, age-groups and educational levels. In 1961 it was divided into three parts *viz.*, (1) C-III Part A for all areas; (2) C-III Part B for Urban areas and (3) C-III Part C for Rural areas, whereas in 1971 Census it has been divided into two parts—C-III Part A for total and C-III Part B for urban areas. Further, in 1961 Census this table was prepared on full count basis whereas in 1971 Census it has been prepared on the basis of 10% and 20% samples for rural and urban areas respectively and consolidation was done for total areas of the Districts/State.

Question 12 of the Individual Slip of the 1971 Census relates to literacy. If a person is able to read and write with understanding in any language is treated as 'Literate'. It is not necessary that a person who is literate should have received any formal education or should have passed any minimum educational standard. A person who can merely read but cannot write and who can neither read nor write is treated as 'Illiterate'. All the children of the age 4 years or less have been treated as 'Illiterates'.

Question 13 of the Individual Slip collected information about the educational qualifications attained by the enumerated. In Table C-III Part A data have been presented under 8 items i.e., (i) Illiterate; (ii) Literate without educational level; (iii) Primary; (iv) Middle; (v) Matriculation or Higher Secondary; (vi) Non-Technical Diploma or Certificate not equal to Degree; (vii) Technical Diploma or Certificate not equal to Degree; and (viii) Graduate and above. whereas in Table C-III Part B the educational level of graduate and above has been split up further to give details about (1) Graduate degree other than Technical Degree; (2) Post-Graduate degree other than Technical Degree;(3) Engineering and Technology; (4) Medicine; (5) Agriculture, Veterinary and Dairying; (6) Teaching; and (7) Others.

The 8 age-groups adopted in these two tables are 0—4; 5—9; 10—14; 15—19; 20—24; 25—34; 35+; and Age Not Stated.

These two tables will be very much useful in measuring the growth of literacy in the total population as well as in different age-groups. This table is of special interest to the Ministry of Education for purposes of future planning. This is also likely to furnish information to that Ministry on the spread of adult education.

The two statements given on the next two pages show districtwise distribution of 1,000 Males and 1,000 Females by different educational levels in all areas and in urban areas separately.

TABLE C-IV

SINGLE YEAR AGE RETURNS

TABLE C-IV

SINGLE YEAR AGE RETURNS

Table C-IV gives the single year age returns for males and females separately. This is an important demographic table which is used in preparation of the Census Actuarial Report.

At the 1961 Census this table was prepared on full count basis and presented districtwise whereas in 1971 Census it has been prepared only on 10% and 20% sample basis for rural and urban areas respectively at the State level only. In an Appendix to this table districtwise data are given for quinquennial age-groups i.e., 0—4; 5—9; 10—14;.....95—99; 100 + & Age not stated.

The data are based on the age returns collected through Question No. 4 of the Individual Slip. Instructions were given to the enumerators to record the age as the number of years completed on the last birthday. The age of infants (below one year) was recorded as 'O'. In case of persons who were unable to state their ages correctly even after the enumerator stimulating their memory by referring to the well known events such as famine, cyclone an entry as 'Age Not Stated ' was recorded against this question. For this purpose a calendar of outstanding occurrences in each district and famous historical events in the State/Country chronologically arranged was supplied to the enumerators for eliciting the ages of the enumerated accurately to the extent possible.

It is very interesting to note that there are 3,155 centenarians (1,180 males and 1,975 females) in Andhra Pradesh as per 1971 Census. Of them, 10 persons are aged 124 years. Among the 21 districts in Andhra Pradesh, Anantapur possesses the largest number of 345 centenarians) 120 Males; 225 Females). Srikakulam District follows it with 305 centenarians (150 Males; 155 Females).

TABLE C-V

Mother—Tongues

TABLE C-V—MOTHER-TONGUES

Part A: Distribution of languages (inclusive of mother-tongues grouped under each) specified in Schedule VIII to the Constitution of India.

Part B: Speakers of languages / Mother-Tongues (inclusive of Mother-Tongues where grouped) other than those specified in Schedule VIII to the Constitution of India.

These tables correspond to the all India Language tables of the Census of India 1951 published in Census of India Paper I of 1954 and the language tables C-V of the Census of India 1961 published in Volume I Part II-C (ii) Language Tables and Volume II—Andhra Pradesh Part II-C Cultural and Migration Tables.

The Question on Mother-Tongues at the 1971 Census and instructions to enumerators were as follows:

"Q. 14: Mother-tongue

Definition: Mother-tongue is the language spoken in childhood by the person's mother to the person. If the mother died in infancy, the language mainly spoken in the person's home in childhood will be the mother-tongue. In the case of infants and deaf mutes the language usually spoken by the mother shall be recorded.

Record mother-tongue in full whatever be the name of the language as returned and avoid use of abbreviations. You are not expected to determine if the language returned by a person is the dialect of another major language and so on. You should not try to establish any relationship between religion and mother-tongue. You are bound to record the language as returned by the person as his mother-tongue and you should not enter into any argument with him and try to record anything other than what is returned. If you have reason to suspect that in any area due to any organised movement, mother-tongue was not being truthfully returned, you should record the mother-tongue as actually returned by the respondent and make a report to your superior Census Officers for verification. You are not authorised to make any correction on your own."

Table C-V Part A is in two sections: (i) showing the distribution of speakers of languages (inclusive of mother-tongues grouped under each) specified in Schedule VIII to the Constitution of India, for the State and its twentyone districts separately for total, rural and urban areas, cross-classified by sex and (ii) showing the distribution of speakers of these languages for 21 districts, one hundred and ninetyfive taluks and 224 towns in the State for total areas only cross-classified by sex. The talukwise data for the rural areas are not presented but they can be obtained by subtracting data in respect of towns within a taluk from its total figures.

Table C-V Part B presents speakers of languages/mother-tongues (inclusive of mother-tongues where grouped) other than those shown under Part A for the States, Districts, Taluks and Towns. This table is also being presented in two sections: (i) showing the speakers of these languages/mother-tongues for the State and its Districts for Total, Rural and Urban areas cross-classified by sex and (ii) showing the speakers of these languages/mother-tongues for total areas of districts, taluks and towns cross-classified by sex.

In both parts A and B, mother-tongues have been grouped in some cases under the relevant language(s). This has been done on the basis of information readily available or in the light of studies already made. Those 'identifiable' mother-tongues which returned 10,000 or more speakers each at the all-India level have been grouped in Parts A and B as shown below.

Table C-V Part A

GUJARATI	—	Saurashtra
HINDI	—	Awadhi; Banjari; Bhadrawahi; Bhojpuri; Garhwali; Hindustani, Kangri; Kulvi; Kumauni;Lamani/Lambadi; Lodhi; Magadhi / Magahi; Marwari; Nimadi; Rajasthani; Sadan/Sadri
KANNADA	—	Badaga
ORIYA	—	Relli
SINDHI	—	Kachchhi
TAMIL	—	Kaikadi; Yerukala/Yerukula
TELUGU	—	Vadari

Table C-V Part B

BHILI/BHILODI	—	Dhodia; Paradhi
KONDA	—	Kodu
LAHNDA	—	Multani

All other mother-tongues falling under Part B and which returned less than 10,000 speakers each at the all-India level or were not 'identifiable' on the basis of information available as of date are included in the category 'Others' occuring as the last entry in Part-B.

* PAHARI is a combination of various speeches spoken over long stretches of areas where the speakers preferred to give a general name as Pahari. Similar is the case with BHOTIA, KUKI, MUNDA and NAGA appearing in table C-V Part B and marked by asterisk therein.

TABLE C-V PART A(i)

Distribution of languages (inclusive of mother-tongues grouped under each) specified in Schedule VIII to the Constitution of India

TABLE C-VI

Bilingualism

C-VI BILINGUALISM

This table corresponds to Table D-1 Part II of the 1951 and C-VI of the 1961 Censuses.

The question on bilingualism at the 1971 Census was: Question 15 : Other Languages

"After recording the mother-tongue in Question 14, enquire whether the person knows any other language (s), Indian or Foreign, and record language(s) returned by him against this question. In case he does not know any language apart from his mother-tongue, put 'X' against this question.

The number of languages recorded under this question need not be more than two. These languages should be other than his mother-tongue and they should be recorded in the order in which he speaks and understands best and can use with understanding in communicating with others. He need not necessarily be able to read and write these languages. It is enough if he has a working knowledge of these subsidiary languages to enable him to converse in that language with understanding."

In this table, data on bilingualism are presented only for selected languages/mother-tongues (L/MTs). The selection of these L/MTs has been done on the basis of all India table C VI-'Bilingualism of 1961' and a list of L/MTs was devised for all India. This list formed the basis for preparing the table on Bilingualism as estimated from the processing of 10 % rural and 20 % urban sample slips. The rural table was processed manually and the urban table on the computer. The estimated tables for rural and urban areas as pooled are presented here.

Columns 2, 3 and 4 of the table give the total number of speakers of L/MT inclusive of MTs grouped under it. Columns 5, 6 & 7 give figures of such of the speakers who returned a second language, that is to say, any other L/MT not accounted for in columns 2, 3 & 4. Column 3 contains in 'run on' fashion the names of subsidiary L/MTs wherever grouped by number of male and female speakers within brackets.

TABLE C-VI

BILINGUALISM

Language/ Mother-Tongue	TOTAL SPEAKERS			Number also speaking a second language/Mother-tongue			Columns (6 & 7) classified by second language/Mother-tongue
	Persons	Males	Females	Persons	Males	Females

FERTILITY TABLES

FERTILITY TABLES

Fertility tables which are compiled for the first time at the 1971 Census provide information about the currently married women and related births during the last year by religion, education, duration of marriage, presentage and age at marriage. Each of these tables has been divided into two parts—Part A : relating to rural areas and Part B : to urban areas of Andhra Pradesh State. Two appendices are also given for the tables F-I and F-III presenting similar data for currently married women belonging to Scheduled Castes/Scheduled Tribes separately. The data in all the F-series tables are presented at the State level only.

TABLE F-1 PART A

DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND RELATED BIRTHS DURING THE LAST YEAR BY RELIGION, PRESENT AGE AND AGE AT MARRIAGE (RURAL)
