CENSUS OF INDIA 1971—MYSORE STATE
PUBLICATION PROGRAMME

Portrait of Population	—A Descriptive Analysis	
Part I-A-Vol. I	—First part of the General Report (Chapters I to V)	
Part I-A-Vol. II	—First part of the General Report (Chapters VI to IX)	
Part I-B	—Second part of the General Report	
Part I-C	—Subsidiary Tables	
Part II-A	—General Population Tables (A-Series)	
Part II-B(i)	—Economic Tables (B Series)	
Part II-B(ii)	—Economic Tables (B Series)	
Part II-B(iii)	—Economic Tables (B Series)	
Part II-C(i) & Part V-A	—Distribution of population by Religion, Scheduled Castes & Scheduled Tribes (C—Series) & —Special Tables on Scheduled Castes and Scheduled Tribes	(Combined volume)
Part II-C(ii)	—Social and Cultural Tables and Fertility Tables—Tables on Household Composition, Marital Status, Educational Levels, Single Year Age, Mother Tongue and Bilingualism (C & F. Series)	
Part II-D	—Migration Tables (D—Series)	
Part III-Vol. I	—Report on Establishments (Reports and Subsidiary Tables)	
Part III-Vol. II	—Report on Establishments (Main Establishment Tables)	
Part IV	—Report on Housing	
Part V-B	—Ethnographic Notes on Scheduled Castes and Scheduled Tribes	
Part VI-A	—Town Directory	
Part VI-B	—Special Survey Reports on selected Towns	
Part VI-C	—Survey Reports on Selected Villages	
Part VIII-A	—Administration Report—Enumeration	Not for sale—for *official use only*
Part VIII-B	—Administration Report—Tabulation	
Part IX	—Census Atlas	
Part IX-A	—Administrative Atlas	
Part X	—District Census Hand Books :	
	Part A & B—Village & Town Directory and Village & Town Primary Census Abstract	
	Part C—Analytical Report, Administrative Statements and District Census Tables	

Special Studies and Other Miscellaneous Reports.

(i) Report on Bhuta Cult in South Kanara District.

ALL INDIA PUBLICATIONS

Volumes similar to those indicated above are being published at the All India level. Apart from these, All India Census Tables on 1% Sample basis being Part II (Spl.) and a Special Report on Graduates and Technical Personnel (G Series) being Part VII are published.

The District Census Handbooks will be available for sale at the Government Central Press, Bangalore and other publications at the Office of the Director of Census Operations in Karnataka, No. 21/1 Kaitichay's Complex, Mission Road, Bangalore-27 and the Controller of Publications, Civil Lines, Delhi-110006.

PREFACE

The 1971 Census Publication Programme contemplates presentation of Social and Cultural tables (C series) and the Fertility tables (F series) under the title Part II-C. As in 1961 Census, special detailed tabulation for Scheduled Castes and Scheduled Tribes was done this time also to facilitate comparability. These tables are referred to as SCT series.

For convenience, the above tables are presented in two volumes, namely, Part II-C(i) & Part V-A (combined valume) and Part II-C(ii). Part II-C(i) & Part V-A, already published, covers tables on Religion, Scheduled Castes and Scheduled Tribes population classified according to livelihood classes and literates and special tables on Scheduled Castes and Scheduled Tribes. All these tables have been generated on full count.

The present volume, Part II-C(ii), contains tables on composition of households, agewise distribution according to Marital status, Literacy and Educational levels, Single year age returns, Bilingualism and Fertility, all based on samples, together with mother tongue tables which have been generated on full count. It is hoped that the data presented in this volume, will be of immense use for various agencies.

I must express my deep sense of gratitude to Sri A. Chandrashekar, Ex-Registrar General, India and Sri R. B. Chari, Registrar General, India for their valuable guidance, inspiration and support. I am also grateful to Sri K.K. Chakravorty, Assistant Registrar General, India, Sri S. C. Srivastava, Assistant Central Tabulation Officer, Sri Madn Singh, Research Officer and his staff, for scrutiny of the tables and for their valuable suggestions.

In my Office, Sri B. S. Narasimha Murthy, Deputy Director of Census Operations has been in charge of the preparation of this volume. The credit is shared by him and a band of his dedicated staff, particularly Sri R. Y. Revashetti, Assistant Director of Census Operations (Technical), Sri M. Somashekar, Sri N. Lakshminarasimhan and Sri B. Venkatachala Rao, Tabulation Officers, Sri S. R. Raghavendra Rao and Sri H. R. Keshava Murthy, Senior Technical Assistants, Sri N. H. Chandra Mouli, Head Assistant, Sri B. Sakharam Shetty, Smt. P. V. Vanaja Bai, Sri K. V. Parthasarathy, Sri G. B. Chaugala, Sri S. Anjaneyulu and Sri K. R. Narayana and Sri M. S. Nagaraj, Statistical Assistants and to each one of them thanks are due.

Our thanks are also due to the Manager, Government of India Press, Nasik, and his staff for the excellent printing of this volume so expeditiously.

Bangalore,
August, 1977

P. PADMANABHA
Director of Census Operations,
Karnataka.

INTRODUCTION

The 1971 census publications of this State are made up of several parts. Part II of the census publications will cover the main census tables. This part is divided into serveral sub-parts each of which will be published as a separate book. Part II-A which is already published covers General Population Tables, or the A series tables and the Primary Census Abstracts of the districts. The Economic Tables of 1971 are included in the B series which are being published as Part II-B. The migration tables are included in part II-D volume.

The Social and Cultural Tables and Fertility Tables are included in C and F series respectively which are published as Part II-C. The C and F series tables envisaged in 1971 census are as follows:

C-Social and Cultural Tables

C-I Part A	Members of households by Relationship to Head of Household classified by Age-group for (State and districts).
C-I Part B(i) and B(ii)	Households where the head is a Male/Female by relationship of members with the head for (State and districts).
C-II	Age and Marital status for (State and districts).
C-III Part A	Age, Sex and Education in All Areas.
C-III Part B	Age, Sex and Education in Urban Areas only.
C-IV	Single Year Age returns (State level only).
Appendix to C-IV	Distribution of persons by five year age-groups for State and districts.
C-V Part A(i)	Distribution of Languages (inclusive of mother tongues grouped under each) specified in Schedule VIII to the Constitution of India — for State and districts.
C-V Part A(ii)	Speakers of Languages/Mother tongues (inclusive of mother tongues where grouped) specified in Schedule VIII to the Constitution of India for districts, taluks and city/towns.
C-V Part B(i)	Speakers of Languages/Mother tongues (inclusive of mother tongues where grouped) other than those specified in Schedule VIII to the Constitution of India — for State and districts.
C-V Part B(ii)	Speakers of Languages/Mother tongues (inclusive of mother tongues where grouped) other than those specified in Schedule VIII to the Constitution of India for districts,taluks and city/towns).
C-VI	Bilingualism (State level only).
C-VII	Religion (for State, districts, taluks and city/towns).
C-VIII	Scheduled Castes and Scheduled Tribes (Part A and Part B); Classification by Literacy and industrial category of workers and non-workers according to main activity among Scheduled Castes/Scheduled Tribes (for State, districts, taluks and city/towns).

F-Fertility Tables (State level only)

F-I	Distribution of currently married women and the related births during the last year by religion, present age and age at marriage. (Part A for Rural areas and Part B for Urban areas).
Appendix to F-I	Distribution of currently married women and the related births during the last year by Scheduled Castes/Scheduled Tribes, present age and age at marriage (Rural/Urban).
F-II	Distribution of currently married women and the related births during the last year by education, present age and age at marriage (Part A for Rural areas and Part B for Urban areas).
F-III	Distribution of currently married women and the related births during the last year by religion, duration of marriage and age at marriage (Part A for Rural areas and Part B for Urban areas).
Appendix to F-III	Distribution of currently married women and the related births during the last year by Scheduled Castes/Scheduled Tribes, duration of marriage and age at marriage (Part A for Rural areas and Part B for Urban areas).
F-IV	Distribution of currently married women and the related births during the last year by education, duration of marriage and age at marriage (Part A for Rural areas and Part B for Urban areas).
F-V	Distribution of currently married women and the related births during the last year by religion, education groups, present age and age at marriage. (Part A for Rural areas and Part B for Urban areas).

All the above tables except Tables C-V, C-VII and C-VIII have been prepared on sample basis. Table C-V, C-VII and C-VIII are based on full count. To facilitate easy handling, Part II-C volume has been published in two parts, namely Part II-C(i) covering Tables C-VII, C-VIII and Special tables on Scheduled Castes and Scheduled Tribes, and Part II-C(ii), the present volume which covers the remaining tables of C and F series.

There has been a change this time in grouping of languages/mother tongues. Table C-V (A & B) gives figures for languages/mother tongues, each of which has returned 10,000 or more speakers at All India Level in 1971. The figures now presented in this volume supercede all previous figures published earlier on a provisional basis in the Pocket Book of Population Statistics and Census Centenary Monograph No. 10 issued by the Registrar General, India and General Report-Part I-A Vol. II Mysore, 1971 and Portrait of population, Mysore, 1971 brought out by this Directorate.

The tables presented in this volume, reflecting the different Social, Cultural and Fertility characteristics of the population were built up from the data available in the population record and from the various questions of the individual slip which were canvassed at the 1971 census.

The processing of the data collected through individual slips was done in various stages. The tabulation was carried out manually for processing data on sex, mother tongue, religion, literacy, scheduled castes and tribes, and for Primary Census Abstract on full count. The detailed cross-tabulation was done manually based on a 10% sample of the individual slips in case of rural areas and a 20% sample of the individual slips in case of urban areas. The data from these sampled slips were transferred on to punch cards and processed on electronic computer in the Data Processing Unit of the Registrar General's Office. A 4% sample of the population record too was similarly processed on electronic computer. The sample tables thus prepared were estimated by using multipliers. The technical notes given in Appendices I, II and III provide an insight about the details of the entire sampling and estimation procedure. These tables prepared on the basis of the sample, presented here, are estimated with reference to the main characteristic of the table using different set of multipliers. Hence, in a few cases the figures of a particular characteristic presented in other tables full count or estimated, may vary marginally. In appendix-IV taluk-wise distribution of towns are indicated.

Specimen copies of the Individual slip and Population Record canvassed in the 1971 census are reproduced below for the general appreciation of the reader.

Signature o. Enumerator : .....

Date : ....

Signature of Supervisor : .....

Date : ....

The scope of each of the tables and the explanation of the terms used in the tables have been given in the explanatory notes that precede each table.

The following extracts from the manual of instructions to enumerators relating to questions 2, 3, 4, 5, 6(a), 6(b), 10, 11, 12, 13, 14 and 15 of the Individual Slip, on the basis of which these tables are compiled will be helpful in appreciating the contents of these tables.

* * *

Question 2 : Relationship to Head

In the case of the Head of the household write 'Head'. The Head of the Household for census purposes is a person who is recognised as such in the household. He is generally the person who bears the chief responsibility for the maintenance of the household and takes decisions on behalf of the household. The Head of the household need not necessarily be the eldest male member, but may even be a female or a younger member of either sex. You need not enter into any long argument about it but record the name of the person who is recognised by the Household as its Head.

In the case of institutions like boarding houses, messes or friends living together in one census house which should be regarded as households of unrelated persons living together, which may be called institutional Households, the Manager or Superintendent or the person who has administrative responsibility or who by common consent is regarded as the head should be recorded as the Head of the household.

The Manager or Superintendent who does not stay normaly in the institution should be enumerated at his place of normal residence. You should make sure before filling up the slip for the Manager or Superintendent etc., of an institutional household, that he/she has not been enumerated at any other household.

In the case of absence of a normal 'Head', the person on whom the responsibility of managing the affairs of the household falls, should be regarded as the Head.

All relationships in this question should be recorded in relation to the Head of the household. Write the relationship in full. Do not use words like 'nephew', 'niece or uncle', but state whether brother's or sister's son or daughter (for nephew or niece) or father's or mother's brother (for uncle), 'Son' will include 'adopted son' or 'step son'; similarly for a daughter. In the case of visitors, boarders, or employees, write 'visitor', 'boarder', or 'employee' as the case may be. In the case of institution, the members should be recorded as 'unrelated'.

If on the check of revisional round between 1st and 3rd April 1971 the Head of the household as recorded previously is found to have died, the person in the household who succeeds him by common consent as head should be recorded as Head and the relationships in all other slips will have to be suitably corrected. The slip of the deceased Head of the household will, of course, be cancelled.

Question 3 : Sex

For males write 'M' and for females write 'F' within the circle indicated against this question. Even for eunuchs and hermaphrodites, write 'M' only. Verify with reference to the name and relationship to Head against questions 1 and 2 respectively that you have noted the sex correctly.

Question 4: Age

Record the age of the person in total years completed last birthday. Very often there is a tendency on the part of the individuals to return 'years running' rather than the 'years completed'. Make sure that only the actual number of years completed is recorded.

In respect of infants who might not have completed one year by the day of enumeration their age in completed years should be invaribly shown as '0' as they have not yet completed one year of age and add 'Infant' in brackets. As was stated under general instructions make sure that infants even if a day old are invariably enumerated. You should not enter the age in months. The age of an infant who has not yet completed one year should invariably be noted as '0' only.

Age is one of the most important items of demographic data and you should ascertain the age with greatest care. Many persons particularly in the rural areas cannot give their age correctly. They should be assisted to state the correct age by stimulating their memory with reference to any historical event etc., well known in the area. Sometimes the age can be ascertained with reference to the age of another person of a known age that may in the same household or in the neighbouring household or that of the well known person of the village such as Headman of the village. A person can more easily say whether he was older or younger to such a person and by how many years. This will help you to record the age more accurately.

Question 5: Marital Status

In answering this question use the following abbreviations:

NM : Never Married
M : Currently Married
W : Widowed
S : Separated or Divorced.

For a person who has never been married at any time before, write 'NM'. For a person currently married, whether for the first or another time and whose marriage is subsisting at the time of enumeration with the spouse living, write 'M'. Write 'M' also for persons who are recognised by custom or society as married and for the persons in stable defacto union. Even if a marriage is disputed in the locality write 'M' if the person concerned says he or she is married or is in stable defacto union. For a widowed person whose husband or wife is dead, and who has not been married again, write 'W'. For a person who has been separated from wife or husband and is living apart with no apparent intention of living together again or who has been divorced either by a decree of a law court or by an accepted social or religious custom but who has not remarried, write 'S'. For a prostitute return her marital status as declared by her.

Question 6(a): Age at Marriage

Age at marriage: You should ascertain the age at which the currently married woman whom you are enumerating was married and record that age in completed years. If the currently married women had been married more than once, the age at which she got married for the first time should be recorded.

Question 6(b): Any Child Born in the last one year

Any child born in the last one year: You should ascertain if the currently married women whom you are enumerating gave birth to a child in the last one year prior to the date enumeration. Since it may be difficult for a person to reckon the exact year with reference to the English calender dates, the period of one year may be ascertained with reference to a well known festival day which falls close to Feb-March, as determined by the Director of Census operations of the State. You should ask if a child was born on or after this festival day last year to the date of enumeration. Only if the child was alive, even if the child had died soon after birth, should the answer be 'Yes', to this question. Still birth i e., a child which is born dead should not be taken into account for this purpose. So while you should make sure that every case of birth of child born alive, even if it is not alive on the date of enumeration, is reported, you should not reckon it if the child was born lifeless.

It is common experience that the birth of the child may not be reported readily if the child is not actually surviving at the time of enumeration. Infant deaths are still high in the country. There is a chance of a number of such cases being missed unless specifically questioned about them. It is necessary to record all live births even if the child had died soon thereafter or had not survived to the day of enumeration. Therefore where the initial answer to this question is 'no', you should ask a specific question if there has been a case of child having been born alive in the last one year and later dying before the enumeration date. This is a delicate question and should be asked with tact in a manner not to offend sensibility of the respondent. Where a currently married woman first answers that she had no child born in the last one year, you may perhaps question her as follows:

"It has been found in some houses that a child was born and had died soon after or a few days or months later and such cases had not been reported. It is my hope that there are no such cases here. Am I right?"

This may bring in the required response. If she reports 'no' then you can be sure that no birth has been missed. You have to make sure that any live birth that has occurred to the currently married woman in the last one year is netted whether the child is surviving till the date of enumeration or not. Similarly, probe to eliminate still births may be necessary. For example, when the answer is 'yes' under question 6(b) the enumerator might ask if the child is here in this house. If the answer is 'yes' no further question is needed. If 'no' the enumerator might ask where he has gone. The answer may be 'dead' or he has gone elsewhere. If 'dead' then the enumerator might ask when did the child die and this will bring out the fact whether or not it was a still birth.

Write 'Yes' if the currently married woman had given birth to a live child from the prescribed festival day last year to the date of enumeration or 'No' if she had not. In case of two of multiple births, write 2, 3 etc., as the case may be within round brackets after the entry 'Yes'.

NOTE :—You may find on your revisional round from 1st to 3rd April, 1971 that a child is born to a married woman in a household after your last visit but before the sunrise of 1st April, 1971. You will have to take this into account and correct the answer against the Q. 6(b) accordingly. You must enquire specifically if any such births has taken place. While ignoring still births all other births where the child was born alive if it did not survive long should be taken into account.

Question 10 : Religion

In answering this question use the following abbreviations :

H : Hinduism

I : Islam

C : Christianity

S : Sikhism

B : Budhism

J : Jainism

for others record the actual religion as returned fully.

If a person says that he has no religion it may be recorded accordingly. Do not mistake religion for caste which will not be recorded here.

Question 11 : Scheduled Caste or Scheduled Tribe

You have been furnished with a list of scheduled castes and scheduled tribes notified for your State. Ascertain if the person enumerated belongs to a scheduled caste or scheduled tribe and if he does, then record the name of the scheduled caste or scheduled tribe which should find place in the list furnished to you. The answer should be recorded against the correct rectangle provided for the purpose against this question. For a person who is not a member of any scheduled caste or scheduled tribe write 'X' in both the rectangles.

If the person belonging to a scheduled caste or scheduled tribe returns his caste or tribe by synonym or generic name of a caste or a tribe it should be entered only if it finds a place in the list furnished to you. Do not write the names of scheduled castes in general terms as 'Harijan' or 'Achhut'. You should ascertain the name of the caste when it is returned and write it in the rectangle provided for recording the name. Similarly, do not write the names of scheduled tribes in general term as 'Adivasi'. You should ascertain the name of the tribe when it is returned and write it in the rectangle with broken lines provided for recording the same. If a person is negligent and insists on calling himself merely 'Harijan' or 'Achhut' or 'Advasi' as the case may be, tell him that this description is not adequate for census purposes and persuade him to give out the actual name of the caste or tribe. You should make all efforts to ascertain the correct name of the scheduled caste or scheduled tribe as found in the notified list. If the person merely claims to be a scheduled caste or scheduled tribe but says that he does not belong to any of the notified communities applicable to the area, he will not be entered as a scheduled caste or scheduled tribe.

Scheduled castes can belong only to the Hindu or Sikh religions. If a person belongs to scheduled caste, there will be either 'H' or 'S' in the answer to question 10. Scheduled tribes may belong to any religion.

Question 12 : Literacy (L or O)

Definition of a literate : A person who can both read and write with understanding in any language is to be taken as literate. A person who can merely read but cannot write is not a literate.

It is not necessary that a person who is literate should have received any formal education or should have passed any minimum educational standard.

For a person who is literate i.e., who can both read and write, record 'L' in the triangle against question 12. If there is any doubt about a person's ability to read or write, the test that may be applied for reading is his/her ability to read any portion of the printed matter in the Enumerator's Instructions and similarly for writing he/she should be able to write a simple letter. Ability merely to sign one's name is not adequate to qualify a person as being able to write with understanding. If a person claims to be literate in some other language with which the enumerator is not acquainted, the respondent's word has to be taken as correct. Other member of the household may also be able to testify to the literacy of the person enumerated.

For a person who is literate i.e. who can neither read nor write or can merely read but cannot write, in any language, write 'O' in the triangle against question 12. All children of the age of 4 years or less should be treated as illiterate even if the child is going to a school and may have picked up reading and writnig a few odd words.

Question 13 : Educational Level

This question will be asked of those for whom 'L' has been recorded against question 12. For a person who is illiterate and 'O' has been put against him in the answer to question 12, there is no advantage in ascertaining the educational level even if he had at some stage attended school and passed a standard and had relapsed into illiteracy. In such a case you should put 'X'. You have to ascertain and record the highest educational level attained by a person for whom 'L' is recorded in answer to question 12.

For a person who is still studying in a particular class, the highest educational level attained by him will be one that he has actually passed and not the one in which he is studying. For example, a person studying in Ist year B.A. should be recorded as only 'PUC' or 'Higher Secondary', as the case may be. Similarly, a person studying, say, in the 4th year of 'MBBS' should not be noted as 'MBBS' but as 3rd year 'MBBS' which is the highest level he has actually attained. If you are not sure whether a person has passed Primary, Middle, Higher Secondary or other definite levels, you may record the actual standard passed such as say IIIrd standard, VIIIth standard, Ist year B.Com. etc.

The highest educational level attained by the person enumerated should be recorded. When a person holds both general and technical qualifications both of which are of equivalent level such as say B.Sc. (Zoology) and M.B.B.S. or B.A. (Maths) and B.E. (Bachelor of Engineering), the technical qualification should be given preference in recording the highest educational level attained. Where the general educational level is higher than the technical educational level or where it is not possible to decide which of the two levels is relatively higher, the highest level of education as returend by the person concerned should be recorded.

In recording the highest educational level of a graduate or a post-graduate, subject of specialisation such as B.Sc. (Maths.), M.A. (Economics), M.Sc. (Botany), B.Sc. (Agriculture), etc., should be noted. You should not use abbreviations which are not in common use. In such cases, the degree or diploma should be spelt out fully.

Whenever you come across graduates or post-graduates as also those with a technical diploma or degree, you will have to issue him a "Degree-holder and Technical Personal Card" and ask the person concerned to fill it. You should note the location code on the card while issuing it. Put a tick (√) after noting the educational level against question 13 immediately after you issue a card. When you collect it after some time but before you complete the enumeration of your area, cross the tick and put a circle as (√).

You will have to ensure that the card issued to all the graduates and the technical degree or diploma holders are collected back. The non-crossed tick, if any, against question 13 will show that the card has not been collected.

Question 14 : Mother-Tongue

Definition : Mother-tongue is the language spoken in childhood by the person's mother to the person. If the mother died in infancy, the language mainly spoken in the person's home in childhood will be the mother-tongue. In the case of infants and deaf mutes the language usually spoken by the mother shall be recorded.

Record mother-tongue in full whatever be the name of the language as returned and avoid use of abbreviations. You are not expected to determine if the language returned by a person is the dialect of another major language and so on. You should not try to establish any relationship between religion and mother-tongue. You are bound to record the language as returned by the person as his mother-tongue and you should not enter into any argument with him and try to record anything other than what is returned. If you have reason to suspect that in any area due to any organised movement, mother-tongue was not being truthfully returned, you should record the mother-tongue as actually returned by the respondent and make a report to your superior Census Officers for verification. You are not authorised to make any correction of your own.

Question 15 : Other Languages

After recording the mother-tongue in question 14 enquire whether the person knows any other language(s), Indian or foreign and record language(s) returned by him against this question. In case he does not know any language apart from his mother-tongue put 'X' against this question.

The number of languages recorded under this question need not be more than two. These languages should be other than his mother-tongue and they should be recorded in the order in which he speaks and understands best and can use with under-standing in communicating with others. He need not necessarily be able to read and write these languages. It is enough if he has a working knowledge of these subsidiary languages to enable him to converse in that language with understanding.

* * *

Population Record

Soon after you complete the enumeration of all the persons in the household you are expected to transfer certain items of information of all the individual members of each household to the Population Record. Population Record form has been reproduced earlier. If you feel that the filling of the Population Record in the field is likely to take considerable time there is no objection to the details being posted by you later at home at the end of the day. However, soon after you complete the enumeration of all persons in a household you must note down the Location Code Number and the Household number on the Population Record and also copy out in Column 2 all the names of the persons enumerated in the household. This will help you to check with the members of the household and verify if all the persons qualified to be enumerated in the household have been fully enumerated.

The Population Record forms would have been supplied to you in convenient books and each page will normally take the entries of one household. However, if in a large household there are more number of persons than what a single Population Record form can accommodate, you may continue the entries on the next form but note boldly on the top of the continued Population Record as "Continued".

The Population Record hardly calls for any detailed explanation. On the top of each form please note correctly the Location Code Number and the Household number. It is important that you note the household number correctly. Do not fail to note boldly "INST" in respect of institutional households and 'O' in respect of houseless households.

You will be required to furnish information in the Enumerator's Abstract on the total number of occupied residential houses, the census households, the institutional households and houseless households in your block with reference to the entries made in this Population Record. So please make sure that you have entered the Household Number correctly as this will guide you in posting the required particulars in the Enumerator's Abstract. At the right hand side below the Household number, you will have to record information if the household belongs to SC/ST. You would have already ascertained if the head of the household belongs to a Scheduled Caste/Scheduled Tribe with reference to Question 11 of the Individual Slip. If the head belongs to any S.C./S.T., write S.C./S.T. as the case may be and also the name of S.C./S.T. to which the head of the household belongs.

The columns in the main body of the Population Record are self-explanatory. You have to post them with reference to the information you have collected of each member of the household in the Individual Slip against the relevant questions. However, column 9 of the Population Record may require some explanation. For those who have returned themselves as workers for their main activity against Question 16(a)(i) of the Individual Slip, while you may note 'C', 'AL' as the case may be, as recorded in the box against Question 16(a)(i), in respect of those other than cultivators and agricultural labourers, you may please indicate briefly the description of work as recorded in Question 16(e) of the Individual Slip. For those who have returned themselves as non-workers for their main activity you may note the same abbreviation as recorded against Question 16(a)(ii).

APPENDIX I

A NOTE ON THE SAMPLING PROCEDURE ADOPTED IN 1971 CENSUS FOR C-I PART-A, C-I PART-B (i) AND C-I PART-B (ii)

Sample Size : For the preparation of tables C-I Part-A, C-I Part-B (i) and C-I Part-B (ii) on household composition, a sample of residential households was drawn in two stages. In the first stage, a twenty percent systematic sample of effective enumeration blocks (defined later) was selected systematically. In the second stage, a twenty percent sample of population records relating to residential households was again systematically selected from each of the sample block.

Selection Procedure : For the purpose of sample selection, the rural and urban parts of each district were treated as separate strata. Within each stratum, a list of blocks was prepared by merging those containing less than 50 households with the neighbouring blocks. Blocks formed in this way were called 'effective enumeration blocks' or simply 'effective blocks'. The list of effective blocks so formed served as a frame for the selection of the first stage unit. A twenty percent sample of effective blocks was then selected systematically. Having identified the first stage units, the population record books for the selected effective blocks were assembled. Within each selected effective block, the population records relating to residential households were serially numbered. To do this effectively, instructions were issued to fold the population record relating to 'houseless households or institutional households'. Care was also taken to see that only one serial number was assigned to a population record, whenever the record relating to a household covered more than one page. In cases where 'effective blocks' were formed by merging two or more blocks, the population record books corresponding to all the census enumeration blocks constituting the effective block, were assembled together and then the households were selected. Fresh random numbers were selected for each effective block. The population records corresponding to the selected households were marked 'S' at the right hand top corner with a stamp provided.

Estimation Procedure : The tables prepared for each of the stratum were multiplied uniformally by 25 to give the final estimated table.

APPENDIX II

A NOTE ON THE SAMPLING PROCEDURE ADOPTED IN THE 1971 CENSUS FOR SOCIAL AND CULTURAL TABLES (EXCEPT C-I & C-V)

Sample Size : A ten percent sample of the slips was selected linear systematically with a random start from the individual slips relating to the rural parts of a taluk. In the urban part of the district, a twenty percent systematic sample of the individual slips was selected with a separate random start. The sample sizes were adopted on consideration of required precision, available resources and operational convenience.

Selection Procedure : The sample design adopted in the 1971 census was a stratified systematic sample of individual slips. For the purpose of sample selection, each district was divided into three sub-regions: (1) Taluk (rural); (2) Non-city urban district and (3) City (urban unit including Agglomeration with 100,000 and more population).

These sub-regions were termed as operational units. If, however, any of the operational unit was unduly large, it was split into sub-operational units of at least 20,000 persons. Similarly, small-sized operational units were either clubbed together or tagged on to a continuous larger unit so as to form an 'effective operational unit' of the required minimum size. Adoption of those operational units ensured accuracy in sample selection, maintaining at the same time stability in the sampling fraction within the sampled areas. This procedure has ensured effective control over sample selection within each block, as also in the entire operational unit.

For the purpose of the Primary Census Abstract (PCA) the individual slips were sorted into ten broad industrial categories and nine broad age groups for each of the sexes. The ten industrial categories of workers and non-workers were as follows : (I) Cultivators; (II) Agricultural labourers; (III) Livestock, forestry, fishing, hunting and plantations, orchards & allied activities (IV) Mining & quarrying; (Va) Manufacturing, processing, servicing & repairs in *household* industry: (Vb) Manufacturing, processing, servicing & repairs in other than *household industry;* (VI) Construction; (VII) Trade & commerce; (VIII) Transport, storage & communications (IX) Other services and (X) Non-workers.

The nine age groups into which the slips belonging to each industrial category were sorted were 0-14, 15-19, 20-24, 25-29, 30-39, 40-49, 50-59, 60+ and 'age not stated'. Thus the individual slips of a particular operational unit were sorted into $11 \times 9 = 99$ cells, separately for males and females. Sampling was done in each of the operational units independently by taking separate random starts. The slips were then distributed into 10 (or 5) pigeon-holes for rural/urban samples and one pigeon-hole was selected at random. The slips falling in the selected pigeon-hole constituted the sample. For operational details of the sampling procedure and instructions, the 'Manual of instructions or sorting, compilation (manual processing) & sampling procedures' may be consulted. All tables except A-I to A-V (Population tables), B-I Part A, B-II (economic tables) C-V (mother tongue), C-VII (Religion) and C-VIII (Scheduled Castes & Tribes) have been prepared on a sample basis.

Estimation Procedure : The tables prepared for each of the districts/states from the ten percent rural and twenty percent urban sample slips have been inflated to give the final estimated tables. Estimates have been obtained by making use of the cell frequencies (usually labelled as 'controls') available from the tables prepared on full count basis, namely, PCA and B-1 Part A. In order to ensure the maximum possible inter-table consistency, it became necessary to use the estimated frequencies of a few of the final tables as controls for estimating some cell frequencies of other tables.

This way of estimating the cell frequencies ensured that marginal totals of estimated tables tallied with that of the full-count tables. This is convenient to the user because, after adjustment, the identical marginal totals are found in tables having the same marginal specification. "The adjustment diminishes the sampling variance to some extent; the more the controls, the smaller the sampling variance of the adjusted frequencies"[1]. Further, adjustment to known control totals has at the same time the effect of eliminating biases in the nature of inherent differences between the sample and complete count.

For the purpose of estimation of final tables, a set of multipliers was prepared for each table. A multiplier is the ratio of full-count frequency of some

characteristics from PCA (Primary Census Abstract) or Table B-I Part A and the corresponding sample frequency of the same characteristics from the sample tables. The following statement gives the level of presentation of the tables and the related controls on which the multipliers are based. The details will be presented in the report on sampling procedures to be published later :—

Table	Level of Presentation	Control based from tables
C II	District	B I Part A & PCA
C III A	Do.	,, ,,
C III B	Do.	,, ,,
C IV	State	,, ,,
C IV Appendix	District	,, ,,

As no such control was readily available for C VI (Bilingualism), these were estimated by multiplying the sample values by 10 and 5 in rural and urban areas respectively.

Reliability of estimates : No exact formula can be given for the precision of the estimates in view of the systematic sampling design adopted. The relative standard error can be estimated roughly on the basis of simple random sampling, estimated roughly as $\sqrt{(1-f)\frac{1-p}{np}}$ where 'f' is the proportion samples, (O-10 in case of rural areas & O-20 in case of urban areas); 'p' is the estimated proportion in any cell and 'n' the sample size being equal to ten percent of individual slips in rural areas and twenty percent in urban areas. In the present census, slips were sorted by sex, industrial category and age-group before sampling. It is expected that the efficiency must be considerably higher than a *simple random sample of identical size.* Extensive studies conducted have indicated that systematic sampling of individuals is more efficient than random sampling especially when the slips were pre-sorted for most of the socio-economic characteristics covered in census[2]. Thus the estimates prepared on the basis of the systematic sampling in the present census can be expected to be quite reliable.

APPENDIX III

A NOTE ON THE SAMPLING PROCEDURE ADOPTED IN THE 1971 CENSUS FOR FERTILITY TABLES

Sample size : A ten percent sample of the slips was selected linear systematically with a random start from the individual slips relating to the rural parts of a taluk. In the urban part of the district, a twenty percent systematic sample of the individual slips was selected with a separate random start. The sample sizes were adopted on consideration of required precision, available resources and operational convenience.

Selection procedure : The sample design adopted in the 1971 census was a stratified systematic sample of individual slips. For the purpose of sample selection, each district was divided into three sub-regions; (1) Taluk (rural) : (2) Non-city urban district and (3) City (urban unit including Agglomeration with 100,000 and more population).

These sub-regions were termed as operational units. If, however, any of the operational unit was unduly large, it was split into sub-operational units of at least 20,000 persons. Similarly, small-sized operational units were either clubbed together or tagged on to a contiguous larger unit so as to form an "effective operational units" of the required minimum size. Adoption of these operational units ensured accuracy in sample selection, maintaining at the same time stability in the sampling fraction within the sampled areas. This procedure has ensured effective control over sample selection within each block, as also in the entire operational unit.

For the purpose of the Primary Census Abstract (PCA) the individual slips were sorted into ten broad industrial categories and nine broad age groups for each of the sexes. The ten industrial categories of workers and non-workers were as follows : (I) Cultivators; (II) Agricultural labourers; (III) Livestock, forestry, fishing, hunting and plantations, orchards & allied activities (IV) Mining & quarrying; (Va) Manufacturing, processing, servicing & repairs in *household industry;* (Vb) Manufacturing, processing, servicing & repairs in *other than household industry;* (VI) Construction; (VII) Trade & Commerce; (VIII) Transport, storage & communications (IX) Other services and (X) Non-workers.

The nine age groups into which the slips belonging to each industrial category were sorted were O-14, 15-19, 20-24, 25-29, 30-39, 40-49, 50-59, 60+ and 'age not stated'. Thus the individual slips of a particular operational unit were sorted into $11 \times 9 = 99$ cells, separately for males and females. Sampling was done in each of the operational units independently by taking separate random starts. The slips were then distributed into 10 (or 5) pigeon-holes for rural/urban samples and one pigeon-hole was selected at random. The slips falling in the selected pigeon-hole constituted the sample. For operational details of the sampling procedure and instructions, the 'Manual of instructions on sorting, compilation (manual processing) & sampling procedures' may be consulted.

Estimation procedure : All the tables F-I to F-V are presented at state level. The sample table F-I to F-V have been multiplied by '10' in case of rural area and by '5' in case of urban area to estimate the final tables.

Reliability of estimates : No exact formula can be given for the precision of the estimates in view of the systematic sampling design adopted. The relative standard error can be estimated roughly on the basis of simple random sampling, as $\sqrt{(1-f)\frac{1-p}{np}}$ where 'f' is the proportion samples, (0.10 in case of rural areas & 0.20 in case of urban areas); 'p' is the estimated proportion in any cell and 'n' the sample size being equal to ten percent of individual slips in rural areas and twenty percent in urban areas. In the present census, slips were sorted by sex, industrial category and age-group before sampling. It is expectel that the efficiency must be considerably higher than a simple random sample of identical size. Extensive studies conducted have indicated that systematic sampling of individuals is more efficient than random sampling especially when the slips were pre-sorted for most of the socio-economic characteristics covered in a census[1]. Thus the estimates prepared on the basis of the systematic sampling in the present census can be expected to be quite reliable.

C-I PART A	MEMBERS OF HOUSEHOLDS BY RELATIONSHIP TO HEAD OF HOUSEHOLD CLASSIFIED BY AGE GROUPS.
C-I PART B(i)	HOUSEHOLDS WHERE THE HEAD IS MALE BY RELATIONSHIP OF MEMBERS WITH THE HEAD.
C-I PART B(ii)	HOUSEHOLDS WHERE THE HEAD IS A FEMALE BY RELATIONSHIP OF MEMBERS WITH THE HEAD.

C-I HOUSEHOLD COMPOSITION TABLES

Table C-I is presented here in two main parts, namely Part-A and Part-B. Part B is further subdivided into Part-B(i) and Part-B(ii).

For the preparation of Table C-I Part-A, C-I Part-B(i) and C-I Part B(ii) a 4 percent sample of households was drawn in two stages from the population records. In the first stage a 20 percent sample of effective Enumeration Blocks was selected systematically with a random start. In the second stage a 20 percent sample of Population Records was selected from each sampled block again systematically with a random start. Detailed procedure for selection of sample has already been given in Appendix-I earlier.

Household : A household is a group of persons who commonly live together and would take their meals from a common kitchen unless the exigencies of work prevented any of them from doing so. There may be 'one-member household, two-member household or multi-member household'. For census purposes each one of these types is regarded as a 'Household'. Again, there may be a household of persons related by blood or household of unrelated persons; the latter are Boarding Houses, Hostels, Residential Hotels, Orphanages, Rescue Homes, Ashrams etc. These are called "Institutional Households".

Each household will be listed according to the instructions that follow (see paras 44 & 45 of the instructions to enumerators) and a distinguishing number allotted to each household. As each household will be related to the physical structure of a census house, the household number as such need not be painted on the door of each census house. Only the building and census house number will be painted.

All the "Institutional Households" and "Houseless Households" were excluded while selecting the second-stage sample of Population Records. The selected Population Record sheets of the households were marked 'S' and folded to identify their selection. The entire process of selection was done in the respective divisional tabulation offices.

The sampled population record pads were forwarded to the coding and punching cell at Bangalore where further processing was done. On the basis of the punched data the tabulation was done in the Central Mechanical Tabulation Unit of the Registrars General's Office. The sample figures in the tables thus prepared were estimated by uniformly multiplying by 25.

The contents and scope of three tables namely. Table C-I Part-A C-I Part B(i) and Part-B(ii) are briefly explained below :

TABLE C-I PART-A : MEMBERS OF HOUSEHOLDS BY RELATIONSHIP TO HEAD OF HOUSEHOLD CLASSIFIED BY AGE-GROUPS

This table gives figures for Total/Rural/Urban areas down to the district level. This table gives the composition of households by relationship to the head of household classified by three broad age groups namely less than 30 years, 30-49 years and 50+ years. "Age not stated" is included in "All ages". Related and unrelated persons and single member households are shown separately. The relationship to heads of households who can be either males or females are presented for married sons, brothers, father, mother, other males and females and to for the same relations for other marital status combined.

This table is of sociological interest as it helps to assess the extent of the joint family system. The distribution of the heads of households by age and their relations classified by marital status further gives an idea about the future trend of the joint family system. During 1961 census the corresponding table C-I was prepared on 20% sample basis for rural, urban and total population separately. The relationship to the head was shown as "married sons" and "other married relations" and were not classified by broad age-groups.

TABLE C-I PART-B(I) AND PART-B(II)

Households where the head is a Male/Female by relationship of members with the head.

The two parts of this table taken together corresponds largely to Table C-I of 1961. It gives composition of households where head is male or female by relationship of members with the head of households. It would be of much interest to sociologists as it would reveal composition of households having married relations also.

C-I PART A—MEMBERS OF HOUSEHOLDS BY RELATIONSHIP

State /District	Age-Group of the head of household	Heads of Households		Total No. of house-holds	Total household population		Number of members by relationship to head

C-II AGE AND MARITAL STATUS

C-II AGE AND MARITAL STATUS

This is a very important demographic table which presents information about marital status by sex and quin-quennial age-groups separately for total, rural and urban components of population. This table has been prepared for the state and down to the district level. The same table was prepared at the 1961 census on *full count basis and in 1951 on a 10%* sample data. The population is classified in each age-group under four categories *viz.* Never married, Married, Widowed and Divorced or Separated. Marital status "Unspecified" will also be found in the table.

During the tabulation a uniform principle was adopted on an All-India basis to treat all persons in the age-group 0-9 as 'Never Married' irrespective of the entries made against question No. 5 in the individual slip.

Regarding classification by marital status it may be pointed out here that for persons who are acknowledged by custom or society as married and persons in stable *de-facto* union the marital status was recorded as 'Married'. Even if a marriage is disputed in the region or locality, the status was recorded as 'Married' provided the respondent declares so.

A 'Widowed' person is one whose husband or wife is deceased and who has not remarried.

For a person who was divorced in a lawful manner, either by a decree of law or by an accepted social or religious custom but who has not remarried, or a person who had been separated from wife or husband and was living apart with no apparent intention of living together, the status recorded was "Divorced or Separated".

For a prostitute the return on marital status was as declared by her.

For a person who has never been married at any time before, the marital status was recorded as "Never Married".

This table provides an elaborate base for comparing regional variations of marital status conditions in different age-groups since the last two censuses.

Statements 1 to 4 given at the end of this note show the percentage of population under each marital status separately for males and females in each age-group to the total population of that age-group, for Total, Rural and Urban areas of the state respectively. Statement 5 indicates the distribution of 1,000 Males/Females according to marital status by sex for the state and districts.

The majority of unmarried persons among males and females observed in these tables have obviously come from an enormous pre-ponderance of child and adolescent population, thus making for a relatively small proportion of the married persons.

The proportion of unmarried persons is higher among males than among females throughout life. The age at marriage for males is relatively higher than for females. This is reflected in the higher proportions of males under "Never Married" and relatively small proportions under "Married" upto the age 29.

The proportion of married persons is higher among females than among males upto the age of 30 to 34.

It is significant that the proportion of the wives to total females begins to decline as soon as the age period 25 to 29 is crossed owing to casualities among husbands.

The proportion of widowed persons also naturally increases with each quin-quennium but is at its highest in the age-group 70 and above. The preponderance of widows over widowers found, is caused as there is greater scope of remarriages of widowers than that of widows.

The incidence of divorce and separation does not show any significant variation with the increase in age. However the proportions are quite small.

STATEMENT 1

PERCENTAGE DISTRIBUTION OF POPULATION BY MARITAL STATUS IN RURAL AND URBAN AREAS OF MYSORE STATE—1971

Marital Status	Total		Rural		Urban	
	Males	Females	Males	Females	Males	Females
Total	**100.00**	**100.00**	**100.00**	**100.00**	**100.00**	**100.00**

C III—PART A AGE, SEX AND EDUCATION IN ALL AREAS

C III—PART B AGE, SEX AND EDUCATION IN URBAN AREAS ONLY

C-III AGE, SEX AND EDUCATION

This table deals with educational standards of the population classified by sex and age-groups, presented down to the district level. It has two parts, viz. Part-A for all areas and Part-B for urban areas. The age-groups are quin-quennial upto 24 and grouping thereafter is 25-34 and 35+ and age not stated.

This table helps to assess the growth of literacy in the population as well as in the different age-groups since the last census. A similar table C-III Part A and B was prepared on full count in 1961 census with slightly different educational levels and age-groups, and in 1951 census, this table was prepared on 10% sample basis.

The concepts and definitions adopted in preparing this table are explained below :—

1. Illiterate : Is a person who can neither read nor write or can merely read but cannot write in any language.

2. Literate : Is a person who can both read and write with understanding in any language. The test for reading is ability to read any portion of the printed matter in the Enumerator's Instructions and similarly for writing the person should be able to write a simple letter. Ability merely to sign one's name is not adequate to qualify a person as being able to write with understanding. If a person claims to be literate in some other language with which the enumerator is not acquainted, the respondent's word has to be taken as correct.

All the children of the age of 4 years or less should be treated as illiterate even if the child is going to school and may have picked up reading and writing a few odd words.

3. Educational Levels : If a person could both read and write and had also passed a written examination as proof of educational level attained, the highest examination passed was noted in the individual slip instead of merely "literate". The variety of entries relating to educational levels found in the individual slips were fitted in against the broad educational levels adopted for the preparation of this table.

In Part-A for the table which is for *all areas*, data are presented by :—

(i) Illiterate

(ii) Literate* (Without educational level)

(iii) Primary

(iv) Middle

(v) Matriculation or Higher Secondary

(vi) Non-technical diploma or certificate not equal to degree.

(vii) Technical diploma or certificate not equal to degree.

(viii) Graduates and above.

*Includes educational levels not classifiable.

In Part-B, which is for *urban areas only*, in addition to the above mentioned first seven characteristics, figures are also given for the following educational levels which together corresponds to 'Graduates and above' in Part-A of the table.

(i) Graduate degree other than technical degree.

(ii) Post-Graduate degree other than technical degree.

(iii) Professional degree or diploma equal to degree or Post-graduate degree in—

(a) Engineering and Technology

(b) Medicine

(c) Agriculture, Veterinary and Dairying

(d) Teaching

(e) Others.

The various diplomas falling under categories : Viz. (i) non-technical diploma or certificate not equal to degree and (ii) technical diploma or certificate not equal to degree broadly cover the following :—

Non-technical diploma or certificate not equal to degree :

Rattan, Bhushan, Prabhakar, Budhiman, Vidwan, Giani, Adib, Adib-Alam, Adib-Fazal, Prajana, Munshi, Munshi-Alam, Munshi-Fazal, Maulvi, Maulvi-Alam, Maulvi-Fazal, Diploma in French, Proficiency in oriental languages (Sanskrit, Persian, Arabic, Urdu, Hindi, Punjabi), Visual and graphic arts, Acting, Music, dancing, sewing, art, embroidery, domestic science, statistics (except S.I. diploma equivalent to a post-graduate degree) Diploma in Library Science.

Technical diploma or certificate not equal to degree : Diploma in :

(a) Engineering	Aeronautical engineering, Automobile engineering, Chemical engineering, Civil engineering, draughtsman, Overseers, Surveyors, Computors etc. Electrical engineering, Mechanical engineering, Metallurgical engineering, Mining engineering, Tele-communication/Radio and communication engineering, Architecture, Electronics, Textile, Costume design, Dress making, Cinematography and sound engineering.

(b) Medical	Human medicine/Surgery, Nursing, Ayurvedic, Unani and other systems of medicine, Dispensing, Midwifery, Pharmacy and dressers course, L.M.P., L.M.F.
(c) Technology	Glass & Ceramic technology, Leather technology, Wireless technology, Textile technology, Printing, Food Fisheries, Forestry, Dental technology, X-Ray technology, Laboratory technology, Pulp and Paper technology, Handloom technology, Fuel technology.
(d) Animal husbandry, Livestock.	Veterinary and dairying.

Statements 1, 2 and 3 given at the end of this section, show the proportions of population in different educational levels to the total population in each age-group, for total, rural and urban areas respectively.

From statement 1 it is seen that out of the total population of 29,299,014 in this state, the literate population accounts for 31.5%. Literacy rates among males and females are 41.6% and 20.9% respectively. The primary and above levels together form 25.6%, 34.5% and 16.3% for persons, males and females respectively.

Out of the 315 persons who are literate among every 1000, 59 have no educational level, 146 have passed primary, 61 have passed middle school examination, 42 have passed matriculation or equivalent examination, one each has passed non-technical or technical diploma or certificate not equal to degree and another 5 have attained graduation or higher level of education.

Of the 416 males who are literates among every 1000, 71 have no educational level, 191 have passed primary, 80 have passed middle school examination, 63 have attained matriculation or equivalent stage, one has passed non-technical diploma or certificate not equal to degree 2 have passed technical diploma or certificate not equal to degree and 8 have attained graduation or higher level of education.

Speaking of females, of the 209 females out of every 1000, 46 have no educational standards, 100 have passed primary stage, 40 have passed middle school examination, 21 have attained matriculation or equivalent level and hardly 2 have completed graduation and above level.

The following statement illustrates the Rural-Urban differentials as pronounced in educational levels in Mysore State.

Proportion of 1000 population by educational levels (1971)

Level of Education	Rural		Urban		Total	
	Males	Females	Males	Females	Males	Females
1. Illiterate	646	855	396	585	584	791
2. Literate* (Without educational level).	55	27	120	107	71	46
3. Primary	199	88	169	137	191	100
4. Middle	62	23	135	97	80	40
5. Matriculation or Higher Secondary.	35	7	147	66	63	21
6. Non-technical diploma or certificate not equal to degree.	1	N	1	1	1	N
7. Technical diploma or Certificate not equal to degree.	N	N	5	N	2	N
8. Graduate & above	2	N	27	6	8	2

*Includes educational level not classifiable.

The above figures bring out the gap in between rural and urban areas and the relatively low literacy of females as compared with males. But the higher education appears to have made a fairly good impact among females in urban areas. Among 415 females who are literate in every 1000 in the urban areas, 107 are without any formal education, 137 have passed primary standard, 97 have passed middle school examination, 66 have passed matriculation or equivalent examination and 6 have attained graduation level.

C-IV SINGLE YEAR AGE RETURNS

C-IV SINGLE YEAR AGE RETURNS

This table has been prepared separately for total, rural and urban population at the state level only. This is also a very important demographic table which helps the census actuary in computing the mortality rates from the age data of the earlier censuses and in preparing the life tables. This table affords a useful study on bias in age returns at the census. The corresponding table was prepared in 1961 census on full count and on 10% sample basis in 1951 census.

An appendix to this table has been presented for the state and districts giving population figures by sex for five year age-groups viz. 0-4, 5-9, 10-14 etc.

The accurate enumeration of the age of the persons in a population census involves many difficulties. There are errors in the reporting ages mainly due to ignorance and misstatement of age. Generally the tendency is to return one's age in round numbers usually ending in 5 or 0. In a large illiterate population, as in India, where the importance of returning one's age accurately is not understood, special care has had to be exercised in collecting the data on age. The enumerators were provided with a list of important events in each district to help them jog the memory of the respondent and they were advised to apply elementary tests for consistancies among the ages of close relations such as parents, brothers, sisters and others. In spite of all these precautions census age returns everywhere are subject to inaccuracies and biases in age returns are mainly due to misstatements of age. The single year age data when plotted on a graph show the familiar concentrations and deep troughs at regaular intervals which are attributable to age distortions due to preference for particular digits and ages.

As was observed in previous censuses, these single year age returns do not have much significance unless expressed in terms of appropriate say 5 year age group totals which is the most suitable. These totals would have to be smoothed so that the age biases cancel out within the age group. Smoothed (adjusted) ages as worked by the Census Actuary for Mysore State are given below which compares the adjusted and unadjusted figures at various ages.

ADJUSTED AND UNADJUSTED FIGURES OF MALE AND FEMALE POPULATION BY SINGLE YEAR OF AGE, 1971

49	—80.6	—83.6
59	—83.0	—87.6

It is interesting to note from the above statement that the distortions are not much in the younger ages below 10. This is because the birth of a child would have occurred only a few years before and a high level of literacy is not necessary for the recollection of the event. Consequently, the age-group 0-9 may be taken as fairly accurate. Beyond this age-group age knowledge begins to diminish with age.

C-V MOTHER TONGUES

TABLE C-V—MOTHER TONGUES OF THE 1971 CENSUS

Part A : Distribution of languages (inclusive of mother-tongues grouped under each) specified in Schedule VIII to the Constitution of India.

Part B : Speakers of languages/mother-tongues (inclusive of mother-tongues where grouped) other than those specified in Schedule VIII to the Constitution of India.

These tables correspond to the all-India language tables of the census of India 1951 published in Census of India Paper I of 1954 and the language tables C-V of the census of India 1961 published in volume I Part II C(ii) — Language tables and volume XI — Mysore Part II-C(i) Social and Cultural tables.

The question on mother-tongues at the 1971 census and instructions to enumerators were as follows.

"Question 14 : Mother-tongue

Definition :—Mother-tongue is the language spoken in childhood by the person's mother to the person. If the mother died in infancy, the language mainly spoken in person's home in childhood will be the mother-tongue. In the case of infants and deaf mutes the language usually spoken by the mother shall be recorded.

Record mother-tongue in full whatever be the name of the language as returned and avoid use of abbreviations. You are not expected to determine if the language returned by a person is the dialect of another major language and so on. You should not try to establish any relationship between religion and mother-tongue. You are bound to record the language as returned by the person as his mother-tongue and you should not enter into any argument with him and try to record anything other than what is returned. If you have reason to suspect that in any area due to any organised movement, mother-tongue was not being truthfully returned, you should record the mother-tongue as actually returned by the respondent and make a report to your superior Census Officers for verification. You are not authorised to make any correction on your own".

Table C-V Part A is in two sections : (i) showing the distribution of speakers of languages (inclusive of mother-tongues grouped under each) specified in Schedule VIII to the Constitution of India for the state and its nineteen districts separately for total, rural and urban areas cross-classified by sex and (ii) showing the distribution of speakers of these languages for nineteen districts, one hundred and seventy five taluks and two hundred and forty five towns in the state for total areas only cross-classified by sex. The data for the rural areas of the taluk are not presented but they can be derived by subtracting data in respect of towns within the taluk from the total taluk figures. Taluk-wise list of towns are furnished in Appendix-IV.

Table C-V Part B presents speakers of languages/mother-tongues (inclusive of mother-tongues where grouped) other than those shown under Part A for the state, districts, taluks and towns. This table is also being presented in two sections (i) showing the speakers of these languages/mother-tongues for the state and its districts for total, rural and urban areas cross-classified by sex and (ii) showing the distribution of these languages/mother-tongues for total areas of districts, taluks and towns cross-classified by sex.

In both parts A and B, mother-tongues have been grouped in some cases under the relevant languge(s). This has been done on the basis of information readily available or in the light of studies already made. Those 'Identifiable' mother-tongues which returned 10,000 or more speakers each at the all-India level have been grouped in parts A and B as shown below.

Part A

GUJARATHI	—	SAURASHTRA
HINDI	—	BANJARI, BHOJPURI; BRAJ BHASHA; GARHWALI; HINDUSTANI; KANGRI; KULVI; KUMAUNI; LAMANI/LAMBADI; MAITHILI; MARWARI; MEWARI; *PAHARI; RAJASTHANI.
KANNADA	—	BADAGA
MALAYALAM	—	YERAVA
ORIYA	—	RELLI
SINDHI	—	KACHCHHI
TAMIL	—	KAIKADI; YERUKALA/YERUKULA
TELUGU	—	VADARI

Part B

BHILI/BHILODI		PARADHI; VARLI
KHASI	—	WAR
LAHNDA	—	MULTANI

All other mother-tongues falling under Part B and which returned less than 10,000 speakers each at the all-India level or were not 'identifiable' on the basis of information available as of date are included in the category 'Others' occurring as the last entry in Part B.

*PAHARI is a combination of various speeches spoken over long stretches of areas where the speakers preferred to give a general name as Pahari. Similar is the case with NAGA appearing in table C-V Part B and marked by asterisk therein.

C-VI BILINGUALISM

C-VI BILINGUALISM

This table corresponds to table D-I Part II of the 1951 and C-VI of the 1961 censuses.

The question on bilingualism at the 1971 census was: Question 15: Other Languages.

"After recording the mother-tongue in question 14, enquire whether the person knows any other language(s), Indian or foreign, and record language(s) returned by him against this question. In case he does not know any language apart from his mother-tongue put 'X' against this question.

The number of languages recorded under this question need not be more than two. These languages should be other than his mother-tongue and they should be recorded in the order in which he speaks and understands best and can use with understanding in communicating with others. He need not necessarily be able to read and write these languages. It is enough if he has a working knowledge of these subsidiary languages to enable him to converse in that language with understanding".

In this table, data on bilingualism are presented only for selected languages/mother-tongues (L/MTs). The selection of these L/MTs has been done on the basis of all India table C-VI—Bilingualism of 1961 and a list of L/MTs was devised for all India. This list formed the basis for preparing the table on bilingualism as estimated from the processing of 10% rural and 20% urban sample slips. The rural table was processed manually and the urban table on the computor. The estimated tables for rural and urban areas as pooled are presented here.

Columns 2, 3 and 4 of the table give the total number of speakers of L/MTs inclusive of MTs grouped under it. Columns 5, 6 and 7 give figures of such of the speakers who returned a second language, that is to say, any other L/MT not accounted for in columns 2, 3 and 4. Column 8 contains in 'run on' fashion the names of subsidiary L/MTs inclusive of L/MTs wherever grouped by number of male and female speakers within brackets.

F - FERTILITY TABLES

F-FERTILITY TABLES

The fertility tables are a new feature of 1971 census. There are 5 main tables in this series, namely F-I to F-V. The data presented in this series will be of immense utility to the planners, demographers and research scholars connected with family welfare programmes.

The compilation of these tables are based on replies furnished against the following questions in the Individual enumeration slips:—

Q. 4 Age

Q. 5 Marital Status

Q. 6 For currently married women only
- (a) Age at Marriage
- (b) Any child born in he last one year

Q. 10 Religion

Q. 11 Scheduled Castes and Scheduled Tribes

Q. 12 Literacy

Q. 13 Educational level.

Relevant extracts from the Manual Instructions to the Enumerators which have bearing on the above questions have already been given in the Introductory note to this volume.

For filling up Q. 6(b)—Any child born in the last one year, certain additional instructions were issued to the enumerators. The enumerators were asked to ascertain from the currently married women only (i.e. all women whose marital status was recorded as 'M' against Q. 5) whether she had given birth to any child within a period of one year prior to the date of enumeration. Since it was considered difficult for a respondent to reckon the exact calender year with reference to the date of enumeration, the enumerators were instructed that they might conveniently ask if a child was born on or after 'Sankranthi' which is a major festival which fell on 14-1-1970 and was approximately a year prior to the enumeration. This, as in the case of age, was suggested to have a convenient reference point to job one's memory.

It was intended to collect the information on births occurring to currently married women during the last *one* year only. But due to obvious limitations on the part of the respondent for recalling the date of birth the said festival was however reckoned as a reference point in cases where the respondent was unable to recall the event properly. Hence statistics presented in these tables may not necessarily pertain to the stipulated one year as required. No adjustments however have been made in the data presented here on this account.

The fertility data are based on 10% sample in case of rural areas and 20% sample in case of urban areas. The sample figures were inflated by uniformly multiplying by 10 and 5 for rural and urban areas respectively, to estimate the final tables.

A note on the sampling procedure adopted in the 1971 census for fertility tables has already been given earlier as Appendix-III.

All the five main tables and two appendices presented in this volume give data for State level only. The cross-classified data on fertility are presented here with reference to Age at marriage, present age, religion, education, and duration of marriage. Similar data for Scheduled Castes and Scheduled Tribes are presented in the appendices to tables F-I and F-III. The data presented in these tables help in deriving differentials by religion/education in median age at marriage/duration and in age specific fertility rates, total fertility rate and general fertility rate for various age at marriage groups. A note which precedes each table gives a brief introduction to the tables presented.

A few statements based on the fertility tables are presented here and salient features therein are briefly highlighted.

Statements 1-4 give age specific marital fertility rates for present age-groups of the currently married women by religion and literacy. The marital age specific fertility rate means the number of live births in a year to 1,000 married women in any specified age-group. The variation in age specific rates show how fertility of women varies with age.

The marital fertility rates of women above age 13+ are given according to the characteristic religion in statements 1 & 2 for rural and urban areas respectively. The general marital fertility rate in rural areas of the state is 170 and that in urban areas is 156. Fertility appears to be at its peak in the age-group of 18-22 and declines thereafter in both rural and urban areas. The decline in fertility is rapid from age 27 onwards. The marital fertility rates are found to be appreciably lower in urban areas compared to rural areas in all ages and as well as in the different age-groups.

The study of fertility pattern by different characteristics throws light on the conditions which influence fertility. There may be differential fertility rates between different ethnic groups, between rural and urban population, between illiterate and literate or highly educated and so on. Pronounced differentials are observed in the fertility levels in the different religions in both rural and urban areas. The relatively smaller size of women and the related births do not permit a critical comparison of fertility differentials among

religious groups *viz.* Jains, Buddhists and Sikhs. The only clear cut differential as brought out by these statements is between Muslims and Hindus. The fertility rates are higher than the rates for 'all religions' in case of Muslims and Christians in rural areas, and Muslims, Buddhists and Jains in urban areas.

The fertility pattern in case of Scheduled Castes generally follows that of the "total", with "urban" areas showing lower order of fertility.

The fertility rate for 'all ages' is higher in rural areas than in urban areas in case of Scheduled Tribes but between the age-groups a varying picture is obtained.

Statements 3 and 4 clearly bring out the rural-urban differentials in fertility rates among the illiterates and literates. The marital fertility rates are appreciably lower in urban areas.

Age at marriage assumes a special significance in the study of fertility, for, with the higher age at marriage, the duration or span of the married life decreases. The effective reproductive span of the women consequently decreases which has a definite bearing on the number of births. Statements 5 and 6 indicate the proportion of currently married women in 'total' religious groups, Scheduled Castes and Tribes. These proportions help to ascertain the age at which most of the marriages takes place according different customs and practices in different religions.

Generally, the ages 13 to 17 appear to be the ages mostly favoured for marriage in case of women. While higher concentration is seen in rural areas in these ages in the urban areas the pattern though similar, the proportions reveal higher age at marriage.

Among the most numerous religious groups namely, Hindus, Muslims and Christians, similar pattern is observed. However among christians comparatively higher age at marriage is indicated.

F-I DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY RELIGION, PRESENT AGE AND AGE AT MARRIAGE (RURAL/URBAN)

F-1 DISTRIBUTIONS OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY RELIGION, PRESENT AGE AND AGE AT MARRIAGE (RURAL/URBAN)

This table is presented in two parts *viz.* Part A relating to rural areas and Part B relating to urban areas. The distribution of the currently married women and their related births during the last one year cross classified by religion, age and age at marriage of the mother is provided in the table. An appendix is also provided for the table presenting similar data separately for Scheduled Castes and Scheduled Tribes only.

The 'age at marriage' is classified into 6 groups viz. less than 13, 13-17, 18-22, 23-27, 28+ and unspecified. 'Nil' entries against Q. 6(a) are included under 'Unspecified'.

The present age of the currently married women in ages 10+ are grouped into 9 age-groups, namely, less than 13, 13-17, 18-22, 23-27, 28-32, 33-37, 38-42, 43-47, 48+ and age unspecified.

Further, the data are presented for major religions *viz*: Hindus, Muslims, Christians, Sikhs, Buddhists, Jains, Others and religion not stated.

W—Women B—Births

F-11 DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY EDUCATION, PRESENT AGE AND AGE AT MARRIAGE (RURAL/URBAN)

F-II DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY EDUCATION, PRESENT AGE AND AGE AT MARRIAGE (RURAL/URBAN)

This table is in two parts, *viz.*, Part-A relating to the rural and Part-B relating to the urban areas. The distribution of women and births by education, present age and age at marriage is provided in this table.

This table is similar to table F-I, but here the data are presented for illiterates and literates by various educational levels instead of religion. The educational levels adopted are:

(i) Literate but less than Matriculate,

(ii) Matriculate and above, but less than graduate, and

(iii) Graduate and above.

Levels of education not classifiable "elsewhere" are included in item (i) above.

F-111 DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY RELIGION, DURATION OF MARRIAGE AND AGE AT MARRIAGE (RURAL/URBAN)

F III, DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY RELIGION, DURATION OF MARRIAGE AND AGE AT MARRIAGE (RURAL/URBAN)

This table is in two parts, namely, Part-A relating to the rural and Part-B relating to the urban areas. This table is similar to Table F-I but here the "Present-age" is replaced by "Duration of marriage". The duration of marriage which was not directly elicited from the respondent is derived as the difference between the 'Present age' and 'age at marriage'. The following are the duration groups for which data are presented; Less than 1, 1-4, 5-9, 10-14, 15-19, 20-24, 25-29, 30+ and 'unspecified'.

An appendix is also provided for the table presenting similar data separately for Scheduled Castes and Scheduled Tribes only.

F-IV DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY EDUCATION, DURATION OF MARRIAGE AND AGE AT MARRIAGE (RURAL/URBAN)

F-IV DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY EDUCATION, DURATION OF MARRIAGE AND AGE AT MARRIAGE (RURAL/URBAN)

This table is similar to table F-III and is presented in two parts, Part-A for rural areas and Part-B for urban areas. Here the data are presented for illiterates and literates by various educational levels as in table F-II, instead of religion.

F-V DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY RELIGION, EDUCATION GROUPS, PRESENT AGE AND AGE AT MARRIAGE (RURAL/URBAN)

F-V DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY RELIGION, EDUCATION GROUPS, PRESENT AGE AND AGE AT MARRIAGE (RURAL/URBAN)

This table provides the distribution of women and births by Religion-cum-Education, present age and age at marriage. This table, in fact, is the combination of tables F-I and F-II and seek to give the summed up picture these two tables separately give. These data will help in deriving differentials by Religion-*cum*-Education in mediam age at marriage and in age specific fertility rate, total fertility rate and general fertility rate for various age at marriage.
