MOTIF

Rajabai Tower

Rajabai Tower, which houses the University Library is unique among the buildings, which enhance the beauty of Mumbai and has amply fulfilled the desire of the donor that it should be "an ornament to this city". The Clock Tower, one of the most attractive features of the city, rises to a height of 280 feet. Above the first gallery, in niches cut in the pillars at the corners of the octagon, are large figures carved out of Porbander Stone, representing the different races and costumes of Western India, and higher still is another series of figures of the same description representing the features and mode of dress of the different communities of 'Bombay State'. Premchand Raichand completed the building in November 1878 at a total cost of Rs. 5.48 lakhs, of which he donated Rs. 4 lakhs in commemoration of his mother.

Foreword

The District Census Handbook (DCHB) published by Census Organisation since 1951 census, is one of the important publications in the context of planning and development at grass-root level. The publication, which is brought out for each district, contains several demographic and socio-economic characteristics village-wise and town-wise of the district alongwith the status of availability of civic amenities, infrastructural facilities, etc.

The scope of the DCHB was initially confined to a few Census Tables and Primary Census Abstract (PCA) of each village and town within the district. Thereafter, at successive censuses, its scope and coverage has been enlarged. The DCHB published at the 1961 census provided a descriptive account of the district, administrative statistics, census tables and a village and town directory including PCA. The 1971 census-DCHB series was in three parts: Part-A related to village and town directory, Part-B to village and town PCA and Part-C comprised analytical report, administrative statistics, district census tables and certain analytical tables based on PCA and amenity data in respect of villages. The 1981 census DCHB was in two parts: Part-A contained village and town directory and Part-B the PCA of village and town including the SCs and STs PCA up to tahsil/town levels. New features alongwith restructuring of the formats of village and town directory were added into it. In Village Directory, all amenities except electricity were brought together and if any amenity was not available in the referent village, the distance in broad ranges from the nearest place having such an amenity, was given. Information on new items such as adult literacy centres, primary health sub-centres and community health workers in the village were provided so as to meet the requirements of some of the Revised Minimum Needs Programme. Information on approach to the village was provided for the first time in the Village Directory so as to give the details on number of inaccessible villages in each district. In the Town Directory, a statement (IV-A) on slums was introduced to provide the details on civic and other amenities in the notified slums of Class I and Class II towns.

The 1991 census DCHB, by and large, followed the pattern of presentation of 1981 census, except the format of PCA was restructured. Nine-fold industrial classification of main workers was given against the four-fold industrial classification presented in the 1981 census. In addition, sex-wise population in 0-6 age group was included in the PCA for the first time with a view to enable data users to compile more realistic literacy rate as all children below 7 years of age had been treated as illiterate at the time of 1991 Census. One of the important innovations in the 1991 census was the Community Development Block (CD block) level presentation of village directory and PCA data instead of the traditional tahsil/taluk/PS level presentation. It was expected that the presentation of village directory and PCA data at CD block level will help the planners in formulation of micro level development plans, CD block being lowest administrative unit.

The present series of 2001 census DCHBs have been made more informative and exhaustive in terms of coverage and content. The Village Directory has been enlarged in scope by including a number of other facilities like banking, recreational and cultural facilities, newspapers and magazines and ‘most important commodity’ manufactured in village. Income and expenditure of gram panchayat, wherever possible, has been provided. Apart from these, more details on distance(s) at which basic amenities are available (if not available in the village), are given. This includes educational facilities (namely primary and middle schools and collage),

medical facilities (viz. Allopathic Hospital, Maternity & Child Welfare Centre and Primary Health Centre), drinking water, post & telegraph (post office and phone), communication, bank, credit societies and recreational facilities. In Town Directory, the statement on Slums has been modified and its coverage enlarged by including details on all slums instead of 'notified slums'. The information is given in case of all statutory towns irrespective of their class, against only Class I and Class II towns in 1981 and 1991 censuses. The basic amenities available in the villages and towns are analysed in depth with the help of a number of cross-classified inset tables and statements. Two other significant additions in the publication are inclusion of 'motif' highlighting significant characteristic of the district and analytical notes as annexures. The analytical notes on (i) fertility and mortality and (ii) various measures of fertility and mean age at marriage are prepared based on 1991 Census. Whereas in the notes relating to (i) percentage distribution of migrants by place of birth/place of last residence, (ii) main religions, (iii) marital status of population, (iv) age, sex and education, and (v) distribution of spectrum of mother tongue, nature and extent of changes occurred in the district in its basic socio-demographic features during the decade 1991-2001 are analysed. The eight digits permanent location code (PLCN) to all the villages and towns have been assigned keeping in view the future needs.

The village and town level amenity data have been collected, compiled and computerised in prescribed record structure under the supervision of Shri Samir Kumar Biswas, Director of Census Operations, Maharashtra. Thereafter, efforts have been made to ensure comparability of the information with that of 1991 census data and the information brought out by the respective State Governments in their annual reports and statistical handbooks for various years after 1991. The task of planning, designing and coordination of this publication was carried out by Shri R.G. Mitra, Deputy Registrar General (C&T) and Dr. I.C. Agrawal, Senior Research Officer of Social Studies Division. Dr. R.P. Singh, Deputy Registrar General (Map) provided the technical guidance in the preparation of maps. Whereas, Shri Anil Kumar Arora, Deputy Director of Data Processing Division who worked under the overall supervision of Shri Himakar, Addl. Director(EDP) helped in preparation of record structure for computerisation of village and town directory data and the programme for the generation of Village Directory and Town Directory statements including analytical inset tables. The draft DCHB manuscripts received from the Census Directorates have been scrutinised in the Social Studies Division under the guidance of Shri S.L. Jain, Deputy Director and Shri R.K. Mehta, Assistant Director. I am thankful to all of them and others who have contributed to make this publication possible.

Preface

The Registrar General and Census Commissioner of India has in his foreword to this series of publications, not only provided the reader with the historical background of the District Census Handbooks but has also explained at some length the scope and coverage envisaged for this country-wide project. This volume contains the salient results based on the data gathered at the actual head-count and in addition contain a wealth of other non-census information in respect of Villages and Towns of the District. It is hoped that this volume would go a long way to meet the ever-increasing demand for the micro-level data in this era-planned development.

District Census Handbook of Maharashtra is a joint venture of the Government of Maharashtra and the Census Organization of the Government of India. The design for the 2001 District Census Handbook was evolved centrally by the Census Commissioner, India. In the preparation of the District Census Handbook, the role played by the Census Organization is that of data gatherer. In accomplishing this task we have had the ready and whole-hearted co-operation of the staff at various levels of different departments of the State Government. Much of the data so provided by this field –level officers have been cross checked with the data obtained from various departments and an attempt has been made to reconcile the discrepencies as well. The Village Directory data in addition were also examined logically and possible errors list generated village wise for select facilities was rechecked and revalidated with the revenue officers in the respective collectorate.

I am extremely grateful to Shri D.K. Sikri, Additional Secretary and Registrar General, India for his guidance in bringing out this publication. I am equally grateful to Shri J. K. Banthia, I.A.S. the former Registrar General and Census Commissioner, India for his constant inspiration, help and guidance at every stage.

I also express my thanks to Dr. R.P. Singh, Dy. Registrar General, India (Map), Shri R.G. Mitra, Dy. Registrar General, India (Census Division), Dr. I.C. Agrawal, Assistant Registrar General (SS Division), Shri S.L. Jain Deputy Director (SS Division), Shri C.S. Arora, Director (EDP), Shri Himakar, Additional Director (EDP), Shri M.R. Balakrishnan, Joint Director (EDP), Shri Anil Kumar, Deputy Director (EDP) and their colleagues for their co-operation and support in bringing out this volume.

Shri Samir Kumar Biswas, IAS held the office of Director of Census Operations, Maharashtra and guided the operations of the 2001 Census. The data presented in this handbook were collected and compiled under the direction and guidance of Shri Biswas. We would deem it our duty; therefore, to offer him our sincere and grateful thanks for all that he did for this project.

In this Directorate, Shri R.S. Meena, Joint Director guided this project in a meticulous manner and received all help from Dr. S.S. Hiremath, Deputy Director. The DCHB unit was spearheaded by Smt. Sushma Monga, Assistant Director, who was on deputation from the Planning Commission, New Delhi.

The physical features have been concurred by the Map section, after incorporating necessary changes, wherever required. The Maps, inserted are prepared by the Cartography section under the guidance of Shri D.N. Chaurasia, R.O.

I take this opportunity to offer my grateful thanks to all officials in various grades who have been actively involved in voluminous work of compilation and preparation of this volume. The list of the officials of this Directorate closely associated with this work is given separately.

ANALYTICAL NOTE

Analytical Note

(i) History and Scope of District Census Handbook

The origin of DCHB lay in the 1951 Census when it began as a joint venture between the Government of India and the State Government. The present volume pertaining to 2001 Census is sixth in series since then. The District Census Handbook (DCHB) is a unique publication from the Census Organization that, in a condensed form, gives details of the Census and non-Census information from the village level upwards to the district level. It has therefore, been acclaimed & recognized as one of the best source of information next only to the district gazetteer.

The District Census Handbook as published in 1951 incorporated, some basic demographic and economic information of the district, village wise and town wise separately, besides having some important Census Tables. However, it underwent a radical change in the 1961 Census as a much more descriptive account of the district and a lot of non-census information on climate, rainfall, agriculture, industry, education, etc. was added to it besides a number of cross tables being picked up from various series of Census tables. In 1971 the District Census Handbook was divided into Part - A relating to Village and Town Directory, Part - B containing village and town wise Primary Census Abstract and Part - C reported on the administrative aspect and Census tables based on Primary Census Abstract etc. For the state of Maharashtra only Part A and B were published. The 1981 Census again saw the scope of it increasing to contain the data on literacy rate, Primary Health Centers etc. It was published as part A and B and the same pattern was again followed in 1991. However, in 1991 some of the non-census data included information on girl schools, social forestry area etc. as separate Appendices. The DCHB, 2001 Census have been made more informative and exhaustive in terms of coverage and content. The scope of village directory has been broadened by including more types of facilities such as bank, recreational and cultural facilities, newspapers and magazines available in villages. Information on most important commodity manufactured in village and also income and expenditure of Gram Panchayat, wherever possible are provided.. Specific details on distances, in case a basic amenity is not available in the referent village is also given. These include distances in respect of availability of primary and middle school and college (in respect of the educational facility), Allopathic Hospital, Maternity & Child Welfare Centre and Primary Health Centre (in respect of the medical facility), Drinking water, Post Office and Phone, Communication, Bank, Credit societies and Recreational facilities. The Non-Census information collected at the village level or town level by the Tahsildar/ Chief officer was scrutinized and verified in each district by the District Planning Officer and District Statistical Officer. The Collectorate were also requested to once again verify this in case serious discrepancies were observed. Logical checks were applied to the data and the scrutiny points which emerged after this exercise were further verified in the field by officials of this Directorate. With reference to the town concerned, the nearest city with 5 lakh and above population has also been given in addition to 1 lakh and above population. The non-census information was cross-checked with parent department also. For example, information on electricity was cross-checked with Maharashtra State Electricity Board, that on roads with Public Works Department, on health with the Directorate of health and so on. It is felt that because of this extra validation, information provided in the 2001 District Census Handbook should become more reliable and can be used without any hitch by Scholars and Planners alike.In town directory, information on all types of slums, whether notified/recognised by the respective town authority or not and in respect of all statutory towns irrespective of their class as against only Class I and Class II towns of the 1981 and 1991

Censuses are provided. The varied basic amenities available in the villages and towns are analysed in depth with the help of a number of cross-classified inset tables and statements. A number of tables based on Primary Census Abstract are also made to correlate data with geography of the tahsils. A significant addition in the publication is inclusion of analytical notes as annexures on important aspects concerning Census data on (i) fertility, mortality and migration, (ii) various measures of fertility and mean age at marriage, (iii) percentage distribution of migrants by place of birth/place of last residence, (iv) main religions, (v) marital status of population, (vi) age, sex and education, and (vii) distribution of different mother tongue, all based on 1991 Census. The eight digits permanent location code (PLCN) to all the villages and towns have been assigned keeping in view the future needs.

The Village and Town Directory as also the Primary Census Abstract included in this Handbook should quench the thirst of the planners involved in micro level planning.

(ii) Brief History of the District

The early historical accounts do not relate themselves with the city, which was non-existent then but with the group of islands, which provided the site for the growth, and the development of the city at a later date. The early history of the island cannot be mirrored precisely for want of ample evidence. The earliest historical reference to Aparanta (North Konkan) occurs in the Edicts of Ashoka, which says that Buddhism was introduced into Konkan during the reign of Ashoka. Then the Satavahanas, Kalachuri Kings, Mauryas, Chalukyas and the Rashtrakutas held sway in Konkan region. Rashtrakutas made Shilahara King in charge of North Konkan. They ruled North Konkan for about 5 Centuries. With the rise of Yadavas of Devgiri in the thirteenth century, their typical Hemadpanti architecture found a way in Bombay also. The Hindu Kingdom of Devgiri Yadav came to an end in 1318 A.D. and Muslim rule came in early 14th Century.

The early history of Bombay during the era of Muslim supremacy is somewhat indefinite. The Portuguese period of the history of Bombay commences from 1534 with possession of the Island of Bombay by the Portuguese from Sultan Bahadur of Gujarat.

Bombay during the period of Portuguese was composed of seven villages subordinate to two chief stations at which custom duty was levied. These villages were Mahim, Parel-Varella (Vadala), Syva (Sion) under the kasba of Mahim and Mazagaon, Bombaim and Varel (Worli) under the kasba of Bombaim.

The Portuguese have left behind their historical landmarks more in the form of Churches and Cathedrals than by way of economic and social development.

Within a period of less than one and a half century, the Island of Bombay underwent three successive political changes.

(i) On 23rd December 1534, the Island passed from the Mohammedan kings of Gujarat to the Portuguese;

(ii) The transfer of the Island from the Portuguese to the British Crown was effected on 18th February 1665 in accordance with the marriage treaty dated 23rd June 1661;

(iii) Lastly, the Island was transferred to the East India Company under a Royal Charter dated March 27, 1668.

The consolidation of power of the company in India and its transfer to the crown in 1857 ushered a new age in the life of Bombay City. It became the capital of 'Bombay Presidency' controlling not only the adjoining territory, but the whole of Saurashtra, Karnataka and the Coastal strip of land known as Konkan. Ever since, Bombay has been enjoying the status of a state capital.

The peaceful development of the city for the last one century has elevated the city to the status of 'Urbs prima in India'. The city is now the nucleus of the industrial region of Western India and yields so much of revenue as to make up the budgetary deficit of the state.

"Bombay is a city intended to the built by God" said Gerald Aungier, the first British Governor of Bombay when he shifted his office and residence from Surat settlement in 1672. Governor Aungier laid the solid foundation and infrastructure for the city he

envisaged by establishing a court of justice. Government Mint, a printing press and hospital to supplement the Naval Quarrission and port. He encouraged the mercantile and enterprising communities especially from neighbouring Gujarat to promote trade and commerce. Then onwards, the focus shifted to Bombay emerged as the port and seat of commerce for the hinterland area of Deccan plateau, Central India and Western province of Gujarat.

The name of the city Bombay (Mumbai) is derived from patron deity the Mother Goddess Mumba Devi, worshiped by the earliest inhabitants the Kolis. The sea-voyage of Vasco-da-Gama via the Cape of Good Hope was the beginning of colonization is Western India. Bombay as rechristened by Portuguese sailor was a small fishing hamlet and remained as such till 1500 A.D. The local inhabitants were the Koli, Bhandari, Pathare Prabhu and Panchkalshi communities. The East India Company received possession of Bombay in 1668, which marked the beginning of the rise of Bombay. The opening of Suez Canal in 1869 turned Bombay into window to the west and the Gateway of India for British trade, scientific discoveries in the early 19th Century and mechanized production system turned Great Britain into a hub of industrial activity and was referred to as the workshop of the world. The ever increasing volumes of manufactured goods were exported to all the markets of the world including India.

Bombay became the center of activity where British goods started pouring in year after year and from which Indian raw material left in growing volume for Great Britain. The great Indian Peninsular Railway linked up Bombay to Nagpur and Raichur to carry the goods into interior hinterland. The phenomenal growth of foreign trade, textile industry and railway work-shops made Bombay a rich city in the Indian subcontinent. Bombay has been thus harbour of industrialization in the Country. The establishment of 'Bombay University' and 'High Court' marked the beginning of modernization culminating in the present cosmopolitan nature of the city.

Bombay was a group of separate islands namely Colaba, Old Woman, Apollo Bunder, Mazagaon, Parel – Sewri – Sion, Mahim – Baradbet (Deserted Island and Worli) Salsette was separated from Islands of Bombay by the Mahim creek. In 1772, an accurate survey of the whole island was initiated. The constructions of Sion causeway connecting Bombay island with Salsette was completed in 1803. The geographical area beyond the Island was part of Thane portions, which were added forming the Bombay Suburban district and later extended to comprise the Greater Bombay Municipal Corporation.

Initially the district of Bombay included only the city island. In 1920, when the Salsette taluka was divided into North Salsette and South Salsette; South Salsette consisting of 86 villages was separated from the Thane district, to constitute the newly created Bombay Suburban district. This district was made up of two talukas: Borivali with 33 villages and Andheri with 53 villages. Thirty-three villages from the Bombay Suburban district were transferred to the Thane district in 1945; 14 of these 33 villages, required for the development of Aarey Milk Colony, were returned to Bombay Suburban district in 1946.

On the 15th April, 1950, the municipal limits of Bombay were extended to include the Andheri taluka of the Bombay Suburban district as suburban Bombay. The Borivali taluka, together with a village transferred from Thane district was also appended to Bombay when the municipal corporation limits were further extended on 1st February 1957. Thus, the Greater Bombay district, comprising the city proper and suburban area came into being since 1957.

(iii) Administrative Set-Up

There were major administrative changes immediately after the 1991 census. Though the number of divisions remained the same, the number of districts increased from 30 to 35. The five new districts formed are Nandurbar, Gondiya, Washim, Hingoli and Mumbai (Suburban). For administrative reasons the populous Greater Bombay district of 1991 Census has been divided, wide notification No.REN 2680/855/ CR-448/ M-10 Dt. 1st October 1990 into two districts viz., Mumbai and Mumbai (Suburban) districts. Yet and uniquely the two

districts are governed by a single municipal corporation viz., Brihanmumbai Municipal Corporation. During the same period the name has also been changed from Bombay to Mumbai. Similarly four more districts viz., Nandurbar, Washim, Hingoli and Gondiya have been formed by bifurcating Dhule, Akola, Parbhani and Bhandara districts respectively after the 1991 Census. The Konkan division includes 6 districts, the Nashik division 5 districts, Pune division 5 districts, Aurangabad division 8 districts Amravati division 5 districts and Nagpur division 6 districts. Thus in 2001 Census, the state has 35 districts spread over 6 divisions.

Two separate entities viz., Bombay and Bombay Suburban districts were also in existence prior to 1950. But in April 1950, the unit "Greater Bombay" came into existence with the merger of the above two entities for the purpose of municipal administration. It comprised the Bombay Island proper with its coverage from Colaba points in the south and Mahim on the Western Railway side and Sion on the Central Railway side. Suburban areas from Bandra to Jogeshwari on the Western Railway side and Kurla to Bhandup including Chembur and Chembur Camp on the Central Railway side.

Again in February 1957 an important change took place when the limits of Greater Bombay were extended upto Dahisar on the Western Railway side and Mulund on the Central Railway side covering in all an area of 437.7 sq.kms. Thus, Greater Bombay district, comprising the city proper and suburban areas came into being since 1957.

The district was divided into wards and further into sections for administrative purposes and convenience in 1961. Till 2001 census, the number of sections continues to be 88, as was in the previous censuses. However, the number of wards increased from 15 in 1971 to 21 in 1981 and further from 23 in 1991 to 24 in 2001 Census. The Greater Bombay district during the 1991 Census was divided into three major parts. (a) Island City, (b) Eastern Suburbs, (c) Western suburbs. But after the 1991 Census the entire administrative level was overhauled completely at the district level but not at the municipal corporation level. The newly created Mumbai district covers an area of 9 municipal wards and the Mumbai (Suburban) district covers 15 municipal wards. The entire city is divided into six administrative zones. The zones are supervised by the Deputy Municipal Commissioners while the administrative head of each ward is a ward officer. Apart from these there are departmental heads who supervise the work of the major departments pertaining to civic administration. The district wise distribution of wards is given below: -

The Mayor Chairs all the meetings of the corporation body. He also attends other functions associated with his role as the first citizen of Mumbai. The day-to-day functions of administration are carriedout by the Municipal Commissioner as per the Municipal Corporation act. The additional commissioners, in the overall management and supervision of the administration ably assist him.

The Bombay Municipal Corporation has the privilege of one of the earliest experiences in local

self-government in British India. The Bombay Municipal Corporation Act, 1888, which continues to govern the city, is largely the brainchild of Sir Pherozasha Mehta, the Chairman of the Bombay Municipal Corporation (1884-86). The act has incorporated with the complete comprehensive concept of an ideal structure of Municipal Government, with a dichotomy of the deliberative and executive wings of the corporation. It has served as a model for other corporations also. The Municipal Corporation of Greater Mumbai today handles the entire gamut of civic affairs and its development plans.

The Municipal Corporation has an elected body consisting of 221 elected and 5 nominated members with the Mayor of Mumbai as the presiding authority a leader of the house representing the majority party as well as leader of the opposition.

As per the Bombay Municipal Corporation Act of 1888, seven statutory collateral authorities are functioning with distinct responsibilities. They are (1) Corporation (2) Standing Committee, (3) Improvements Committee, (4) Bombay Electric Supply and Transport Committee, (5) Education Committee, (6) The Municipal Commissioner and (7) The General Manager, Bombay Electric Supply and Transport undertaking. The first five are deliberative and the remaining two are executive authorities. Apart from these the corporation has five special committees viz., (1) Works Committee (city), (2) works Committee (Suburbs), (3) Public Health Committee, (4) Markets and Gardens Committee and (5) the Lair Revenue and General purpose Committee, all of which deal with specified subjects.

(iv) Physical features

Location and Size

Mumbai district is situated on the west coast of India between 18° 52' and 19° 04' North latitudes and 72° 47' and 72° 54' East longitudes. It is surrounded on three sides by water, the open Arabian Sea to the West and South, and Thane creek to the East. To the North it is bordered by Mumbai (Suburban) district.

The district Mumbai is the southern part of Greater Mumbai Municipal Corporation, which covers an area of 157.00 sq.kms as per the Surveyor General of India and has a population of 3,338,031 persons as per the Census 2001. While the area of the district accounts for 0.1 percent of the total area of the State, the districts population constitutes 3.4 percent of the total population of the State. The density of population is 21,261 persons per sq. km. Among the 35 districts of the State, the district ranks 35th in terms of area, 10th in terms of population and 1st in terms of density.

Population and urban growth has taken place at such a rapid pace the housing has not been able to cope up resulting in the development of numerous slum in the district. Dharavi considered to the biggest slum in Aisa is located here, for which Mumbai regrets to be famous.

The district is well connected by roads, railways, airways and searouts from the other parts of the country. It has a commanding position on the world shipping routes by having a well-developed International Seaport, which has a vast hinterland within the country. An International Airport at Santacruz is located at few Kms. distance from its outer fringe in Mumbai (Suburban) district.

Physiography

India has been divided into four macro level physical divisions i.e. The Northern Mountains, The Great Plains, The Deccan Plateau, and The Coastal Plains and Islands.

Maharashtra falls under two of these macro level divisions 1) The Deccan Plateau, and 2) The Coastal Plains and Islands. The north-south running Sahyadri range separates these two divisions. The Deccan Plateau lies to the east while the Coastal Plains and Islands lie to the west up to the Arabian Sea. The Deccan Plateau is much larger of the two divisions and includes twenty nine districts of the State while only six districts lie in the Coastal Plains and Islands.

The whole Deccan Plateau is sub-divided into 12 meso regions. Of these, only 2 meso regions i.e. Northern Maharashtra and The Maharashtra Plateau lie within the State. Northern Maharashtra is further divided into 2 micro regions i.e. The Tapi-Purna Valley and The Wardha-Penganga-Wainganga Plain. The Maharashtra Plateau is also further sub-divided into 2 micro regions i.e. The Eastern Plateau and The Western Plateau with Protruded Hills.

The Coastal Plains and Islands is divided into 4 meso regions i.e. Gujarat Region, Western Coastal Region, Eastern Coastal Region and The Islands. Of these, The Western Coastal Region covers

Maharashtra. This region is divided into 4 micro level regions i.e. Maharashtra Littoral, Goa Coast, Karnataka Coast and North Kerala Coast. Only Maharashtra Littoral falls within the state of Maharashtra.

The hierarchy of these macro, meso and micro level physiographical divisions within Maharashtra State are as below :

(A) Deccan Plateau :

(i) Northern Maharashtra :

(a) Tapi-Purna Valley: - Includes the districts of Nandurbar, Dhule, Jalgaon, Buldana, Akola, Washim and Amravati.

(b) Wardha-Penganga-Wainganga Plain: - Includes the districts of Wardha, Nagpur, Yavatmal, Bhandara, Gondiya, Gadchiroli and Chandrapur.

(ii) Maharashtra Plateau :

(a) Eastern Maharashtra: - Includes the districts of Aurangabad, Jalna, Parbhani, Hingoli, Nanded, Bid, Osmanabad, Latur, Solapur, Sangli and Kolhapur.

(b) Western Maharashtra with Protruded Hills: - Includes the districts of Nashik, Ahmadnagar, Pune and Satara.

(B) Coastal Plains and Islands :

(i) Western Coastal Plains :

(a) Maharashtra Littoral: - Includes the districts of Thane, Mumbai (Suburban), **Mumbai**, Raigarh, Ratnagiri and Sindhudurg.

Physiographically, the district fall under the Maharashtra littoral, the micro level division of Coastal Plains and Islands. The district of Mumbai is a part of an island (as of today) which is separated from the mainland of Konkan by the narrow Thane creek and a slightly wider Harbour Bay. This island is originally consisted of eight separate islands. These are the (i) Salsette, (ii) Colaba, (iii) Old Woman, (iv) Apollo Bundar, (v) Mazagaon, (vi) Parel-Sewri-Sion, (vii) Mahim Baradbet (deserted island) and (viii) Worli.

The Salsette island is located in the north of Mahim creeks while the remaining seven islands are located in the south of this creek and forms together the district of Mumbai stretching from Colaba point to Mahim creek in the western railway side and upto Sion on the Central Railway side.

The present day topography of Mumbai district has been greatly influenced by human interference. The original island have been amalgamated into one by bridging the breaches and by infilling the central tidal depressions in between the islands. A substantial area has been reclaimed from below sea level by infilling and pushing the sea outward through dyke walls like those of the Back Bay reclamation. At present Mumbai is no longer a group of island but only a projecting peninsula of the larger salsette. The Mumbai neighbourhood has undergone, during the last 3 to 4 hundred years, such visible change in the physical landscape because of human interventions that the present configuration of the coast is no true indicator of the natural shoreline features. Near Malbar Hill headland is the Back Bay partially reclaimed from the south with a beach at its head at Chowpatty and erosion further south where it is exposed to direct dominant waves. This stretch is heavily protected by human interference to prevent further evasion by dumping tetrahedrals along the Marine Drive. The Eastern Harbour Front of Mumabi stretching from Sasson Docks in the south to Sewari –Wadala in the north is an entirely man-made shore consisting of quays, berths and divide walls and is artificially maintained deep by constant dredging.

Many low hills have been quarried for road and plinth material, subsequently leveled and built up. However, some elevated small hillocks partly built up having height varying between 40 metres and 70 metres can be seen in Sion, Sewari, Antop, Worli and Love Grove. Major part of the district is barely above tidal level. There is nothing left natural within the district. It is only a man made jungle of concrete buildings.

Drainage

Due to human interference, most of the surface drainage has been so completely modified that there is practically no natural drainage in the district. The original Mahim river, draining northern fringe of the district into Mahim Bay has been dammed in its upper

reaches while the building of the Airport at Santacruz has blocked it in its mid stretches. The lower stretches, close to Mahim Bay, have become a stinking, fast silting up gutter carrying polluted waters and industrial wastes only remove during the flush of the high tides and floods of the monsoon. The entire district has so dense build up area and roads that have decreased percolation of run off into the ground so that even moderately heavy rains result in flooding of vast areas. If heavy rains coincide with high tides, the sea does not receive the sewage from the city drains causing traffic and health problems.

Climate

Being a coastal district, the climate of Mumbai is equable. The variations in temperature daily as well as seasonal are not large. The entire year can be divided into four seasons. The rainy season from June to September followed by the post monsoon season from October to November. December to February constitutes the cold season followed by the summer season from March to May. The climate during the Summer season is some what oppressive and there is a dampness in the air throughout the year. The average annual rain-fall is 1800 mm. But of this about 600 mm ie, one-third of the rainfall occurs in the month of July. It is the rainiest month. Some rainfall mostly as thundershowers is also received during post monsoon months.

The meteorological observatory is located at Colaba, the southern tip of Mumbai district. It records the climatological indicates for this entire region. The average temperature during the month of January is 19^0C whereas in the month of May it is recorded as 33^0C (2000-2001). Due to the prevailing high humidity the weather during the summer is very oppressive. The afternoon breezes bring some welcome relief from heat. After the withdrawal of monsoon the temperature rises steadily. However the night temperature drops gradually. After November the day temperature begins to decrease, it reaches to the lowest in the month of January the coldest month. Mumbai district having most of the surface as buildup area forms an urban heat 2^0 to 4^0 C warmer than the surrounding and produces a heat glow that can be seen miles off from the air.

Generally Mumbai district is more humid than the rest of Maharashtra and mornings are more humid than the rest of the day.

During the south-west monsoon the skies are generally heavily clouded. As the monsoon withdraws the cloudiness also decreases. During December to March clouds are hardly visible.

Natural Wealth

Minerals

The Mumbai district has been occupied by Deccan basalt flows. These are horizontally bedded and are more or less uniform in character over wide areas. Certain extrusive and intrusive mafic types are associated with basalts and are found in Mumbai and its vicinity. Further more some fossiliferous sediments, mainly of tufaceous origin and partly fresh water origin, rich in fauna, are also found. Trap rocks are generally devoid of any economically importance and useful minerals but being hard, dense and durable make excellent building stones. The main rock types quarried are basalt, andesite and granophyric trachyte. The famous Gateway of India is built out of granophyric trachyte.

Fisheries

The district is one of the most important maritime districts in Maharashtra. Marine fishing is one of the chief industries of the district and it is famous for its fish supply even from olden days. Many fishing crafts are operated from Sassoon Docks, Ferry Wharf, and Karnak Bunder. Of the total landing of the district, more than 95 percent are through mechanized boats. The fishing activities are carried out over nine months from September to May.

The important marine fish caught in the district are Bombay Duck, Pomfret, Prawns, Shrimps, Surmai and Dagol, Mandeli, Eels, Dhoma, Cat fish, Lobsters, Karle, Bangada and others. Catla, Rohu and Mrigal are the important varieties of the inland fisheries. The fishing is done by dol nets, gill nets, surface drift nets, bottom drift nets and trawling. The fishing activity is mostly done by the Koli community.

The Yearwise Percentage share of prominent varieties in terms of value for Mumbai and Maharashtra State during 1991-00 and 2000-01 is given below :

The fisheries co-operative societies have played an important role in providing ice-factories, fish transport trucks and other fisheries requisites to the members. There are many ice and freezing plants in Mumbai. The frozen fish products are exported mainly to Japan, the U.S.A. and the Arab Countries while Bombay duck is mainly exported to Southeast Asian countries. The export of fishery products in Maharashtra is done through Mumbai and Jawahar Port only. There is a fishing training centre at Versova, which imparts training in scientific methods of pisciculture and the commercial aspects of the fishing industries. Exports from two ports during 1999-00 and 2000-01 in quantity and value are given below :

TABLE iii : EXPORT OF MARINE FISH
(Quantity in Tons, Value in Rs. 000)

	Exports 1999-00		Exports 2000-01	
Name of Port	Quantity	Value	Quantity	Value
1	2	3	4	5
Mumbai Port	26,583	2,170,300	17,467	2,007,300
	32.0	32.8	14.8	22.5

	100.0	100.0	100.0	100.0

Source: Commissioner of Fisheries, Govt. of Maharashtra

From the above table it may be seen that more than two-third quantity of export is carried out from Jawahar port during 1999-2000. This quantity has again increased in the year 2000-01 at more than 85 per cent. The credibility of Mumbai port as a major export centre has diminished during the last decade and is replaced by Jawahar port.

Soils And Cropping Pattern

The soils of the district are essentially derived from Deccan Trap, which is the predominant rock formation in the district. A substantial area of the district has been reclaimed from sea. These reclaimed lands were initially brought under cultivation and today many localities in the district bear such crops names as Kele wadi, Tad wadi, Phanas wadi, Ambe wadi Naral wadi etc. which were once garden lands. Today cultivation in Mumabi district is negligible and the entire district is a vast concrete jungle, almost completely built up with practically nothing natural left.

The geology of the intervening lowlands is more or less obscured by the development of Mumbai City. Most of the geological exposures are now covered by buildings and rarely exposed in some road cuttings. The trap rocks, which are now extinctive, are still found in places like elevated Mazgaon, Bhoiwada, Koliwada, Antophill and Sion. These rocks are being hard, dense and durable make excellent building stones. Some volcanic breccias and ashes interbedded with basalts are noticed at Kurla and Sion area.

Forests

The Mumbai district is totally devoid of any forest at present. The immense growth of urbanization and industrialisation reduced little floral wealth of the city. The district at present comprises mainly of residential and industrial area.

Animal Husbandry

As per sixteenth Quinquennial census of livestock of 1997, the information on important number of livestock and livestock indicators are given below.

Statement showing no. of Livestock (Position as on 15th Oct. 1997) in district Mumbai and Mumbai (Suburban).

1)	Total Cross bred/Indigenous Cattle	6,534
2)	Total Buffaloes	77,676
3)	Total Goats	12,593
4)	Total Sheep	429
5)	Total Pigs	5,089
6)	Total Equine	1,770
7)	Total Camel	0
8)	Total Rabbits	0
9)	Total Livestock (excluding dogs)	104,091
10)	Total Poultry (including Ducks)	152,979

Source: Sixteenth All India Livestock & Farm Equipment Census 1997.

The total livestock (excluding dogs) are 104,091 and total poultry (including ducks) are 152,979 in the district. Out of the total livestock, the total crossbred/ indigenous cattle are 6,534, total buffaloes are 77,676, goats 12,593, sheeps 429, pigs 5,089 and equine 1,770.

Statement showing Selected Livestock indicators (Position as on 15th Oct. 1997) in district Mumbai and Mumbai (Suburban).

	Category	Value
1)	Density of Livestock population (per sq.km.)	173
2)	Average Livestock per village	0

3)	No. of livestock per thousand human population	10
4)	No. of in-Milk cows per thousand human population	0.3
5)	No. of in-Milk buffaloes per thousand human population	7
6)	No. of poultry fowls per thousand human population	15
7)	No. of bullocks and male buffaloes per hundred hectares of gross cropped area	0
8)	No. of tractors per thousand hectares of gross cropped area	0
9)	No. of Veterinary Institute per lakh livestock	9

Source: Sixteenth All India Livestock & Farm Equipment Census 1997.

The density of livestock population per sq. km. works out to 173. For every thousand human population there are 10 livestock, 0.3 in-milk cows, 7 in-milk buffaloes and 15 poultry fowls. The number of Veterinary institute per lakh livestock has reported to be 9.

Industry

Mumbai is one of the most industrially advanced developed district in the state before independence and even after independence. Because of industrial revolution in the last century changed entire picture of Mumbai as one of the greatest industrial center of the country. Mumbai has been connected to other towns by Road, Rail and Air. Similarly, all types of major industries like cotton, Steel, Oil, Chemical industries etc. started their production in Mumbai. There is a full concentration of manufacturing industries in the district. Cloths, Garments, Readymade, Edible Oil, Gold ornaments, Broom, Plastic, Medicines, Watercolours etc are the main manufacturing items.

Trade and Commerce

The declining trend in industrial production in Mumbai is somewhat compensated in recent years by the increasing trading, commercial and financial activity. Mumbai in fact is considered the capital for this activity. Trading is no longer organized solely on traditional lines but has now acquired state of the art stature in as much as it is being increasingly professionalised through adoption of advanced marketing practices satellite transmitted and other innovative local advertisement and through the use of faster, almost instant, means of communication and contacts. Several post-graduate management degree courses include marketing advertising, etc. subject for specialization. Accounting methods are yielding to computerization with larger trading houses and establishments. And in all these developments, Mumbai is playing a leading role. In the context of globalisation of trading activity, among others, it is to be expected that trade will increasingly acquire sophistication.

Fish, Steel utensils, Oil, Textile product, Cloth, Readymade Garments, Crockery, Ornaments, Diamond, Water Cooler, Electric items, Fruits, medicines etc. are the most important items of export.

Transport

Public Transport in Mumbai

The most widely used mode of transport is the bus. BEST is the sole operator of urban road passenger transport within the limit of Mumbai. The Maharashtra State Road Transport Corporation operates buses from all major centers and district headquarters at Mumbai. The BEST buses are operating within the city in Mumbai Corporation and near by areas like Vashi, Bhayandar, and Belapur etc.

Other than buses, only taxis are allowed to ply throughout the limits of Mumbai. BEST undertaking also operates bus routes to Mumbai (Suburban) district and extended suburbs. It also runs ferry service between Marve-Manori and Borivali-Gorai.

The fleet of buses owned by BEST decreased to 3,430 in March end 2001 from 3,469 in March 1999 end. The table iv gives comparative operational statistics from 1998-99 to 2000-01 for both Mumbai and Mumbai (Suburban) districts.

Note: The above data is for the entire BEST operation that includes Mumbai City, Suburban, Navi Mumbai, Thane and Bhayandar area.

Source : General Manager BEST, Colaba.

Table iv presented above shows that an effective average of 3,432 buses traversed about 244 million kms. in 2000-01 carrying 1,511 million passengers across the length and breadth of Greater Mumbai. It may be seen from the table that the number of fleets and passengers carried dropped in the year 2000-01 compared to 1998-99.

The earnings from the bus operation amounted to Rs. 642.7 crores in the year 2000-01 from Rs. 531.9 crores in the year 1998-99 is noteworthy.

The distribution of average distances travelled by bus is given below :

TABLE v : AVERAGE DISTANCES TRAVELLED BY CITIZENS

Serial number	Journey length (kms.)	Percentage of passengers (2000-2001)
1	2	3
1	0 - 4	50.8
2	4 - 6	20.9

4	10 - 15	5.5
5	15 - 20	2.7
6	20 & above	4.0

Source: General Manager, BEST, Colaba.

It may be seen from the above table that more than 50 per cent passengers travelled upto 4 kms. in the year 2000-01. While more than one-third passengers travelled between 4-10 kms., a little more than 12 per cent travelled above 10 kms.

Communication

Mumbai is the headquarters of the central and western railway. The broad-gauged lines of central and western railways connect all major places of interest of India. Inside the city of Mumbai local trains connect places. The suburban electric trains are fast and economical. Trains start for western suburbs from Churchgate and for eastern suburbs from Chhatrapati Shivaji Terminus.

Electricity and Power supply

Statement IV of Town directory gives the information on number of electrical connections in the City. 1,222,641 connections for residential purpose, 45,698 connections for industrial and 355,633 connections for commercial purpose in the city.

Law and Order situation in the city

With the increasing population and growing number of slums in which half of the city population is residing at present, Maintenance of law and order in the city is crucial. This work devolves on the police force comprising IPS and subordinate officers and constables etc

The table - x gives a comparative number of cases reported under important crimes and detected for the year 1998, 1999 and 2000. From the table it may be seen that the highest crime is reported under IPC for 1998. Total cognizable offences under Local and Special Acts are reported 215,135 and almost detected. Crimes reported under Gambling Act, Prohibition Act, Suppression of immoral traffic in Women and Girls Act and Motor Vehicle Act are detected fully.

(v) Census concepts

Building :

A 'Building' is generally a single structure on the ground. Sometimes it is made up of more than one component unit which are used or likely to be used as dwellings (residences) or establishments such as shops, business houses, offices, factories, workshops, worksheds, schools, places of entertainment, places of worship, godowns, stores etc. It is also possible that building which have component units may be used for a combination of purposes such as shop-cum-residence, workshop-cum-residence, office-cum-residence, etc.

Usually a structure will have four walls and a roof. But in some areas the very nature of construction of houses is such that there may not be any wall. Such is the case of conical structures where entrance is also provided but they may not have any walls. Therefore, such of the conical structures are also treated as separate buildings.

Permanent houses :

Houses, the walls and roof of which are made of permanent materials. The material of walls can be any one from the following, namely, galvanized iron sheets or other metal sheets, asbestos sheets, burnt bricks, stones or concrete. Roof may be made of from any one of the following materials, namely, tiles, slate, galvanized iron sheets, metal sheets, asbestos sheets, bricks, stones or concrete.

Semi-permanent houses :

Houses in which either the wall or the roof is made of permanent material and the other is made of temporary material.

Temporary houses :

Houses in which both walls and roof are made of materials, which have to be replaced frequently. Walls may be made from any one of the following temporary materials, namely, grass, thatch, bamboo, plastic, polythene, mud, unburnt bricks or wood. Roof may be made from any one of the temporary materials, namely, grass, thatch, bamboo, wood, mud, plastic or polythene.

Dwelling Room :

A room is treated as a dwelling room if it has walls with a doorway and a roof and should be wide and long enough for a person to sleep in, i.e. it should have a length of not less than 2 metres and a breadth of at least 1.5 metres and a height of 2 metres. A dwelling room would include living room, bedroom, dining room, drawing room, study room, servant's room and other habitable rooms. Kitchen, bathroom, latrine, store room, passageway and verandah which are not normally usable for living are not considered as dwelling rooms. A room, used for multipurpose such as sleeping, sitting, dining, storing, cooking, etc., is regarded as a dwelling room. In a situation where a census houses is used as a shop or office., etc., and the household also stays in it then the room is not considered as a dwelling room. But if a garage or servant quarter is used by a servant and if she/ he also lives in it as a separate household then this has been considered as a dwelling room available to the servant's household. Tent or conical shaped hut if used for living by any household is also considered as dwelling room.

A dwelling room, which is shared by more than one household, has not been counted for any of them. If two households have a dwelling room each but in addition also share a common dwelling room, then the common room has not been counted for either of the households.

Census house :

A 'census house' is a building or part of a building used or recognised as a separate unit because of having a separate main entrance from the road or common courtyard or staircase, etc. It may be occupied or vacant. It may be used for residential or non- residential purpose or both.

In certain peculiar situations, the manner in which buildings and census houses were identified for numbering in the field by the enumerators is described hereunder:

Sometimes a series of different buildings are found along a street which are joined with one another by common walls on either side looking like a continuous structure. These different units are practically independent of one another and are likely to have been built at different times and owned by different persons. In such cases, though the whole structure with all the adjoining units apparently appears to be one building, each portion was treated as a separate building and its constituent units as separate census houses.

On the other hand, one may come across cases, particularly in large cities of multi-storeyed ownership

flats. In these cases while the structure looks like one building, different persons own the flats. In case of such multi-storeyed structures, having a number of flats owned by different persons, the entire structure was treated as one building and each flat as a separate census house.

If within a large enclosed area, there are separate buildings owned by different persons then each such building is treated as a separate building. There can be a situation where within an enclosed compound there are separate buildings owned by an undertaking or company or even government that are actually in occupation of different persons. For example, Indian Oil Corporation colony where the buildings are owned by the Corporation but these are in occupation of their employees. Each such building was treated as a separate building. But if in any one of these buildings there were flats in occupation of different households, each such flat was reckoned as a separate census house.

Sometimes it becomes difficult to apply the definition of census house strictly in certain cases. For example, in an urban area, if a flat has five rooms, each room having direct entrance from the common staircase or courtyard. By definition, this has to be treated as five census houses. If all these five rooms are occupied by a single household it was not realistic to treat them as five census houses. In such a case,'singleness' of use of these rooms along with the main house should be considered and the entire flat was treated as one census house. On the other hand, if two independent households occupy these five rooms, the first household living in 3 rooms and the second household occupying 2 rooms, then considering the use, the first three rooms together were treated as one census house and the remaining rooms as another census house. But if each room was occupied by an independent household, then each such room was treated as a separate census house.

In case of hostels, hotels, etc., even if the door of each room in which an inmate lives opens to a common verandah, staircase, courtyard or a common room, as it happens almost invariably, the entire hostel/ hotel building was treated as one census house. but if such hostels/ hotels have out- houses or other structures used for different purposes or the same purpose, then each such structure attached to the main hostel / hotel was treated as a separate census house.

In some parts of the country, in rural areas, the pattern of habitation is such that a group of huts, located in a compound, whether enclosed or unenclosed, is occupied by one household. While the main residence may be located in one hut, other huts may be used for sleeping, as a kitchen, bath room, baithak, etc. Though each of the huts was a separate structure, they form a single housing unit and therefore, have to be treated collectively as one building and one census house. If some of the huts are used by one household and the others by a second household as residence, then the two groups of huts were treated as separate census houses. However, if there were also other huts in the compound used for other purposes and not as part of the household's residence such as, cattle shed, workshed, etc., these were treated as separate census houses.

On the other hand, in urban areas, where more than one structure within an enclosed or open compound (premises) belonging to the same person, e.g., the main house, the servant's quarter, the garage, etc., only one building number was given for this group and each of the constituent a separate census house number.

Only cases where a structure with roof and pillars has come up was treated as a building.

Village

The basic unit for rural areas is the revenue village which has definite surveyed boundaries. The revenue village may comprise of one or more hamlets but the entire village is treated as one unit for presentation of data. In unsurveyed areas, like villages within forest areas, each habitation area with locally recognized boundaries is treated as one village.

Rural-Urban area

The data in tables on Houses, Household Amenities and Assets are presented separately for rural and urban areas. The unit of classification in this regard is 'town' for urban areas and 'village' for rural areas. In the Census of India 2001, the definition of urban area adopted is as follows:

a) All places with a municipality, corporation, cantonment board or notified town area committee, etc.

b) A place satisfying the following three criteria simultaneously:

i) A minimum population of 5,000.

ii) at least 75 per cent of male working population engaged in non-agricultural pursuits; and

iii) a density of population of at least 400 per sq. km.(1,000 per sq.mile)

For identification of places which would qualify to be classified as 'urban' all villages, which, as per the 1991 Census had a population of 4,000 and above, a population density of 400 persons per sq. km. and having at least 75 per cent of male working population engaged in non-agricultural activity were considered. To work out the proportion of male working population referred to above against b) (ii), the data relating to main workers were taken into account.

Apart from these, the outgrowths (OGs) of cities and towns have also been treated as urban under 'Urban Agglomerations'. Examples of out-growths are railway colonies, university campuses, port areas, military camps, etc., that may have come up near a statutory town or city but within the revenue limits of a village or villages contiguous to the town or city. Each such individual area by itself may not satisfy the demographic criteria laid down at (b) above to qualify it to be treated as an independent urban unit but may deserve to be clubbed with the towns as a continuous urban spread. Thus, the town level data, wherever presented, also includes the data for outgrowths of such towns.

City

Towns with population of 100,000 and above are called cities.

Urban Agglomeration

An Urban Agglomeration is a continuous urban spread constituting a town and its adjoining urban outgrowths (OGs) or two or more physically contiguous towns together and any adjoining urban outgrowths of such towns. In some cases railway colonies, university campuses, port areas, etc., may come up near a city or statutory town outside its statutory limits but within the revenue limits of a village or villages contiguous to the town or city. Each such individual area by itself may not satisfy the minimum population limit to qualify it to be treated as an independent urban unit but may deserve to be clubbed with the town as a continuous urban spread.

For the purpose of delineation of Urban Agglomerations during Census of India 2001, following criteria are taken as pre-requisites:

(a) The core town or at least one of the constituent towns of an urban agglomeration should necessarily be a statutory town ; and

(b) The total population of all the constituents (i.e., towns and outgrowths) of an Urban Agglomeration should not be less than 20,000 (as per the 1991 Census).

With these two basic criteria having been met, the following are the possible different situations in which Urban Agglomerations would be constituted:

i) a city or town with one or more contiguous outgrowths;

ii) two or more adjoining towns with their outgrowths; and

iii) a city and one or more adjoining towns with their outgrowths all of which form a continuous spread.

Household

A 'household' is usually a group of persons who normally live together and take their meals from a common kitchen unless the exigencies of work prevent any of them from doing so. Persons in a household may be related or unrelated or a mix of both. However, if a group of unrelated persons live in a census house but do not take their meals from the common kitchen, then they are not constituent of a common household. Each such person was to be treated as a separate household. The important link in finding out whether it was a household or not was a common kitchen. There may be one member households, two member households or multi-member households.

Institutional household

A group of unrelated persons who live in an institution and take their meals from a common kitchen is called an Institutional Household. Examples of Institutional Households are boarding houses, messes, hostels, hotels, rescue homes, jails, ashrams, orphanages, etc. To make the definition more clearly perceptible to the enumerators at the Census 2001, it was specifically mentioned that this category of households would cover only those households where a group of unrelated persons live in an institution and share a common kitchen.

Houseless household

Households who do not live in buildings or census houses but live in the open on roadside, pavements, in hume pipes, under fly-overs and staircases, or in the open in places of worship, mandaps, railway platforms, etc., are treated as Houseless Households.

Scheduled Castes and Scheduled Tribes

Article 341 of the Constitution provides that the President may, with respect to any State or Union territory, specify the castes, races or tribes or parts of or groups within castes, races or tribes which shall for the purposes of the Constitution be deemed to be Scheduled Castes in relation to that State or Union territory. Article 342 similarly provides for specification of tribes or tribal communities or parts of or groups within tribes or tribal communities, which are to be deemed for the purposes of the Constitution to be Scheduled Tribes in relation to the various States and Union territories. In pursuance of these provisions, the list of Scheduled Castes and / or Scheduled Tribes are notified for each State and Union territory and are valid only within the jurisdiction of that State or Union territory and not outside.

It is important to mention here that under the Constitution (Scheduled Castes) Order, 1950, no person who professed a religion different from Hinduism was deemed to be a member of a Scheduled Caste in addition to every member of the Ramdasi, Kabirpanthi, Majhabi or Sikligar caste resident in Punjab or Patiala and East Punjab States Union were in relation to that State whether they professed the Hindu or the Sikh religion. Subsequently, in September 1956, by an amendment, the Presidential Order of 1950 and in all subsequent Presidential Orders relating to Scheduled Castes, the Hindu and the Sikh religions were placed on the same footing with regard to the specification of Scheduled Castes. Later on, as per the amendment made in the Constitution (Scheduled Castes) Order 1990, the Hindu, the Sikh and the Buddhist were placed on the same footing with regard to the recognition of the Scheduled Castes.

The lists containing the names of the Scheduled Castes and the Scheduled Tribes applicable for the Census of India 2001 in the State are given below:

Language and Mother tongue

As per the census concept, each language is a group of mother tongues. The census questionnaire collects information on the mother tongue of each person and mother tongue is defined as the language spoken in childhood by the person's mother to the person. If the mother died in infancy, the language mainly spoken in the person's home in childhood will be the mother tongue. In the case of infants and deaf mutes, the language usually spoken by the mother is considered as mother tongue. It is not necessary that the language spoken as mother tongue should have a script. The mother tongues returned by the respondents in census are classified and grouped under appropriate languages according to their linguistic characteristics.

Literate

A person age 7 years and above who can both read and write with understanding in any language is taken as literate. A person who can only read but cannot write is not literate. It is not necessary that to be considered as literate, a person should have received any formal education or passed any minimum educational standard. Literacy could also have been achieved through adult literacy classes or through any non-formal educational system. People who are blind and can read in Braille are treated as literates.

Literacy rate

Literacy rate of the population is defined as the percentage of literates in the age group seven years and above. For different age groups the percentage of literates in that age group gives the literacy rate.

Educational level

The highest level of education a person has completed.

Work

Work is defined as participation in any economically productive activity with or without compensation, wages or profit. Such participation may be physical and/or mental in nature. Work involves not only actual work but also includes effective supervision and direction of work. It even includes part time help or unpaid work on farm, family enterprise or in any other economic activity. All persons engaged in 'work' as defined above are workers. Persons who are engaged in cultivation or milk production even solely for domestic consumption are also treated as workers.

Reference period for determining a person as worker and non-worker is one year preceding the date of enumeration.

Main worker

A person who has worked for major part of the reference period (i.e. six months or more during the last one year preceding the date of enumeration) in any economically productive activity is termed as 'Main worker'.

Marginal worker

A person who worked for less than six months of the reference period (i.e. in the last one year preceding the date of enumeration) in any economic activity is termed as 'Marginal worker'.

Non worker

A person who has not worked at all in any economically productive activity during the reference period (i.e. last one year preceding the date of enumeration) is termed as 'Non worker'.

Cultivator

For purposes of the Census a person is classified as cultivator if he or she is engaged in cultivation on land owned or held from government or held from private persons or institutions for payment in money, kind or share. Cultivation includes effective supervision or direction in cultivation.

A person who has given out her/his land to another person or persons or institution(s) for cultivation for money, kind or share of crop and who does not even supervise or direct cultivation in exchange of land, is not treated as cultivator. Similarly, a person working on another person's land for wages in cash or kind or a combination of both (agricultural labourer) is not treated as cultivator.

Cultivation involves ploughing, sowing, harvesting and production of cereals and millet crops such as wheat, paddy, jowar, bajra, ragi, etc., and other crops such as sugarcane, tobacco, ground-nuts, tapioca, etc., and pulses, raw jute and kindred fiber crop, cotton, cinchona and other medicinal plants, fruit growing, vegetable growing or keeping orchards or groves, etc. Cultivation does not include the following plantation crops–tea, coffee, rubber, coconut and betel-nuts (areca).

Agricultural labourer

A person who works on another person's land for wages in money or kind or share is regarded as an agricultural labourer. She/he has no risk in the cultivation, but merely works on another person's land for wages. An agricultural labourer has no right of lease or contract on land on which she/he works.

Household industry worker :

Household industry is defined as an industry conducted by the head of the household herself/himself and or by the members of the household at home or within the village in rural areas and only within the precincts of the house where the household lives in urban areas. The larger proportion of workers in household industry should consist of members of the household including the head. The industry should not be run on the scale of a registered factory which would qualify or has to be registered under the Indian Factories Act and should be engaged in manufacturing, processing, servicing and repairs of goods.

It does not include professions such as a Pleader, Doctor, Musician, Dancer, Waterman, Astrologer, Dhobi, Barber, etc. or merely trade or business, even if such professions, trade or services are run at home by members of the household.

Other worker :

A person who has been engaged in some economic activity during the reference period but not as a cultivator or agricultural labourer or in Household Industry is termed as a 'Other Worker (OW)'. The type of workers that come under this category of 'OW' include all government servants, municipal employees, teachers, factory workers, plantation workers, those engaged in trade, commerce, business, transport, banking, mining, construction, political or social work, priests, entertainment artists, etc. In effect, all those workers other than cultivators or agricultural labourers or household industry workers, are 'Other Workers'.

Work participation rate :

Percentage of workers (main + marginal) to total population.

Population density :

Population density is the number of persons inhabited per square kilometre of the area.

Age :

Age is measured in terms of the completed number of years.

Sex -ratio :

Number of females per 1000 males in a population.

(vi) Non Census Concepts

Improved drinking water :

If the household had access to drinking water supplied from a tap, hand pump, tube well or well (protected or covered) situated within or outside the premises, it is considered as having access to improved drinking water.

It may be mentioned that such uniform definition may not be valid across all states.

System of sewerage :

Generally, a sewerage system would mean a network of mains and branches of underground conduits for the conveyance of sewerage to the point of disposal. Sewers that carry only household and industrial wastage are called separate sewers; those that carry storm water from roofs, streets and other surfaces are known as storm water drains, while those carrying both sewage and storm water are called combined sewers. However, in some towns which

are not provided with such underground sewerage system, it is served by open surface drain, box drain, sylk pattern drain, etc., in these towns.

Type of latrine andMethod of disposal of night soil :

There are three prevalent systems of disposal of human wastes, viz.(i) underground sewerage, (ii) sanitary water flush latrines with individual disposal systems, like septic tank, leaching cess pool and collecting well, and (iii) dry type of latrines with manual scavenging.

The system of underground sewerage provides for the street sewerage with which are connected the sanitary latrines constructed in the houses having water closets and fitted with flushing cistern (or hand flushing). Through this sewer the faecal matter is transported without the need for scavenging.This system generally exists in cities and big towns.

Where the streets sewer does not exist these sanitary water flush latrines are connected to a local septic tank with a sub-soil dispersion system or a leaching pit. Here the liquid wastes from the water closet is disposed of locally in leaching pit, a septic tank with a soil dispersion system is constructed. This dispersion requires an optimum travel through the pores of the soil which renders the harmful liquid bacterially innocuous by the slow process of filtration through the soil traversed.

Where the soil is impermeable, collecting wells are constructed and the sanitary water flush latrines are connected with them. These wells are cleaned at periodic intervals by a suitable device. The dry type of latrines are of service type latrines from where human excreta is removed by scavengers from house to house, in most cases carrying it on their heads or shoulders or in baskets with handle or wheel barrows. These are then collected in bullock carts or trucks or tractors and trolleys for being carried to the dumping grounds.

Fertility :

In demography, the word fertility is used in relation to the actual production of children or occurrence of births specially live births. Fertility is a measure of rate at which population adds to itself by births and normally assessed by relating the number of births to a full or part of the population, such as number of married women or number of women of child bearing age. The definitions of the terminology used in computing different fertility rates are mentioned below:

Crude birth rate(CBR) :

Ratio of the number of live births in a year to the mid year population, normally expressed per 1,000 population.

$$CBR = \frac{\text{Number of live births during the year}}{\text{Mid–year Population.}} \times 1{,}000$$

Crude death rate(CDR) :

Ratio of the number of deaths in a year to the mid year population, normally expressed per 1,000 population.

$$CDR = \frac{\text{Number of deaths during the year}}{\text{Mid–year Population}} \times 1{,}000$$

Natural growth rate :

Growth rate is obtained as the difference between crude birth rate and crude death rate in the absence of migration.

Age specific fertility rate (ASFR) :

Number of live births in a year to female population in any specified age group normally expressed per 1,000 women.

$$ASFR = \frac{\text{Number of live births in a particular age-group}}{\text{Mid-year female population of the same age-group}} \times 1{,}000$$

Age specific marital fertility rate (ASMFR) :

Number of live births in a year to married female population in any specified age group normally expressed per 1000 married women .

$$ASMFR = \frac{\text{Number of live births in a particular age-group}}{\text{Mid-year married female population of the same age-group}} \times 1{,}000$$

General fertility rate (GFR) :

Number of live births per 1,000 women in the reproductive age-group (15-49) years in a given year.

$$GFR = \frac{\text{Number of live births in a year}}{\text{Mid-year female population in the age group (15-49) years}} \times 1{,}000$$

General marital fertility rate (GMFR) :

Number of live births per 1,000 married women in reproductive age-group (15-49) years in a given year.

$$GMFR = \frac{\text{Number of live births in a year}}{\text{Mid-year married female population in the age-group (15-49) years.}} \times 1{,}000$$

Total fertility rate (TFR) :

It is obtained as the total of the age specific fertility rates (number of children born per woman of the particular age) for the entire reproductive age span. It provides the average number of children that will be born to a woman under the fertility levels indicated by the age specific fertility rates assuming that there is no mortality of women till the completion of reproductive period.

$$TFR = 5 \times \frac{\sum_{15\text{-}19}^{45\text{-}49} ASFR}{1{,}000}$$

Total marital fertility rate (TMFR) :

Average number of children that would be born to a married woman if she experiences the current fertility pattern throughout her reproductive span (15-49) years assuming that there is no mortality of women till the completion of reproductive period.

$$TMFR = 5 \times \frac{\sum_{15\text{-}19}^{45\text{-}49} ASMFR}{1{,}000}$$

Age-specific mortality rate (ASMR) :

Number of deaths in a particular age and sex group per 1,000 population of the same age group.

$$ASMR = \frac{\text{Number of deaths in a particular age-group}}{\text{Mid-year population of the same age group}} \times 1{,}000$$

q1 Probability of dying between birth and age 1. This can be used as approximate value of Infant Mortality Rate (IMR) which gives the ratio of number of deaths in a year of children aged less than one year to the number of births in that year.

q2 Probability of dying between birth and age 2.

q5 Probability of dying between birth and age 5. This indicator is also known as Under Five Mortality Rate (U5MR)

Infant mortality rate (IMR) :

Ratio of the number of infant deaths (deaths of children below one year) in a year to the number of live births in that year.

$$IMR = \frac{\text{Number of infant deaths during the year}}{\text{Number of live births during the year}} \times 1{,}000$$

Infant mortality rate comprises of two parts, viz., Neo-natal mortality rate and Post neo-natal mortality rate. The neo-natal mortality rate also comprises of two parts viz., Early neo-natal mortality rate and late neo-natal mortality rate. These are defined as :

Neo-natal mortality rate (NMR) :

Number of infants dying within the first month of life (28 days or under) in a year per 1000 live births of the same year.

$$NMR = \frac{\text{Number of infant deaths aged 28 days or under during the year}}{\text{Number of live births during the year}} \times 1{,}000$$

Early neo- natal mortality rate :

$$= \frac{\text{Number of infant deaths of less than 7 days during the year}}{\text{Number of live births during the year}} \times 1{,}000$$

Late neo-natal mortality rate :

$$= \frac{\text{Number of infant deaths of 7 days to less than 29 days during the year}}{\text{Number of live births during the year}} \times 1,000$$

Post neo-natal mortality rate (PNMR) :

$$= \frac{\text{Number of deaths of 29 days to less than one year during the year}}{\text{Number of live births during the year}} \times 1,000$$

Peri-natal mortality rate (PMR) :

Number of still births plus deaths within 1st week of delivery per 1,000 births in a year.

$$PMR = \frac{\text{Number of still births and infant deaths of less than 7 days during the year}}{\text{Number of live births and still births during the year}} \times 1,000$$

Still birth rate (SBR) :

$$= \frac{\text{Number of still births during the year}}{\text{Number of live births and still births during the year}} \times 1,000$$

Maternal mortality rate(MMR) :

Number of deaths of women in the age group 15-49 while pregnant or within 42 days of termination of pregnancy from any cause related to pregnancy and child birth per 100,000 live births in a given year.

$$MMR = \frac{\text{Number of maternal deaths to women in the age group 15-49}}{\text{Number of live birth}} \times 100,000$$

Eligible couple (Couples per 1,000 population) :

Number of currently married females in the age group15-44 years per 1,000 persons of all ages.

Child woman ratio (0-4) :

1. Number of children in the age group 0-4 years per 1,000 women in the age group 15-49 years.

Child woman ratio (5-9) :

2. Number of children in the age group 5-9 years per 1,000 women in the age group 15-49 years.

Migration :

Migration is the third component of population change, the other two being mortality and fertility.

A person is considered as a migrant by place of birth if the place in which he/she is enumerated during the census is other than the place of his/her birth. Similarly a person is considered as a migrant by place of last residence if the place in which he/she is enumerated during the census is other than his/her place of immediate last residence outside the village or town and not simply in another house or locality in the same village or town.

Certain aspects concerning temporary movement/migration of people has been explained below as these are important components concerning migration :-

(i) Migration of persons in search of job is high in the country. In many cases such migrants are only seasonal in nature. People migrate to other places for work in a particular season and come back again to their usual place of residence after three or four months. All such workers are treated as migrants. Similarly, if a person moved to any other place for attending short term vocational or educational course that laste for only few months of a year, she/he too were considered as a migrant.

(ii) Where a person had merely gone out to another place or had been shifting from one place to another purely on tour, pilgrimage, visit to hospital for treatment or for temporary business purposes, such persons are not deemed to have had another residence different from the place where she/he or her/his family normally resides. She/he is not considered as migrant.

(iii) A woman temporarily moves into a hospital or to her parents or other relative's house for delivery and if the hospital or the parents/relatives houses is in a place different from usual place of residence, the place where the hospital or parents/relative's house is the place of last residence of the child but not of the mother.

A new response category 'Moved after birth' was added in Census of India 2001 in the question on 'reasons for migration' to bring out additional migration patterns. Natural calamities or distress migration as a reason for migration for last residence migrants included in 1991 Census, is covered under category of 'Others'. The reason for migration has been determined as applicable at the time of migration and not in reference to any point of time after that. For example, if a person had moved from the place of her/his last residence for the purpose of education and subsequently at some point of time got employment there only, the reason for migration would be 'education' and not 'work/employment'.

Internal and International migration :

The migrational movements are of three types (i) Migration within the state itself with its components (a) Migration within the district of enumeration (intra district migration) (b) Migration from one district of state to another district of state (inter district migration), (ii) Migration from one state to another State of the country (inter-state migration), (iii) Migration from one country to another country. The first two streams together constitute internal migration, while the last type of movement is called international migration. The present name of the country, state or district and not the name by which they were known at the time of her/his birth or last residence were recorded.

Rural - Urban components of migration:

Rural or Urban status in respect of migrants have been determined as applicable at the time of migration and not with reference to any point of time after that.

The flow of migrants consists of four streams viz. rural to rural, rural to urban, urban to rural and urban to urban.

Civic status of urban units :

Civic Status of a town/city is determined on the basis of Civic Administrative authority of the town e.g., Municipal Corporation / Corporation, Municipal Committee/ Municipal council, Municipality etc.

Size class of UA / Town :

Size-class of UA/Town is based on the population size of the UA/City/Town UAs/Towns with 1,00,000 and above population are classified as Class I UAs. / Towns. These Class I UAs. / Towns are now further sub classified in to seven sub classes namely M1 to M7 depending on the population size of UA/City/ Town. These are M7(5,000,000 and above); M6(2,000,000 to 4,999,999); M5 (1,000,000-1,999,999) M4 (500,000-999,999); M3(300,000-499,999), M2 (200,000-299,999) & M1 (100,000-199,999). Towns with, 50,000 to 99,999 population are classified as Class II towns, 20,000 to 49,999 population are Class III towns, population with 10,000-19,999 are Class IV towns, population with 5000 and 9999 are Class V towns and towns with less than 5000 population are Class VI towns.

Slum area :

The Slum Areas (Improvement and Clearance) Act, 1956 which was enacted by the Central Govt. defined slums as a) Areas where buildings are in any respect unfit for human habitation; or b) are by reasons of dilapidation, overcrowding, fault arrangement and design of such buildings, narrowness or faulty arrangement of streets, lack of ventilation, light or sanitation facilities, or any combination of these factors, are detrimental to safety, health or morals.

Mega city

The concept of 'Mega city' is a recent phenomenon in the Urban Sociology and is defined in term of metropolitan city in the form of large size, problem of management of civic amenities and capacity to absorb the relatively high growth of population. Indian Census in 1991 treated the population size of 5 million and above as the cut off point to identify a place as the mega city. Whereas, for the purpose of inclusion in Centrally Sponsored Scheme for Infrastructure Development in Mega cities the Ministry of Urban Affairs and employment, Department of Urban Development adopted the criteria of 4 million and above population as per 1991 Census for Mega Cities. In 2001 Census, cities with 10 millions and above population have been treated as Mega cities.

(vii) 2001 Census Findings – Population, its distribution

Brief Note on Census

Census taking is a massive operation carried out in a short span of time with the active participation of a veritable army of enumerators. The reference moment for the 2001 Census was the 00.00 hrs. March 1, 2001 i.e. the census provides a snapshot of the population of the country, as on 1st march 2001. Actual enumeration was spread over a period of 20 days from 9th February 2001 to 28 Feb.2001, followed by a revisional round up to 5th March 2001 for updating of the population figures with reference to 00.00 hours of March 1, 2001. Household schedule having 23 questions regarding each and every person in the family is newly introduced in this Census. These questions are mainly self-explanatory and answers are in code language. Question No. 1 to 15 are related to general and socio-cultural characteristic individual. Question 16 to 20 is about economic activity of the person. Question 21 and 22 about migration and question no. 23 is for women, related to fertility. In addition one question is added in 2001 census which is related to household engaged in cultivation/ plantation in part III.

As a prelude to the actual Census, the urban and rural areas were identified and listed out in respect of each administrative unit. The Director of Census Operations has prepared the list of urban area (which is generally referred to as town list) and simultaneously, a list of villages. These lists form the basic frame for the organization of the Census Operations. Thereafter geographical area that could be conveniently covered out to constitute the enumerator's block.

The next major step was the house listing Operation that was carried in the state during May-June 2000. Thereafter, in order to adhere to the prescribed workload norms, the actual Census enumeration's blocks were carefully demarked on the basis of the layout sketches and the notional maps prepared was also utilised to collect wealth of information on items such as predominant construction material used for houses, amenities available to the Census households, number of living rooms etc. Information regarding number of bedrooms in the household, if couples having separate room, availability of amenities like telephone, TV, Car/Scooter was asked first time in this Census. From this information we can have an idea of standard of living of the people in the country.

Distribution of Population in Urban Areas

According to 2001 Census, the total population of Mumbai is 3,338,031 comprising of 1,878,246 males and 1,459,785 females.

* Worked out by Culling out and Collating the wardwise / sectionwise information

@ Now bifurcated into Mumbai and Mumbai (Suburban)

1991 population figures are taken from revised Gr. Bombay PCA as in 1991 DCHB

Till census 1991, Mumbai district was a part of the then Greater Bombay district. For the purpose of comparison, therefore the population for Mumbai district has been culled out by collating the respective ward/sectionwise population for district. Mumbai district covers the area from Colaba to Mahim. Table - xi shows the growth of Mumbai for the last one century i.e. 1901 to 2001. It can be seen that the growth rate for the 1st half-century i.e. 1901 to 1951 was more than the latter half. The growth rate of Mumbai in the year 1911 was at 23.8 percent, which declined to 20.2 percent in the 1921 Census, and 1.3 percent in 1931. Again the decadal growth rose to 28.9 percent in 1941 and touched the highest ever growth of the City so far at 66.2 percent in 1951. The 1961, 1971 and 1981 showed a slow growth rate and 1991 census showed a negative growth rate ever recorded. The negative growth rate may be due to the migration of city population to suburban and extended sub-urban areas. The 2001 Census figure showed a positive growth rate at 5.1 percent. In absolute terms, while the 1901 population was 721,776 that of 1951 census were more than three times i.e. 2,329,020.

It is worth noting that the percentage of decadal variation from 1901 Census to 1951 Census is exactly the same for both Greater Bombay district and Mumbai district although in absolute terms, the figures are different. Thus indicating a perfect equlibrium in terms of percentage of decadal population growth in each of the new bifurcated Mumbai and Mumbai (suburban) districts from 1901 to 1951 Census.

In absolute terms, the population of the district has been increasing since 1901 Census. The population for Wards now dileanated for Mumbai was 721,776 in 1901 which increased to 893,481 in 1911, 1,073685 in 1921, 1087,191 in 1931, 1,401,059 in 1941 and 2,329,020 in 1951. The population in 1951 Census increased more than three times the population in 1901 Census for Mumbai. In Census 1961, the population was 2,771,933, which increased to 3,070,378 in 1971, 3,285,040 in 1981, and decreased to 3,174,889 in 1991. As per Census 2001 the population for Mumbai was 3,338,031. It has been observed that the growth of population was more rapid in Mumbai during the first five decades from 1901 to 1951. The growth in the decades 1951-61, 1961-71, 1971-81, and 1991-2001 was comparatively slow for Mumbai district. The decade 1981-91 registered a negetive growth.

In the Census 2001, the houseless and institutional population in Mumbai district is given in Table- xii.

Both Mumbai and Mumbai (Suburban) being entirely urban districts rank first in terms of urban population of the state. For the year 2000 Mumbai, Mumbai (Suburban), U.A. together has been identified as fifth largest metropolis in the world in the United Nations report entitled. United Nations World Urbanization Prospects,2001, Revision. The population estimated, as on 2000, is given in Table - xiii for first five Metropolis of the world.

Note : 1991 Population figures are taken from revised Greater Bombay PCA as in 1991 DCHB.

From the data presented in the table, it may be seen that the district in the last four decades has been experiencing a low decadal growth rate. During the period from 1961 to 1991 the growth rates of the district decreased continuously. Whereas during 1991-2001, the district stopped showing decreasing growth rate and recorded a increasing growth rate of 5.1 percent. Mumbai district added 2.98 lakh population during 1961-71, 2.15 lakh during 1971-81 and 1.63 lakh during 1991-2001. The corresponding decadal growth rate was 10.8 percent, 7.0 percent and 5.1 percent. During 1981-91, the population of the district has declined by 1.10 lakhs and the decadal growth rate recorded was –3.4 percent.

Mumbai district consists of A, B, C, D, E, F/S, F/N, G/N and G/S wards of Brihanmumbai Municipal Corporation. Among these nine wards, during Census 2001, F/N recorded the highest growth rate of 21.8 percent followed by B Ward with 19.5 percent, whereas F/S ward and D ward recorded the lowest growth rate of -5.0 and -4.2 percent respectively. The population of C' ward has been decreasing continuously since 1961 upto 1991 whereas it showed an increase in 2001. It recorded a negative growth rate of -7.9 percent in 1961-71, -13.4 percent in 1971-81, -26.4 percent in 1981-91 whereas a positive growth rate of 1.8 percent in 1991-2001.

Among the nine wards G/North is the most populous ward with 582,007 persons and B' Ward has the least population with 140,633 persons.

Table - xv gives the distribution of wards by population range for Mumbai district 2001 Census.

TABLE xv: DISTRIBUTION OF WARDS BY POPULATION RANGE OF MUMBAI - 2001 CENSUS

Population Range	No. of Wards each range	Percentage of Population covered in each range	Name of Wards
1	2	3	4
1 - 2 lakhs	1	4.2	B
2 - 3 lakhs	2	12.4	A+C
3 - 4 lakhs	2	23.3	D+F/S
4 - 5 lakhs	2	26.9	E+G/S
5 lakhs +	2	33.2	F/N + G/N
All ranges	9	100.0	

It is observed from the table that out of 9 wards of Mumbai district, only one ward i.e. ward 'B' is falling in range of below 2 lakhs. Wards 'A' and 'C' are having population range of 2-3 lakhs. Nearly 50 percent of the population of the district is concentrated in four wards viz- E ward, G/South ward, D ward and F/South ward. Two wards F/N and G/N have population above 5 lakhs each.

The nine wards of Mumbai district area have been divided into 38 sections for administrative purposes. There are no jurisdictional changes in the section boundaries during 1991-2001. Section-wise population as per 2001 Census is presented in table – xvi.

From table - xvi it may be seen that sections 32 (Sion) and 33 (Dadar) recorded the population of more than 4 lakhs. These two sections recorded 27 percent of the population of the district. Sections 19, 7 and 4 recorded less than 20,000 populations and in 9 sections the population crossed one-lakh mark.

It is observed that first five populous sections in Mumbai district are 32,33,29,36 and 27. Their respective names are Sion, Dadar, Sewri, Worli and Byculla. The three last populated sections in the district are 19, 4 and 7 with their respective area i.e. Chaupatty, Fort North and Chakala in 'B' Ward.

TABLE xvii : POPULATION DISTRIBUTION OF SECTIONS OF MUMBAI DISTRICT

Population range	No.of sections covered	Percentage of population covered

All ranges	38	100.0

Table - xvii gives the population distribution of sections in six ranges. The table reveals that 18 sections are falling in the population range of 10,000 – 49,999 followed by 11 sections in the range of 50,000 – 99,999. There are 7 sections with range of 100,000 – 1, 99999 constituting 31 percent of Mumbai's population. It is also found that not a single section is falling in the range of 200,000 – 299,999 and also below 10,000 populations. Only 2 sections, ie. 32 and 33, falling in F/N and G/N wards are found in the population range of 300,000 and above. These two sections together account for 27.4 percent of city population.

TABLE xviii : DISTRIBUTION OF SECTIONS BY POPULATION RANGE OF MUMBAI DISTRICT

All ranges	38	38	100.0	100.0

Note: 1991 population figures are taken from revised Gr. Bombay PCA as in 1991 DCHB.

From table -xviii it may be seen that during Census 2001 there are 15 sections in the population range 20,000 – 49,999 against 14 sections in 1991. The highest percentage of sections also falls in the range of 20,000 – 49,999 both in 1991 Census and 2001 Census. Similarly number of sections in the population range 50,000 – 99,999 has increased to 11 in 2001 as against 10 in 1991. There is no change in sections in the 2 lakh and above range. In the population range of 20,000 – 49,999 there has been an increase from 36.8 percent in 1991 to 39.5 percent in 2001 Census i .e. an increase of 3 points of concentration during a decade.

Table – xix gives the growth, density, sex ratio of Mumbai district (being the entire urban district) in relation to the State Urban areas. The overall density of population in Mumbai district is found to be 21,261 per sq.km. in 2001. The average density in 1991 Census was 20,222. This implies that the density has increased by 1,039 persons per sq.km.

From the table – xx it will be seen that density has declined in 'D' ward during the decade 1991-2001. In the remaining wards, the density of population has increased.

In Mumbai district, the density varies from ward to ward. 'C' ward (Marine Lines), which had the highest density in 1991 (111,944) retains the same position in 2001 Census (114,001). 'A' ward (Colaba) registered the lowest density i.e 18,479 persons per sq.km.

Table - xxi shows distribution of wards by density ranges.

For understanding patterns, the wards have been grouped under five different density ranges. 4 wards (57.1 percent) fall in the density range of 50,000 – 1,00,000 per sq.km. One ward each is found in the density range of 10,000–20,000, 20,000–50,000 and 1,00,000 and above. Not a single ward has been recorded in below 10,000 density range.

Table - xxii gives the distribution of density and variation in density by wards of Mumbai district during 1991 and 2001 Census. From the table it can be seen that the density has declined in 'D'ward (-2515). In the remaining wards density has increased. The density has increased by 1,402 in 'A' ward whearas it has increased substantially in 'B' ward (9,314).

When the wards are distributed in five different ranges, it is observed that there were no changes in the ranges of 10,000-20,000 and one lakh & above during both the Censuses, a slight change had occurred in the ranges of 20,000-50,000 and 50,000-100,000. It may be noted that density of 'B' ward has increased and the category has hence changed from group III to IV.

Note: (i) Sex ratio has been worked out as females per 1000 males.
(ii) Mumbai district being the entire urban district comparison for State urban has been made.
(iii) 1991 population figures are taken from revised Gr. Bombay PCA as in 1991 DCHB.

For Mumbai district there are 777 females per 1000 males. The sex ratio of the district is lower than state average of 873 in 2001 and that of 1991 Census (791) of the district.

From the table given it can be concluded that the sex ratio in Mumbai district has always remained lower than that of the state average during the century 1901-2001. This indicates a selection for male children over female children.

The number of females against males was considerably low at the beginning of the century (652 females per 1000 males). The situation still worsened in 1921 when the females were little above one half of their male counterparts (561 females per 1000 males). The next two decades 1931-41 registered slight improvements in the female-male ratios. The Census of 1951 (first post independent Census) again saw a fall in sex ratio by 42 points. Thereafter, however the gap between the two sexes has been narrowed down considerably up to 1991 Census. In Census 2001 again there was a fall in sex ratio by 14 points, which is lesser than the state sex ratio by 96 points. The above description showed ups and downs in sex ratio, but the 100 years ratio has increased by 125 points.

When compared with the state figures, sex ratio for urban Maharashtra has improved by 11 points only during the last century. But the improvements in the Mumbai district sex ratio for the same period is found to be 10 times over the state figures. The difference between the district and the state figure during 1901 was -210, which has come down to -96 during the last 100 years. The 1991 Census showed a further decrease in difference to -84. The improvement was found to be quite satisfactory i.e. by 114 points.

Table-xxv reveals the sex ratio for 9 wards of Mumbai district for 1991 and 2001 Census.

In Census 2001, the wards A (733), B (735), C (587), E (755) and G/S (760) have sex ratios below the district average. The sex ratio in D, F/S, F/N and G/N is higher than the district average of 777.

In 1991 five wards were having sex ratio less than that of Mumbai (791). These 5 wards were A (761), C (733), E (776), F/S (769) and G/S (734)

Note : 1991 population figures are taken from revised Gr. Bombay PCA as in 1991 DCHB.

The districts average sex ratio is found to be 777 females per 1000 males for 2001 Census compared to state sex ratio of 922.This is less than the 1991 sex ratio of 791. Though 20 sections have shown a positive rate compared to district sex ratio, 18 sections show a decline in the number of females per thousand males. The highest Sex ratio is seen in Section 34 i.e., in Mahim with 962 females followed by Section 19 i.e. Chaupathy with 926 females. During 2001 Census the lowest sex ratio (266) is recorded in Section 13 i.e. Market, which also recorded the lowest during 1991 Census.

38	U	9,372	4,826	4,546	942

Table - xxvii gives sex ratio in the age group 0-6 for Mumbai in 2001. The sex ratio for 0-6 age group is 922, for the district as compared to general sex ratio of 777. Of the 38 sections, 18 sections have sex ratio below the district average, while the remaining are above the average sex ratio for the district. This indicates that the sex ratio in the age group 0-6 years is more balanced than that for all the age groups in 2001.

Scheduled Castes and Scheduled Tribes

Census of India provides the data of the Scheduled Castes and Scheduled Tribes for evolving suitable plans for their socio-economic upliftment. As in the previous census, the 1991 Census also collected the detailed information on socio-economic characteristics of Scheduled Castes and Scheduled Tribes. The planners and the administrators heavily depand on this data.

N - Negligible

Table xxxiv gives sectionwise percentage of Scheduled Castes and Scheduled Tribes population to total population in the district for 1981, 1991 and 2001 Census.

In 2001 Census, the highest percentage (21.9 percent) of Scheduled Castes population has been recorded in section 24 (1st Nagpada), whereas the lowest/negligible percentage (0.1 percent) of such population has been observed in section 12 (Bhuleshwar) and 7 (Chakala). All sections except section 4 (Fort North), 15 (Fanaswadi) and 38 (Lovegrove) registered lower percentages of Scheduled Castes population in 2001 as compared to 1991 Census. Even in section 24 (1st Nagpada), which has recorded highest percentage of Scheduled Castes population, has declined in 2001 as compared to 1991 Census when it was 22.4 percent.

The Scheduled Tribes population numbering 20,666 in 2001 in the district constitute 0.6 of the total population of the district as against 0.9 percent in 1991 Census. While 16 sections (3, 5, 8, 9, 10, 12, 13, 15, 18, 19, 20, 24, 25, 28, 31 & 35) have recorded increase in the proportion of Scheduled Tribes population, the remaining 22 sections have recorded a decline in proportion of Scheduled Tribes to total population of the wards.

The concentration of Scheduled Tribes population in 2001 is highest in Section 2 (Middle and Lower Colaba) with 3.3 percent and the lowest/negligible in Khara Talao. In 2001Census, one section i.e. 7 (Chakala) has recorded 'nil' Scheduled Tribes population.

Table -xliii gives the proportion of main workers, marginal workers and non-workers in Mumbai district 2001. The work participation rate for total workers is defined as the percentage of total workers to total population. In a similar way it is defined for main and marginal workers. 2001 Census recorded 37.5 percent of Mumbai district population as main workers, 1.8 percent as marginal workers and the remaining 60.7 percent as non workers. The corresponding figures for the state are 35.9 percent. 6.6 percent and 57.5 percent. It is seen that the proportion of persons engaged in the economically productive activity to total population for the Mumbai district is 39.3 percent compared to the state average of 42.5 percent in 2001 census.

Among the 9 wards, C' Ward has recorded the highest percentage (48.9 percent) of main workers and F/S' ward least (33.6 percent) percentage of main workers. Out of 9 wards 4 wards (A, B, C, & D) work participation rate is higher than the district (37.5 percent). Among the main workers male participation rate in the district is 56.9 perent while that of females is 12.5 percent. Among the marginal workers, male participation rate in the district is 2.3 percent while that of females in 1.3 percent. Within the district among 9 wards the highest proportion of marginal workers of 2.4 percent has been noticed in G/N Ward and the lowest 1.1 percent in B' Ward and D' Ward.

Non-workers constitute 60.7 percent of the population of the district. Sex differentials reveal that the proportion of male non-workers is at 40.8 percent and that of female non-workers is at 86.3 percent. Within the 9 wards of the district, the highest proportion of non-workers has been observed at 64.5 perent in F/S ward and the lowest in 49.6 percent in C' Ward.

(viii) Major Social and Cultural events, Natural and Administrative developments and significant activities during the decade.

One major administrative development happened in the district is the creation of the newly formed district as Mumbai. Till April 1950, Mumbai was a group of seven islands reclaimedint one by bridging the beaches between the islands. After 1950. Greater Mumbai district was formed with the merger of Mumbai and Mumbai suburban. But the uncontrolled population influx to the suburban area necessitated planned development of the suburb and other infrastructural facilities. For administrative purpose, the government vide notification No.REN 2680/855/ CR-448/M-10 dated 1st October 1990 separated Greater Bombay district into two as " Mumbai " and "Mumbai (Suburban)". Thus Mumbai is born on 1.10.1990 as an independent district.

(ix)Brief description of places of religious, historical or archaeological importance and places of tourist interest in the towns of the district.

The city of Mumbai is often described rightly as epitome of India. Its population comprises men and women of all castes, creeds and communities from all states of India and even from abroad. Naturally many languages, many religious and social practices are followed by them. Even though Mumbai is predominantly inhabited by Hindus of different states of India, their feasts and festivals are found common.

Undoubtedly fairs have a close association with festivals. Even foreign travellers and historian have recorded important festivals and fairs in Mumbai and articles of special exellence available in them. Fairs are the meeting ground of livestock and agricultural commodities, many cultures of crafts and motifs of ideas and designs etc. In Mumbai district 7 fairs are held in a year where lakhs of people attend. The 7 fairs held are as follows :-

i) Mahalakshmi fair at Mahalakshmi Ashvina Sud 1 to Ashvina Sud 10.

ii) Shri Lakshmi Narayan fair at Gowalia Tank Ashvina Sud 12 to Ashvina Vad 6.

iii) Shri Vithoba fair at Vadala (west) Ashadh Sud 10 to Ashadh Sud 12.

iv) Mankeshwar fair at Reay Road Shravana Vad 5 to Shravana Vad 9.

v) Pir Sayed Ahmad Ali Shah Kadri Urus at Dongri 6th Rajab to 8th Rajab.

(x) Major characteristics of the district, contribution of the district in the form of any historical figure associated with the district

Sir Bartle Friar's visionary foresight saw some great landmarks for the present generation of Mumbai. He demolished all waste and outdated structures and put forward plans for some magnificent structures. His ideas later came true in the form of old secretariate building, University Library Town Hall, High Court and Post and Telegraph office buildings. All these buildings were built in a line facing the sea. The other prominent buildings built in this style are Elphinston College, Victoria and Albert museum, Elphinston Middle School, Arts School, Gokuldas

Tejpal Hospital, Sailors Home, Chhatrapati Shivaji Terminus and Brihanmumbai Municipal Corporation etc. The efforts of Government, Municipal Corporation, Private Companies and ever-cautious citizen were monumental in building the present mega city of Mumbai.

There are many structures, which are famous for their architectural beauties. Gateway of India (Traditional Indian style) Taj Mahal Hotel, Prince of Wales Museum (Indian style), St. Andrew's Church (classical Gothic), High Court (English Gothic), St. Thomas Cathedral (partly Gothic), Secretariat (Vatican Gothic), University (French Gothic), Royal Institute of Science (cultural renaissance style), B.B. & C.I. Churchgate – WR. Headquarter (Gothic Indian), Victoria Terminus (Italian Gothic), Municipal Corporation headquarters (Old Gothic), General Post Office, Town Hall, Victoria and Albert Museum (Italian Renaissance**).** Ruins of Mumbai fort are still visible in the precincts of INS Angre even today. Similarly one can travel back in the history by observing the walls of fort George out side St. George Hospital. Old secretariate building now houses courts and Government offices and historical building Hornby House near Lion Gate has now converted into Great Western Hotel.

Mumbai has immensely contributed towards the building of modern India. Numerous political, social, cultural and economic events / movements like Royal Asiatic Society (1805), Students Literary and scientific Society (1848), Sir J.J. School of Art (1877), Prarthana Samaj (1868) Arya Samaj (1875), Theosophical Society (1875), the 1st conference of the Indian National Congress (1885), Workers movement (1885), Quit India Movement (1942) have started for the first time in Mumbai. It has given many towering personalities to the nation like industrialists, social workers, scholars and researchers, writers, and artists.

Mumbai megapolis is leading in national and international business, production industry, market for daily use goods and financial business. It is known as the economic capital of India. The headquarters of Reserve Bank of India and State Bank of India are located in this city. The Bombay Stock Exchange, which controls the Share Market, is the pride of Mumbai. The industries located here produce commodities like Cloth, Chemicals, Paint, Fertilizer, Engineering goods, Vehicles, Printing, Silk, and Artificial thread, Oil, Soap, Plastic etc. It is also the important centre for production of hindi motion pictures and tele serials. The Natural gas and mineral oil produced at Bombay High supplied to Mumbai refineries through pipelines.

The first tram services pulled by horses were started in the city in 9th May 1874. Later in 7th May 1907 their place were taken by electric Trams. But due to the availability of other fast transport sources the tram services were stopped functioning from 31st May 1964 onwards. Now transport facilities like locals run by Western and Central Railways, BEST buses, taxies and private vehicles are available. Mumbai Port Trust looks after administration of ports. Navy's Western Naval Command is also located in this district.

Cultural diversity is one of the major characteristics of the district. The cultural activities are preserved by local populace especially the Maharashtrians. Mumbai has been the centre of activities and place of evolution of different political social economic and art movement. People from different countries, states with different languages and religions came to Mumbai for business, service and settled here.They contributed immensely for the development of Mumbai. Newspapers and periodicals of English, Marathi, Hindi, Gujarati, Sindhi, and Urdu etc. are published from here. Mumbai Samachar (Gujarati) is the oldest newspaper in India. Marathi stage of Mumbai has been acknowledged as one of the most experimental and along with this English, Gujarati and Hindi dramas and cultural shows are also organized.

Stadiums like Wankhede (Cricket), Brabourne (Foot ball, Hockey), Cooperage (Foot ball), Vallabhbhai Patel (Wrestling) Priyadarshani (Track and field) are located in this district. Bhartiya Krida Kendra (Dadar), Kamgar Krida Kendra (Elphinston) are famous for Indian sports. Mumbai has given many national and international players to the nation. Mahalaxmi racecourse, famous for horse race is also located here.

Institutes

Baba Atomic Research Centre, Haffkins Institute, Nehru Planetarium and Nehru Science Centre and

Tata Institute of Fundamental Research have been acting as the barometer of scientific and technological development of the nation. In addition to these Tata Institute of Social Science, International Institute of Population Studies have been engaged in research in social science and demography.

A brief description of the settlements in Mumbai District

Fort

Fort area is the heart of Mumbai district. It is surrounded by Arabian Sea. A luster of skyscrapers having government offices, headquarters of trading/ business companies, five star, three star hotels, airline, sea transport companies, schools, colleges, Mumbai University, and cinema halls etc covers this area. Headquarters of many nationalized, co-operative banks, insurance companies, head post office printing press, etc. are also located. Multistoried buildings like stock exchange tower, overseas tele-communication centre, Reserve Bank of India and many more five stars hotel are dotting the skyline of this area. Apart from these the seat of power of the State Government i.e. Vidhan Bhavan and Mantralaya are also located in the district.

Markets

The area surrounded by Lokmanya Tilak Road, Shyamaldas Gandhi Road, Rajaram Mohan Roi Road, Shaukat Ali Road, the part of Kamathipura, Nagpada is known as Market area. Central Railway line also bound it to the east and Western Railway line to the west. This area is famous for trading business. Area wise demarcation is found for particular type of trading business. Trading of furniture, machinery, scent unani medicene etc. is found along Mohammad Ali Road and Ibrahim Rahimalullah Road. The Muslim community is mostly engaged in these types of business. Gujarathi communities dominate in the business of grain and grocery (Mandvi, Dongri and Danabunder area), thread and cloth (Mulji Jetha Market and Mangaldas Market) gold, silver & diamond (Zaveri Bazar). Mumbadevi, Tambakata, Nagdevi street, Shaikh Memon street etc. are famous for shops selling same type of goods. Lohar Chawl, Sutar Chawl are the examples of streets having shops selling particular types of goods.

Hi–fi locality

Parel and Byculla were famous for the rich peoples locality during the days gone by. The rich ones preferred later Malbar Hill. Bunglows are given way to multi–stories buildings/structures. Industrialists, businessmen, politicians, cine stars etc. are mainly found in this area. Western culture is mainly found among these people. During the last ten years the Cuff-Parade area has become the most sought after. Due to this the real estate cost has risen tremendously along this belt.

Industrial Area and Lower Middle Class locality

This locality is found at the north side of the Markets area. It is extended upto Dadar at the north and Mumbai ports at the east side. Industrial colonies are found in Parel, Worli and Tadwadi, which manufacture various types of goods. In addition to these chemical factories are found in Shivdi and engineering factories are found in Mazgaon. Central and Western Railways have their workshops at Parel, Mahalaxmi and Lower Parel. The mill workers occupied most of the chawls. But now-a-days due to the closure of the mills the occupants are forced to engaged in other works. The conditions of the chawls are dilapidated most of them were built before independence. Slums are found along both sides of Dr. E. Moses and Senapati Bapat Roads.

Mumbai Docks

Mumbai docks are found at the eastern coastal area of Mumbai islands. The area of the docks are spread upto Turbhe and Butcher islands. Sassoon dock, which is located at the southern tip of the island is reserved for fishing activities. During the earlier period the foreign passenger traffic was handled in the Apollo Bunder. But now it is limited to only local traffic. Ballard Pier is the main port, which now controls foreign passenger traffic while Alexandra, India and Princess docks controls goods traffic. Apart from these the small scale trade is done at small ports like Modi, Mallet, Kasaralkadi, Nutak Haji, Shivdi etc. Petroleum is unloaded at Turbhe and Butcher islands. Indian Navy's Mazgaon dock is also located here. Of the total export and import in Indian Ports, Mumbai port controls about 43 percent import and 22 percent export. Apart from

crude oil, iron, steel and ready made goods also imported. Mumbai ports cater the needs of not only Maharashtra but also of Western Madhya Pradesh, Gujarat, Rajasthan, Uttar Pradesh, Andhra Pradesh and some part of Karnataka. To ease the pressure off the Mumbai ports, in 1971 Nhava – Sheva port was undertaken. Now a full-fledged Jawaharlal Nehru Port is available for the import – exports.

Middle Class Locality

'Bombay Improvement Trust' started building residential complexes in Matunga. But after some years the project was shelved. Later during the 2nd world war residential complexes were built arround Dadar, Shivdi and Wadala. Past two decades also witnessed the residential complexes of rich coming up alongwith the middle class in Prabhadevi and Worli area. Asia's biggest slum Dharavi is located to the north of these areas.

(xi) Scope of Town Directory

Information on this aspect is furnished in detail in the village and town directory statements and in a consolidated form in the appendix and also in the tables presented. The non-census information collected at the village level or town level by the Tahsildar / chief officer was scrutinized and verified in each district by the district planning officer / district statistical officer. The Collectors were also requested to once again reverify the data in case serious discrepancies were observed. Logical tests were applied to the data and the officials of this directorate visited the districts to revalidate the data. Besides this, the non-census information was cross-checked with the parent department. For example information on electricity was cross checked with Maharashtra State Electricity Board, that on roads with Public Works Department, on health with the Directorate of Health and so on.

Greater Mumbai is one of the progressive cities in the field of education.Even before the independence, a large number of self-less social workers had set up schools and colleges. After independence the Government had made major efforts for increasing all educational levels in various societies. The special concessions and scholarships were provided for the deserving and the under privileged students. The expenditure on the education was gradually raised during each five year plan with a view to provide educational facilities to those who cannot attend regular day schools on account of age and their domestic difficulties. Government has been continuously encouraging for opening night schools, Open Universities and correspondence courses. Workers in factory areas and other business centers in the city are benefited by these institutions. In respect of primary education, secondary education and higher education, college and technical education including medical education the number of institutions increased rapidly. In case of private agencies, they also run school, colleges, technical and medical colleges and institutions. The Mumbai University established in 1857 has jurisdiction over Greater Mumbai.The University also conducts postgraduate institutions and historical research centers.

It may be mentioned that on an average the ratio of population to these institutions in the city work out as 0.2 primary schools per 1,000 population, 0.1 middle schools and 0.1 secondary schools in the city.

Medical Facilities

Improvement in the general health of people is reflected in broad terms in the expectation of life at birth. The average birth rate and death rate for children has reduced from year to year in Mumbai. In 2001 the Mumbai City has 84 Hospitals, 250 Dispensaries, 112 Health Centres, 21 Family Welfare Centres, 19 TB Hospitals and other medical institutions are available in the city. During 2001 there are 23,088 beds in the medical institutions.

In public health activity, Mumbai Municipal Corporation is primarily concerned with implementation of population control and family welfare programmes.

PART B
PRIMARY CENSUS ABSTRACT

Brief note on Primary Census Abstract

The first census of the third millennium and twenty first century the Census of India, 2001 was the 14th continuous and uninterrupted Indian census since 1872. Thus, 2001 Census will provide data on population and its characteristics marking transition from one century and millennium to another.

The gigantic operation of Population Enumeration (considered by many to be the single largest and complex peace time administrative exercise in the world) was made possible due to the door to door universal canvassing of the Household Schedule by about 2 million enumerators and supervisors covering 593 districts, 5,463 sub-districts, 5,161 towns and 638,588 villages. The comprehensive Household Schedule which replaced the individual slip had three parts and two sides A and B. Part I contained the Location Particulars; Part II related to the Individual Particulars and Part III contained questions for Household engaged in Cultivation/Plantation . The part II of the Household Schedule had 39 columns and 23 questions all of which were universally canvassed and no sampling was resorted to during enumeration.

Data Processing

A quantum leap was made in the technology front while processing the Census 2001 data both for Houselisting and Population Enumeration. The Census schedules for both the phases were scanned through high speed scanners in fifteen data centers across the country and hand-written data from the schedules were converted into digitized form through Intelligent Character Reading (ICR) software for creation of ASCII records for further processing. The designing and formatting of the Household Schedule had to be done very carefully using specialized software so as to ensure uniformity, which was an essential pre-requisite for scanning. The selection of appropriate state-of-art technology in data processing has made it possible to produce all the Houselisting as well as Population Enumeration tables on full count basis for the first time in the history of Census. For Census 2001, about 202 million schedules consisting of about 1,028 million records were scanned and processed within a span of only 10 months starting October, 2002.

Task Force on Quality Assurance

After the data is processed, it is expedient on the part of the data producing agency to satisfy itself about its quality before putting the same in public domain. This has to be done mainly through the process of internal consistency, comparison with similar data in the past and also through validation with likewise data if available, from external sources. Quite often the local knowledge and perception has to be brought into play to understand both the existing and the new emerging trends of population distribution and characteristics. The other very important aspect of the data quality is to ensure complete coverage of all geographical areas especially for the population enumeration phase where the data is disseminated right up to the village level in the rural areas and the ward level in the urban areas. Thus ensuring the complete coverage and correct geographical linkage of each enumeration block was one of the major planks of the quality control, specially for small area population statistics.

A very comprehensive check and edit mechanism was put in place to objectively examine the preliminary Census 2001 Population Enumeration results and finally clear them for use. The responsibility of the final clearance of data was with the Task Force on Quality Assurance (TFQA), headed by the Registrar General and Census Commissioner, India. The other members of the TFQA were the Heads and senior officers of the Census Division, Data Processing Division, Map Division, Demography Division and Social Studies Division. The Directors of Census Operations were co-opted as members whenever the TFQA discussed the data for their States/Union territories. The Directors and their senior officers were required to make detailed presentations of data for their own state both in respect to the

quality and the coverage and only after the full possible cleared.

There has been a major departure in Census 2001 from the past in respect of the procedure followed for finalization of the Scheduled Castes and the Scheduled Tribes population. In the earlier censuses, the total Scheduled Castes and Scheduled Tribes populations were finalized at the time of the manual compilation of the Primary Census Abstracts (PCA) at the Regional Tabulation Offices which were specially set up for this purpose. The individual Scheduled Castes and the Scheduled Tribes population for each state was finalized much later based on manual coding done by the coders. In 2001 Census, each individual Scheduled Caste and the Scheduled Tribe have been coded directly on the computers by the Data Entry Operators through a process known as Computer Assisted Coding (CAC) and taken up along with the processing of PCA data. The CAC process involves pulling down, from the relevant dictionary of the Scheduled Castes and the Scheduled Tribes, on the computer screen and coding from the dictionary by referring to the image of the specific individual entry in the Household Schedule appearing on the screen. The CAC of the response on Religion wherever required, was also undertaken along with the processing of PCA. This is because the Scheduled Castes status had to be determined in relation to the religion of the individual. Two Special Task Forces, one on Religion and the other on Scheduled Castes/ Scheduled Tribes were constituted for scrutiny and appropriate classification of these responses.

The main task of the Special Task Force on Religion was to appropriately merge or group the new responses encountered and code it into the appropriate religious community based on available literature and local knowledge. The Special Task Force on Scheduled Castes and Scheduled Tribes examined the different Scheduled Castes and Scheduled Tribes entries encountered and classified these into appropriate category of the Scheduled Castes or the Scheduled Tribes principally based on the Presidential Notification and the available literature. Thus a very systematic and scientific mechanism was operationalised to firm up the individual religion and the individual Scheduled Castes/Tribes returns. The Scheduled Castes and the Scheduled Tribes population in 2001 Census, is thus being finalized by aggregating the population data for individual Scheduled Castes and the Scheduled Tribes at appropriate geographical levels.

The entire work relating to the data validation and scrutiny was completed by all the States/Union Territories under the overall supervision and monitoring of the Census Division of the Office of the Registrar General, India with active cooperation and support of the Social Studies Division, Data Processing Division, Data Dissemination Division and Map Division.

Primary Census Abstract

The Primary Census Abstract which is yet another important publication of 2001 Census gives basic information on Area, Total Households, Total population, Scheduled Castes, Scheduled Tribes population, Population in the age group 0-6, Literates, Main workers and Marginal workers classified by the four broad industrial categories, namely, (i) Cultivators, (ii) Agricultural labourers, (iii) Household Industry Workers, and (iv) Other workers and also Non-workers. The characteristics of the Total Population includes Scheduled Castes, Scheduled Tribes, Institutional and Houseless population and are presented by sex and rural-urban residence. This data is presented at different levels, namely, India, States/Union territories, Districts and Cities, Urban Agglomerations (Population 1,00,000 and above) in three different tables. In addition, the Appendix of said publication provides Houseless and Institutional Households and their population by residence and sex for 2001 for India, State and Union territory.

Apart from the India and State/Union Territory volumes for Primary Census Abstract, the District Census Handbook contains District Primary Census Abstract, Appendix to District Primary Census Abstract, Primary Census Abstract for Scheduled Castes, Primary Census Abstract for Scheduled Tribes, Village Primary Census Abstract and Urban Primary Census Abstract of the concerned district in the state.

It was for the first time at the 1981 Census that the Primary Census Abstract (PCA) was brought out for the Scheduled Castes and the Scheduled Tribes separately on the pattern of General Primary Census Abstract. This practice was continued in 1991 also. In the 1961 and 1971 Censuses, such data were made available in Table C-VIII-Social and Cultural table and to some extent in the series 'Special Tables for Scheduled Castes/Scheduled Tribes'.

The format of Primary Census Abstract has been restructured slightly in the 2001 Census as compared to that of 1991 Census. The nine-fold industrial classification of main workers given in the Primary Census Abstract of 1991 Census has been discontinued and its place, four-fold industrial classification of both 'main workers' and 'marginal workers' are included. In 1981 census only main workers were presented in to four categories. One of the novel features of the primary census abstract of 1991 census was the presentation of data of the population of age group 0-6 is continued in 2001 Census also. This will help the data users in better analysis and understanding of this literacy data.

Level of presentation in District Census Handbooks:

The Primary Census Abstract data in different PCAs are presented at different levels. The level of presentation of Primary Census Abstracts are as under:

	Name of the Primary Census Abstract	Level of presentation
1.	District Primary Census Abstract	District/CD Block/UA/City/Town
2.	Primary Census Abstract for Scheduled Castes	District/CD Block/Town
3.	Primary Census Abstract for Scheduled Tribes	District/CD Block/Town
4.	Village Primary Census Abstract	CD Block/Village wise
5.	Urban Primary Census Abstract	Town/Ward level

The PCA Data for villages was presented CD Block wise for the first time in 1991 Census. This practice is continued in 2001 Census also. The data for each CD Block is presented both for rural and urban areas separately. All the villages within the CD Block constitute the rural portion and the Census Towns and Outgrowths are shown under the urban portion of the CD Block. In case a CD Block is spread over two or more districts, than portion which falls within the district is presented, the data pertaining to remaining portion of the CD Block is presented in the concerned District Census Handbook. The data in the Urban Primary Census Abstract for each town as well as for town with outgrowths in the district are presented. The data for all the wards and the outgrowths of the town(s) are also presented separately below the concerned town(s).

The District Primary Census Abstract is presented in 59 columns. The Primary Census Abstract for Scheduled Castes and Primary Census Abstract for Scheduled Tribes are presented in 52 columns. The Village Primary Census Abstract and Urban Primary Census Abstract are presented in 58 columns.

The concepts and definitions used in the column heading are explained under the sub heading 'Census Concepts' in the Analytical Note. The term 'Total Population' includes the Scheduled Castes, the Scheduled Tribes, the Institutional and the Houseless populations. The explanation regarding area figures presented at various level in the Primary Census Abstracts are as follows:

Area Figures

The area figures supplied by local revenue authorities of the district in respect of tahsils, Police Stations and by the local bodies in respect of towns are given in square kilometres. The area figures of the villages supplied by the Tahsildars in acres have been converted and shown in hectares. The area figures of the CD Block is the total of the village areas coming under each CD Block. The area figures for the district are the same as adopted by the Surveyor General of India to maintain uniformity at the national level. The total area figures of all the tahsils/CD Blocks within the district may not tally with area figures of the district because former represents land use area only. Similarly, the total of all the villages may not tally with the entire rural of Police Station/ Tahsil. The difference may be due to the fact that while the area covered by hills, forests and rivers etc, have been accounted in the Tahsils and P.S. level the same may not be covered under the area of the villages. Apart from this it may also differ due to varying methods of computation adopted at different levels.

An appendix to District Primary Census Abstract has also been furnished showing urban enumeration block-wise particulars on Total Population, the Scheduled Castes Population and the Scheduled Tribes Population for each town.

ANNEXURE – I Not relevant For Mumbai District

ANNEXURE - II

Fertility and Mortality, 1991 Census

Fertility Levels :

Fertility is a major component of population growth. In the 1991 Census questions on fertility related to age at marriage, number of surviving children, number of children ever born alive and children born alive during the last year were asked. The first three questions were asked to all ever married women and last questions related to currently married women. The measures of fertility worked out are based on the F-series of 1991 Census pertaining to Maharashtra State.

Mortality Levels :

Information on the question on children ever born and children surviving canvassed for all ever-married women have been tabulated by age of the mother. From this estimates of the child mortality have been worked out by using brass technique.

* Mumbai district was included in undivided Greater Bombay District in 1991 census.

Mortality

From the estimate of child mortality [number of deaths by ages 1, 2, 3 and 5 given above as q(1), q (2), q (3) and q (5)] it is observed that the level of child mortality in the district is substantially lower compared to the state in 1991 census. A notable feature is the lower female mortality compared to male mortality in the district as against higher female mortality for the state. However, the sex differentials in child mortality appear to be more pronounced in the state compared to the district.

* Mumbai district was included in undivided Greater Bombay District in 1991 census.

Fertility

A perusal of the various fertility measures namely GFR (General Fertility Rates), GMFR (General Marital Fertility Rate), TFR (Total Fertility Rate), TMFR (Total Marital Fertility Rate), CBR (Crudes Birth Rate) for the district vis-à-vis State reveals lower rates for the district as compared to State as a whole. In 1981, the GFR, GMFR, TFR, TMFR & CBR were 116, 162, 3.4, 5.1 and 28.0 respectively as compared with State average of 134, 168, 4.3, 5.2, and 31.8 in Census 1981. Similar trend is observed in 1991 Census. In 1991 GFR, GMFR, TFR, TMFR & CBR were 103, 143, 3.0, 5.0 and 25.9 respectively for the district as against the State average of 124, 157, 3.7, 5.2, and 29.8 respectively.

It may be seen that, while during both Census 1981 and 1991 the fertility rates are lower for the district than the State as a whole. But the gap in fertility rates between the district and the State has reduced for TFR and TMFR in 1991 census.

Mean age at marriage

Mean age at marriage is recorded higher for the district than the State in 1991.

Child Woman Ratio

The child woman ratio is recorded lower for the district compared to the state in 1991 Census.

Note: # The 1991 Census could not be conducted in 33 villages of Akkalkuwa and Akrani C.D. Blocks of Dhule District. The population of these villages (Persons 16,052 Male 8,200 and Females 7,852) has been obtained from secondary sources and included in the population of district and Maharashtra. However, further details are not available.

* Mumbai district was included in undivided Greater Bombay District in 1991 census.

Source: Table C-2 of Part IV-A, C series - Socio Cultural Tables, 1991 census.

When compared to 1991 data, it is found that during the last decade the literacy rate of the state has jumped from 64.9 per cent to 76.9 per cent.

Since in 1991, Mumbai district was included in undivided Greater Bombay district, the comparison has not been attempted.
