Cultural-Dancing Troupe of Chin-Kuki-Mizos

Presentation and exhibition of cultural dances during the *Kut* celebration by the ethnic tribes of Chin-Kuki-Mizo community has become a regular feature in the recent years. The dancers usually attired in their traditional dress presents the show to the tune of music and song. The festival is a post-harvest one observed and celebrated in honour and praise of *God* who blessed the people with good crops. It was celebrated with feasting, dancing and drinking of locally prepared rice-beer. The festival has become popular with its celebration accompanied with cultural dances by the ethnic-tribes, praises to *God* and varied forms of entertainment.

(xvi) Village Directory data of Singngat T.D. Block 205-219

(c) Appendixes to Village Directory : 220-238

Appendix I : Abstract of Educational, Medical and Other Amenities in villages-T.D. Block level

Appendix IA : Villlages by number of Primary Schools

Appendix IB : Villages by Primary, Middle and Secondary Schools

Appendix IC : Villages with different sources of drinking water facilities available

Appendix II : Villages with 5,000 and above population which do not have one or more amenities available

Appendix IV : T.D. Block wise list of inhabited villages where no amenity other than drinking water facility is available

Appendix V : Summary showing number of villages having or not having Scheduled Castes population

Appendix VI : Summary showing number of villages having or not having Scheduled Tribes population

Appendix VIIA: List of villages according to the proportion of the Scheduled Castes to the total population by ranges

Appendix VIIB: List of villages according to the proportion of the Scheduled Tribes to the total population by ranges

PART-B : PRIMARY CENSUS ABSTRACT

(a) Brief note on Primary Census Abstract 240-242

(b) District Primary Census Abstract (General) 243-249

Primary Census Abstract for Scheduled Castes 251-257

Primary Census Abstract for Scheduled Tribes 259-265

T.D. Block wise Village Primary Census Abstract 267-349

Foreword

The District Census Handbook (DCHB) published by Census Organisation since 1951 census is one of the important publications in the context of planning and development at grass-root level. The publication, which is brought out for each district, contains several demographic and socio-economic characteristics village-wise and town-wise of the district alongwith the status of availability of civic amenities infrastructural facilities, etc.

The scope of the DCHB was initially confined to a few Census Tables and Primary Census Abstract (PCA) of each village and town within the district. Thereafter, at successive censuses, its scope and coverage has been enlarged. The DCHB published at the 1961 census provided a descriptive account of the district, administrative statistics, census tables and a village and town directory including PCA. The 1971 census-DCHB series was in three parts: Part-A related to village and town directory, Part-B to village and town PCA and Part-C comprised analytical report, administrative statistics, district census tables and certain analytical tables based on PCA and amenity data in respect of villages. The 1981 census DCHB was in two parts: Part-A contained village and town directory and Part-B the PCA of village and town including the SCs and STs PCA up to tahsil/town levels. New features alongwith restructuring of the formats of village and town directory were added into it. In Village Directory, all amenities except electricity were brought together and if any amenity was not available in the referent village, the distance in broad ranges from the nearest place having such an amenity, was given. Information on new items such as adult literacy centres, primary health sub-centers and community health workers in the village were provided so as to meet the requirements of some of the Revised Minimum Needs Programme. Information on approach to the village was provided for the first time in the Village Directory so as to give the details on number of inaccessible villages in each district. In the Town Directory, a statement (IV-A) on slums was introduced to provide the details on civic and other amenities in the notified slums of Class I and Class II towns.

The 1991 census DCHB, by and large, followed the pattern of presentation of 1981 census, except the format of PCA was restuctured. Nine-fold industrial classification of main workers was given against the four-fold industrial classification presented in the 1981 census. In addition, sex-wise population in 0-6 age group was included in the PCA for the first time with a view to enable the data users to compile more realistic literacy rate as all children below 7 years of age had been treated as illiterate at the time of 1991 census. One of the important innovations in the 1991 census was the Community Development Block (CD Block) level presentation of village directory and PCA data instead of the traditional tahsil/taluk/PS level presentation. It was expected that the presentation of village directory and PCA data at CD block level will help the planners in formulation of micro level development plans, CD block being lowest administrative unit.

The present series of 2001 census DCHBs have been made more informative and exhaustive in terms of coverage and content. The Village Directory has been enlarged in scope by including a number of other facilities like banking, recreational and cultural facilities, newspapers and magazines and most important commodity manufactured in village. Income and expenditure of gram panchayat, wherever possible, has been provided. Apart from these, more details on distance(s) at which basic amenities are available (if not available in the village), are given. This includes educational facilities (namely primary and middle schools and college), medical facilities (viz. Allopathic Hospital, Maternity & Child Welfare Centre and Primary health Centre), drinking water, post & telegraph (post office and phone), communication, bank, credit societies and recreational facilities. In Town Directory, the statement on Slums has been modified and its coverage enlarged by including details on all slums instead of 'notified slums'. The information is given in case of all

statutory towns irrespective of their class, against only Class I and Class II towns in the 1981 and 1991 censuses. The basic amenities available in the villages and towns are analysed in depth with the help of a number crossclassified inset tables and statements. Two other significant additions in the publication are inclusion of 'motif' highlighting significant characteristic of the district and analytical notes as annexures. The analytical notes on (I) fertility and mortality and (II) various measures of fertility and mean age at marriage are prepared based on 1991 Census. Whereas, in the notes relating to (I) percentage distribution of migrants by place of birth/place of last residence, (II) main religions, (III) marital status of population, (IV) age, sex and education, and (V) distribution of spectrum of mother tongue, nature and extent of changes occurred in the district in its basic socio-demographic features during the decade 1991-2001 are analysed. The eight digits permanent location code (PLCN) to all the villages and towns have been assigned keeping in view the future needs.

The village and town level amenity data have been collected, compiled and computerised in prescribed record structure under the supervision of Shri Kh. Dinamani Singh, Director of Census Operations Manipur. Thereafter, efforts have been made to ensure comparability of the information with that of 1991 census data and the information brought out by the respective state governments in their annual reports and statistical handbooks for various years after 1991. The task of planning, designing and coordination of this publication was carried out by Shri R.G. Mitra, former Deputy Registrar General (C&T) and Dr. I.C. Agrawal, Assistant Registrar General of Social Studies Division. Dr. R.P. Singh, former Deputy Registrar General (Map) provided the technical guidance in the preparation of maps. Whereas, Shri Anil Kumar Arora, Deputy Director of Data Processing Division who worked under the overall supervision of Shri Himakar, Addl. Director (EDP) helped in preparation of record structure for computerisation of village and town directory data and the programme for the generation of Village Directory and Town Directory statements including analytical inset tables. The draft District Census Handbook manuscripts received from the Census Directorates have been scrutinised in the Social Studies Division under the guidance of Shri S.L. Jain, Deputy Director and Shri R.K. Mehta, Assistant Director. I am thankful to all of them and others who have contributed to make this publication possible.

D.K.Sikri
Registrar General &
Census Commissioner, India

Dated:17.10.2006

Preface

The common perception is that population Census is simply a head count of the people of the country. But it is much more than that. It is the total process of collecting, compiling, analyzing or otherwise disseminating demographic, economic and social data at a specific point of time of all the people of the country. So it is the snapshot of the country's population and housing at a given point of time.

The Millennium Census moment was 00.00 hours of 1st March 2001, the referral time at which the snapshot of the population of the country was taken. This was a departure from the earlier Census tradition, as until the 1991 Census (except 1971), the Sunrise of 1st March of the relevant Census year was the Census moment. The enumeration of the houseless population was carried out on the night of 28th February, 2001.

In its history, population Census was conducted non-synchronously during 1865-1872. However, the first synchronous Census in India was held in 1881. Since then Censuses were taken every ten years.A series of publications were brought out from the results of Censuses. For Manipur State, publication of District Census Handbook is one such important publication which was brought out since 1951 Census and it continues till 2001. In 2001 Census, District Census Handbooks have been made more informative and exhaustive in its coverage and content. The basic amenities available in the villages and towns have been analysed the inset tables and statements. It contains Village Directory and Town Directory and Primary Census Abstract of Scheduled Castes and Scheduled Tribes and on the aspect of demographic characteristics, fertility, mortality, marital status, age, sex and education and mother tongue as annexures.

The data collected through Census are used for administration, planning, policy making and evaluation of various programmes by the Government, NGOs, research scholars/academicians and commercial/business enterprises.

The District Census Handbook of Manipur is the outcome of a joint venture of the Government of Manipur and the Census Organisation, Govt. of India, Ministry of Home Affairs. In preparing this volume we got wholehearted co-operation from the Directorate of Economics and Statistics, District Authorities, and Department of Information and Public Relations of the Manipur Government, and technical guidance and advice from the various divisions in the office of the Registrar General, India.

I am extremely grateful to Shri D.K.Sikri, Registrar General, India and Census Commissioner, India for his guidance and inspiration in bringing out this publication.I am equally grateful to Shri Jayanta Kumar Banthia, former Registrar General, India and Census Commissioner for his constant guidance and advice in the initial stage. I am thankful also to Shri R.G.Mitra, former Deputy Registrar General (C&T) for planning and designing and co-ordination of this publication, Shri Dr. I.C.Agarwal, Assistant Registrar General, and Shri S.L.Jain, Deputy Director, Social Studies Division, for finalising data and analytical notes, Shri Dr. R.P.Singh, Deputy Registrar General, Map Division for providing technical guidance in preparation of maps, Smt. Suman Prashar, Joint Director (for printing of these volume), Shri Himakar, Additional Director and Shri Anil Kumar Arora, Deputy Director, Data Processing Division, for record structure and data computerisation.

I would like to place on record my since thanks to Shri Kh.Dinamani Singh, I.A.S. former Director (since repatriated) assisted by Shri S.Birendra Singh, (since posted as Deputy Director, DCO,Nagaland) who played vital role at various stages of Census and the overall supervision of collection and compilation work for this volume. My thanks are also to all the concerned officers and officials Shri U.C.Lal, S.I.Grade I, Shri Dr.M.Manimohon Meetei ,Geographer, Shri R.K.Manisana, S.I.Grade II, Shri I.Jugin, S.I.Grade II and

Shri O.Jugindro Singh, Printing Inspector, for their painstaking labour and constant involvement while bringing out this publication. Their names are given separately in the column of acknowledgement

Last but not the least, I would be failing in my duty, if I miss all those who provided necessary help and support towards bringing out this publication, I thank them a lot.

(Y.Thamkishore Singh)
Director

District Highlights - 2001 Census

1. The decade population of the district during 1991-2001 is 29.4 per cent which is much higher than the state growth of 24.9 per cent.

2. The district ranks first in terms of area and fourth in population size among the 9 districts of the state.

3. It has a density of only 50 persons per sq. km against the state density of 103 persons.

4. Sex Ratio of the district is 944 females per 1000 males against 974 of the state.

5. The literacy rate of the district which 70.6 per cent compares very favourably with the state average of 70.5 per cent. Gender literacy gap of the district is however 14.6 per cent points against 19.8 per cent points of the state.

6. The district has no urban population.

7. The district is predominantly inhabited by different Scheduled Tribes and constitutes 93.2 per cent of the total population of the district.

8. Only 0.1 per cent of the total population are Scheduled Castes.

Definition of Census Town :

All places which satisfy or are expected to satisfy the following criteria are treated as Census Towns :

i) A minimum population of 5,000;

ii) At least 75 per cent of the male working population engaged in non agricultural pursuits, and

iii) A density of population of at least 400 per square kilometre (1,000 per square mile).

ANALYTICAL NOTE

Analytical Note

(i) History and Scope of District Census Handbook :

The District Census Handbook is the only publication that incorporates the data down to village level for rural areas and to ward level for urban areas. The data published in the Handbook are very useful to planners, scholars and administrators for the purpose of village, block and district level planning. The publication is mainly divided into Town and Village District section consisting of the data on amenities available in towns and villages and Primary Census Abstract section consisting of the other demographic details.

The District Census Handbook was introduced for the first time in the 1951 Census. Until then, Census reports furnished data mostly up to the district/sub-division/town level. The idea behind the publication of District Census Handbook in 1951 for each district was to present valuable village wise information collected for the time in that Census concerning the social and economic life of the people. In the case of Manipur, only one State District Census Handbook was published, the state having only a single district till the period of 1961 Census. The Primary Census Abstract data were presented upto the village and Town level.

The content of the Handbook showed a number of changes in 1961 Census. While the Village Directory of 1961 Census was prepared in the same fashion as the Primary Census Abstract of 1951, a number of improvements were made by presentation of the population figures relating to Scheduled Castes and Scheduled Tribes, classification of workers into 9 industrial categories and addition of certain data on essential amenities. In 1961, maps and alphabetical list of villages for each sub-division were added in the District Census Handbooks. The District Census Handbook was divided into three parts, viz., Part I dealing with the general description of the district, Part-II dealing with the census tables and official statistics and Part – III dealing with the Village Directory.

In the 1971 Census, further improvements were made in the contents of the District Census Handbook.. The Census data part was delinked from the non-Census data part in the publication. The 1971 District Census Handbook was divided into three parts as follows:

Part - A - Village and Town Directory

Part - B - Village and Town wise Primary Census Abstract; and

Part -C - Analytical Report and Administration Statements and District Census Tables.

Of these, Part A and B were combined and published as one volume and while Part C was published as another volume. The Town Directory of Part A contained information on status, growth, history, physical aspects, civic and other amenities, etc. in respect of each town within the district while the Village Directory gave data on amenities and land use for each village within the sub-division. Part B gave the Primary Census Abstract of all the villages and towns within each sub-division.

The contents of the District Census Handbook of 1981 were, by and large, similar to those adopted for the 1971 Census. However, to avoid delay in publication, the second volume of the 1971 Census Handbook was dropped and the District Census Handbooks were brought out in two parts, Part-A containing Village/Town Directory and Part-B containing Town/Village wise Primary Census Abstract. In smaller districts these parts were combined in one volume but in bigger districts the Handbooks were published in two volumes, one for Part-A and another for Part-B. A major change was that in the Primary Census Abstract of 1981 the main workers were classified into four broad categories only against the traditional nine categories of the past censuses. However, data on marginal workers in the Primary Census Abstract and separate Primary Census Abstracts for Scheduled Castes and Scheduled Tribes were additional features of 1981.

The District Census Handbook of 1991 was also brought out almost in the same fashion as that of 1981 in two parts, namely, Part-A-Village and Town Directory and Part-B-Village and Town Primary Census Abstract. As far as possible both Part A and Part B were included in the same volume as the data given therein are closely interrelated. However, in respect of some bigger districts

of a few major states it was not possible to bring out the two parts together, in such cases separate volumes were brought out for each part.. The additional data on marginal workers of 1981 was also retained in 1991. A major departure in 1991 Census was, however, the presentation of data at Community/Tribal Development Block level instead of at sub-divisional level. Another significant improvement was the presentation of civic and other amenities data available in notified or recognised slums of Class I and II towns.

In 2001 a number of improvements in the presentation of data in the District Census Handbook of each district in a state has been made. The contents of the Village Directory have been expanded considerably. Village Directory now provides additional information about amenities regarding number of banks, number of agricultural credit societies, number of non-agricultural credit societies, number of co-operative societies and number of recreational and cultural facilities such as cinema/video hall, sports club and stadium/auditorium. Information on whether newspaper/magazine is received in the village regularly is also an additional item provided in the Village Directory for the first time. Income and expenditure of local bodies and names of most important commodities manufactured in the village are other information furnished in the Village Directory.

Census concepts regarding building, census house, household, rural areas, urban areas, urban agglomeration, mother tongue, literate, worker (main and marginal), non-worker, work participation rate, sex ratio, density, etc. have also been provided in the District Handbooks of 2001 Census. Besides these census concepts concepts on non-census items such as educational institutions, safe drinking water, system of sewerage, types of latrines, method of disposal of night soil, civic status of town, etc. are also provided in the District Census Handbook.

Important highlights observed in 1991 Census on certain aspects of the social and demographic characteristics of the population of the district are also included in district census handbook of 2001 Census as an innovation. These include brief notes on fertility, mortality and migration statistics, measures of fertility and mean age at marriage. Other 1991 Census items discussed are distribution of migrants by place of birth/ place of last residence, brief accounts of main religions found in the district, marital status of population, age, sex and education and distribution of different mother tongues returned in the district in 1991 Census. A significant improvement in 2001 is the introduction of a permanent location code system for each village in the state and the district. The permanent location code system will make comparison of the village level census data easier over a period of time.

(ii) Brief history of the District

The district of Churachandpur derives its name from the town of Churachandpur after Sir Churachand Singh, K.C.S.I.,C.B.S. the Maharaja of Manipur. It lies on the south-western part of Manipur between 24.0 N and 24.3 N latitutde and 93.15 E and 94.0 E longitude. The district is bounded on the north by Tamenglong District, on the east by the districts of Imphal and Chandel, on the south by Myanmar (Burma) and Mizoram and on the west bynthe State of Mizoram and Assam. The average altitude of the district is 914.0 metres above the mean.sea level. The area of the district as furnished by the Surveyor General of India is 4570.0 sq.km.

Historically, the district is charecterised by a stream of immigrants, mainly of the Kuki origin, from Burma and Chitagong Hill Tracts (now in Bangladesh)beginning right from the 15th and 16th century even upto the early part of this century. Depending on the period of migration these Kuki immigrants have been classified by various authers into the old Kuki group. On the basis of their languageand affinity to other social characteristics they are further classified into Northern-Chin sub-group and Kuki-Chin sub-group. They gradually spread throughout the district and other hilly area of Manipur from various directions in search of fertile and suitable habitation areas. In the process of control and supremacy there arose constant feuds and wars, mostly local, within the different factions of the migrant group as also between the migrant population and the original settlers. In the immediate pre-independence period they came into the limelight during the Kuki Rebellion of 1917-19. In December, 1917,the Kukis broke into open rebellion against the British in defiance of the order of conscription of labour corps for imployment in France during the First World War. The rebellion lasted till March,1919. Many lives were lost in the rebellion. During the Second World War the district further witnessed heavy military movement of the I.N.A. (Indian National Army of Netaji Subhaschandra bose) forces and the Japanese Army and their engagement against the Indian and the British Army. The spread of Christianity among the different sectionsof the people of the district in the beginning of the 20th century is another epoch-making achievement in the history of the district. From a small start the district now have a number of Christian organizations/

missionaries operating in all corners of the district. The spread of Christianity is still a continuing process.

Churachandpur district which was previously known as Manipur South District came into existence in the year 1969 alongwith the district reorganization of Manipur. Manipur was till thena single district Union Territory having only 10 Sus-Divisions. By an order of Manipur Government No. 20/39/69-D dated 12th November,1969, Manipur was divided into 5 districts having 25 Sub-Divisions. Under the said notification, the Churachandpur Sub-Division alongwith 15 hill villages of Jiribam Sub-Division were transferred to form Manipur South District. The District was further divided into 5 sub-divisions, namely, Tipaimukh, Thanlon, Churachandpur North, Churachandpur and Thinghat (presently known as Singngat). Since then there have been some minor territorial changes in the jurisdiction of the district. In 1972, 14 hill villages belonging to Jiribam sub-division of Manipur Central District (now Imphal district) were added to the administrative and revenue jurisdiction of Tipaimukh sub-division of the district. During 1981 and 1991 the district lost two hill villages belonging to Churachandpur sub-division. These hill villages were already lying within the geographical jurisdiction of Bishnupur district and the transfer to these villages to Bishnupur district was made in 1985 for administrative conveniences. During the intervening period the name of the district had also been changed Manipur South District to Churachandpur district.

The relevant Government order affecting the jurisdiction of the district are presented below :-

Subject	Government order with date
1. Creation of Manipur South District	Government Secrstariate order No.20/39/69-D dated 12, November 1969 (Gazette E-93 dated 15/2/72) Manipur
2. Formation of Tipaimukh, Thanlon, Churachandpur and Thinghat (Singngat Sub-Division)	- do -
3. Addition of 14 villages Jiribam Sub-Division Tipaimukh Sub-Division	Government of Manipur from Secretariate Planning and Development Order to No. 18/11/71-SC dared 14/2/72 (manipur Extra Ordinary Gazette No. 136-E-93 dated 15/ 2/72)
4. Change of the district name from Manipur South District to Churachandpur district	Government of Manipur Secretariate.-Revenue Deptt. Order No. 43/2/81-R (Pt) dated 15/7/83 (Manipur (Extra-ordinary Gazette No. 174 dated 5/8/ 83).
5. Transfer of 2 villages from Churachandpur Sub-Division to Bishnupur District.	Government of Manipur Revenue Deptt. Order No. 6/1/73-R (Pt-V) Dated 18/12 84 (Manipur Gazette No.37 dated 16/1/85)
6. Constitution of the Hill Areas of Manipur South District into Manipur South Autonomous District.	Government of Manipur, Planning and Development Deptt.No. 18/1/71-SC dated 14/1/72)
7. Dclaration of District and Sub-Division Head quarters.	Government of Manipur, Planning & Development Deptt. No. 18/1/71-SC dated 16/1/85)
8. Withdrawal of Churachandpur Municipality from the operation of the Manipur Municipality Act,1976	Government of Manipur, Secretariate Administration & Urban Development Deptt. No. 2/28/84-LSG (MUC) dated11/2/88 (Manipur Gazette No. 352 dated 11/2/88.
9. Withdrawal of Singngat Small Town from the Municipal operation of the ManipurUrban Municipality Act, 1976	Government of Manipur ,Administration Housing & Development Deptt. No. 3/10/77-LSG(NA) dated 11/2/88 (Manipur Gazette No.352 dated 11/2/88.

Churachandpur District now has 5 sub-Divisions and 6 Tribal Development Blocks (T.D.Blocks). Every Sub-Division except Churachandpur Sub-Division has one T.D.Block and in these sub-divisions, the jurisdiction of the T.D.Blocks concide with that of the respective sub-divisions. In Churachandpur sub-division alone there two T.D.Blocks. The names of the sub-divisions and the names of the T.D.Blocks within each sub-division along with their respective headquarters are given below :-

Sub-Division	Headquarters
1. Tipaimukh	Parbung
2. Thanlon	Thanlon
3. Churachandpur North	Henglep
4. Churachandpur	Churachandpur
5. Singngat	Singngat

T.D.Block	Headquarters
1. Parbung	Parbung
2. Thanlon	Thanlon
3. Henglep	Henglep
4. Churachandpur	Churachandpur
5. Samulamlan	Samulamlan
7. Singngat	Singngat

There is no statutory town in the district in 1991. Churachandpur town which was in existence since 1971 and which was the third biggest town in Manipur in 1981 was denotified by the State Government in 1988 as per the recommendation of the Hill Areas Commotee and placed under the administrative control of the Manipur South District Autonomous Council. Singngat NAC was also similarly denotified and placed under the control of the District Council. Out of these towns denotified by the State Government, Churachandpur town satisfied all the demographic characteristics of an urban area. The place is, therefore, taken as Census Town in 1991 after the consultation with the office of the Registrar General of India. Loktak Hydro Electric Project town a census town of 1981 covering the build-up areas of the Loktak Hydro Project, was also denotified in 1991 as it failed to fulfil the demographic characteristics of an urban area. Churachandpur which was a Census town in 1991 census ceased to be so in 2001. No census town is notified in 2001 Census for the entire district. Places within the district treated as urban in each census since 1971 census are below :-

Census Year	Places treated as urban	Status of the town	Remarks
1971	Churachandpur	NAC	Notified as a town for the first time
1981	Churachandpur	M	Denotified by State Govt. in 1988
	Singngat	NAC	- do -
	Loktak Hydro Electric Project	CT	Denotified on demographic consideration in 1991
1991	Churachandpur	CT	Churachandpur Municipality area of 1981
2001	Churachandpur	Rural	Denotified as Census Town

NAC = Notified Area Committee
M = Municipality
CT = Census Town

.(iii) Administrative set up

The district Magistrate-Cum-Deputy Commissioner (District Collector) is the head of the district. He is assisted by an Additional Deputy Commissioner/Additional District Magistrate and Assistant Commissioner by such other officers and staff as are appointed from time to time. Maintainace of law and order, revenue administration, economic development are the main duties of the District Administration. The district is divided into a number of administrative units (Sub-division) which are in the charge of Sub-Divisional Officer (Magistrate). The District has five such sub-divisions namely (I) Tipaimukh Sub-Division (II) Thanlon Sub-Division (III) Churachandpur North Sub-Division (IV) Churachandpur Sub-Division (V) Singngat Sub-Division having their headquarters respectively at Parbung, Thanlon, Henglep, Churachandpur and Singngat. Eacg Sub-Division is concurrently a Tribal Development Block and each Sub-Divisional Officer functions as Block Development Officer in their respective jurisdictions. However Churachandpur Sub-Division has an additional Tribal Development Block in the name of Samulamlan Tribal Development Block in charge of by a separate Block Development Officer who is junior in rank to that of a Sub-Divisional Officer. The number of sub-divisions in 2001 Census remained the same as in 1991 Census. Other district hads such as Superintendent of Police, Zonal Educational Officer, District Agriculture Officer and many other District Offices are located at Churachandpur District Headquarter.

The Hill Commissioner sitting in the State Secretariate at Imphal supervises the work of Hill Deputy Commissioners including that of Churachandpur District. Due to non-functioning of District Council, its affairs are looked after by the Deputy Commissioner. The District is located in the South-West region of the State, having an international border with Myanmar on its south.

The District Police is headed by Superintendent of Police assisted by Deputy Superintendent of Police. The judicial administration is looked after by Chief Judicial Magistrate posted in the District Headquarter.

Due to non-functioning of Autonomous District Council, its affairs are looked after by District Deputy Commissioner assisted by Chief Executive Officer.

(iv) Physical Features

Location and Size :- Churachandpur District lies in the South-Western part of Manipur. It lies between latitudes 23 56'43" N to 24 42'N and longitudes 92° 58'E to 93° 52'8"E approximately. It is bounded on the North by Tamenglong, Imphal East, Senapati, Bishnupur and Thoubal Districts, south by Mizoram and Myanmar (Burma), east by Chandel district and west by Assam State. The total area of the district is 4,570 sq.km. It is the largest district in Manipur.

Physiography

The district has a small velley portion extended from Manipur (Imphal) valley along the Khuga River basin while the rest of the major portion belongs to the rugged hilly terrain. Churachandpur district is divided into 3 hilly regions, viz.,i) Western Hilly Region, ii) Eastern Hilly Region and iii) Southern Hilly Region, based on geology, soils, topography, climate and natural vegetation. The Western Hilly Region occupies the west portion of Tuipilui river and Tuivai river. In this region there are three long and two small parallel hill ranges. In the western part, the Vangai range as high as 839 metres near Kangreng extending north-south from Doltang to Tipaimukh. The important peaks of this region are Upper Kharkhublen (811), Bharakhal (566), Tingmun (444), Thingradhar (342), etc. The second range divides the Barak and Tuivai rivers in the west and Tuibum and Tuijanglui rivers in the east. The Senvon peak located in the southern portion 1,341 metres high above the MSL is the highest peak of this range while other peaks are Khongjang (1,098). Parbung (1,022), Tolbung (840), Hrovakot (760), Taithu (644), Thingpan (522), etc. The third one streches from Natheilbok to Thanlon north to south as high as 1,55 metres near Thanlon and separates the Tuijanglui river and Tuipilui river. The other peaks are Thangnangbung (1,112), Sawaipai (874), etc. A small range as high as 1,529 metres start from Khongjang to Bungpuilon divides the tuibum river in the west, Tuiliyanlui river in the east and Tuijanglui river in the north. Pherjol (1,161), Phailian 91,043), etc. are the other peaks. The last one separates the Tuiliyanlui river in the west, Tuivai river in the east and Tuipilui river in the north extending north-south from Dialkhai to Sinzawl as high as 1,193 metres near Sumtuk.

The eastern hilly region lies east of Tuipilui and Tuivai rivers and north of the Singngat road. In this region a range stretches north-south from Nayang to Mualkui as high as 1,448 metres at Aina divides the Tuipilui river in the west, Tuivai river in the south, Tuililui river in the south-east and Leimatak river in the north-east. A small section of this range extends eastward at Moldak and separates the Leimatak and Tuililui rivers. The important peaks are Nayang (1,388), Kijuiliphai (1,207), Mualkui (845), Thieki (758), etc. From Nayang it extends eastward upto Khengjang, a peak as high as 1,561 metres divides the Irang river and Leimatak river. Another range extends north-south from Zongmakot to Singtampaozang as high as 1,699 metres at Mamun Lhang from which rover Leimatak has it source. The other peaks are Singtampaojang (1,174), Bemongzang (1,093),etc.This ranges devides the Tuililui river in the west,Tuila river in the east,Ruivel river in the south and Leimatak river in the north. The last parallel range extends from Lamuan to Buksao as high as 2,068 mtrs. near Ukha. It separates the Tuila river in the west, Khuga river and numbers of small streams falling into the Loktak Lake in the east. Nabil Khunou (1,915), Buksao (1,208), etc. are other peaks of this range. To the east of the Khuga river, a range extends from north to south direction as high as 1,924 mtrs. and divides the Khuga river and Tuining river. Two small ranges extends eastward. The Mt. Mulam (1,543) is located here.

The southersn hilly region comprises the southern portion of Singhat road. There are five small parallel ranges extending north- south. The western range deivides the Tuikui river in the west and Tuilak river in the east. The important peaks of this range are Mualmet Vum (1,625),Kangkap(962), etc. The second range divides the Tuilak and Tuivel rivers and stretches from Suangdoh (1,231) to Ngalzang(1,403).Ngalgang (1,440), Donglam (1,070), etc. are the other peaks. The Behang Tang range as high as 933 mtrs. separate the Tuivel and Tuivai rivers. The next one stretches from Singhat to Maltomjang as high as 1,487 mtrs. and divides the Tuivei and Tuitha or Khuga rivers.The Thingbungthung range as high as 1,752 mtrs. separates the Tuitha or Khuga river and the Manipur river.

DRAINAGE

The district is drained by two river systems i.e. The Barak river system and The Manipur river system. The Irung river and its tributaries like the Leimatak river, Tuipilui river and Tuijanglui river (following northwards) and Tuivai river with her tributaries such as Tuivel river, Tailak river (flowing northwards), Tuililui river,Tuila river, Tuibum river, Tuiliyanlui river (flowing sothwards) are the main tributaries of the Barak river, which drains the west, north-eastern and southern portions of the district. The Barak river rises from the Liyai Khnou village of Senapati District and flows

south- west upto the end of the district boundary and turns sothwards through the Tamenglong district. After running a distance of about 38 km. In the Churachandpur district, it joints with the Tuivai river at Tipaimukh and turns towards the north and forms the State boundaries between the Mizoram and Manipur for about 25 kms. and with Assam for about 31 kms.It further flows towards the north upto Jirimukh where the Jiri river falls and then it bent westwards upto Sylhet district of the Bangladesh as the Surma river and joints with the Brahamaputra at Comilla district of Bangladesh. Some small and medium size boats doing business on passeger and Cargo transport ply along the Barak river upto Tipaimukh, but for most part of its course, the river and its tributaries have very swift and fast flowing current which are unsuitable for navigation. The Irung river starts from the Sintonglbung range of Tamnenglong district and flows towards the south. It forms the district boundary between Tamenglong and Churachandpur after turning westwards from Vantangbung to the joining point with the Barak river for about 35 kms.The Leimatak river rises from Mount Mamun Lhang (1,699) and flows toward the north for about 34 kms. in the district. It enters into Tamenglong District and falls into the Irang river near Tamlok village. The Tuipilui river starts near Thanlon(1,555) and flows towards the north. After flowing for about 48 kms. it joints the Irang river at Vantangbung. Another triburtaries of the Irang river, name Tuijanglui rises from the Jhangkum village (about 1000 mets. High) and flows northward for about 40 kms. and falls into the Irang river.

The Tuivbai river rises from the Zampi village of Myanmar (Burma) about 1,594 mtrs. high above the MSl. It flows towards the north upto near Zavellei for about 28 kms. long and after meeting the Tuila river, it turns towards the west upto near Dyalkhai village for about 30 kms. and then flows towards the south for about 28 kms. and thus forming as International boundary of about 10 kms. with Myanmar. It again turns towards the west and forming the State boundary with the Miozoram for about 28 kms. and turns towards the south and enters into Mizoram. After flowing a short distance in Mizoram, the Tuivai river again rurning towards the north upto the State Boarder, bends westwards to form the State boundary for about 18 kms. It then turns towards the north along with the State boundary for about 14 kms. and lastly falls into the Barak river at Tipaimukh.The Tuivel river rises from the Mauvum village of Myanmar and flows towards northward. It flows parallel to the Tuival river and after running for about 26 kms. the Tuivel river falls into the Tuivai river. The Tuilak river starts from Ngaljang village (1,440) of southern hilly region and flows the north. It joints the Tuivai river near Mualnuam after flowing for about 26 kms. The Tuila river starts from Zongmakot village (about 1,600 mtrs.) and flows southwards for about 34 kms. and falls into the Tuivai river near Zabellei village. The Tuililui river rises from Moldak village (about 1,100 mtrs) and rurns towards the south for about 23 kms. and joins with the Ruivai river near Singtam village. The Tuibum river starts from Khongjang village (1,098) and flows for about 31kms.southwards and falls into the Tuivai river. The Tuiliyamlui river rises from the Height of 1,555 mtrs. near Thanlon and flows towards the south for about 24 kms. and falls into the Tuivai river near Bungpuilon.

The Manipur river and its triburaries, the Khuga and Tuining rivers drain the eastern part of the district. It forms the district boundary with the Chandel district for about 43 km before its final entry into the Myanmar. The Manipur river rises from the Lakhamei village (2,473) of Senapati district as the Iril river flows the south. After joining with Imphal river at Lilong, Thoubal river at Mayang Imphal, Sekmai river at Sekmaijin, Chakpikarong river at Sugnu, Khuga river at Ithai, Tuining river at Lungngil,etc., its name changes itself as the Manipur river and flows towards the south and falls into Chindwin river of Myanmar (Burma) as Myitha river at Kalewa. The Khuga river rises from the Theigatang Village (1,668) and flows towards the north. A small river namely Tuitha starts from the Mt.Mulam (1,549) and flows southwards for about 16 km. And joins the Khuga river near Hiangtam Khul. The Khuga river flows for about 45 km. In the district and turns eastwards and finally falls into the Manipur river at Ithai in Bishnupur district at the southern edge of the Loktal Lake. The Tuining river starts from the height of 1,924 mt. Near the Mt. Mulam and flows towards the north for about 11 km. and turns eastwards. And then it flows for about 18 km. and falls into the Manipur river at Lunggil.

MINERALS AND QUARRYING

The district is poor in mineral resources. No proper Geological Survey of the district has been made till now. Only some deposits of Lignite has been reported by the Geological Survey of India in and around Kangvai village in the Tuieloo valley along the Tiddim State Highway. The total reseve of lignite in the area is estimated to be 12,262 metric tonnes . No commercially viable project on a large scale can be

taken up based on this reserve.

DEVELOPMENTAL AND ECONOMIC ACTIVITIES IN THE DISTRICT

Ones major/medium project is taken up by IFCD, PHED has covered 13 village fully and 65 villages partially .Old age pension scheme has been implemented by the Social Welfare Department and 336 persons were benefited under the scheme in 1999-2000 involving an amount of Rs. 4.03 lakhs. Further 33 dependent children were assisted, involving the amount of Rs.0.24 lakhs. Various development schemes were also taken up the Tribal development in the district .Accordingly 22 person were benefited under Animal Husbandry, 300 under Agri and Horticulture dev., 107 under village and small industries ,119 under housing schemes ,in the year 1998-99. As per latest figure available, Churchandpur district has 6 known tourist spots. The district has, in 1999-2000 35,309 applicants on the live register of its lone employment exchange. About 3,027 unemployed youth got registered during the period.

MAJOR SOCIAL,CULTURAL EVENTS,ETC.

During the decade, toward the end of first half of 1997 an inter-tribal (communal) conflict broke out between the two kindred tribes of the district probably over the questions of asserting dominance and supremacy at a particular geographical region or over the claims and counter-claims made by rival groups of people over the traditional difference in opinion over language issue and the like. The Manipur local Daily (The Poknapham) in its issue dated 20th March,1999 reported the loss of 352 lives,136 causalities and burning down of 4670 houses. Many native villagers were uprooted from the site of their ancestral homes and villages resulting in loss of properties, desertion of villages, grouping and establishment of villages and the like. The tension subsided towards the early part of 1998 due to peace efforts by Government and peace mission. Relief and Rehabilitation measures have been undertaken by Central and State Government Agencies and NGOs. The conflict might have brought about many changes in the social, economic life and political leanings of the tribes in conflict and their kindred tribesmen.

DEVELOPMENT ACTIVITIES

Agriculture and Horticulture : Agricultural and related activities occupy the most important place in the economy of the district. Being the main source of livelihood of the people the entire economy of the district depends on the success or failure of food crops. Rice and maize are the two major crops of the district. Rice is cultivated on the slopes of hills by means of two methods namely, Jhum and terraced cultivation. For the purpose of Jhum cultivation, a plot of of land is selected and the trees and vegetations growing on it are slashed and cleared. Then fire is set., burning the dry woods and vegetations then crops are grown. Rain is the only source of water and production is very low. The land thus brought under cultivation is used as long as it is fertile and productive. When the top soil is finally washed away and the soil become no longer productive the cultivation is shifted to another place after the same procedures. In recent years as the pressure on land increases the jhum cycle has been reduced from 19/9 years to 5/4 years. There are pockets of foothills where the slopes are not so steep and where terraced cultivation is practiced. Stream and spring waters are generally used for irrigating such cultivation. There ar some areas in and around Chrachandpur – Khuga Valley where wet rice cultivation is practiced. The area under rice cultivation in 1999-2000 is estimated at 13.73 thousands hectors, with an estimated yield of 25.01 thousand tones while the corresponding figures for maize in that year is 0.84 hectors, and 1.03 thousand tones respectively. Distribution of fertilizer (all sorts) is estimated at 505 tones, pulses, potato, pea, soya been, ginger, pineapple and chillie are other agricultural products which ar highly of good taste and also exported to other districts.Among vegetable mention may be made of Cabbage, Cauliflower, Brinjals , Tree-Bean (Yongchak) Tomatoes, and wide variety of edible vegetables grown in the wild hills. Citrus fruits such as Lime, Lemon and Orange are found in plenty in Tipaimukh sub-division. Becouse of poor communication system these fruits cannot reach the district headquarters and,therefore, exported to Silchar and its adjoining areas by boats through the Barak river. Other fruits products are Guava, Papaya, Banana, Pear, Umla Plum etc. Three Progeny-Orchard farms at Chrachandpur (Tuibong), Thanlon and Tinsong are responsible for distribution of fruit saplings to the needy farmers. To check soil erosion caused by shifting cultivation and to conserve soil programmes on affofestation social forestry and permanent settlement of Jhumia families have already been taken up. The district has a partial share of afforstation programme in the catchments area of Loktak Hydro Electric Project.

VETRINARY & ANIMAL HUSBANDRY

The district boasts of having 5 Nos. of District

Veterinary Hospital, 5 Nos. of Hospital, 1 Artificial Insemination Centre, 7 Veterinary Aid Centres while the patient treated is estimated at 35,524 in 1999-2000. The break up of livestock population (1997 Census) is as follows :- (a) Cattle – 18,374, (b) Buffaloes – 5,223, (c) Sheep – 196, (d) Goats – 1,588, (e) Horses and Ponies – 314, (f) Pigs – 31,560, (g) Dogs – 5110, (h) Mithuns – 1,283. Among the livestock Pig constitutes the highest population, followed by cattle. The two are reared mainly for home consumption and for marketing. Cattle and buffaloes are reared also for ploughing paddy fields. Poultry are earlier mainly for home consumption, but now people have started marketing them.

ELECTRICITY

The district is endowed a number of fast flowing rivers and streams many of which are suitable for generation of electricity. In fact, a number of projects have already been taken up in this regard , both at Central and State sector Of all the power projects, the Loktak Hydro Electric Project is the biggest and the most important not only from the viewpoint of power generation but also from other infrastructure facilities it has given to the district and within and outside the State. In fact, it is one of the biggest power projects in the North-Eastern India. Special feature of the project involve building of a barrage at Ithai on the Imphal River, construction of a power channel for a total length of 3.347 km. of which 2.287 km. is open and 1.08 km. is covered, and the construction of a power house for housing 3 units having a total installed capacity of 105 MW (3x35). The project which was intended to give irrigation facility to the neibouring districts by the methods of lift irrigation system has already benefited a number of farmers in Churachandpur, Bishnupur and Imphal Districts. The project begin in 1971 under the plan and was commissioned in 1984 and is now running successfully.

Other power projects under investigation and construction include the Loktak Down Stream with installed capacity of 90 MW, The Tuivai Power Project and the Khuga Dam Project. Of the three, The Khuga Project is under construction and is expected when-completed, to irrigate 11,000 hectors of land, to generate 1.5 MW of power, besides supplying drinking water to the people in around Churachandpur. In 1999-2000, the district has a diesel installed capacity of 0.45 MW and 3 Diesel-Power Houses while villages had been electrified.

INDUSTRY AND ALLIED ACTIVITIES

Due to lack of proper communication facilities and lack of other infrastructures, the district is very poor in the industrial front. In the year 1999-2000, the district has 8 registered industrial units (SIDO) giving an employment to 34 people. Investment in P & M of the units is estimated at 15.16 lakhs, production value of which is estimated at 8.64 lakhs. Number of enterprises as per economic census 1998 in the district is recorded at 3160 giving an employment to 8,506 people. Important types of industrial units/factories registered include woodworks, Iron and Steel, Ready-Made Garments, Rice-Mill, Saw Mill, Flour Mill, Automobile Servicing and Repairing, Embroidery, Carpentry etc. The establishments and enterprises are concentrated mainly in the town areas and other areas of easy communication, but the largest enterprise representative of the district which engaged a significant segment of the rural population is handloom and loin weaving industry. It is mainly confined to the women population . A sizable products are marketed outside the district. Baskets of various shapes and designs, hats, chairs and furniture's are some of the cane and bamboo products in the district. The District Industry Center take up various Schemes on development of small-scale industries, enterprises, factories in the district.

ROAD,TRANSPORT & COMMUNICATION

The means of road-transport and communication is not up to the mark. Many villages are still inaccessible by road. All the sub-divisional headquarters are however connected by all-weather roads. In 1999-2000, the district has a total road length of 970 km. divided into National Highways – 272 km. (longest among the districts of Manipur), State Highway – 60 km., Major District Roads – 222 km., other District Roads – 17km. , Inter village Roads – 399 km. Included above is the National Highway Imphal-Churachandpur-Tipaimukh-Aizawl), thatpasses through the district. Tiddim Road (Imphal-Churachandpur-Singngat Road) is the most important State Highway of the district. Churachandpur – Sugnu-Chakpikarong Road, another State Highway connects the district headquarters with Chandel district. Other District and Village roads are jeepable only during dry season. Number of vehicles (all types) registered in the district as on 31/2/2000 is 3285. The district boasts

of having 5 Sub-Post Offices, 72 Branch Post Offices, each of Telephone Exchange and Telegraph Office and 3 numbers of combined office of Telegraph and Telephone as on 31-12-2000.

TRADE & COMMERCE, CIVIL SUPPLY

Except for a few agricultural product, the bulk of day to day needs of the people of District are met by importing from outside. The district was once self-sufficient in food grain. But in recent years, due to pressure of lands and growing population, it imports large quantity of rice and other food items from outside. main items of import besides rice, consists of sugar, salt, kerosene and other petroleum product, dry fish, , dal and other pulses, tea, coffee, edible oil, tobacco products, readymade garment, various textile goods, hardware and other building materials, utensils, various grocery items etc. Notable items of exports include Charcoal, firewood, timber logs and planks, lemon and oranges, pineapple, ginger, dalchini cinnamon, spices, chilly, maize, oilseeds, sweet rice, cane and bamboo products etc. Churchandpur town is most important trading center. Most of importing and exporting are done through this town. Other trading centers are Thanlon, Singhat and tipaimukh. The barak river handles a good traffic for the villages situated along the river. Buses and trucks are chief means of transport through the District and State highways.

The district Food and Civil Supply Department undertakes the task of procurement and distribution of essential commodities specially rice, sugar, kerosene through Fair Price Shops and Rationing agents. The District is equipped with 9 go downs having the capacity of 2200 Mts. During the period 1999-2000.8066.3Mtsof rice and 125.0 Mts of Sugar were produced and distributed to public.

CO-OPERATION

The Co-operation movement in the district is of recent origin. In 1999-2000,the district has 578 registered Societies, out of which 200 are Industrial while 378 are non-industrial. The district Co-operation officer looks after the work of registration, training of personal, audits of societies, control and direction of Co-operative movement. Prominent among the Societies are of Agricultural, Milk supply, Weavers, Consumer, Labour contract and Piggery Farming Societies.

TENANCY & LAND REFORM

The states of Manipur does not have any tenancy act. The Manipur land revenue and Land Reform Act 1960 has not been extended to the district except to a few of Khuga valley in the Churchandpur sub-divisions of the district . Land Survey work taken up in hills areas could not make much headways due to lack of legal sanction and objection from the village chiefs and the villagers. The land ownership is in the name of village chief and therefore no individual ownership.

EDUCATION & ADULT EDUCATION

The literacy percentage of the district is 74.67 which is higher than the state percentage68.87(2001 census). The district stands third in literacy rate of the districts of Manipur . The district has 266 institutions at primary level with 13,342 learners in 1998-99. 78 institutional at middle school level with 8,538 pupils, 78 at Higher secondary level with 27,402 pupils. 1 at college level for professional / other Education with 654 learner, 3 at college (gen) level with the enrolment of2,110.

MEDICAL, HEALTH & FAMILY WELFARE SERVICE:

In 1999-2000 the district has one district hospital which is look after by a Medical Supdt. Family welfare measures are coordinated by District Welfare Officer. It has 6 family welfare centres and post partum program center. Besides it has 10 CHC/PHC,68 PHSC/ dispensaries while the number of bed available there is 207. The total number of patients treated is recorded at 99,374. One district Aids Officer is posted in the district. The Chief Medical officer superintends and coordinates various health's Scheme implemented in the district .There are a good number of NGO- run rehabilitation centers in the town of Churchandpur.

OTHER DEVELOPMENT ACTIVITIES

Ones major/medium project is taken up by IFCD, PHED has covered 13 village fully and 65 villages partially .Old age pension scheme has been implemented by the Social Welfare Department and 336 persons were benefited under the scheme in 1999-2000 involving an amount of Rs. 4.03 lakhs. Further 33 dependent children were assisted, involving the amount of Rs.0.24 lakhs. Various development schemes were also taken up the Tribal development in the district .Accordingly 22 person were benefited under Animal Husbandry, 300 under Agri and Horticulture dev., 107 under village and small industries ,119 under housing schemes ,in the year 1998-99. As per latest figure available, Churchandpur district has 6 known tourist spots. The district has, in 1999-2000

35,309 applicants on the live register of its lone employment exchange. About 3,027 unemployed youth got registered during the period.

Flora and Founa :

A wild and dense forests of this hilly District is the natural habitat of a large variety ofwild animals and birds such as boars, deers, tigers, monkey etc. The evergreen forest give the District a sylvan look. ;Some commonly found trees in these forests are Pine (Uchan) Aibizzia , SPP (Khok), Atrocarpus Hirsuta (Heiru Kokthong), Aquiteria Agallocha (Agor) , SamuliaMolaburica (Tera), Euginia Prea – Hainesisna (Uningthou) etc. On the hill – slopes near Kabo – valley, Teak and Oak trees are found. A peculiar lily called Tengnoupal Lily (Lilium longigulium) which is unknown to outside world and which is very beautiful is also found in the District.

FAIRS & FESTIVALS :

As the district is predominantly inhabited by Christian. CHRISTMAS constitutes the most important festival in the district. The festival is celebrated with full enthusiasm on 25th December of every year and some times it last 2/3 days. The festival is followed by new year on Jan 1 every year. SINGING DEVOTIONAL songs, praise and worship, delivering gospel messages, feasting mark the celebration .Exchange of gifts also mark the occasion. Besides, good Friday, Easter Sunday falling usually in the month of march /April and Pentecostal day are on important occasion for the Christian of the district. In spite of the conversion into Christianity, old and tribal festival called khodou/kut has become fresh again and is celebrated with renewed vigor usually in the month of November.

Khana Ka-Ut

It is an ear – piercing ceremony of Maring Tribe. The Maring – Naga believe that one"s birth on earth is not blessed by god till his/her ears are pierced in a ritual ceremony.

Khai Koumathro

The Maring – Naga believe that the soul of the dead person does not rest if his/her death is not condoled ceremonially. As such, Khai – Koumaithre festival is performed in the month of January or February of every year for the death occurring in the preceding year

Charan Kumbrian

This is a harvesting festival of Anal tribe. After harvesting the produce is brought home and then the festival is organized. In the festival the village – priest propitiates the Almighty with offering like a mithun and "Yu". The villagers, particularly the boys and girls do singing and dancing with hearty thanks to god for a good harvest

Yu Hongba

This is also a merry – making festival of the Anal tribe. The festival is organized by the well – to- do families of the tribe. For the festival, Twenty to thirty jugs of rice beer are prepared and a mithun is killed to enjoy with the beer. The rice Anal family will organize the festival for three to four days and the villagers sing and dance with prayer to God.

Khudut/Kut

This festival is observed by the Kuki communities. After harvesting the grain, produces are brought home and stored in barns etc. Meat particularly of mithun is sufficiently prepared and the villagers take it with locally prepared "YU" (liqour) and then the villagers particularly – boys and girls would dance with different song. Devotional song is sung in praise of God for the good harvest of the year.

Christmas

After conversion of majority population of the District into Christianity, Christmas signifying birth of Jesus Christ constitutes the biggest festival. It is usually observed on 25th December every year. Other festival related to Christians –like Good- Friday, Easter Sunday, Christmas Eve, are also observed by the Christians.

(V) CENSUS CONCEPTS

Building : A 'Building' is generally a single structure on the ground. Sometimes it is made up of more than component unit which are used or likely to be used as dwellings(residences) or establishments such as shops, business houses, offices, factories, workshops, worksheds, Schools, places of entertainment, places of worship, godowns, stores etc. It is also possible that building which have component units may be used for a combination of purposes such as shop-cum-residence,workshop-cum residence,office-cum-residence,etc.

Usually a structure will have four walls and a roof. But in some areas the very nature of construction of houses is such that there may not be

any wall. Such is the case of conical structures where entrance is also provided but they may not have any walls. Therefore, such of the conical structures are also treated as separate buildings.

Permanent houses

Houses, the walls and roof of which are made of permanent materials. The material of walls can be any one from the following, namely, galvanized iron sheets or other metal sheets, asbestos sheets, burnt bricks, stones or concrete. Roof may be made of from any one of the following materials, namely, tiles, slate, galvanized iron sheets, metal sheets, asbestos sheets, bricks, stones or concrete.

Semi-permanent houses:

Houses in which either the wall or the roof is made of permanent material and the other is made of temporary material.

Temporary houses:

Houses in which both walls and roof are made of materials, which have to be replaced frequently. Walls may be made from any one of the following temporary materials, namely, grass, thatch, bamboo, plastic, polythene, mud, unburnt bricks or wood. Roof may be made from any one of the following temporary materials, namely, grass, thatch, bamboo, wood, mud, plastic or polythene.

Dwelling Room:

A room is treated as a dwelling room if it has walls with a doorway and a roof and should be wide and long enough for a person to sleep in, i.e. it should have a length of not less than 2 meters and a breadth of at least 1.5 meters and a height of 2 meters. A dwelling room would include living room, bedroom, dining room, drawing room, study room, servant's room and other habitable rooms. Kitchen, bathroom, latrine, store room, passageway and verandah which are not normally usable for living are not considered as dwelling rooms. A room, used for multipurpose such as sleeping, sitting, dining, storing, cooking, etc., is regarded as a dwelling room. In a situation where a census houses is used as a shop or office., etc., and the household also stays in it then the room is not considered as a dwelling room. But if a garage or servant quarter is used by a servant and if she/ he also lives in it as a separate household then this has been considered as a dwelling room available to the servant's household. Tent or conical shaped hut if used for living by any household is also considered as dwelling room.

A dwelling room, which is shared by more than one household, has not been counted for any of them. If two households have a dwelling room each but in addition also share a common dwelling room, then the common room has not been counted for either of the households.

Census House:

A 'census house' is a building or part of a building used or recognised as a separate unit because of having a separate main entrance from the road or common courtyard or staircase, etc. It may be occupied or vacant. It may be used for residential or non- residential purpose or both.

In certain peculiar situations, the manner in which buildings and census houses were identified for numbering in the field by the enumerators is described hereunder:

Sometimes a series of different buildings are found along a street which are joined with one another by common walls on either side looking like a continuous structure. These different units are practically independent of one another and are likely to have been built at different times and owned by different persons. In such cases, though the whole structure with all the adjoining units apparently appears to be one building, each portion was treated as a separate building and its constituent units as separate census houses.

On the other hand, one may come across cases, particularly in large cities of multi-storeyed ownership flats. In these cases while the structure looks like one building, different persons own the flats. In case of such multi-storeyed structures, having a number of flats owned by different persons, the entire structure was treated as one building and each flat as a separate census house.

If within a large enclosed area, there are separate buildings owned by different persons then each such building is treated as a separate building. There can be a situation where within an enclosed compound there are separate buildings owned by an undertaking or company or even government that are actually in occupation of different persons. For example, Indian Oil Corporation colony where the buildings are owned by the Corporation but these are in occupation of their employees. Each such building was treated as a separate building. But if in any one of these buildings there were flats in occupation of different households, each such flat was reckoned as a separate census house.

Sometimes if becomes difficult to apply the

definition of census house strictly in certain cases. For example, in an urban area, if a flat has five rooms, each room having direct entrance from the common staircase or courtyard. By definition, this has to be treated as five census houses. If all these five rooms are occupied by a single household it was not realistic to treat them as five census houses. In such a case,'singleness' of use of these rooms along with the main house should be considered and the entire flat was treated as one census house. On the other hand, if two independent households occupy these five rooms, the first household living in 3 rooms and the second household occupying 2 rooms, then considering the use, the first three rooms together were treated as one census house and the remaining rooms as another census house. But if each room was occupied by an independent household, then each such room was treated as a separate census house.

In case of hostels, hotels, etc., even if the door of each room in which an inmate lives opens to a common verandah, staircase, courtyard or a common room, as it happens almost invariably, the entire hostel/ Hotel building was treated as one census house. but if such hostels/ hotels have out- houses or other structures used for different purposes or the same purpose, then each such structure attached to the main hostel / hotel was treated as a separate census house.

In some parts of the country, in rural areas, the pattern of habitation is such that a group of huts, located in a compound, whether enclosed or unenclosed, is occupied by one household. While the main residence may be located in one hut, other huts may be used for sleeping, as a kitchen, bath room, baithak, etc. Though each of the huts was a separates structure, they form a single housing unit and therefore, have to be treated collectively as one building and one census house. If some of the huts are used by one household and the others by a second household as residence, then the two groups of huts were treated as separate census houses. However, if there were also other huts in the compound used for other purposes and not as part of the household's residence such as, cattle shed, workshed, etc., these were treated as separate census houses.

On the other hand, in urban areas, where more than one structure within an enclosed or open compound (premises) belonging to the same person, e.g., the main house, the servant's quarter, the garage, etc., only one building number was given for this group and each of the constituent a separate census house number.

Only cases where a structure with roof and pillars has come up was treated as a building.

Rural-Urban area:

The data in tables on Houses, Household Amenities and Assets are presented separately for rural and urban areas. The unit of classification in this regard is 'town' for urban areas and 'village' for rural areas. In the Census of India 2001, the definition of urban area adopted is as follows:

a) All places with a municipality, corporation, cantonment board or notified town area committee, etc.

b) A place satisfying the following three criteria simultaneously:

i) A minimum population of 5,000;

ii) at least 75 per cent of male working population engaged in non-agricultural pursuits; and

iii) a density of population of at least 400 per sq. km.(1,000 per sq.mile)

For identification of places which would qualify to be classified as 'urban' all villages, which, as per the 1991 Census had a population of 4,000 and above, a population density of 400 persons per sq. km. and having at least 75 per cent of male working population engaged in non-agricultural activity were considered. To work out the proportion of male working population referred to above against b) (ii), the data relating to main workers were taken into account.

Apart from these, the outgrowths(OGs) of cities and towns have also been treated as urban under 'Urban Agglomerations'. Examples of outgrowths are railway colonies, university campuses, port areas, military camps, etc., that may have come up near a statutory town or city but within the revenue limits of a village or villages contiguous to the town or city. Each such individual area by itself may not satisfy the demographic criteria laid down at (b) above to qualify it to be treated as an independent urban unit but may deserve to be clubbed with the towns as a continuous urban spread. Thus, the town level data, wherever presented, also includes the data for outgrowths of such towns.

Household

A 'household' is usually a group of persons who

normally live together and take their meals from a common kitchen unless the exigencies of work prevent any of them from doing so. Persons in a household may be related or unrelated or a mix of both. However, if a group of unrelated persons live in a census house but do not take their meals from the common kitchen, then they are not constituent of a common household. Each such person was to be treated as a separate household. The important link in finding out whether it was a household or not was a common kitchen. There may be one member households, two member households or multi-member households.

Institutional Household

A group of unrelated persons who live in an institution and take their meals from a common kitchen is called an Institutional Household. Examples of Institutional Households are boarding houses, messes, hostels, hotels, rescue homes, jails, ashrams, orphanages, etc. To make the definition more clearly perceptible to the enumerators at the Census 2001, it was specifically mentioned that this category or households would cover only those households where a group of unrelated persons live in an institution and share a common kitchen.

Scheduled Caste and Scheduled Tribe :

Article 341 of the Constitution provides that the President may, with respect to any State or Union territory, specify the castes, races or tribes or parts of or groups within castes, races or tribes which shall for the purposes of the Constitution be deemed to be Scheduled Castes in relation to that State or Union territory. Article 342 similarly provides for specification of tribes or tribal communities or parts of or groups within tribes or tribal communities which are to be deemed for the purposes of the Constitution to be Scheduled Tribes in relation to the various States and Union territories. In pursuance of these provisions, the list of Scheduled Castes and / or Scheduled Tribes are notified for each State and Union territory and are valid only within the jurisdiction of that State or Union territory and not outside.

It is important to mention here that under the Constitution (Scheduled Castes) Order, 1950, no person who professed a religion different from Hinduism was deemed to be a member of a Scheduled Caste in addition to every member of the Ramdasi, Kabirpanthi, Majhabi or Sikligar caste resident in Punjab or Patiala and East Punjab States Union were in relation to that State whether they professed the Hindu or the Sikh religion. Subsequently, in September 1956, by an amendment, the Presidential Order of 1950 and in all subsequent Presidential Orders relating to Scheduled Castes, the Hindu and the Sikh religions were placed on the same footing with regard to the specification of Scheduled Castes. Later on, as per the amendment made in the Constitution (Scheduled Castes) Order 1990, the Hindu, the Sikh and the Buddhist were placed on the same footing with regard to the recognition of the Scheduled Castes.

The lists containing the names of the Scheduled Castes and the Scheduled Tribes applicable for the Census of India 2001 in the State are given below:

CENSUS OF INDIA 2001

MANIPUR

List of Scheduled Castes and

Scheduled Tribes

[The Scheduled Castes and Scheduled Tribes Orders (Amendment) Act, 1976

(No. 108 of 1976, dated the 18th September, 1976)]

Scheduled Castes

1. Dhupi, Dhobi
2. Lois
3. Muchi, Ravidas
4. Namsudra
5. Patni
6. Sutradhar
7. Yaithibi

Scheduled Tribes

1. Aimol
2. Anal
3. Angami

4. Chiru
5. Chothe
6. Gangte
7. Hmar
8. Kabui
9. Kacha Naga
10. Koirao
11. Koireng
12. Koml
13. Lamgang
14. Mao
15. Maram
16. Maring
17. Any Mixo (Lusai) tribes
18. Monsang
19. Moyon
20. Paite
21. Purum
22. Ralte
23. Sema
24. Simte
25. Sahte
26. Tangkhul
27. Thadou
28. Vaphui
29. Zou

Language and Mother Tongue :

As per the census concept, each language is a group of mother tongues. The census questionnaire collects information on the mother tongue of each person and mother tongue is defined as the language spoken in childhood by the person's mother to the person. If the mother died in infancy, the language mainly spoken in the person's home in childhood will be the mother tongue. In the case of infants and deaf mutes, the language usually spoken by the mother is considered as mother tongue. It is not necessary that the language spoken as mother tongue should have a script. The mother tongues returned by the respondents in census are classified and grouped under appropriate languages according to their linguistic characteristics.

Literate

A person age 7 years and above who can both read and write with understanding in any language is taken as literate. A person who can only read but cannot write is not literate. It is not necessary that to be considered as literate, a person should have received any formal education or passed any minimum educational standard. Literacy could also have been achieved through adult literacy classes or through any non-formal educational system. People who are blind and can read in Braille are treated as literates

Literacy Rate

Literacy rate of the population is defined as the percentage of literates in the age group seven years and above. For different age groups the percentage of literates in that age group gives the literacy rate.

Educational Level

The highest level of education a person has completed

Work

Work is defined as participation in any economically productive activity with or without compensation, wages or profit. Such participation may be physical and/or mental in nature. Work involves not only actual work but also includes effective supervision and direction of work. It even includes part time help or unpaid work on farm, family enterprise or in any other economic activity. All persons engaged in 'work' as defined above are workers. Persons who are engaged in cultivation or milk production even solely for domestic consumption are also treated as workers.

Reference period for determining a person as worker and non-worker is one year preceding the date of enumeration.

Main Worker :

A person who has worked for major part of the reference period (i.e. six months or more during the last one year preceding the date of enumeration) in

any economically productive activity is termed as 'Main worker' .

Marginal Worker :

A person who worked for less than six months of the reference period (i.e. in the last one year preceding the date of enumeration) in any economic activity is termed as 'Marginal worker' .

Non Worker :

A person who has not worked at all in any economically productive activity during the reference period (i.e. last one year preceding the date of enumeration) is termed as 'Non worker'.

Cultivator :

For purposes of the Census a person is classified as cultivator if he or she is engaged in cultivation on land owned or held from government or held from private persons or institutions for payment in money, kind or share. Cultivation includes effective supervision or direction in cultivation.

A person who has given out her/his land to another person or persons or institution(s) for cultivation for money, kind or share of crop and who does not even supervise or direct cultivation in exchange of land, is not treated as cultivator. Similarly, a person working on another person's land for wages in cash or kind or a combination of both (agricultural labourer) is not treated as cultivator.

Cultivation involves ploughing, sowing, harvesting and production of cereals and millet crops such as wheat, paddy, jowar, bajra, ragi, etc., and other crops such as sugarcane, tobacco, ground-nuts, tapioca, etc., and pulses, raw jute and kindred fiber crop, cotton, cinchona and other medicinal plants, fruit growing, vegetable growing or keeping orchards or groves, etc. Cultivation does not include the following plantation crops – tea, coffee, rubber, coconut and betel-nuts (areca).

Agricultural Labourer

A person who works on another person's land for wages in money or kind or share is regarded as an agricultural labourer. She/he has no risk in the cultivation, but merely works on another person's land for wages. An agricultural labourer has no right of lease or contract on land on which she/he works

Household Industry Worker :

Household industry is defined as an industry conducted by the head of the household herself/himself and or by the members of the household at home or within the village in rural areas and only within the precincts of the house where the household lives in urban areas. The larger proportion of workers in household industry should consist of members of the household including the head. The industry should not be run on the scale of a registered factory which would qualify or has to be registered under the Indian Factories Act and should be engaged in manufacturing, processing, servicing and repairs of goods.

It does not include professions such as a pleader, Doctor, Musician, Dancer, Waterman, Astrologer, Dhobi, Barber, etc. or merely trade or business, even if such professions, trade or services are run at home by members of the household.

Other Worker

A person who has been engaged in some economic activity during the reference period but not as a cultivator or agricultural labourer or in Household Industry is termed as a 'Other Worker (OW)'. The type of workers that come under this category of 'OW' include all government servants, municipal employees, teachers, factory workers, plantation workers, those engaged in trade, commerce, business, transport, banking, mining, construction, political or social work, priests, entertainment artists, etc. In effect, all those workers other than cultivators or agricultural labourers or household industry workers, are 'Other Workers'

Work Participation Rate

Percentage of workers (main + marginal) to total population

Population Density

Population density is the number of persons inhabited per square kilometre of the area.

Age

Age is measured in terms of the completed number of years

Sex-ratio :

Number of females per 1000 males in a population.

NON CENSUS CONCEPTS

Improved drinking water:

If the household had access to drinking water supplied from a tap, hand pump, tube well or well (protected or covered) situated within or outside the premises, it is considered as having access to improved drinking water.

It may be mentioned that such uniform definition may not be valid across all states.

System of sewerage :

Generally, a sewerage system means a network of mains and branches of underground conduits for the conveyance of sewerage to the point of disposal. Sewers that carry only household and industrial wastage are called separate sewers; those that carry storm water from roofs, streets and other surfaces are known as storm water drains, while those carrying both sewage and storm water are called combined sewers. However, in some towns which are not provided with such underground sewerage system, it is served by open surface drain, box drain, sylk pattern drain, etc., in those towns.

Type of latrine and method of disposal of night soil

There are three prevalent systems of disposal of human wastes, viz. (i) underground sewerage, (ii) sanitary water flush latrines with individual disposal systems, like septic tank, leaching cess pool and collecting well and (iii) dry type of latrines with manual scavenging.

The system of underground sewerage provides for the street sewerage with which are connected the sanitary latrines constructed in the houses having water closets and fitted with flushing cistern (or hand flushing). Through this sewer the faecal matter is transported without the need for scavenging. This system generally exists in cities and big towns.

Where the street sewer does not exist these sanitary water flush latrines are connected to a local septic tank with a sub-soil dispersion system or a leaching pit. Here the liquid wastes from the water closet is disposed of locally in leaching pit, a septic tank with a soil dispersion system is constructed. This dispersion requires an optimum travel through the pores of the soil which renders the harmful liquid bacterially innocuous by the slow process of filtration through the soil traversed.

Where the soil is impermeable, collecting wells are constructed and the sanitary water flush latrines are connected with them. These wells are cleaned at periodic intervals by a suitable device. The dry type of latrines are of service type latrine from where human excreta is removed by scavengers from house to house, in most cases carrying it on their heads or shoulders or in baskets with handle or wheel barrows. These are then collected in bullock carts or trucks or tractors and trolleys for being carried to the dumping grounds.

Fertility

In demography, the word fertility is used in relation to the actual production of children or occurrence of births specially live births. Fertility is a measure of rate at which population adds to itself by births and normally assessed by relating the number of births to a full or part of the population, such as number of married women or number of women of child bearing age. The definitions of the terminology used in computing different fertility rates are mentioned below:

Crude birth rate(CBR) :

Ratio of the number of live births in a year to the mid year population, normally expressed per 1000 population.

$$CBR = \frac{\text{Number of live births during the year}}{\text{Mid-year Population}} \times 1000$$

Crude death rate (CDR) :

Ratio of the number of deaths in a year to the mid year population, normally expressed per 1000 population.

$$CDR = \frac{\text{Number of deaths during the year}}{\text{Mid-year Population}} \times 1000$$

Natural growth rate :

Growth rate is obtained as the difference between crude birth rate and crude death rate in the absence of migration.

Age specific fertility rate (ASFR) :

Number of live births in a year to female population in any specified age group normally expressed per 1000 women.

$$ASFR = \frac{\text{Number of live births in a particular age-group}}{\text{Mid-year female population of the same age-group}} \times 1000$$

Age specific marital fertility rate (ASMFR) :

Number of live births in a year to married female population in any specified age group normally expressed per 1000 married women.

$$ASMFR = \frac{\text{Number of live births in a particular age-group}}{\text{Mid-year married female population of the same age-group}} \times 1000$$

General fertility rate (GFR) :

Number of live births per 1000 women in the reproductive age-group (15-49) years in a given year.

$$GFR = \frac{\text{Number of live births in a year}}{\text{Mid-year female population in the age-group (15-49) years}} \times 1000$$

General marital fertility rate (GMFR) :

Number of live births per 1000 married women in reproductive age-group (15-49) years in a given year

$$GMFR = \frac{\text{Number of live births in a year}}{\text{Mid-year married female population in the age-group (15-49) years.}} \times 1000$$

Total fertility rate (TFR) :

It is obtained as the total of the age specific fertility rates (number of children born per woman of the particular age) for the entire reproductive age span. It provides the average number of children that will be born to a woman under the fertility levels indicated by the age specific fertility rates assuming that there is no mortality of women till the completion of reproductive period.

$$TFR = \frac{5 \times \Sigma_{15\text{-}19}^{45\text{-}49} ASFR}{1000}$$

Total marital fertility rate (TMFR) :

Average number of children that would be born to a married woman if she experience the current fertility pattern throughout her reproductive span (15-49) years assuming that there is no mortality of women till the completion of reproductive period.

$$TMFR = \frac{5 \times \Sigma_{15\text{-}19}^{45\text{-}49} ASMFR}{1000}$$

Age-specific mortality rate (ASMR) :

Number of deaths in a particular age and sex group per 1000 population of the same age group.

$$ASMR = \frac{\text{Number of deaths in a particular age-group}}{\text{Mid-year population of the same age-group}} \times 1000$$

q1 :

Probability of dying between birth and age 1. This can be used as approximate value of Infant Mortality Rate (IMR) which gives the ratio of number of deaths in a year of children aged less than one year to the number of births in that year.

q2 :

Probability of dying between birth and age 2.

q5 :

Probability of dying between birth and age 5. This indicator is also known as Under Five Mortality Rate (U5MR)

Infant mortality rate (IMR) :

Ratio of the number of infant deaths (deaths of children below one year) in a year to the number of live births in that year.

$$IMR = \frac{\text{Number of infant deaths during the year}}{\text{Number of live births during the year}} \times 1000$$

Infant mortality rate comprises of two parts, viz., Neo-natal mortality rate and Post neo-natal mortality rate. The neo-natal mortality rate also comprises of two parts viz.,early neo-natal mortality

rate and late neo-natal mortality rate. These are defined as:

Neo-natal mortality rate (NMR) :

Number of infants dying within the first month of life (28 days or under) in a year per 1000 live births of the same year.

$$NMR = \frac{\text{Number of infant deaths aged 28 days or under during the year}}{\text{Number of live births during the year}} \times 1000$$

Early neo- natal mortality rate :

$$= \frac{\text{Number of infant deaths of less than 7 days during the year}}{\text{Number of live births during the year}} \times 1000$$

Late neo-natal mortality rate :

$$= \frac{\text{Number of infant deaths of 7 days to less than 29 days during the year}}{\text{Number of live births during the year}} \times 1000$$

Post neo-natal mortality rate (PNMR) :

$$PNMR = \frac{\text{Number of deaths of 29 days to less than one year during the year}}{\text{Number of live births during the year}} \times 1000$$

Peri-natal mortality rate (PMR) :

Number of still births plus deaths within 1st week of delivery per 1000 births in a year.

$$PMR = \frac{\text{Number of still births and infant deaths of less than 7 days during the year}}{\text{Number of live births and still births during the year}} \times 1000$$

Still birth rate (SBR) :

$$SBR = \frac{\text{Number of still births during the year}}{\text{Number of live births and still births during the year}} \times 1000$$

Maternal mortality rate (MMR) :

Number of deaths of women in the age group 15-49 while pregnant or within 42 days of termination of pregnancy from any cause related to pregnancy and child birth per 1000 live births in a given year.

$$MMR = \frac{\text{Number of maternal deaths to women in the age group 15-49}}{\text{Number of live birth}} \times 1000$$

Eligible couple (Couples per 1000 population) :

Number of currently married females in the age group15-44 years per 1000 persons of all ages.

Child woman ratio (0-4) :

1. Number of children in the age group 0-4 years per 1000 women in the age group 15-49 years

Child woman ratio (5-9) :

2. Number of children in the age group 5-9 years per 1000 women in the age group 15-49 years.

Migration :

Migration is the third component of population change, the other two being mortality and fertility.

A person is considered as a migrant by place of birth if the place in which he/she is enumerated during the census is other than the place of his/her birth.

Similarly a person is considered as a migrant by place of last residence if the place in which he/she is enumerated during the census is other than his/her place of immediate last residence outside the village or town and not simply in another house or locality in the same village or town.

Certain aspects concerning temporary movement/ migration of people has been explained below as these are important components concerning migration or migration has been determined as applicable at the time of migration and not in reference to any point of time after that. For example, if a person had moved from the place of her/his last residence for the purpose of education and subsequently at some point of time got employment there only, the reason for migration would be 'education' and not 'work/ employment'.

Civic status of urban units :

Civic Status of a town/city is determined on the basis of Civic Administrative authority of the town e.g., Municipal Corporation/Corporation, Municipal Committee/Municipal council, Municipality etc.

Size class of UA/town :

Size-class of UA/Town is based on the population size of the UA/City/Town. UAs./Towns with 1,00,000

and above population are classified as Class I UAs. / towns. These Class I UAs./towns are now further sub classified in to seven sub classes namely M1 to M7 depending on the population size of UA/City/ Town. These are :

M7	(5,000,000 and above);
M6	(2,000,000 to 4,999,999);
M5	(1,000,000-1,999,999);
M4	(500,000-999,999);
M3	(300,000-499,999);
M2	(200,000-299,999) &
M1	(100,000-199,999).

Towns with 50,000 to 99,999 population are classified as Class II towns,

Towns with 20,000 to 49,999 population as Class III towns,

Towns with 10,000-19,999 population as Class IV towns,

Towns with 5000 and 9999 population as Class V towns and

Towns with less than 5000 population as Class VI towns.

Slum area

The Slum Areas (Improvement and Clearance) Act, 1956 which was enacted by the Central Govt. defined slums as a) Areas where buildings are in any respect unfit for human habitation; or b) are by reasons of dilapidation, overcrowding, fault arrangement and design of such buildings, narrowness or faulty arrangement of streets, lack of ventilation, light or sanitation facilities, or any combination of these factors, are detrimental to safety, health or morals.

Mega city

The concept of 'Mega city' is a recent phenomenon in the Urban Sociology and is defined in terms of metropolitan city in the form of large size, problem of management of civic amenities and capacity to absorb the relatively high growth of population. Indian Census in 1991 treated the population size of 5 million and above as the cut off point to identify a place as the mega city. Whereas, for the purpose of inclusion in Centrally Sponsored Scheme for Infrastructure Development in Mega cities the Ministry of Urban Affairs and employment, Department of Urban Development adopted the criteria of 4 million and above population as per 1991 Census for Mega Cities. In 2001 Census, cities with 10 millions and above population have been treated as Mega cities.

2001 Census findings-Population and its distribution

Churachandpur District which has an area of 4,570 sq.km. is the biggest of all districts in Manipur in area and covers 20.47 percent of the total geographical area of the state. In terms of population, the district is the fourth largest in the state and has 9.94 percent of the total population of the state. It has a population of 227,905 persons in 2001, the absolute increase in population over that of 1991 Census being 51,721 persons. The growth rate of population during 1991-2001is 29.36 percent against 31 percent observed during 1981-91. The growth rate is much higher than that of the state for 1991-2001 is 29.36 percent against 31 percent observed during 1981-91. The growth rate is much higher than that of the state for 1991-2001 (24.86 percent). The density of population per sq.km. isas low as 50 persons against the state average of 103 persons. The total population for the district is composed of 117,232 males and 110,232 males and 110,673 females. The sex ratio is, therefore, 944 females per 1000 males in 2001 and is lower by 30 points from the state sex ratio of 974 females.The district has no urban area in 2001 as the only urban area, namely, Churachandpur Census Town of 1991 was denotified due to non fulfillment of the demographic criteria of a town. Total number of villages in the district is 540, an increase of 38 villalges from that of 1991. Churachandpur sub-division has a total of 280 villages followed by Churachadpur North sub-division with 117 villages. Most of the villages are of smaller sizes and large size villages are few.Villages having less than 500 population constitute 86.85 percent of the total villages. Among the sub-divisions, Churachadpur is the most populated sub-division and has about 58 percent of the total population while the least populated sub-division is Singngat with only 8.73 percent of the total. There are 139,080 persons which are literate by census definition (88,825 persons are illiterate), the literacy

rate being 70.6 percent which compares very favourably with the state literacy rate of 70.5 percent. the male literacy rate in 2001 is 77.7 percent against the female literacy rate of 63.1 percent, the gender literacy gap is therefore 14.6 points.About 93.2 percent of the total population of the district is Scheduled Tribes, the absolute population being 212,482 persons, of which 107,002 are females and the rest 105,480 are females. Only 0.1 percent of the population belongs to Scheduled Castes. Of the total population 43.6 percent (99,363 persons) are workers, the percentage of main workers being 31.6 percent. Among the categories of workers, Cultivators constitute 56.5 percent of the total work force while Other Workers represent 27.9 percent. Workers in Household Industgry are only 7.1 percent.

TABLES

TABLE 1 : DECADAL CHANGE IN POPULATION OF TAHSILS BY RESIDENCE, 1991-2001

Serial number	Tahsil	Population						Percentage decadal variation 1991-2001			Percentage urban population	
		1991			2001						1991	2001
		Total	Rural	Urban	Total	Rural	Urban	Total	Rural	Urban		
1	2	3	4	5	6	7	8	9	10	11	12	13
1	Tipaimukh Sub-Division				25409	25409	0					0
2	Thanlon Sub-Division				22057	22057	0					0
3	Churachandpur North Sub-Div.				28380	28380	0					0
4	Churachandpur Sub-Division				132156	132156	0					0
5	Singngat Sub-Division				19903	19903	0					0
	District Total:				227905	227905	0					0

Table 1 shows the decadal change in population by sub-divisions of Churachandpur district during 1991-2001 as also the percentage of urban population in each of the sub-divisions for 1991 and 2001. The population of the district has grown from 176,184 persons in 1991 to 227,905 persons in 2001, an addition of 51,721 persons during the decade, which gives a growth rate of 29.4 percent against the state growth rate of 24.9 percent. In the sub-divisions, there is wide variation in the rates of the population growth. Churachandpur shows the highest growth of 40.8 percent, Churachandpur North being the second highest with 38.7 percent, while the lowest growth is found in Tipaimukh with 5.9 percent. Singngat also shows a rate of only 6.8 percent. Churachandpur is the only sub-division having urban population in 2001 in the district. The higher decadal growth rate in the rural population is due to the declassification of Churachandpur Census Town in 2001 for its failure to satisfy the demographic criteria of a census town and the consequent addition of the said urban population as rural. Thus, the percentage of urban population to the total population has come down from 23.6 percent to nil in 2001.

TABLE 2: NUMBER AND PERCENTAGE OF INHABITED VILLAGES IN SPECIFIED POPULATION SIZE RANGES WITH THE RELATED POPULATION , 2001

Serial number	District / C.D. block	Total number of inhabited villages	Total rural population			Number and percentage of villages	Population less than 200		Number and percentage of villages
			Persons	Males	Females		Males	Females

The number and percentage of inhabited villages and population for each of the T.D.Block in the district in ranges of population less than 200, 200-499, 500-999, 1000-1999, 2000-4999, 5000-9999 and 10,000 and above are presented in Table 2. Most of the villages are small sized. Villages having population less than 200 and 200-499 persons account for 82.8 percent (447 villages) of the total number of inhabited villages (540) in the district. In terms of population these two groups account for 41.0 percent of the total district population. There are only 2 villages having population above 5000 persons, 1 each in the range of 5000-9999 and 10000 and above. These two villages are found in Churachandpur T.D.Block. In Henglep and Samulamlan T.D.Blocks there is no village having a population more 2000 persons.

TABLE 3: NEW TOWNS, DENOTIFIED, DECLASSIFIED AND MERGED TOWNS IN 2001

Name of Town
NIL

There is no new town created in the district during 1991-2001. Also there is no town merged with other towns in the district during the period. Churachandpur C.T. was the only town existed in 1991 in the district and this census town was declassified in 2001 as the town fails to fulfill the demographic criteria of a census town.

TABLE 4 : DISTRIBUTION OF VILLAGES BY POPULATION DENSITY, 2001

Range of population density (per square kilometer)	Total number of villages in each population density range	Percentage of villages in each population density range	Population	Percentage distribution of population
1	2	3	4	5
0-10	540	100.0	227,905	100.0
11-20	0	0.0	0	0.0
21-50	0	0.0	0	0.0
51-100	0	0.0	0	0.0
101-200	0	0.0	0	0.0
201-300	0	0.0	0	0.0
301-500	0	0.0	0	0.0
501 +	0	0.0	0	0.0
Not known	0	0.0	0	0.0
District Total:	540	100.0	227,905	100.0
Population Density (Rural) of the district:		0		

The population density of the villages by different ranges is intended to be shown in Table 4, but as the village wise area of the villages in the district is not available the population density could not be worked out. Thus, only the density for the district as a whole is available. The total area of the district is 4,570 sq.km which gives a density of 50 persons in every sq.km. against the state average of 103 persons per sq.km. There is no urban area in the district in 2001.

TABLE 5 : SEX RATIO OF STATE AND DISTRICT, 1901-2001

Census Year	Manipur			Churachandpur		
	Total	Rural	Urban	Total	Rural	Urban
1	2	3	4	5	6	7
1901	1,037	1,038	1,036	-	-	-
1911	1,029	1,023	1,051	-	-	-
1921	1,041	1,029	1,091	-	-	-
1931	1,065	1,048	1,137	-	-	-
1941	1,055	1,044	1,102	-	-	-
1951	1,036	1,039	633	1,048	1,048	-
1961	1,015	1,018	985	1,004	1,004	-
1971	980	980	980	976	979	947
1981	971	971	969	929	945	861
1991	958	951	975	931	920	983
2001	974	963	1,009	944	944	

The sex ratio of the state and hurachandpur district from 1901 is furnished in Table 5. For the state, the sex ratio is above parity upto 1961 with a highest ratio of 1065 in 1931. Since 1971 the sex ratio is constantly below 1000, the lowest ratio of 958 being recorded in 1991. In 2001, however, the sex ratio of 974 showed an improvement of 16 per 1,000 over that of 1991. The pattern of the sex ratio for the rural areas of the state is almost similar to that of the total areas. For the urban areas there are wide variations in the ratios over the decades, the highest of 1,091 being noted in 1921 against the lowest ratio of 633 in 1951. In 2001 Census the sex ratio showed a considerable improvement to show a figure of 1,009. Churachandpur district was created in 1969 as Manipur South in 1969 and was changed to Churachandpur in 1983. The highest sex ratio for the district for the total areas is recorded in 1951 with a figure of 1,048 while the lowest is recorded in 1981 with a ratio of 929. There is a gradual improvement of the sex ratios in the later two decades when in 2001 the ratio stood at 944, a gain of 15 points over 1981. For the rural areas in the district the highest ratio is against 1951 while the lowest is against 1991. The district has urban area only in 1971,1981 and 1991.

TABLE 6 : SEX RATIO BY TAHSILS, 2001

Serial number	Name of Tahsil	Sex ratio		
		Total	Rural	Urban
1	2	3	4	5
1	Tipaimukh Sub-Division	960	960	
2	Thanlon Sub-Division	953	953	
3	Churachandpur North Sub-Div.	905	905	
4	Churachandpur Sub-Division	941	941	
5	Singngat Sub-Division	994	994

TABLE 7 : SEX RATIO BY CD BLOCKS, 2001

Serial number	Name of C D block	Sex ratio
1	2	3
1	Parbung T.D.Block	960
2	Thanlon T.D.Block	953
3	Henglep T.D.Block	905
4	Samulamlan	992
5	Churachandpur	934
6	Singngat T.D.Block	994
	District Total	944

Table 6 and Table 7 give the sex ratios at sub-division and at T.D. Block level respectively. The district has a total population of 117,232 males and 110,673 females which gives a sex ratio of 944 females per 1000 males in the district. The ratio is lower by 34 points than the state sex ratio of 978. Among the sub-divisions, Singngat has the highest ratio of 994 while the lowest ratio 905 is found in Churachandpur North.

The jurisdiction of all the sub-divisions, except Churachndpur which has two T.D.Blocks, coincides with the jurisdiction of the T.D. Blocks. The sex ratio of 992 of Samulamlan T.D.Block which falls in Churachndpur sub-division comes next to Singngat T.D.Block (994).

TABLE 8 : SEX RATIO OF RURAL POPULATION BY RANGES, 2001

Range of sex ratio for villages	Number of inhabited villages	Percentage of villages in each range	Population 2001	Percentage distribution of population
1	2	3	4	5

District Total:	540	100.0	227,905	100.0
Sex ratio (Rural) for District:		944		

This table gives the sex ratio of rural population by different ranges and the corresponding number of villages and their population. The table shows that a total of 329 villages representing 60.9 percent of the total villages in the district accounting for 172,372 persons, i.e., 75.6 percent of the total district population, are in the sex ratio ranges of 900-949, 950-999 and 1000-1099. 83 villages have sex ratios above 1100, 150 villages (27.8 percent of the total villages) are in the range of 1000-1099 while the ranges of 900-949 and 950-999 have 92 and 87 villages respectively. Of the total district population, 34.3 percent (78,130 persons) are in the sex ratio group of 1000-1099. On the lower side, 4.3 percent of the population residing in 13 villages falls in the range of less than 700.

Table 10 to Table 13 shows the sex ratio of population in the age-group 0-6 years at sub-division and T.D.Block and by range of sex ratio for rural and urban areas in 2001. There are 15,690 males and 15,189 females in the age-group 0-6 years in the district which gives a sex ratio of 968 for the said age-group. Thanlon is the only sub-division which has a sex ratio above 1000. Singngat is not much below par. The lowest child sex ratio of 934 is found in Tipaimukh sub-division (Parbung T.D.Block). Regarding sex ratio in the child age-group of 0-6 years by ranges, 193 villages (35.7 percent of the total villages in the district) covering a population of 25.4 percent of the total are in the group 1100 and above. Sex ratio range of 1000-1099 has 80 villages with a population proportion of 16.4 percent. It is interesting that 114 villages (21.1 percent of the total villages) having a corresponding population of 8.4 percent of the total population have sex ratio below 700. As there is no urban area Table 13 is presented for the sake of information only.

		227905	205	212482	0.1	93.2

The number and percentage of Scheduled Castes and Scheduled Tribes by sub-divisions and T.D.Blocks are shown in Table 14 and Table 15 respectively. The district is predominantly inhabited by Scheduled Tribes of different categories. There are 212,482 persons belonging to this category in the district and they represent 93.2 percent of the total district population. In Singngat sub-division they account for 99.4 percent of the total population of the sub-division. The percentage of the Scheduled Tribes is also as high as 98.5 percent in Thanlon sub-division. As regards Scheduled Caste, only 0.1 percent of the total population numbering just 205 persons is persons belonging to this category. They are mainly found only in Churachandpur T.D.Block of Churachandpur sub-division.

District Total	540	100.0	212,482	100.0

Table 16 shows the proportion of the Scheduled Castes in the villages while Table 16 gives the proportion for the Scheduled Tribes. Only 15 villages are found inhabited by Scheduled Caste persons out of which 13 villages have their percentages to the total village population below 5 percent while 2 villages have the percentages between 5-10. No Scheduled Caste population is found in 525 villages. Of the total population 96.6 percent (i.e. 205,333 persons) of the Scheduled Tribes are in 521 villages in the range of 76 and above percent. In the range of 51-75 percent there are 10 villages while no village falls in the range below 11-20 percent.

5	Churachandpur	146	1005
6	Singngat T.D.Block	1000	994
	District Total	145	986

In Table 19, which shows the sex ratio among the Scheduled Castes and the Scheduled Tribes, it is found that the sex ratio of the Scheduled Castes is discouragingly as low as 145 females per 1000 males. As regards the Scheduled Tribes, the figures exhibit a ratio of 986 which is a little higher than the state sex ratio of 980. Among the T.D.Blocks Churachandpur has the highest ratio of 1005 while Henglep has the lowest ratio of 948.

	District Total	139080	78871	60209	88825	38361	50464	70.6	77.7	63.1	14.6

From the number and percentage of literates and illiterates for the sub-divisions and T.D.Blocks given in Table 21 and Table 22, it is seen that out of the total district population of 227,905 persons there are 139,080 literate persons in 2001 of which 78,871 are male literates and 60,209 are female literates. This gives the total literacy rate of the district as 70.6 percent, the male literacy and the female literacy rates being 77.7 percent and 63.1 percent respectively, the male-female literacy gap being 14.6 percent points. This compares favourably with the corresponding state literacy rates for the total, males and females (70.5 percent, 80.3 percent and 60.5 percent respectively). Among the sub-divisions there is wide variation in the literacy rates, Tipaimukh sub-division showing the total highest literacy rates of 77.3 percent while Churachandpur North sub-division has the lowest total rate of 53.1 percent. The total literacy rate for Churachandpur sub-division where the district head quarters are situated is the second highest having a rate of 73.8 percent. There is no difference in the pattern of the ranking of the literacy rates for the males and the females in the sub-divisions, Tipaimukh followed by Churachandpur and Thanlon. As regards the male-female gap, the gap is the highest in Churachandpur North (19.5 points). The gap is also high in Singngat (17.3 points) and Thanlon (15.8 points). The lowest gap is found in Tipaimukh sub-division (8.5 points).

TABLE 23 : DISTRIBUTION OF VILLAGES BY LITERACY RATE RANGE, 2001

Literacy rate for District:		70.6		

From Table 23 which gives the distribution of the number of villages by different ranges of literacy rates it is found that in 1 entire village having a population of 142 persons no literate persons are found while in 6 villages having a population of 1,381 persons the literacy rate is as low as 1-10 percent. Literacy range 21- 40 percent has 61 villages. Literacy range 61-70 percent has the highest number of villages (105) which is equivalent to 19.5 percent of the total villages. It can also be noted that 38 villages fall in the range of 91-99 percent against 94 villages in the range of 81-90 percent and 85 villages in the range of 71-80 percent. With

regard to population distribution, 31.3 percent of the total population (71,438 persons) is in the range of 81-90 percent while 23.3 percent of the total population (53,127 persons) is in the range of 71-80 percent.

	District Total	128170	70674	57496	84312	36328	47984	70	76.7	63.1	13.6

Among scheduled tribes there are 128,170 persons who are literates and 84,312 persons are illiterate. The total literacy rate for the scheduled tribes for the district is thus 70.0 percent which compares very favourably with the literacy rate of 65.9 percent for the scheduled tribes at the state level. The male and female literacy rates for the district are 76.7 percent and 63.1 percent respectively. Among the T.D.Blocks, Parbung has the highest total rate of 78.3 percent while Churachandpur (74.7 percent) and Thanlon (71.2 percent) occupy the second and third position. The lowest rate of 51.5 percent is found in Henglep T.D. Block. The literacy rates by sex also follow the same trend, Parbung (82.4 percent for males and 74.1 percent for females) coming in the top followed by Churachandpur (81.2 percent for males and 68.3 percent for females) and Thanlon (78.9 percent for males and 63.0 percent for females). Sex wise gap in literacy rate is 13.6 for the district, and among the Blocks the highest gap is found in Henglep Block (17.6 points) while in Singngat the gap is 17.3. The lowest gap of 8.3 percent point is found in Parbung Block.

TABLE 29 : DISTRIBUTION OF VILLAGES BY LITERACY RATE RANGE FOR SCHEDULED TRIBES POPULATION, 2001

District Total:	538	100.0	212,482	100.0

Literacy rate for District (Rural): 70

The distribution of the villages by ranges of literacy rates shown in Table 29 almost follow the same pattern as was observed in Table 23 for the total population. In the of range 91-99 percent there are 37 villages while the next rage of 81-90 percent has 93 villages and 61-70 percent range has the maximum of 106 villages. Range 61 percent and above has 334 villages which accounts for 60.3 percent of the total inhabited villages of the district. Literacy rates less than 21 percent have a total of 22 villages. As regards population, 31.5 percent of the total district scheduled tribes population numbering 66,893 persons is found in the literacy range of 81-90 percent whereas the literacy range of 71-80 percent has 23.6 percent of the total population. Of the total district population 68.5 percent is accounted by the ranges 61-70, 71-80 and 81-9

The total population is divided into workers and non-workers based on the economic activity. The workers are again bifurcated further as main workers and marginal workers on the basis of the time spend on the work. The distribution of the absolute numbers and the percentages of the main, marginal and non-workers to the total district/sub-division/block population are shown in Table 31 and Table 32. The definition of main workers and marginal workers are already given in the previous chapter. Work participation rate which is defined as the percentage of total workers to the total population for the district in 2001 is 43.6 percent (which is equal to the state average) against 56.4 percent of non-workers. In absolute numbers there are 128,542 non-workers and 99,363 workers. Main workers constitute 31.6 percent of the total population while the proportion of the marginal workers is 12.0 percent. The work participation rate for the males (48.4 percent) is higher than that of the females (38.5 percent) by about 10 percent. While the proportion of the main workers is higher among males the proportion for the marginal workers is higher among females. As regards the work participation rates in the sub-divisions, Churachandpur North, Thanlon, Tipaimukh and Singngat are above the district average, the highest rate being recorded against Churachandpur North (54.4 percent). Only Churachandpur sub-division (37.5 percent) is below the district average. Among the blocks also, Churachandpur and Samulamlan (which are within Churachandpur sub-division) are below the district participation rate. As regards main workers the percentage of Thanlon (47.2 percent) is very much above the district figure of 31.6 percent while for marginal workers the proportion is 23.9 percent against Churachandpur North, the district figure being 12.0 percent.

Note: Percent of Worker to total worker are given in brackets

According to Census workers are broadly divided into cultivators, agricultural labourers, household industry workers and other workers. The percentage distribution of these categories to the total workers by males and females for each of the sub-divisions is given in Table 34 and for each of the T.D.Blocks in Table 35. In the district, agriculture is the largest sector where the workers are actively engaged in the economic activity. Workers engaged as 'cultivators' (56.5 percent) and 'agricultural labourers' (8.5 percent) together account for 65 percent of the total work force. In absolute figures these two sectors have 64,579 workers (cultivators - 56,107 persons and agricultural labourers -8,472 persons) out of a total work force of 99,363 persons. 'Other workers' account for 27.9 percent of the total workers while those engaged as 'household industry workers' constitute 7.1 percent. Female proportions are higher in cultivators, agricultural labourers and household industry than that of the males. Approximately 77 percent of the total workers in household industry are females. Among the sub-divisions more than 88 percent of the total workers in Tipaimukh and Thanlon are engaged as cultivators. Tipaimukh has 89.4 percent which is the highest of all the sub-divisions. The lowest proportion of cultivators is found in Churachandpur sub-division (32.9 percent) mainly because the larger segment of the workers constituting as much as 45.1 percent is found in 'other workers'. Workers engaged as agricultural labourers are the highest in Singngat (19.1 percent) against the district average of 8.5 percent. In household industry sector Churachandpur has the highest rate of 10.8 percent. The proportion of the female workers engaged in this sector is also as high as 21.8 percent.

Note : - Percentages are given in brackets.

* Based on the improved drinking water source, drinking water supply has been classified as 'Improved ' or otherwise. If the household has access to drinking water supplied from a tap or a hand pump / tube well situated within or outside the premises it is considered as having access to 'Improved drinking water source'. However, the concept of improved drinking water is state specific and this is to be considered accordingly.

Post office includes Post office, telegraph office and Post and telegraph office.

$ Transport communication includes bus service, rail facility and navigable waterways.

Collection of different amenities available in the villages is an important feature of the houselisting operation. Table 37 gives the distribution of different amenities such as education, medical, drinking water, post office, telephone, transport, banks, power supply, transport, etc. Out of 540 inhabited villages in the district, 395 villages (73.1 percent of the total villages) have facilities for education while power supply is available in 306 villages (56.7 percent). 110 villages have improved drinking water supply and post office is available in 65 villages. Bus service facility and waterways are available in 95 villages while 123 villages (22.8 percent of the total villages) can be approached by pucca road. Availability of bank and telephone is limited to only 4 and 6 villages respectively. Only 4 villages have agricultural credit societies.

Post office includes Post office, telegraph office and Post and telegraph office.

$ Transport communication includes bus service, rail facility and navigable waterways.

Table 38 shows the number and percentage of rural population served by different amenities. From the table it is seen that 87.4 percent of the population numbering 199,097 persons is served by the facilities of education while the benefit of medical facility is available to 139,547 persons, i.e., 61.2 percent of the total population. The benefit of medical facility is restricted to only 23.3 percent of the population whereas improved drinking water is also limited to only 24.9 percent. Only 8.1 percent of the population took the facility of banking services while telephone facility is available to only 3.5 percent of the population. Less than one third of the total population has facilities of transport communications and can be approached by pucca road. Facilities of post office are available to only 19.4 percent of the population.

TABLE 39 : DISTRIBUTION OF VILLAGES NOT HAVING CERTAIN AMENITIES, ARRANGED BY DISTANCE RANGES FROM THE PLACES WHERE THESE ARE AVAILABLE, 2001

Village not having the amenity of	Distance range of place from the villages where the amenity is available			
	Less than 5 kilometres	5-10 kilometres	10+ kilometres	Total (Col. 2 - 4)
1	2	3	4	5
1. Education :-				
(a) Primary School	89	43	12	144
(b) Middle School	191	121	84	396
(c) Degree College	51	46	437	534
2. Medical:-				
(a) Hospital	51	63	424	538
(b) PHC	107	119	306	532
3. Post Office	103	93	278	474
4. Telephone	27	37	469	533
5. Bus Service	157	114	173	444
6. Banks				
(a) Commercial Bank	42	58	435	535
(b) Cooperative Bank	43	56	439	538
7. Agricultural Credit Societies	44	48	443	535

The distribution of the villages not having certain amenities is arranged by distance ranges in kilometers from the places where these are available in Table 39. The distance ranges are less than 5 km., 5-10 km. and above 10 km. A total of 144 villages do not have any primary school within the village, 396 villages do not have any middle school and degree college is not available in 534 villages. As regards medical facilities hospital is not present in 538 villages and villagers of 424 villages have to travel more than 10 km. to get the facility of a hospital. As for PHC, out of 532 villages where the facility is not available within the village, 306 villages fall beyond 10 km. from where the facility is available. Similarly, for post office 278 villages and for telephone 469 villages fall beyond 10 km. from where the facility is available. Population of 297 villages has to travel more than 5 km. to get facility of a bus service. For banks and agricultural credit societies also most of them fall beyond 10 km.

TABLE 40 :DISTRIBUTION OF VILLAGES ACCORDING TO THE DISTANCE FROM THE NEAREST STATUTORY TOWN AND AVAILABILITY OF DIFFERENT AMENITIES, 2001

Distance range from the nearest statutory town (in kilometres)	Number of inhabited villages in each range	Type of amenity available					Type of amenity available

	(100.0)	(73.1)	(12.2)	(12.0)	(1.1)	(17.6)	(0.7)	(0.7)	(22.8)

Post office includes Post office, Telegraph office and Post and telegraph office.

$ Transport communication includes bus service, rail facility and navigable waterways.

Distribution of villages according to the distance from the nearest statutory town by availability of different amenities is presented in Table 40. Churachandpur district does not have any statutory town in 2001. Out of 540 villages 197 villages fall beyond 51 km. from the nearest statutory town, 285 villages fall within 16-50 km. range and 46 villages fall in the range of 5-15 km.

TABLE 41: DISTRIBUTION OF VILLAGES ACCORDING TO POPULATION RANGE AND AMENITIES AVAILABLE, 2001

Population range	Number of inhabited villages in each range	Type of amenity available

	(100.0)	(73.1)	(12.2)	(20.4)	(12.0)	(1.1)	(17.6)	(0.7)	(0.7)	(22.8)	(56.7)

Post office includes Post office, Telegraph office and Post and telegraph office.

$ Transport communication includes bus service, rail facility and navigable waterways.

* Based on the improved drinking water source, drinking water supply has been classified as 'Improved' or otherwise. If the household has access to drinking water supplied from a tap or a hand pump / tube well situated within or outside the premises it is considered as having access to 'Improved drinking water source'. However, the concept of improved drinking water is state specific and this is to be considered accordingly.

The inhabited villages are divided into population range groups of 1-499, 500-999, 1000-1999, 2000-4999, 5000-9999 and above 10000 and the corresponding amenities of education, medical, etc. available in these population range groups are furnished in Table 41. It is found from this table that out of 447 villages i.e., 82.8 percent of the total villages in Churachandpur district, which fall in the range of population less than 500 persons, 310 villages (69.4 percent) have the amenities of education within the villages while 244 villages (54.6 percent) have the amenities of power supply. Only 31 villages have the medical amenities, improved drinking water is available only within 83 villages, bus service is available to 59 villages and 85 villages are approachable by pucca road. The availability of amenities in 51 villages of range 500-999 population and 26 villages of range 1000-1999 population are comparatively better than the first range group. Normally, the bigger the size of village population the availability of the amenities within the villages should be higher. However, in the range of 5000-9999 and 10000 + which have 1 village each the availability of the amenities is rather discouraging. Except education no other amenity is available in 5000-9999 range while only education, bank and power supply is available in the later range.

TABLE 42: DISTRIBUTION OF VILLAGES ACCORDING TO LAND USE, 2001

	Sub-Div.	(0.3)	(35.4)	(64.3)	(0.3)	(35.4)	(64.3)	-	-	-
2	Thanlon	12	970	2,674	12	970	2,674	-	-	-
	Sub-Div.	(0.3)	(26.5)	(73.1)	(0.3)	(26.5)	(73.1)	-	-	-
3	Churachandpur	13	808	4,215	13	808	4,215	-	-	-
	North Sub-Div.	(0.3)	(16.0)	(83.7)	(0.3)	(16.0)	(83.7)	-	-	-
4	Churachandpur	2,420	10,838	8,942	2,420	1,083	8,942	-	-	-
	Sub-Div.	(10.9)	(48.8)	(40.3)	(10.9)	(48.8)	(40.3)	-	-	-
5	Sngngat	16	974	2,574	16	974	2,574	-	-	-
	Sub-Div.	(0.4)	(27.3)	(72.2)	(0.4)	(27.3)	(72.2)	-	-	-

According to Census houses are divided into permanent, semi permanent and temporary based on the construction materials of the wall, roof and floor of the houses. Based on this classification there 2,473 houses, which is equivalent to 6.4 percent of the total houses in the district, of permanent type and 15,029 houses (39.0 percent of the houses) of semi permanent type. The remaining 21,002 houses (54.6 percent) are of temporary nature. Churachandpur sub-division where the district headquarters are present has the highest number of permanent (2,420) and semi permanent (10,838) houses. The percentage composition of the above two categories is below the district average in all the other sub-divisions. In semi permanent category the next highest percent is found in Tipaimukh. The percentage of temporary houses to the total houses in the sub-divisions is high in Churachandpur North (83.7 percent), Thanlon (73.1 percent), Singngat (72.2 percent) and Tipaimukh (64.3 percent).

TABLE 50: PERCENTAGE OF HOUSEHOLDS HAVING IMPROVED DRINKING WATER SOURCE, ELECTRICITY, BATHROOM, TOILET AND DRAINAGE FACILITY, 2001

The percentage of households having improved drinking water source, electricity, bathroom, toilet and drainage facility as per 2001 Census is shown in Table 50. The availability of these services is generally low in the district. Out of the total households 30.3 percent have improved drinking water, 41.7 percent have electricity and drainage is available to 41.2 percent of the households. Regarding bathroom and toilet facility, only 13.1 percent of the households have bathroom and toilet is available to only 9.8 percent of the total households. Among the sub-divisions the facilities are better in Churachandpur than the other sub-divisions. In respect of the improved drinking water source Churachndpur, Churachandpur North and Thanlon sub-divisions are comparatively much better than the remaining two sub-divisions of Tipaimukh and Singngat. The proportion of households using electricity in all the sub-divisions except Churachandpur is very low. Only 6.4 percent of the households in Singngat and 0.2 percent in Thanlon have the facility of electricity. Regarding drainage only 19.2 percent of the households have the facility in Singngat. Toilet facility is very low in all the sub-divisions, the highest proportion of 15.8 percent being observed only in Churachndpur. Similar trend is also found as regards bathroom facility.

TABLE 51 : NUMBER AND PERCENT OF HOUSEHOLDS BY TYPE OF FUEL USED FOR COOKING, 2001

Data source: Census of India 2001, H- series: "Tables on Houses, Household amenities and Assets."

Table 51 gives data on the distribution of the households by type of fuel used for cooking, such as, fire wood, crop residue, cow dung cake, electricity, coal/lignite(charcoal), cooking gas (L.P.G.), biogas, kerosene and others among the sub-divisions of the district. In all the sub-divisions except Churachandpur firewood and crop residue are almost the only sources of fuel used for cooking. The use of the other types of fuel is negligible in these sub-divisions. In Churachandpur sub-division, firewood as fuel for

cooking accounts for 62.7 percent of the total households. Cooking gas accounts for 27.5 percent of the households while charcoal is the third largest fuel for another 7.2 percent of the households. Crop residue is used as fuel by 1.8 percent of the households. Use of electricity as cooking purposes is very negligible.

TABLE 52 : NUMBER OF HOUSEHOLDS AVAILING BANKING SERVICES AND NUMBER OF HOUSEHOLDS HAVING EACH OF THE SPECIFIED ASSET, 2001

Data source: Census of India 2001, H- series: "Tables on Houses, Household amenities and Assets."

Distribution of the number of households availing banking services and availability of the specified household assets is shown in Table 52. In the district, only 6 percent of the households (2,655 out of 38,525) avail the banking services. Of this, Churachandpur sub-division accounts for as much as 2,434 households, i.e., 91.7 percent of the total households of the district. Census of 2001 also collects from every household data on possession of specified assets in the form of radio/transistor, television, telephone, bicycle, scooter/motor cycle, jeep/car/van, etc. Of the total households of Churachandpur district, 25,044 households have one or the other of these specified assets while the majority of 22,683 households equivalent to 58.9 percent of the total do not have any of the specified assets. The proportion of households having none of the specified assets to the sub-division total is as high as 82.8 percent in Singngat, 77.9 percent in Tipaimukh and 72.9 percent in Thanlon. The proportion is the lowest in Churachandpur (46.6 percent) where most of the specified assets of the district are concentrated.

Places of Historical Importance and Tourist Interest :

Churchandpur situated on the Imphal Tiddim road, immediately beyond the periphery of the Manipur valley ,is a nice place where plain and hills meet. It is 65 km from Imphal and 23 km from moirang. It is a fast developing town with all the infrastructure of a modern urban area. Hills and valley are traded in the market of this town. It has Inspection Bungalow, Tourist home, circuit house, and a number of medium standard hotels to carter to the needs of tourists. It is headquarters of the district. The place is well served by network of all weather road transport system. It is also noted for a variety of foreign goods from Myammar, National highway-150 passes through this town.

Singngat :

It is sub-divisional and T.D.Block headquarters. It is situated on the Imphal-Tiddim road on which regular buses are plying. It is noted of its natural beauty. An important road 'GUITE ROAD' passes through this village and run up to Mizoram.

Thanlon :

It is sub-divisional headquarters and is situated on the Churchandpur –Tipaimukh road (now national highway). It is nice place. It has an inspection bungalow.

Tipaimukh :

It is meeting place of the barak river and the tuivai river and is noted for its scenery beauty. It is 274 kms. from the Churchandpur on the Churchandpur-Tipaimukh road(now national highway). Fruits of various kind are available through this town. Boat riding along the barak river is a pleasant sight and is very enjoyable.

Scope of Village and Town Directory

The Village Directory is the compilation of basic information pertaining to a particular village. The format of the Directory has been revised from time to time but it has been continued to remain as the traditional source of village level basic data. It contains a list of villages with Location Code Numbers, Population, amenities namely Educational and Medical facilities, availability of Drinking Water, Post, Telegraph and Telephone facilities, Commercial and Co-operative Banks, Agricultural and Non-agricultural and other Credit Societies, Recreational and Cultural facilities, Communication, Approach Roads to village, Power Supply and Newspaper / Magazine etc.. The name of villages of each Rural Development Block of the District has been arranged alphabetically and location codes number of the Census of India 2001 and corresponding code number of 1991 Census have been given for each village for easy reference.

Generally a 'village' is taken as a statutorily recognised unit of an area having definite and recognised boundary and separate land records. Thus in Census the basic unit of rural areas is taken as a revenue village which has definite surveyed boundaries. A revenue village may comprise of several hamlets but the entire village is treated as one nit for presentation of data. In Mizoram, however, the concept of village is different from what have been mentioned above since there is no surveyed village in the State. Therefore an inhabited area with locally recognised boundaries and having a name of its own is treated as a village. The un-inhabited villages i.e., the villages where no population was found during Census Operations have also be included in the list of villages and R. D. Block wise in the Village Directory.

Although there is no Panchayat Institution in the District, the villages have Village Councils which are democratically elected local bodies. In addition to the information as to the availability or otherwise of the basic amenities as mentioned in the preceding paragraphs, following nine appendices have also been included :-

1. Appendix I – Abstract of Educational, Medical and other amenities in villages - R. D. Block level.
2. Appendix II – Villages with 5,000 and above population which do not have one or more amenities.
3. Appendix III – Land Utilization Data in respect of Census Towns/ Non-Municipal Towns.
4. Appendix IV – R. D. Block-wise list of inhabited villages where no amenities other than drinking water facility is available.
5. Appendix V - Summery showing number

of villages or not having Scheduled Castes population.

6. Appendix VI - Summery showing number of villages or not having Scheduled Tribes population.

7. Appendix VII -List of villages according to the proportion of the Scheduled Caste and the Scheduled Tribes to the total population by ranges.

8. Appendix VII - Number of villages under each Gram Panchayat (R. D. Block wise)

9. Appendix IX - State showing number of girls schools in the villages.

Part A-Village Directory

VILLAGE DIRECTORY

Note explaining the abbreviations used in the village directory

The "Village Directory" is one of the traditional compilations of the Census. It gives the list of villages, their location numbers, their area, population, number of households, amenities such as educational, medical, drinking water, post and telegraph, commercial and co-operative banks, agricultural non-agricultural and other credit societies, recreational and cultural facilities, communication, approach to village, nearest town with a distance, power supply availability of newspaper and magazines, most important commodity manufactured and land use of each village.

Village is a statutory recognized unit having a definite boundary and separate land records. In case, a complete village is treated as an outgrowth of urban agglomeration, data on amenities for that village, have not been given in the Village Directory but shown along with the urban component. The villages which are consider as a Census Town , the amenities data are shown in the Town Directory. For those villages which have partly merged in an outgrowth of U.A., the amenities data are shown in the Village Directory for that particular village.

The 'un-inhabited' villages (villages with no population) have been indicated as such after furnishing details in columns 1 to 3 i.e., Serial number, Name of village & location code number and area of the village against column no. 4 to 18. The land use data for such villages are shown in col. 19 to 23.

The Village Directory format has 23 columns and the details given under each column are for the village are as follows:-

Columns 1 : Serial Number

Self explanatory. All the villages within the CD Block are presented serially in the ascending order of their location code number.

Columns 2 : Name and Location Code Number of village.

The name and location code number of the village are shown against these columns. This also includes the forest and uninhabited villages.

Column 3 : Area of the village

The area of the villages in hectares are given. Wherever the area figures was not furnished by the concerned department the column is left blank.

Column 4 : Total population

The total population of the village as per 2001 Census is given against this column.

Column 5 : Number of households

The number of households as per 2001 Census is given in this column.

Amenities :

In column 6 to 23, availability in respect of different amenities such as education, medical, drinking water, post, telegraph, banks, credit societies, communication, power, approach road etc. in each village has been depicted with appropriate codes against the column concerned. Wherever the amenities are not available in the village, a dash (-) is shown in the column and next to it in brackets the distance in broad ranges viz.< 5 kms., 5-10 kms. and 10+ kms of the nearest place where the facility is available is given. Column wise details are given below:

Column 6 : Educational

Classes upto class V included in Primary School. This will include nursery school, kindergarten school. Pre-basic school, pre-primary school, junior basic school upto class V.

Classes from VI to VIII are included in the middle school.

Classes from IX and X included in High secondary school. Classes XI and XII are included in senior secondary school.

In case of composite schools like middle school with primary school or secondary school with middle

school, these are also included in the number of primary and middle schools, respectively.

Accordingly any of the following types of institutions if exists within the village is shown as per codes given below :

(i)	**Primary School**	**P**
(ii)	**Middle School**	**M**
(iii)	**Secondary School**	**H**
(iv)	**Senior Secondary School**	**PUC**
(v)	**College**	**C**
(vi)	**Industrial School**	**I**
(vii)	**Training School**	**Tr**
(viii)	**Adult literacy class/centre**	**AC**
(ix)	**Others (specify) e.g. Sanskrit Pathshala, Senior basic school, Navodaya Vidyalaya, Makhtab, etc.**	**O**

More than one institution of a type in the village is indicated by the number within brackets against the abbreviation, e.g. P(3), M(4), etc.

Column 7 : Medical

Availability of medical facility within the village is indicated by following codes :

(i)	**Allopathic Hospital**	**H**
	Ayurvedic Hospital	**HA**
	Unani Hospital	**HU**
	Homeopathic Hospital	**H Hom**
(ii)	**Allopathic Dispensary**	**D**
	Ayurvedic Dispensary	**DA**
	Unani Dispensary	**DU**
	Homeopathic Dispensary	**D Hom**
(iii)	**Maternity & Child Welfare**	**MCW**
(iv)	**Maternity Home**	**MH**
(v)	**Child Welfare Centre**	**CWC**
(vi)	**Health Centre**	**HC**
(vii)	**Primary Health Centre**	**PHC**
(viii)	**Primary Health Sub-Centre**	**PHS**
(ix)	**Family Welfare Centre**	**FWC**
(x)	**T.B. Clinic**	**TB**
(xi)	**Nursing Home**	**NH**
(xii)	**Registered Private Medical Practitioner**	**RMP**
(xiii)	**Subsidised Medical Practitioner**	**SMP**
(xiv)	**Community Health Worker**	**CHW**
(xv)	**Others**	**O**

More than one institution of a type in the village is indicated by the number within brackets against the abbreviations, e.g. H(3), D(4), etc.

Column 8 : Drinking Water

The type of the drinking water supply sources available within the village are indicated by codes as follows :

(i)	**Tap Water**	**T**
(ii)	**Well Water**	**W**
(iii)	**Tank Water**	**TK**
(iv)	**Tubewell Water**	**TW**
(v)	**Handpump**	**HP**
(vi)	**River Water**	**R**
(vii)	**Canal**	**C**
(viii)	**Lake**	**L**
(ix)	**Spring**	**S**
(x)	**Others**	**O**
(xi)	**Summer Sorce**	**SS-**

Column 9 : Post, Telegraph and Telephone

It is indicated by codes as shown below whether within the village exists the following amenities:

(i)	**Post Office**	**PO**
(ii)	**Telegraph Office**	**TO**
(iii)	**Post & Telegraph Office**	**PTO**
(iv)	**Telephone Connection**	**PH**

Column 10: Commercial and Co-operative Banks

If the village is served by any banking service, commercial bank, co-operative bank etc.the same is indicated in codes mentioned below along with the number of banks in brackets. If not available the distance of nearest place where the facility exist is given:

(i)	**Commercial Bank**	**CM**
(ii)	**Co-operative Bank**	**CP**

Column 11: Credit Societies

If the village enjoys the services of Credit Societies i.e. Agricultural Credit Societies, Non Agricultural Credit Society or Other Credit Societies, the same is indicated in codes mentioned below along with the number of such societies in brackets. In case the facility is not available within the village the distance of the nearest place where such facility exist is given :

(i)	**Agricultural Credit Society**	**ACS**
(ii)	**Non- Agricultural Credit Society**	**NCS**
(iii)	**Other Credit Society**	**OCS**

Column 12 : Recreational and cultural facilities

If facilities such as Cinema/Video hall, Sports Club, Stadium/Auditorium is available in the village. The same is recorded in these columns. If not available the particulars of the nearest place with the facility is recorded. The information is indicated in codes mentioned below along with the number of such facilities in brackets:

(i)	**Cinema / Video Hall**	**CV**
(ii)	**Sports Club**	**SP**
(iii)	**Stadium / Auditorium**	**ST**

Column 13 : Communications

If the village is served by any mode of public / private transport like Bus, Railway station or Navigable water ways they are to be mentioned as follows:

(i)	**Bus**	**BS**
(ii)	**Railway Station**	**RS**
(iii)	**Navigable Waterway**	**NW**

Column 14 : Approach to village

Approach to village refers to the state of road leading to village. The approach to the village is indicated in following codes :

(i)	**Paved Road**	**PR**
(ii)	**Mud road**	**MR**
(iii)	**Foot path**	**FP**
(iv)	**Navigable River**	**NR**
(v)	**Navigable Canal**	
(vi)	**Navigable waterways other than River, Canal**	**NCNW**

Column 15 : Nearest Town and distance

The distance is given in kilometers in brackets against the name of the town nearest to the village.

Column 16 : Power supply

Availability of Power Supply in the village, whatever may be the form of its use is given by using following codes :

(i)	**Electricity for domestic use**	**ED**
(ii)	**Electricity for agricultural use**	**EAG**
(iii)	**Electricity for other purposes**	**EO**
(iv)	**Electricity for all purposes**	**EA**

Column 17 : News Paper / Magazine

If village receives any News Paper/Magazines the same is noted in this column using following codes :

(i)	**News Paper**	**N**
(ii)	**Magazine**	**M**

Column 18 : Most important commodities manufactured

The name of three most important commodities manufactured in the village is recorded against this column.

Column 19 to 23 : Land use i.e. area under different types of land use

Land use data maintained by the State/ UT Govts. are furnished against these columns. The data concerning area under Forest, Irrigated land (by source), Un-irrigated land, Culturable waste and Area not available for cultivation in the village are shown against these columns. The area figures are given in hectare(s) up to one decimal. Desh '-' is recorded wherever the information is not made available by the concerned department. The codes used for different types of irrigation facilities available in the village are indicated below:

(i)	**Government Canal**	**GC**
(ii)	**Private Canal**	**PC**
(iii)	**Well (without electricity)**	**W**
(iv)	**Well (with electricity)**	**WE**
(v)	**Tubewell(with electricity**	**TW**
(vi)	**Tubewell(with electricity)**	**TWE**
(vii)	**Tank**	**TK**
(viii)	**River**	**R**
(ix)	**Lake**	**L**
(x)	**Waterfall**	**WF**

(xi) Others **O**
(xii) Total **T**

The village directory also carries the following appendices.

Appendix-I It gives the abstract of educational, medical and other amenities available in villages C D Block wise of the district.

Appendix-I-A Indicates number of villages C D Block wise having one or more primary schools.

Appendix-I-B Indicates number of villages C D Block wise having primary, middle and secondary schools.

Appendix-I-C Shows number of villages C D Block wise with different sources of drinking water facilities.

Appendix-II Indicates the list of villages with 5,000 and above population which do not have one or more important amenities.

Appendix-II-A Indicates list of Census Towns which do not have one or more amenities.

Appendix-III It gives the land utilization data in respect of Census Towns / non-municipal Towns.

Appendix-IV C D Block wise list of inhabited villages where no amenity other than drinking water facility is available.

Appendix-V Summary showing number of villages not having Scheduled Castes population.

Appendix-VI Summary showing number of villages not having Scheduled Tribes population.

Appendix-VII A, VII B The appendix shows the list of villages according to proportion of the Scheduled castes and Scheduled Tribes to the total population by ranges.

Appendix-VIII Indicates C D Block wise number of villages under each Gram Panchayat.

Appendix-IX Shows number of different types of girls school in a village.

Part B-PRIMARY CENSUS ABSTRACT

PRIMARY CENSUS ABSTRACT

The first census of the third millennium and twenty first century the Census of India, 2001 was the 14th continuous and uninterrupted Indian census since 1872. Thus, 2001 Census will provide data on population and its characteristics marking transition from one century and millennium to another.

The gigantic operation of Population Enumeration (considered by many to be the single largest and complex peace time administrative exercise in the world) was made possible due to the door to door universal canvassing of the Household Schedule by about 2 million enumerators and supervisors covering 593 districts, 5,463 sub-districts, 5,161 towns and 638,588 villages. The comprehensive Household Schedule which replaced the individual slip had three parts and two sides A and B. Part I contained the Location Particulars; Part II related to the Individual Particulars and Part III contained questions for Household engaged in Cultivation/Plantation *(Annexure-II)*. The part II of the Household Schedule had 39 columns and 23 questions all of which were universally canvassed and no sampling was resorted to during enumeration.

Data Processing

A quantum leap was made in the technology front while processing the Census 2001 data both for Houselisting and Population Enumeration. The Census schedules for both the phases were scanned through high speed scanners in fifteen data centers across the country and hand-written data from the schedules were converted into digitized form through Intelligent Character Reading (ICR) software for creation of ASCII records for further processing. The designing and formatting of the Household Schedule had to be done very carefully using specialized software so as to ensure uniformity, which was an essential pre-requisite for scanning. The selection of appropriate state-of-art technology in data processing has made it possible to produce all the Houselisting as well as Population Enumeration tables on full count basis for the first time in the history of Census. For Census 2001, about 202 million schedules consisting of about 1,028 million records were scanned and processed within a span of only 10 months starting October, 2002.

Task Force on Quality Assurance

After the data is processed, it is expedient on the part of the data producing agency to satisfy itself about its quality before putting the same in public domain. This has to be done mainly through the process of internal consistency, comparison with similar data in the past and also through validation with likewise data if available, from external sources. Quite often the local knowledge and perception has to be brought into play to understand both the existing and the new emerging trends of population distribution and characteristics. The other very important aspect of the data quality is to ensure complete coverage of all geographical areas especially for the population enumeration phase where the data is disseminated right up to the village level in the rural areas and the ward level in the urban areas. Thus ensuring the complete coverage and correct geographical linkage of each enumeration block was one of the major planks of the quality control, specially for small area population statistics.

A very comprehensive check and edit mechanism was put in place to objectively examine the preliminary Census 2001 Population Enumeration results and finally clear them for use. The responsibility of the final clearance of data was with the Task Force on Quality Assurance (TFQA), headed by the Registrar General and Census Commissioner, India. The other members of the TFQA were the Heads and senior officers of the Census Division, Data Processing Division, Map Division, Demography Division and Social Studies Division. The Directors of Census Operations were co-opted as members whenever the TFQA discussed the data for their States/Union territories. The Directors and their senior

officers were required to make detailed presentations of data for their own state both in respect to the quality and the coverage and only after the full possible cleared.

There has been a major departure in Census 2001 from the past in respect of the procedure followed for finalization of the Scheduled Castes and the Scheduled Tribes population. In the earlier censuses, the total Scheduled Castes and Scheduled Tribes populations were finalized at the time of the manual compilation of the Primary Census Abstracts (PCA) at the Regional Tabulation Offices which were specially set up for this purpose. The individual Scheduled Castes and the Scheduled Tribes population for each state was finalized much later based on manual coding done by the coders. In 2001 Census, each individual Scheduled Caste and the Scheduled Tribe have been coded directly on the computers by the Data Entry Operators through a process known as Computer Assisted Coding (CAC) and taken up along with the processing of PCA data. The CAC process involves pulling down, from the relevant dictionary of the Scheduled Castes and the Scheduled Tribes, on the computer screen and coding from the dictionary by referring to the image of the specific individual entry in the Household Schedule appearing on the screen. The CAC of the response on Religion wherever required, was also undertaken along with the processing of PCA. This is because the Scheduled Castes status had to be determined in relation to the religion of the individual. Two Special Task Forces, one on Religion and the other on Scheduled Castes/ Scheduled Tribes were constituted for scrutiny and appropriate classification of these responses.

The main task of the Special Task Force on Religion was to appropriately merge or group the new responses encountered and code it into the appropriate religious community based on available literature and local knowledge. The Special Task Force on Scheduled Castes and Scheduled Tribes examined the different Scheduled Castes and Scheduled Tribes entries encountered and classified these into appropriate category of the Scheduled Castes or the Scheduled Tribes principally based on the Presidential Notification and the available literature. Thus a very systematic and scientific mechanism was operationalised to firm up the individual religion and the individual Scheduled Castes/Tribes returns. The Scheduled Castes and the Scheduled Tribes population in 2001 Census, is thus being finalized by aggregating the population data for individual Scheduled Castes and the Scheduled Tribes at appropriate geographical levels.

The entire work relating to the data validation and scrutiny was completed by all the States/Union Territories under the overall supervision and monitoring of the Census Division of the Office of the Registrar General, India with active cooperation and support of the Social Studies Division, Data Processing Division, Data Dissemination Division and Map Division.

Primary Census Abstract

The Primary Census Abstract Table A-5 for total population gives basic information on Area, Total Households, Total population, Scheduled Castes, Scheduled Tribes population, Population in the age group 0-6, Literates, Main workers and Marginal workers classified by the four broad industrial categories, namely, (i) Cultivators, (ii) Agricultural laborers, (iii) Household Industry Workers, and (iv) Other workers and also Non-workers. The characteristics of the Total Population includes Scheduled Castes, Scheduled Tribes, Institutional and Houseless population and are presented by sex and rural-urban residence. This data is presented at different levels, namely, India, States/Union territories, Districts and Cities, Urban Agglomerations (Population 1,00,000 and above) in three different tables. In addition, A-5 Appendix table provides Houseless and Institutional Households and their population by residence and sex for 2001 for India, State and Union territory.

Apart from the India and State/Union Territory volumes for Primary Census Abstract, the District Census Handbook contains District Primary Census Abstract, Appendix to District Primary Census Abstract, Primary Census Abstract for Scheduled Castes, Primary Census Abstract for Scheduled Tribes, Village Primary Census Abstract and Urban Primary Census Abstract of the concerned district in the state.

It was for the first time at the 1981 Census that the Primary Census Abstract (PCA) was brought out for the Scheduled Castes and the Scheduled Tribes separately on the pattern of General Primary Census

Abstract. This practice was continued in 1991 also. In the 1961 and 1971 Censuses, such data were made available in Table C-VIII-Social and Cultural table and to some extent in the series 'Special Tables for Scheduled Castes/Scheduled Tribes'.

The format of Primary Census Abstract has been restructured slightly in the 2001 Census as compared to that of 1991 Census. The nine-fold industrial classification of main workers given in the Primary Census Abstract of 1991 Census has been discontinued and its place, four-fold industrial classification of both 'main workers' and 'marginal workers' are included. In 1981 census only main workers were presented in to four categories. One of the novel features of the primary census abstract of 1991 census was the presentation of data of the population of age group 0-6 is continued in 2001 Census also. This will help the data users in better analysis and understanding of this literacy data.

Level of presentation in District Census Handbooks:

The Primary Census Abstract data in different PCAs are presented at different levels. The level of presentation of Primary Census Abstracts are as under:

The PCA Data for villages was presented CD Block wise for the first time in 1991 Census. This practice is continued in 2001 Census also. The data for each CD Block is presented both for rural and urban areas separately. All the villages within the CD Block constitute the rural portion and the Census Towns and Outgrowths are shown under the urban portion of the CD Block. In case a CD Block is spread over two or more districts, than portion which falls within the district is presented, the data pertaining to remaining portion of the CD Block is presented in the concerned District Census Handbook. The data in the Urban Primary Census Abstract for each town as well as for town with outgrowths in the district are presented. The data for all the wards and the outgrowths of the town(s) are also presented separately below the concerned town(s).

The District Primary Census Abstract is presented in 59 columns. The Primary Census Abstract for Scheduled Castes and Primary Census Abstract for Scheduled Tribes are presented in 52 columns. The Village Primary Census Abstract and Urban Primary Census Abstract are presented in 58 columns.

The concepts and definitions used in the column heading are explained under the sub heading 'Census Concepts' in the Analytical Note. The term 'Total Population' includes the Scheduled Castes, the Scheduled Tribes, the Institutional and the Houseless populations. The explanation regarding area figures presented at various level in the Primary Census Abstracts are as follows:

Area Figures

The area figures supplied by local revenue authorities of the district in respect of tehsils, Police Stations and by the local bodies in respect of towns are given in square kilometers. The area figures of the villages supplied by the Tahsildars in acres have been converted and shown in hectares. The area figures of the CD Block is the total of the village areas coming under each CD Block. The area figures for the district are the same as adopted by the Surveyor General of India to maintain uniformity at the national level. The total area figures of all the tahsils/CD Blocks within the district may not tally with area figures of the district because former represents land use area only. Similarly, the total of all the villages may not tally with the entire rural of Police Station/ Tahsil. The difference may be due to the fact that while the area covered by hills, forests and rivers etc, have been accounted in the Tahsils and P.S. level the same may not be covered under the area of the villages. Apart from this it may also differ due to varying methods of computation adopted at different levels.

An appendix to District Primary Census Abstract has also been furnished showing urban enumeration block-wise particulars on Total Population, the Scheduled Castes Population and the Scheduled Tribes Population for each town.

Part B-PRIMARY CENSUS ABSTRACT

PRIMARY CENSUS ABSTRACT

The first census of the third millennium and twenty first century the Census of India, 2001 was the 14th continuous and uninterrupted Indian census since 1872. Thus, 2001 Census will provide data on population and its characteristics marking transition from one century and millennium to another.

The gigantic operation of Population Enumeration (considered by many to be the single largest and complex peace time administrative exercise in the world) was made possible due to the door to door universal canvassing of the Household Schedule by about 2 million enumerators and supervisors covering 593 districts, 5,463 sub-districts, 5,161 towns and 638,588 villages. The comprehensive Household Schedule which replaced the individual slip had three parts and two sides A and B. Part I contained the Location Particulars; Part II related to the Individual Particulars and Part III contained questions for Household engaged in Cultivation/Plantation *(Annexure-II)*. The part II of the Household Schedule had 39 columns and 23 questions all of which were universally canvassed and no sampling was resorted to during enumeration.

Data Processing

A quantum leap was made in the technology front while processing the Census 2001 data both for Houselisting and Population Enumeration. The Census schedules for both the phases were scanned through high speed scanners in fifteen data centers across the country and hand-written data from the schedules were converted into digitized form through Intelligent Character Reading (ICR) software for creation of ASCII records for further processing. The designing and formatting of the Household Schedule had to be done very carefully using specialized software so as to ensure uniformity, which was an essential pre-requisite for scanning. The selection of appropriate state-of-art technology in data processing has made it possible to produce all the Houselisting as well as Population Enumeration tables on full count basis for the first time in the history of Census. For Census 2001, about 202 million schedules consisting of about 1,028 million records were scanned and processed within a span of only 10 months starting October, 2002.

Task Force on Quality Assurance

After the data is processed, it is expedient on the part of the data producing agency to satisfy itself about its quality before putting the same in public domain. This has to be done mainly through the process of internal consistency, comparison with similar data in the past and also through validation with likewise data if available, from external sources. Quite often the local knowledge and perception has to be brought into play to understand both the existing and the new emerging trends of population distribution and characteristics. The other very important aspect of the data quality is to ensure complete coverage of all geographical areas especially for the population enumeration phase where the data is disseminated right up to the village level in the rural areas and the ward level in the urban areas. Thus ensuring the complete coverage and correct geographical linkage of each enumeration block was one of the major planks of the quality control, specially for small area population statistics.

A very comprehensive check and edit mechanism was put in place to objectively examine the preliminary Census 2001 Population Enumeration results and finally clear them for use. The responsibility of the final clearance of data was with the Task Force on Quality Assurance (TFQA), headed by the Registrar General and Census Commissioner, India. The other members of the TFQA were the Heads and senior officers of the Census Division, Data Processing Division, Map Division, Demography Division and Social Studies Division. The Directors of Census Operations were co-opted as members whenever the TFQA discussed the data for their States/Union territories. The Directors and their senior

officers were required to make detailed presentations of data for their own state both in respect to the quality and the coverage and only after the full possible cleared.

There has been a major departure in Census 2001 from the past in respect of the procedure followed for finalization of the Scheduled Castes and the Scheduled Tribes population. In the earlier censuses, the total Scheduled Castes and Scheduled Tribes populations were finalized at the time of the manual compilation of the Primary Census Abstracts (PCA) at the Regional Tabulation Offices which were specially set up for this purpose. The individual Scheduled Castes and the Scheduled Tribes population for each state was finalized much later based on manual coding done by the coders. In 2001 Census, each individual Scheduled Caste and the Scheduled Tribe have been coded directly on the computers by the Data Entry Operators through a process known as Computer Assisted Coding (CAC) and taken up along with the processing of PCA data. The CAC process involves pulling down, from the relevant dictionary of the Scheduled Castes and the Scheduled Tribes, on the computer screen and coding from the dictionary by referring to the image of the specific individual entry in the Household Schedule appearing on the screen. The CAC of the response on Religion wherever required, was also undertaken along with the processing of PCA. This is because the Scheduled Castes status had to be determined in relation to the religion of the individual. Two Special Task Forces, one on Religion and the other on Scheduled Castes/ Scheduled Tribes were constituted for scrutiny and appropriate classification of these responses.

The main task of the Special Task Force on Religion was to appropriately merge or group the new responses encountered and code it into the appropriate religious community based on available literature and local knowledge. The Special Task Force on Scheduled Castes and Scheduled Tribes examined the different Scheduled Castes and Scheduled Tribes entries encountered and classified these into appropriate category of the Scheduled Castes or the Scheduled Tribes principally based on the Presidential Notification and the available literature. Thus a very systematic and scientific mechanism was operationalised to firm up the individual religion and the individual Scheduled Castes/Tribes returns. The Scheduled Castes and the Scheduled Tribes population in 2001 Census, is thus being finalized by aggregating the population data for individual Scheduled Castes and the Scheduled Tribes at appropriate geographical levels.

The entire work relating to the data validation and scrutiny was completed by all the States/Union Territories under the overall supervision and monitoring of the Census Division of the Office of the Registrar General, India with active cooperation and support of the Social Studies Division, Data Processing Division, Data Dissemination Division and Map Division.

Primary Census Abstract

The Primary Census Abstract Table A-5 for total population gives basic information on Area, Total Households, Total population, Scheduled Castes, Scheduled Tribes population, Population in the age group 0-6, Literates, Main workers and Marginal workers classified by the four broad industrial categories, namely, (i) Cultivators, (ii) Agricultural laborers, (iii) Household Industry Workers, and (iv) Other workers and also Non-workers. The characteristics of the Total Population includes Scheduled Castes, Scheduled Tribes, Institutional and Houseless population and are presented by sex and rural-urban residence. This data is presented at different levels, namely, India, States/Union territories, Districts and Cities, Urban Agglomerations (Population 1,00,000 and above) in three different tables. In addition, A-5 Appendix table provides Houseless and Institutional Households and their population by residence and sex for 2001 for India, State and Union territory.

Apart from the India and State/Union Territory volumes for Primary Census Abstract, the District Census Handbook contains District Primary Census Abstract, Appendix to District Primary Census Abstract, Primary Census Abstract for Scheduled Castes, Primary Census Abstract for Scheduled Tribes, Village Primary Census Abstract and Urban Primary Census Abstract of the concerned district in the state.

It was for the first time at the 1981 Census that the Primary Census Abstract (PCA) was brought out for the Scheduled Castes and the Scheduled Tribes separately on the pattern of General Primary Census

Abstract. This practice was continued in 1991 also. In the 1961 and 1971 Censuses, such data were made available in Table C-VIII-Social and Cultural table and to some extent in the series 'Special Tables for Scheduled Castes/Scheduled Tribes'.

The format of Primary Census Abstract has been restructured slightly in the 2001 Census as compared to that of 1991 Census. The nine-fold industrial classification of main workers given in the Primary Census Abstract of 1991 Census has been discontinued and its place, four-fold industrial classification of both 'main workers' and 'marginal workers' are included. In 1981 census only main workers were presented in to four categories. One of the novel features of the primary census abstract of 1991 census was the presentation of data of the population of age group 0-6 is continued in 2001 Census also. This will help the data users in better analysis and understanding of this literacy data.

Level of presentation in District Census Handbooks:

The Primary Census Abstract data in different PCAs are presented at different levels. The level of presentation of Primary Census Abstracts are as under:

The PCA Data for villages was presented CD Block wise for the first time in 1991 Census. This practice is continued in 2001 Census also. The data for each CD Block is presented both for rural and urban areas separately. All the villages within the CD Block constitute the rural portion and the Census Towns and Outgrowths are shown under the urban portion of the CD Block. In case a CD Block is spread over two or more districts, than portion which falls within the district is presented, the data pertaining to remaining portion of the CD Block is presented in the concerned District Census Handbook. The data in the Urban Primary Census Abstract for each town as well as for town with outgrowths in the district are presented. The data for all the wards and the outgrowths of the town(s) are also presented separately below the concerned town(s).

The District Primary Census Abstract is presented in 59 columns. The Primary Census Abstract for Scheduled Castes and Primary Census Abstract for Scheduled Tribes are presented in 52 columns. The Village Primary Census Abstract and Urban Primary Census Abstract are presented in 58 columns.

The concepts and definitions used in the column heading are explained under the sub heading 'Census Concepts' in the Analytical Note. The term 'Total Population' includes the Scheduled Castes, the Scheduled Tribes, the Institutional and the Houseless populations. The explanation regarding area figures presented at various level in the Primary Census Abstracts are as follows:

Area Figures

The area figures supplied by local revenue authorities of the district in respect of tehsils, Police Stations and by the local bodies in respect of towns are given in square kilometers. The area figures of the villages supplied by the Tahsildars in acres have been converted and shown in hectares. The area figures of the CD Block is the total of the village areas coming under each CD Block. The area figures for the district are the same as adopted by the Surveyor General of India to maintain uniformity at the national level. The total area figures of all the tahsils/CD Blocks within the district may not tally with area figures of the district because former represents land use area only. Similarly, the total of all the villages may not tally with the entire rural of Police Station/ Tahsil. The difference may be due to the fact that while the area covered by hills, forests and rivers etc, have been accounted in the Tahsils and P.S. level the same may not be covered under the area of the villages. Apart from this it may also differ due to varying methods of computation adopted at different levels.

An appendix to District Primary Census Abstract has also been furnished showing urban enumeration block-wise particulars on Total Population, the Scheduled Castes Population and the Scheduled Tribes Population for each town.
