Part X—C	. .	District Census Handbook (Analytical Report and Administrative Statistics and District Census Tables)

Foreword

It was in 1961 for the first time in the history of Indian census that a Census of India atlas series was brought out on various census themes as also non-census statistics for India and a number of states and union territories. These atlases received wide recognition. During 1973-74, the Indian Census Centenary Atlas was brought out by the Office of the Registrar General, India. The 1961 atlas was exhibited at the International Geographical Congress (1968) in New Delhi. A folio of the 1961 atlas comprising ten selected maps was distributed among the 1,500 delegates to the congress. The centenary atlas was exhibited at the United Nations world population cenference (1974) in Bucharest.

Maps from the tahsil to the national level appear in most 1971 census table volumes, reports and publications. As part of the 1971 census taking, jurisdictional maps (basic census map documents) and urban land use schematic maps were prepared to enrich the district census handbooks, the town directories and other census publications. The jurisdictional maps at taluka, district levels were combined in a volume known as Administrative Atlas for each state with additional demographic information and published for six states. Others are likely to come out in course of time. These are the latest subject maps with reference to the 1971 census. This upholds the tradition of the census office of producing the largest number of latest maps in the country.

The tabulation plan of the 1971 census aimed at presenting information based on various types of census data. The 1971 census of India atlas series projects census data in thematic maps. The 1971 atlas programme has been planned in a way that helps comparability with the 1961 data in areas like growth and density of population, sex, religion and literacy. The atlas series, which forms part IX in the census publication series will provide correlation of census data with non-census statistics and help in the analysis and evaluation of socio-economic problems at different administrative levels.

Planning of census atlases began along with pre-census preparations in 1969-70. A national conference was organised in April 1970 in the Office of the Registrar General in which scholars like Prof. G. S. Gosal, Prof. V. L. S. P. Rao, Prof. Mansoor Alam, Dr. M. P. Thakore, Dr. L. S. Bhatt and Mr. H. M. Jones participated. It discussed the themes and techniques for the maps to be included in 1971 atlas. This scheme was sent to a large number of universities and institutions and valuable suggestions were received from Prof. O. H. K. Spate, Prof. John E. Brush, Prof. John W. dickay, Prof. R. M. Prothore and Prof. B. J. Garner. The scheme was then examined at conference of directors of census operations at Courtallam (1970) and at Pahalgam (1972).

The atlas series has been planned in such a way that a complete demographic profile for different administrative units in the country is available

from the maps appearing in the atlases of states and union territories and in the national volume. Generally, atlases of states and union territories include eight maps which give the geographical personality of the region, followed by population, sex and age, urbanisation, migration, agriculture, census industrial categories, electricity, transport & communications, trade & commerce and services. There are also maps devoted to scheduled castes and tribes, religion, education, housing and health.

There has been a slight deviation in the all-India volume to reduce the bulk of the atlas by combining themes on the maps. Certain insets are added to provide more information on the subject. Diagrams, graphs, and tables based on quantitative measurements of themes help in interpretations of each plate.

In the present all-India atlas, 80 plates are included in four sections. Eleven plates show administrative boundaries and physical aspects. In the section on demographic structure and trends, 35 plates cover distribution of population, density and growth, sex and age and urbanisation. The economic aspects based on census industrial categories are shown in 13 plates. The socio-cultural aspects accounting for 20 plates relate to scheduled castes and tribes, religion and education. A plate on the physio-geographical regions of India has been included to enable the users to co-ordinate variables in terms of such regions.

This atlas programme has been executed under the direction of Dr. B. K. Roy, Assistant Registrar General (Map). When Dr. Roy went on an U. N. assignment for two years, the work was carried on by the Map division in Delhi under the supervision on Dr. R. R. Tripathi, Now Map Officer. I congratulate all the members of Map division in our Delhi Office and the members of map units in the offices of directors of census operations of states/union territories on their excellent teamwork and their dedication which contributed to the success of this venture.

R. B. CHARI
Registrar General, India
Ex-Officio Census Commissioner, India

PREFACE

During the 1971 Census this Organization has taken up various projects under the guidance of Sh. R. B. Chari, Registrar General & Census Comissioner of India, of which the 1971 Census Atlas Project is just one.

This Atlas is a Visual presentation of demographic, economic and Socio-cultural data along with the description. Its standard contents being, (1) Orientation, (2) Physical conditions, (3) Demographic Structure and trends, (4) Economic Aspects and (5) Socio-Cultural Aspects. These maps follow the general pattern laid down for the country as a whole, by the Registrar General, India. Brief explanatory notes are printed facing the maps, to enable a reader to understand the cartographic presentations. Two horizontal bar diagrams are given below the explanatory notes in the case of several maps. The first bar indicates the number of units/or villages as the case may be, included in each class range in both/absolute numbers and percentages and the other the corresponding population in absolute numbers and percentages. It is hoped that this method of presentation will facilitate easy reference.

Processing of the relevant data was done by S/Sh. S. S. A. Jafri Cartographer, P.S.Gera and Amarjit Singh, Draftsmen. Maps were drawn by S/Sh. P. S. Gera, V.K. Puri and Amarjit Singh, Draftsmen under the supervision of S/Sh. S. S. A. Jafri and Autar Singh Cartographers. Writing about these maps was done by Sh. S. S. A. Jafri, Sh. Chhotey Lal and finally gone through by Sh. Autar Singh under the supervision of Sh. B. N. Mathur.

The majority of maps in this Atlas are based upon the Census data. Several other Government Departments/Agencies of Delhi Union Territory have also liberally provided valuable data for other maps.

I would like to express my thanks and deep feelings of gratitude to Dr. B. K. Roy, Assistant Registrar General (map) for his friendly and sympathetic attitude and praiseworthy help in scrutinizing and finalizing the maps.

Thanks are also due to Shri P. Padamanabha, the present Registrar General and Census Commissioner of India who impressed me in bringing out the 1971 Census Atlas of the Delhi Union Territory.

JAGDISH SINGH

A. ORIENTATION

Map 1

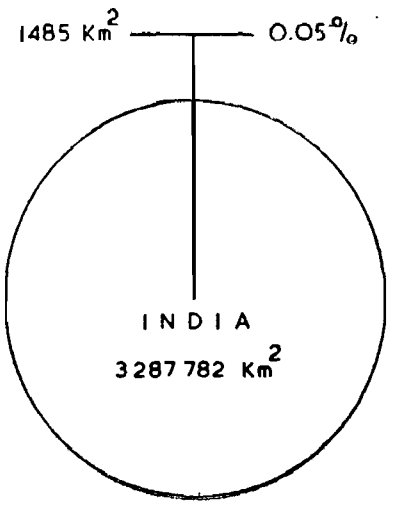

POSITION OF UNION TERRITORY OF DELHI IN INDIA 1971

This map shows the geographical location of the union territory of Delhi in India. Delhi UT lies between 28°-25′ and 28°-53′ north latitude and 76°-89′ and 77°-20′ east longitude. It has an area of 1485 km.2.

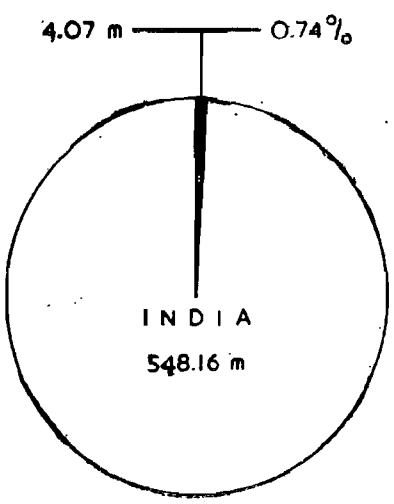

Delhi UT is bounded by two states, viz. Haryana in the north, west and south and Uttar Pradesh in the east. It ranks fourth among union territories with respect to area and first with respect to population.

Union territories	Area (km2.)	Population
1. Arunachal Pradesh	83,578	467,511
2. Andaman & Nicobar Islands	8,293	115,133
3. Goa, Daman & Diu	3,813	857,771
4. Delhi	1,485	4,065,698
5. Dadra & Nagar Haveli	491	74,170
6. Pondicherry	480	471,707
7. Chandigarh	114	257,251
8. Laccadiv, Minicoy & Amindivi Islands	32	31,810

MAP I

Reg. No. 2970 HD' 72–500-250'76.

Based upon Survey of India map with the permission of the Surveyor General of India.

© Government of India copyright 1977.

The boundary of Meghalaya shown on this map is as interpreted from the North-Eastern Areas (Reorganisation) Act, 1971, but has yet to be verified.

The territorial waters of India extend into the sea to a distance of twelve nautical miles measured from the appropriate base line.

Map 2

ADMINISTRATIVE DIVISIONS 1971

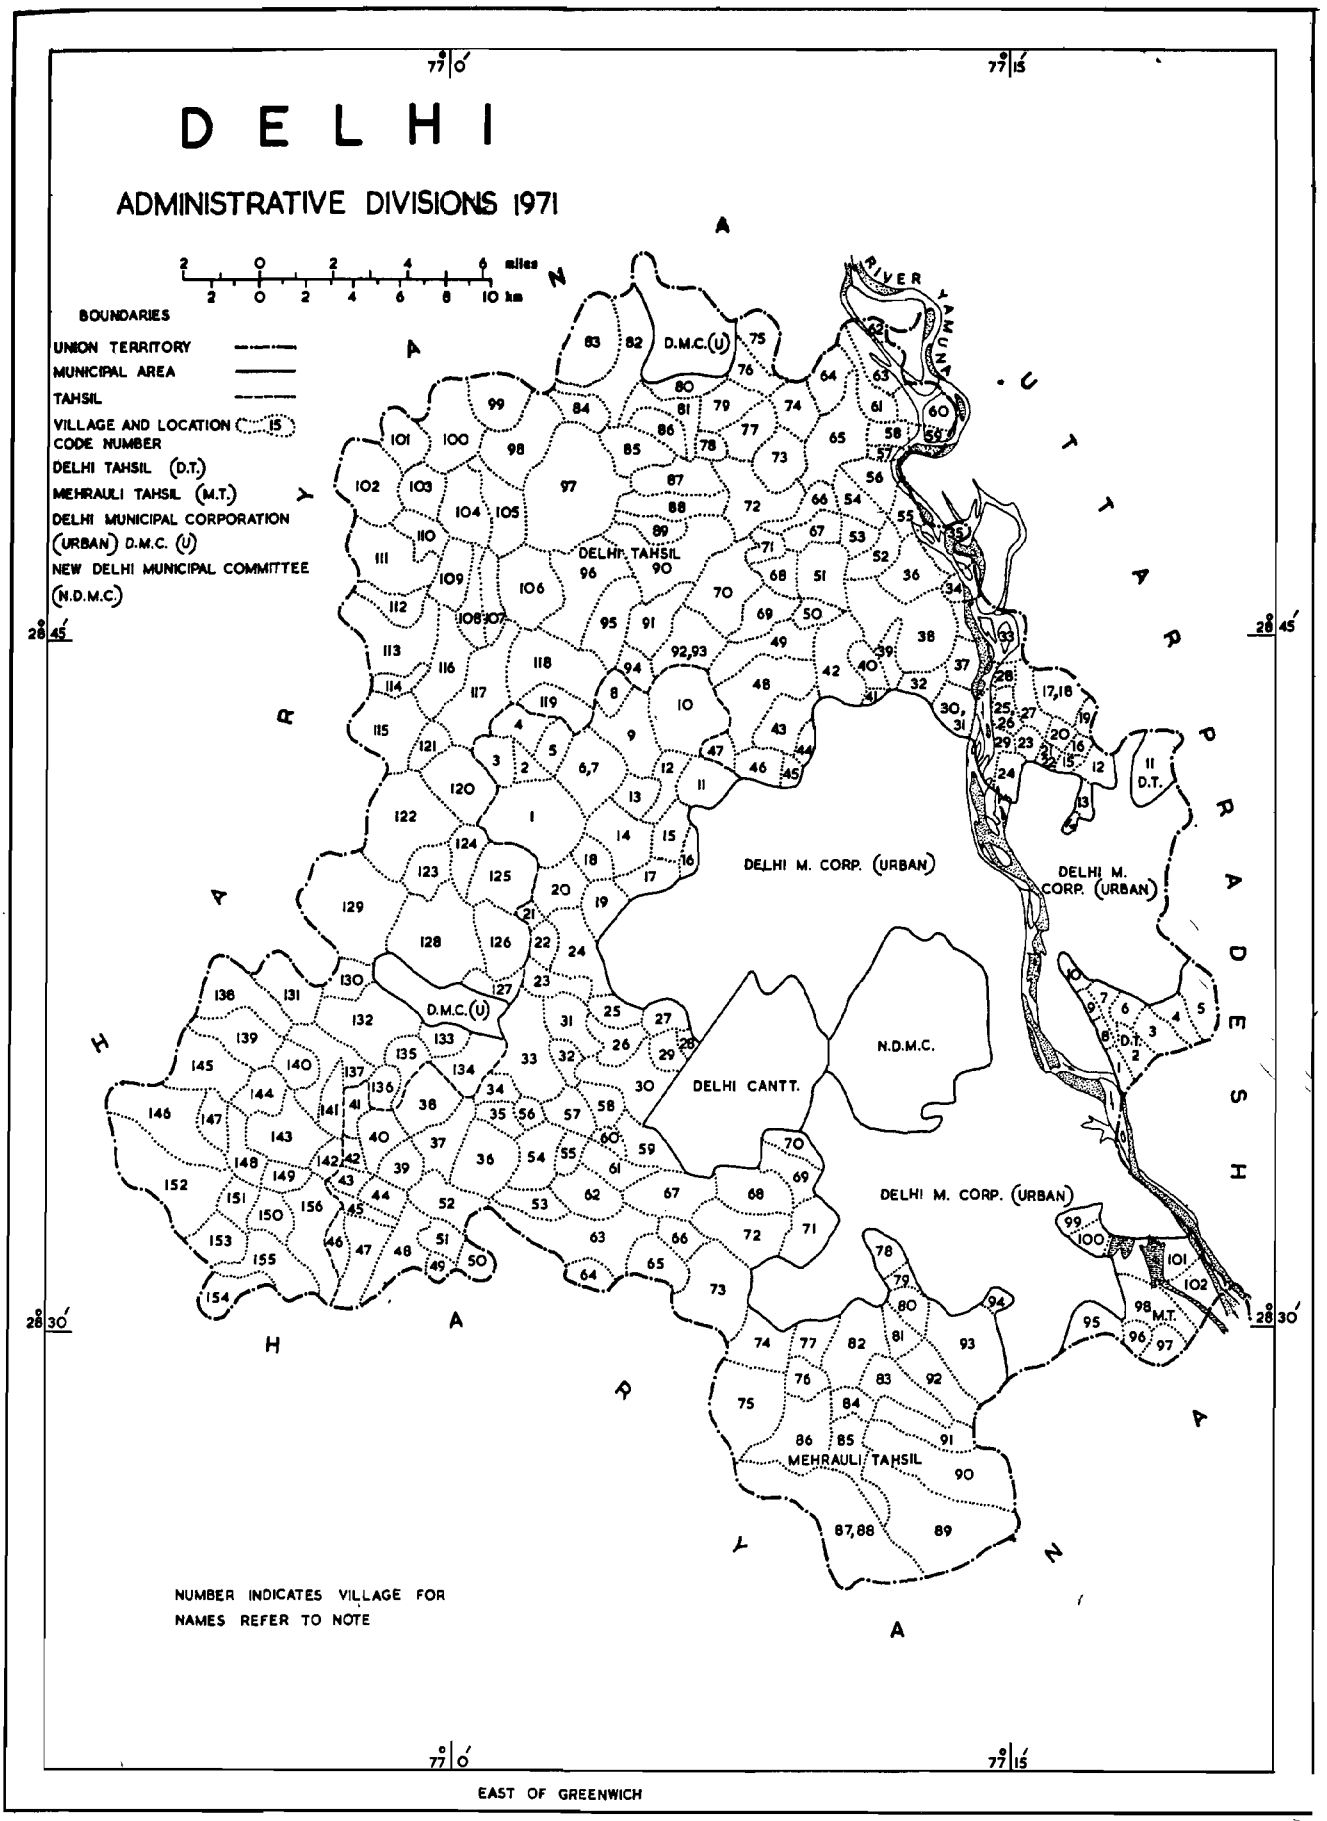

This map shows the administrative units of the Delhi UT. The union territory consists of one district and two tahsils. The civic administration is under the respective controls of Delhi Municipal Corporation (DMC), the New Delhi Municipal Committee (NDMC) and the Delhi Cantonment.

The following table shows the location code numbers of villages, uninhabited villages are printed in italics.

CHANGES IN ADMINISTRATIVE BOUNDARIES 1961-71

There have been two changes within the territory. First, Delhi tahsil was bifurcated into Delhi and Mehrauli Tahsils. Secondary, 40 villages were urbanised and merged in D.M.C.

VILLAGES URBANISED AFTER 1961

B. PHYSICAL CONDITIONS

Map 4

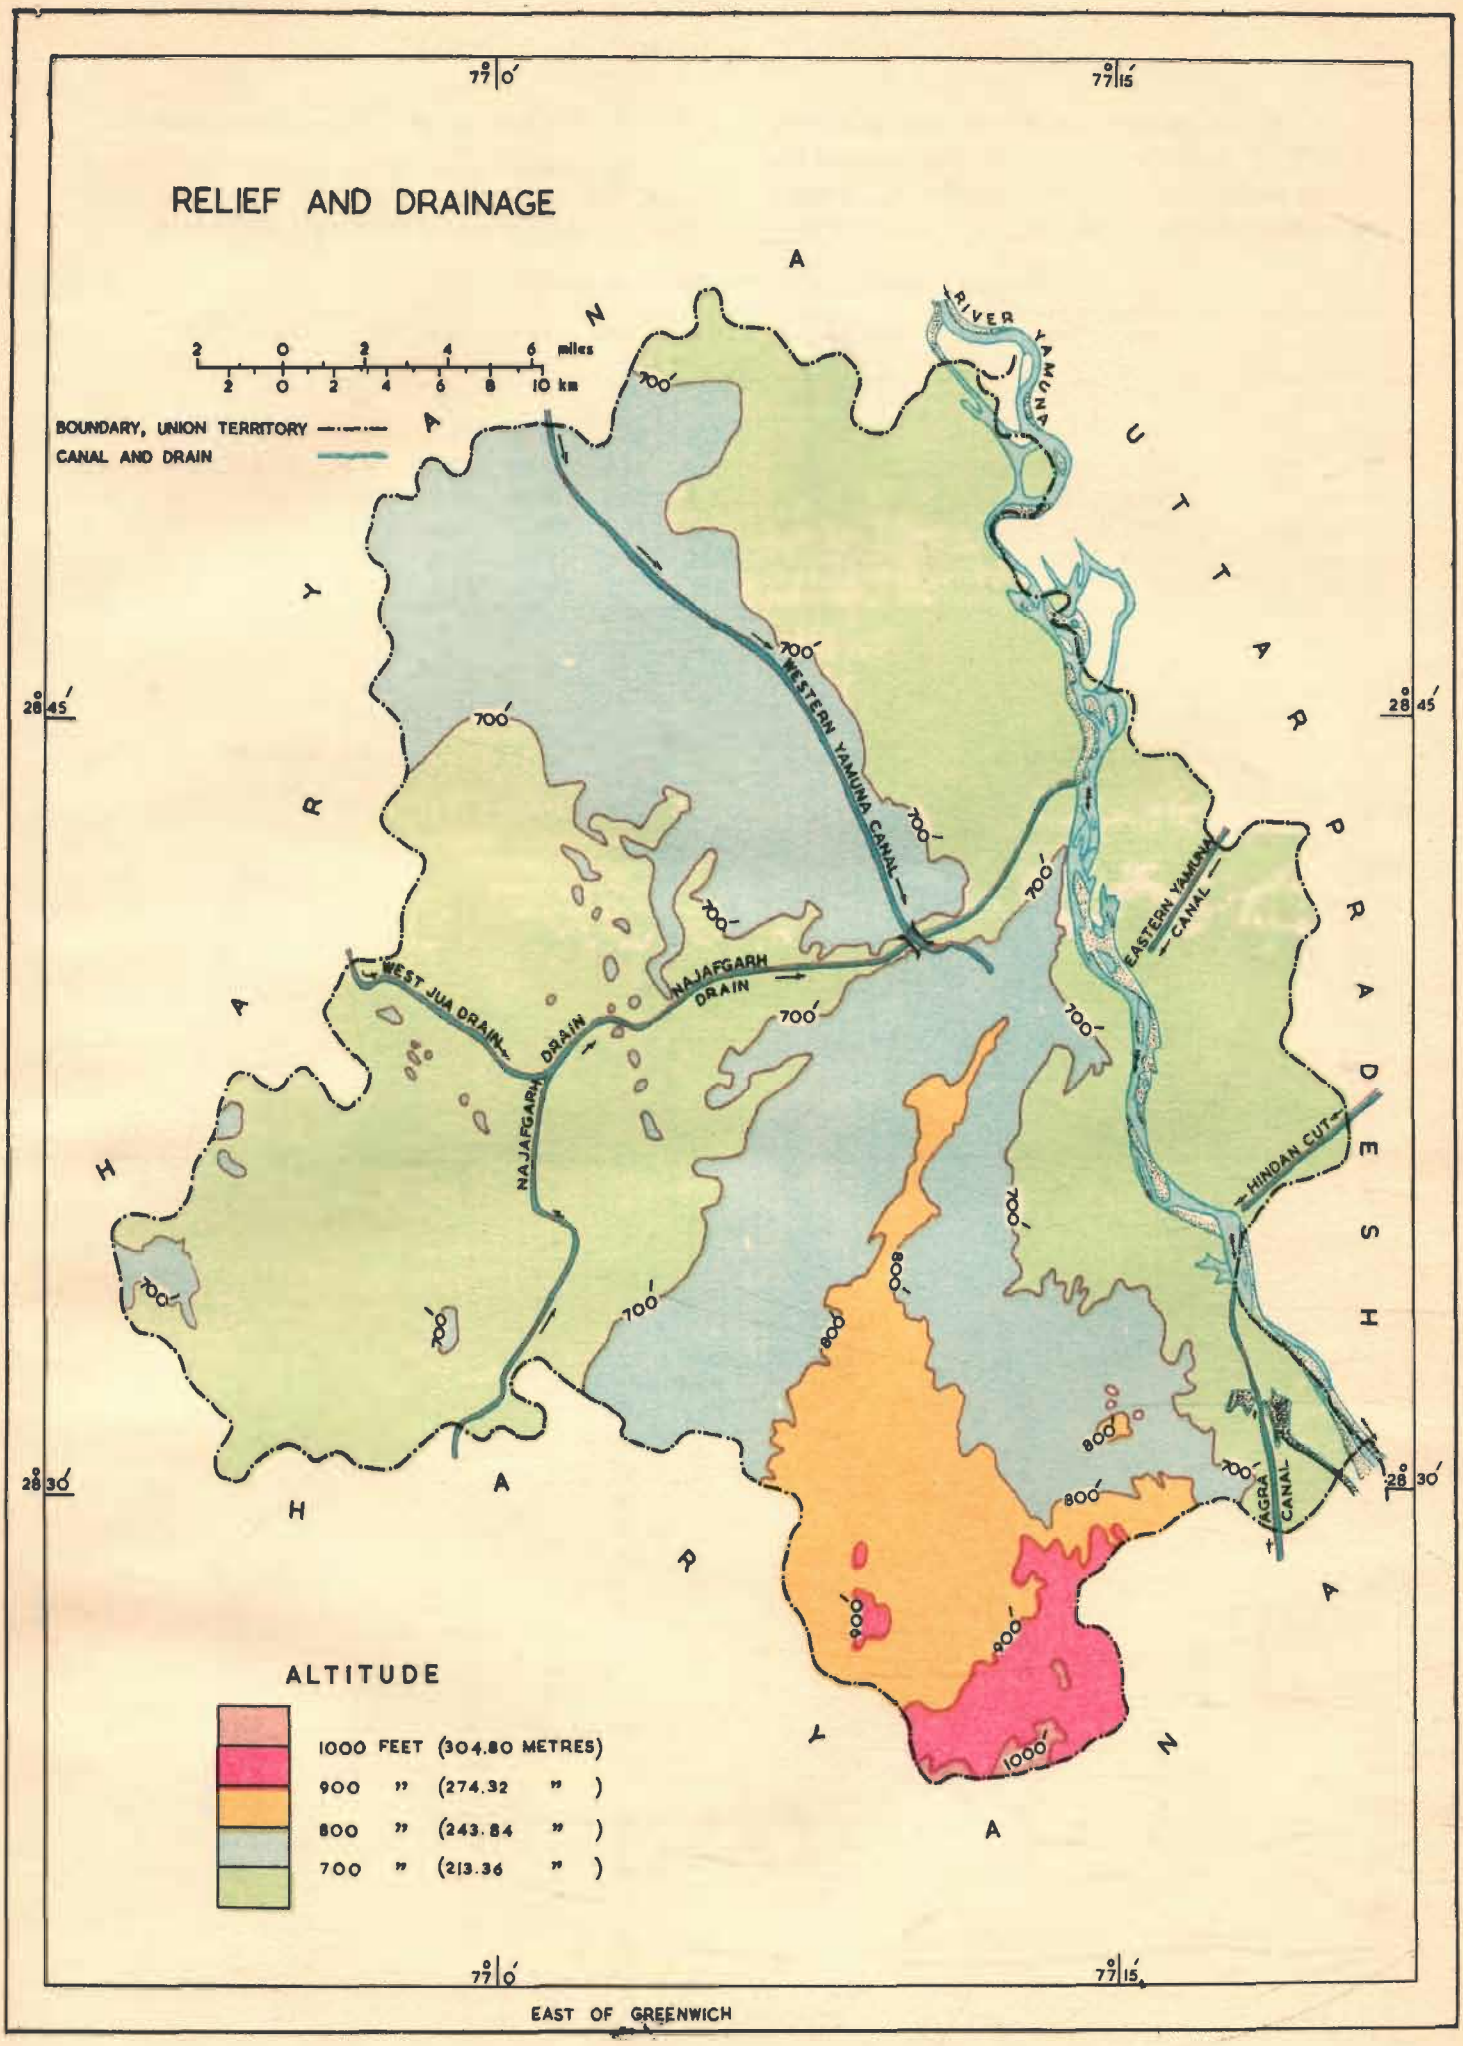

RELIEF AND DRAINAGE

This map shows the relief and drainage of Delhi U.T. Altitudes are depicted by contours in the map. The altitudinal levels are 700′ and below, 700′ to 800′, 800′ to 900′, 900′ to 1,000 and above 1,000′.

The general slope of Delhi UT is from north to south as evidenced by the direction of the flow of the Yamuna. The dominating physical feature is the ridge, the last spur thrown out by the Aravalli, towards the plains of northern India. The ridge almost reaches the water's edge at Wazirabad village, then runs parallel to the river encircling shahjahanabad (the walled city) and extending to the western side of New Delhi. It runs further towards the Qutab and Mehrauli where it throws out numerous branches. Some of which extend to Gurgaon district and other push eastward again towards the Yamuna. One of the highest spurs supports the fort of Tughlakabad.

The Southern part near Mehrauli and Tughalakabad is called *kohi* (hilly). The low-lying land along the river is called *khadar* and the tract lying to the north of the Ridge and west of Grand Trunk Road, which separates it from the *khadar* is a level plain known as *bangar*.

NORMAL MONTHLY AND ANNUAL RAINFALL

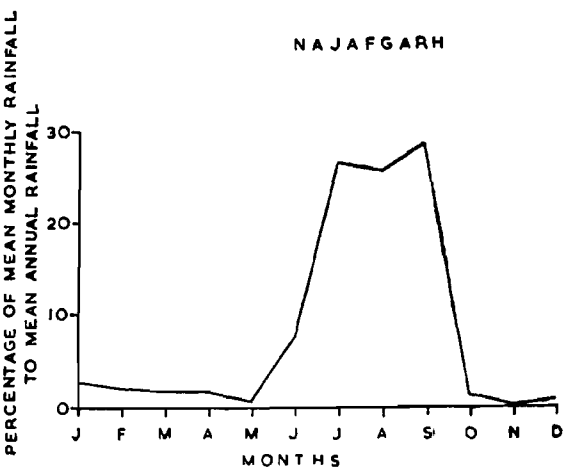

The normal monthly rainfall of selected stations in Delhi UT has been shown by bar diagrams and the normal annual rainfall has been shown by isohyets at suitable intervals of 100 mm. The space between isohyets has been hatched into different shades.

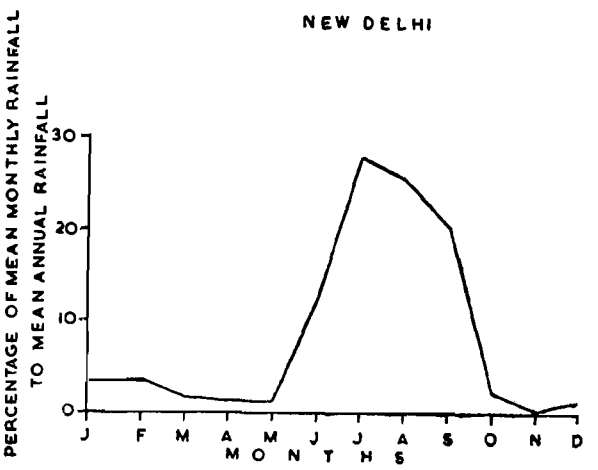

The normal annual rainfall of Delhi UT is 467·1 mm. July, August and September receive the maximum rainfall of nearly 80 per cent of the total.

NORMAL MONTHLY MAXIMUM AND MINIMUM TEMPERATURE

Normal monthly maximum and minimum temperature are shown for two meteorological stations, Safdarjang and Palam. The two stations are located apart at an approximate distance of 9 km. from each other in north-east and south-west respectively.

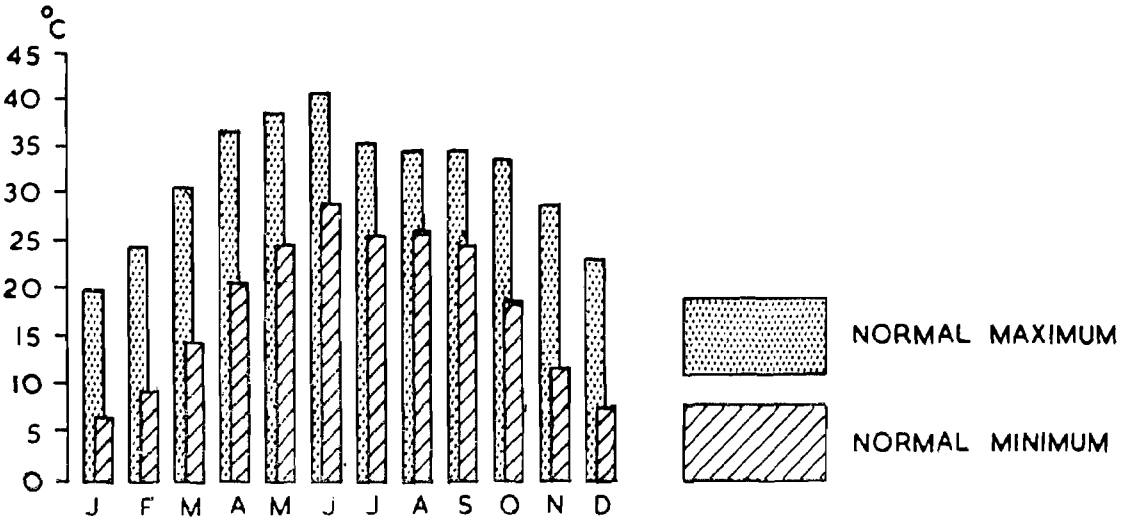

The maximum temperature for Safdarjang is comparatively higher than Palam during the months of January to May and September. The hotest days in Safdarjang occur during May and at Palam in June.

FORESTS

The Forest cover of Delhi UT is divided into two general types, dry thorny forests (natural forests) and mixed forests (Plantations). Natural forests generally includes acacia (babul) and also thorny bushes. Forest under afforestation schemes include temperate, tropical and deciduous trees which are grouped under mixed forests. After 1961 quite a sizeable reserve forests of Delhi UT is engulfed by urbanisation. Only two patches of reserve forests are left which are located in the north and central part of Delhi UT.

DENSITY OF POPULATION 1971

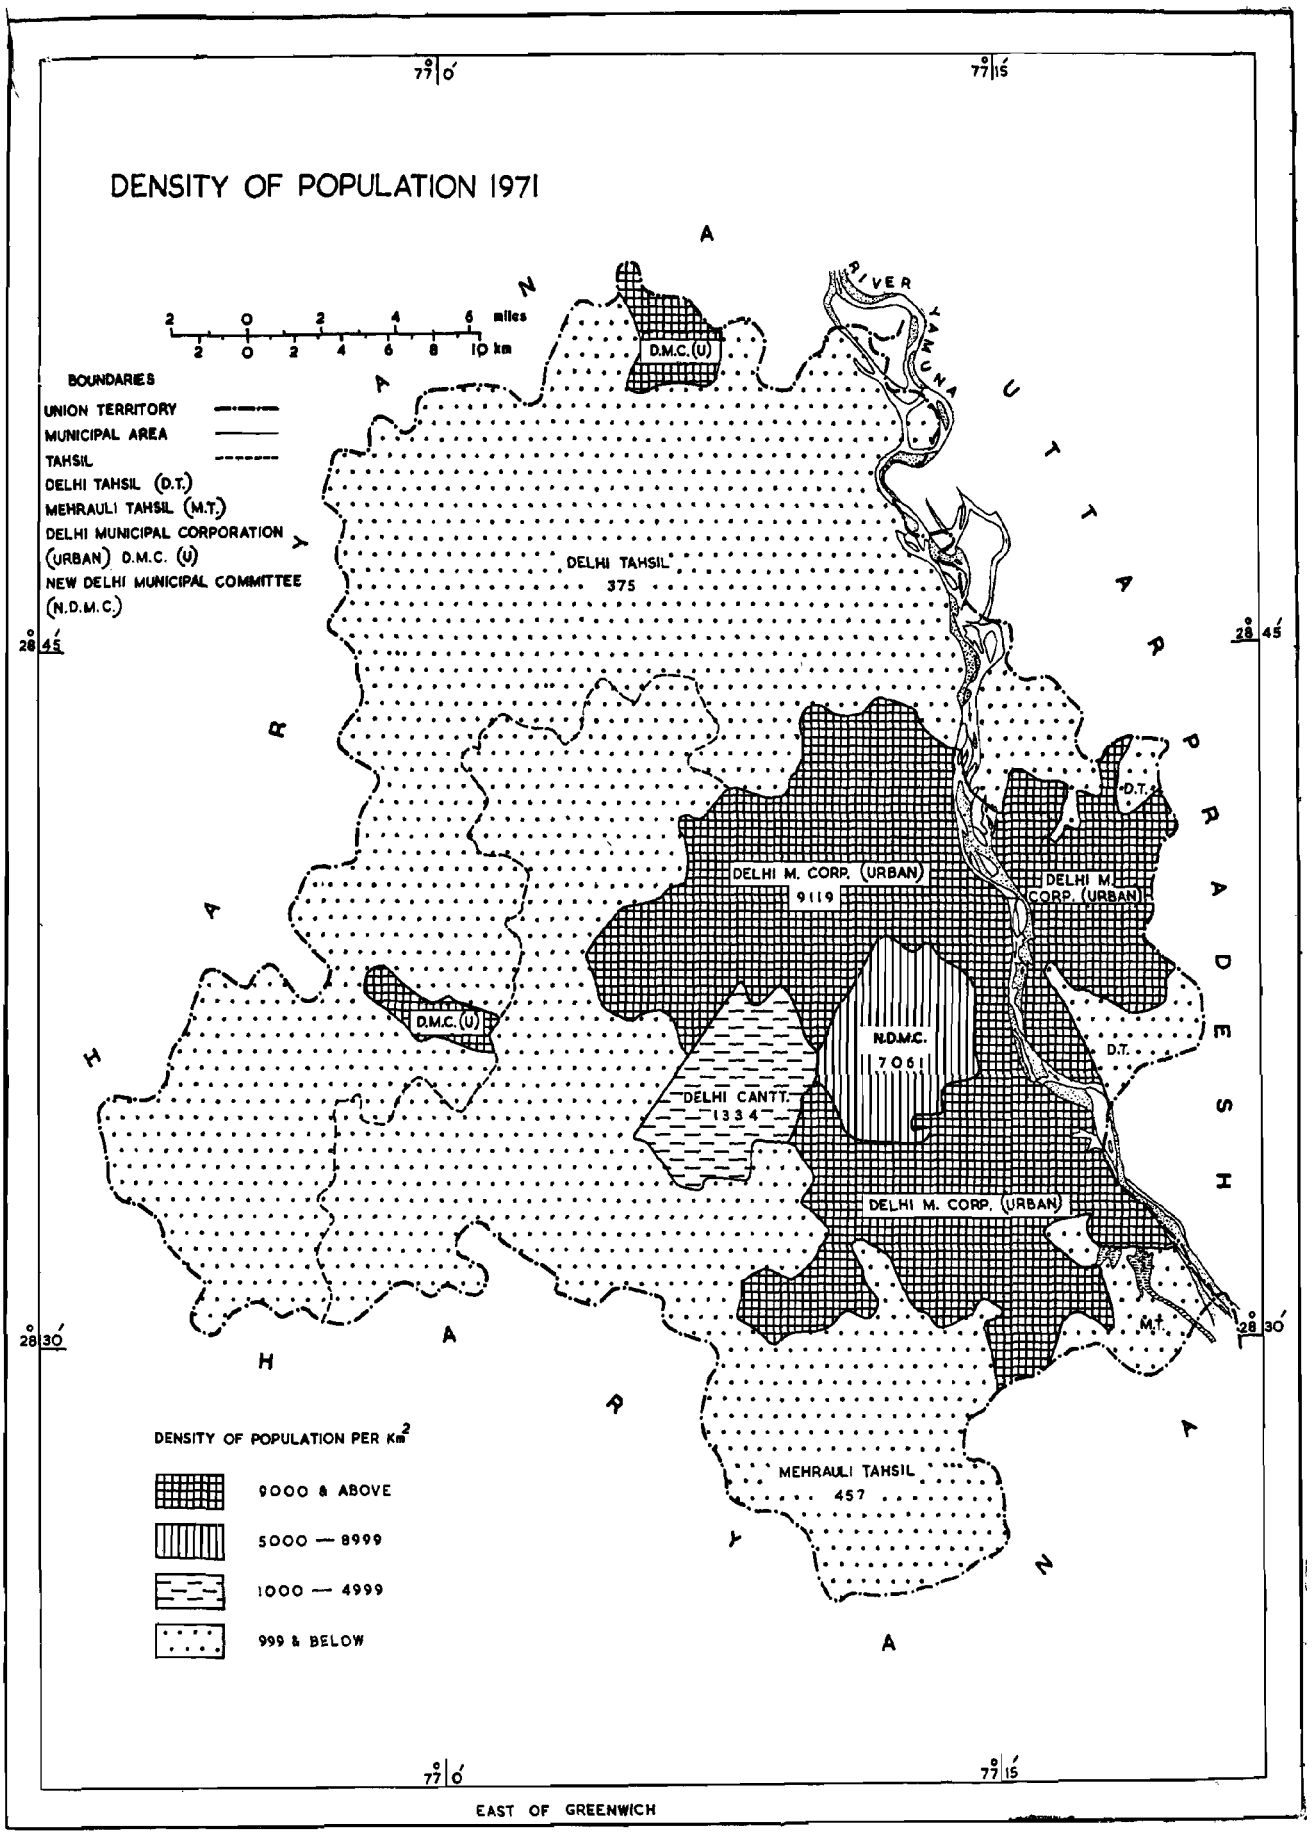

The density figures per km.^{2} have been grouped into four categories as shown in the index of the map. The areas under these categories are hatched from deep to light shades indicating high to low density. Density of population is strikingly uneven in Delhi UT. The lowest density ranges between 375 and 457 persons per km.^{2} in Delhi Tahsil and Mehrauli Tahsil respectively. The urban density has a high gap which ranges i.e. Delhi Cantonment (1334), NDMC (7061) and DMC (9119) persons per km.^{2} The following table shows the variation of density in various units of Delhi UT.

DENSITY OF POPULATION 1971

GROWTH OF POPULATION 1961—71

This map shows the intercensal growth of population in different units of Delhi UT.

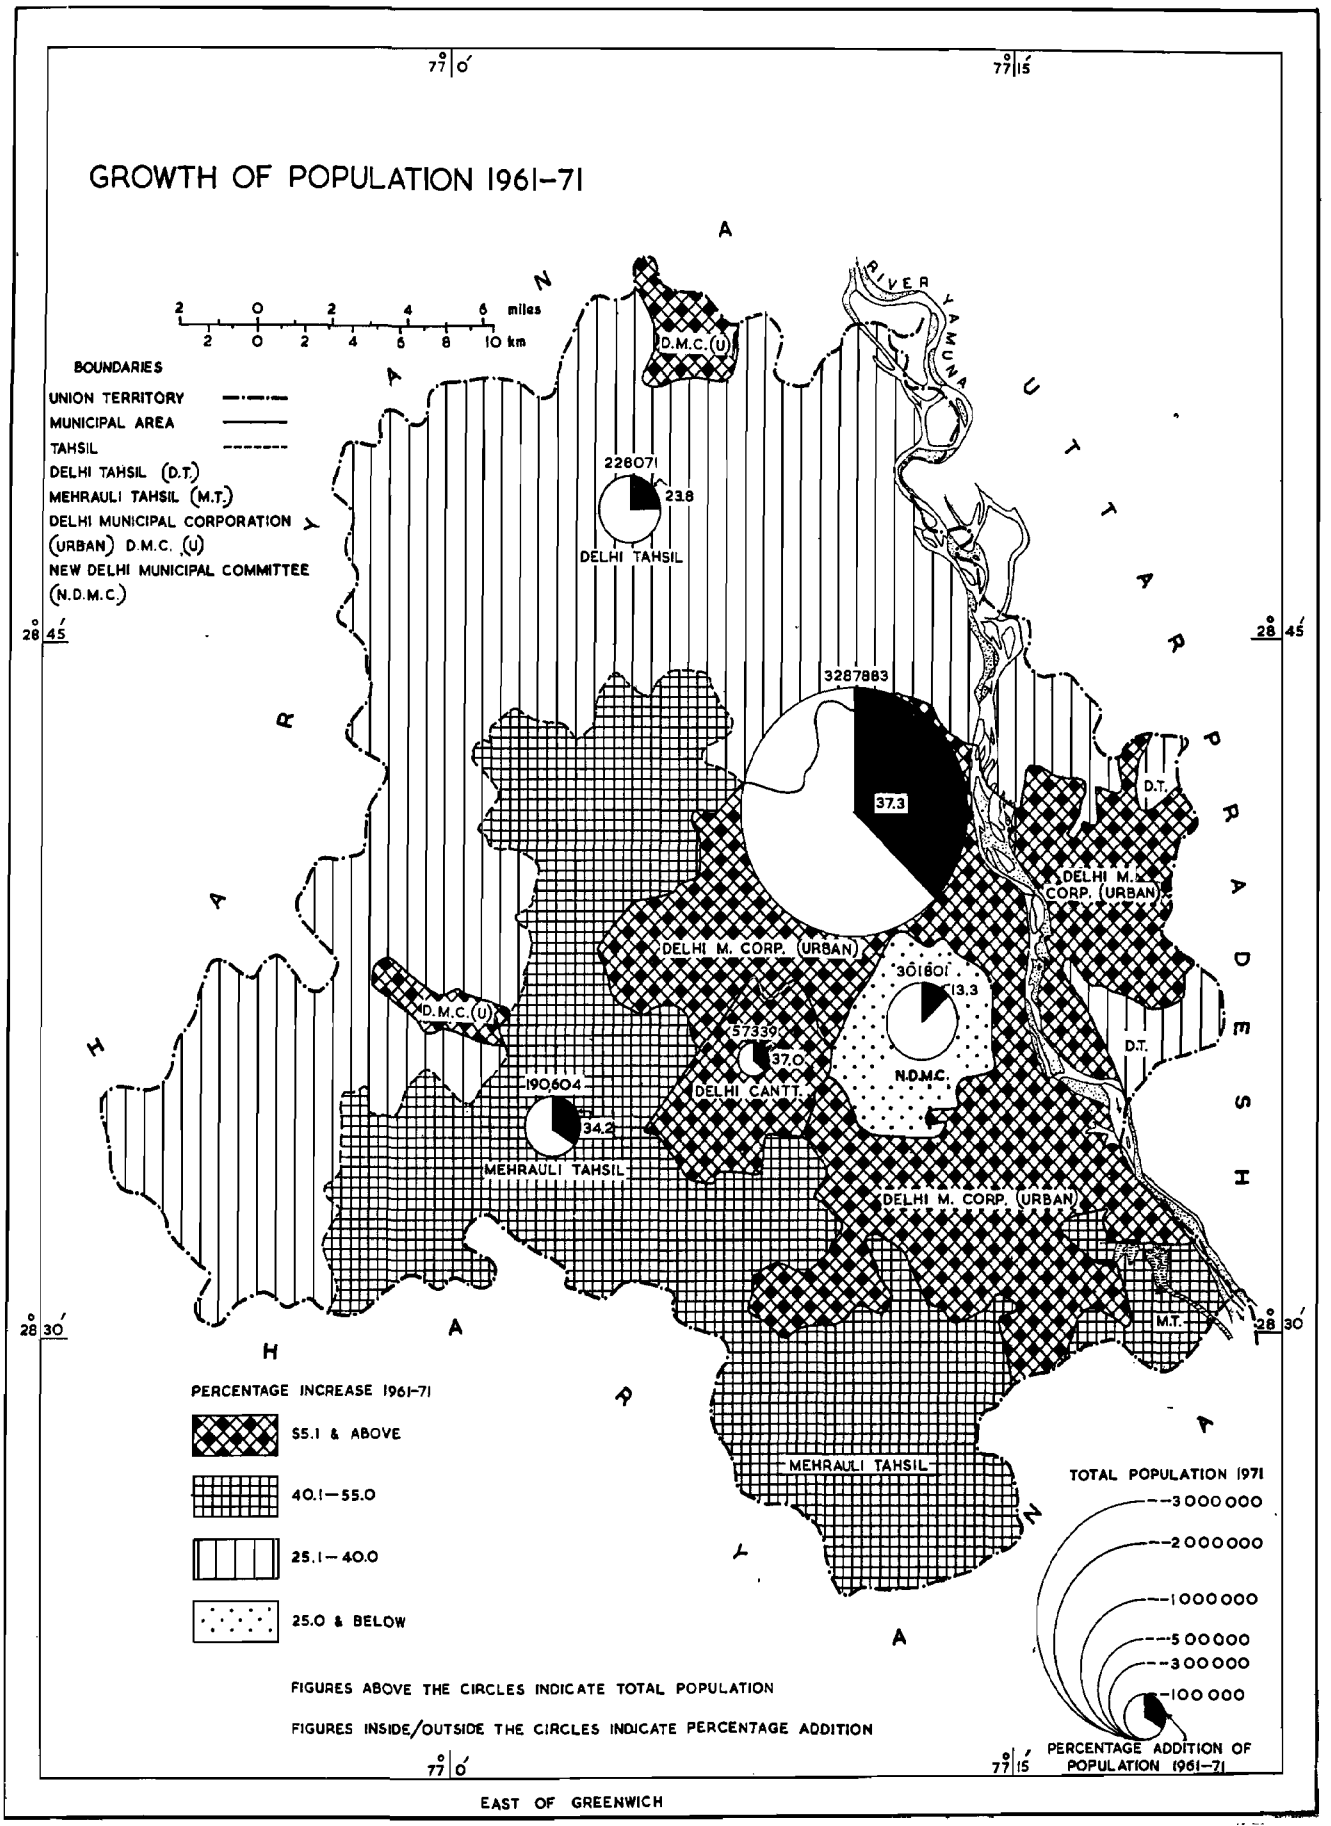

Intercensal growth between 1961 and 1971 has been shown by different shades. The total population of 1971 census has been depicted by proportionate circles. These circles also show the population which was added after 1961 and shown by sectors.

Among all the five administrative units, the growth rate of DMC(U) and Delhi Cantonment is maximum i.e. 59·5% and 58·8% respectively. The NDMC has the lowest population growth of only 15·4%. Both the tahsils; Delhi Tahsil (31·2%) and Mahrauli Tahsil (52·0%) show great difference in their population growth.

Unit	Population		Percentage	Net addition of Population (1961—71)

FERTILITY 1971

This map shows the ratio of children in the age group 0-4 and women in 15-44.

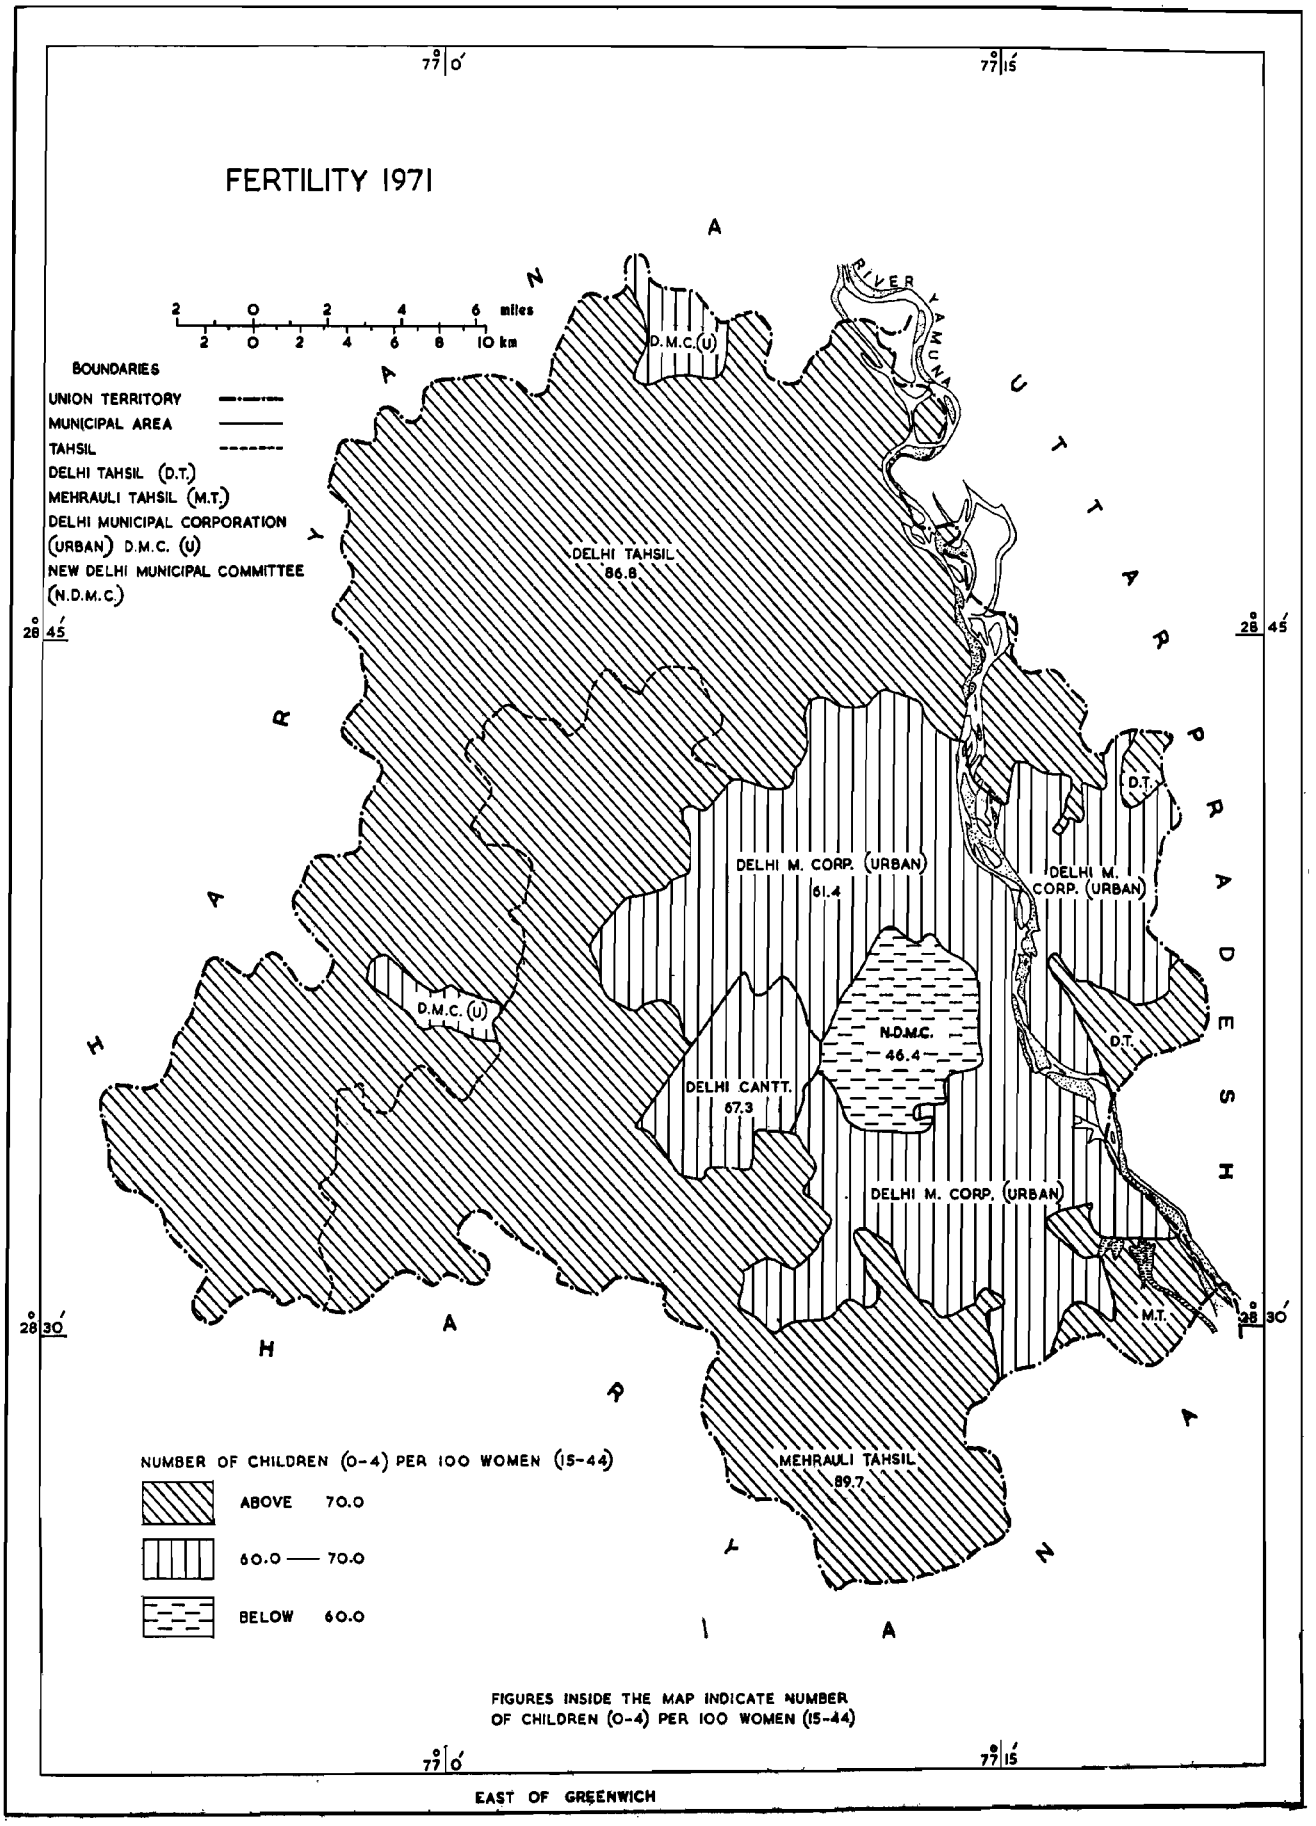

Child-woman ratio has been calculated by dividing the number of children in the age 0-4 by the number of women in the age 15-44, multiplied by 100. These ratios have been grouped in three ranges.

The following table gives the number of children in the age 0-4 per 100 women in the age 15-44 in the various units of Delhi UT.

Unit	Number of children in age (0-4) per 100 women in age (15-44)

CHANGE IN SEX RATIO 1961-71

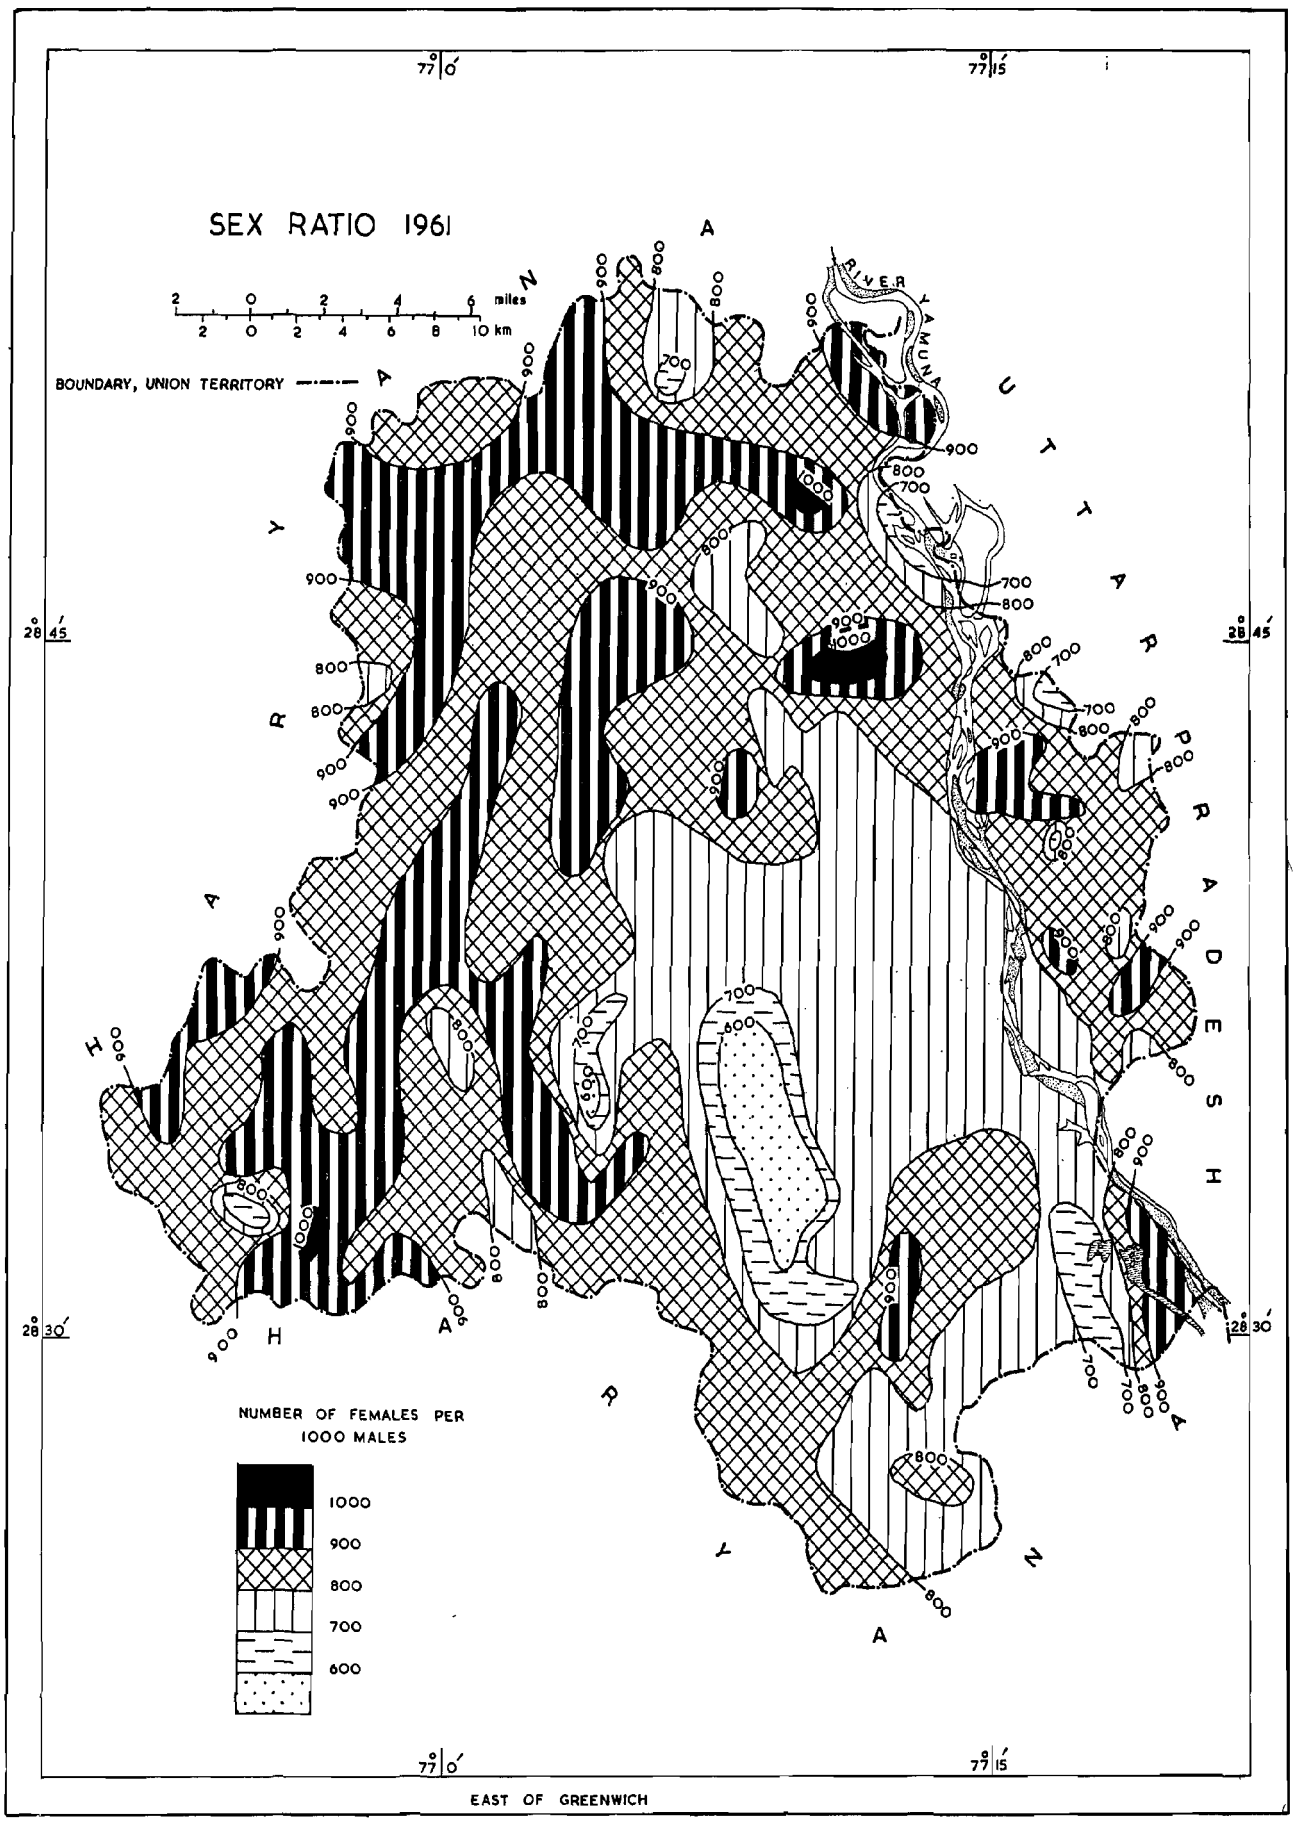

This map shows the changing pattern of sex ratio during 1961-71. Maps for 1961 and 1971 have been drawn side by side by isopleth technique exhibiting the sex ratio of each of the administrative units. Isopleth lines are drawn joining the points of similar sex ratio. The intervening spaces between the two isopleths are shaded from light to dark according to sex ratio values.

During the decade 1961-71 number of women has comparatively increased in all the urban units, while it has lowered down in rural Delhi. The following table gives the sex ratio of different units of the Delhi UT.

Unit	Sex ratio	
	1961	1971
Delhi UT	785	801
Urban	777	798
DMC(U)	788	806

Map 15

SEX, AGE STRUCTURE AND MARITAL STATUS 1971

Sex, age composition and marital status of the population of Delhi UT is shown in this map. Age-groups are displayed as available in census. Male population is shown on the left side of age pyramid and the female on the right. To classify the marital status, horizontal bars have been grouped into three shades of black. The classification namely old men & women (60+), middle age men & women (35-59), young men & women (15-34),boys & girls (5-14), infants (0-4) are shown in red in the pyramids.

The base of the age-pyramids pertaining to the urban units of Delhi UT are comparatively smaller signifying low birth rate in comparison with that of Delhi & Mehrauli Tahsils. The highest proportions of infants age-group 0-4 i.e. male (8·6%), and female (7·8%) is recorded in Mehrauli Tahsil while the lowest in NDMC-male (5·4%) and female (5·0%).

As regards boys & girls (5-14), Delhi Tahsil happens to have maximum proportions of 15·9% and 13·1% respectively. Delhi Cantonment ranks lowest in this age-group.

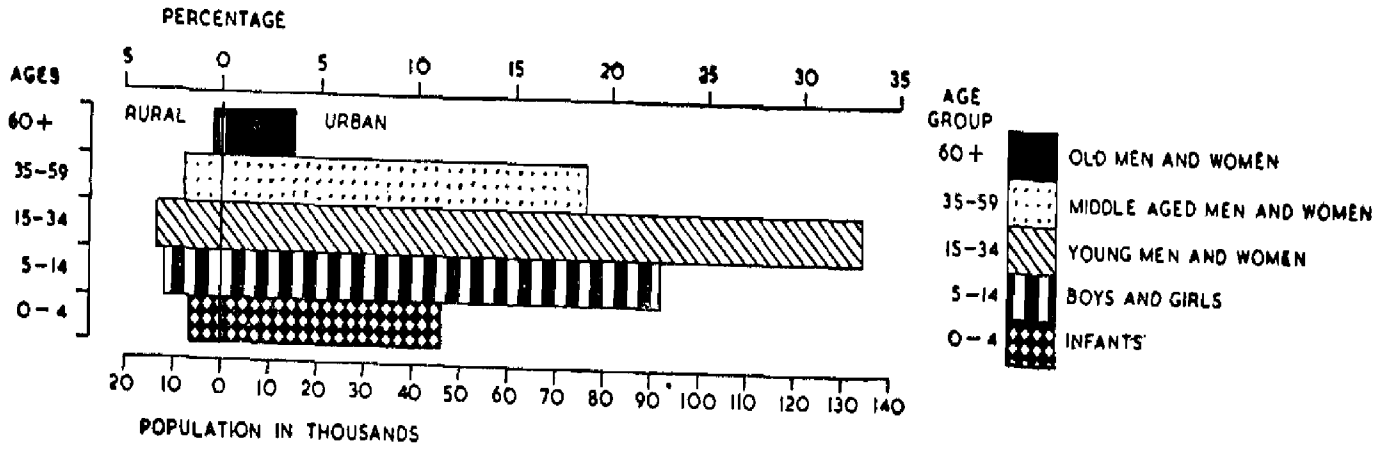

In the category of young men and women (15-34), Delhi cantonment has the maximum percentage of youngmen (31·0%), while young women (16·2%) are maximum in N.D.M.C. Middle aged men and women (35-59) rank at the top in N.D.M.C. (men 16·4% & women 9·6%).

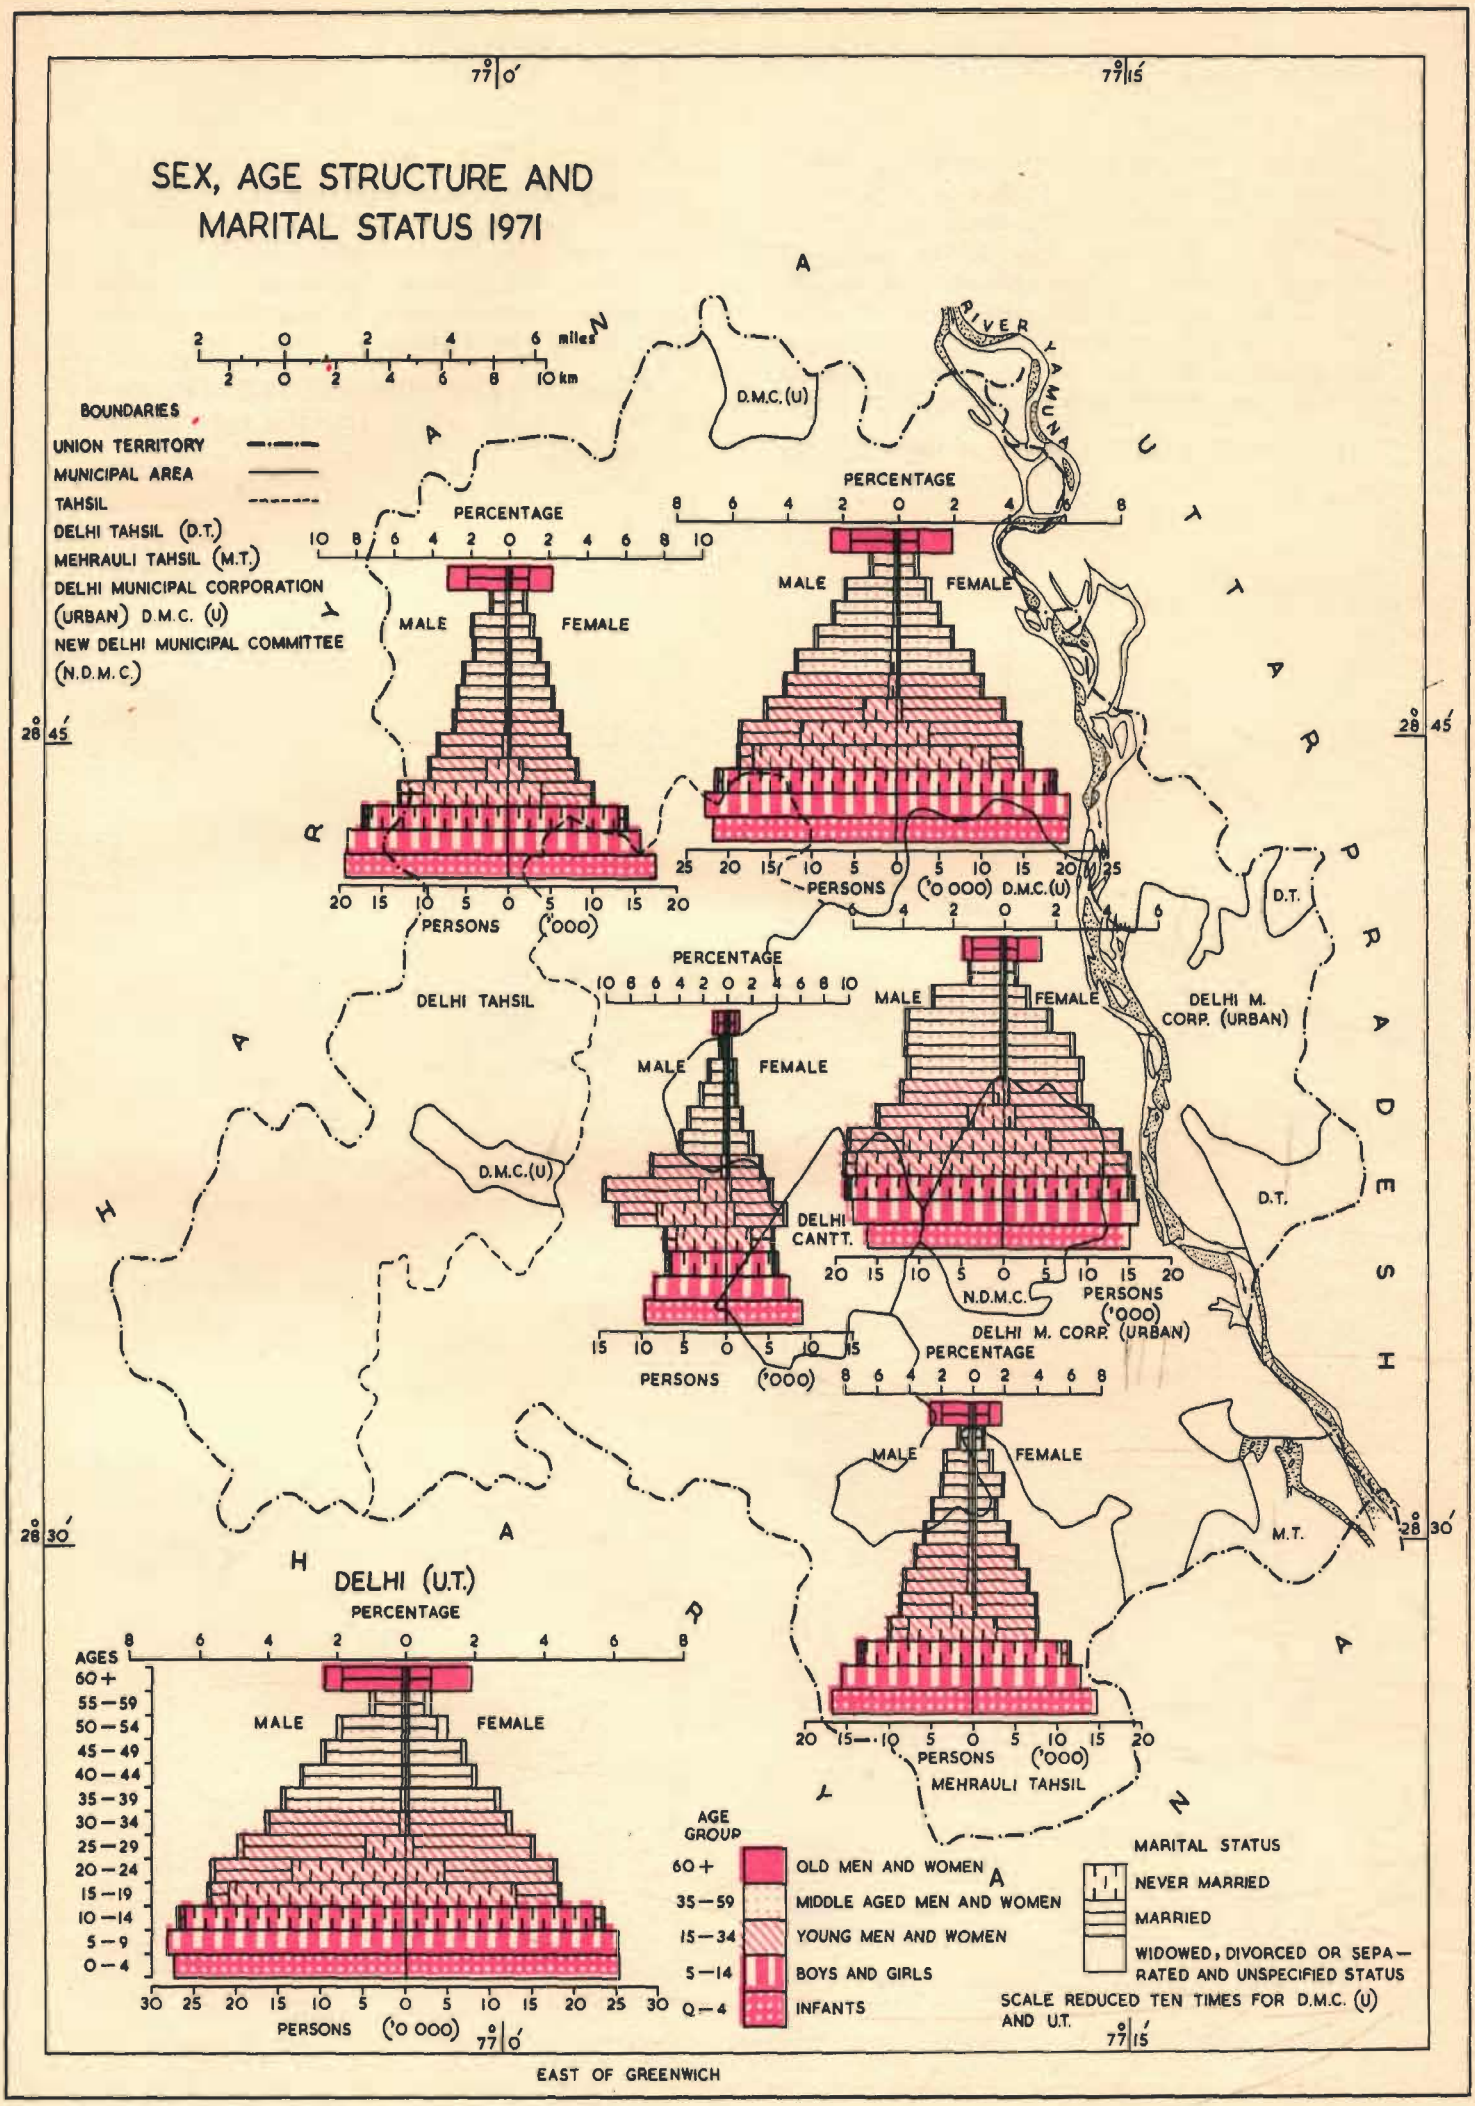

Delhi Tahsil outnumbers all the other units in respect of the concentration of the old people (60+) accounting males 3·2% and 2·2% females.

Marital Status

To deal with the marital status, the population of Delhi UT is divided into the following categories never married, married, widowed, divorced or separated and unspecified. In Delhi UT, there is an excess of married male (56·4%)and female (60·7%) than the never married male (40·7%) and female (32·1%). Widowed, divorced or separated and unspecified in Delhi UT constitute 2·9% males and 7·2% females.

Delhi cantonment outnumbers all the other units in case of married males (64·3%), while Mehrauli Tahsil ranks top in case of married females (71·2%). Majority of never married males (41·5%) are found in DMC(U) and that of females (40·7%) in Delhi cantonment. Maximum number of widowed, divorced or separated and unspecified males are reported in Delhi Tahsil (5·1%) and females in DMC(U)(7·4%).

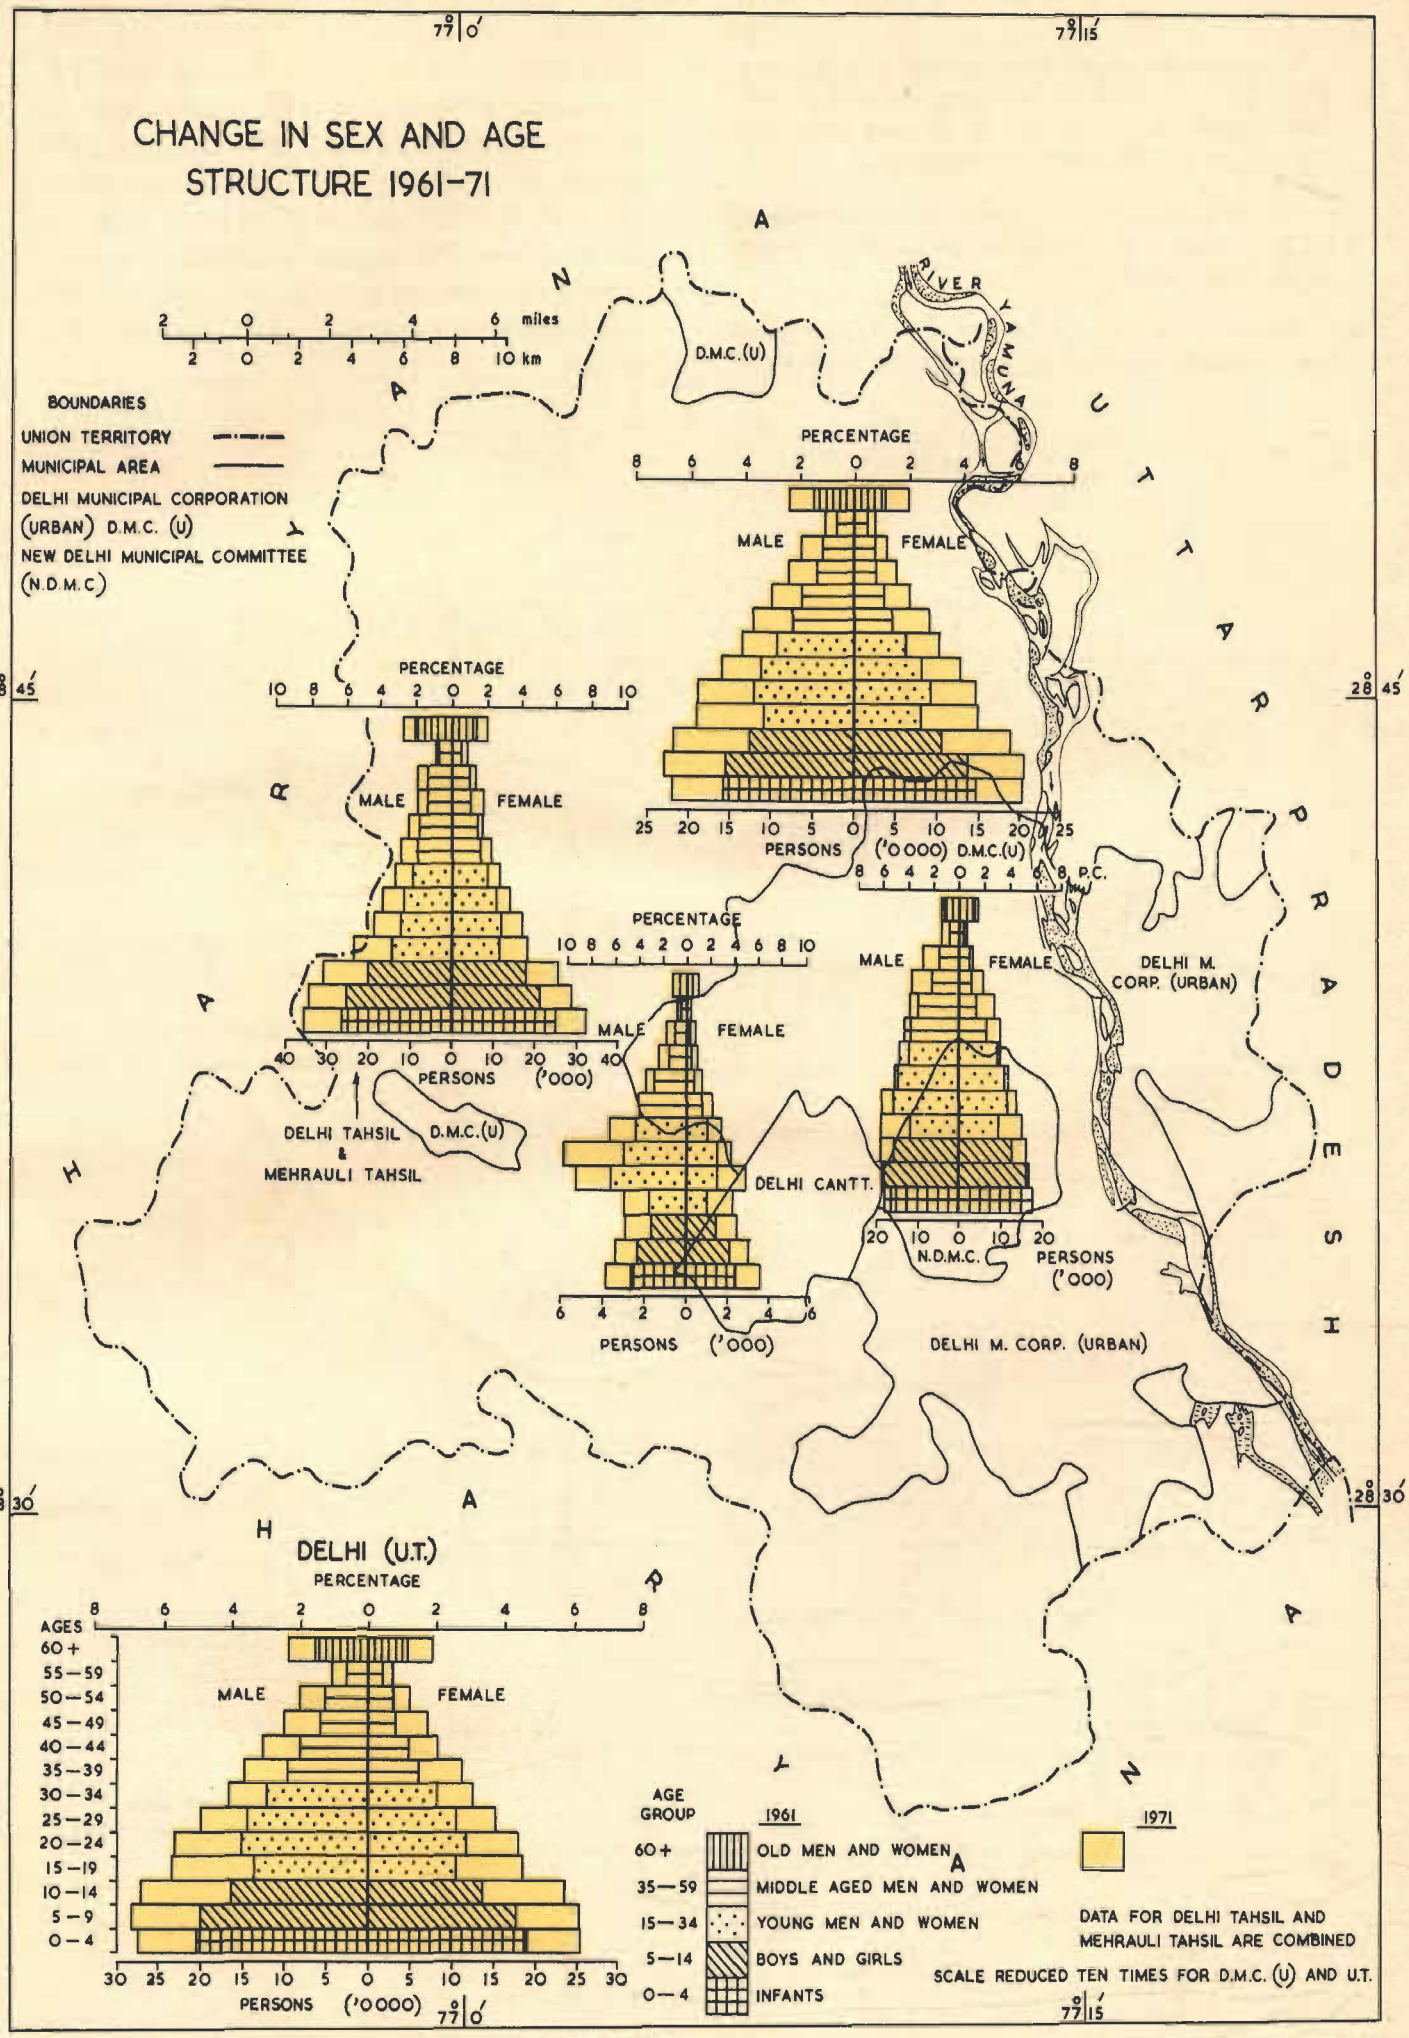

Map 16

CHANGE IN SEX AND AGE STRUCTURE 1961-71

Change in Sex and age structure during 1961-71 is shown in this map. Entire population of Delhi UT is divided into the following broad age groups: infants (0-4), boys and girls (5-14), youngmen and women (15-34), middle aged men and women (35-59) and old men and women (60+). Age-pyramids for 1971 are drawn in yellow for specific age groups, while for 1961 are superimposed on them and are hatched with different shades.

In contrast to the urban area of Delhi UT, the pyramids of 1971 pertaining to rural area is comparatively broad based signifying high birth rate. In Delhi Cantonment, like 1961 the proportion of young men (15—34) remained higher in 1971 too. In NDMC, the growth of population in various age-group remained slow as compared to other units during the decade.

Proportions of old men & women (60+) are found in 1971 on higher side in DMC(U) and rural area of Delhi UT.

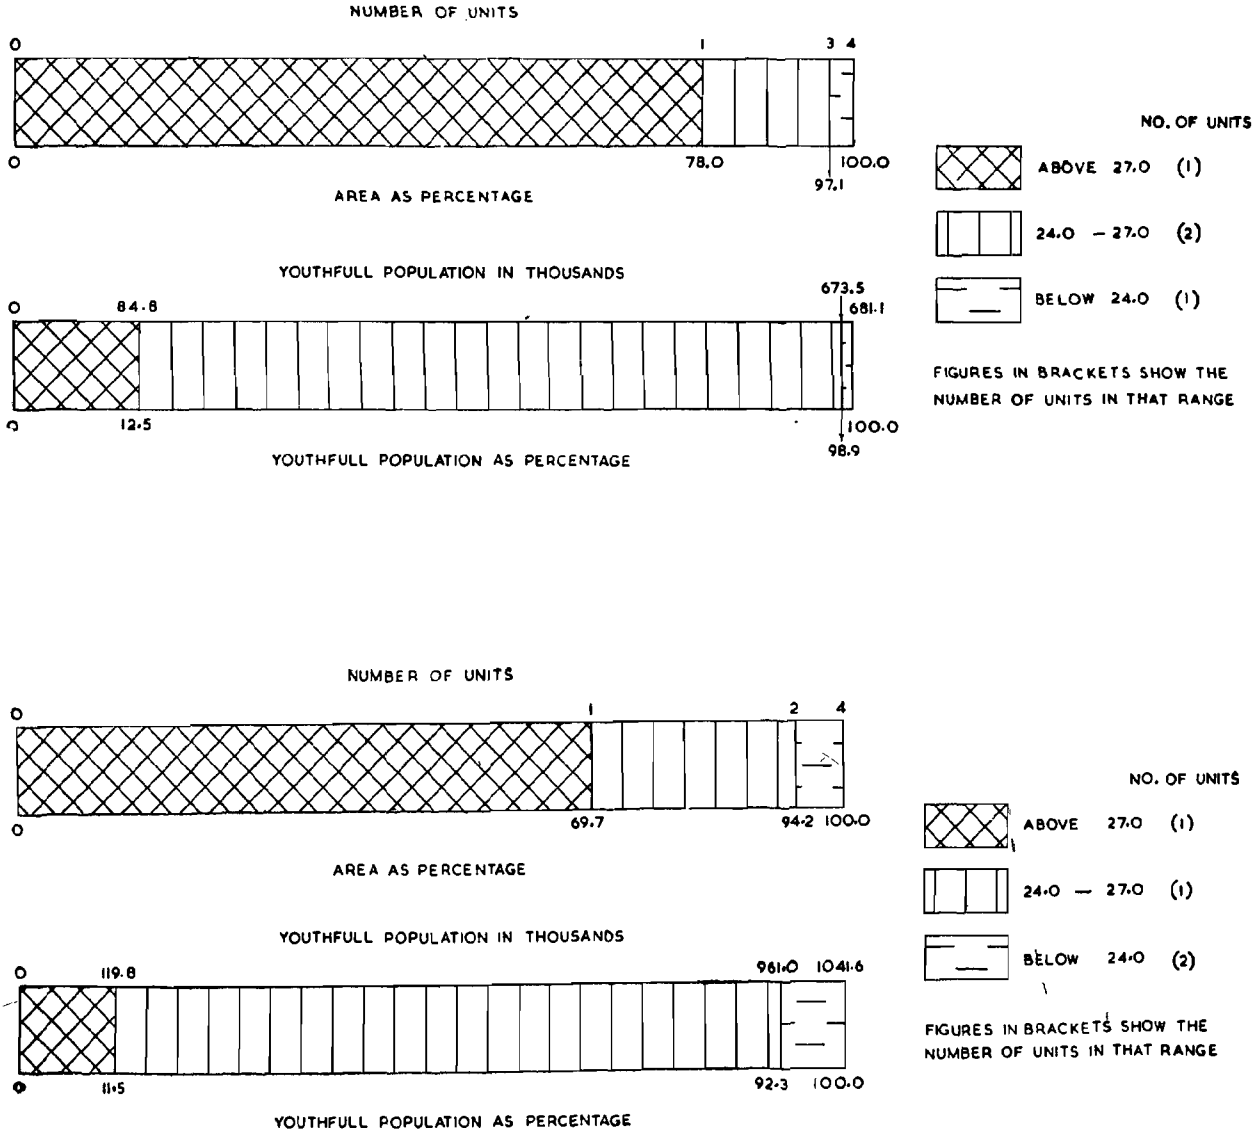

Map 17

CHANGE IN YOUTHFULNESS OF POPULATION 1961-71

Comparative youthfulness of the population of Delhi UT is depicted by two maps for 1961 & 1971. These maps are drawn side by side by choropleth method as per the legend on the maps.

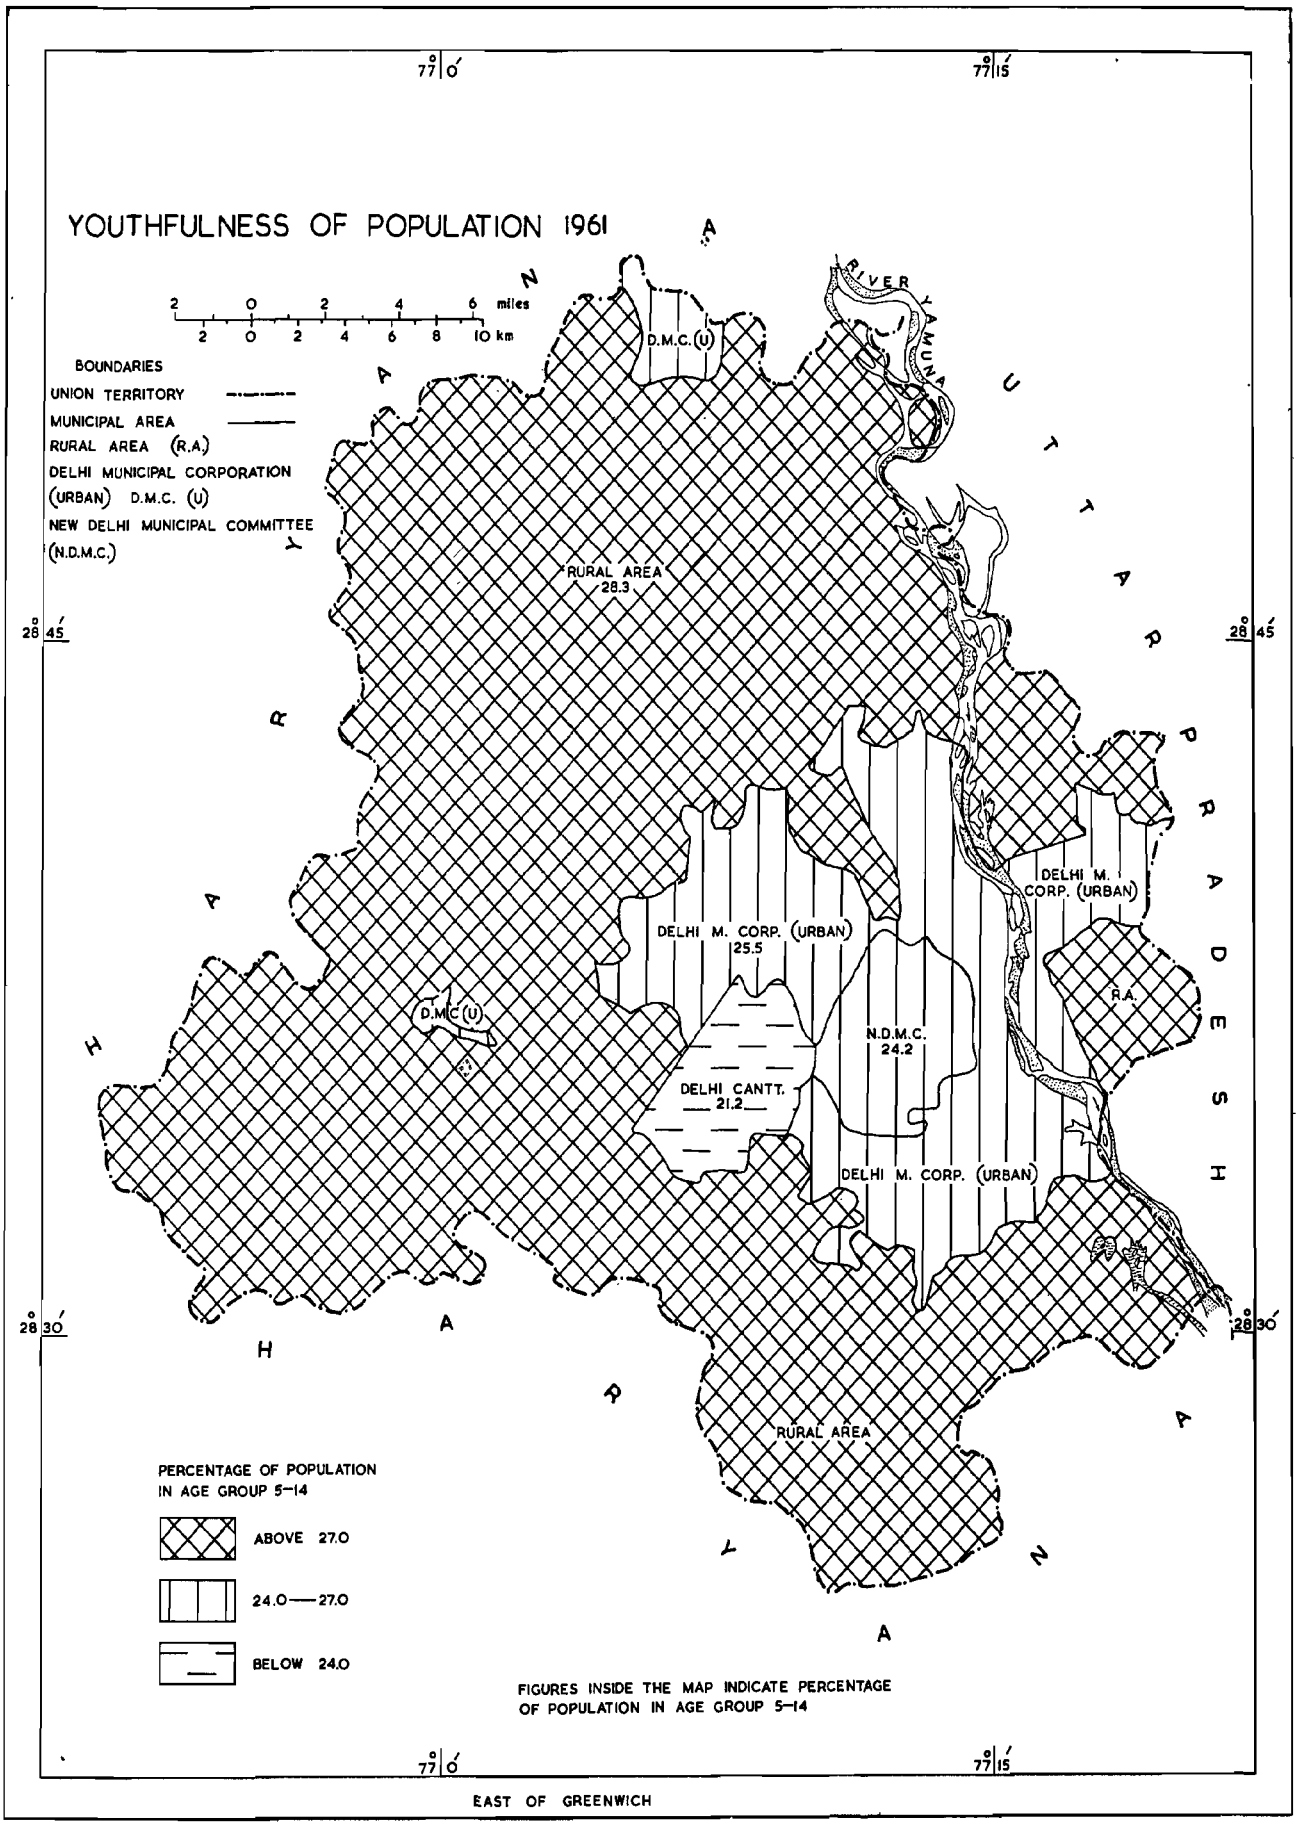

Youthfulness of the population is reckoned as the percentage of the population in age group (5—14) to the total population.

Between the two censuses of 1961-71, no significant change occurred in average youthfulness of Delhi UT. Among the various units of Delhi UT, it remained comparatively higher in rural Delhi i.e. 28·3% in 1961 and 28·6% in 1971 as against Delhi cantonment and N.D.M.C. which stood at the low levels at 21·2% and 24·2% in 1961 and 20·5% and 22·8% in 1971 respectively. DMC(U) however, witnessed no deviation as the proportion of youthfulness remained stationary at 25·5% in 1961 and 25·6% in 1971.

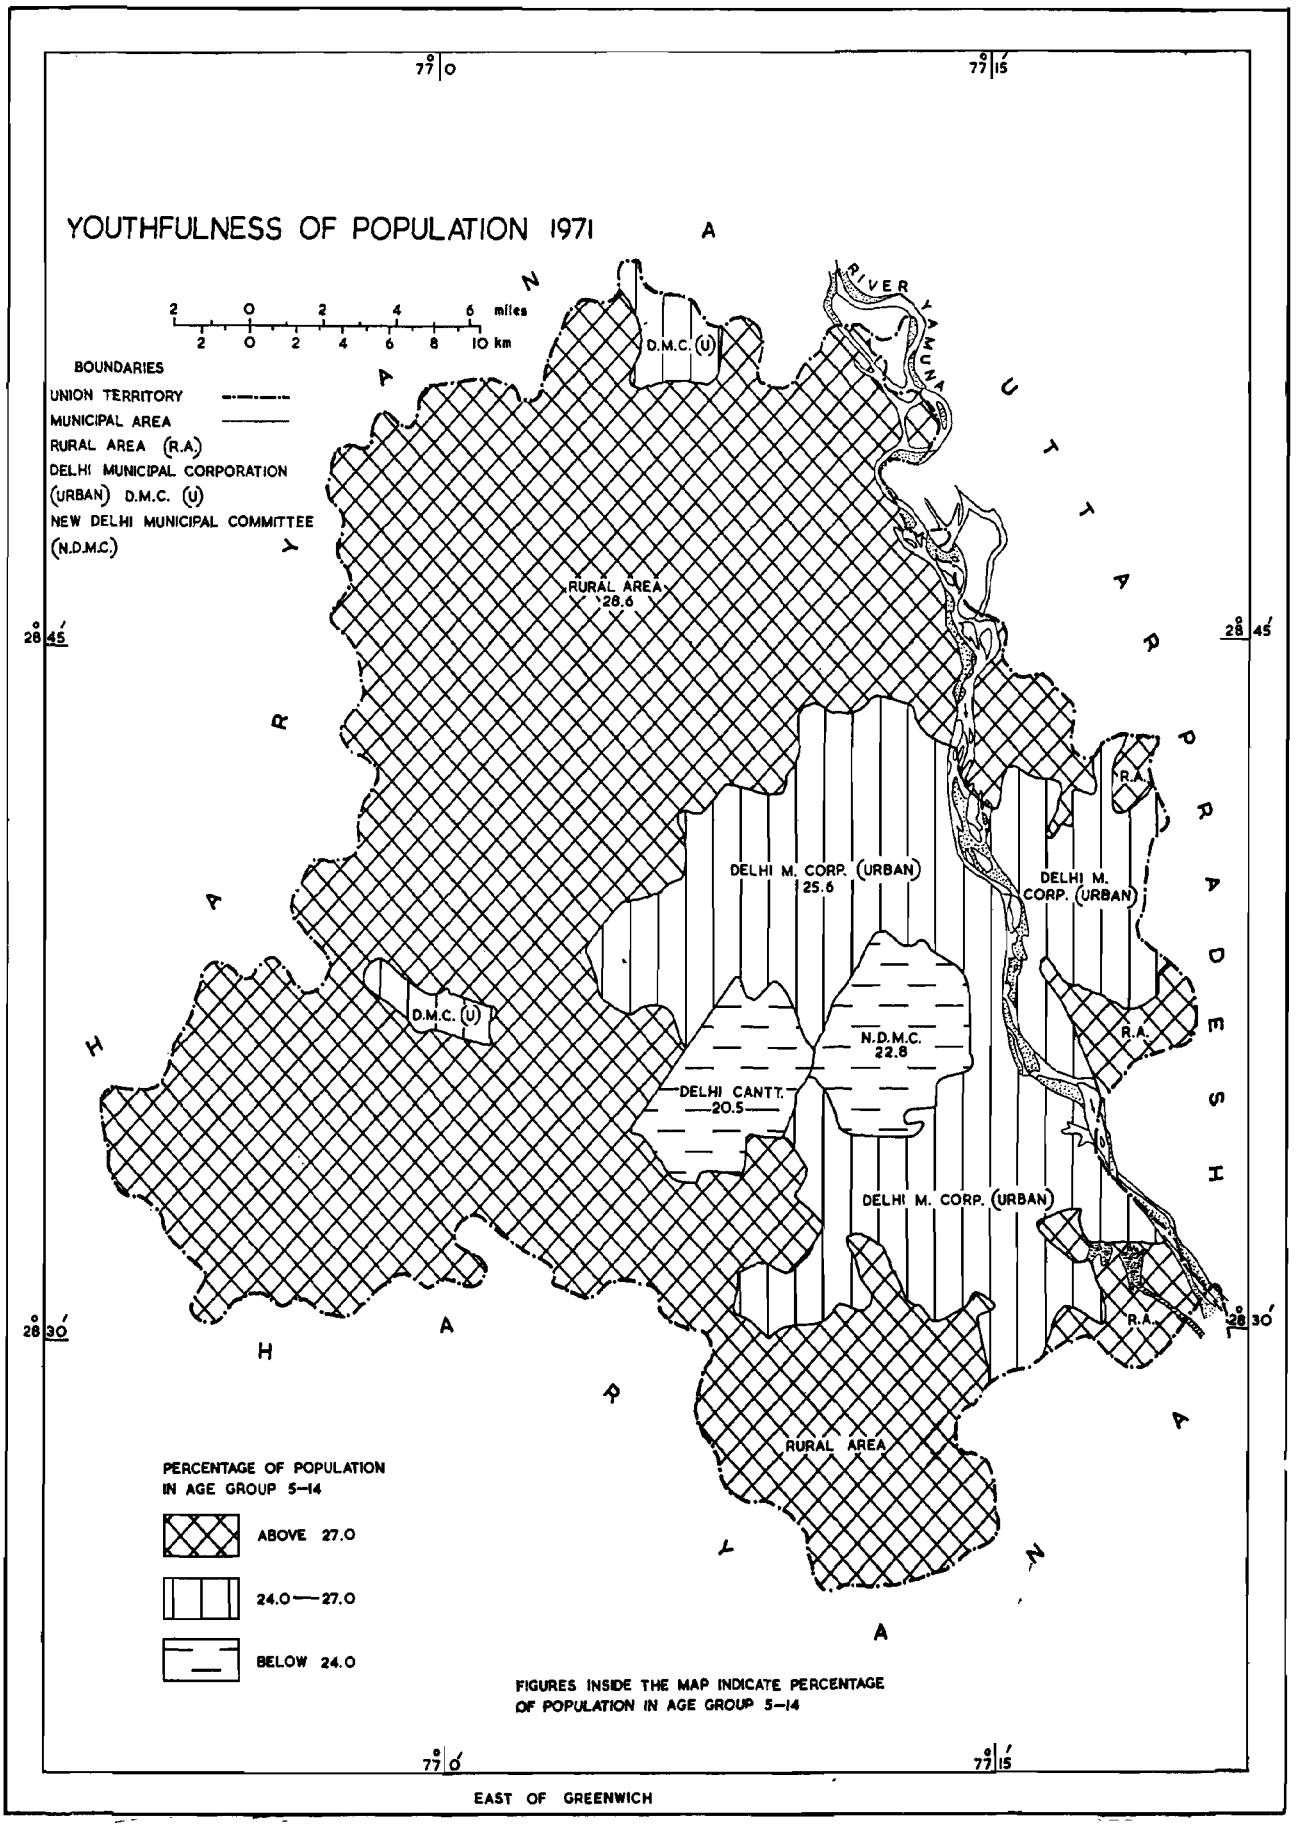

MAP 17

Map 18

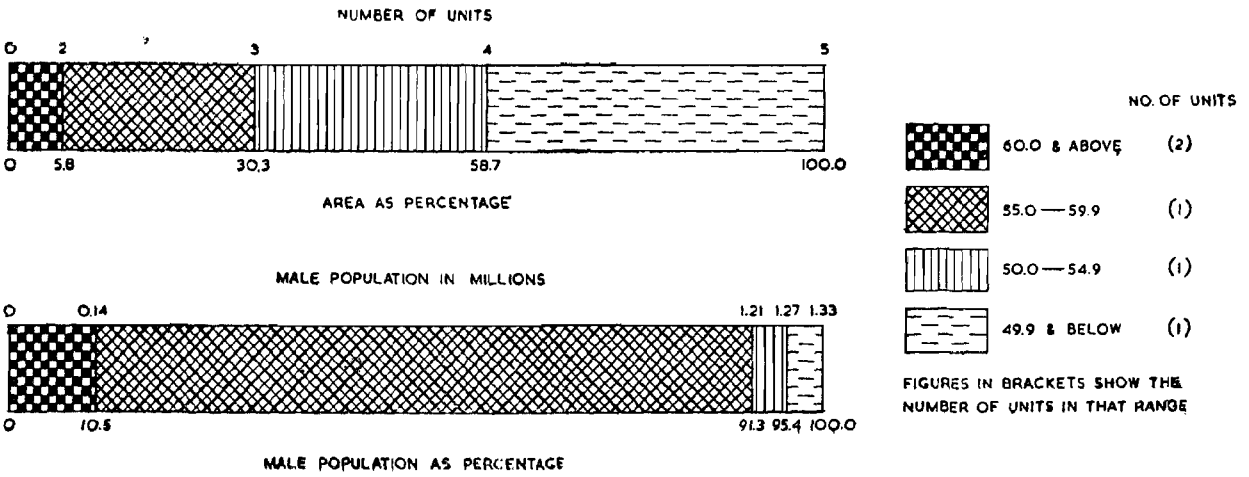

MALES IN WORKING AGE 15—59 1971

Proportion of males in working age 15—59 to total male population is shown in this map. Pie-diagrams proportionate to total male population unit-wise are shown indicating proportions to male population of age 15—59.

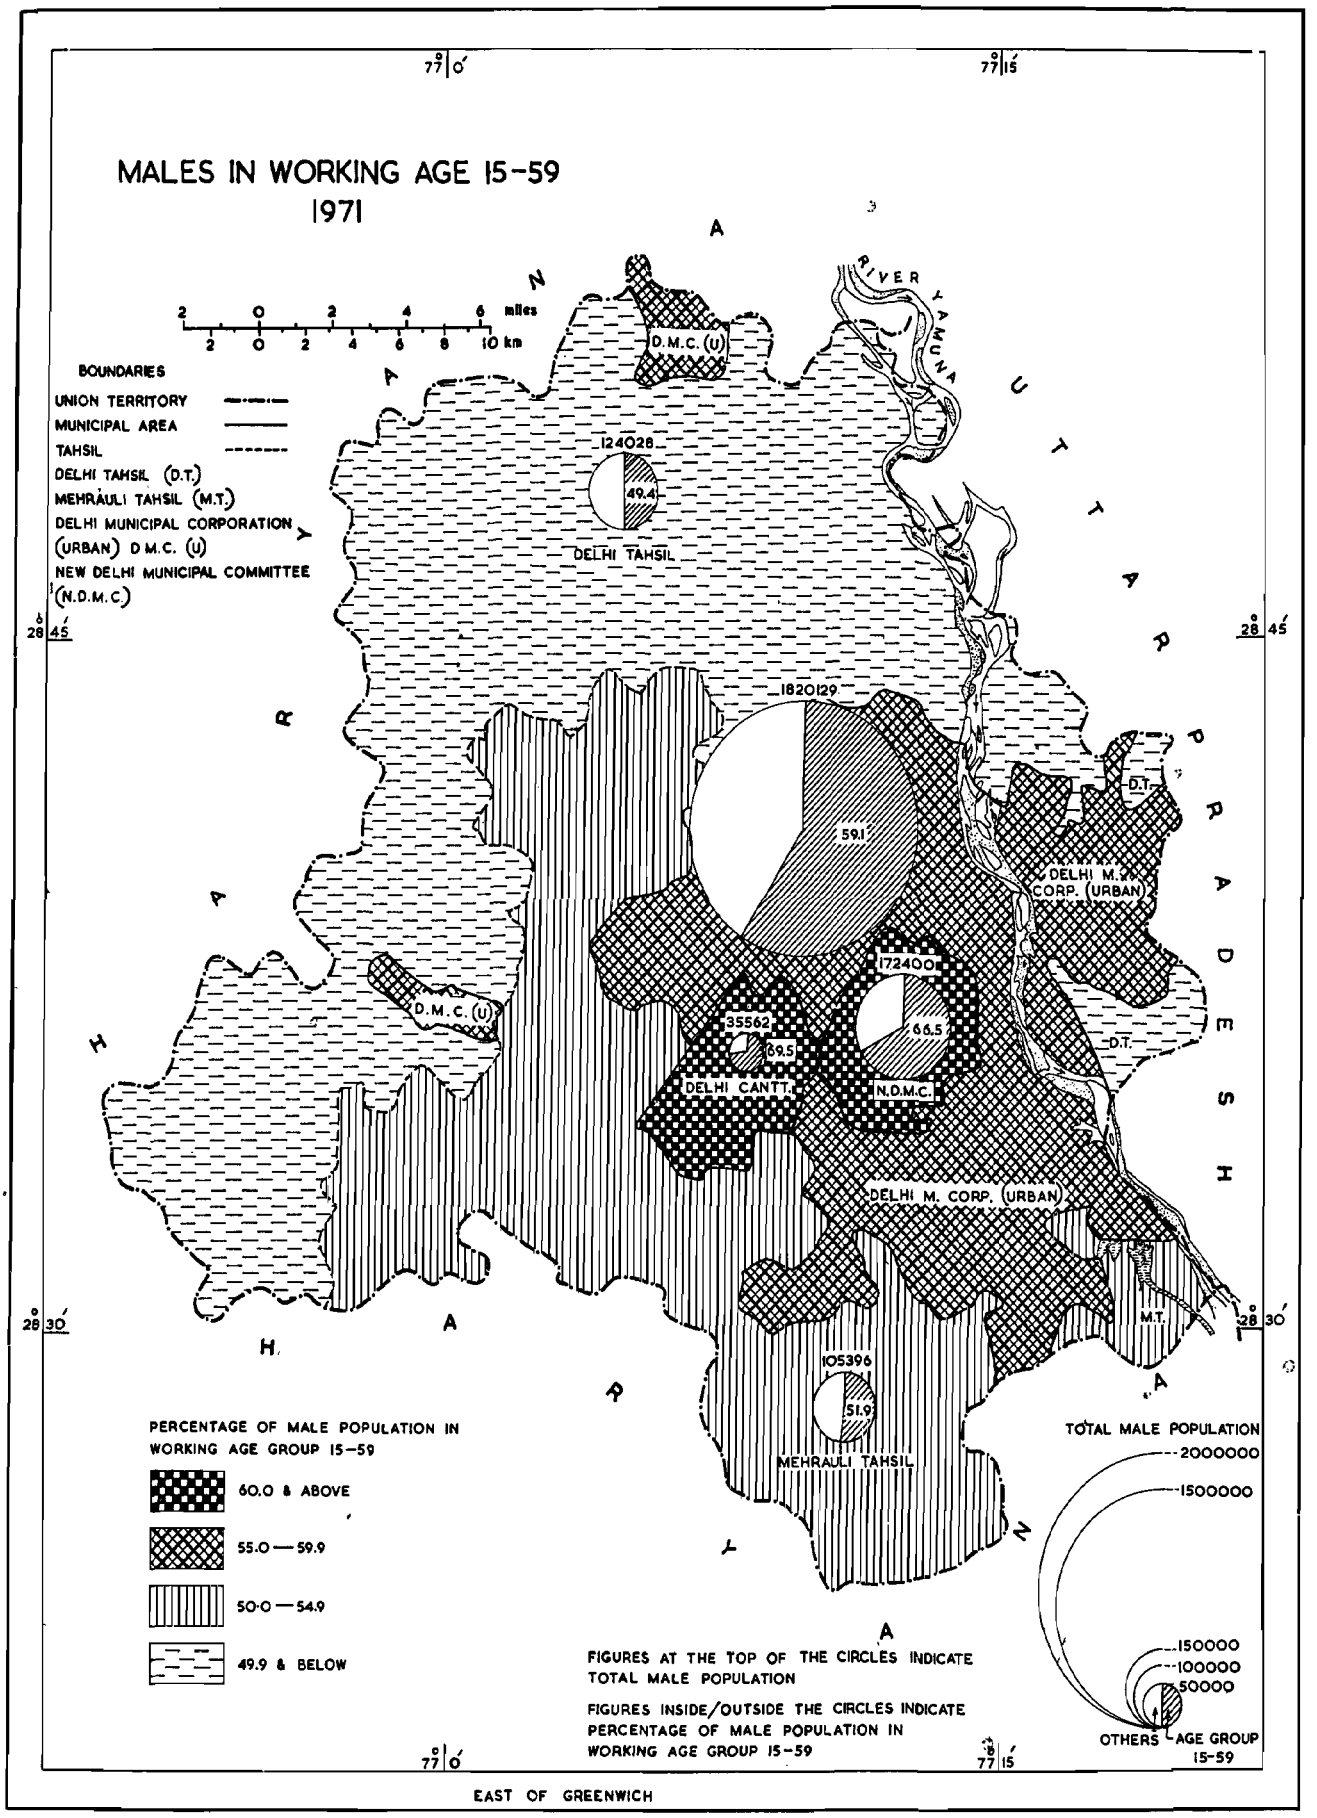

As is evident from the table given below, there is much concentration of working male population in urban units as compared to the rural areas.

Unit	Percentage
Delhi UT	58·9
DMC(U)	59·1
NDMC	66·5
Delhi Cantonment	69·5
Delhi Tahsil	49·4
Mehrauli Tahsil	51·9

As compared to the Delhi UT average of 58·9% Delhi cantonment working population ranks at the top with 69·5% male while Delhi Tahsil (49·4% lies at the bottom. Next in order are NDMC (66·5%) DMC(U) (59·1%) and Mehrauli Tahsil (51·9%)

Map 19

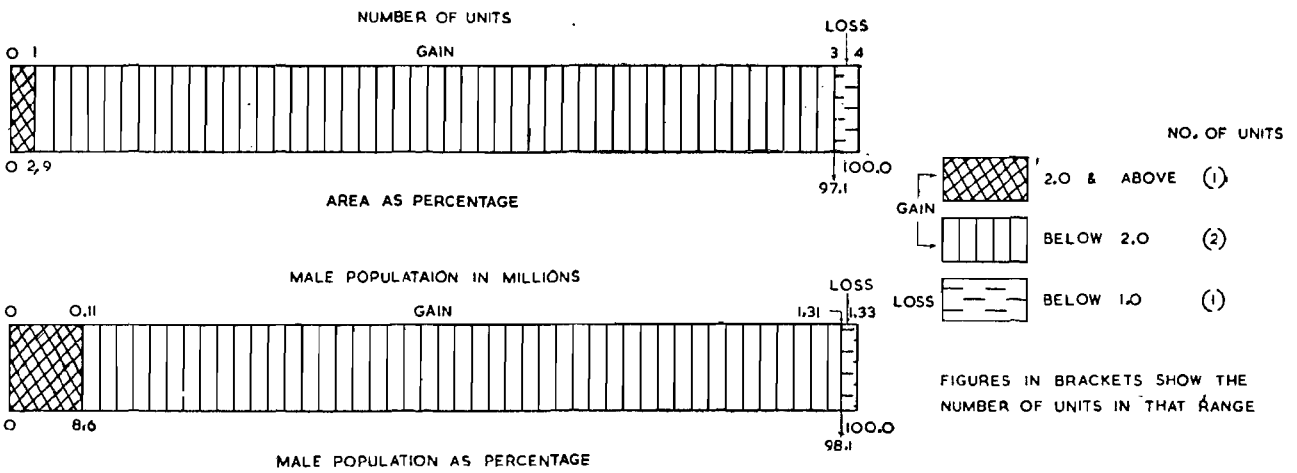

CHANGE IN MALES IN WORKING AGE 15—59 1961-71

Gain and loss in term of male numerical strength in working age 15—59 during 1961—71 is shown in this map on the basis of the following formula.

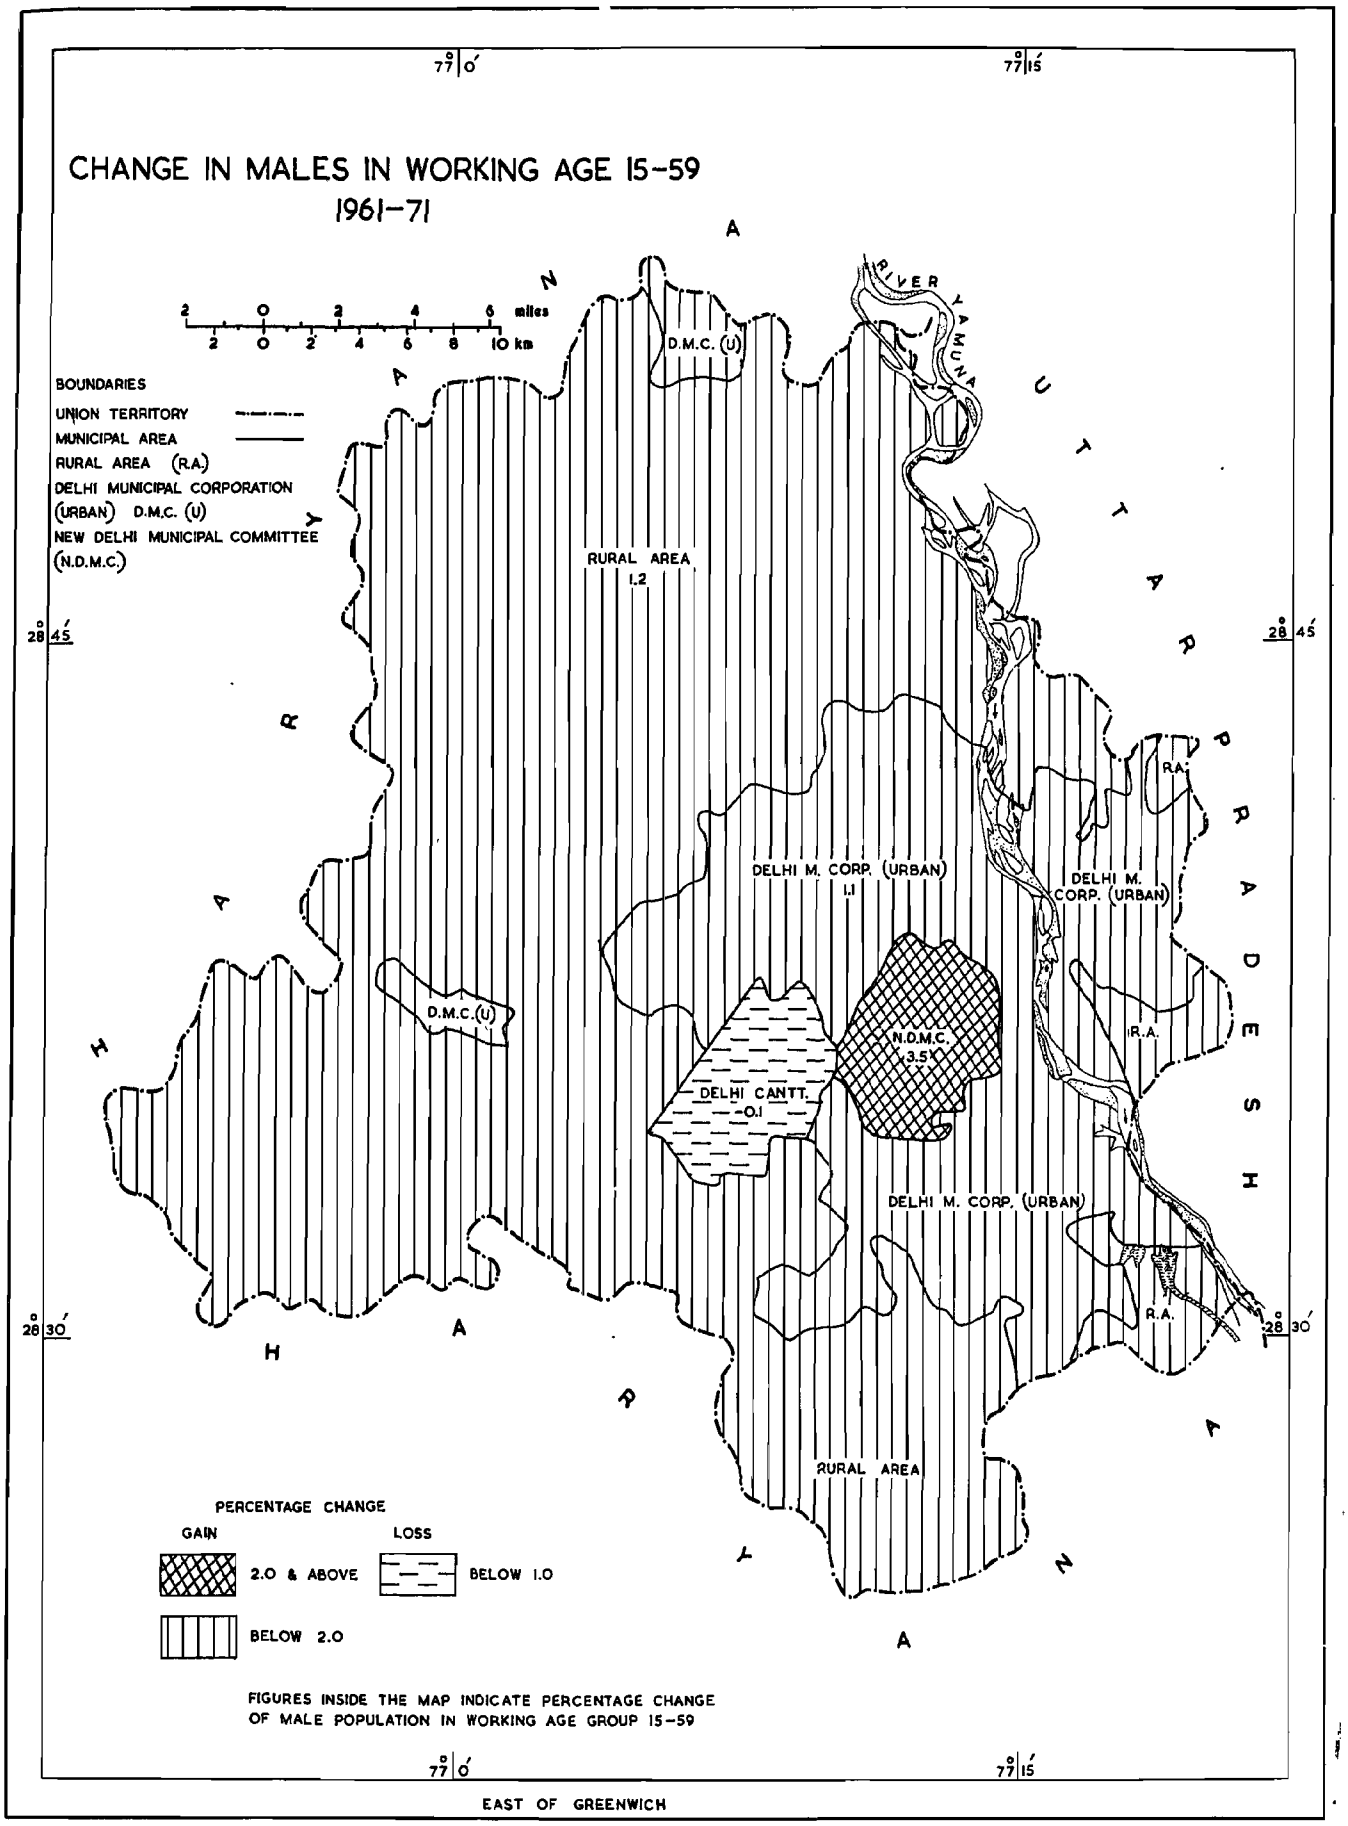

$$C\ (\text{Change}) = \frac{(B)}{A} - \frac{(B')}{A'} 100$$

B : Males in working age (15—59) 1971
B' : Males in working age (15—59) 1961
A : total male population 1971
A' : total male population 1961

During the decade 1961—71, Delhi UT as a whole gained 1·2% males in working age (15—59). N.D.M.C., being a centre of all governmental activities gained (3·5%), almost three times more than the UT average. DMC(U) and rural area have remained nearly at par with the UT average, gaining (1·1%) and (1·2%) respectively. However, in Delhi cantonment the position is reversed as it lost 0·1% males in working age 15—59 during 1961—71.

FEMALES IN WORKING AGE 15—59 1971

Proportion of females in working age 15—59 to total female population are depicted in this map. Various units of Delhi UT are hatched in accordance with the value of proportions, from high to low. Total female population is depicted by proportionate circles. These circles are further divided into females in working age-group 15—59 and others (0—4 and 60+). Total female population is recorded on each circle.

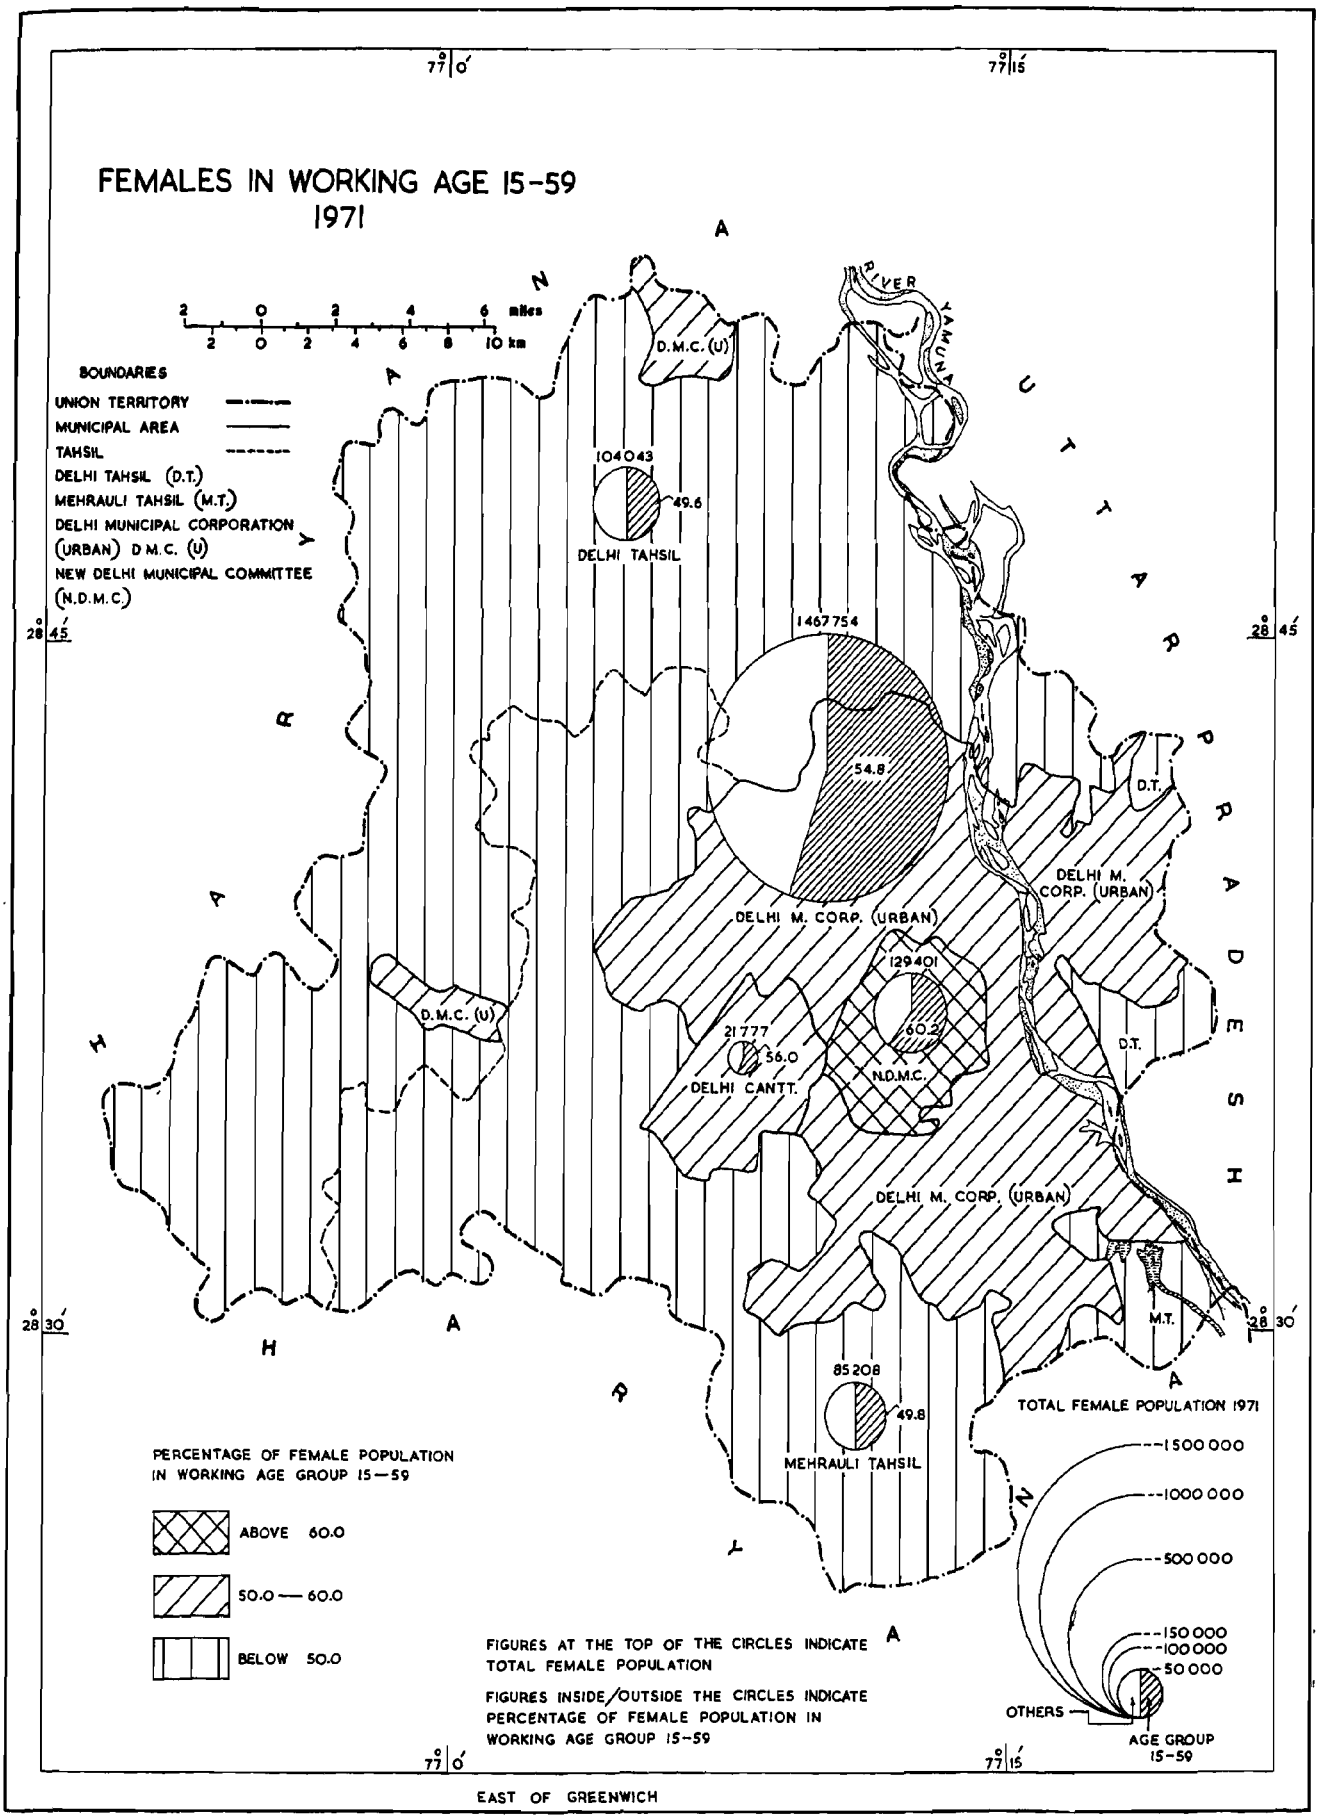

As against the Delhi UT average (54·8%), NDMC (60·2%) records highest proportion. Delhi Tahsil (49·6%) stands at the lowest. Next in the descending order are Delhi Cantonment (56·0%), DMC(U) (54·8%) and Mehrauli Tahsil (49·8%).

CHANGE IN FEMALES IN WORKING AGE 15—59 1961—71

This map shows gain and loss in respect of females in working age 15—59 during 1961—71 on the formula as adopted in map No. 19. Choropleth technique is used.

During the decade, NDMC gained (5·5%) and Delhi cantonment (4·2%) working females which are fairly higher than the Delhi UT average (2·4%). DMC(U) remained almost at par with the UT average gaining (2·3%) working females. The rural area shows (0·3%) of change in females in working age.

CHANGE IN URBAN POPULATION 1961-71

Intercensal growth rate of urban population is highlighted in this map. Figures pertaining to growth rate (1961—71) have been grouped into two categories and are shown by two different hatchings as per the legend.

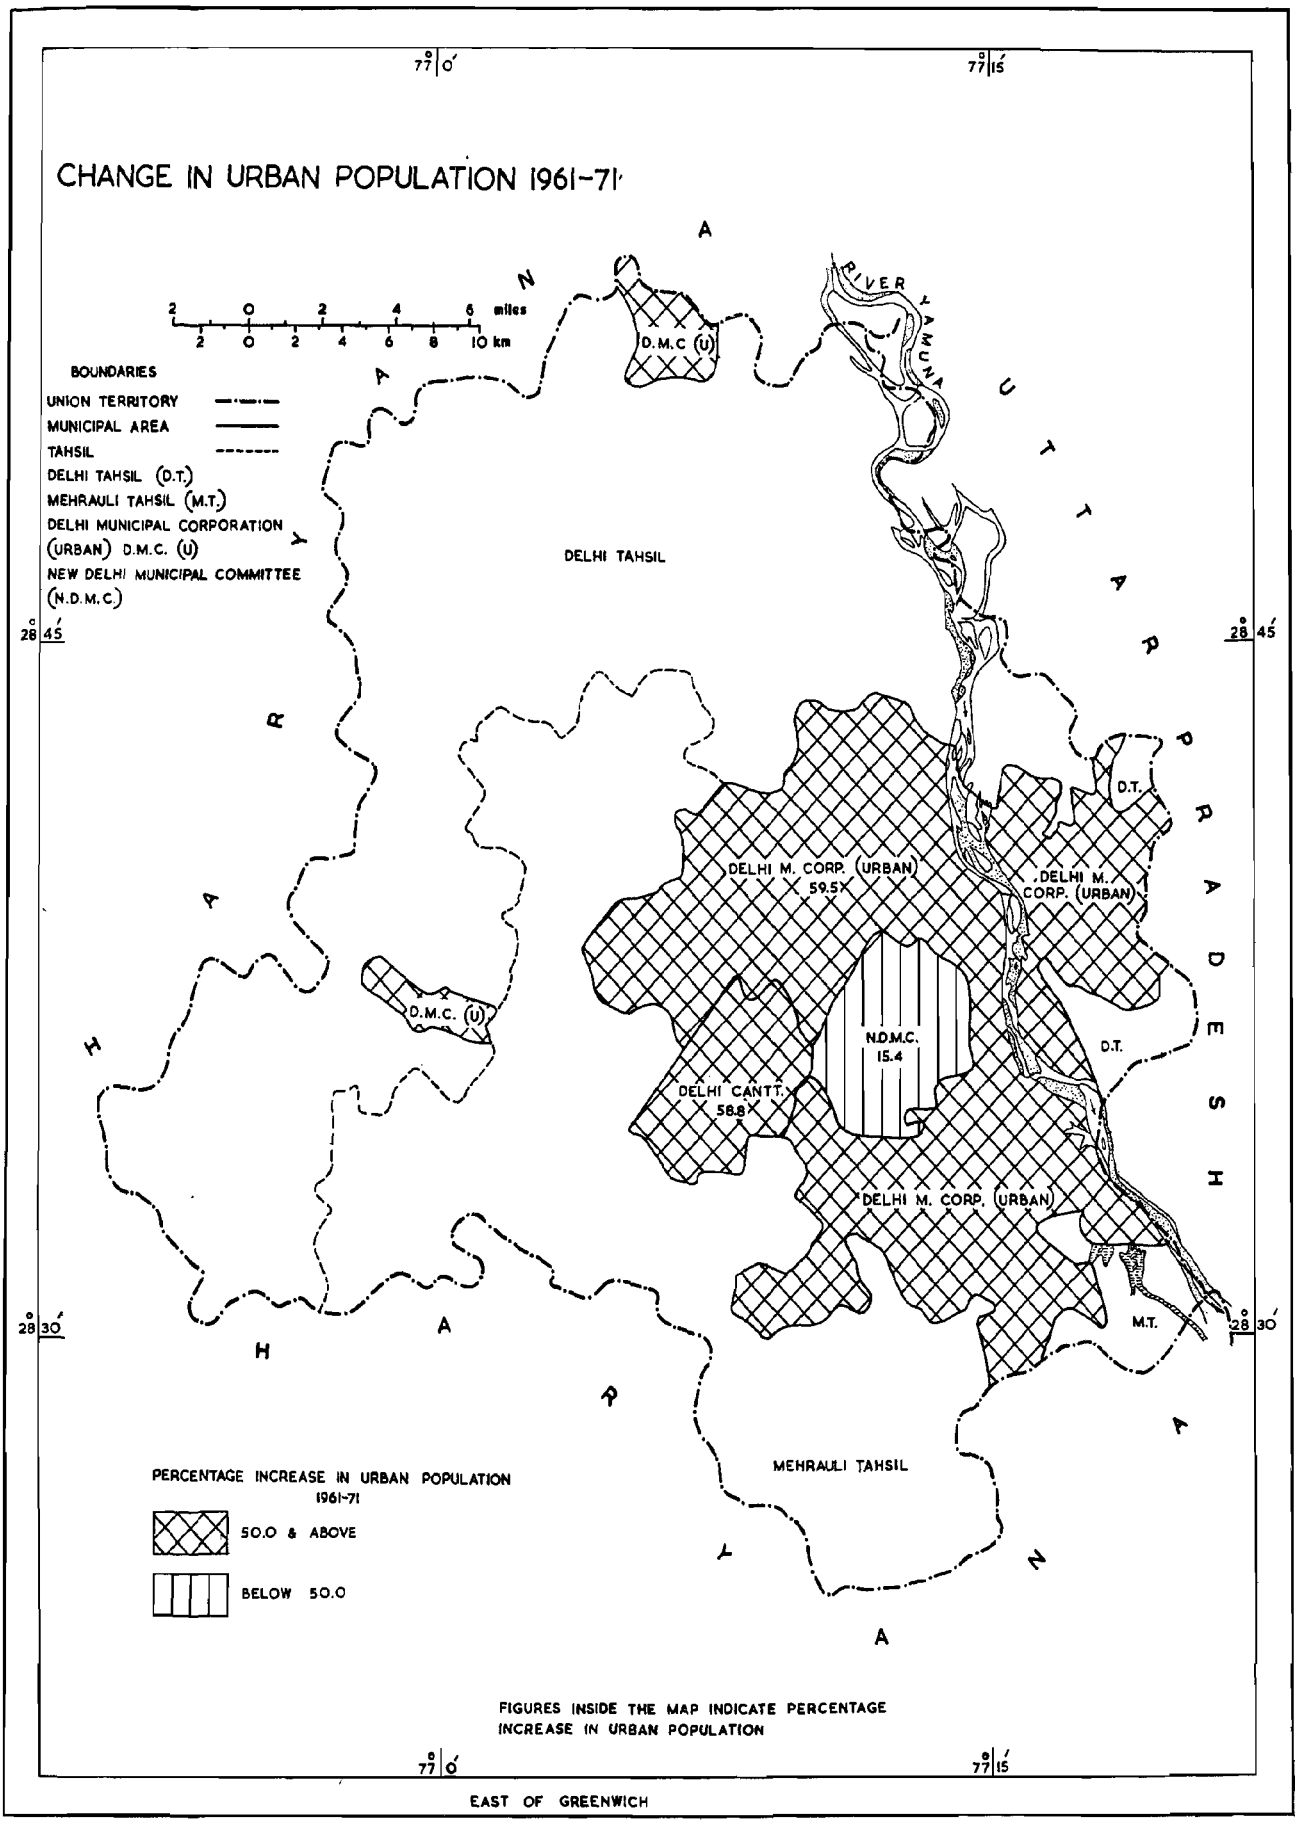

Population of Delhi UA has increased by 54·6% during (1961—71). Highest increase is recorded in DMC(U) (59·5%) and lowest in NDMC (15·4%). Delhi cantonment (58·8%), occupied second position.

Map 23

GROWTH OF URBAN POPULATION 1901-71

This map shows the growth of urban population since 1901 in Delhi UT. Growth of urban population since 1901 is represented by bars with suitable scale in each urban unit of Delhi. For Delhi UA bars are drawn separately.

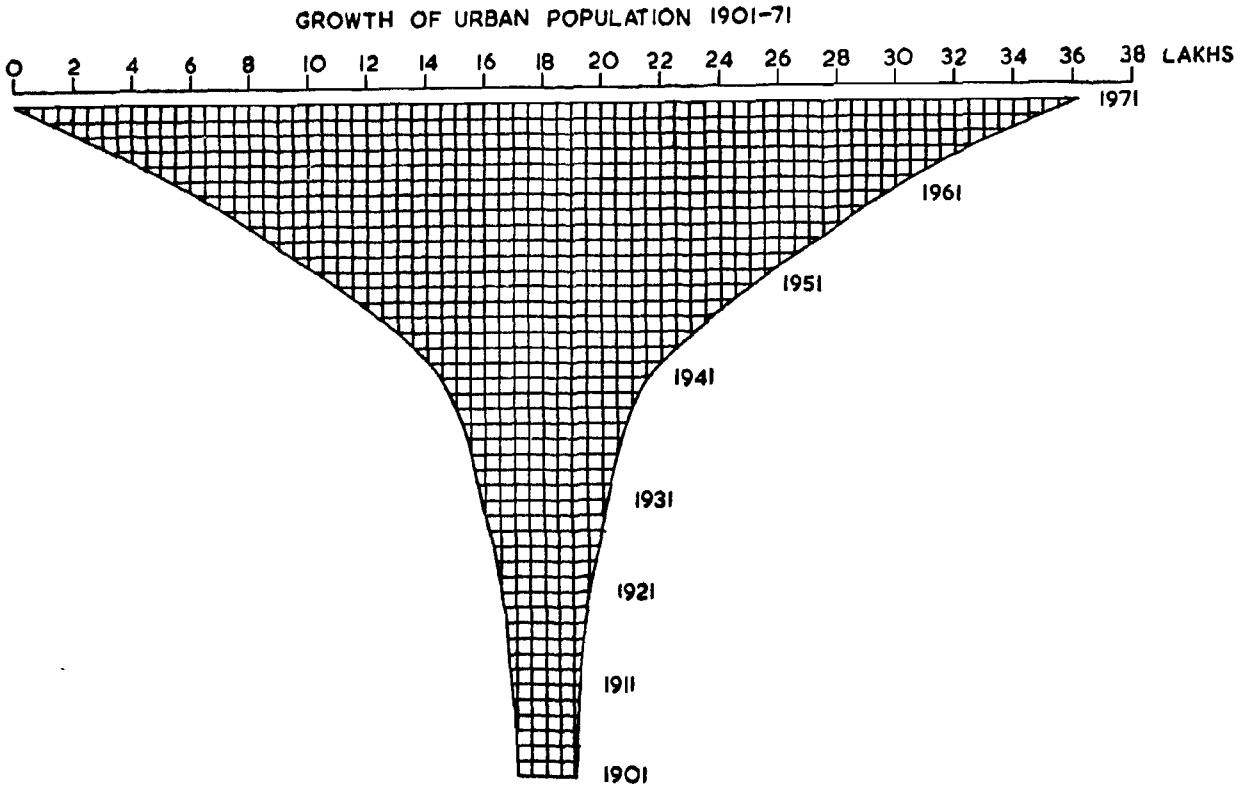

Since NDMC and Delhi Cantonment came into being as urban units in 1931 and 1941 respectively, as such the data for these two urban units since 1901 are not available.

DMC(U)'s population now is nearly sixteen times more than what it was in 1901. It has risen from 2·14 lakh in 1901 to 32·9 lakh in 1971. However, it is noted that the year 1951 witnessed a radically fast population growth as the population went up from 6·96 lakh in 1941 to 14·37 lakh in 1951, and this trend continued in the subsequent decades too.

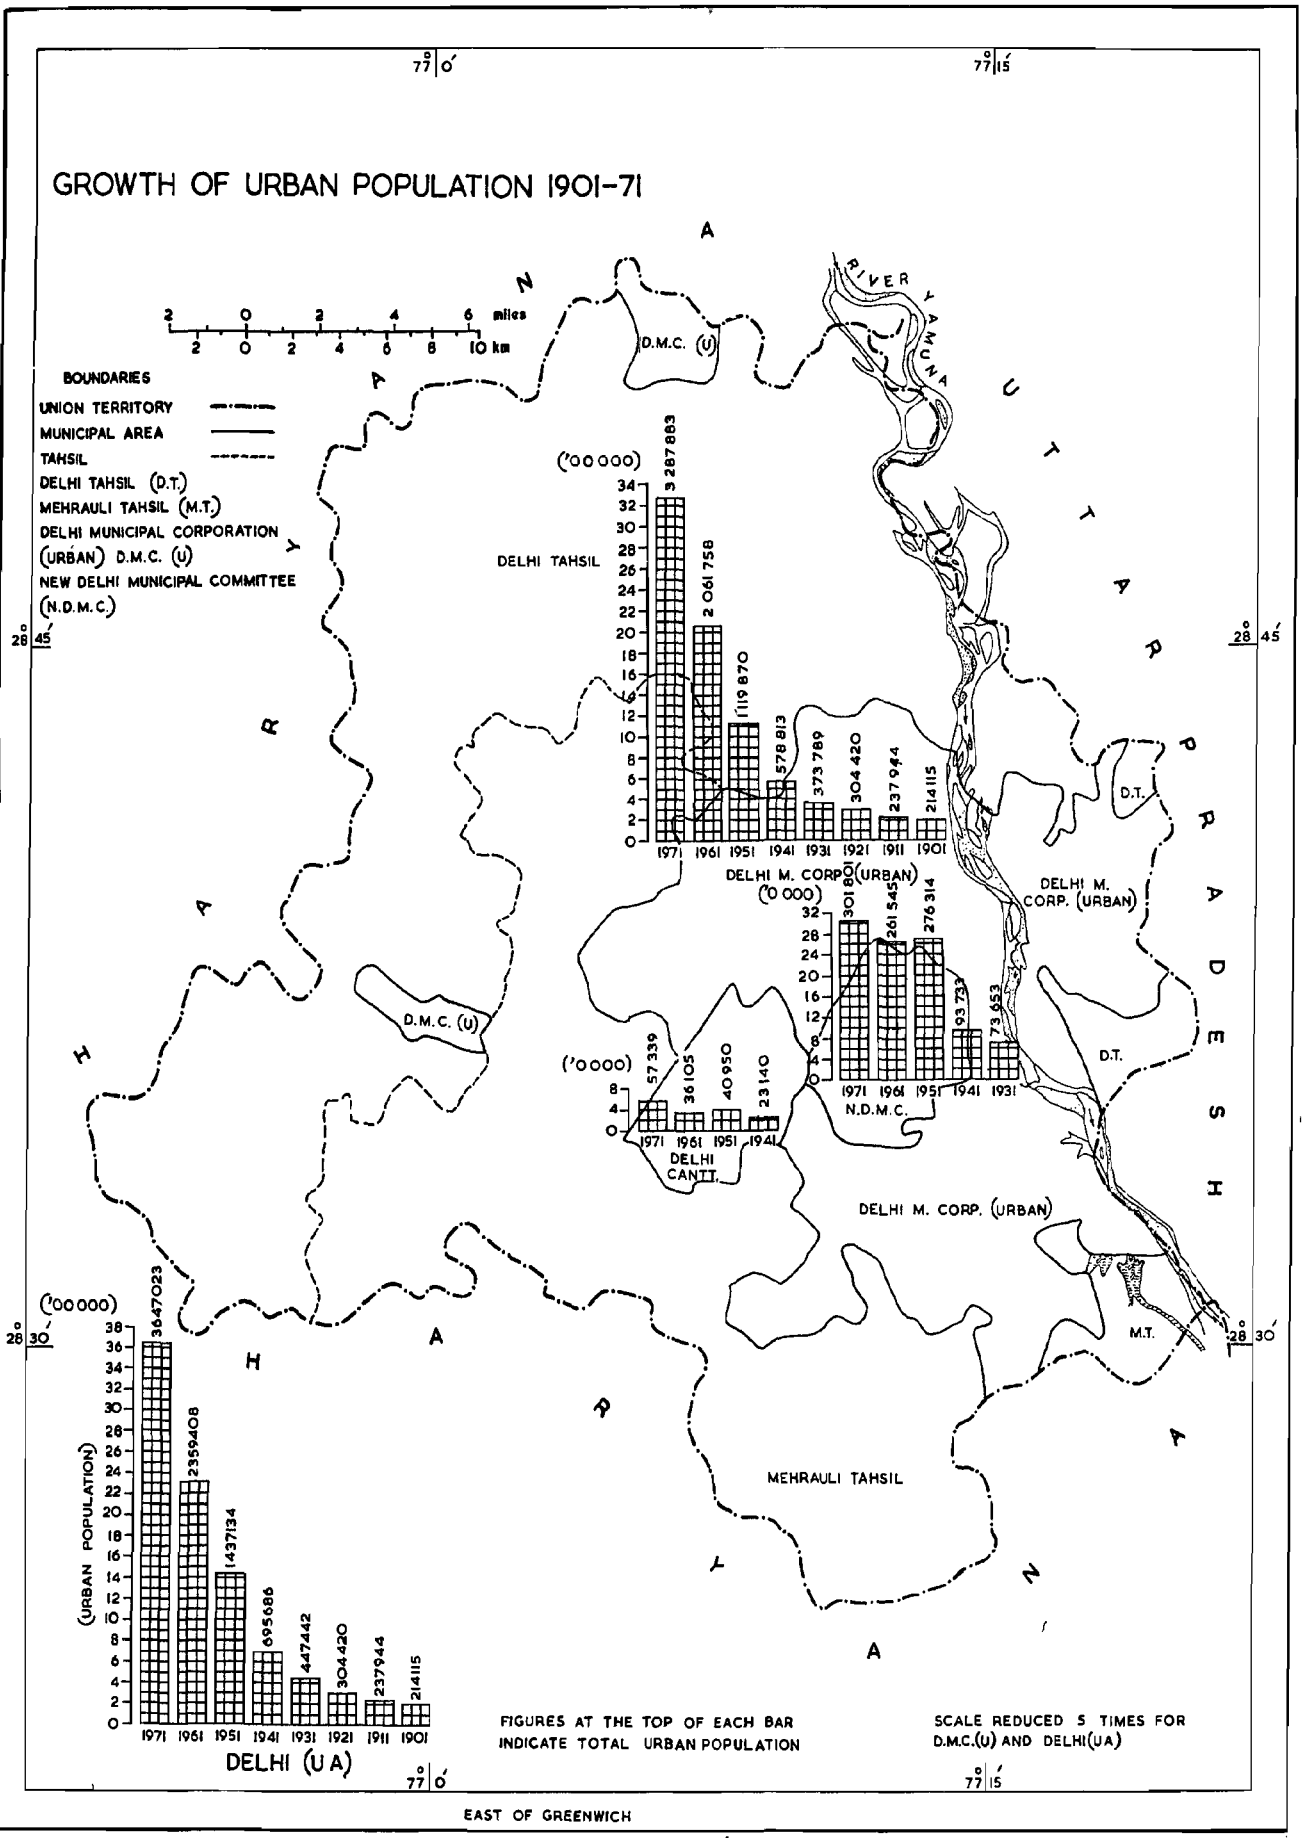

Population of NDMC since 1931 has been quadrupled i.e. it has grown from 75 thousand in 1931 to 3 lakh in 1971. Delhi cantonment however could gain a little more than double, from 23 thousand in 1941 to 57 thousand in 1971.

Map 24

FUNCTIONS OF CLASS I AND II URBAN CENTRES 1971

This map shows the functional character of class I and II urban centres. Delhi UT has two class I urban centres i.e., DMC(U) and NDMC as they both have population more than one lakh. Delhi cantonment is categorised as class II urban centre (population between 50,000 to 99,999).

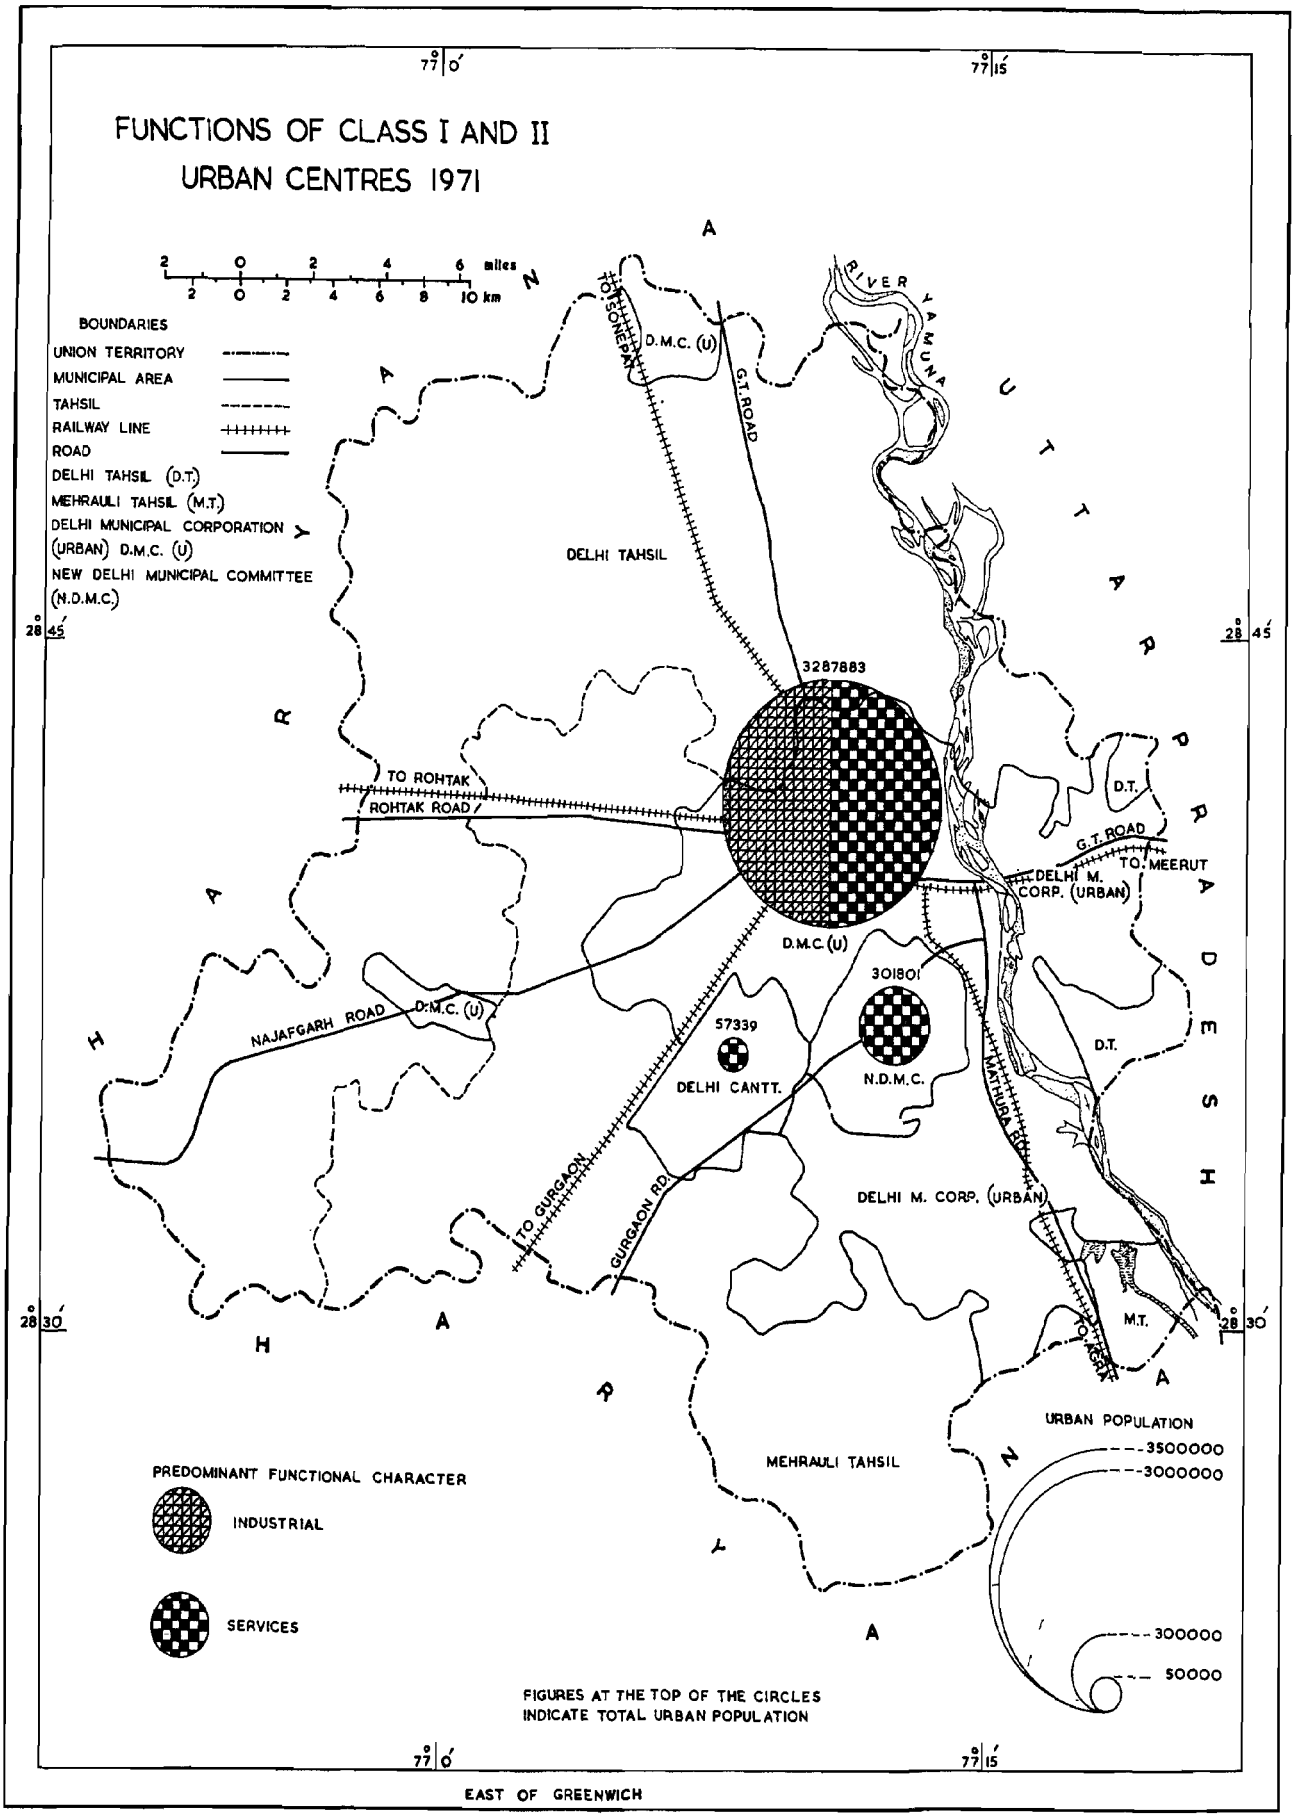

The nine industrial categories have been grouped into the following six functional categories on the basis of following method:

Industrial Categories

I.	Cultivators	I Primary
II.	Agricultural Labourers	
III.	Livestock, forestry, fishing, hunting & Plantations etc.	
IV.	Mining & Quarrying	II Mining
V.	Manufacturing etc.	III Industrial
	(a) Household Industry	
	(b) Other than Household Industry	
VI.	Construction	
VII.	Trade & Commerce	IV Commercial
VIII.	Transport, Storage and Communications	V Transport
IX.	Other Services	VI Services

Delhi Cantonment and NDMC are qualified as "Service" urban centres as in both of them 40% or more workers are engaged in services. Percentage of workers engaged in "Other Services" in Delhi Cantonment and NDMC are respectively 76·83% and 65·06%. The DMC(U) has changed its character from "Service" (mono-functional) in 1961 to "Service-cum-industry" (bi-functional) in 1971 with respective percentage of workers 33·91% in service and 31·60% in industry.

IN-MIGRANTS 1971

This map depicts in-migrants in rural and urban areas in Delhi UT. Proportionate circles are drawn to show the magnitude of sex-wise in-migrants. Percentages of in-migrants to total population are grouped into three categories as on the map.

The percentage of female in-migrants are comparatively higher in rural areas. Male in-migrants are comparatively more concentrated in Delhi Cantonment (64·0%), NDMC (59·1%) and DMC(U) (56·6%).

The proportion of in-migrants to total population in Delhi Cantonment is much higher (73·0%) in sharp contrast to Delhi Tahsil where it is lowest i.e. 32·4%.

Map 26

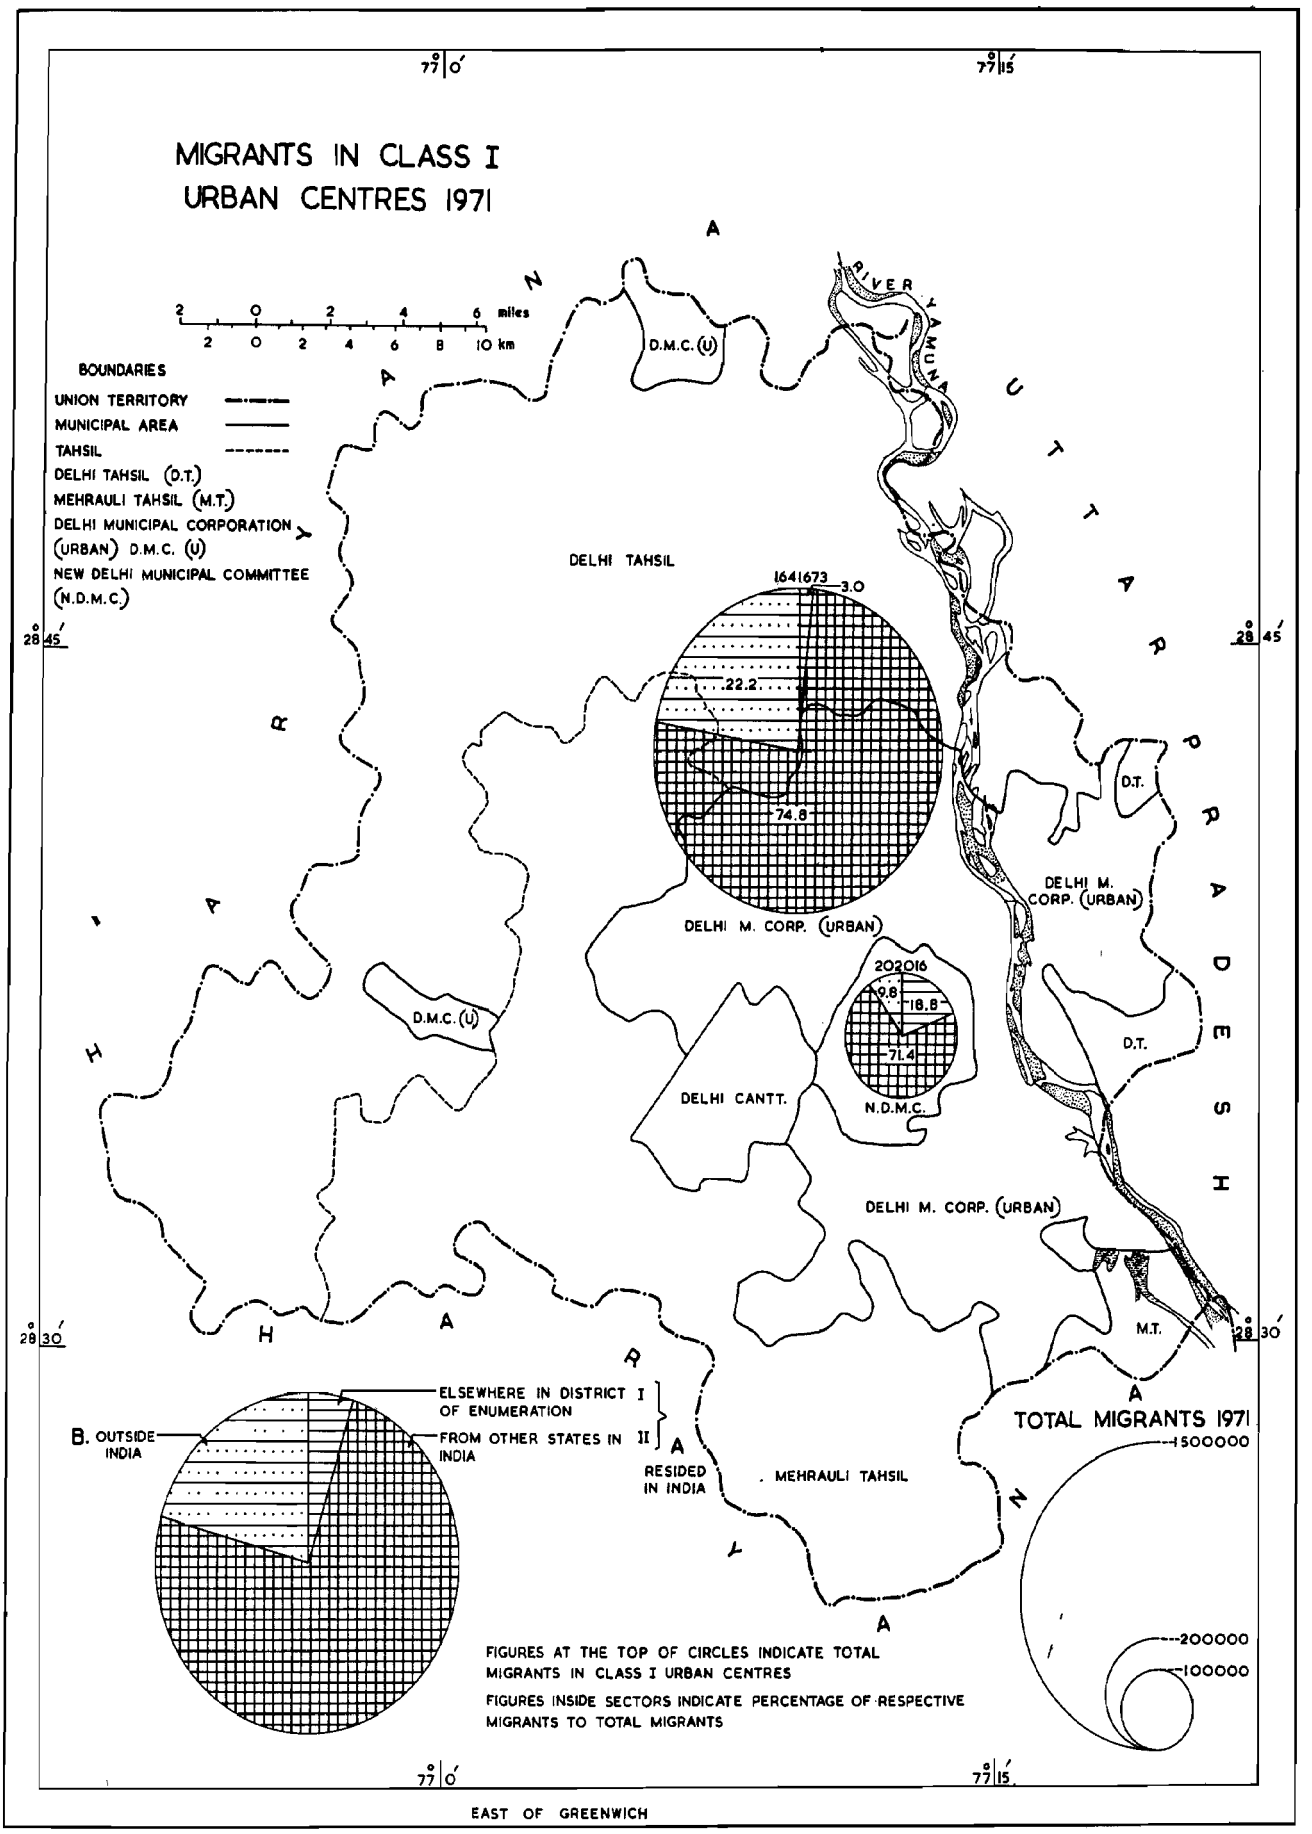

MIGRANTS IN CLASS I URBAN CENTRES 1971

This map is drawn to depict the magnitude of in-migrants in cities having population 100,000 and above. Only two cities of Delhi UT i.e., DMC(U) and NDMC have population 100,000 and above. In-migrants are shown by proportionate circles. These circles are divided to show the in-migrants from elsewhere in place of enumeration, from other states and from other countries.

In NDMC, the percentage of in-migrants from elsewhere in place of enumeration is 18·8 as against the DMC(U) where it is only 3.

The highest proportion of in-migrants (22·2%) "from outside India" is recorded in DMC(U). The proportion of in-migrants from other states in India is 74·8% in DMC(U) and 71·4% in NDMC.

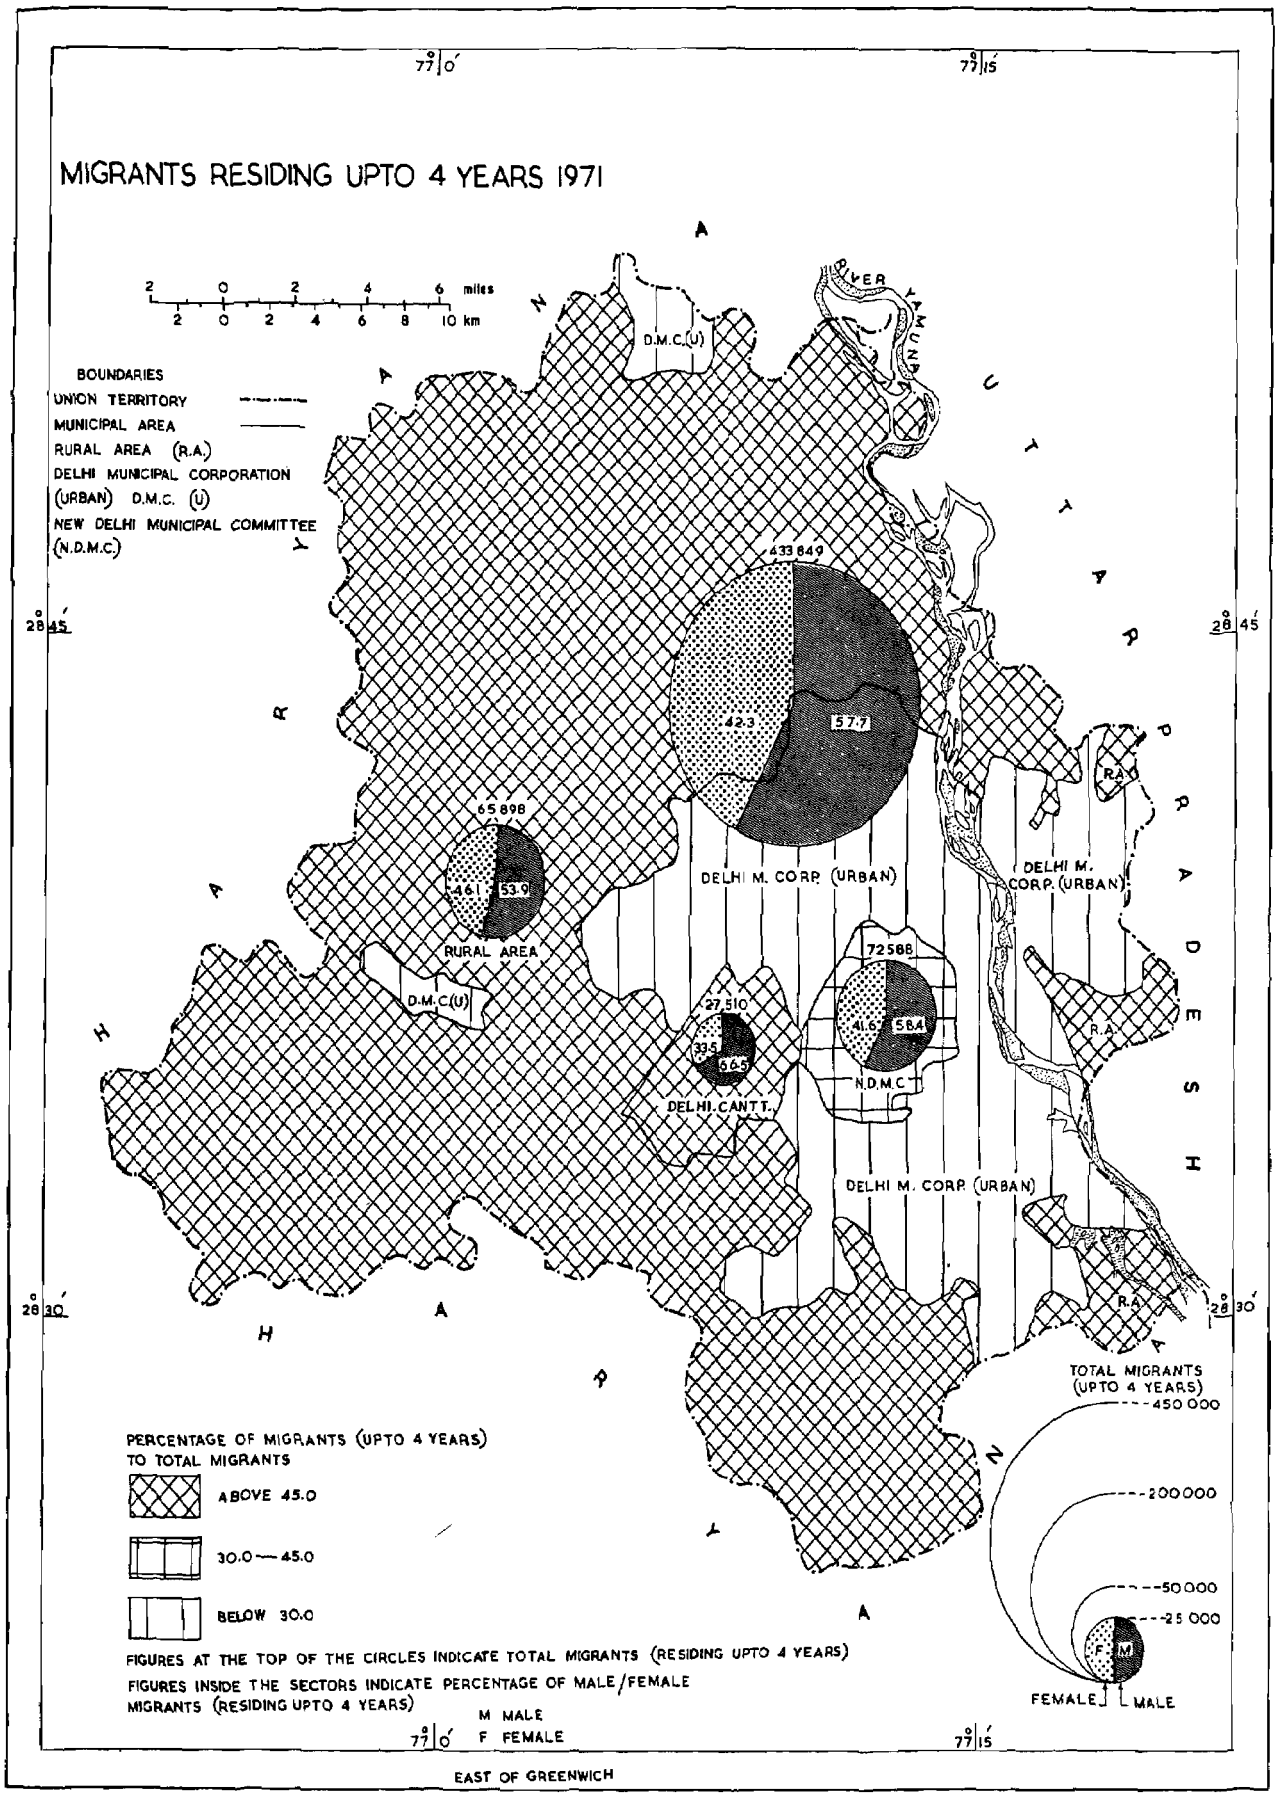

Map 27

MIGRANTS RESIDING UPTO 4 YEARS 1971

This map exhibits the percentage of migrants classified by place of last residence with duration upto 4 years to total migrants. Proportionate circles representing total migrants are divided into male and famale migrants having duration of residence upto 4 years. The percentage of Migrants residing upto 4 years is grouped into three categories as shown in the map.

In Delhi cantonment and Mehrauli Tahsil, the migrants residing upto 4 years are more than half of the total migrants of all durations, whereas in DMC(U) they are only 26·4%. In Delhi Tahsil female migrants are more than the males, but in other units male are dominating.

Map 28

MIGRANTS RESIDING 5—9 YEARS 1971

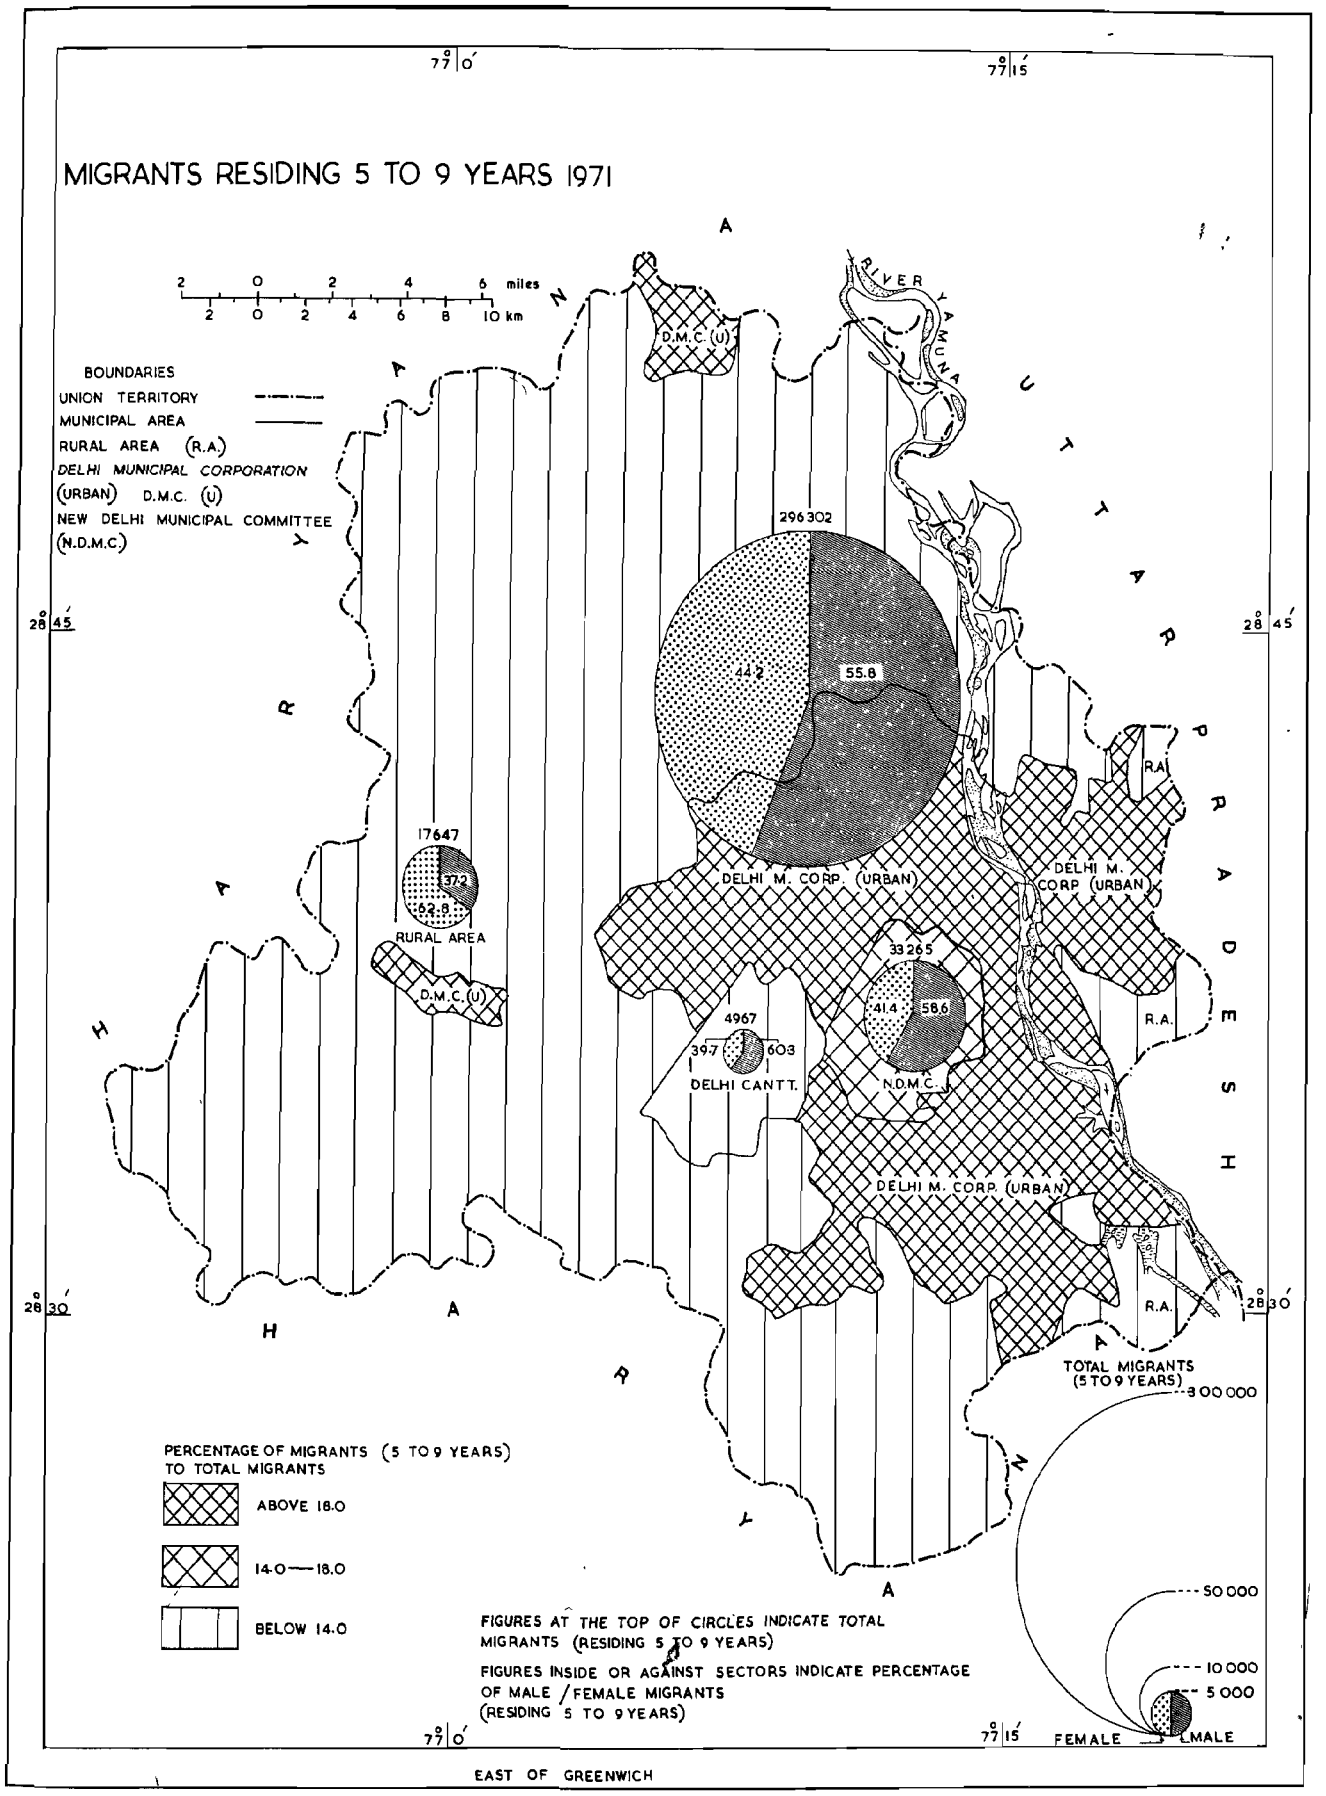

This map depicts the percentage of migrants classified by place of last residence with duration of residence 5—9 years to total migrants of all durations.

Proportionate circles representing migrants of all durations are drawn in each unit. These circles show sex-wise migrants residing 5—9 years with suitable grades of hatching.

In all the units, migrants residing between 5—9 years are less than one-fourth of the total. The highest proportion is in DMC(U) (18·1%) whereas the lowest is in Delhi Cantonment (11·6%). The NDMC, Delhi Tahsil and Mehrauli Tahsil account for migrants 16·5%, 12·9% and 13·4% respectively.

The female migrants outnumber male migrants in Delhi Tahsil and Mehrauli Tahsil.

Map 29

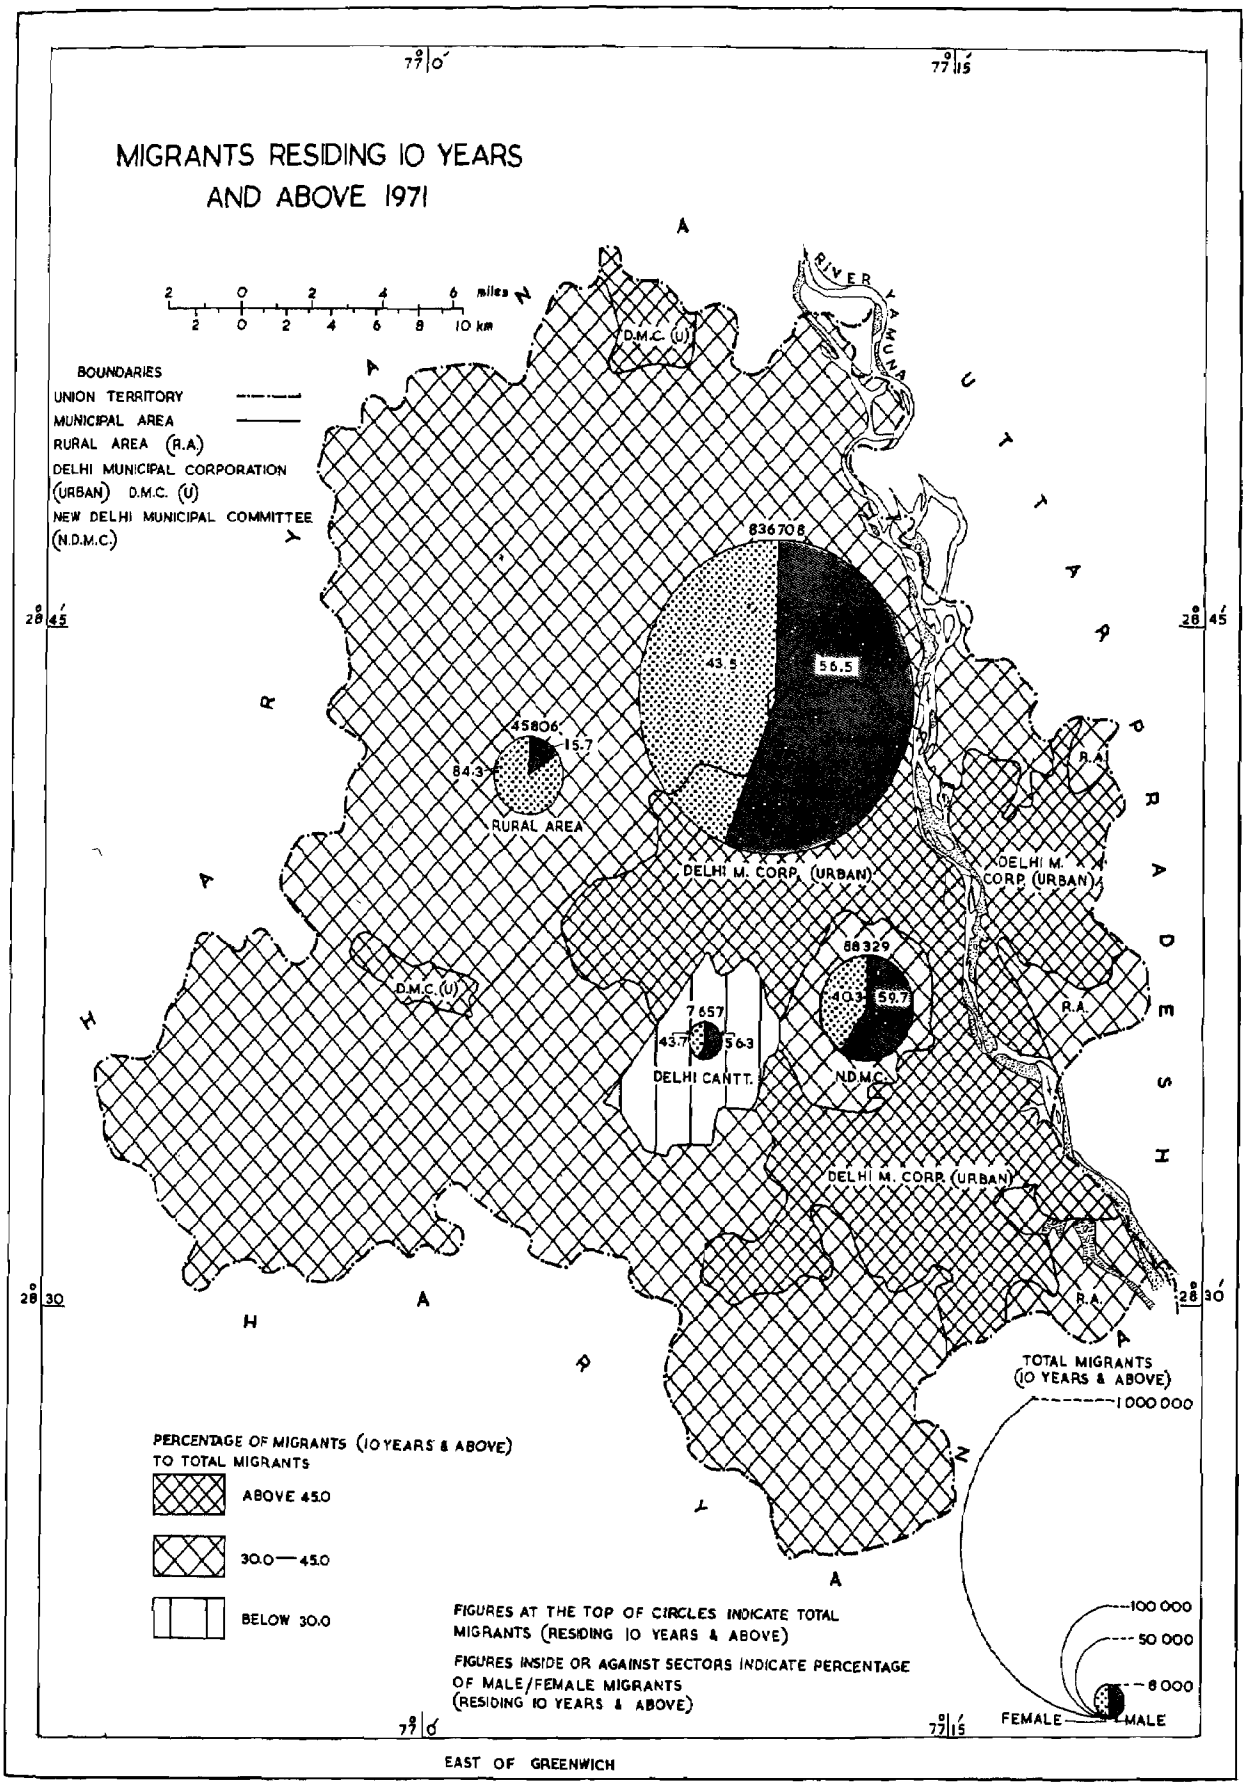

MIGRANTS RESIDING 10 YEARS AND ABOVE 1971

Percentage of migrants classified by place of last residence with duration of 10 years and above to the total migrants is displayed in this map.

Proportionate circles of migrants of all durations are drawn in each unit. These circles are divided into male and female migrants residing 10 years and above and are hatched accordingly from high to low values.

It is notable that the migrants residing 10 years and above are more than half of the total in DMC(U). In other units they are comparatively less. The female migrants residing 10 years and above outnumber the male migrants in Delhi and Mehrauli Tahsils.

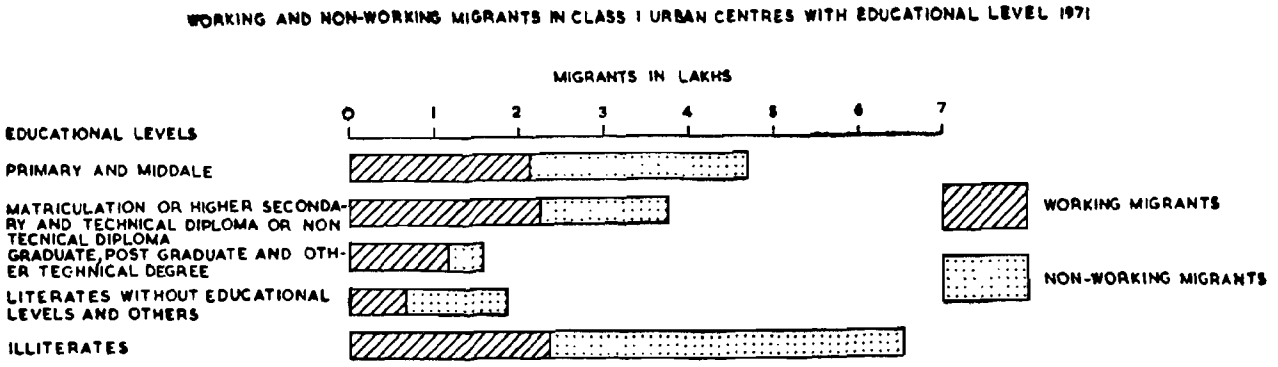

Map 30

WORKING AND NON-WORKING MIGRANTS IN CLASS I URBAN CENTRES WITH EDUCATIONAL LEVELS 1971

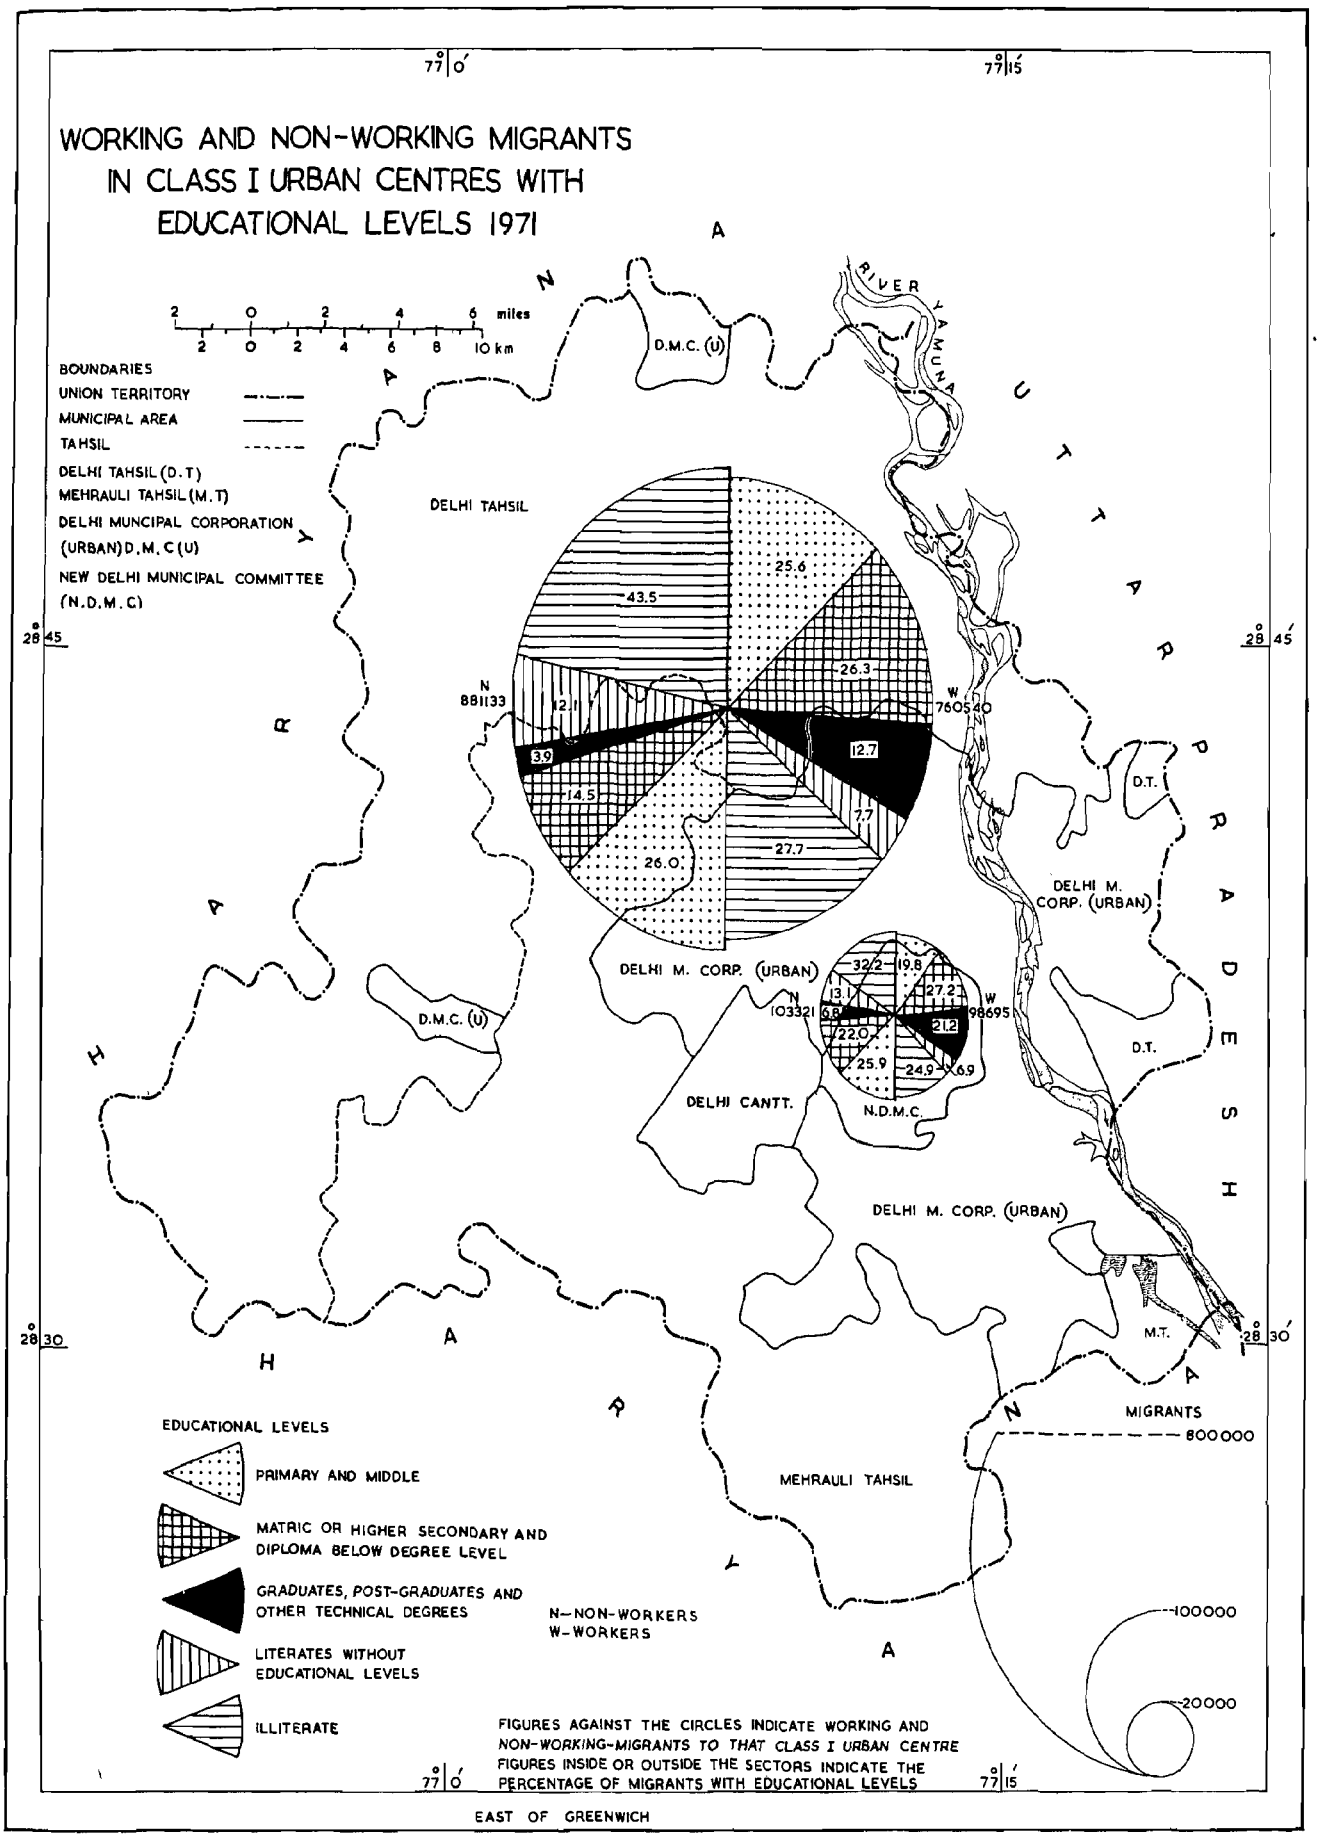

This map exhibits the educational levels of migrants classified as workers and non-workers in each unit of the Delhi UT.

Proportionate circle diagrams representing working and non-working migrants are drawn in each town. These are further divided into five categories of educational levels with different shades, which are as follows : (1) primary and middle, (2) matric or higher secondary below degree level, (3) graduates, post-graduates and other technical degrees, (4) literate without educational levels and (5) illiterates.

In all the units of Delhi UT, illiterates and literates without educational levels among the non-workers are highest. In DMC (U) and NDMC the proportion of persons having primary and middle education represent non-workers which are more in number to the workers. The proportions of matric or higher secondary below degree level, are graduates, post-graduates and other technical degrees are comparatively higher in workers as compared to the non-workers.

Map 31

CLASSIFICATION OF WORKING MIGRANTS 1971

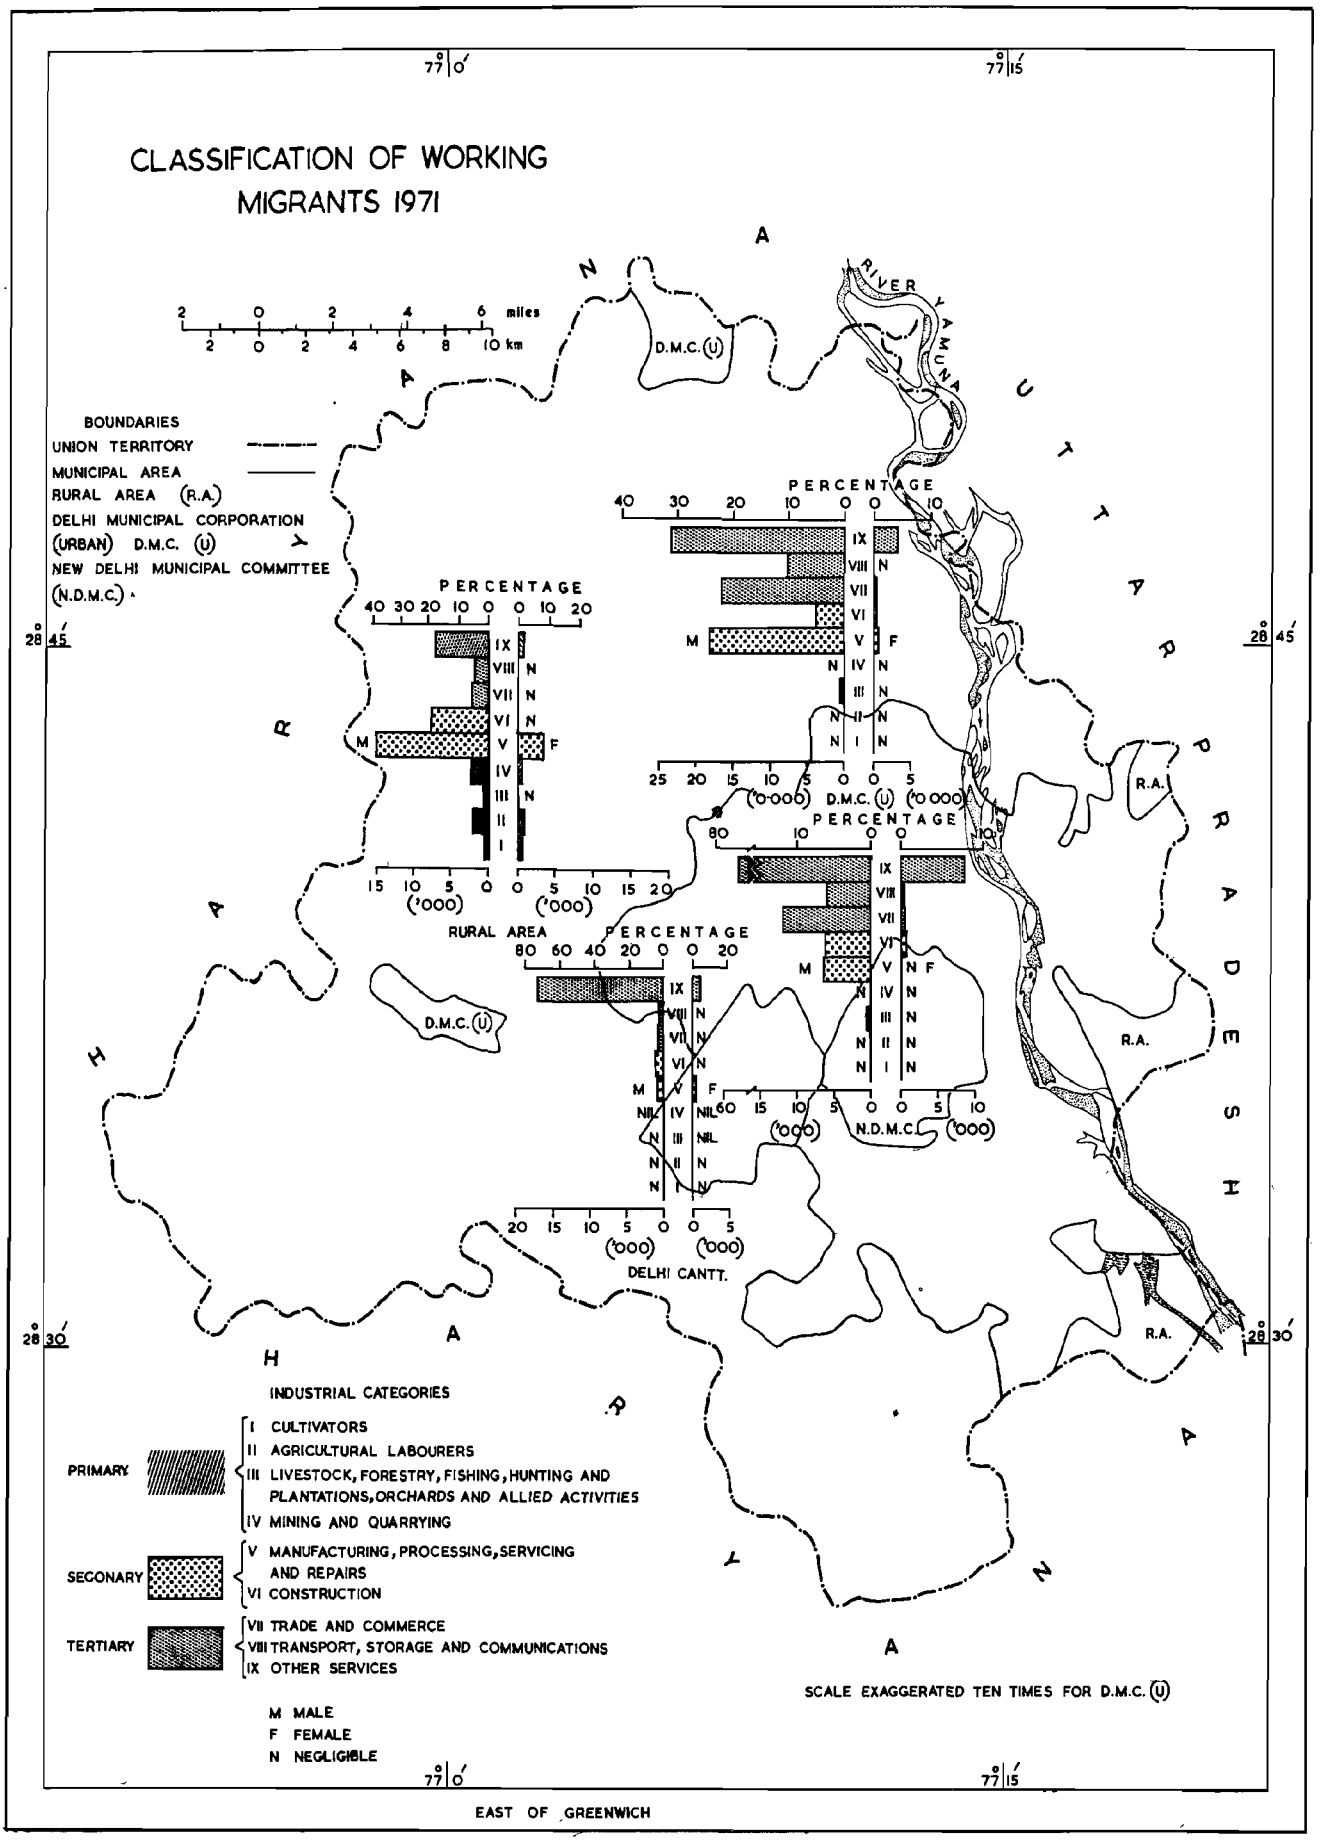

The working migrants both males and females are categorised in the nine Census Industrial categories in this map. Proportionate bars are drawn in each unit with suitable hatching.

The working female migrants in any of the activities do not exceed beyond 5·5% in the Delhi UT. The working male migrants predominate and almost in the secondary and tertiary activities they exceed beyond 20·0%.

In DMC (U), female in other services are less than 5·0% in contrast to secondary and tertiary activities as a whole where they hardly cross 0·5% mark. Workers in other services account for 9·0% while in secondary and tertiary activities their proportion remain within 1·0% in NDMC. In Delhi and Mehrauli Tahsils female workers in manufacturing, processing, servicing and repairs are around 10·0%.

In Delhi and Mehrauli Tahsils male workers in primary activity do not cross 10·0% whereas the percentage figure in secondary activity is more than 30·0%. In Delhi Cantonment more than 72·0% male working migrants are engaged in other services. In DMC (U) and NDMC the male working migrants are engaged in the secondary and tertiary activities.

Map 32

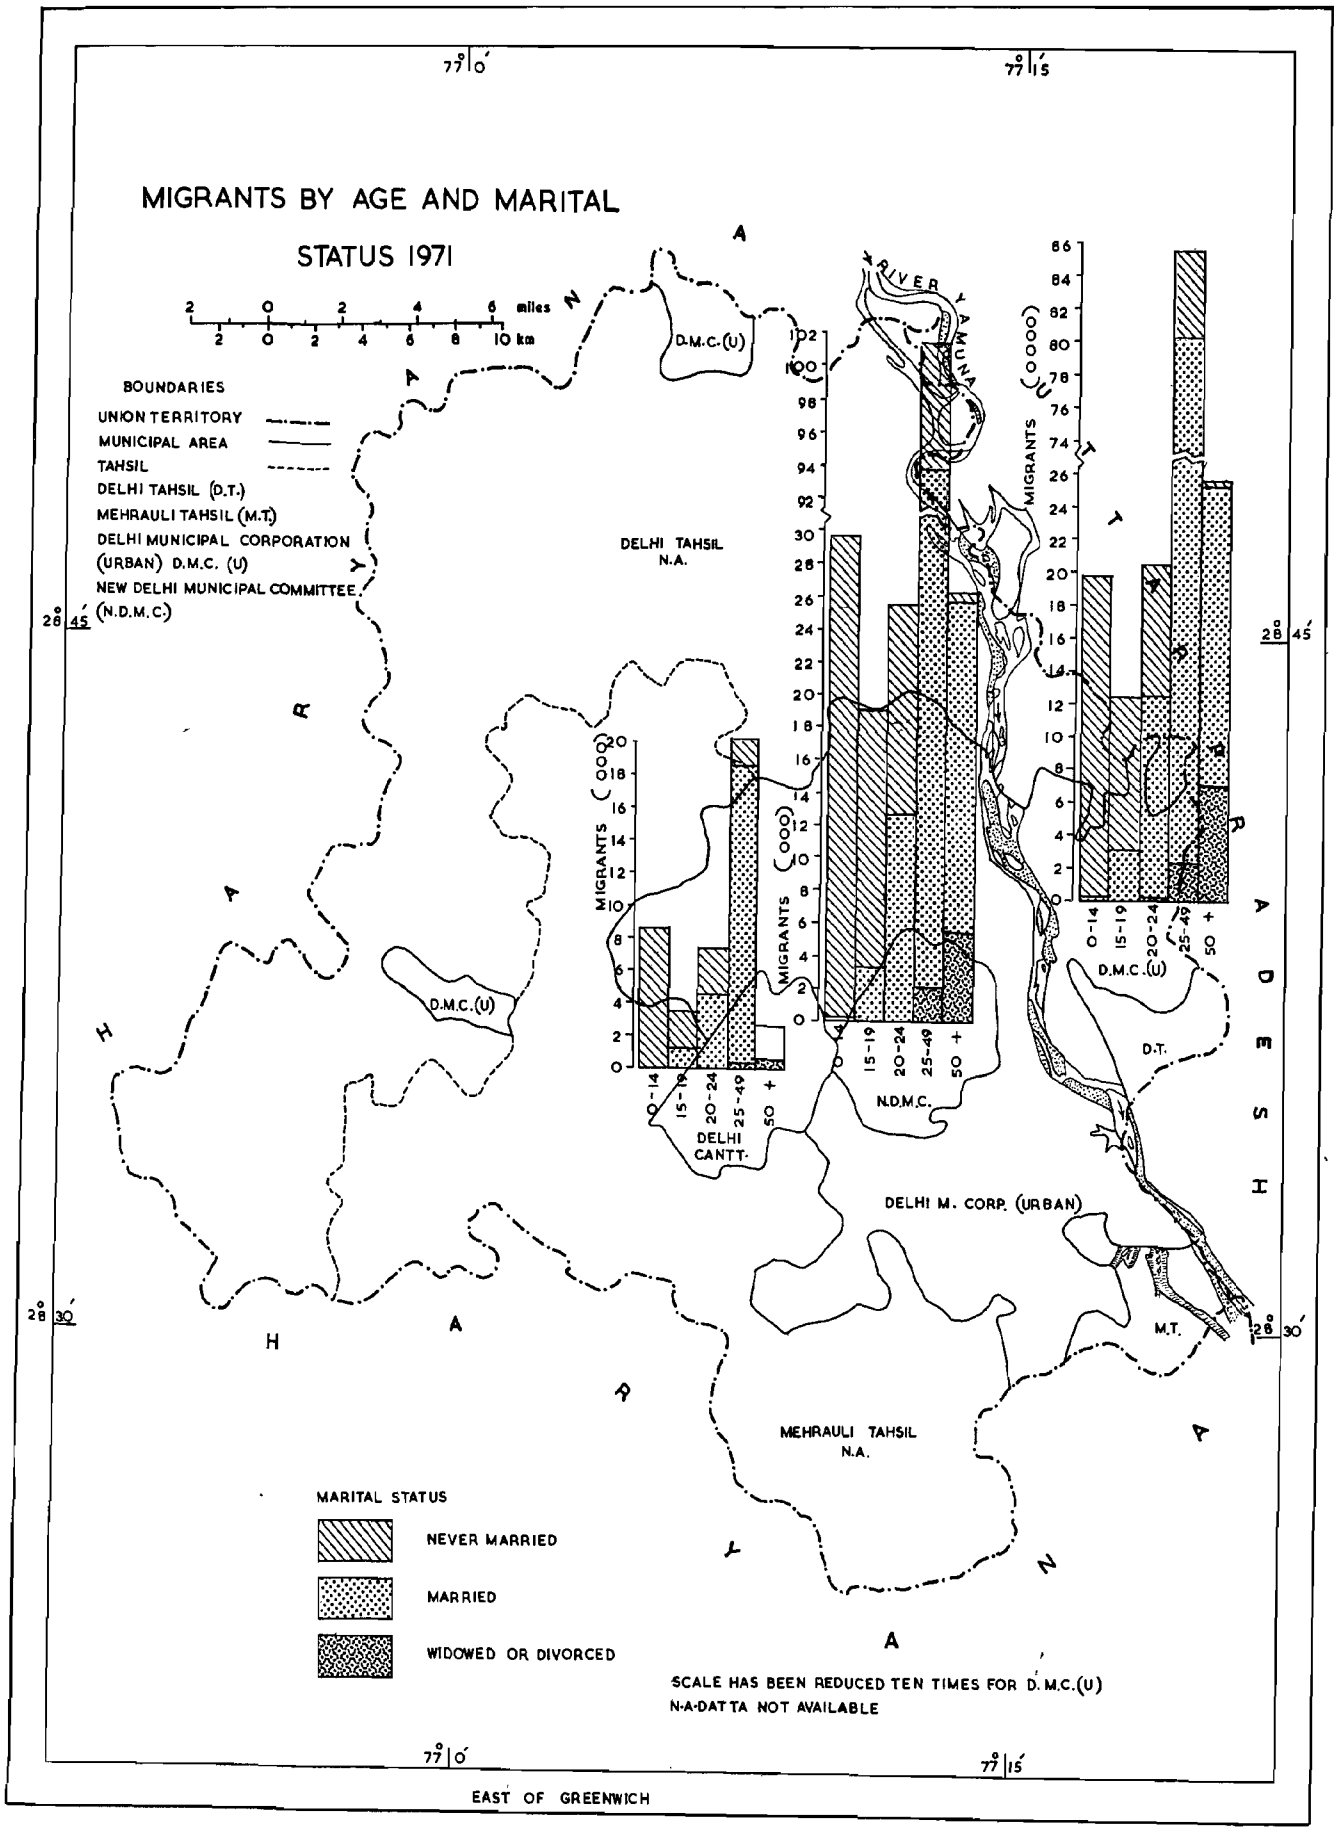

MIGRANTS BY AGE AND MARITAL STATUS 1971

The map depicts age-wise marital status of migrants in urban areas. Migrants are grouped into age groups 0-14, 15-19, 20-24, 25-49 and 50 +and are represented by different bars. These bars are further divided to show the marital status *viz.* never married, married and widowed or divorced.

In urban areas of Delhi UT, the number of married migrants in the age 0-14 is 2,399. Out of this a majority is concentrated in DMC (U) (2121) while it is only 74 in Delhi cantonment. In age 15-19, migrants numbering 110,247 are grouped into never married category. In this case also highest number is seen in DMC (U) (92,185) followed by NDMC (15,815) and Delhi cantonment (2,247). In age 20-24 migrants account for 237,927. Out of this only 141,275 persons are recorded as married. Proportion of widowed and divorced is almost negligible in this age-group. In ages 25-49 and 50+only 67,794 persons are reported as never married. This proportion is considerably low in Delhi cantonment. Similarly, the proportions of widowed and divorced are also in significant in these age-groups.

Map 33

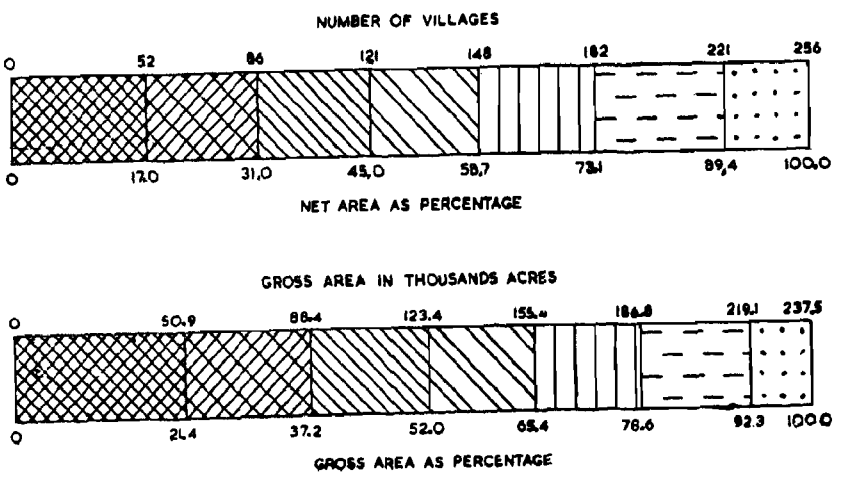

INTENSITY OF CROPPING 1970-71

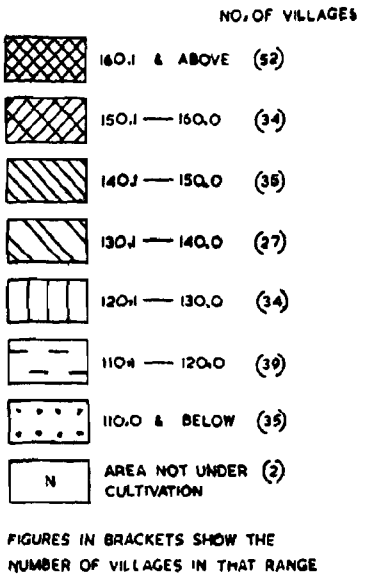

This map shows the village-wise intensity of cropping in Delhi UT during 1970-71. For each village, the intensity-index is worked out as

$$\frac{\text{gross area sown}}{\text{net area sown}} \times 100$$

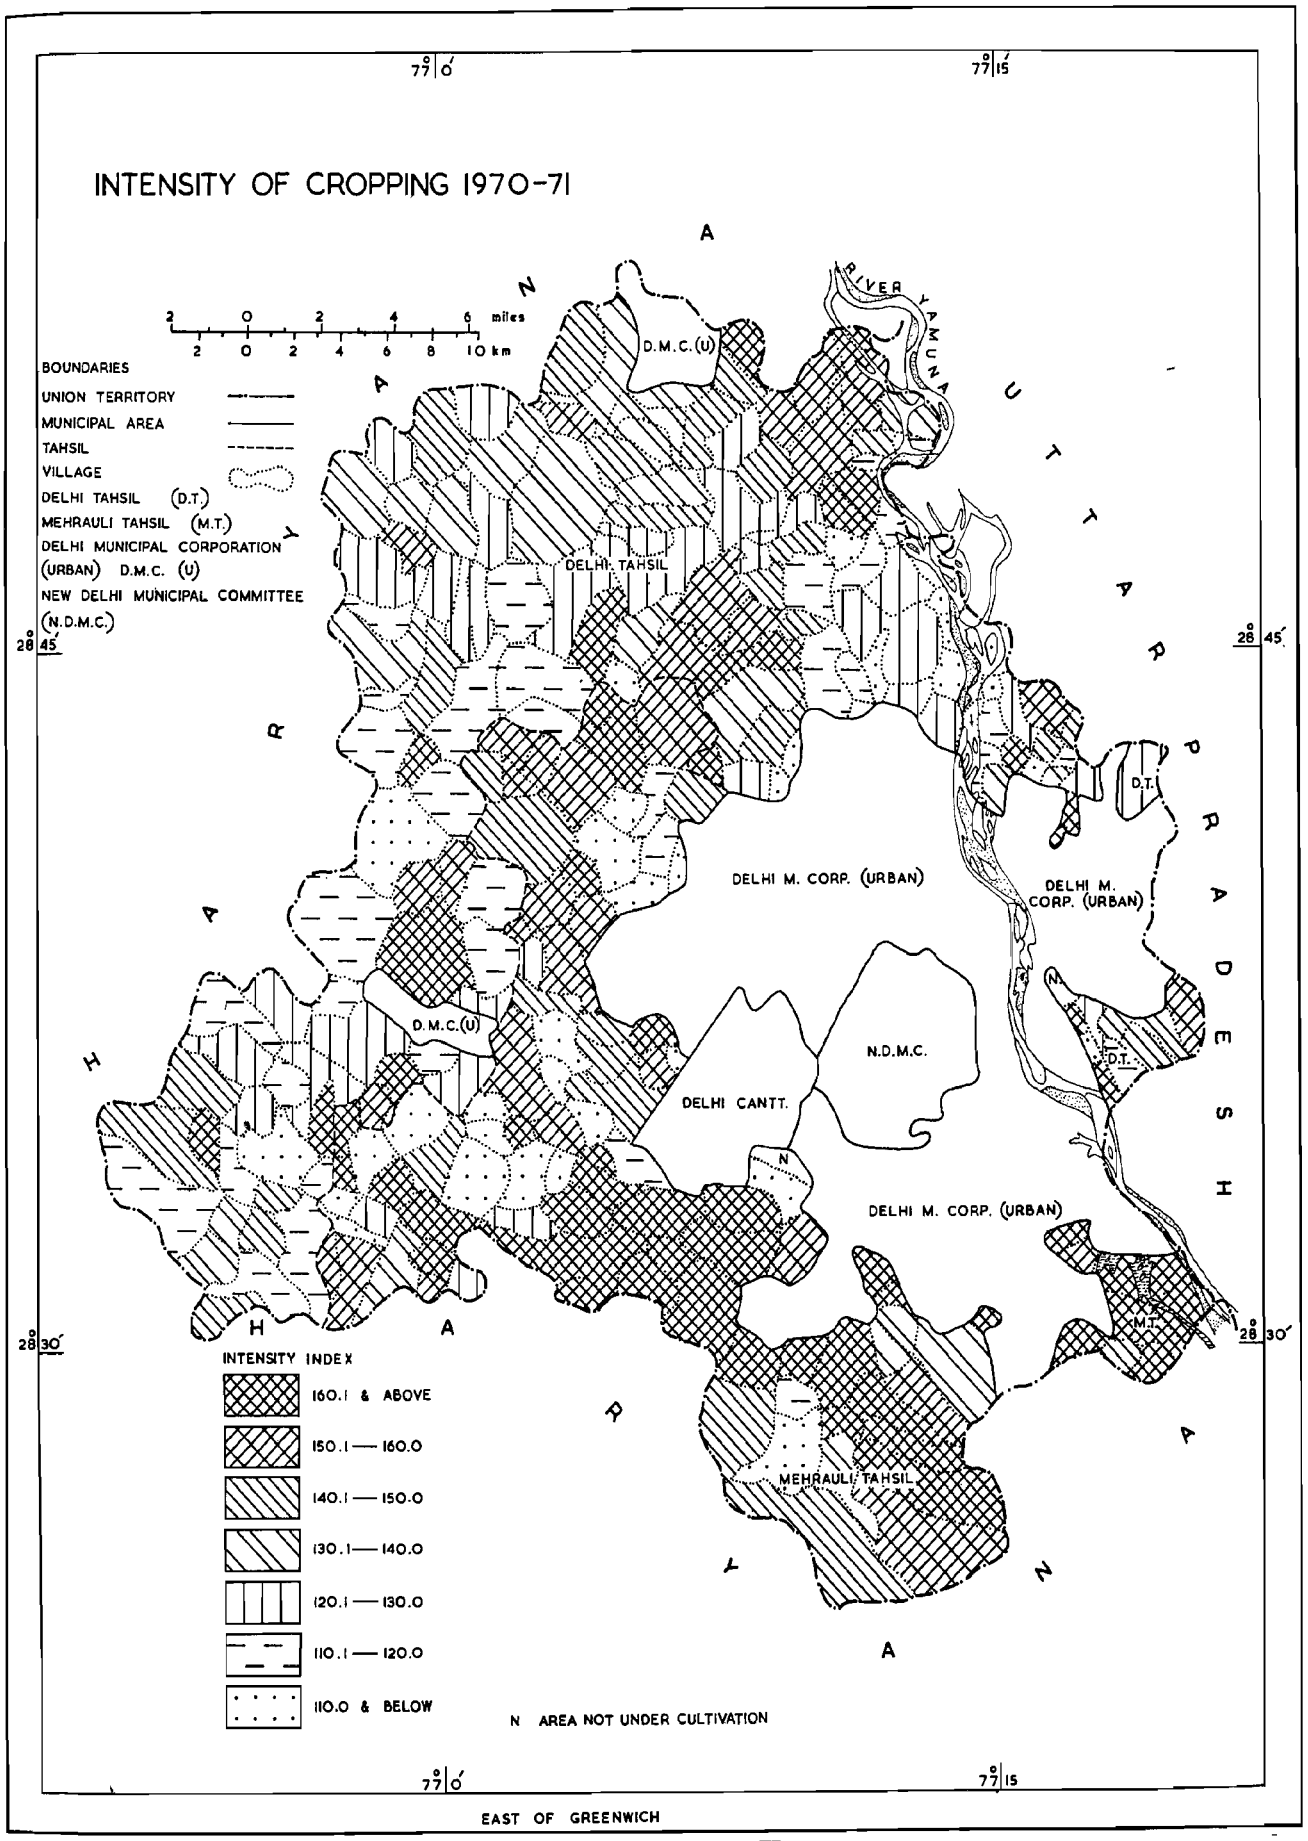

and grouped into seven ranges as shown in the legend by choropleth technique.

The intensity of Mehrauli Tahsil (148·2) is comparatively higher to that of the Delhi Tahsil (132·6). The villages having higher intensity-index than the territory average (138·1) are mostly located around the UA belt, and are equipped with irrigational facilities and easy access of the produce to the markets.

MAJOR CEREALS 1970-71 (RICE, WHEAT AND MILLETS)

This map is drawn to show area of land under major cereals like wheat, rice and millets in the rural areas of Delhi UT. The area of land under each cereal is shown by dots of suitable scales.

As is evident from the map, wheat predominants among major cereals. Rice is sown mostly in the low lying belt of Delhi Tahsil. In Mehrauli Tahsil, it is cultivated along the river Yamuna. Millets are sown on sub-marginal land with meagre irrigational facilities.

PULSES AND OILSEEDS 1970-71

This map exhibits the area of land under pulses and oilseeds in Delhi UT. Area under each crop is shown by dots by suitable scales.

As compared to major cereals area of land under cultivation of pulses and oilseeds is comparably lesser. Almost all the villages of Delhi UT cultivate pulses, but specially the villages located in the south and north have more areas of land under pulses. Cultivation of oilseeds is restricted only to a limited area which does not exceed 150 hectares.

AREA IRRIGATED BY VARIOUS SOURCES 1970-71

Village-wise proportion of the net area irrigated to net area sown is exhibited in this map. Proportions are grouped into seven ranges. All the villages are shaded in accordance with the ranges as given in the legend.

The villages (more than 80%) located in the northern part of the UT have irrigational facilities, whereas those located in the southern part are less in number. In whole of the Delhi UT there are six villages, four in Delhi Tahsil (Chilla Saroda Khadar, Ghargonda Neemka Khadar, Jharoda Mazara Burari and Shah jarpur) and two in Mehrauli Tahsil (Jawala Heri, Saidabad) where entire net area sown is irrigated. The following table shows the area irrigated by various sources :—

AGRICULTURAL HOLDING PER CAPITA IN RURAL AREAS 1971

This map shows the village level variations in per capita agricultural holdings. Figures of per capita agricultural holdings are grouped into six categories. All the villages are hatched from high to low shades indicating size of holding.

The average per capita agricultural holding in the territory is 0·17 hectare. As is evident from the map that the per capita holding in the villages located towards south-west, and of those situated alongwith the Yamuna in north, and of few villages in southern part of the territory is bigger. There is only one village near Delhi cantonment in which no agricultural land is under cultivation.

AGRICULTURAL HOLDING PER MALE CULTIVATOR 1971

This map shows the average of agricultural holding available to a male cultivator (in hectares) in each village of Delhi UT.

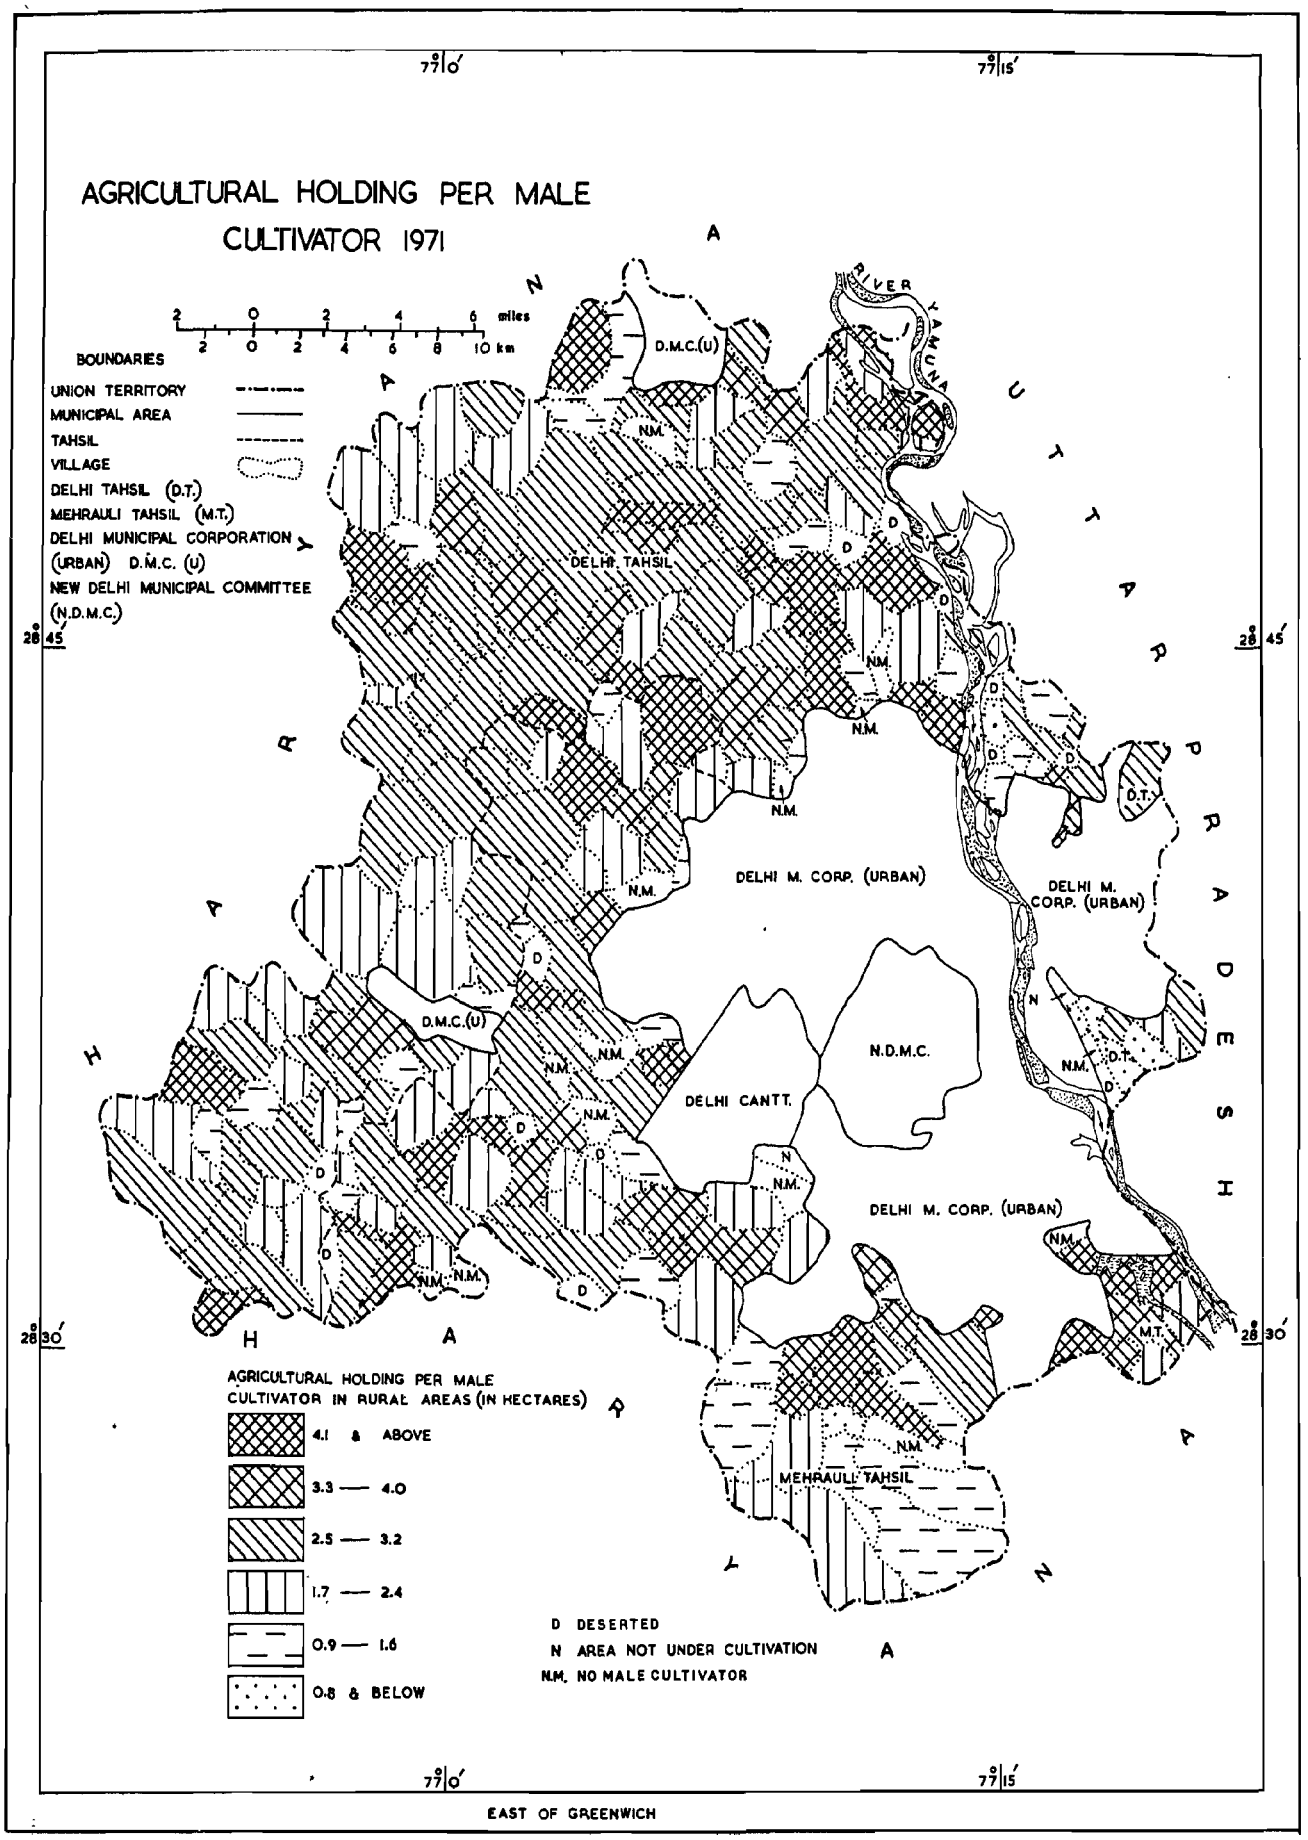

Village-wise figures of agricultural holding available to a male cultivator are grouped into six categories as indicated in the index of the map. Units of Delhi UT are shaded according to these categories with an appropriate legend.

Villages located in the north-west of UT have large sized agricultural holdings compared to those located in the south. In four villages of Delhi UT the sizes of holdings per male cultivator are the largest in Ziauddinpur (137·2 hectares), Salempur Majra (Burari) (68·3 hectares), Fatehpur Jat (59·1 hectares) located in Delhi Tahsil. A village namely Saidabad is located in Mehrauli Tahsil shows the holding of 50·2 hectares.

Map 39

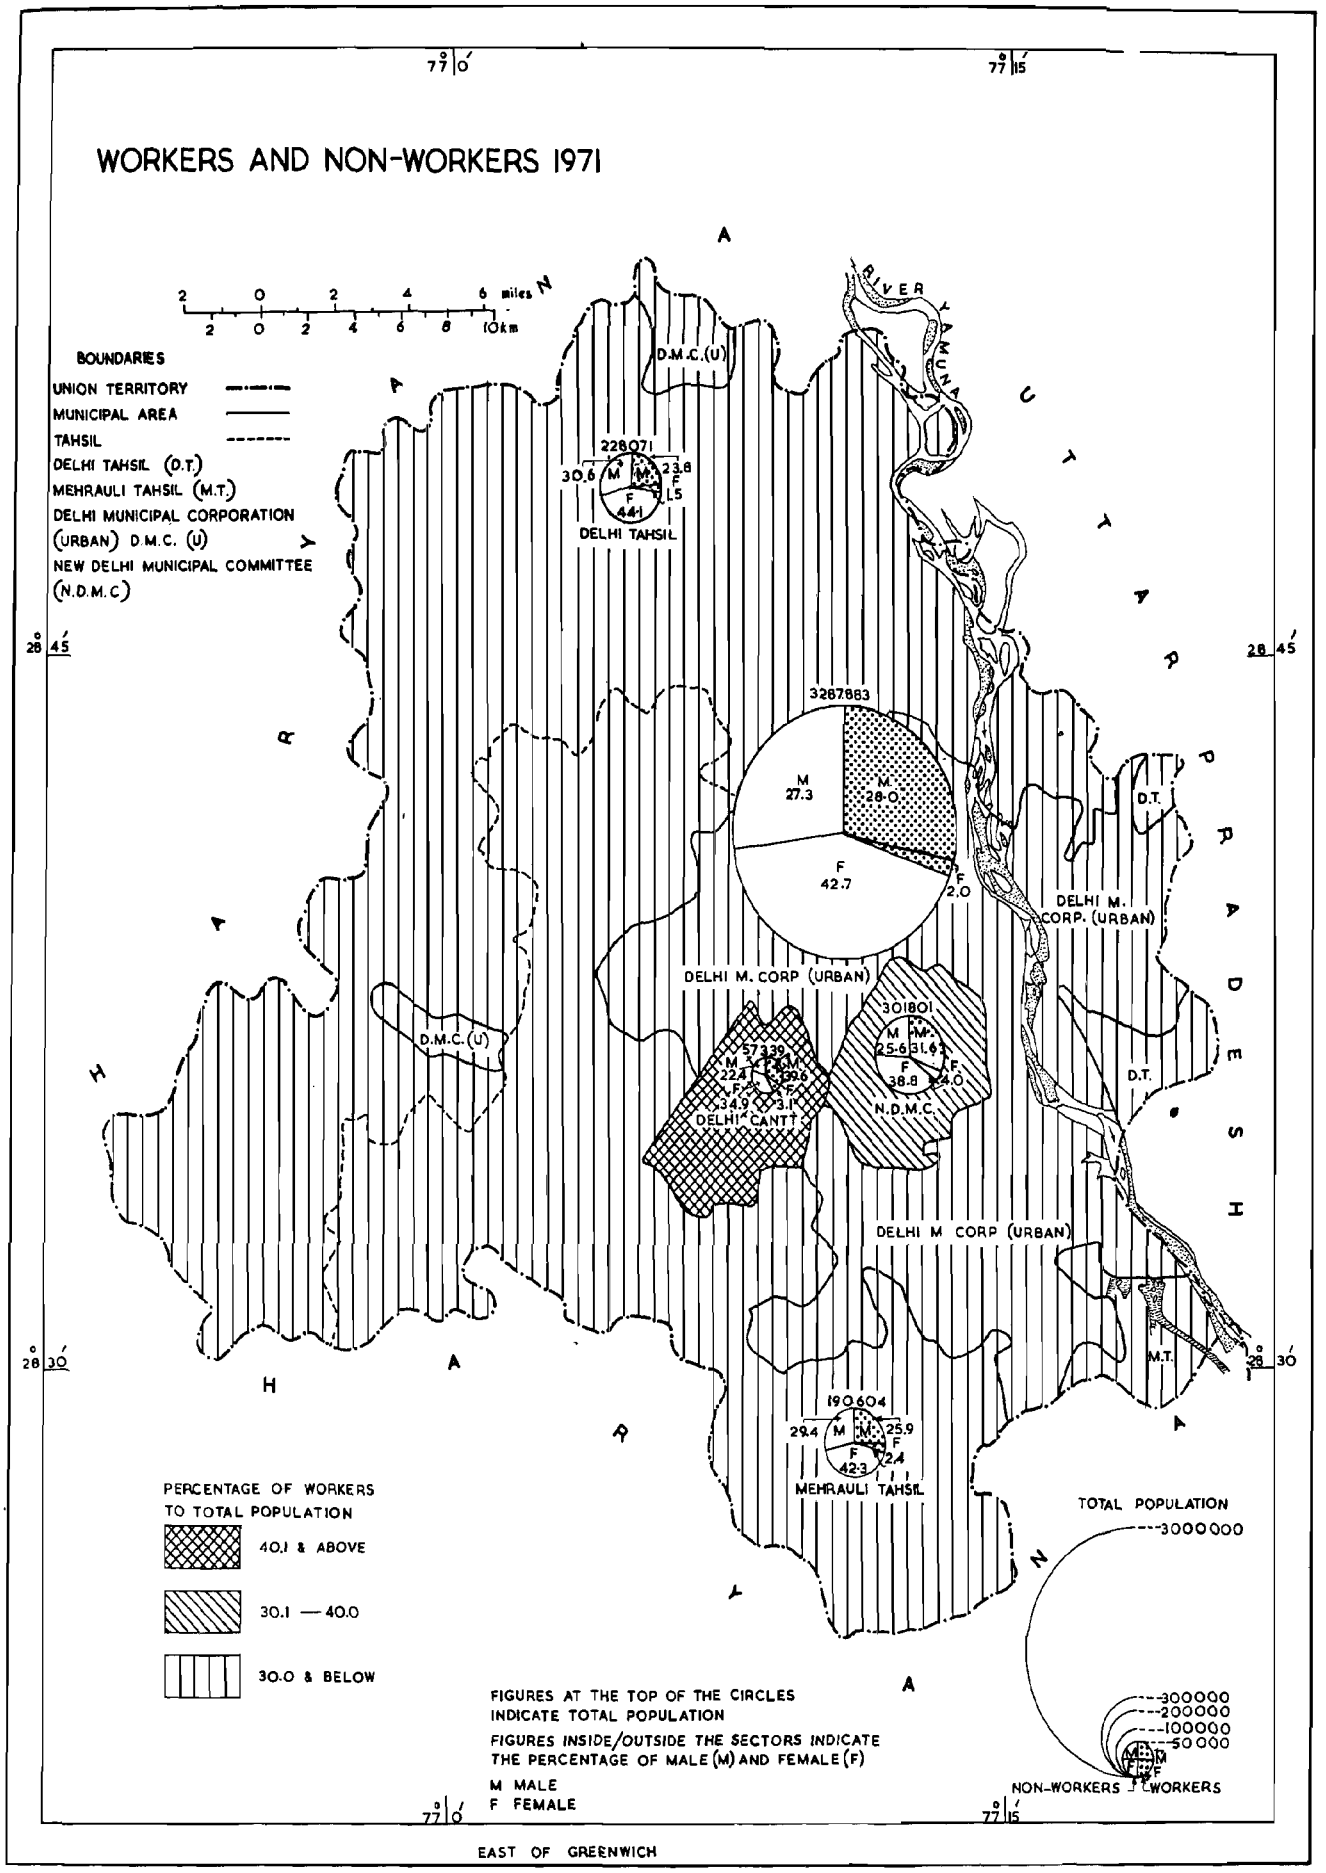

WORKERS AND NON-WORKERS 1971

This map shows the proportions of workers and non-workers by circles proportionate to the total population in each unit. Each circle is bifurcated into two sectors showing workers (hatched) and non-workers (blank). Proportions of workers have been grouped into three categories and hatched from high to low.

In the Delhi UT as a whole, 30·2% are workers and 69·8% non-workers. Of the total wo rkers (30·2%) males are 28·1% and females are 2·1%.

Highest proportion of workers is recorded in Delhi Cantonment (42·7%) and the lowest in Delhi Tahsil (25·3%). NDMC has the maximum (4·0%) female workers, while Delhi Tahsil (1·5%) comes at the bottom.

Map 40

MALE WORKERS IN AGE 15—59 1971

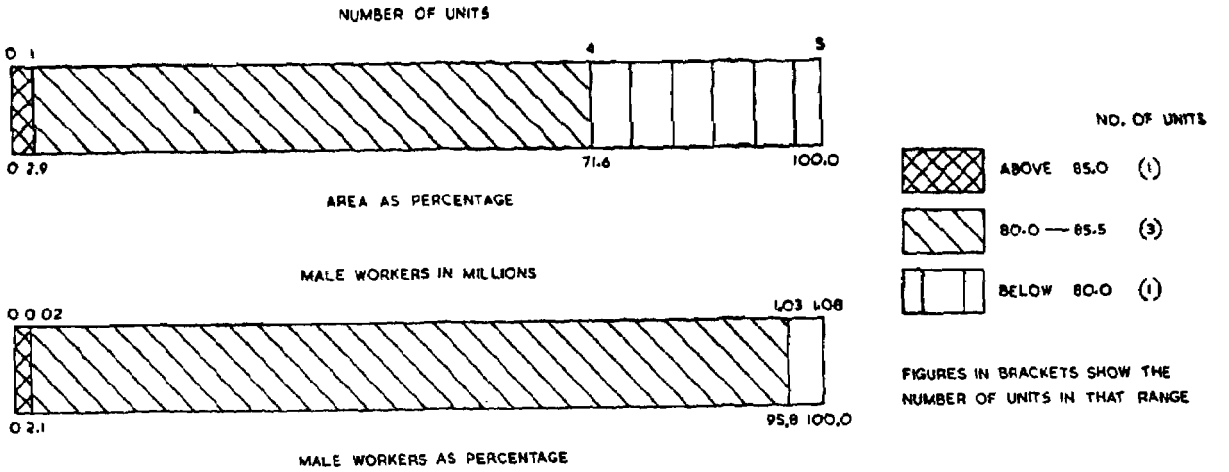

This map is depicted to show the proportion of male workers in age 15—59 to total male population in rural and urban areas of Delhi UT.

The percentage of male workers to total population in age 15—59 are grouped into three categories in choropleth as shown in the index of the map. Proportionate circles representing male population in age 15—59, have been divided into workers and non-workers.

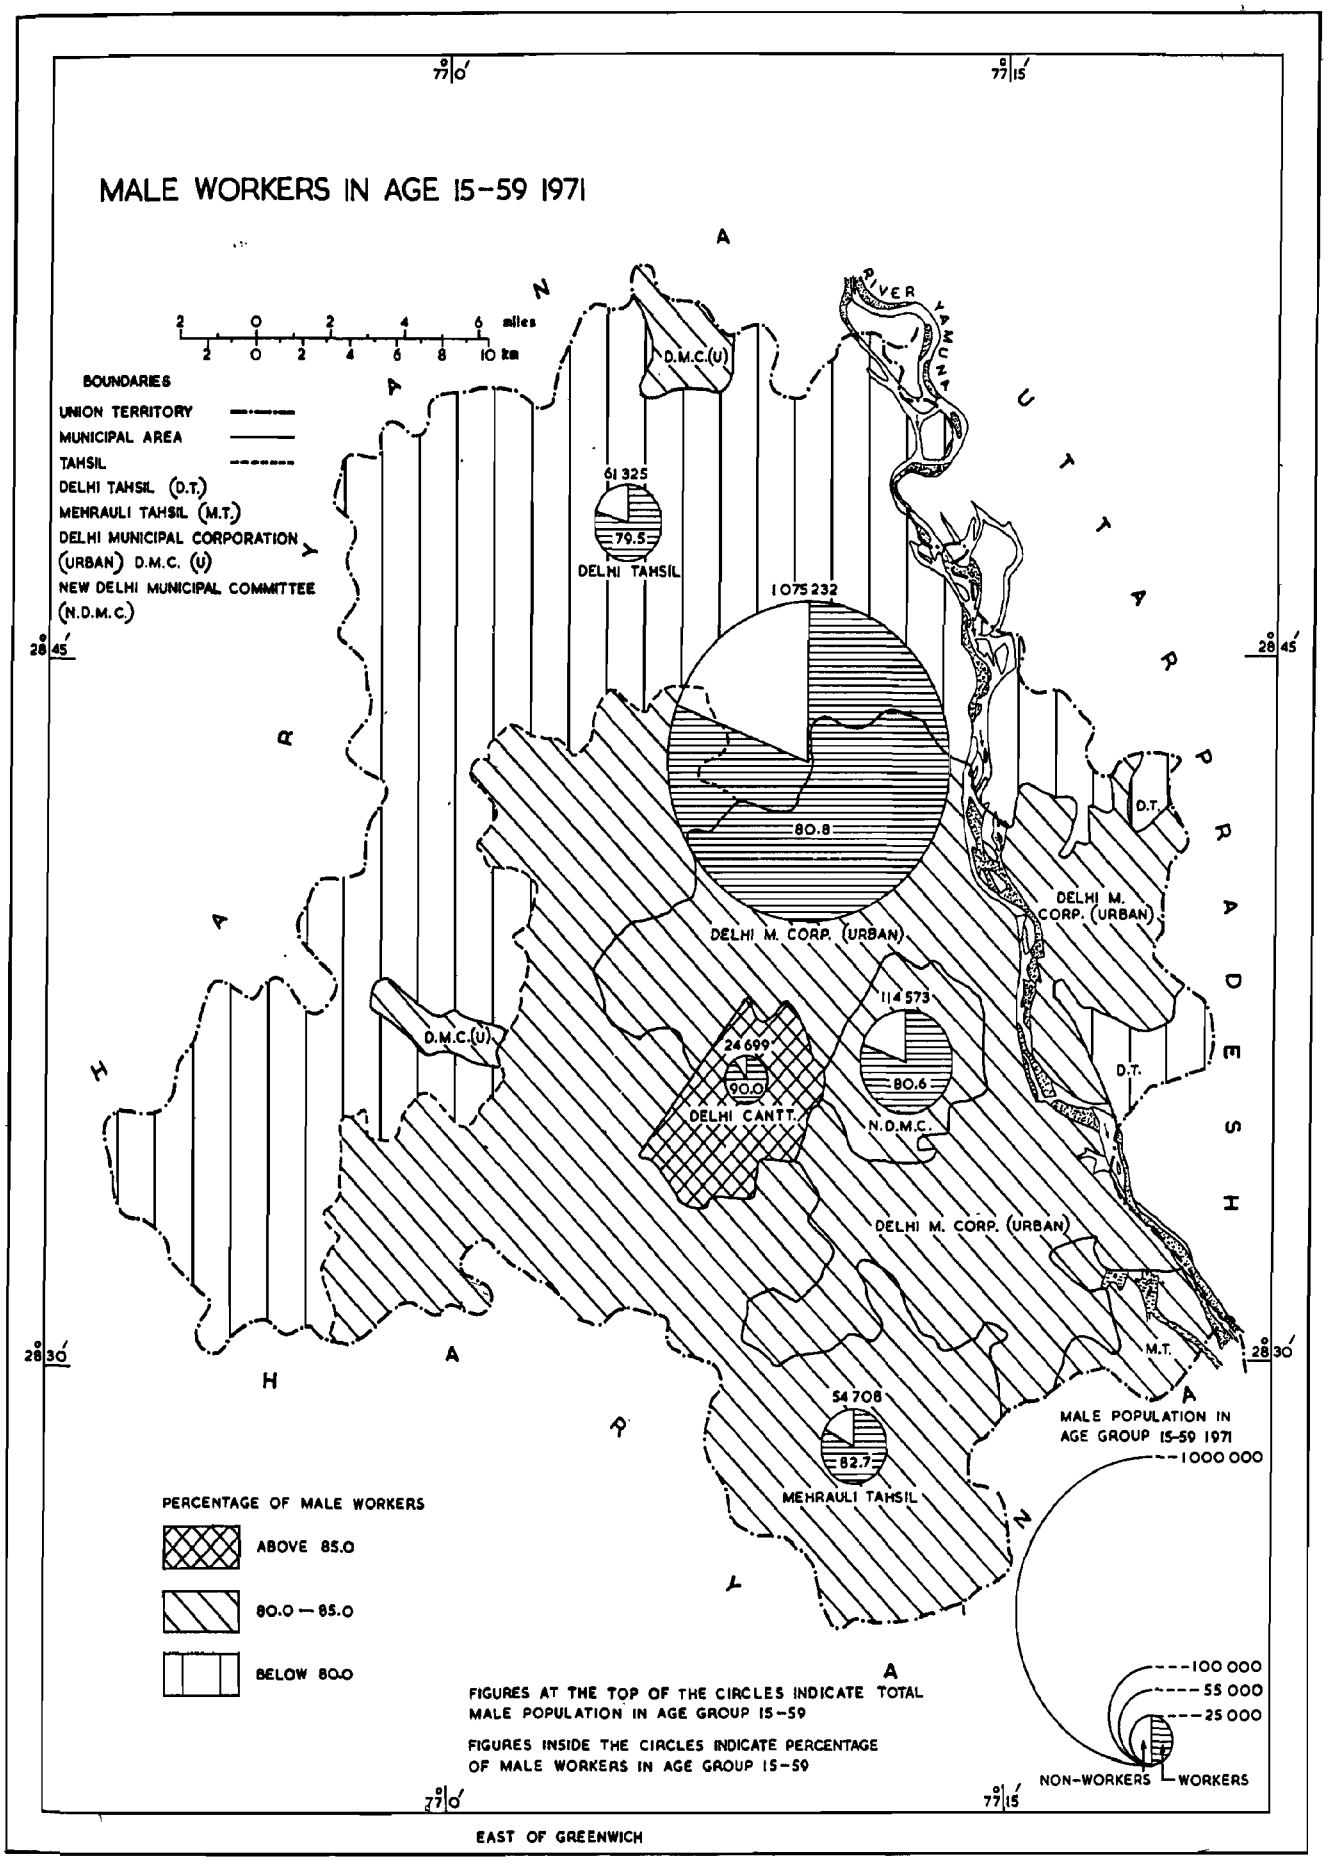

The highest proportion of workers in age 15—59 is reported in Delhi Cantonment (90·0%) probably due to the concentration of service personnel. Lowest proportion is recorded in Delhi Tahsil (79·5%).

The table indicates the unitwise differences in male workers in age 15—59.

Units	Male population (15-59)	Male workers (15-59)	Percentage of male workers to male population (15-59)
Delhi UT . . .	1,325,537	1,077,255	81·3

FEMALE WORKERS IN AGE 15—59 1971

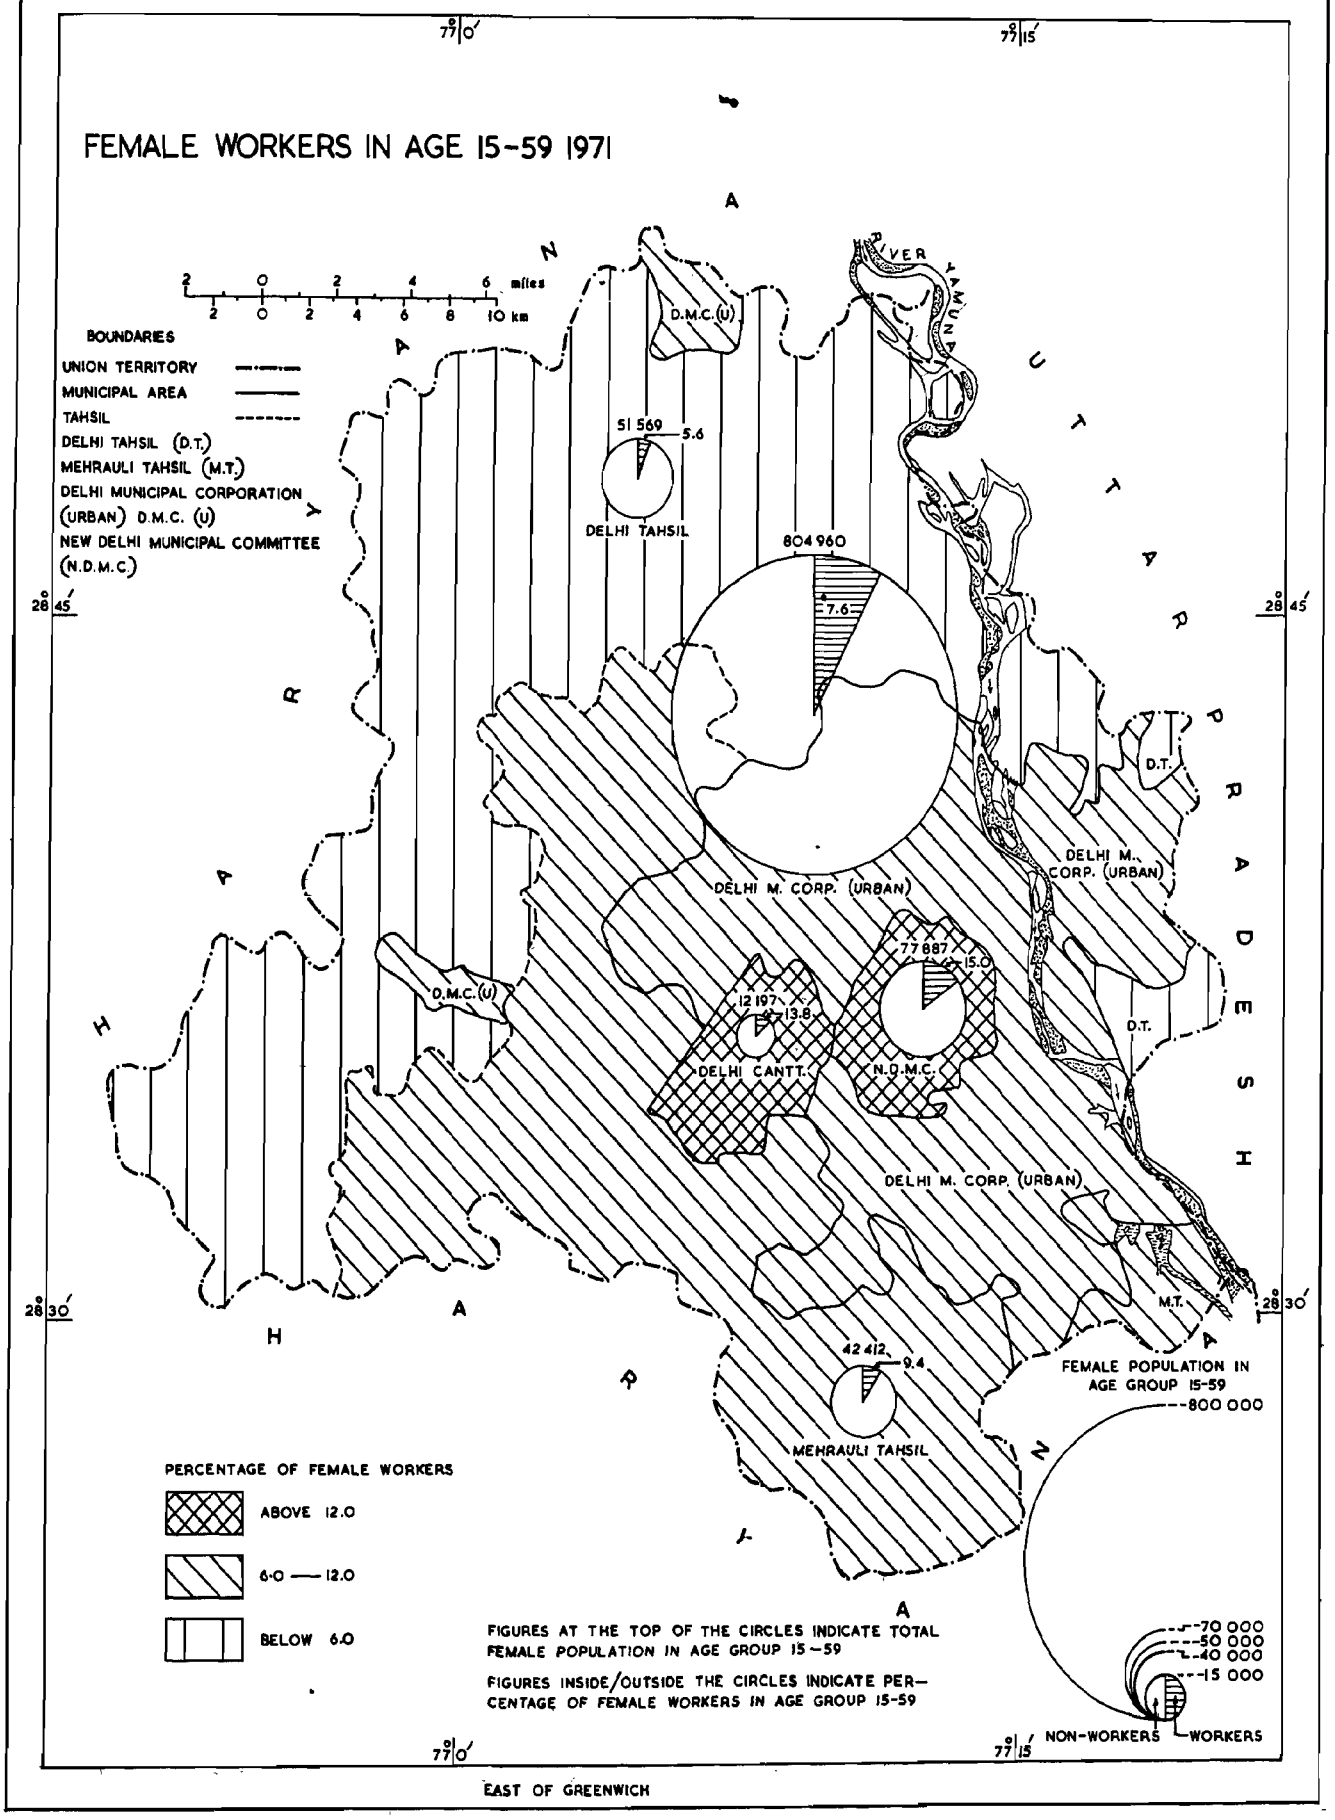

This map shows the proportion of female workers to total female population in age 15—59. Percentages of female workers to total female population are grouped into three categories in choropleth. Proportionate circles representing female population in age 15—59 are divided into workers & non-workers.

Highest proportion of female workers in age 15--59 is seen in NDMC (15·0%). Lowest proportion is reported in Delhi Tahsil (5·6%).

It is striking that the proportion of working women in Mehrauli Tahsil (9·4%) is higher than that of DMC (U) (7·6%). In Delhi Cantonment, it is (13·8%).

Map 42

WORKERS AND NON-WORKERS IN EMPLOYABLE POPULATION IN AGE 15—59 1971

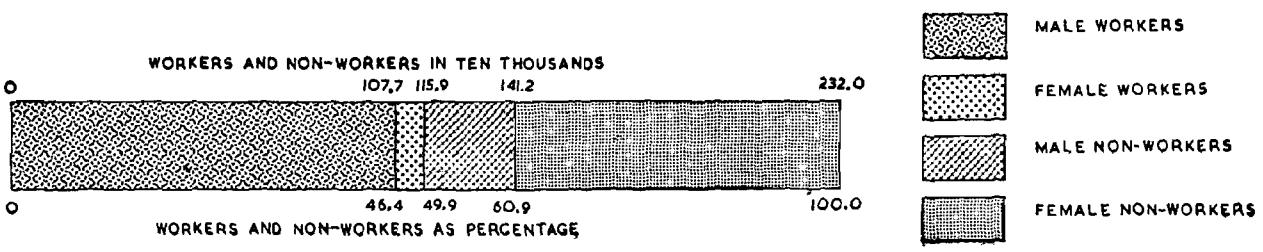

Proportions of workers and non-workers to total employable population in age 15—59 with male & female break-up are shown in this map.

Proportionate circles representing total population in the age 15—59 are drawn. The percentage of workers and non-workers to the total population in age 15—59 with male & female break-up is shown in the circles by porportionate sectors. Sectors representing non-workers are depicted bifurcating into males and females. Squares as shown in the map represent the total non-workers in age 15—59 with male and female break-up.

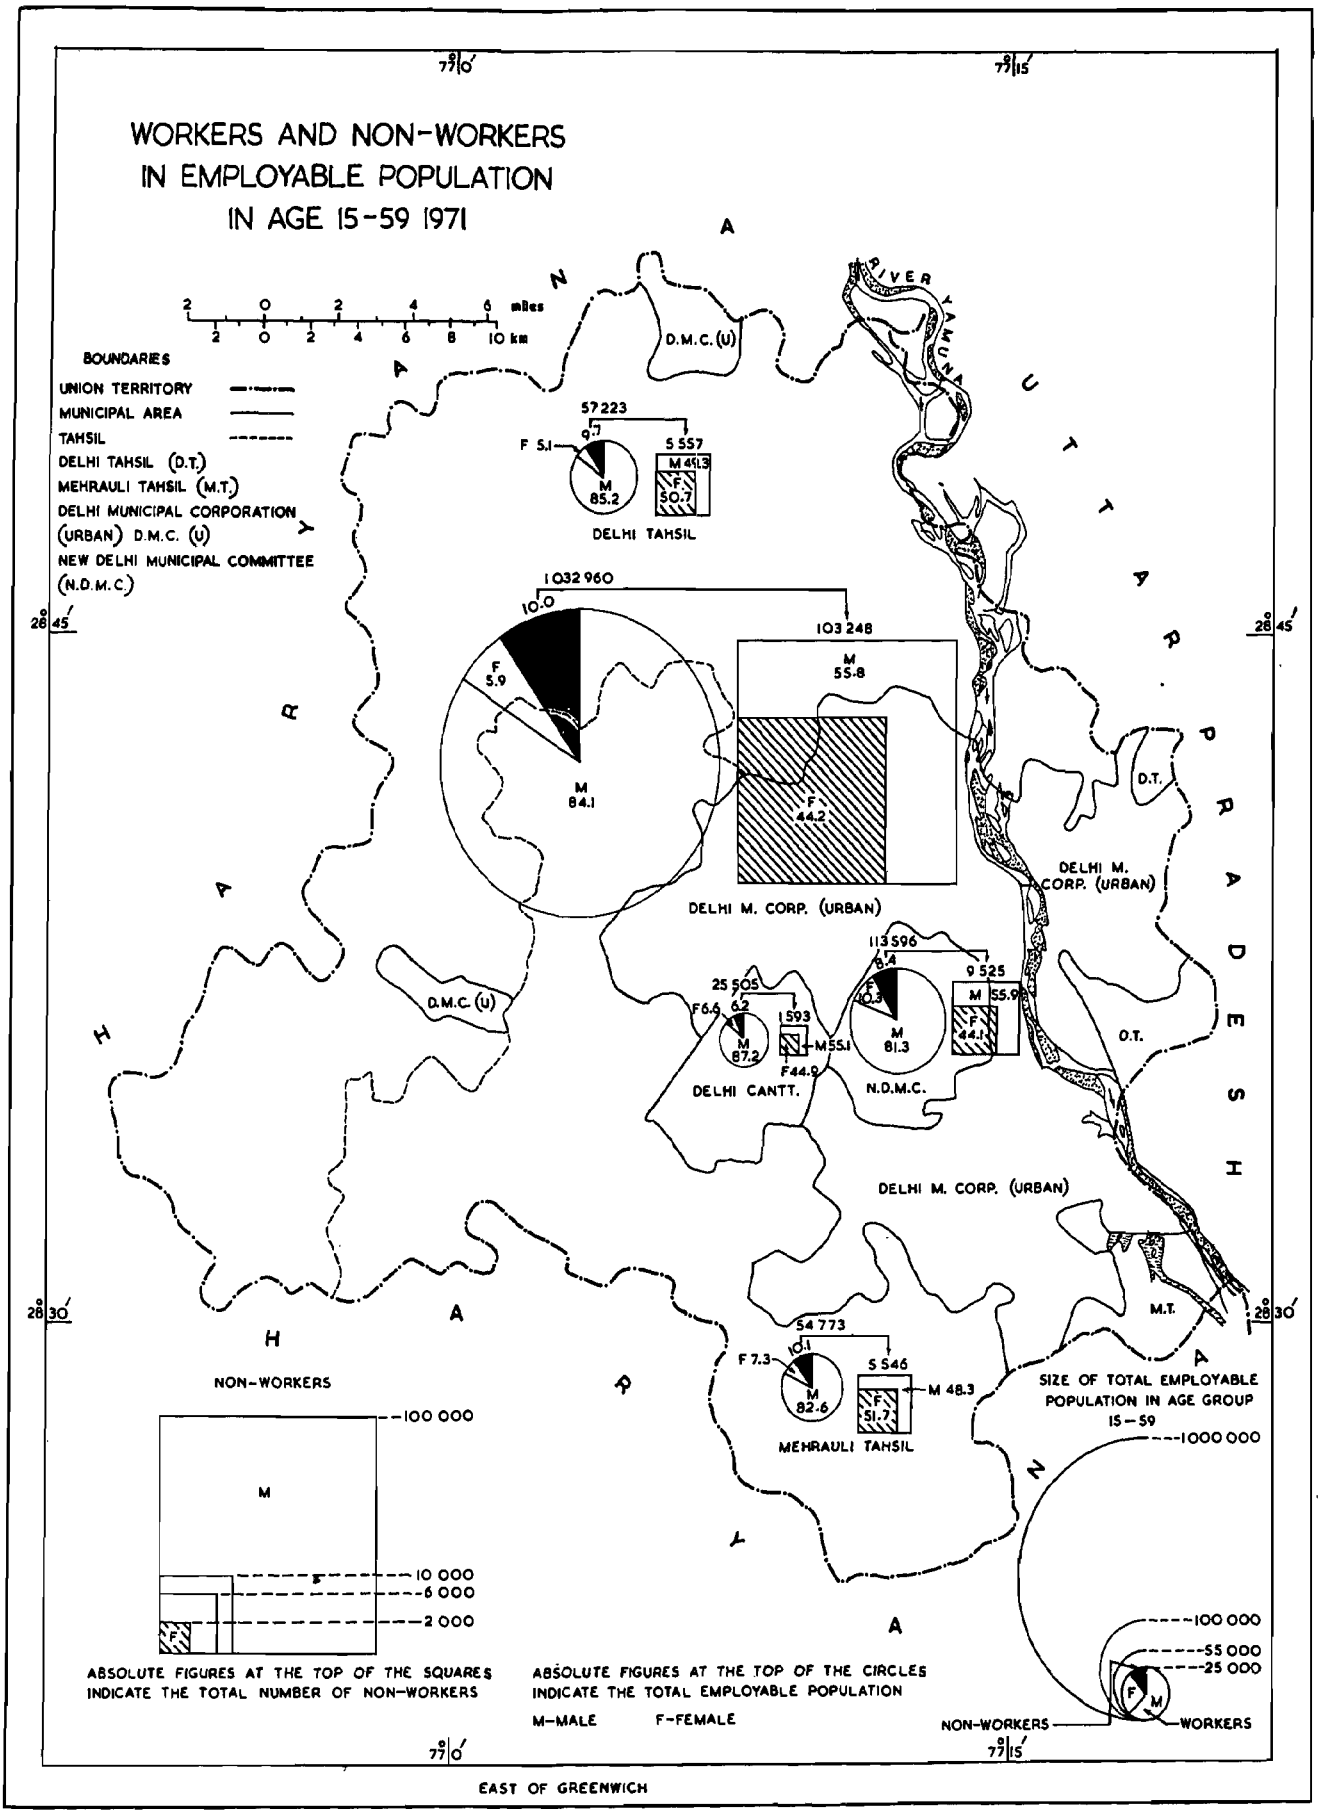

In Delhi UT, the proportion of workers in age 15—59 is 90·2%. The maximum proportion is in Delhi Cantonment (93·8%) and the lowest in Mehrauli Tahsil (89·9%).

NDMC has the highest proportion of female workers (10·3%), while Delhi Tehsil has the lowest (5·1%).

Among the non-workers of the employable population, the proportion of the male non-workers is higher in the urban areas.

Map 43

CLASSIFICATION OF MALE AND FEMALE WORKERS 1971

The map shows the industrial category of male and female workers. Nine census categories of the workers are grouped into the following three economic activities.

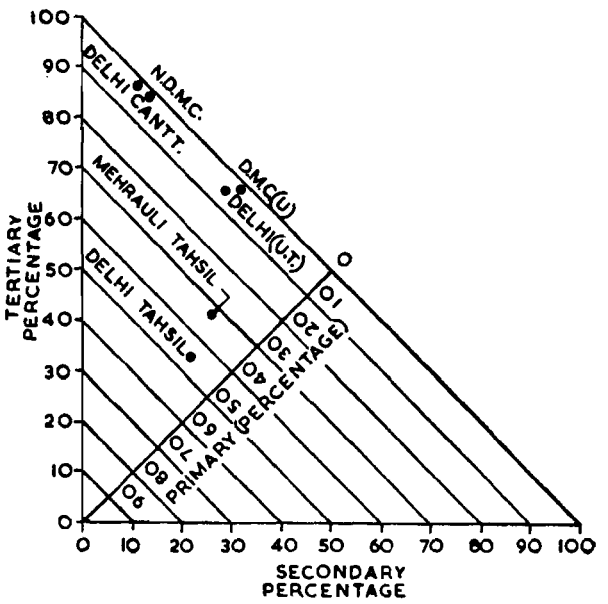

Primary activity : Under this activity, category Nos. I, II, III and IV are grouped.

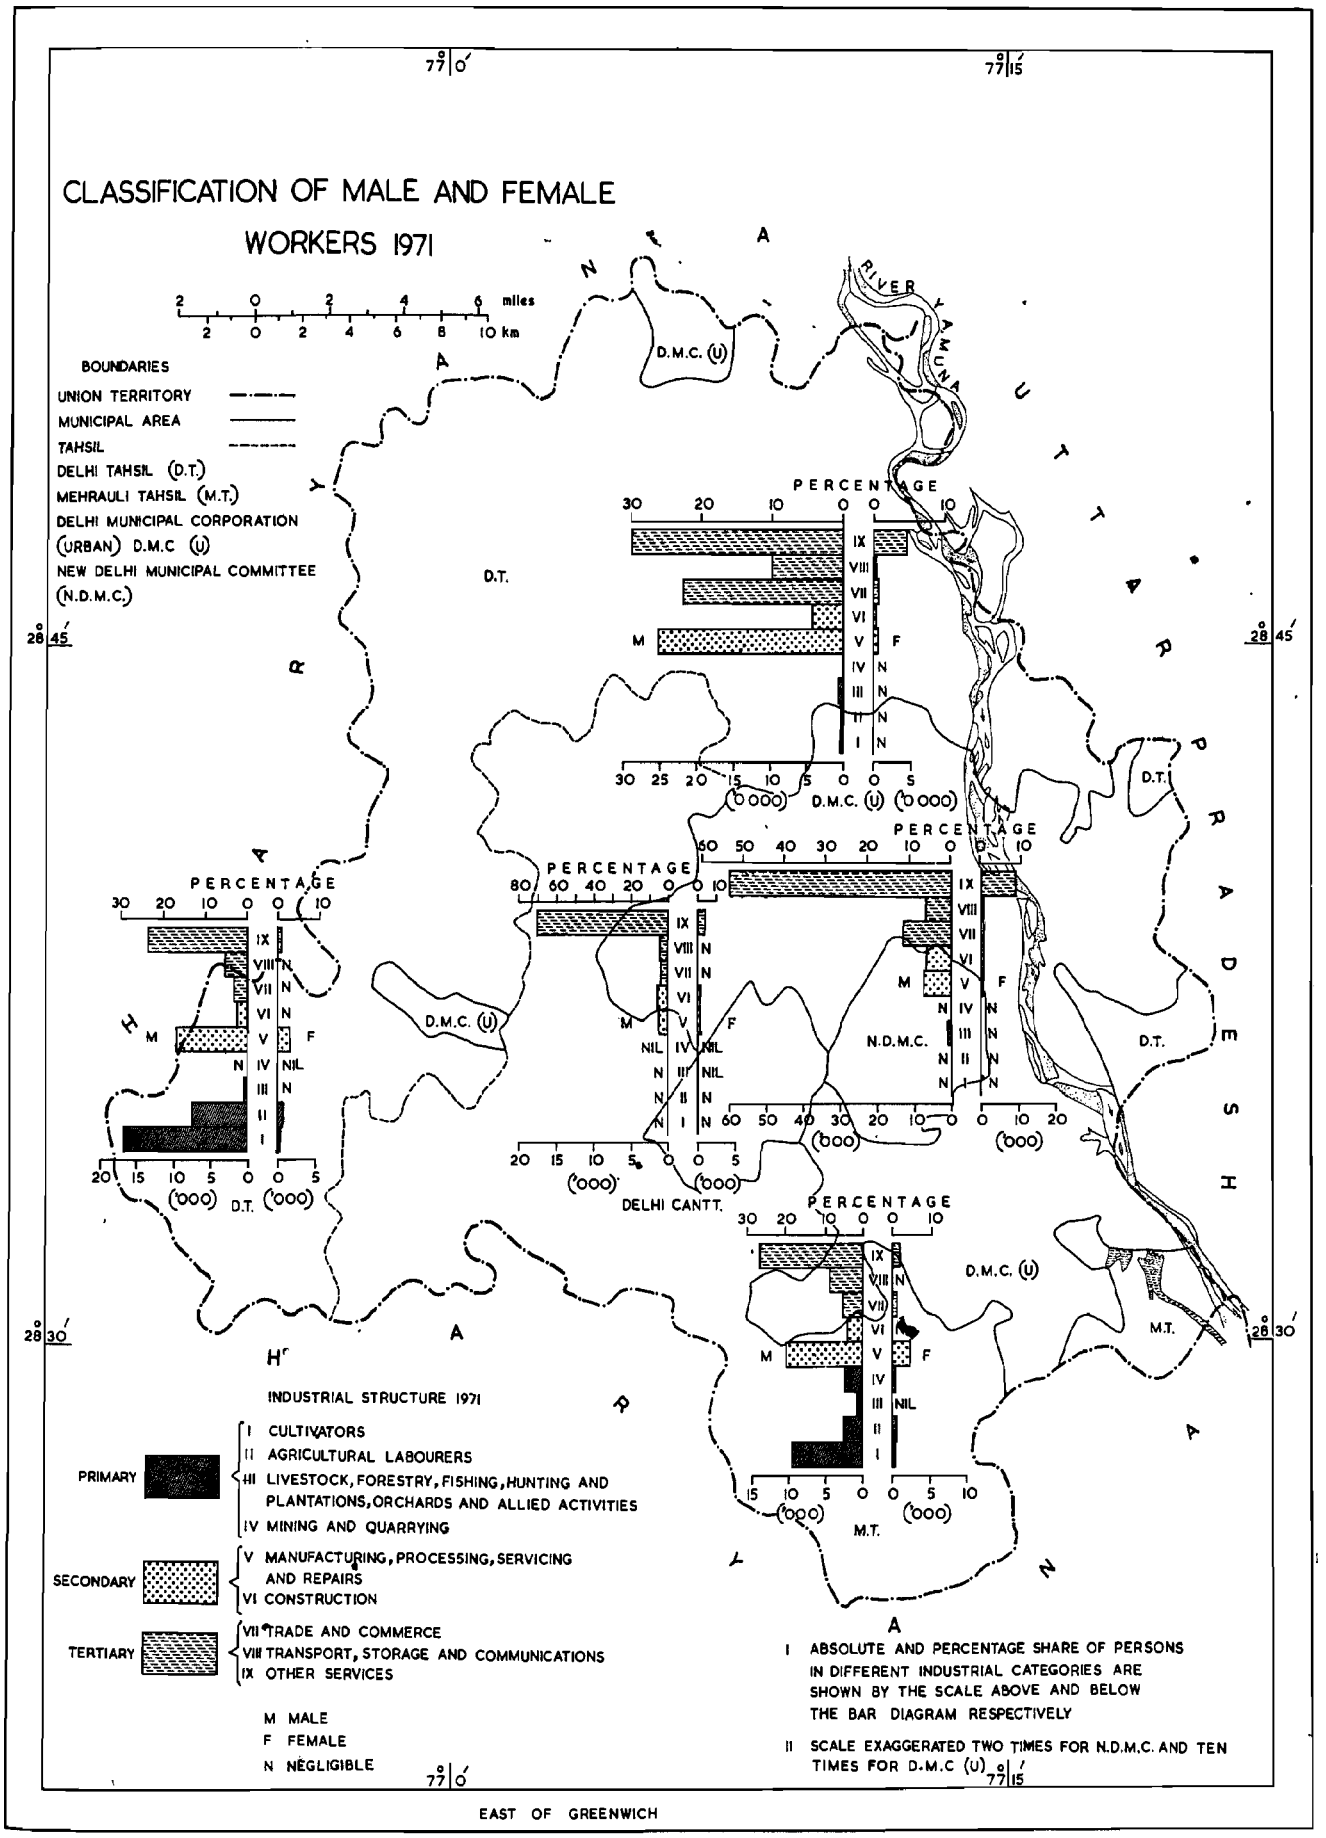

Secondary Activity : Categories V & VI are put together.

Tertiary Activity : In this activity category Nos. VII, VIII and IX are clubbed.

Pyramids are drawn showing the size of workers engaged in various categories. The bar on the left side of pyramid indicate numerical strength of male workers, while that on the right side indicate female workers. Scales showing absolute number and percentage are drawn accordingly in diagrams. Primary secondary and tertiary are shown by different shading. In Delhi UT the proportion of male & female workers in primary activity is 4·7% and 0·3% respectively

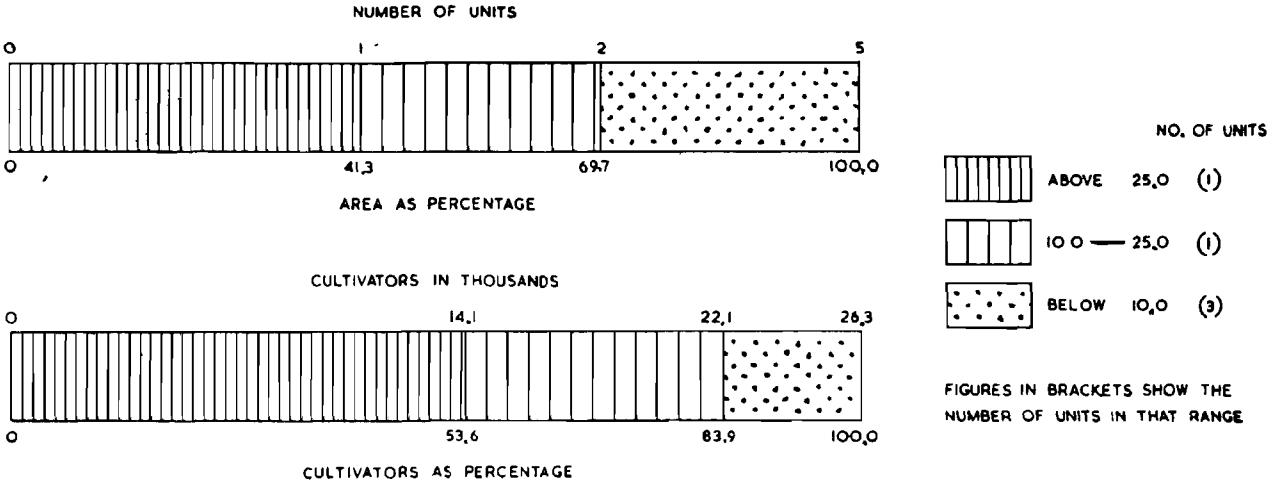

Map 44

CULTIVATORS IN TOTAL WORKERS IN AGE 15—59 1971

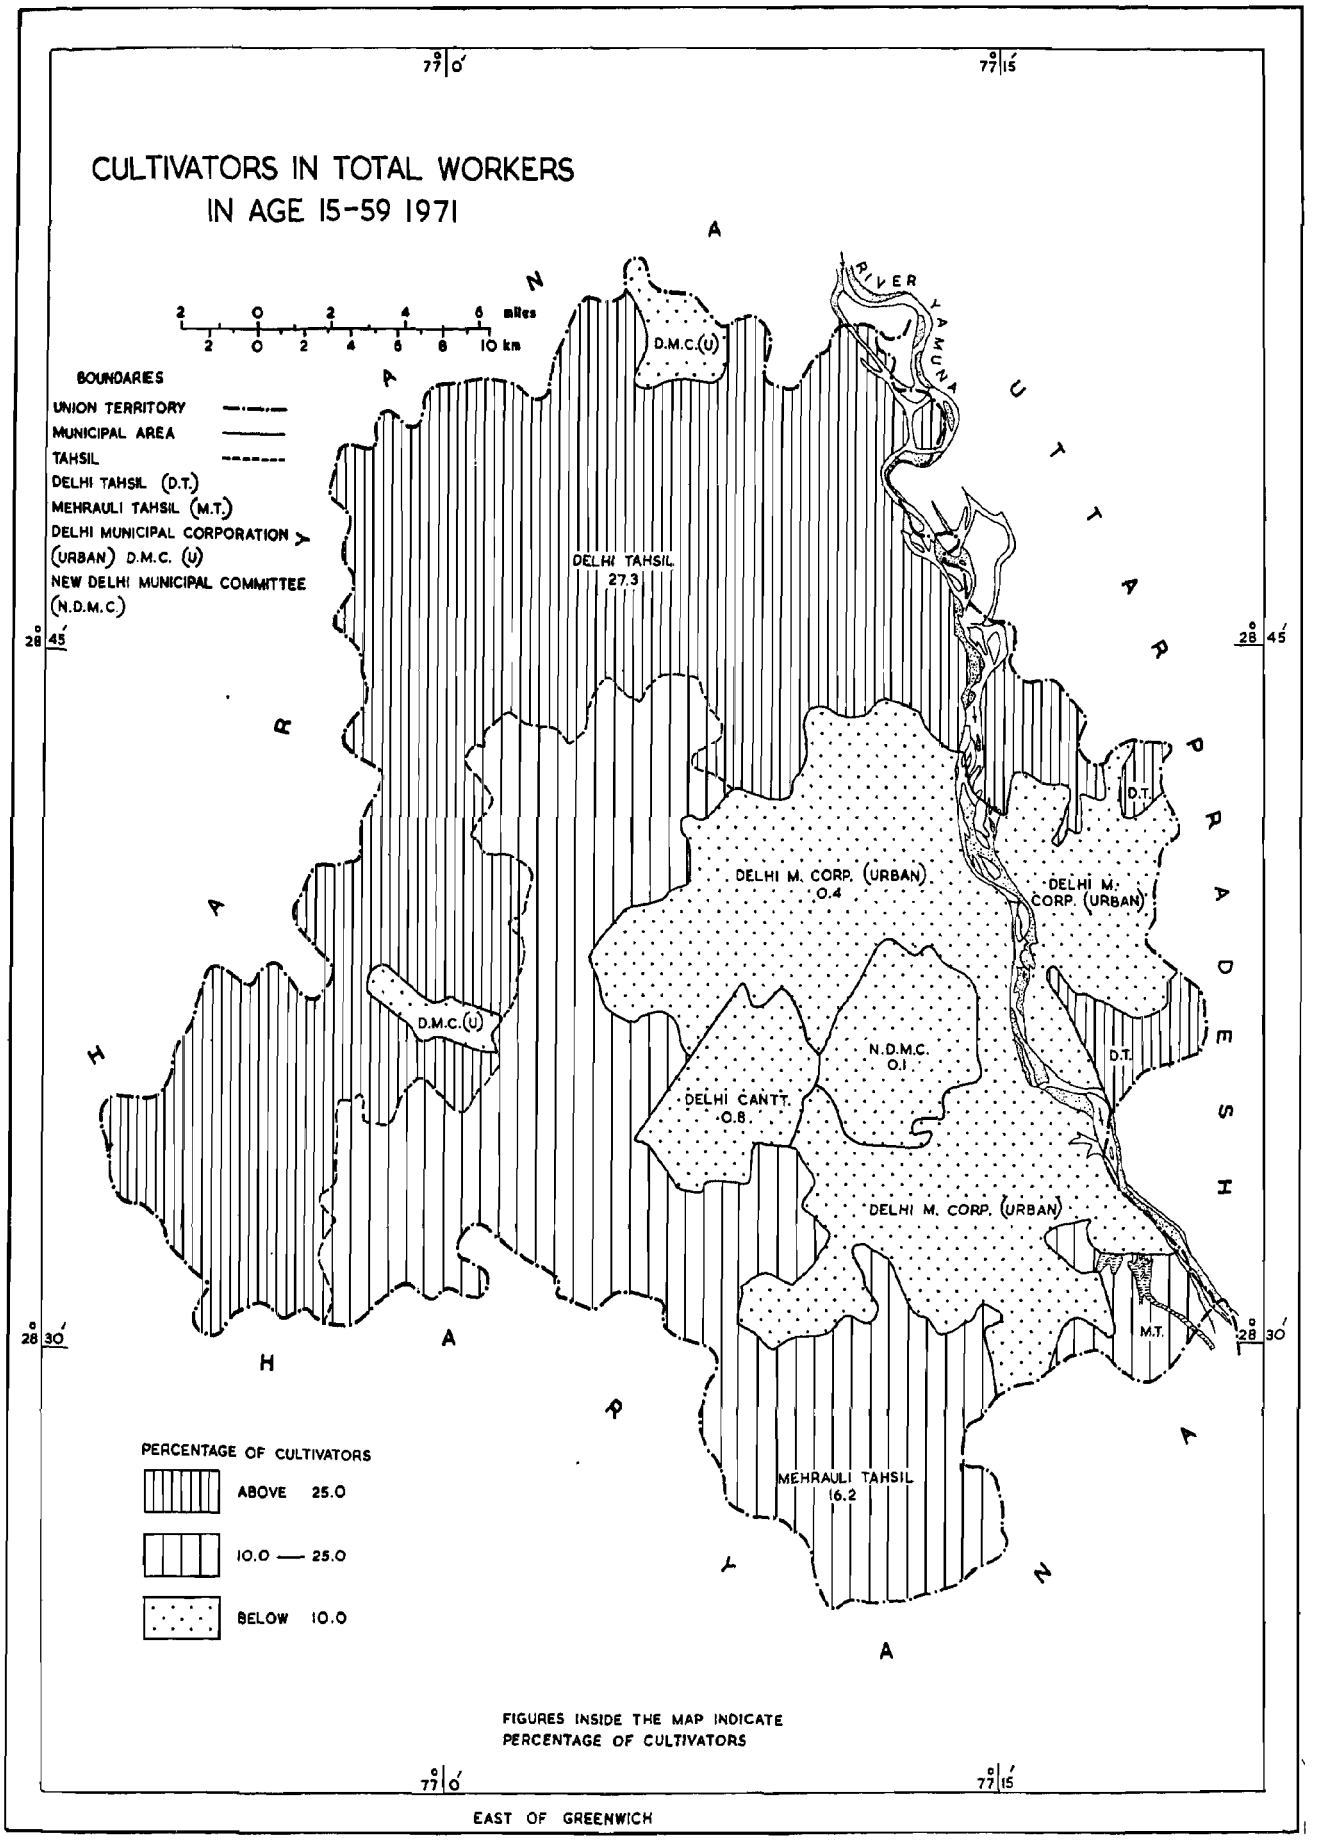

The map shows percentage distribution of cultivators to total workers in age group 15—59. Percentage of cultivators are grouped into three categories as per legend of the map.

Among the two tahsils of the Delhi UT, Delhi Tahsil (27·3%) has comparatively higher concentration of cultivators than the Mehrauli Tahsil (16·2%). Probable reason for this deficiency of cultivators in Mehrauli Tahsil may be due to less proportion cultivated land on account of barren and rocky terrain.

Figures in Delhi Cantonment, DMC (U) and NDMC are negligible due to obvious characteristics of the units.

Map 45

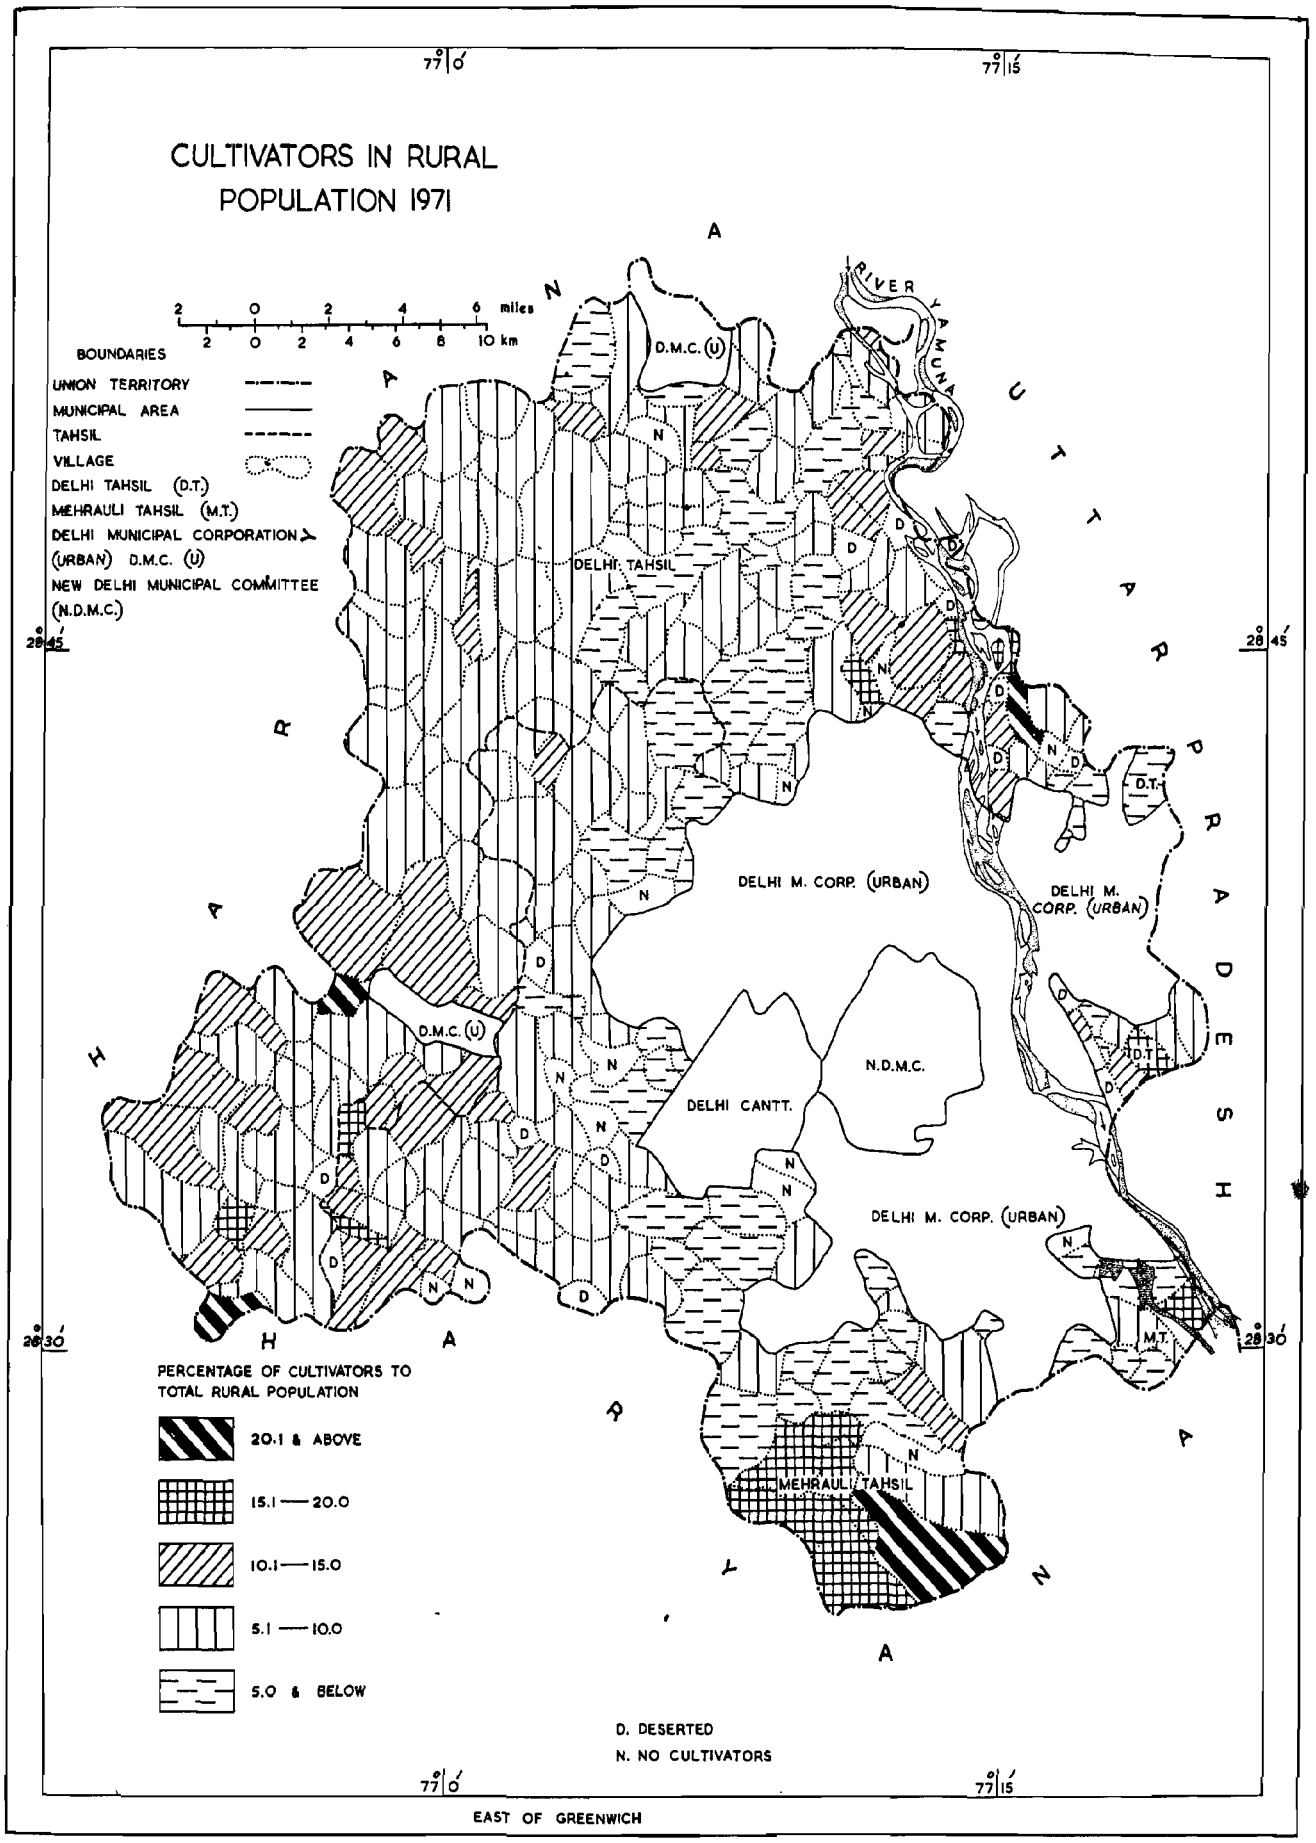

CULTIVATORS IN RURAL POPULATION 1971

This map exhibits the proportion of cultivators to total rural population village-wise in Delhi UT. Proportions are grouped into five ranges by choropleth keeping in view the average (6·5%) Delhi UT.

Majority of the villages fall in two ranges i. e. 5·0% and 5·1% to 10·0%. Three villages located in Delhi Tahsil i. e., Behari Pur, Surakhpur and Deorala and one village Bhati in Mehrauli Tahsil have higher proportion of cultivators above 20·1%.

Map 46

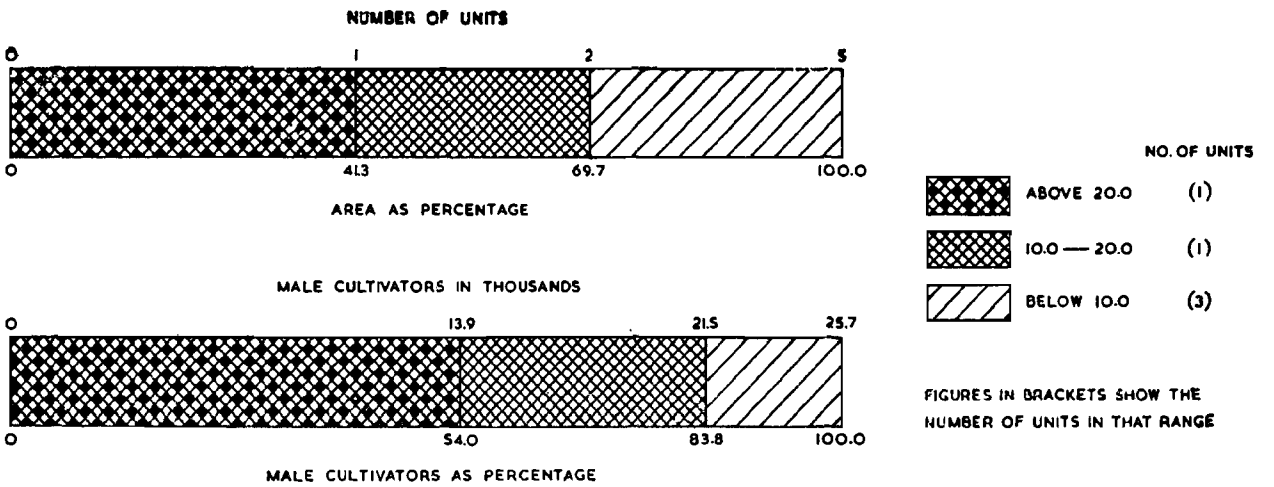

MALE CULTIVATORS IN MALE WORKERS IN AGE 15—59 1971

This map attempts to show percentage of male cultivators to the total male workers in age 15—59. Proportions of male cultivators are shown by choropleth and grouped into three ranges. The average of Delhi UT comes 2·4%.

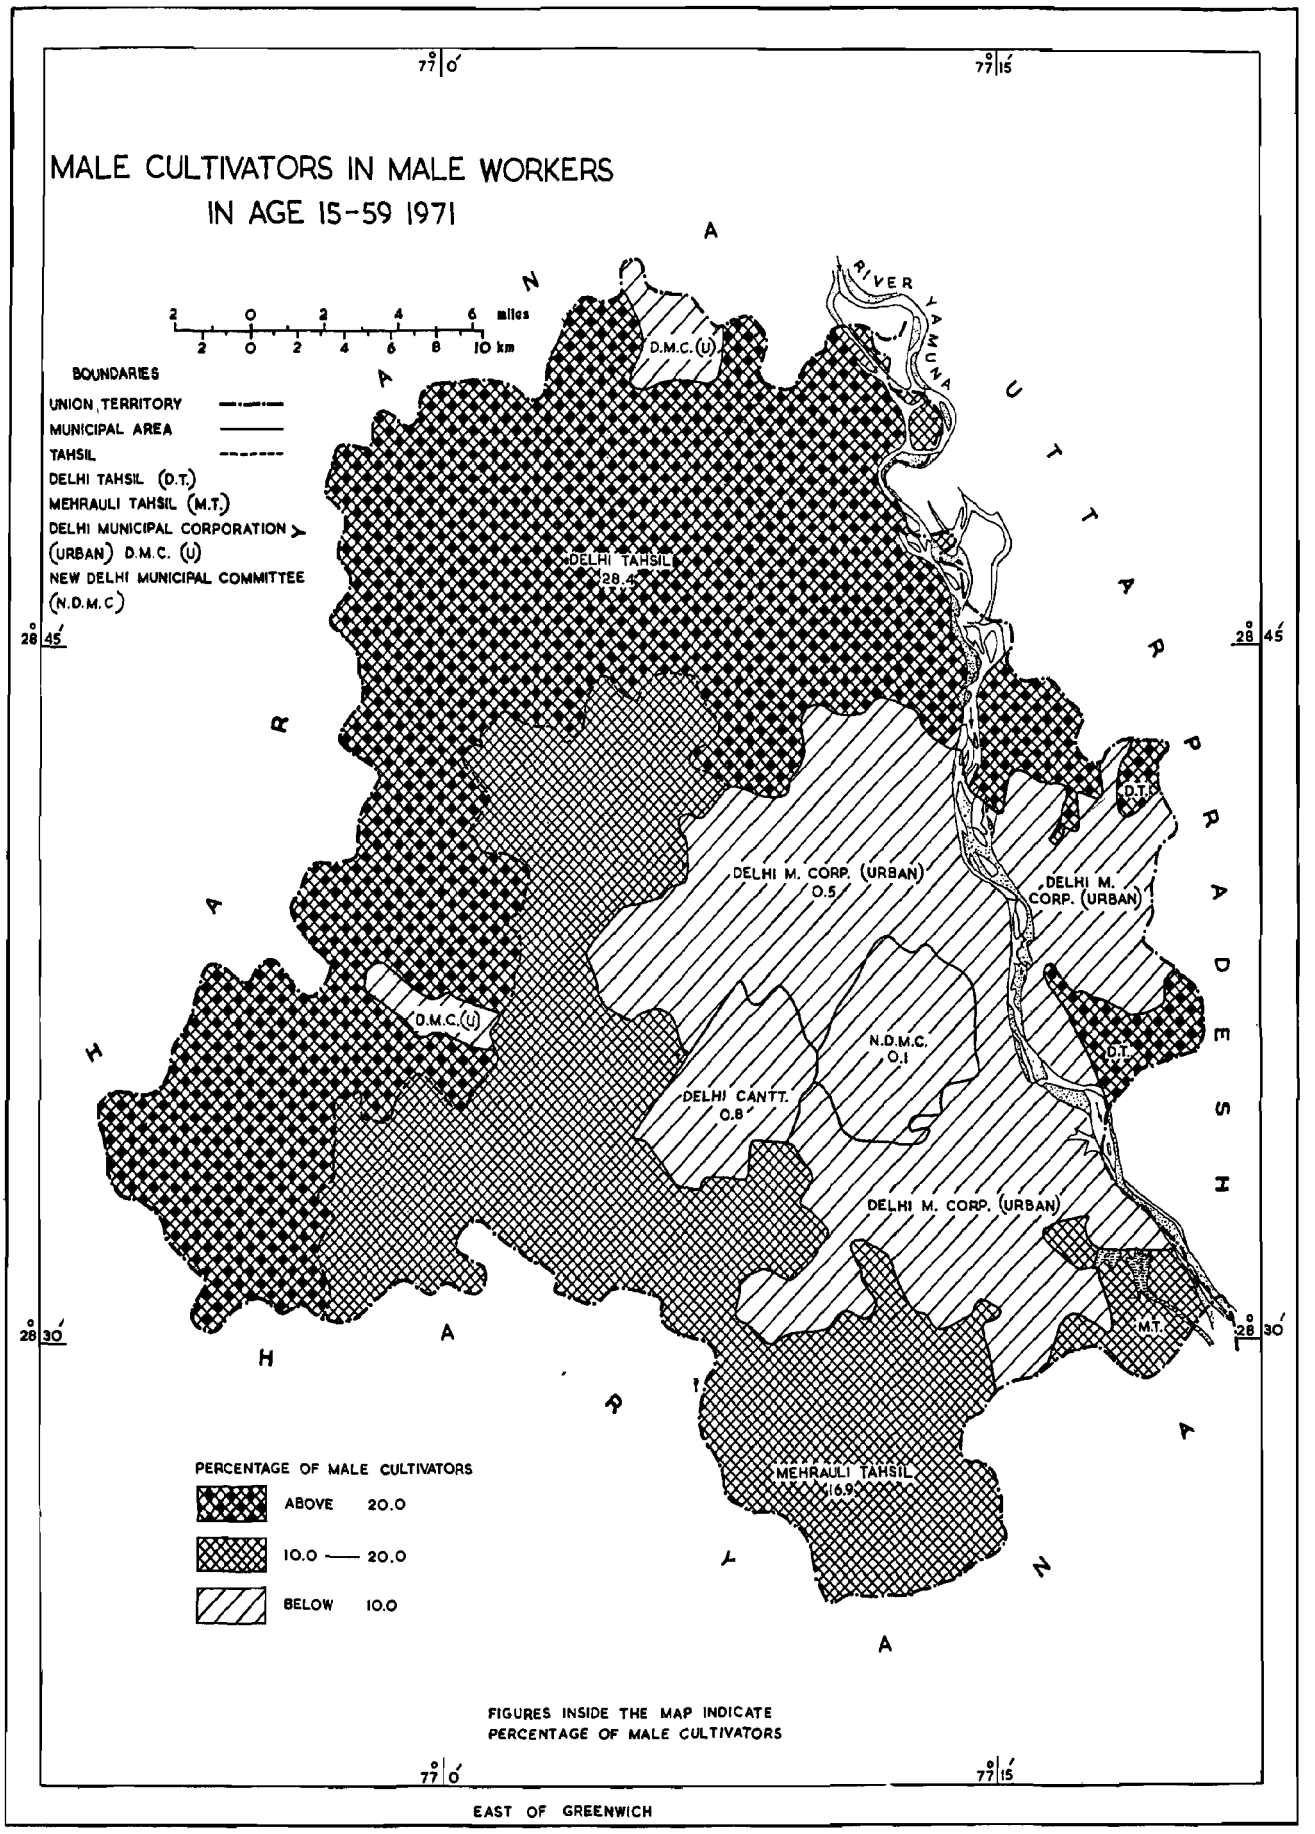

The proportion of male cultivators is highest in Delhi Tahsil (28·4%). Mehrauli Tahsil (16·9%) comes at the second rank. The probable reason for low proportion of Mehrauli Tahsil may be due to rocky structure where no cultivation is possible. In Delhi Cantonment, DMC (U) and NDMC, the respective percentages are 0·8, 0·5 and 0·1.

FEMALE CULTIVATORS IN FEMALE WORKERS IN AGE 15—59 1971

This map depicts percentage distribution of female cultivators to the total female workers in age 15—59. The proportions of female cultivators have been grouped into three ranges and depicted by choropleth.

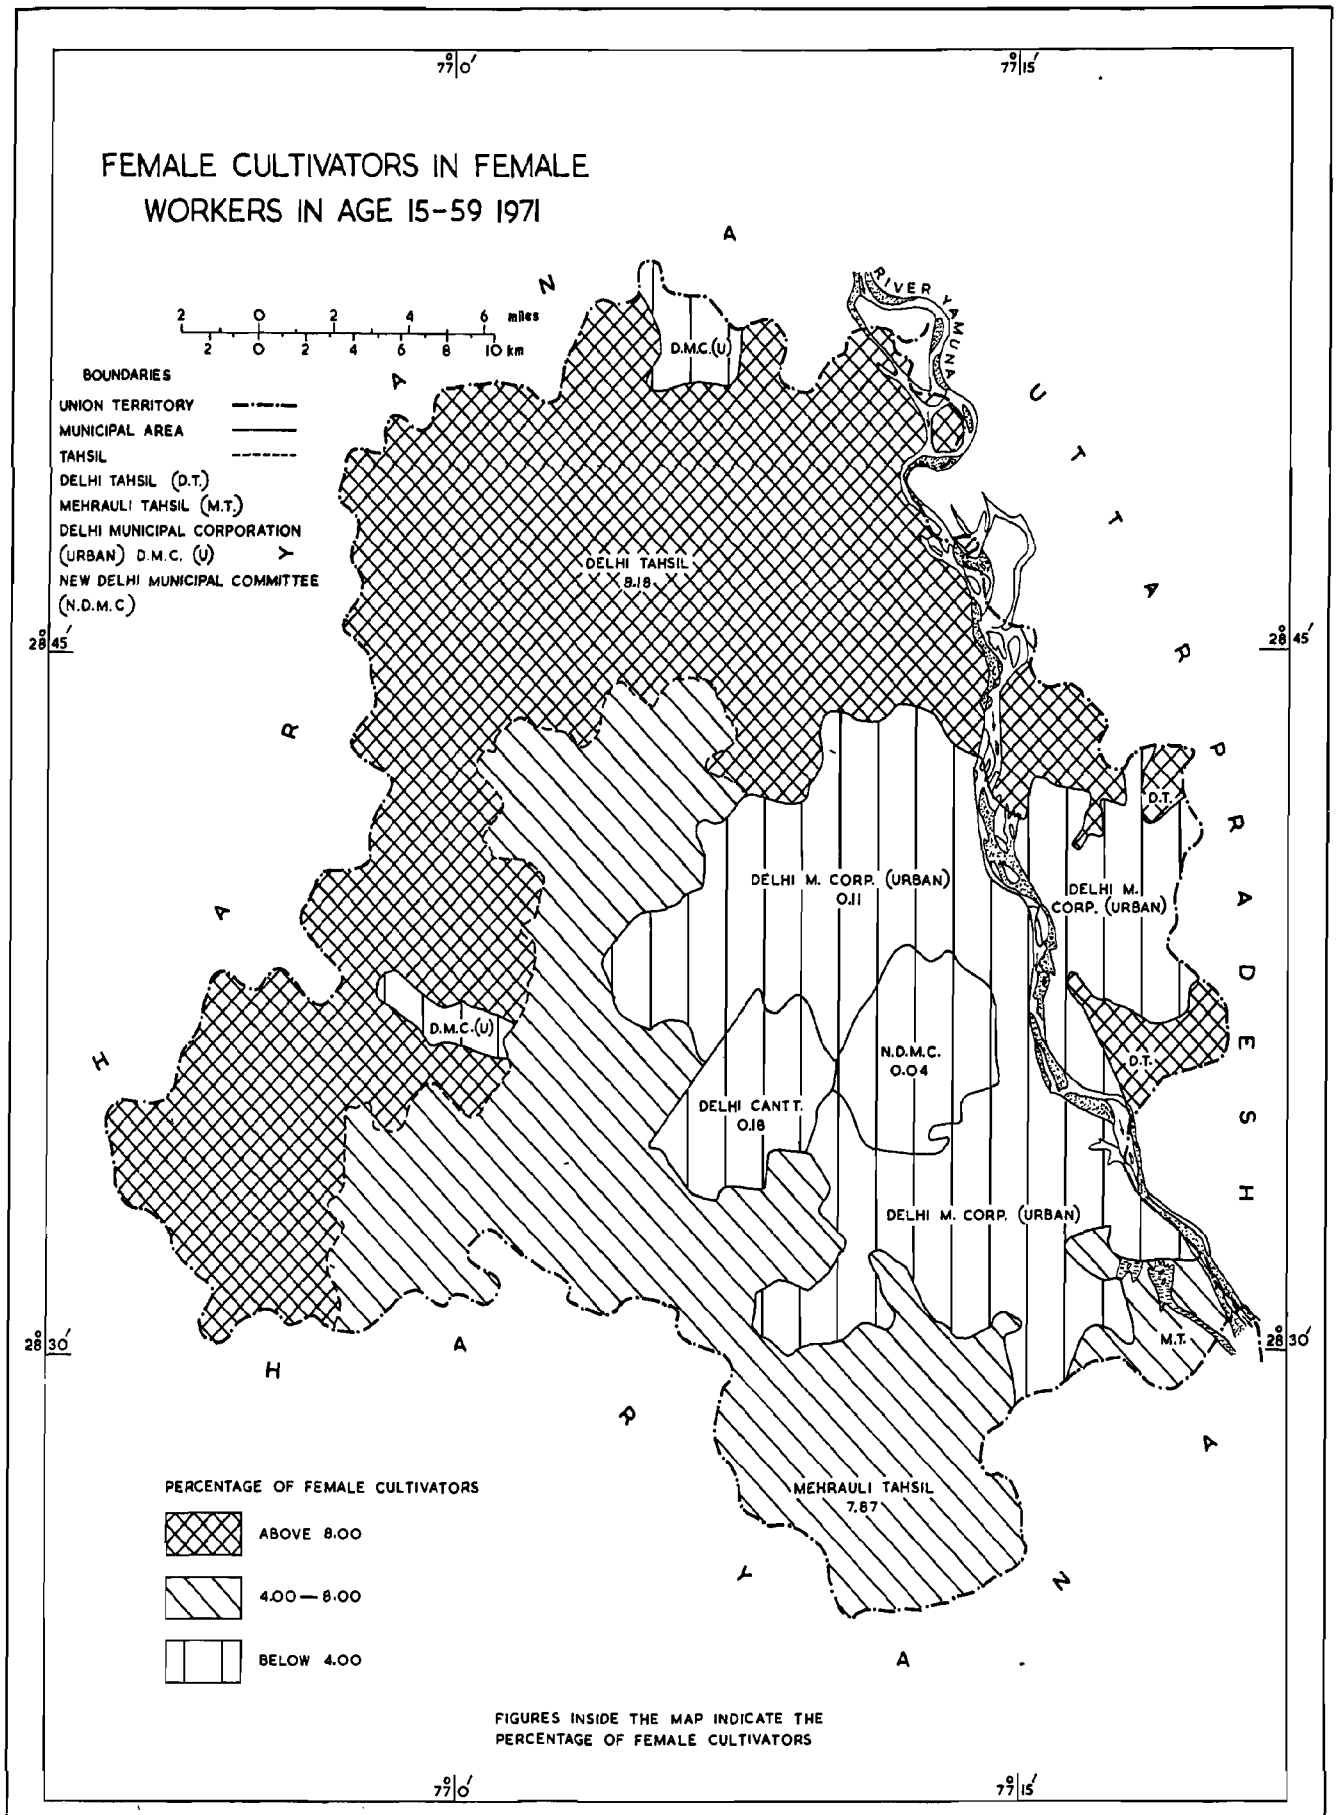

As against almost negligible percentages of female cultivators in Delhi Cantonment (0·18), DMC (U) (0·11) and NDMC (0·04), this is considerably high in Delhi Tahsil (8·18) and Mehrauli Tehsil (7·87).

AGRICULTURAL LABOURERS IN TOTAL AGRICULTURAL WORKERS IN AGE 15—59 1971

Percentage distribution of agricultural labourers to total agricultural workers in age 15—59 is depicted in this map by choropleth unitwise.

It is noted that the agricultural labourers are more in urban areas as compared to rural units. The proportion pertaining to DMC (U) (43·6%) is highest whereas it is less in Mehrauli (25·8%) and Delhi Tahsils (34·1%).

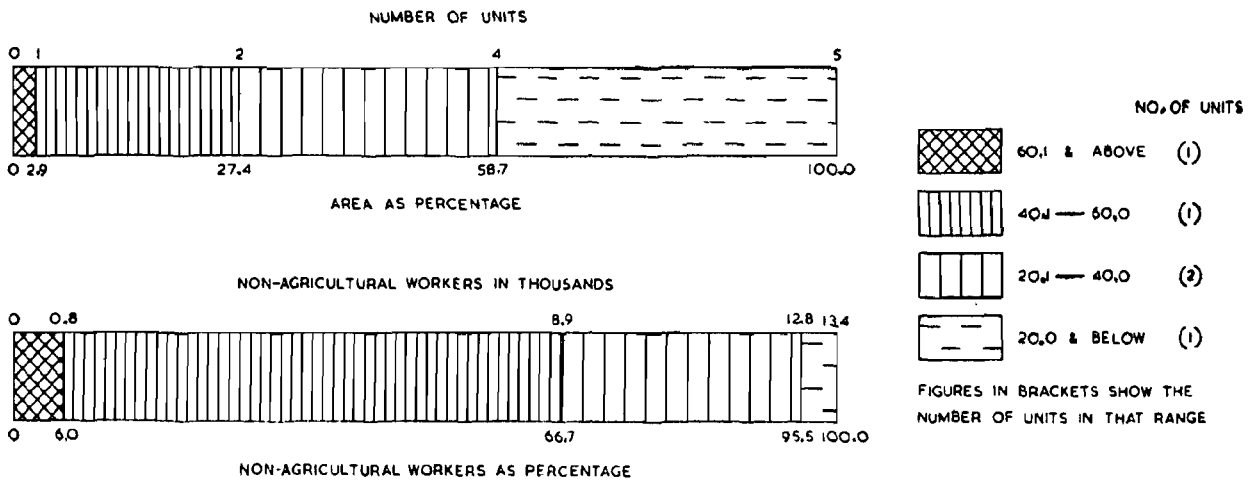

Map 49

NON-AGRICULTURAL WORKERS IN PRIMARY SECTOR 1971

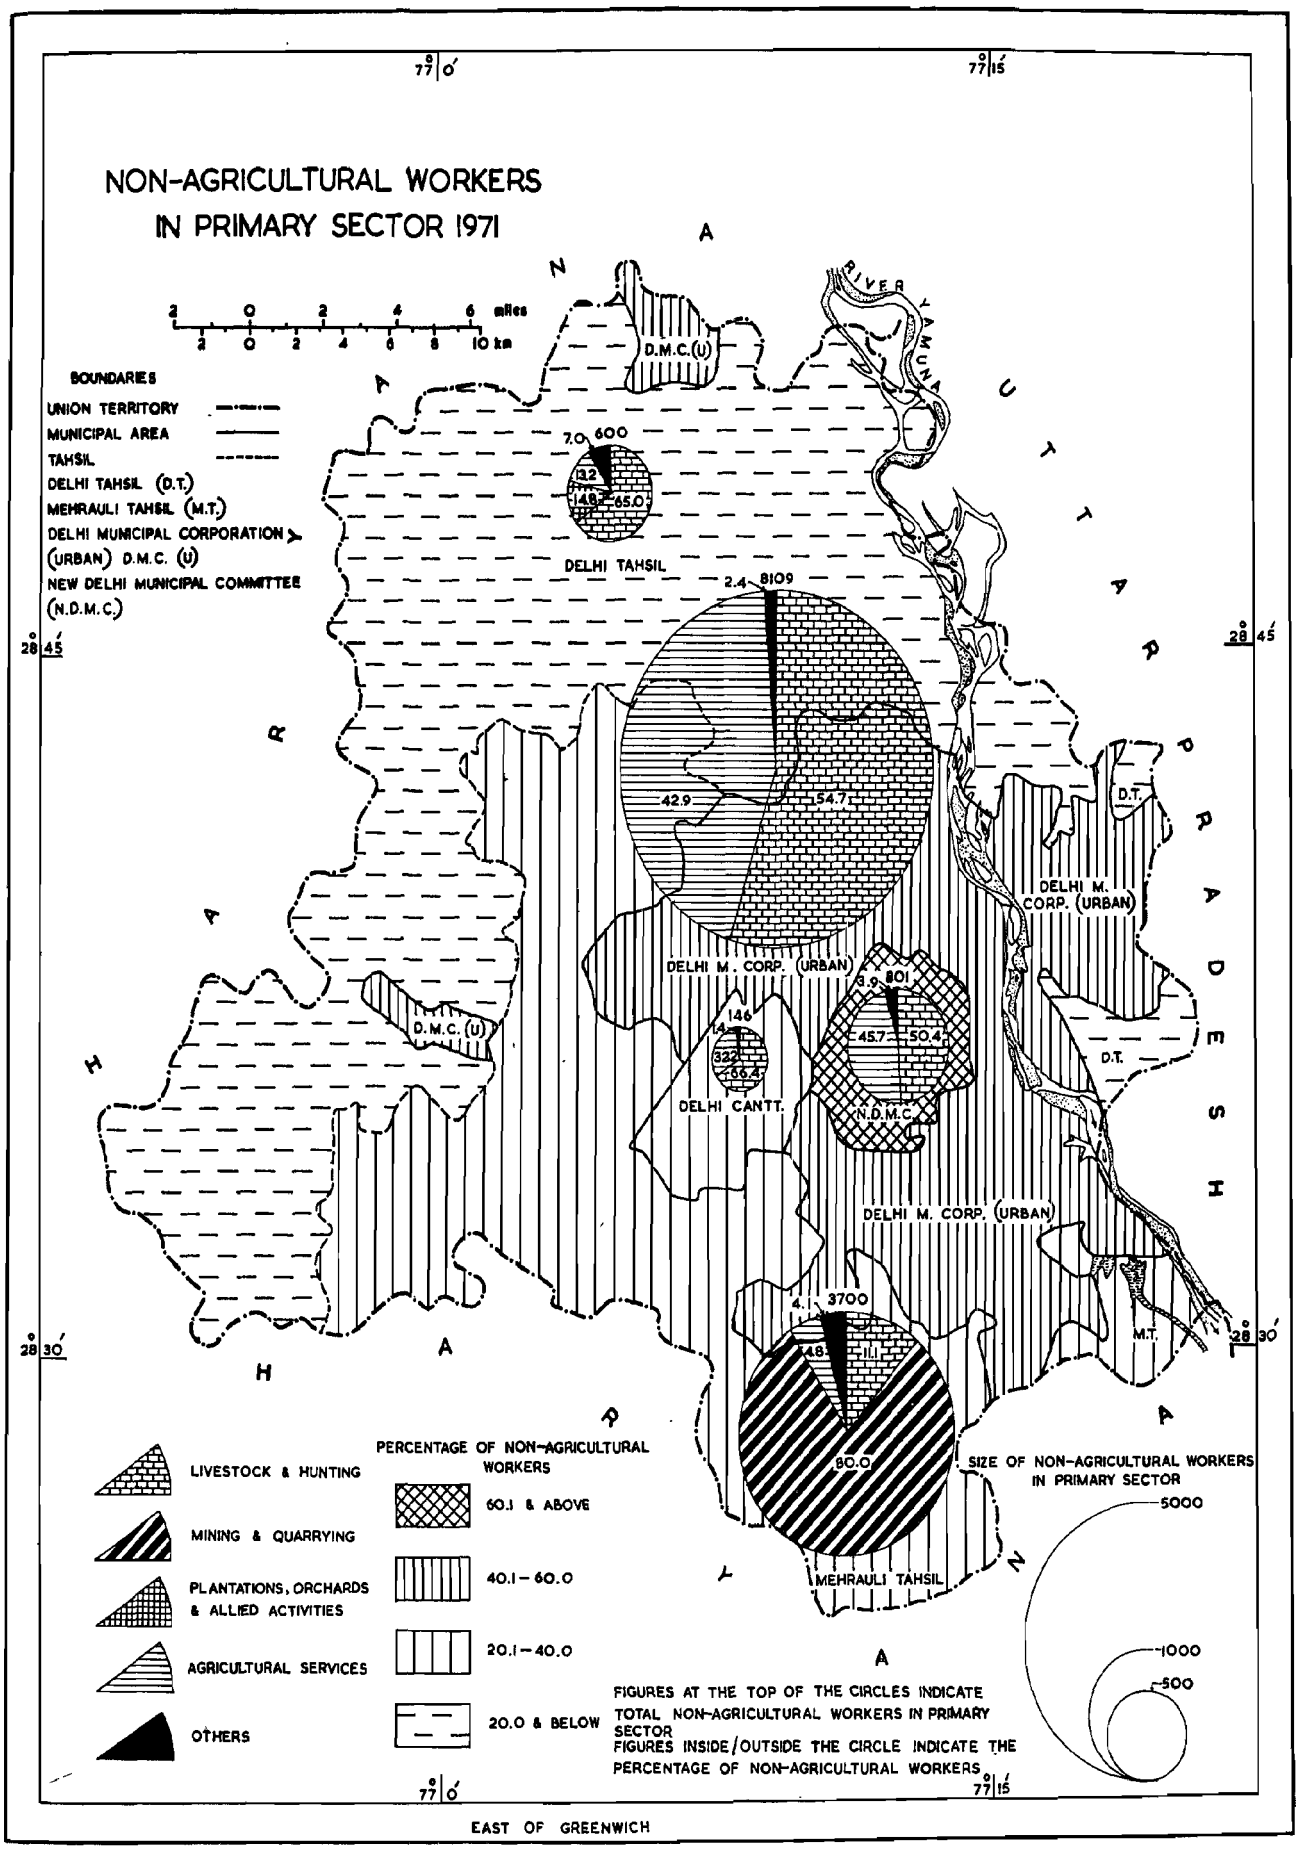

The proportion of non-agricultural workers to total workers engaged in primary activity is shown in this map. In primary activity is included category No. (I)-Cultivators, (II)-Agricultural Labourers, (III)-Livestock, Forestry, Fishing, hunting and plantations, orchards and allied activities, (IV)-Mining & Quarrying.

The percentages of non-agricultural workers to total workers in primary activity are displayed by choropleth technique by grouping into four categories. Proportionate circles representing total non-agricultural workers are drawn for each unit. Sectors are cut-with proportion of the numerical strength of the workers engaged in (I)-Livestock and hunting, (II)-Mining and quarrying, (III)-Plantations, orchards and allied activities, (IV)-Agricultural services and (V)-Others.

It will be seen from the map that the percentage of non-agricultural workers is highest in NDMC (85·6%) followed by DMC (U), Delhi Cantonment, Mehrauli and Delhi Tahsils (49·3%), (30·7%), (22·0%) and (2·3%) respectively. Proportionate circles indicate that except Mehrauli Tahsil all other areas have more than 50% of non-agricultural workers in livestock. In Mehrauli Tahsil Mining & Quarrying is dominating.

WORKERS IN MANUFACTURING, PROCESSING, SERVICING AND REPAIRS 1971

Percentage of workers engaged in manufacturing, processing, servicing and repairs to total workers are shown unit-wise in this map. Proportions of workers are grouped into three categories as shown in the map. Units are shaded from high to low in accordance with the range.

DMC(U) (26·3%) has highest concentration of workers engaged in manufacturing, processing, servicing and repairs. Next in the order are Mehrauli Tahsil (23·1%) and Delhi Tahsil (19·7%). In NDMC and Delhi Cantonment the proportion of these workers is comparatively low at 7·1% and 6·0% respectively.

Map 51

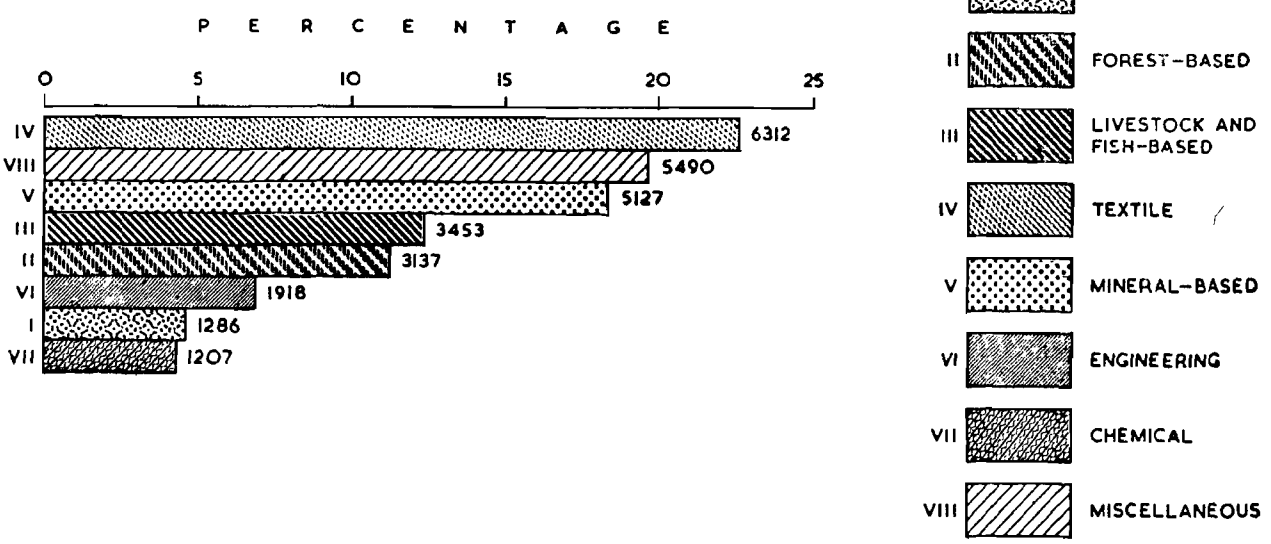

HOUSEHOLD INDUSTRIES BY TYPES AND SIZE OF EMPLOYMENT 1971

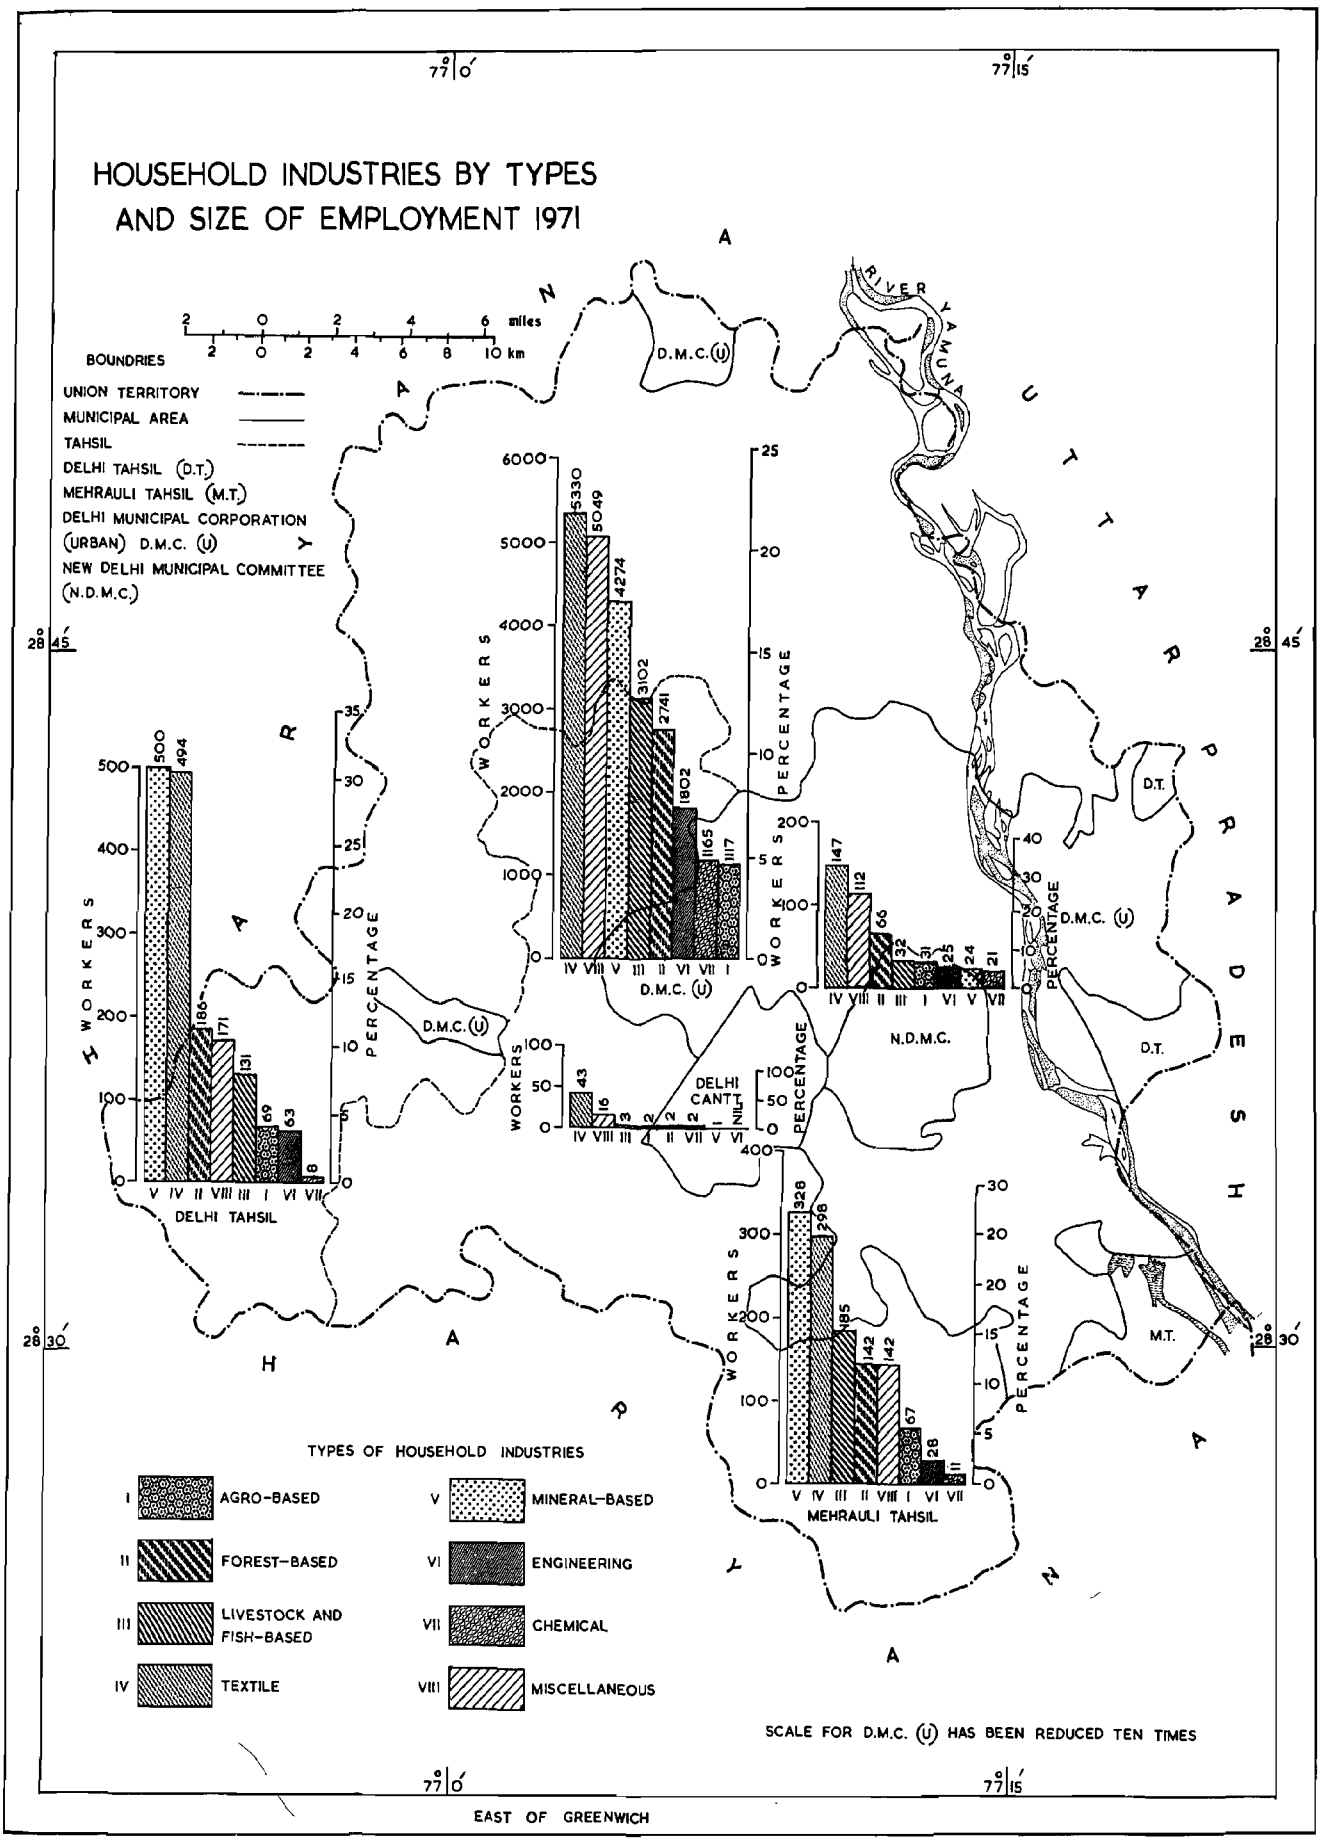

In this map is shown the distribution of eight types of household industries as below :—

(i) Agro-based
(ii) Forest based
(iii) Livestock and fish-based
(iv) Textile
(v) Mineral based
(vi) Engineering
(vii) Chemical
(viii) Miscellaneous

Proportionate bars representing the number of workers employed in the aforesaid household industries are drawn from high to low. The scale showing absolute number is given on the left side while that of percentages on the right side of each diagram. Number of workers employed in each household industry is given at the top of each bar which are shaded accoring to the legend.

Textile household industry employ the maximum number of workers among all the household industries in Delhi Cantonment (62·3%), followed by NDMC (32·1%) and (21·7%) DMC (U). In Delhi and Mehrauli Tahsils mineral based household industries employ maximum workers to the tune of 30·8% and 27·3% respectively. The second important household industry in rural area is textiles. Leaving aside DMC (U) and Delhi Cantonment, Chemical industry employs lowest percentage of workers in all the remaining units.

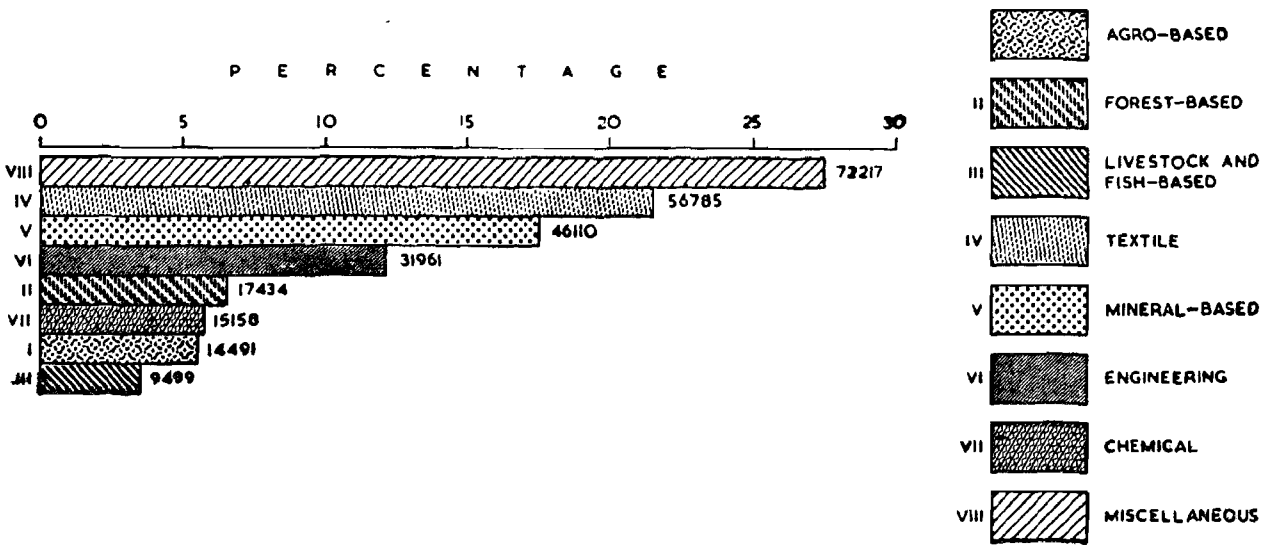

Map 52

FACTORIES BY TYPES AND SIZE OF EMPLOYMENT 1971

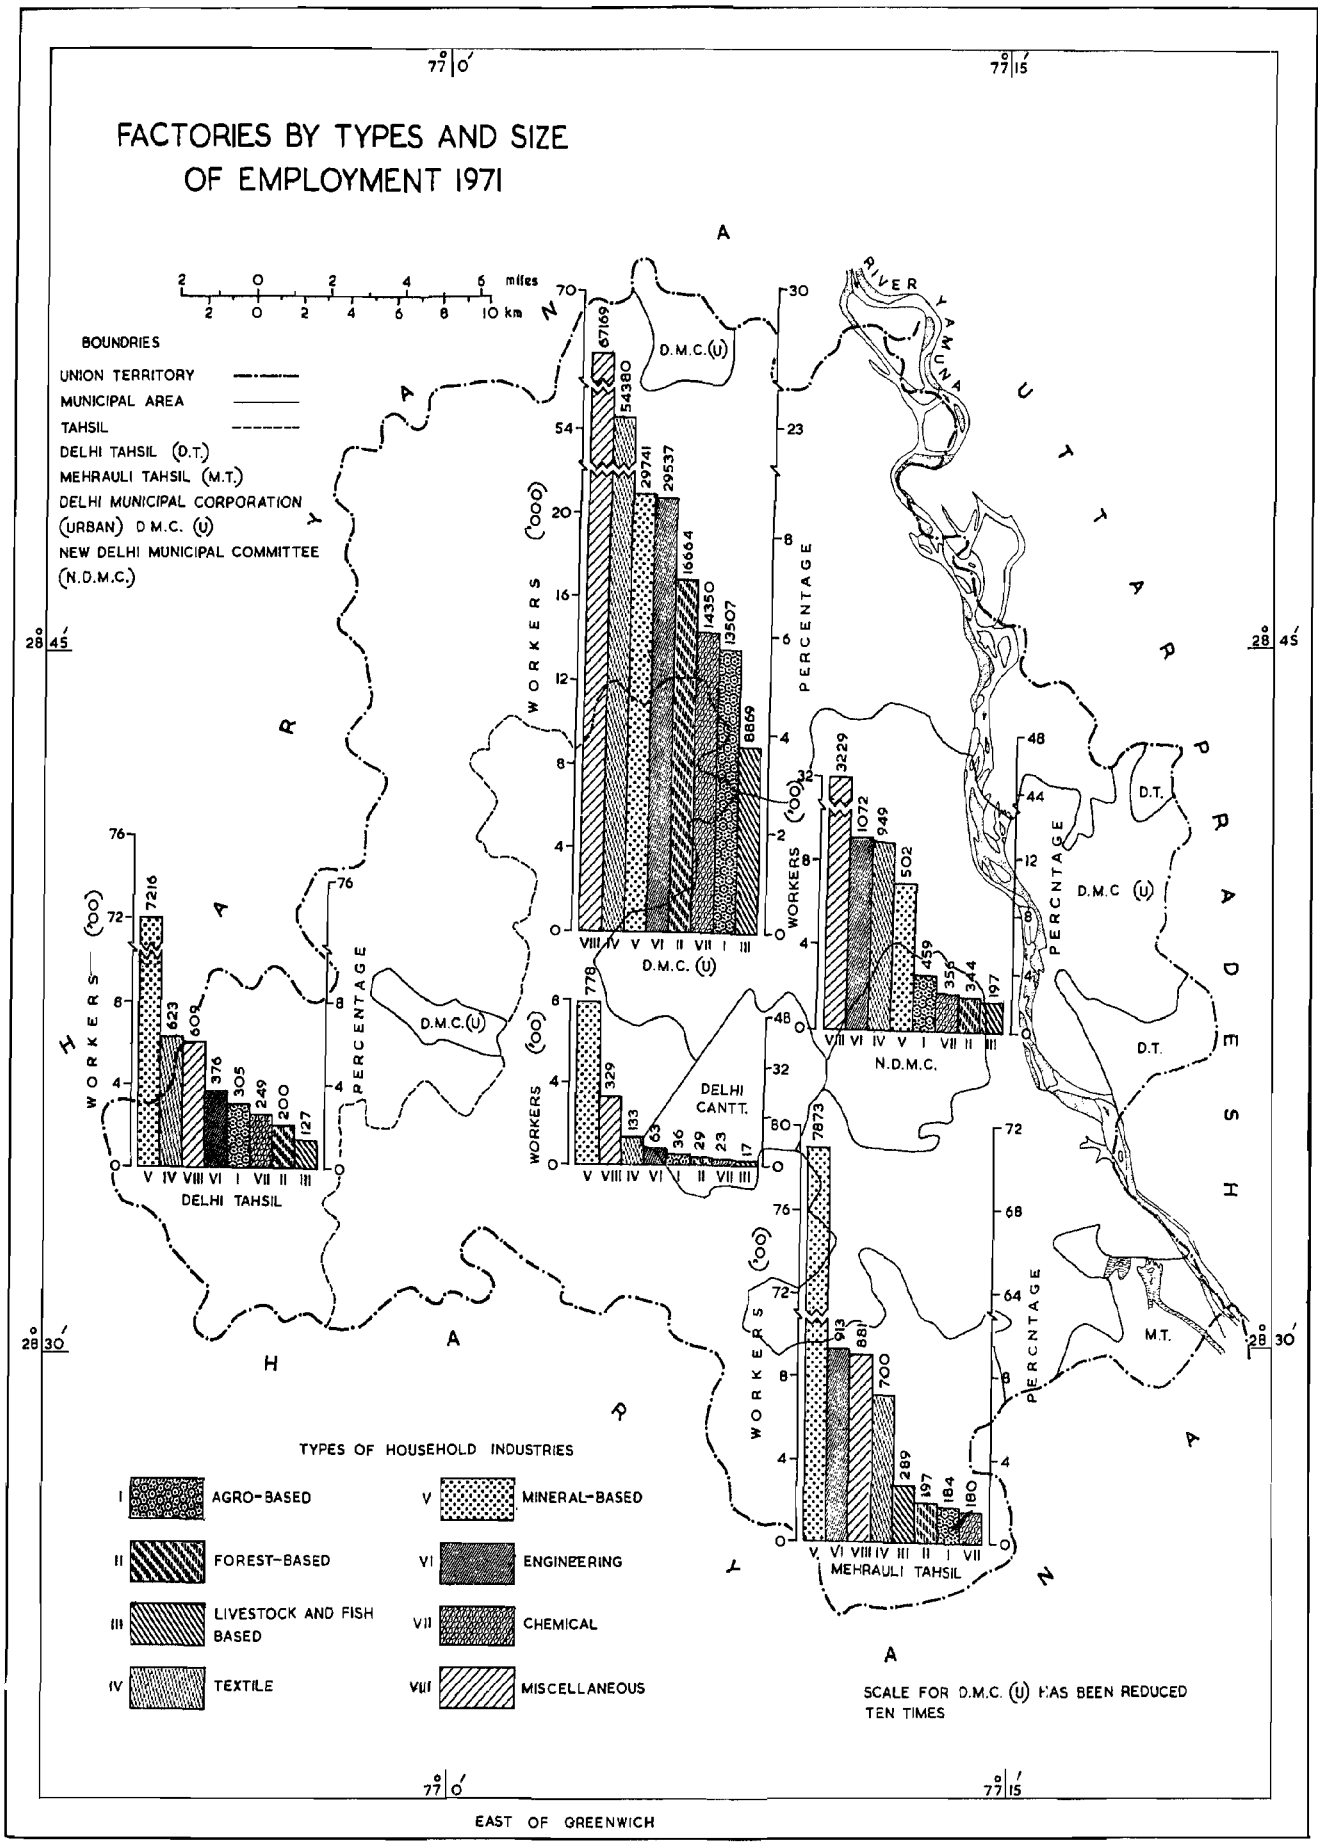

Workers employed in various types of factories are exhibited in this map. Factories are classified into the eight categories—(I)-agro-based, (II)-forest-based, (III)-livestock and fish-based, (IV)-textiles, (V)-mineral-based, (VI)-engineering, (VII)-chemical and (VIII)-miscellaneous.

Each category of factory is represented by a bar proportionate to its size of employment. Bars with suitable scale are arranged in accordance with the size of employment and shaded as per legend given in the map.

Miscellaneous factories employ maximum workers in NDMC (45·4%) and DMC (U) (28·7%). Mineral based factories predominate in Delhi Cantonment (55·3%), Delhi Tahsil (74·4%) and Mehrauli Tahsil (70·2%). Except Mehrauli Tahsil, lowest proportion of workers is engaged in livestock and fish-based factories located in all the units of Delhi UT, which, however does not exceed beyond 4·0%.

Map 53

FACTORIES AND WORKSHOPS BY SIZE OF EMPLOYMENT 1971

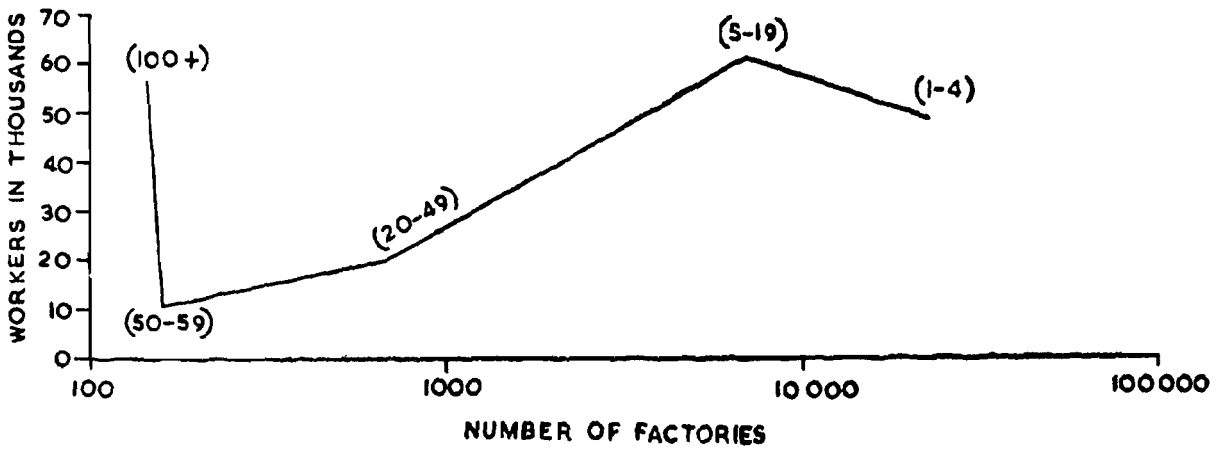

The distribution of factories and workshops by size of employment is depicted in this map. Factories and workshops, according to their size of employment are grouped into six categories : 1—4, 5—19, 20—49, 50—99, 100 & above workers and unspecified.

Bars are drawn proportionate to the number of factories & workshops for each category of size employment. Scales measuring absolute number and percentages are given on left and right side of the diagram. Employment sizes of the factories and workshops are given on the baseline of the diagram. The absolute numbers are shown at the top of each bar.

In Delhi UT as a whole, there are 31,619 factories and workshops. An overwhelming majority (72·1%) in the UT employ 1—4 persons.

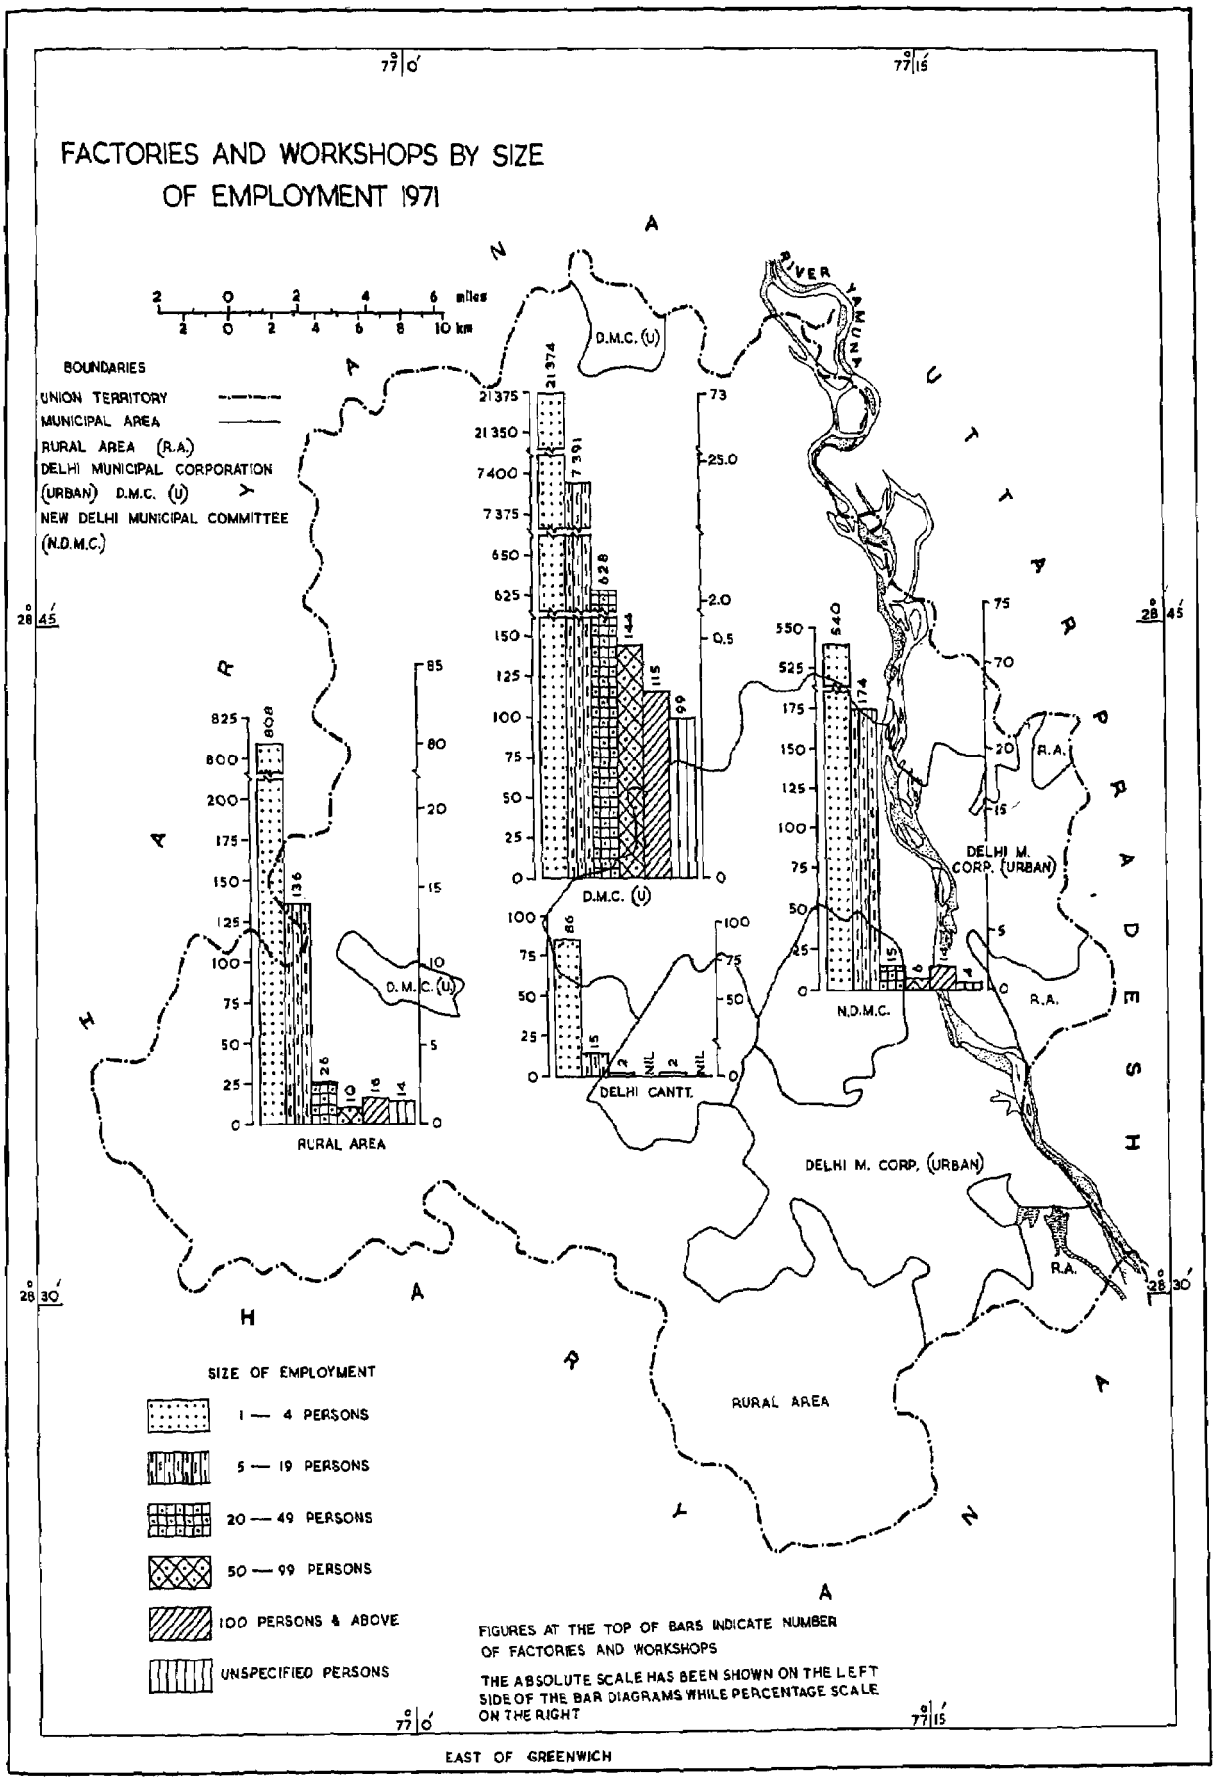

A large proportion of 93·7% factories and workshops of the Delhi UT are located in DMC (U) which employ 1—4 persons. In this context it is noted, when the employment size increases, number of factories and workshops decreases.

In Delhi cantonment and rural area 80·0%- factories and workshops employ 1—4 persons.

FOOD-PROCESSING INDUSTRIES 1971

The distribution of food processing industries in the various units of the Delhi UT is shown in this map. Food processing industries are classified into seven categories: (I) rice and flour, (II) dal mills, (III) Oil mills, (IV) bakery and confectionery, (V) fruit preservation, (VI) hydrogenated oil industries and (VII) dairy industries.

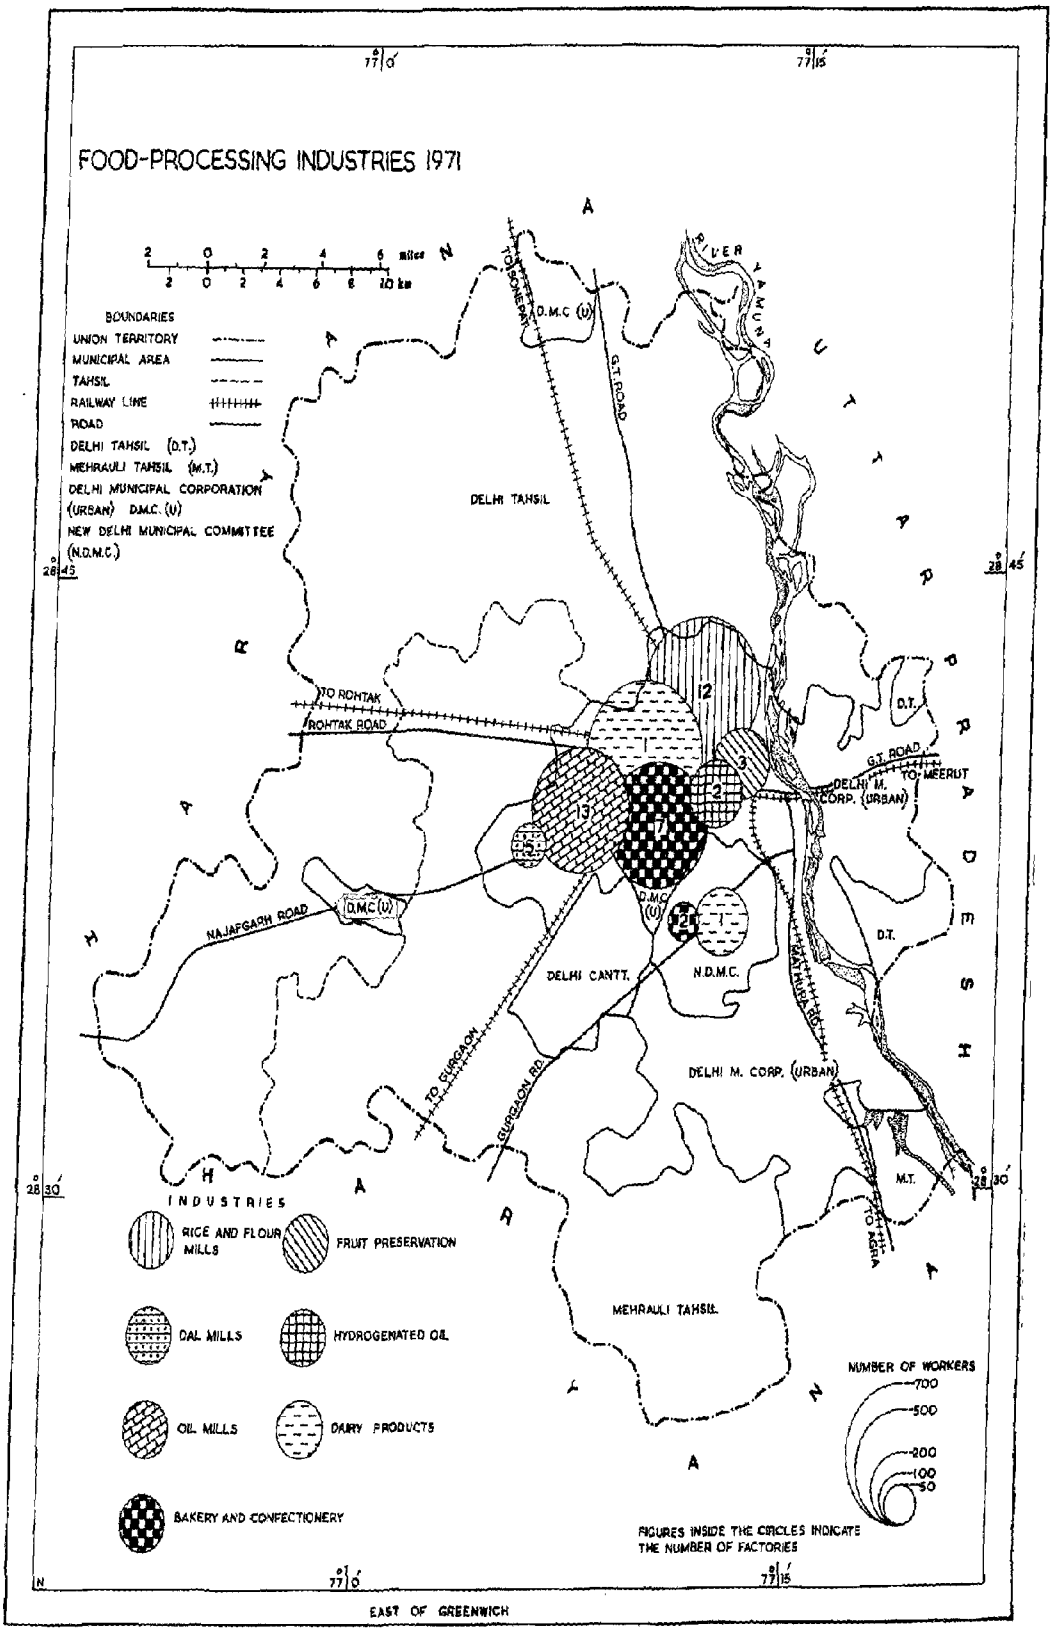

In units, where any food processing industry is located, proportionate circle representing the number of workers engaged is drawn and the number of factories is shown accordingly.

It is quite revealing that all the food processing industries are located in NDMC and DMC(U). Of the total three food processing industries of NDMC, one deals with dairy products and the other two with bakery and confectionery, respectively employing 139 and 32 workers.

In DMC(U), a total of 43 food processing industries engaged in all 3070 workers. However, it is interesting to note that only one Dairy in DMC(U) provides employment to 722 workers. Besides, 12 rice & flour factories engaged—757, five dal mills—75, 13 oil mills—546, seven bakery and confectionery factories-663, three fruit preservatior factories— 158, and two hydrogenated oil industries —149 workers.

BEVERAGES AND TOBACCO INDUSTRIES 1971

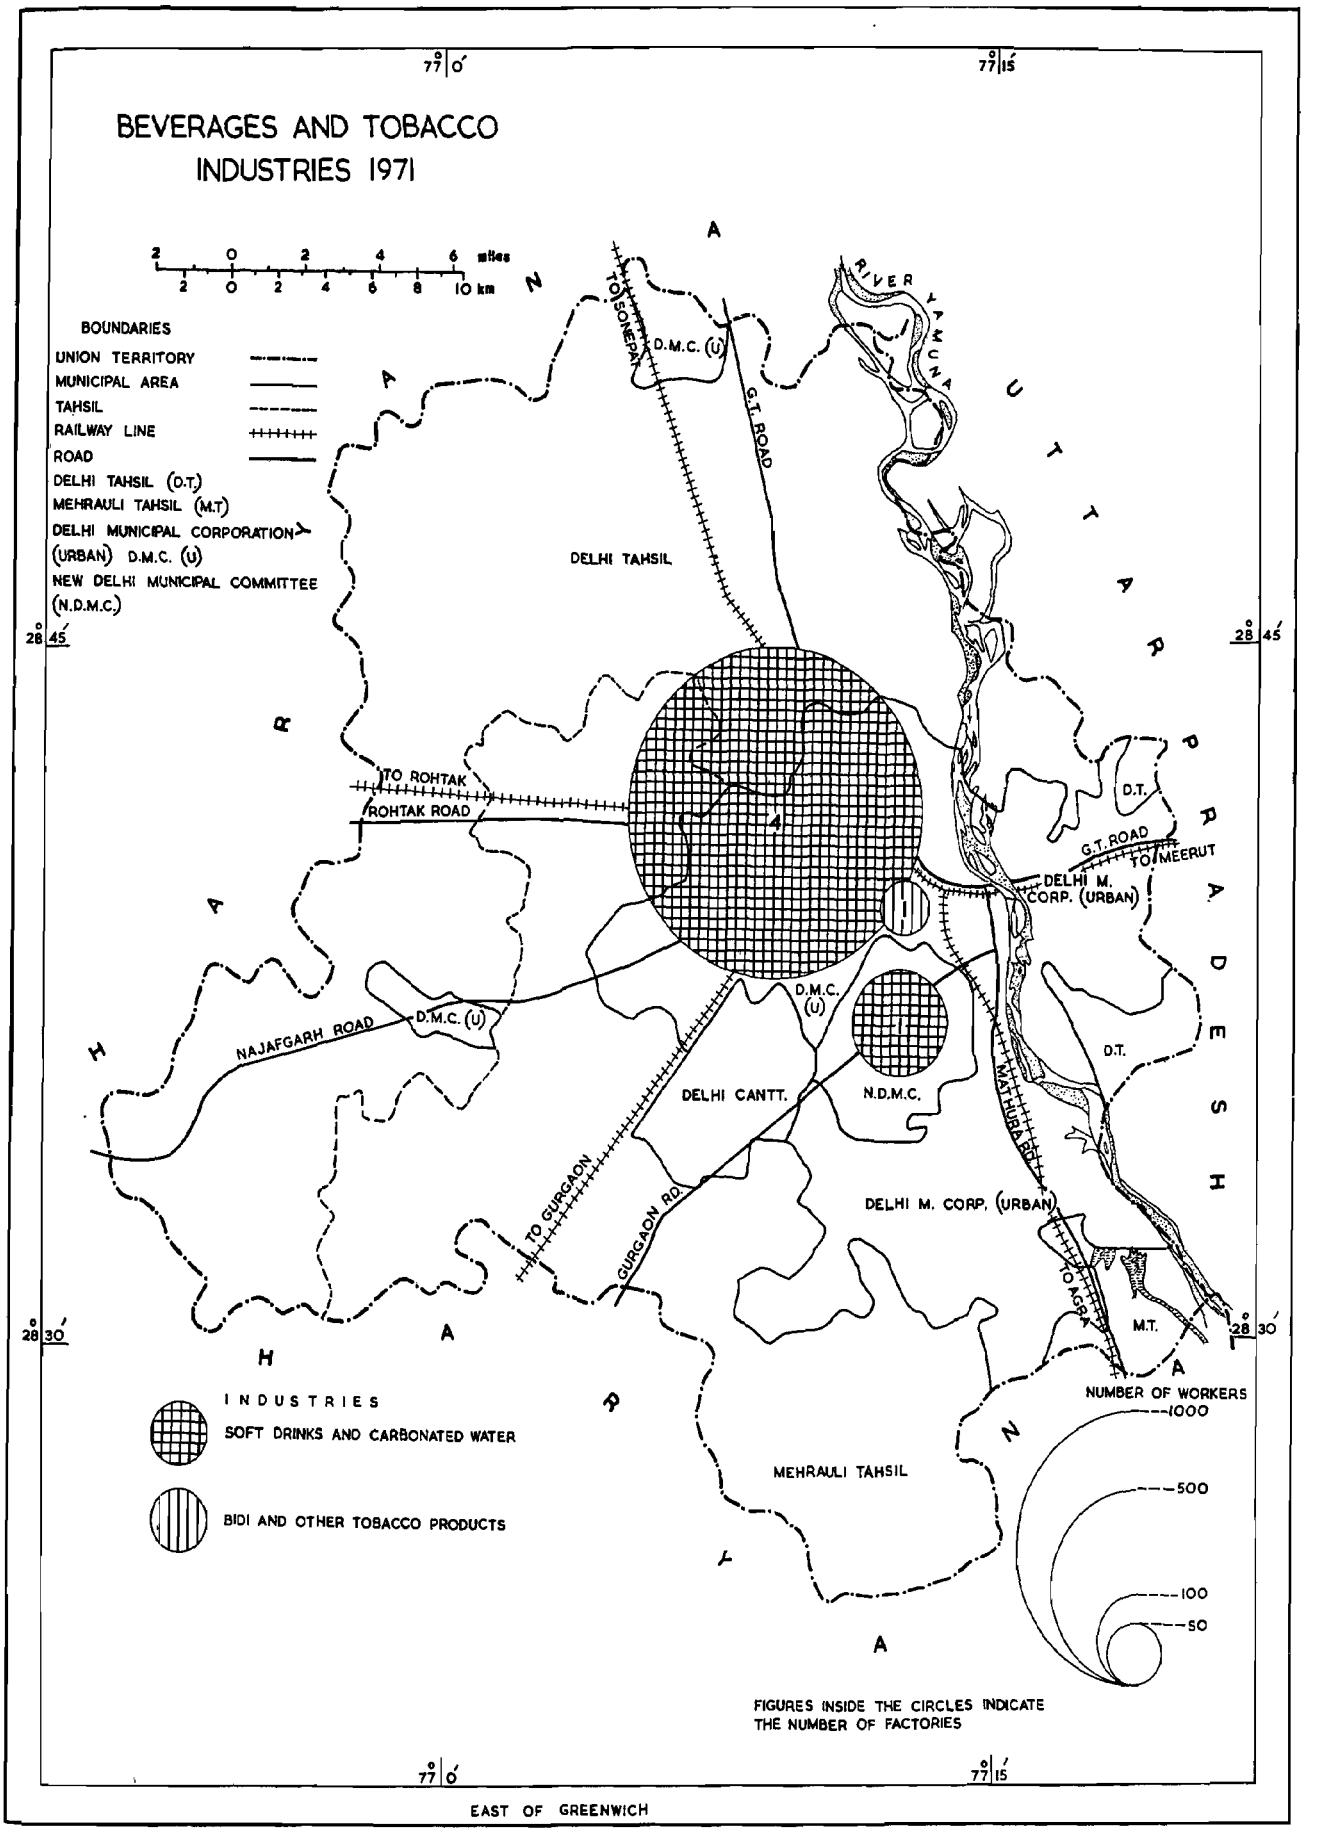

This map exhibits the distribution pattern of beverage and tobacco industries. There are only two types of such industries (1) dealing with soft drinks and carbonated water, and (2) dealing with bidi and other tobacco products.

Proportionate circles according to the number of workers engaged in the two industries are drawn. Number of industries are shown in the circles.

In Delhi UT, there are five industries of soft drinks and carbonated water, and only one of bidi & other tobacco products. of the five industries dealing with soft drinks and carbonated water, four are installed in DMC(U) providing employment to 1372 workers. The only one industry of bidi and other tobacco products is located in DMC(U) engaging 34 workers. In NDMC, the only one industry of soft drinks and carbonated water employs 141 workers.

TEXTILE INDUSTRIES 1971

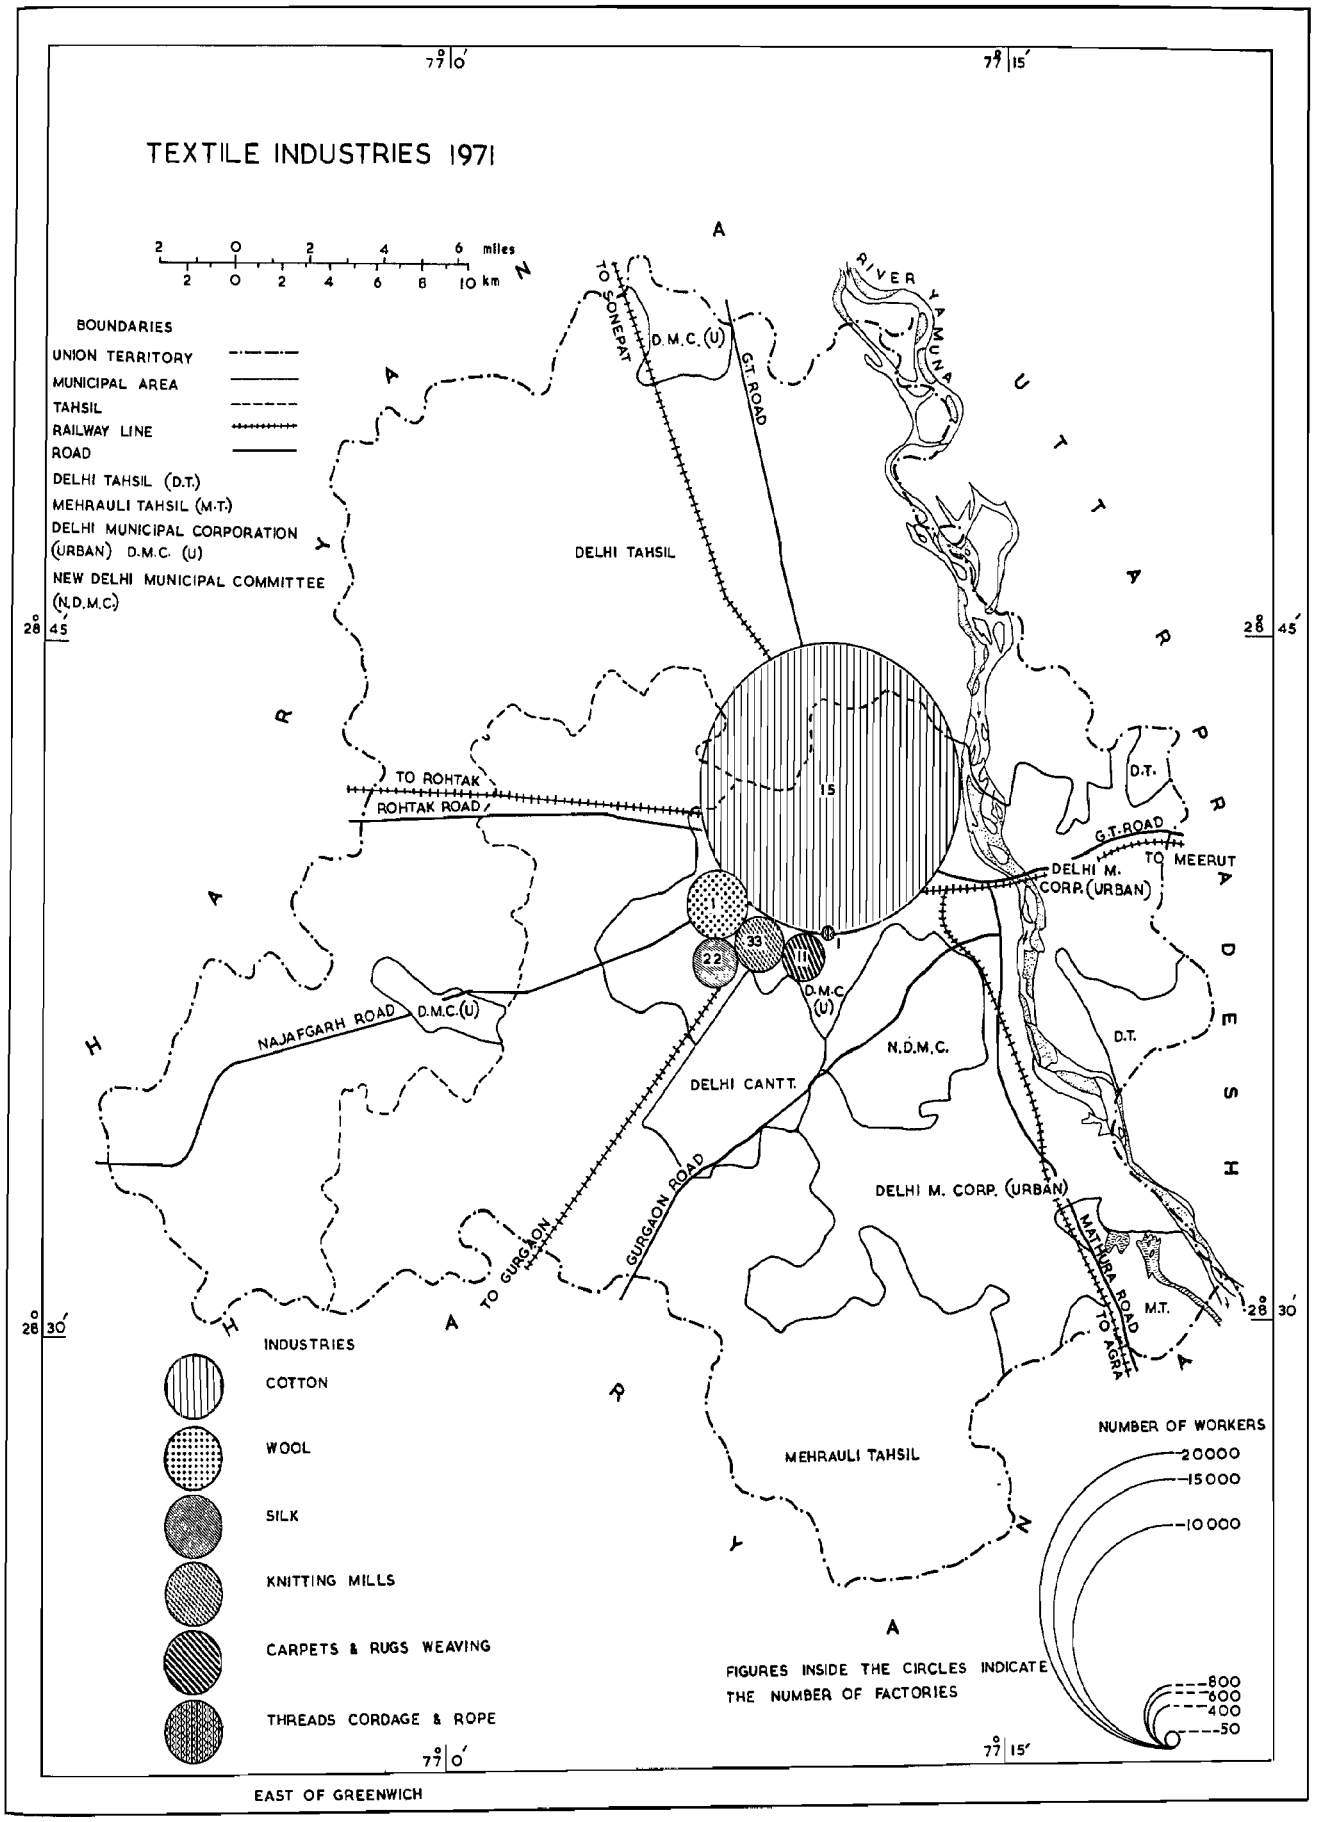

Distribution pattern of textile industries in Delhi UT is depicted in this map. Textile industries are classified into six types: (I) Cotton, (II) Wool, (III) Silk, (IV) Knitting mills, (V) Carpets and rugs weaving (VI) threads, cordage and rope.

Proportionate circles representing the number of workers engaged in different industries, are drawn. Number of total industries is shown in each circle.

In DMC(U), all the six types of textile industries are located. A total of 83 factories provide employment to 2118 workers. Maximum number of workers (18,875) are engaged in 15 cotton industries. Other industries i.e., wool (1), Silk (22), knitting (33) and carpets and rugs weaving (11) respectively employ 408,844,637 and 18 workers. One thread, cord, and ropes industry engages 18 workers.

LEATHER AND WOOD-BASED INDUSTRIES 1971

Leather and wood-based industries located in the Delhi UT are shown in this map. Leather based Industries are classified as: (I) tanneries and leather furnishing, (II) shoe, (III) manufacturing of leather products except foot-wears and other wearing apparels. Wood-based industries are classed as: (I) saw mills, (II) manufacture of furniture & fixture, (III) wood products (IV) paper and pulp products.

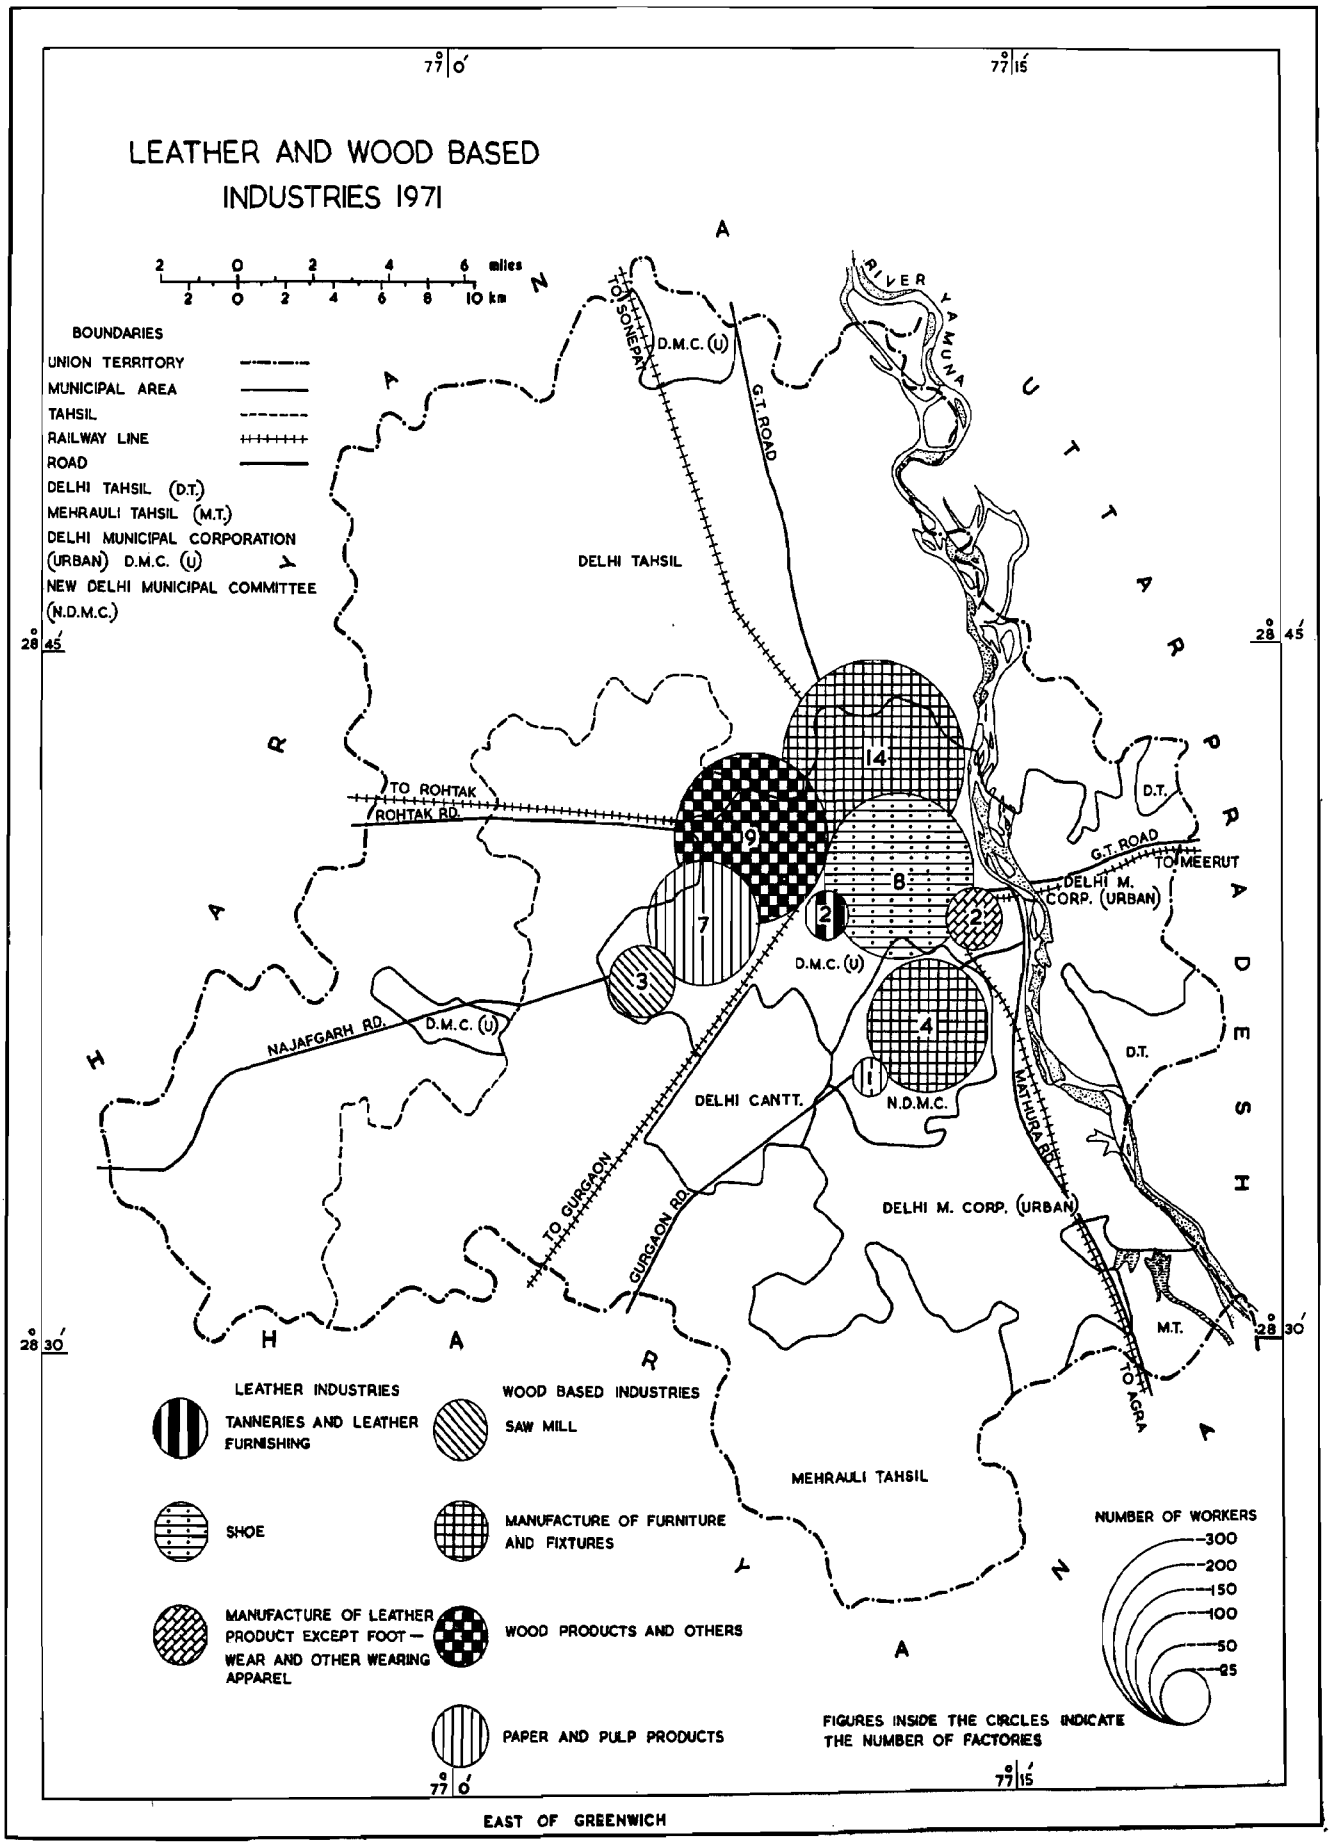

Proportionate circles representing the number of workers engaged in each of the industries are drawn. Number of industries are indicated within the circles.

In DMC(U), there are 2 tanneries & leather furnishing factories employing 19 workers, eight shoe-factories 237 workers and two manufacturing of leather products 35 workers. A total of 12 leather based industries provide employment to 291 workers.

As regard wood-based industries, a total of 38 industries engage 916 workers.

METAL-BASED INDUSTRIES 1971

The metal-based industries located in Delhi UT are shown in this map.

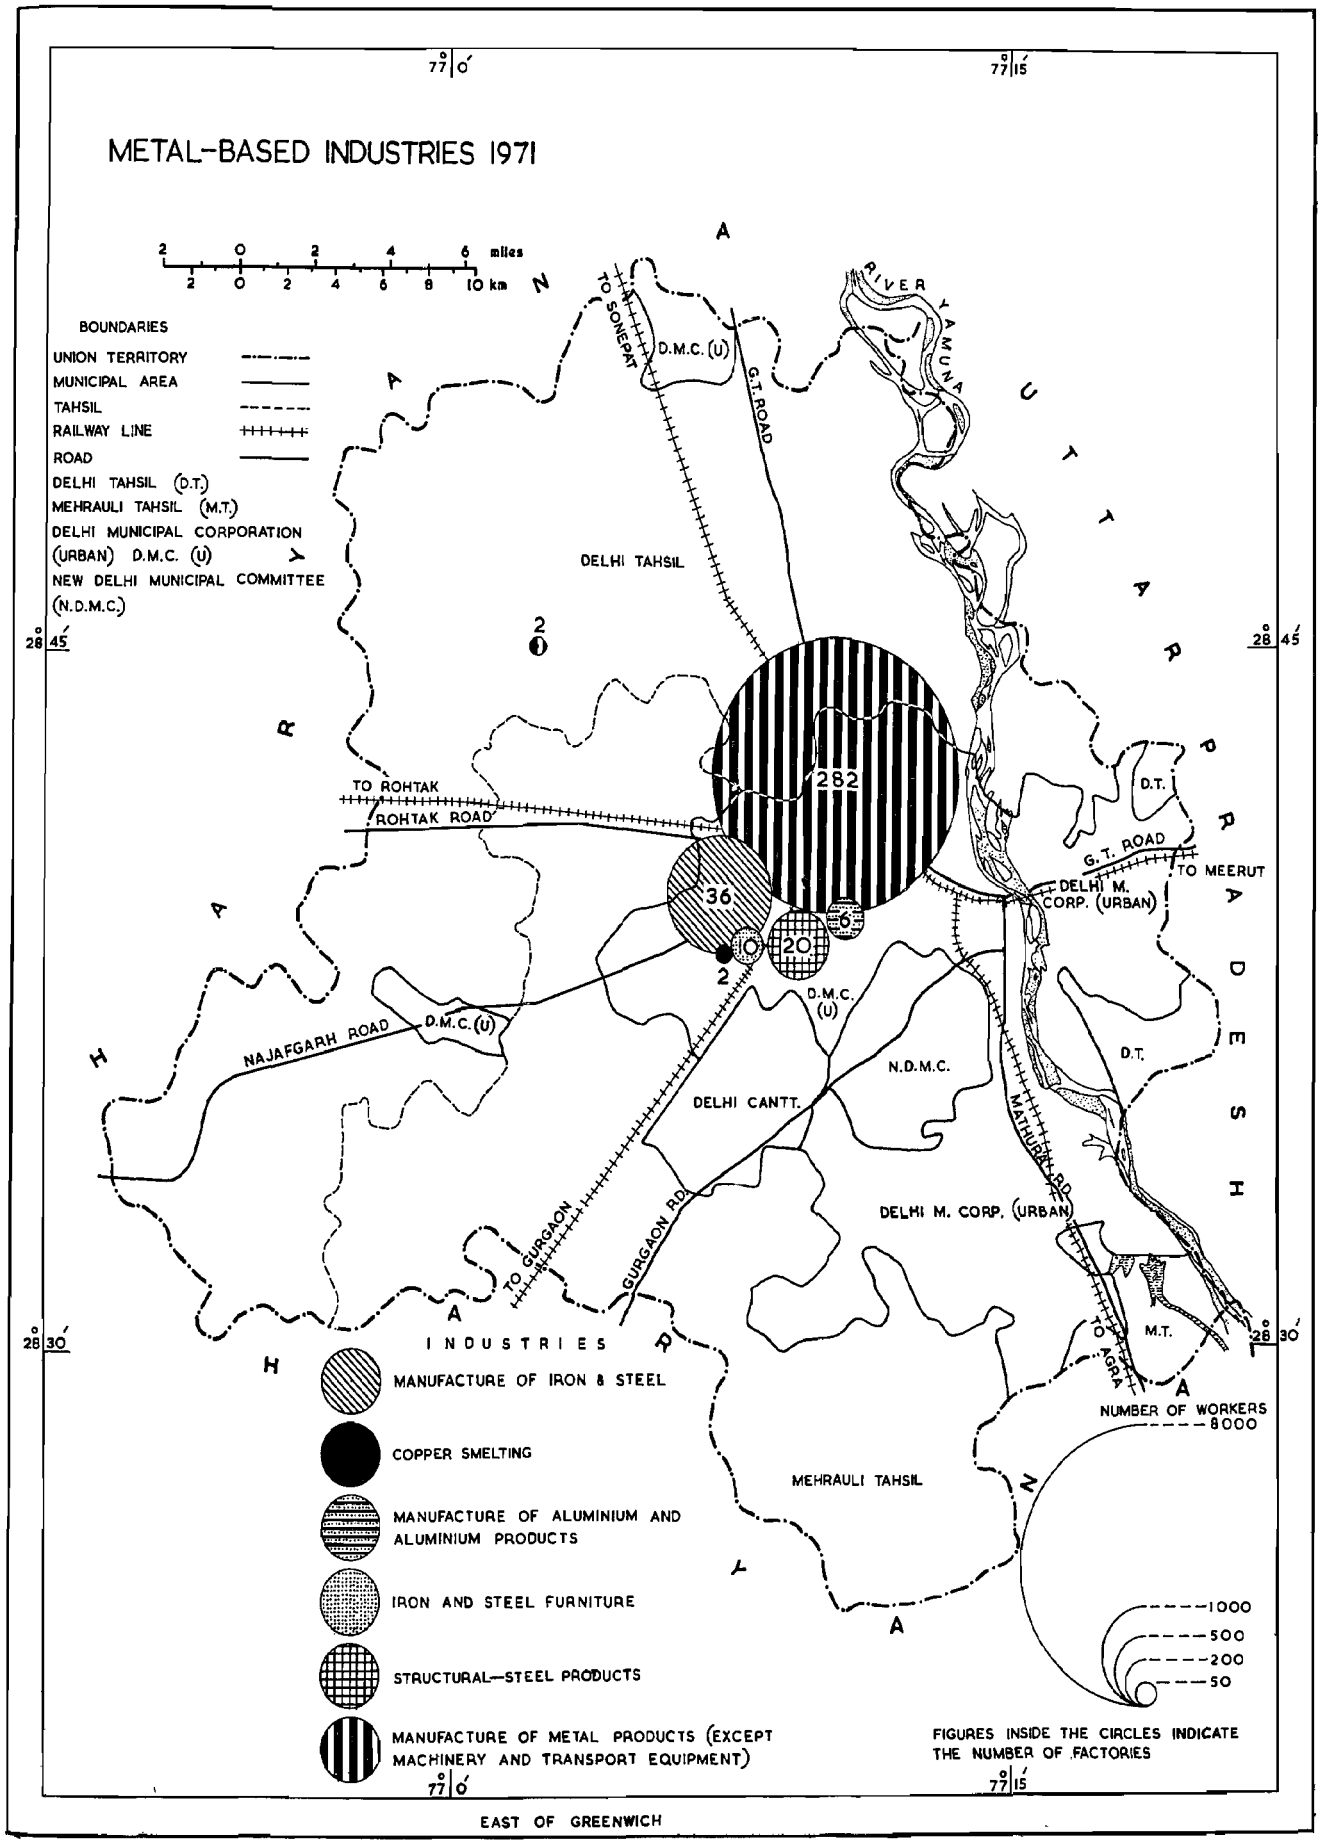

Metal-based industries are classified into six categories : (1) manufacture of iron and steel (2) copper smelting (3) manufacture of aluminium and aluminium products (4) iron and steel furniture (5) structural steel products (6) manufacture of metal products (except machinery and transport equipment). Circles represent proportions of the total workers engaged in different categories of industries. Number of factories in each category is given inside the circles.

Metal-based industries are mainly located in DMC(U) except two dealing in manufacture of metal products (except machinery and transport equipment) which are located in Delhi Tahsil with a total of 35 workers.

In DMC (U), a total of 356 such industries with 9902 workers are in existence. The largest group of industries in DMC(U) are of manufacture of metal products (except machinery and transport equipment) in which are 282 industries with 7675 workers. The remaining industries pertain to the manufacture of iron and steel (36 industries with 1356 workers), copper smelting (2 industries with 28 workers), aluminium and aluminium products (6 industries with 214 workers), iron and steel furniture (10 industries with 143 workers), structural steel products (20 industries with 486 workers).

NON-METALLIC MINERAL BASED INDUSTRIES 1971

This map shows the distribution of non-metallic mineral based industries located in the Delhi UT.

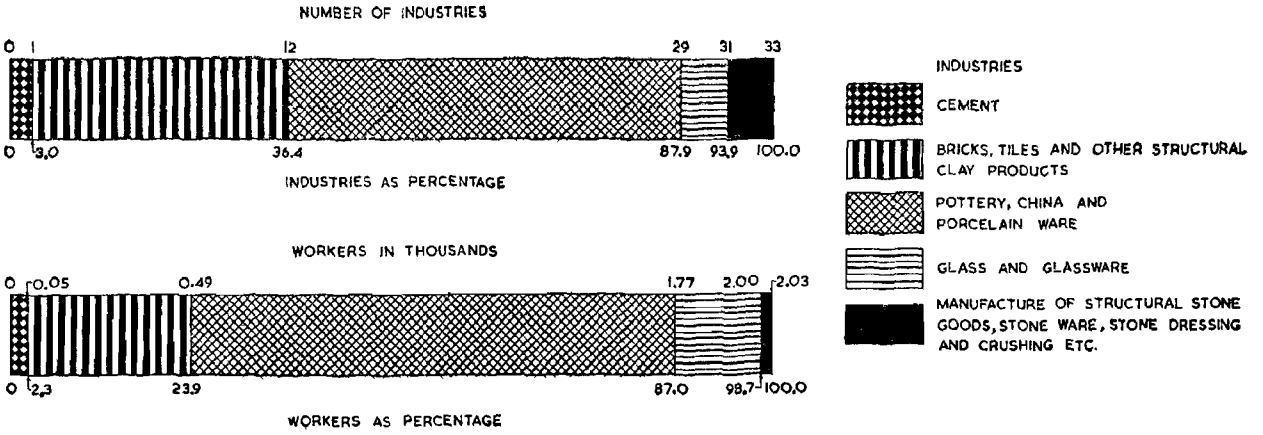

Non-metallic industries are classified into five categories : (1) cement (2) bricks, tiles and other structural clay products (3) pottery, china and porcelain wares (4) glass and glasswares and (5) manufacture of structural stone goods, stone-wares, stone dressing and crushing etc. Circles in proportion of total workers in different categories of industries are drawn. Number of industries are inserted in the circles.

Map reveals that all the 33 industries are located in DMC(U), NDMC and Delhi Tahsil where a total of 2030 workers are employed.

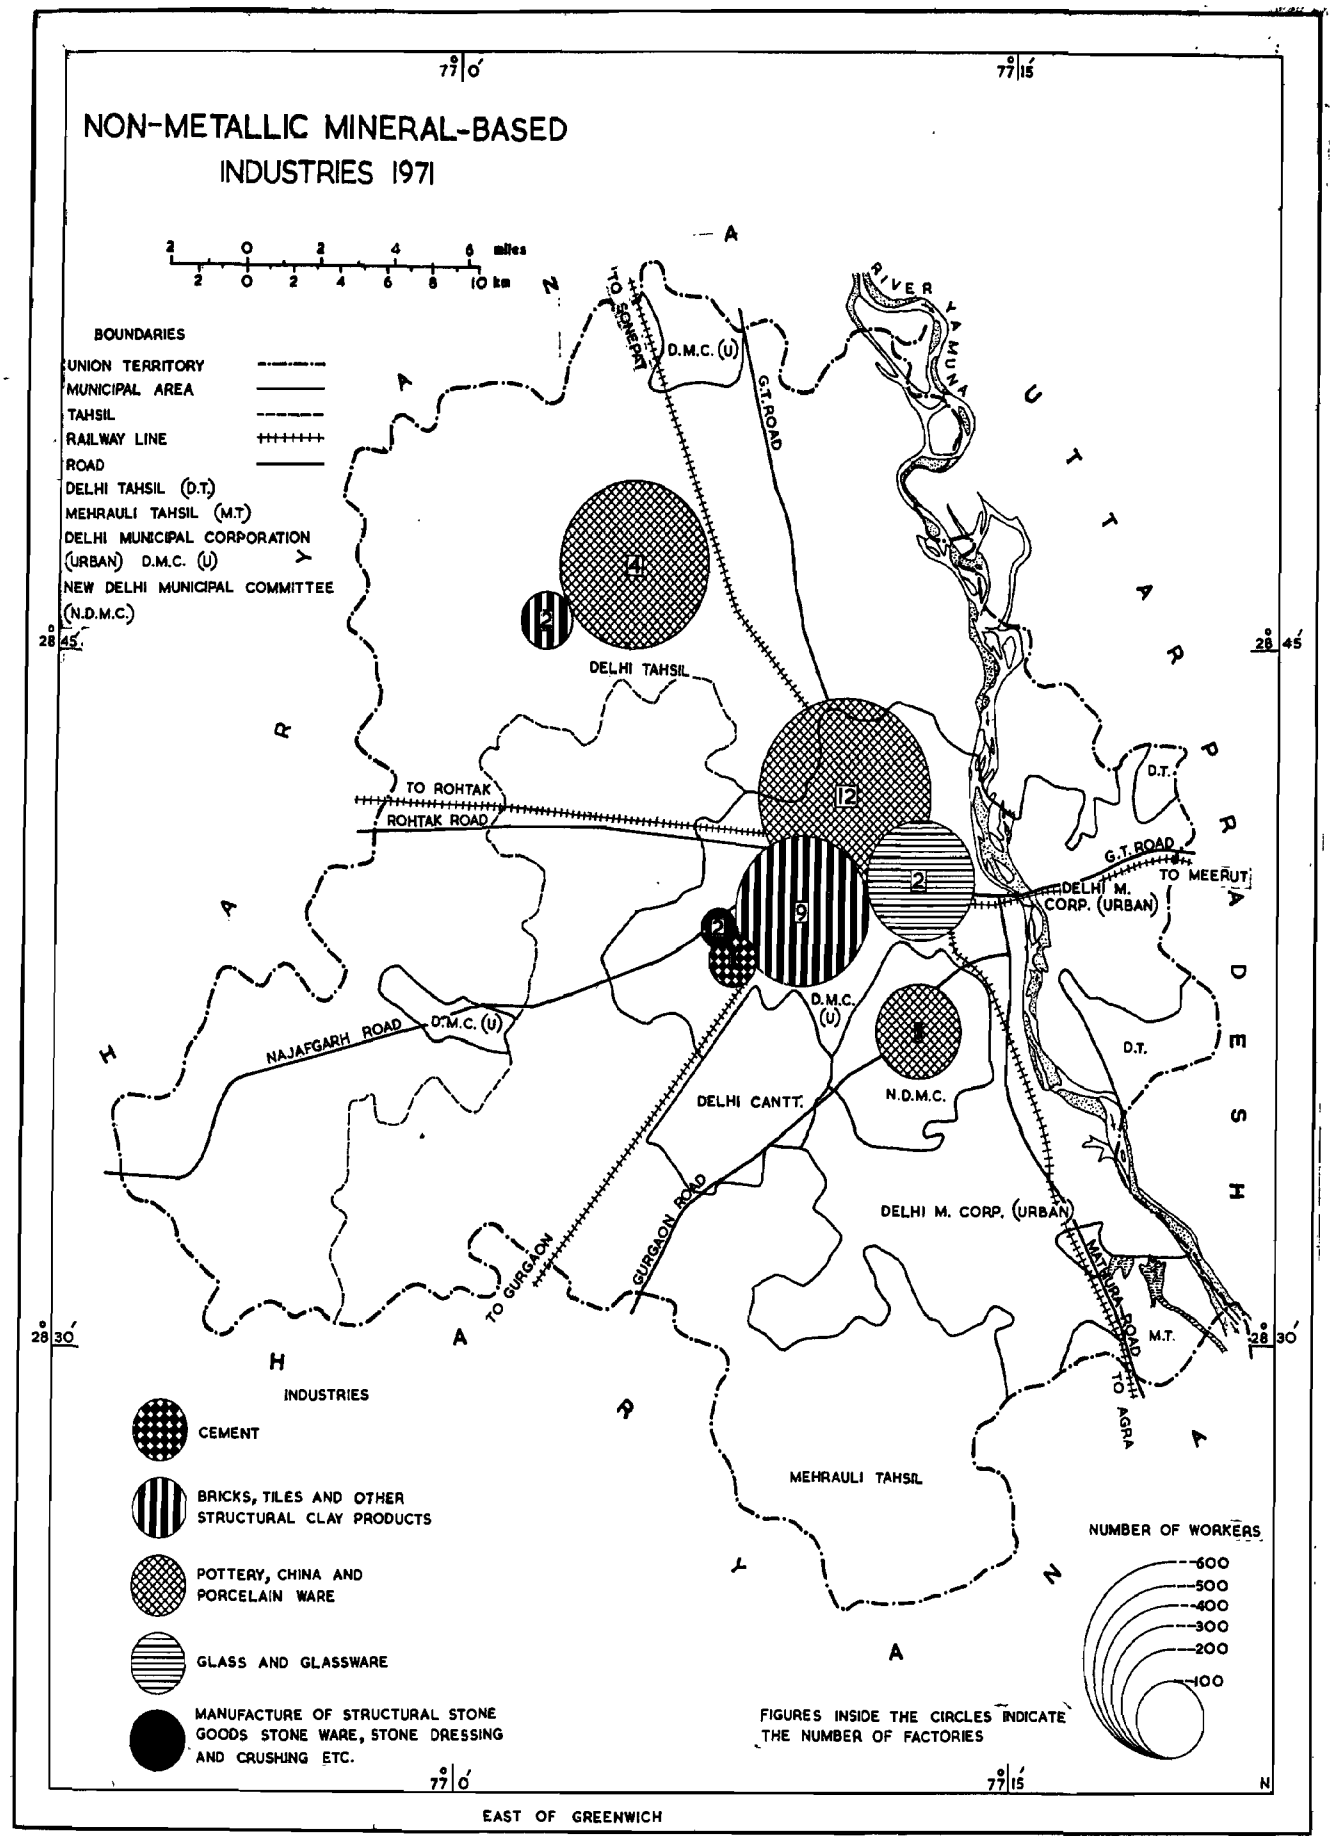

In DMC(U) there are 12 industries of pottery china and porcelain wares with 645 workers stands at the top. Other industries are shown in the map accordingly.

In NDMC, there is only one industry of pottery, china and porcelain wares which employs 158 workers.

In Delhi Tahsil, there are 2 industries of bricks, tiles and other structural clay products which employs 63 workers. Besides 4 industries of pottery and other employ 479 workers in this tahsil.

ENGINEERING AND SCIENTIFIC INDUSTRIES 1971

The distribution of engineering and scientific industries in Delhi UT is shown in this map.

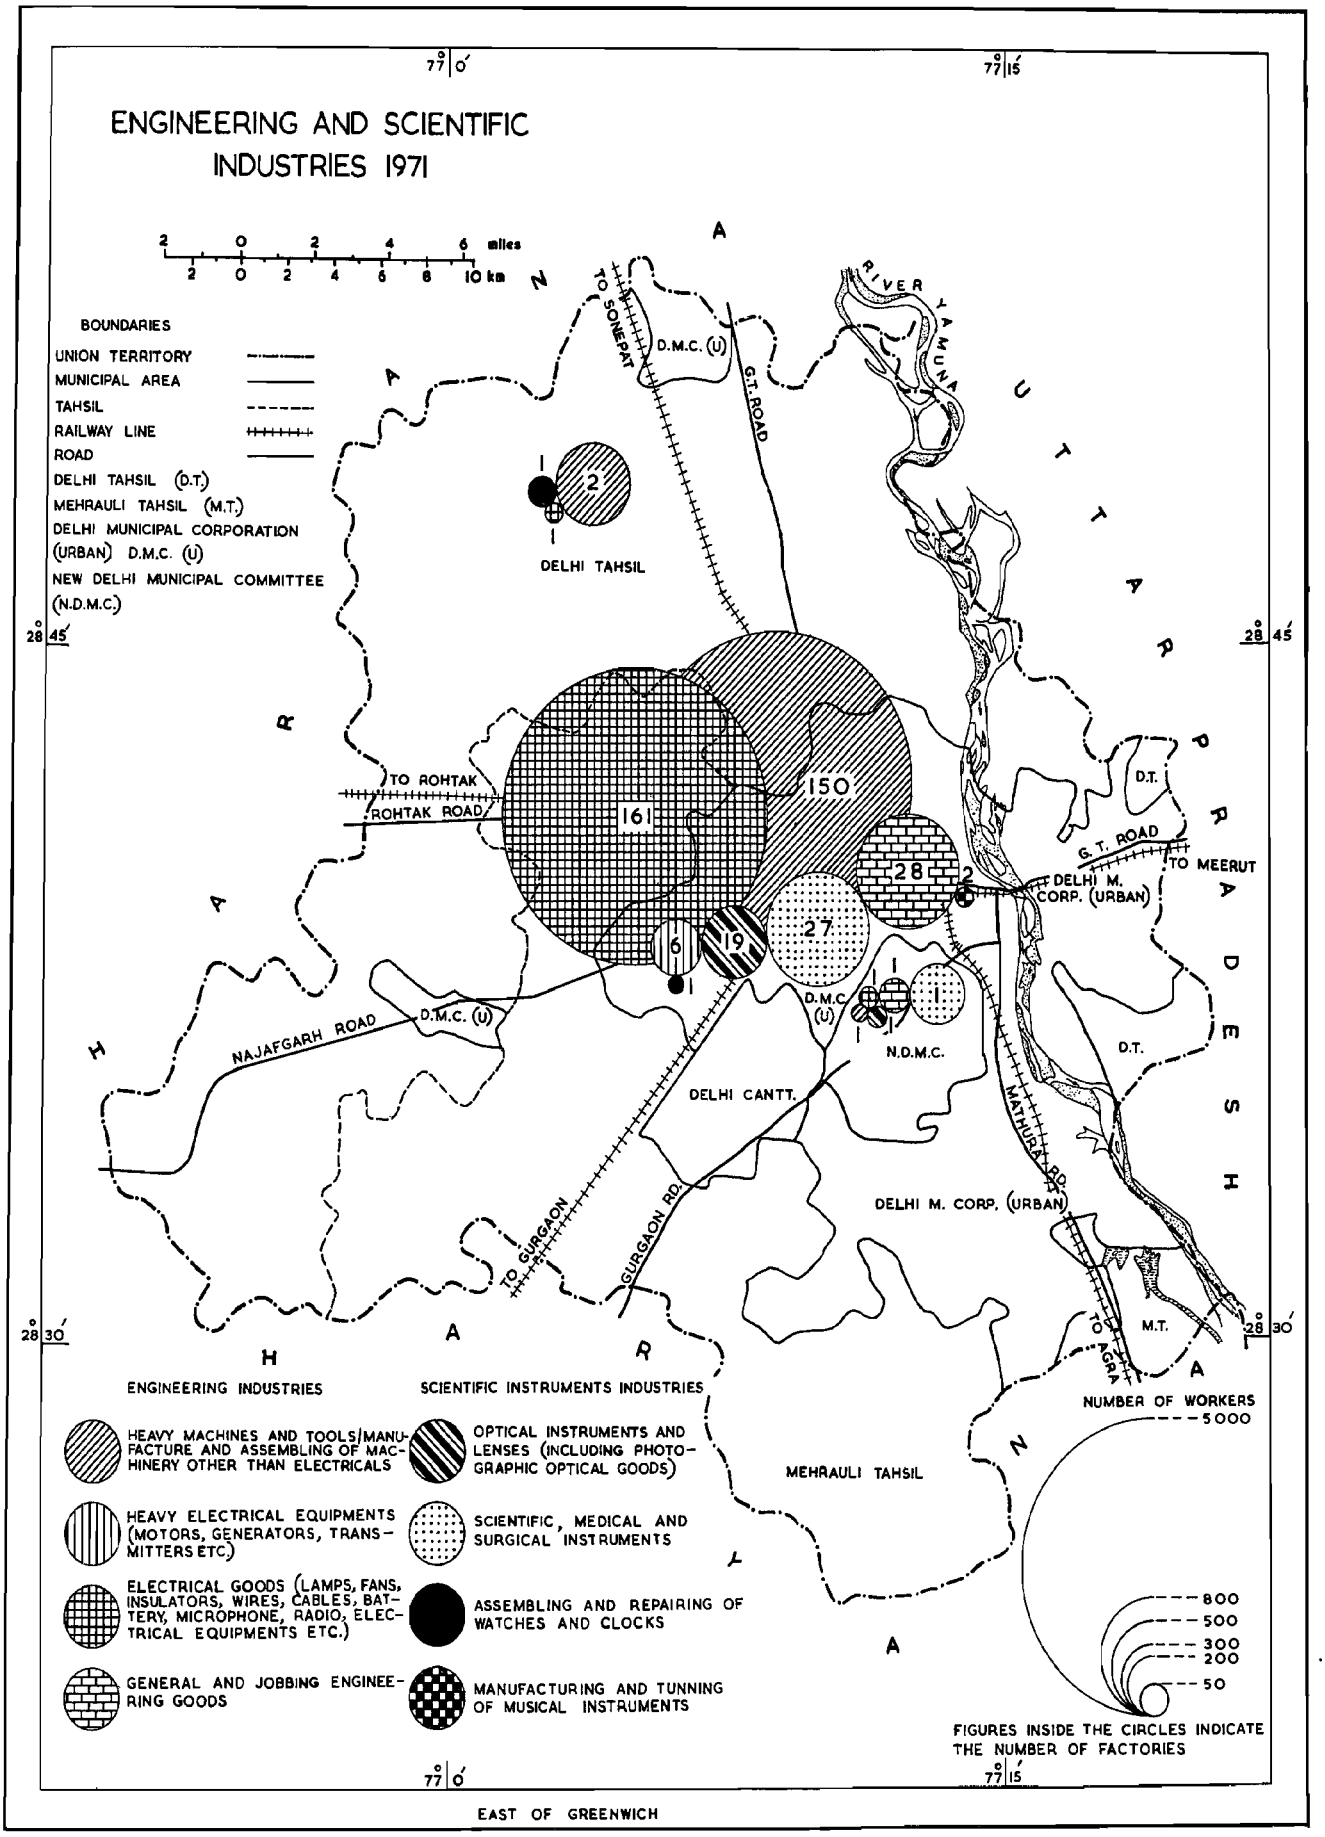

Engineering industries are classified into four types—(1) heavy machines and tools/manufacture and assembling of machinery other than electrical (2) heavy electrical equipments (motors, generators etc.) (3) electrical goods (lamps, fans, radios, electrical equipments etc.) and (4) general and jobing engineering goods.

On the other hand the scientific instrument industries are classified into four categories (1) optical instruments and lenses (including photographic optical goods) (2) Scientific medical and Surgical instruments (3) assembling and repairing of watches and clocks, and (4) manufacture and tuning of musical instruments. Circles proportionate to the total workers in different industries are drawn. Number of industries are given inside the circles.

In Delhi UT, there are 351 industries engaging 12005 workers under engineering industries and the scientific industries, numbers 52 units with 1366 workers. All these industries are located in DMC (U), NDMC and Delhi Tahsil.

TRANSPORT EQUIPMENT INDUSTRIES 1971

Distribution of transport equipment industries in Delhi UT is highlighted in this map.

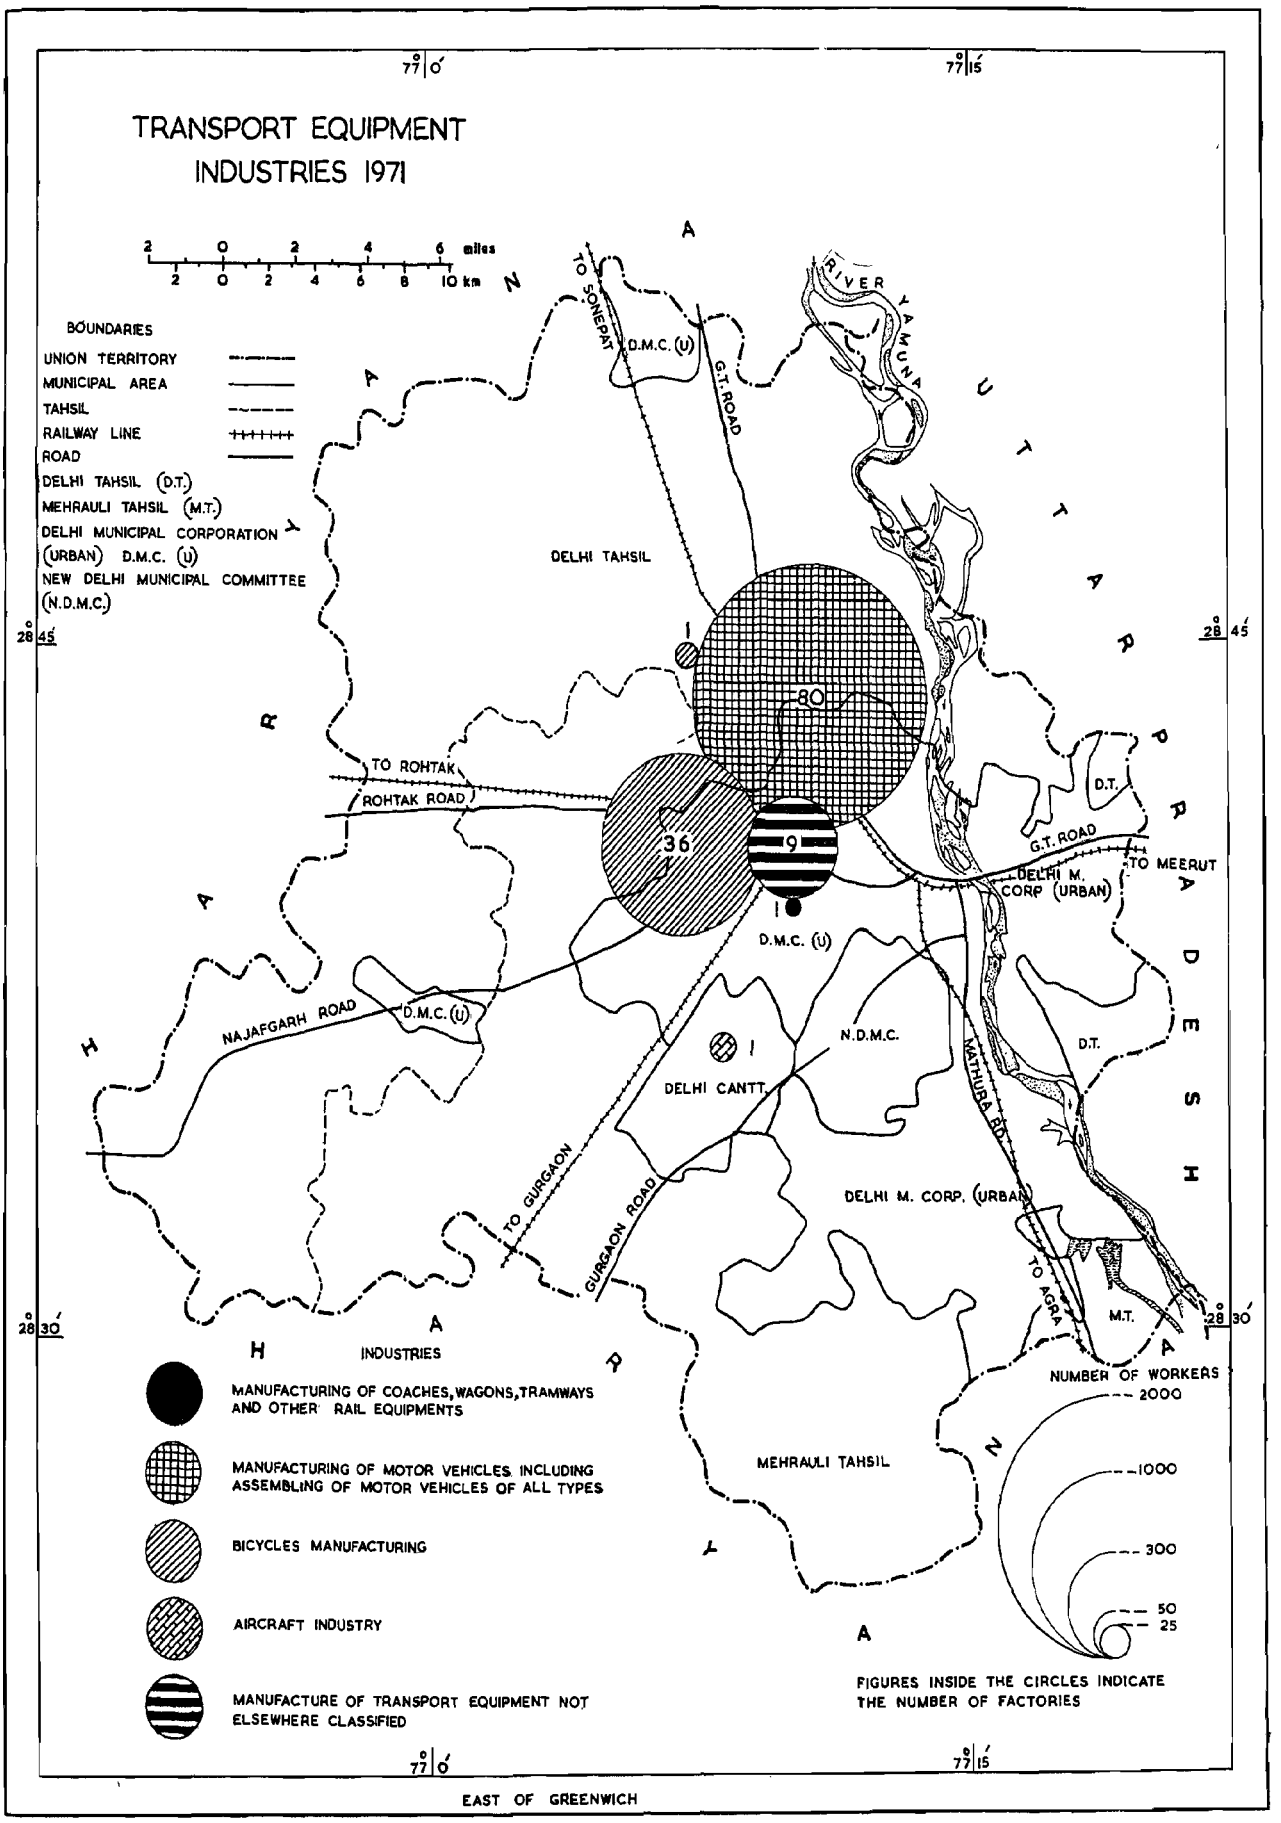

Transport equipment industries are classified into five categories (1) manufacture of coaches, wagons, tramways and other rail equipments (2) manufacture of motor vehicles including assembling of motor vehicles (3) bicycle manufacturing (4) aircraft industry (5) manufacture of transport equipment not elsewhere classified. Number of workers engaged in different industries are shown by proportionate circles. Number of industries are indicated inside the circles.

In Delhi UT, there are 128 transport equipment industries employing 3565 workers. All the industries are located in DMC (U) except one pertaining to aircraft which is located in Delhi Cantonment.

RUBBER AND CHEMICAL INDUSTRIES 1971

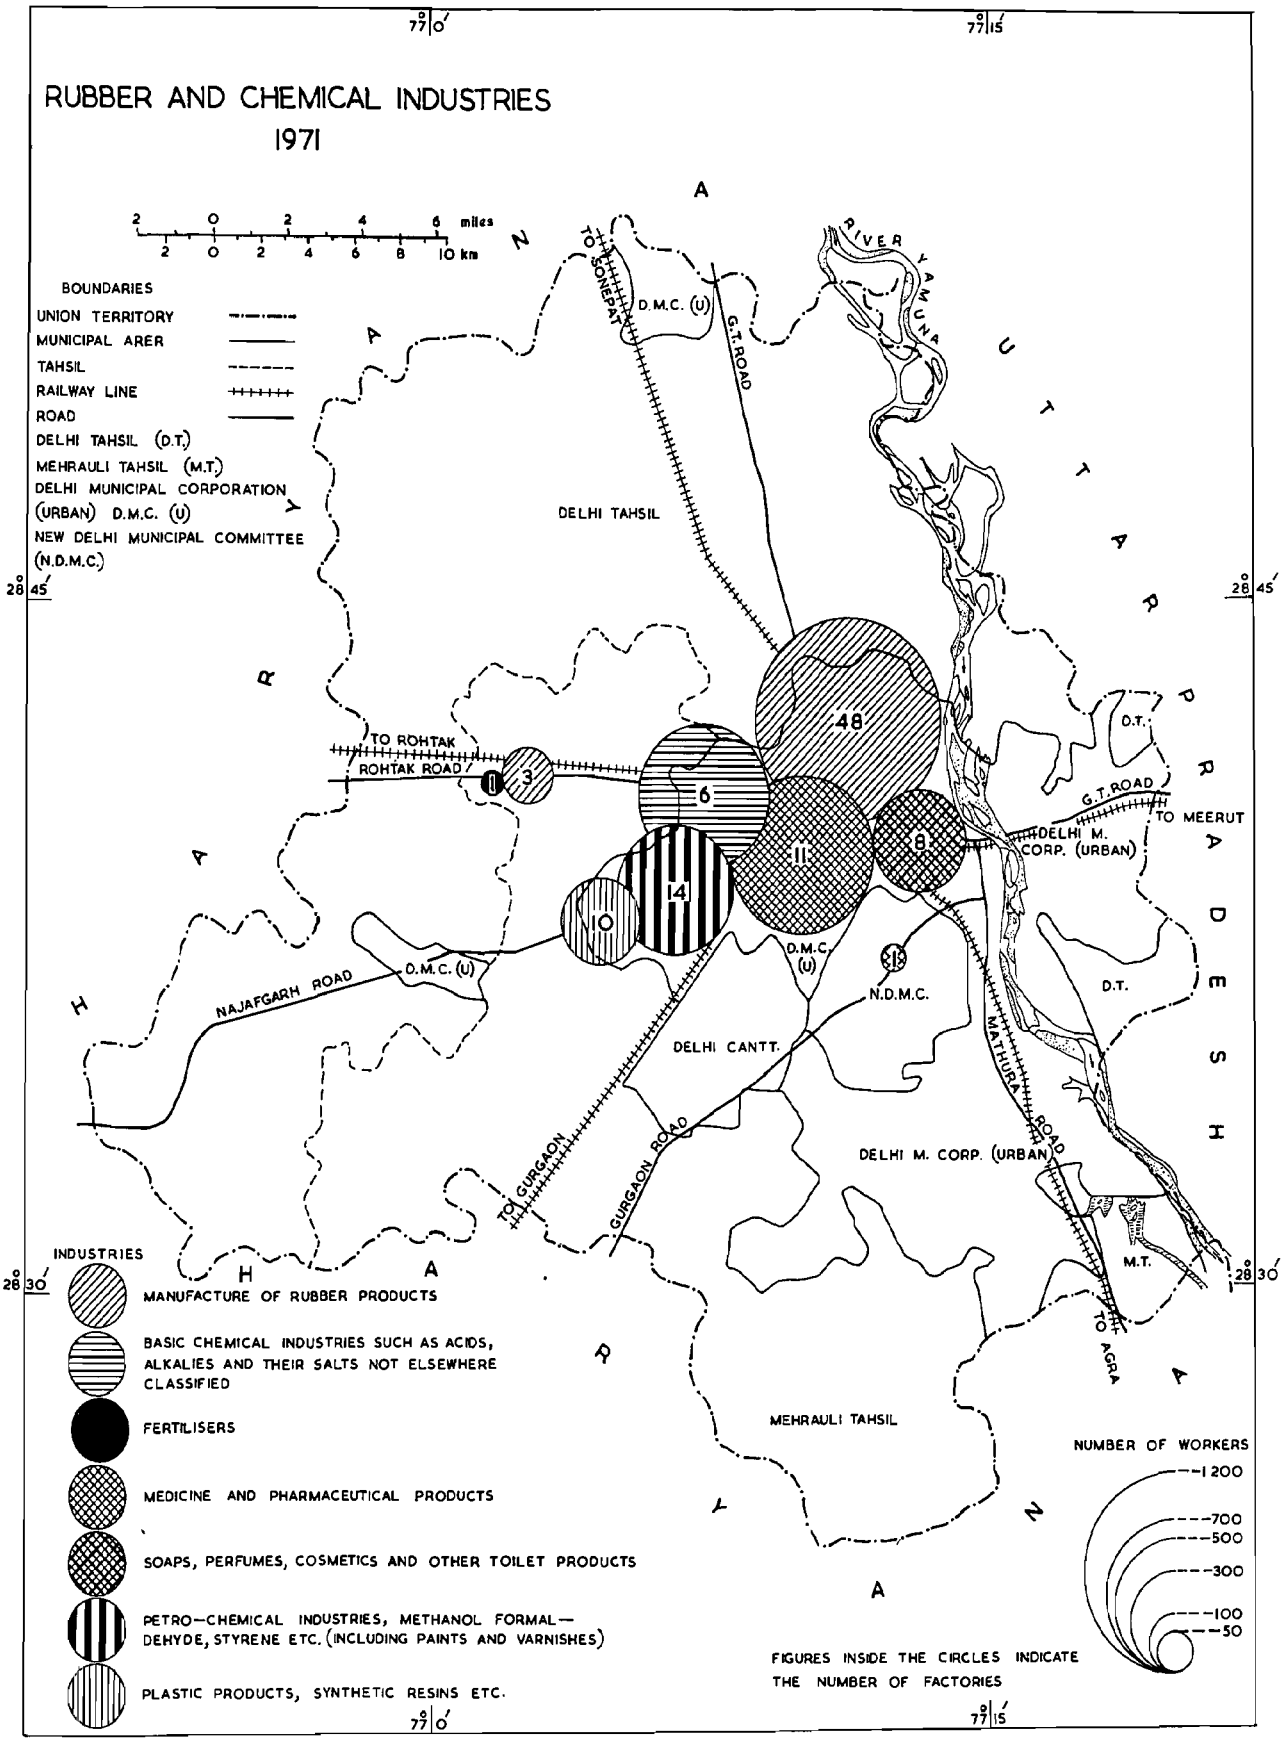

This map shows the distribution of rubber and chemical industries in the Delhi, UT.

Rubber and chemical industries are classified into seven categories (1) manufacture of rubber products (2) basic chemical industries such as acids, alkalies and their salts not elsewhere classified (3) fertilisers (4) medicine and pharmaceutical products (5) soaps, perfumes, cosmetics and other toilet products (6) petro-chemical industries including paints and varnishes (7) plastic products, synthetic resins etc. Proportionate circles according to number of workers engaged in different industries are drawn. Number of industries are inserted in the circles.

In Delhi UT there are 102 industries of rubber and chemical employing a total of 3756 workers. All these industries are located in DMC(U), NDMC and Mehrauli Tahsil.

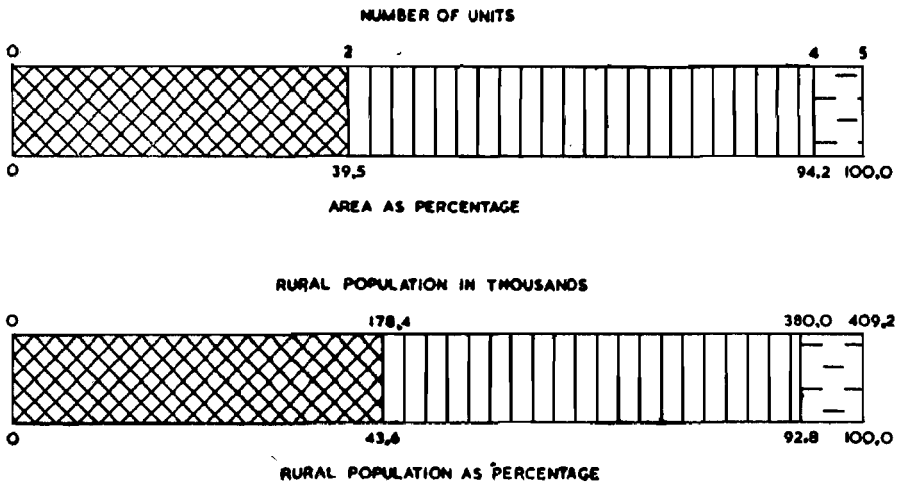

Map 63

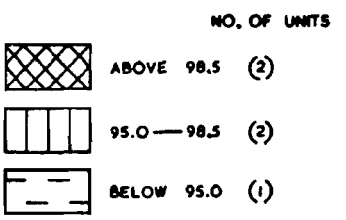

RURAL POPULATION IN ELECTRIFIED VILLAGES 1971

In this map is shown block-wise rural population living in electrified villages.

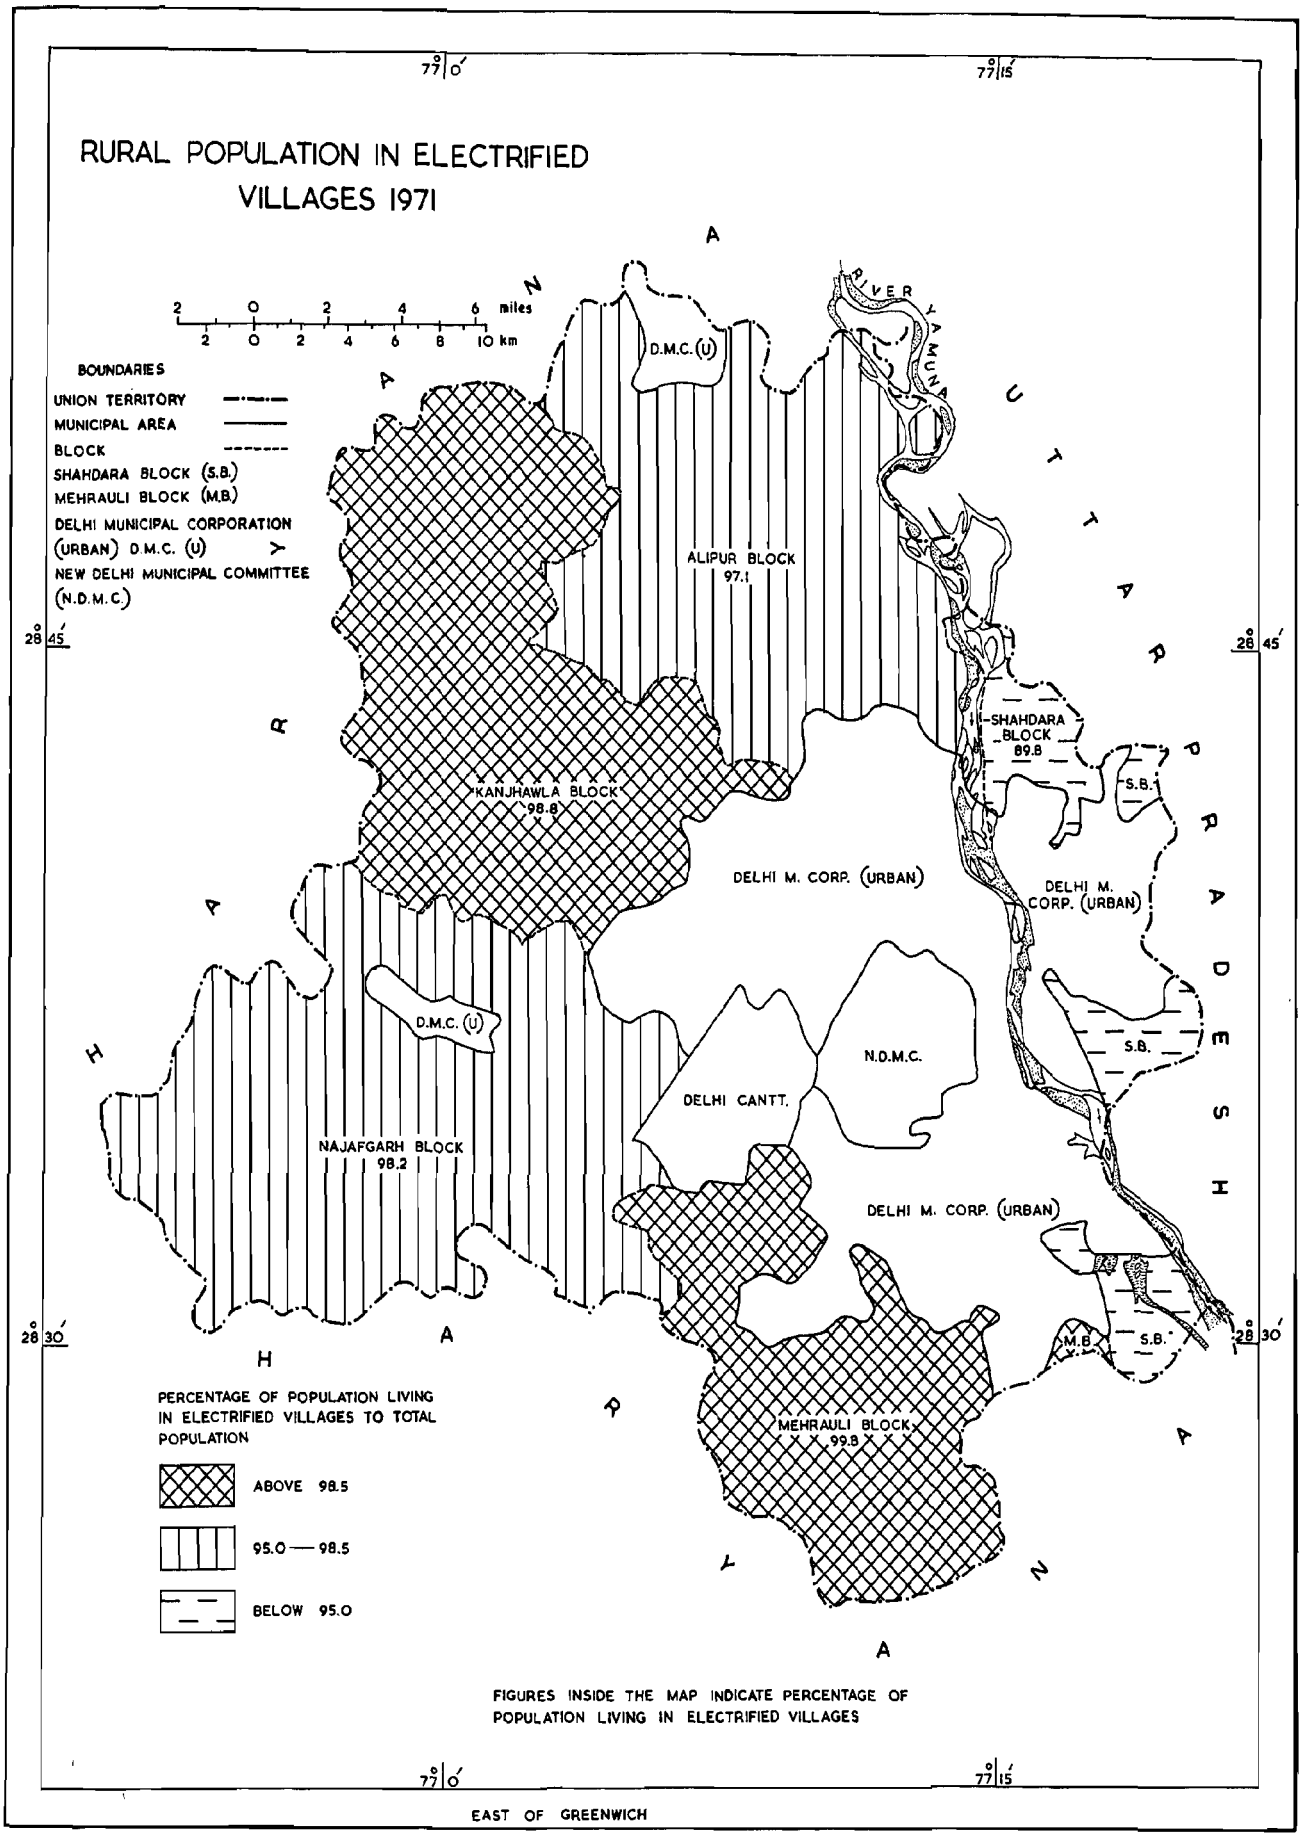

Percentage of rural population living in electrified villages have been calculated for all the blocks. These percentage figures have been grouped into three categories and are shown by choropleth techinque as shown in the legend of the map.

In Delhi UT, 97·7 % population live in electrified villages. Block-wise, it is seen that the villages under the coverage of Mehrauli Block, in respect of electrification are maximum where (99·8%) of population live in electrified villages. Shahdara Block has the lowest proportion (89·8 %). In other Blocks like Kanjhawala, Najafgarh and Alipur the respective figures are 98·8% , 98·2 % and 97·1%.

Map 64

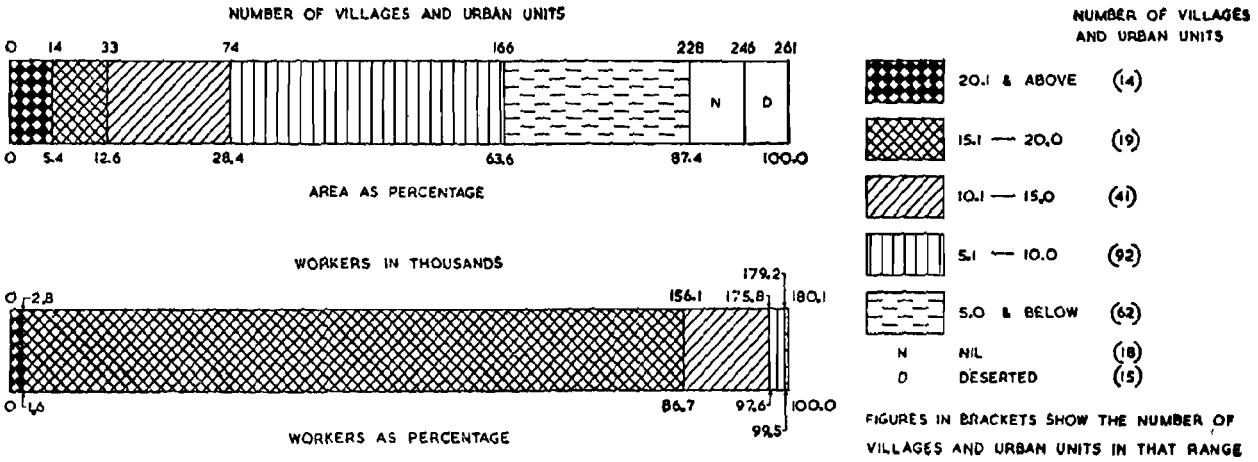

WORKERS IN CONSTRUCTION, TRANSPORT, STORAGE AND COMMUNICATIONS 1971

This map highlights the unit-wise percentages of workers engaged in construction, transport, storage and communications.

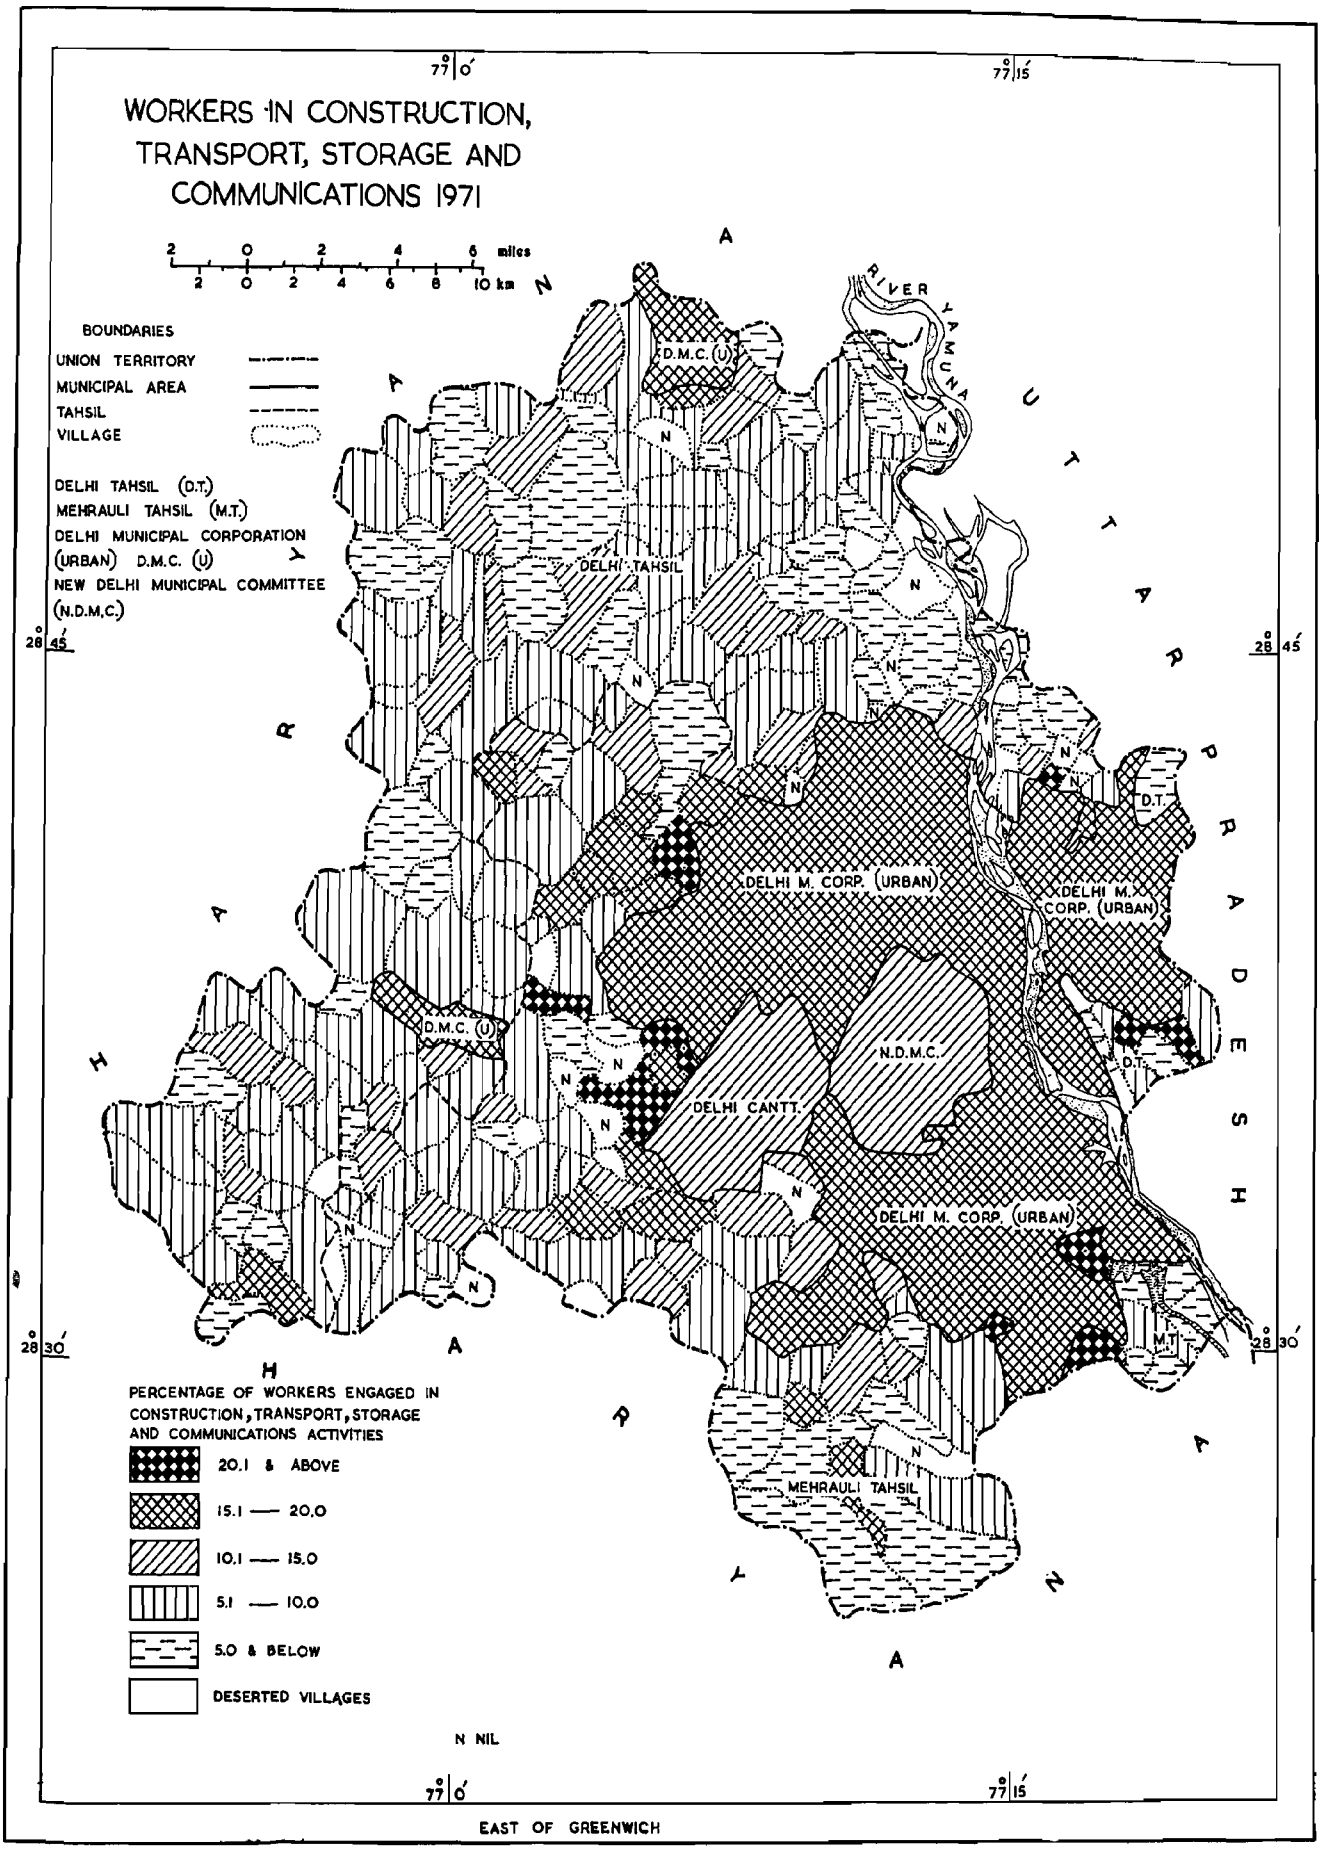

The unit-wise percentages are grouped into five ranges. According to these ranges all the villages/ units are shaded by choropleth technique and as is shown in the legend of the map.

Out of 243 inhabited villages 18 villages have no worker engaged in constructions, transportation and communication. A majority of these villages (194) have workers from 5% to 15%. There are only 17 villages which have 15·1 to 20·0% workers engaged in the aforesaid activity. Only 14 villages which are located at Delhi U. A. border have more than 20% workers engaged in this activity.

It is revealing that in none of the urban units, the proportion has crossed (20%) mark for example, in DMC(U), NDMC and Delhi Cantonment, the proportion is (15·3%), (14·0%) and (10·9%) respectively.

Map 65

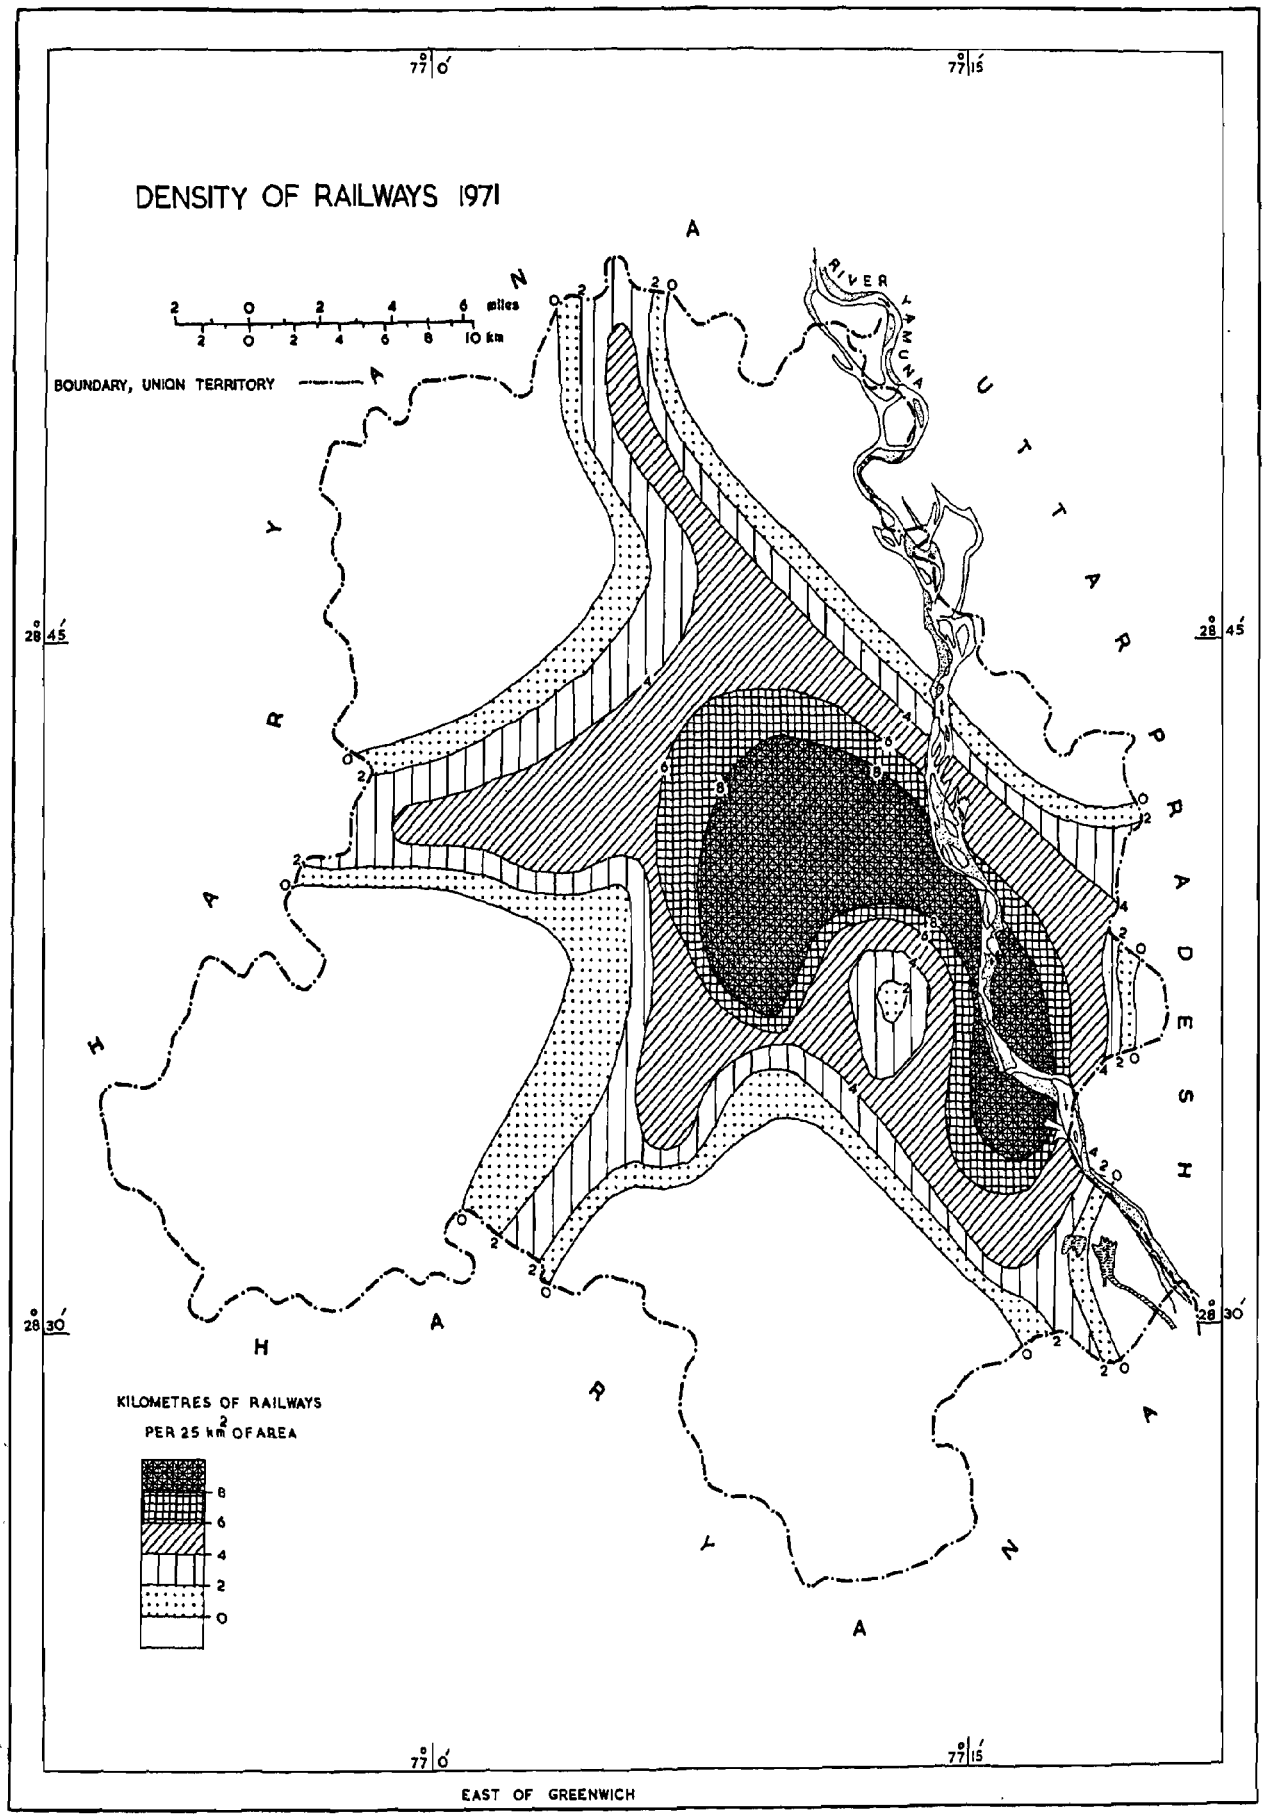

DENSITY OF RAILWAYS 1971

Density of railways in terms of the length of the railway lines measured in kilometres per 25 Km.^{2} of area is shown in this map.

Railways are plotted on the base of map of the Delhi UT whithin grids covering an area of 25 Km.^{2} The length of the railways are measured, and in accordance with these length isopleths are drawn at suitable intervals as shown in the index of the map. The intervals of two isopleths are shaded according to the ranges from high to low values showing density of railways.

As is evident from the map, a considerable part of rural area and southern portion of Delhi UA deprived of railways spread. The five railways tracks, as shown in the map, which form the hub of UA, has a comparative higher density of railways, 8 km. per 25 km.^{2}

Map 66

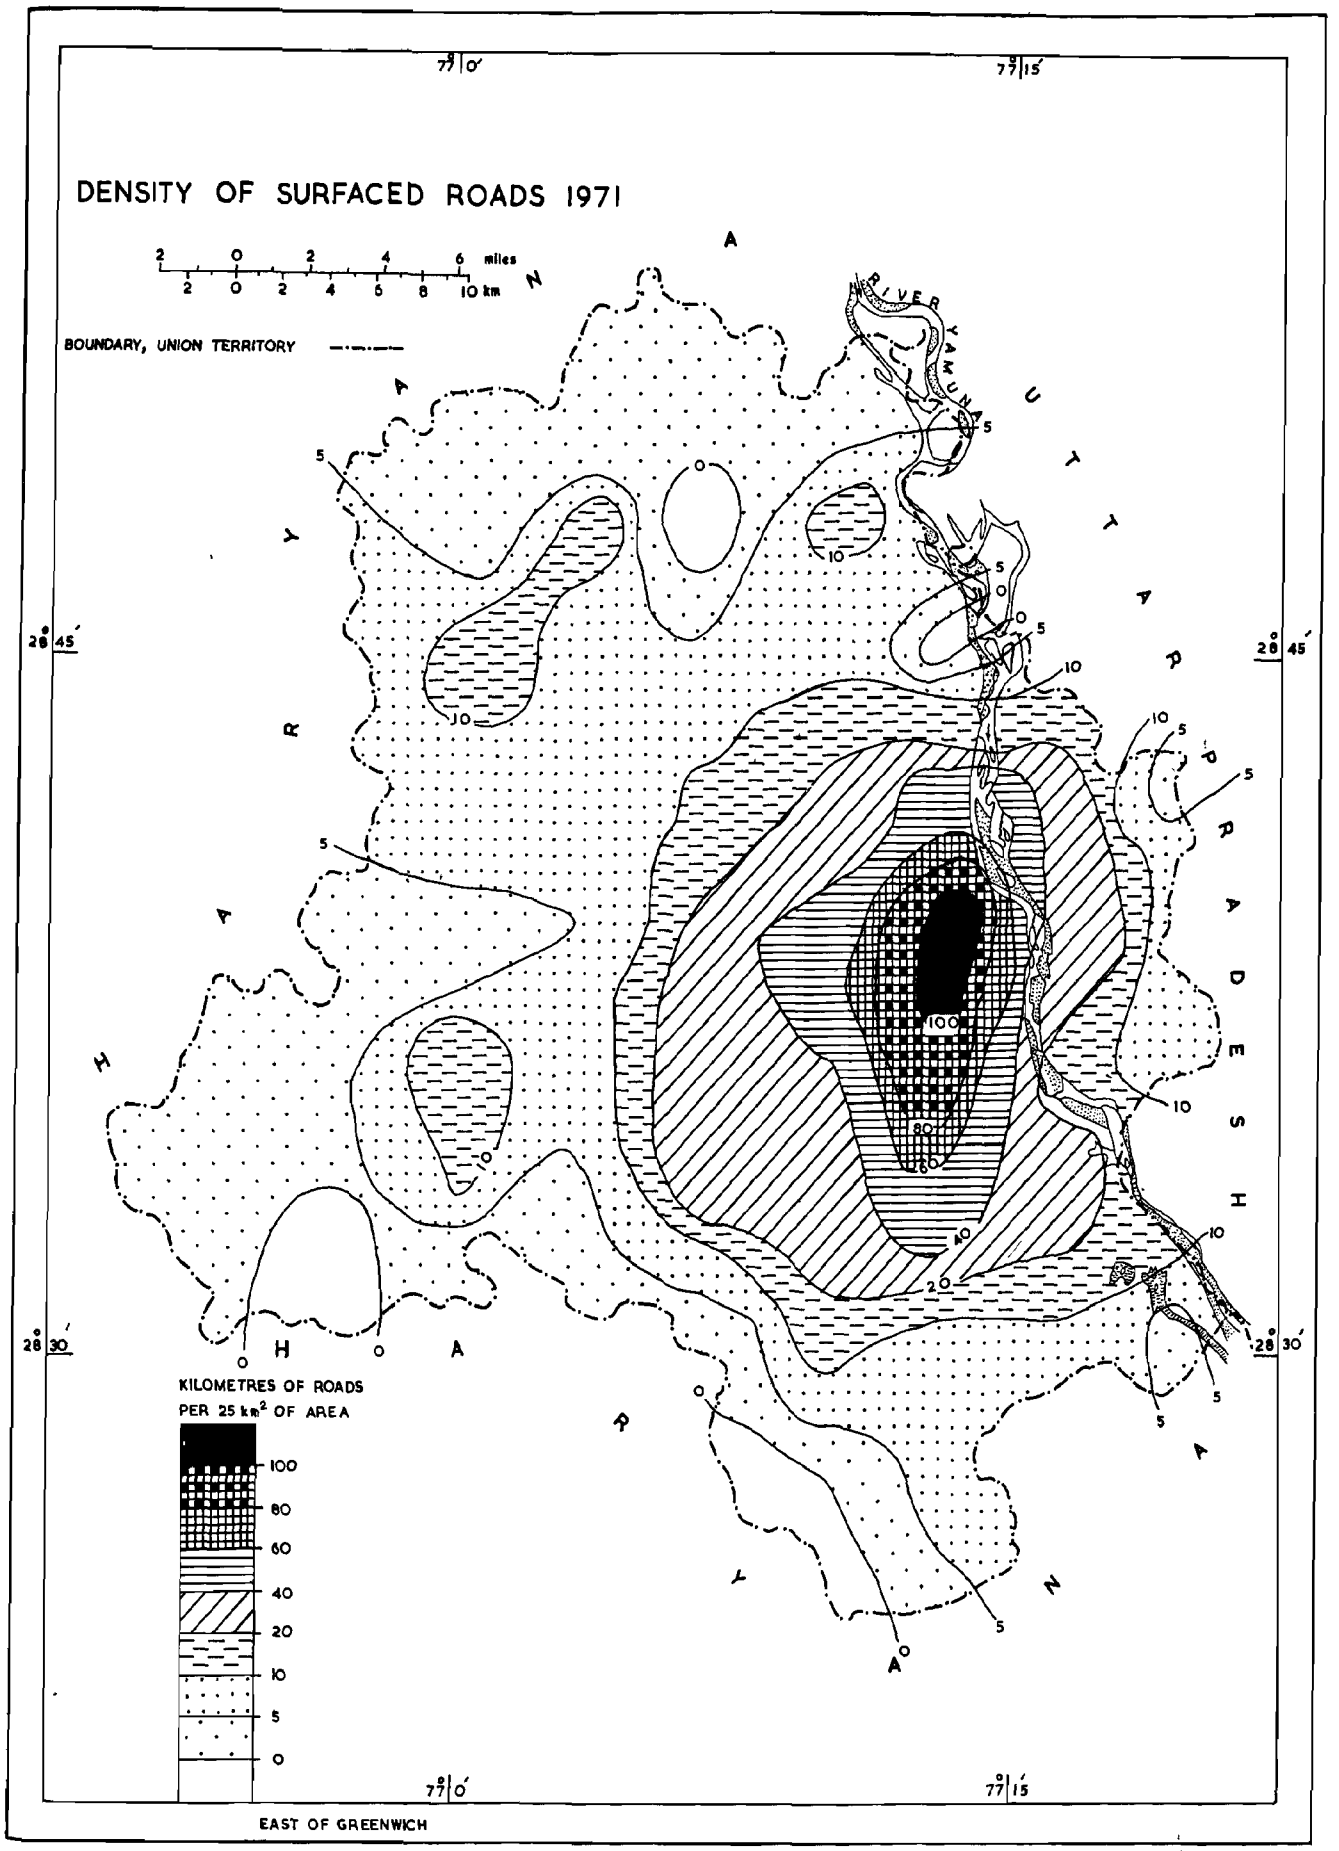

DENSITY OF SURFACED ROADS 1971

This map shows the density of surfaced roads in the Delhi UT in terms of kilometres of surfaced road per 25 km^2 of area.

Length of the surfaced roads on the map are measured in every 25 km^2 grid area. In the centre of all the squares, the values of road lengths are plotted and isopleths are drawn with values of road lengths at suitable intervals as shown in the index of map. The space in between the two isopleths is shaded according to the ranges from high to low as shown in the legend of the map.

The core of Delhi UA has the highest road density which is 20 km per 25 km^2 in sharp contrast to the major part of the rural area which comes below the density of 10 km/per 25 km^2 area.

NUMBER OF PASSENGERS ORIGINATING PER ROUTE KILOMETRE PER DAY ON RAILWAYS 1974-75

This map depicts the number of passengers originating per route kilometre, per day, on railways.

Originating passengers from and to destinations per route kilometre, per day are computed. According to the origin of passengers at each station, the volume of passengers is shown.

The major flow of passengers is from Uttar Pradesh to the city of Delhi. The Delhi Tughlakabad section of northern railways and Delhi-Delhi Safdarjang sections show feable flow of passengers. As regard the daily passengers from originating stations, Delhi Junction has the largest share.

WORKERS IN TRADE AND COMMERCE 1971

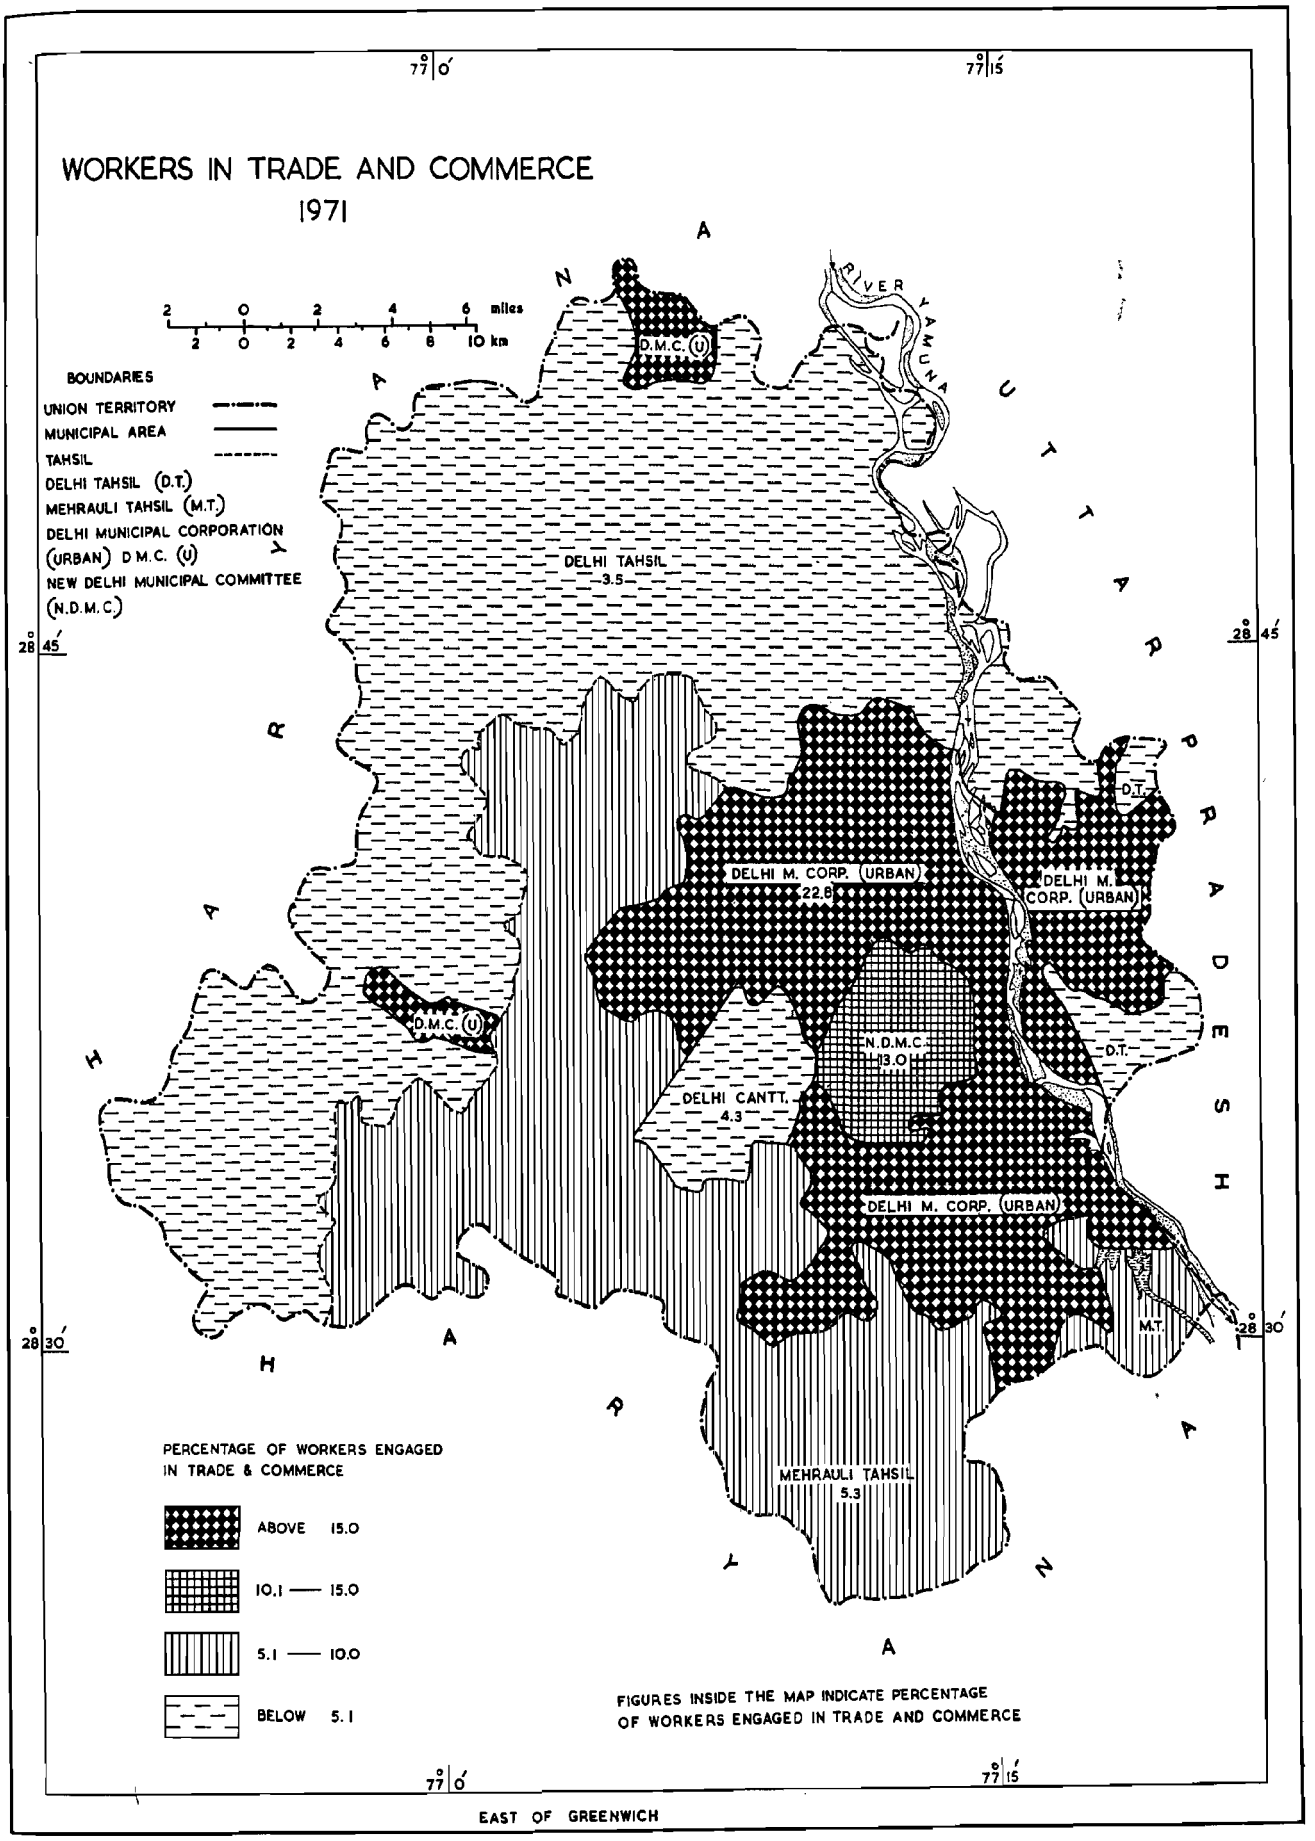

This map depicts the percentages of workers engaged in trade and commerce to the total working population in various units of the Delhi UT.

Percentages of all the units of workers engaged in trade and commerce to the total working population are calculated. The percentages are shown in the map by choropleth technique by grouping the data into four ranges-three below, one nearer to the UT average (19·9%).

The highest proportion of workers engaged in trade and commerce is in DMC(U) (22·8%), followed by NDMC (13·0%). The lowest proportion lies in Delhi Tahsil (3·5%).

WORKERS IN SERVICES 1971

Percentages of workers engaged in services to the total working population in all the units of the Delhi UT are depicted in this map.

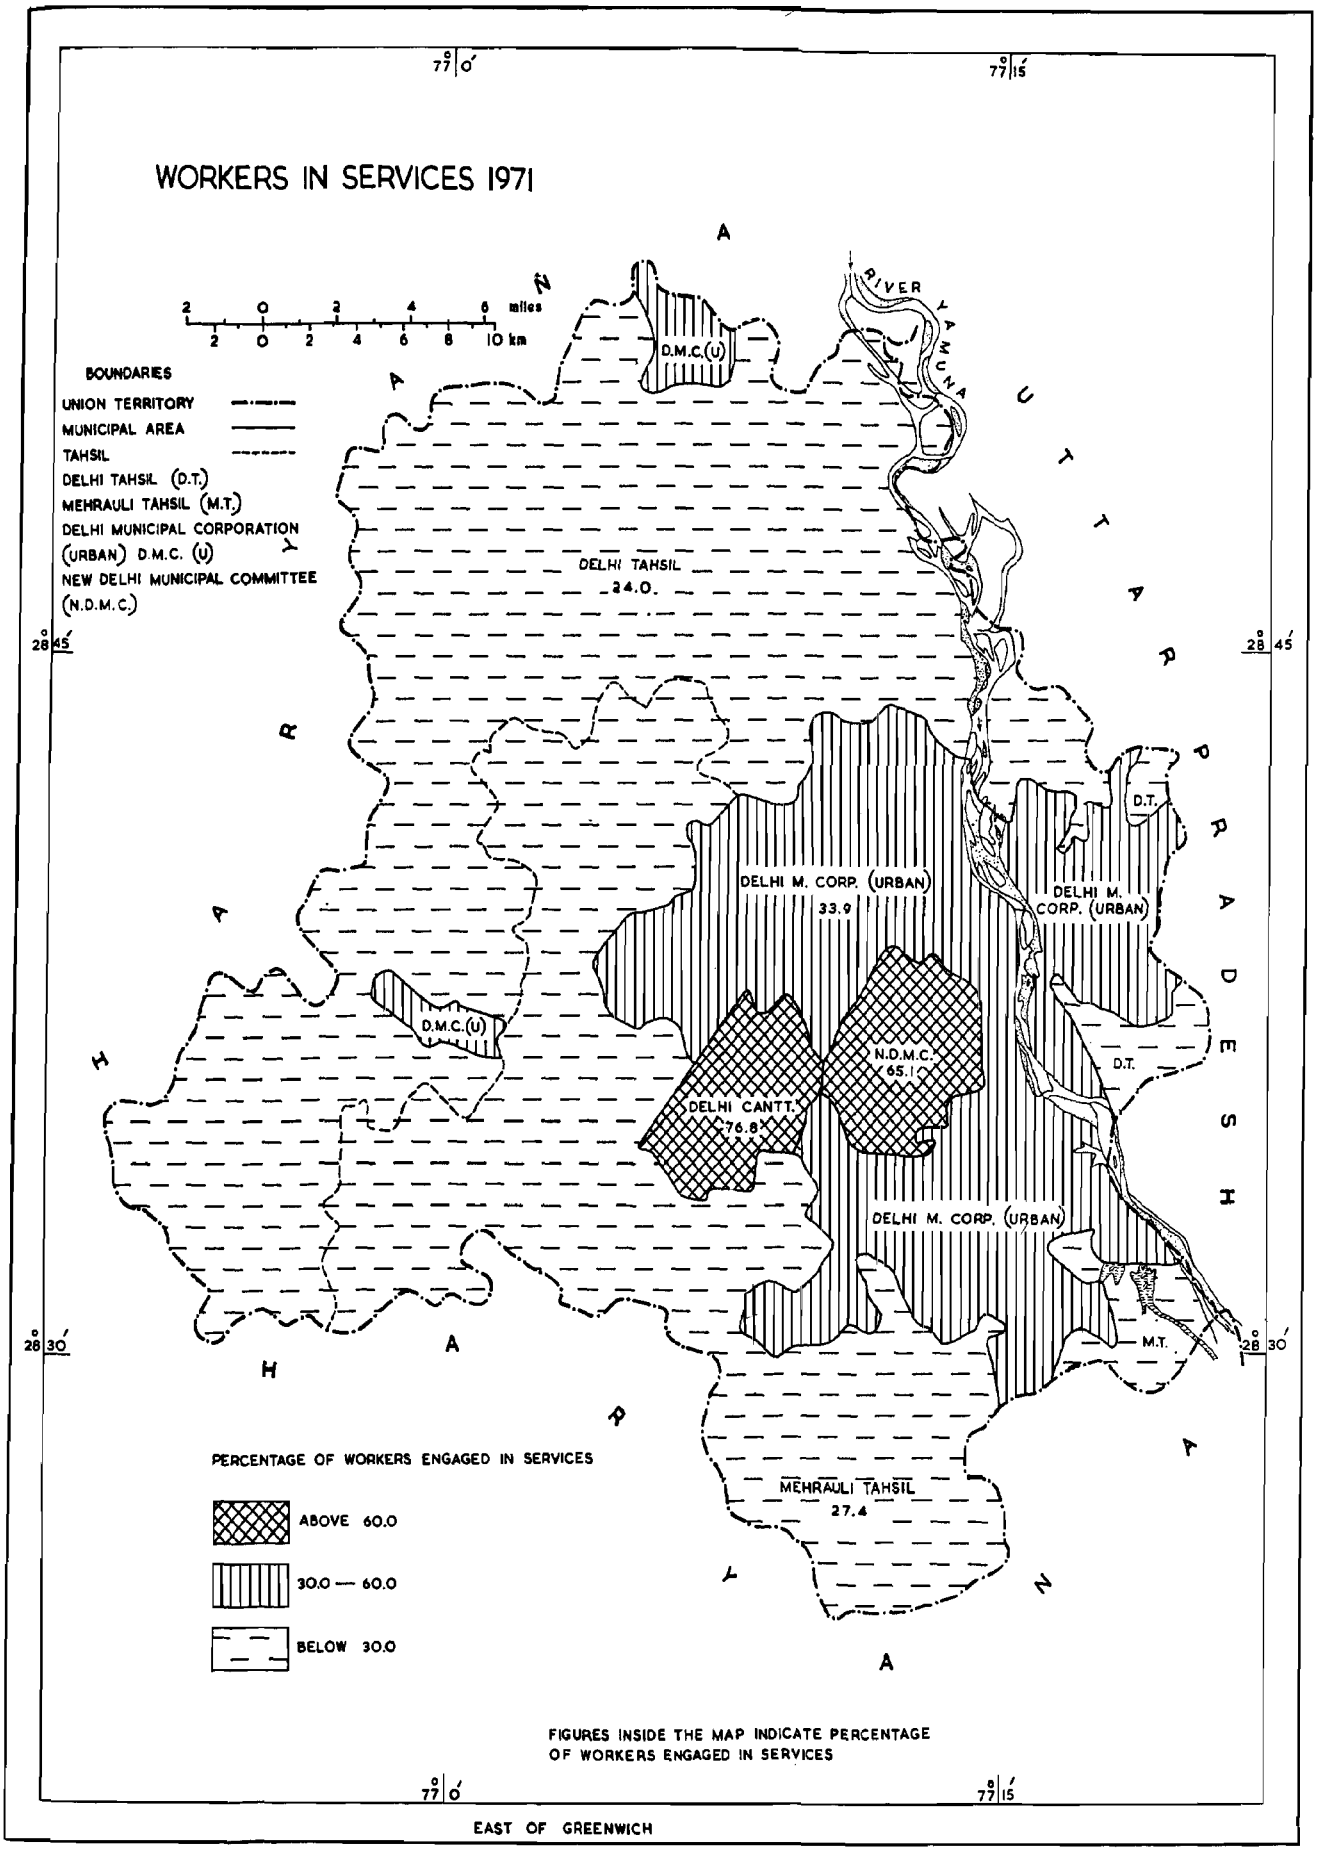

For various units, percentages of workers in services to total working population are calculated and are shown in the map by choropleth technique. The percentage are grouped into three categories as shown in the legend of the map.

The population of workers engaged in services is uneven between the rural and urban units. Highest proportion is in Delhi Cantonment (76·8%), followed by NDMC (65·1%) and DMC(U) (33·9%). In Delhi and Mehrauli Tahsils, the respective percentages are (24·0%) and (27·4%).

Map 70 A To D

WORKERS IN VARIOUS SERVICES 1971

Four maps are drawn to show the percentage of workers in various services to total workers in services 1971. Services are classified as (A) public services (B) educational and scientific services (C) medical and health services (D) personal and other miscellaneous services.

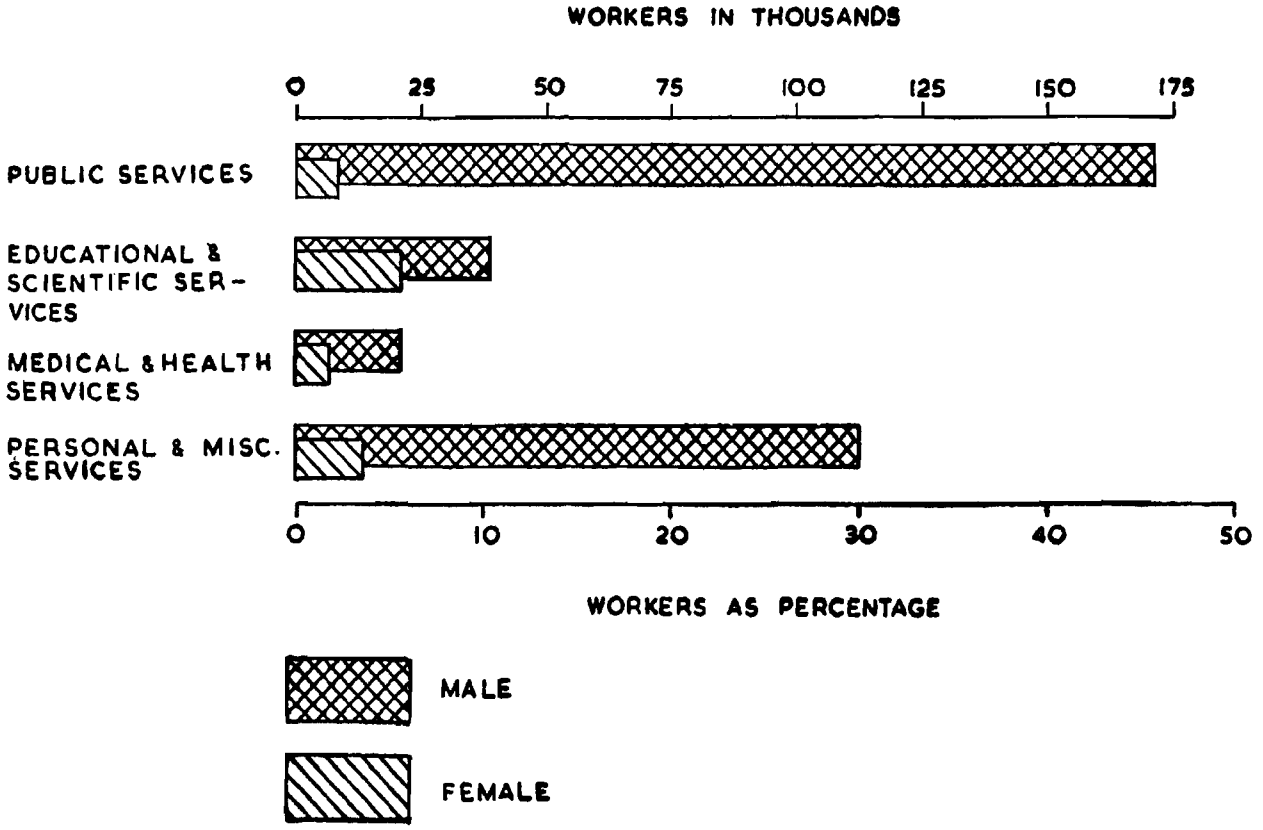

The percentages of workers engaged in the aforesaid four services to total workers grouped into four categories and accordingly hatched from high to low, as given in the legends of the four maps.

MAP A : Percentage of workers engaged in public services in Delhi UT as a whole is 40·0%. Highest proportion is recorded in Delhi Cantonment (85·9%) as against DMC(U) (33·6%) which stands at the bottom. The respective percentages for NDMC, Mehrauli Tahsil and Delhi Tahsil are 53·7, 52·5 and 50·8.

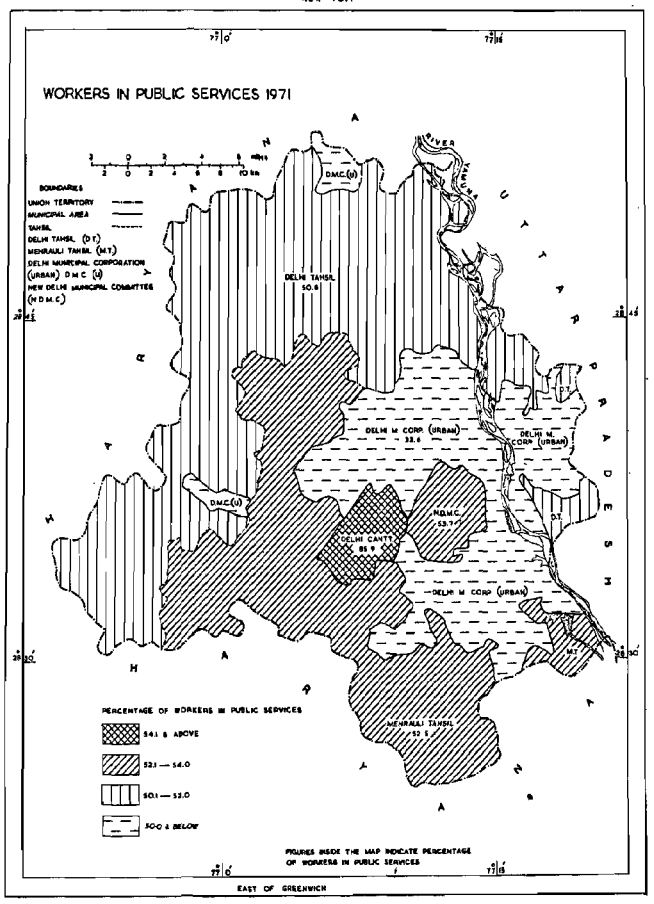

MAP B : In Delhi UT, the percentage of workers engaged in educational & scientific services is 13·7. The highest proportion is in Delhi Tahsil (16·9%), closely followed by DMC(U), (15·5). In other units like Mehrauli Tahsil, NDMC and Delhi Cantonment it is respectively 10·3%, 8·7% and 2·2% .

MAP C : In the category of medical and health service comparatively less workers i.e., 5·5% are engaged in Delhi UT as a whole. In other units like NDMC, DMC(U), Delhi Tahsil and Mehrauli Tahsil the figures is 6·6%, 5·5%,5·3% and 4·9%. In Delhi Cantonment (1·4%), the proportion is lowest.

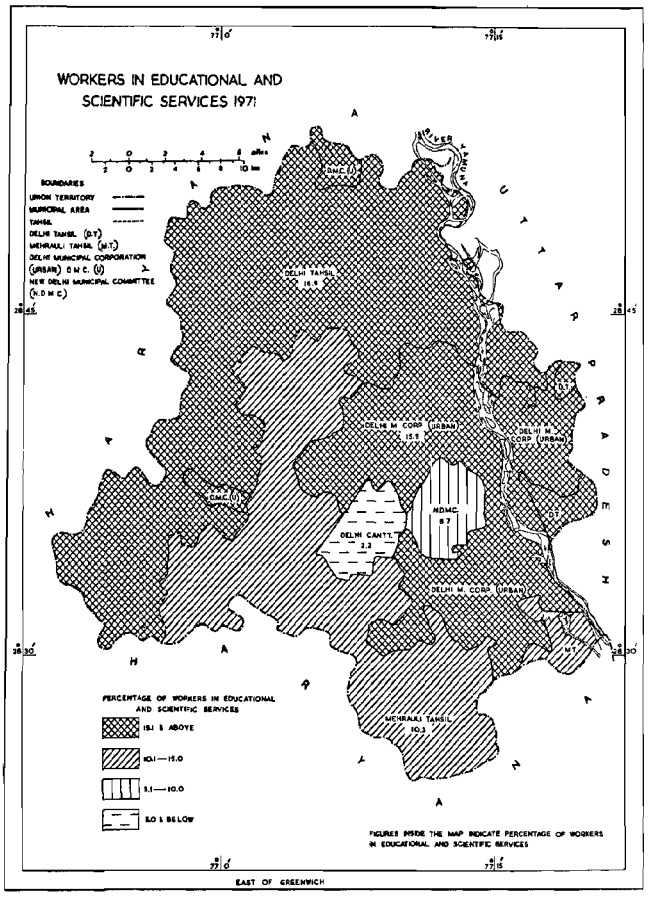

MAP D : In Delhi UT, 28·1% are engaged in personal and other miscellaneous services. The highest proportion is reported in DMC(U) (32·3%) as against the lowest in Delhi Cantonment (8·0%).

SCHEDULED CASTES 1971

The proportion of scheduled castes to the total population in each of the units of Delhi UT are shown in this map.

Percentages of scheduled castes to the total population are calculated. Variations in the distribution among various units are shown by choropleth method into three categories as depicted in the legend of the map.

Highest proportion of scheduled castes is reported in Mehrauli Tahsil (27·6), closely followed by Delhi Tahsil (23·0%). The lowest proportion is in DMC(U) (14·5%). In Delhi Cantonment and NDMC, the respective proportions are (15·6%) and (15·4%).

Map 72

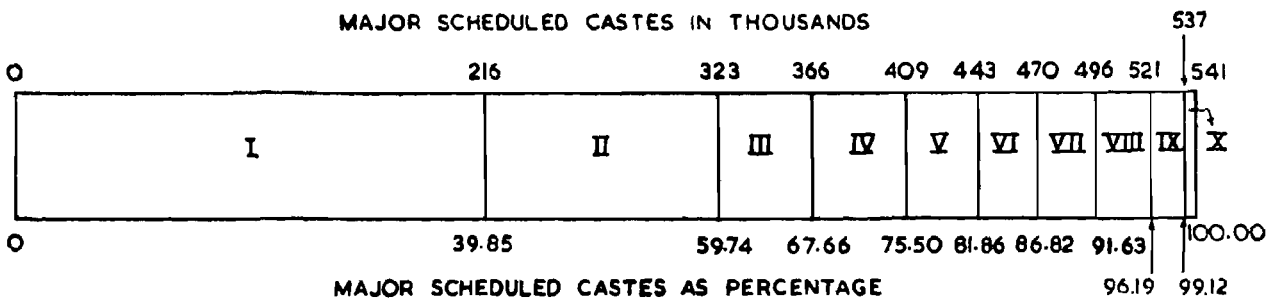

TEN NUMERICALLY MAJOR SCHEDULED CASTES 1971

In this map is depicted the distribution of first ten numerically major scheduled castes in the Delhi UT.

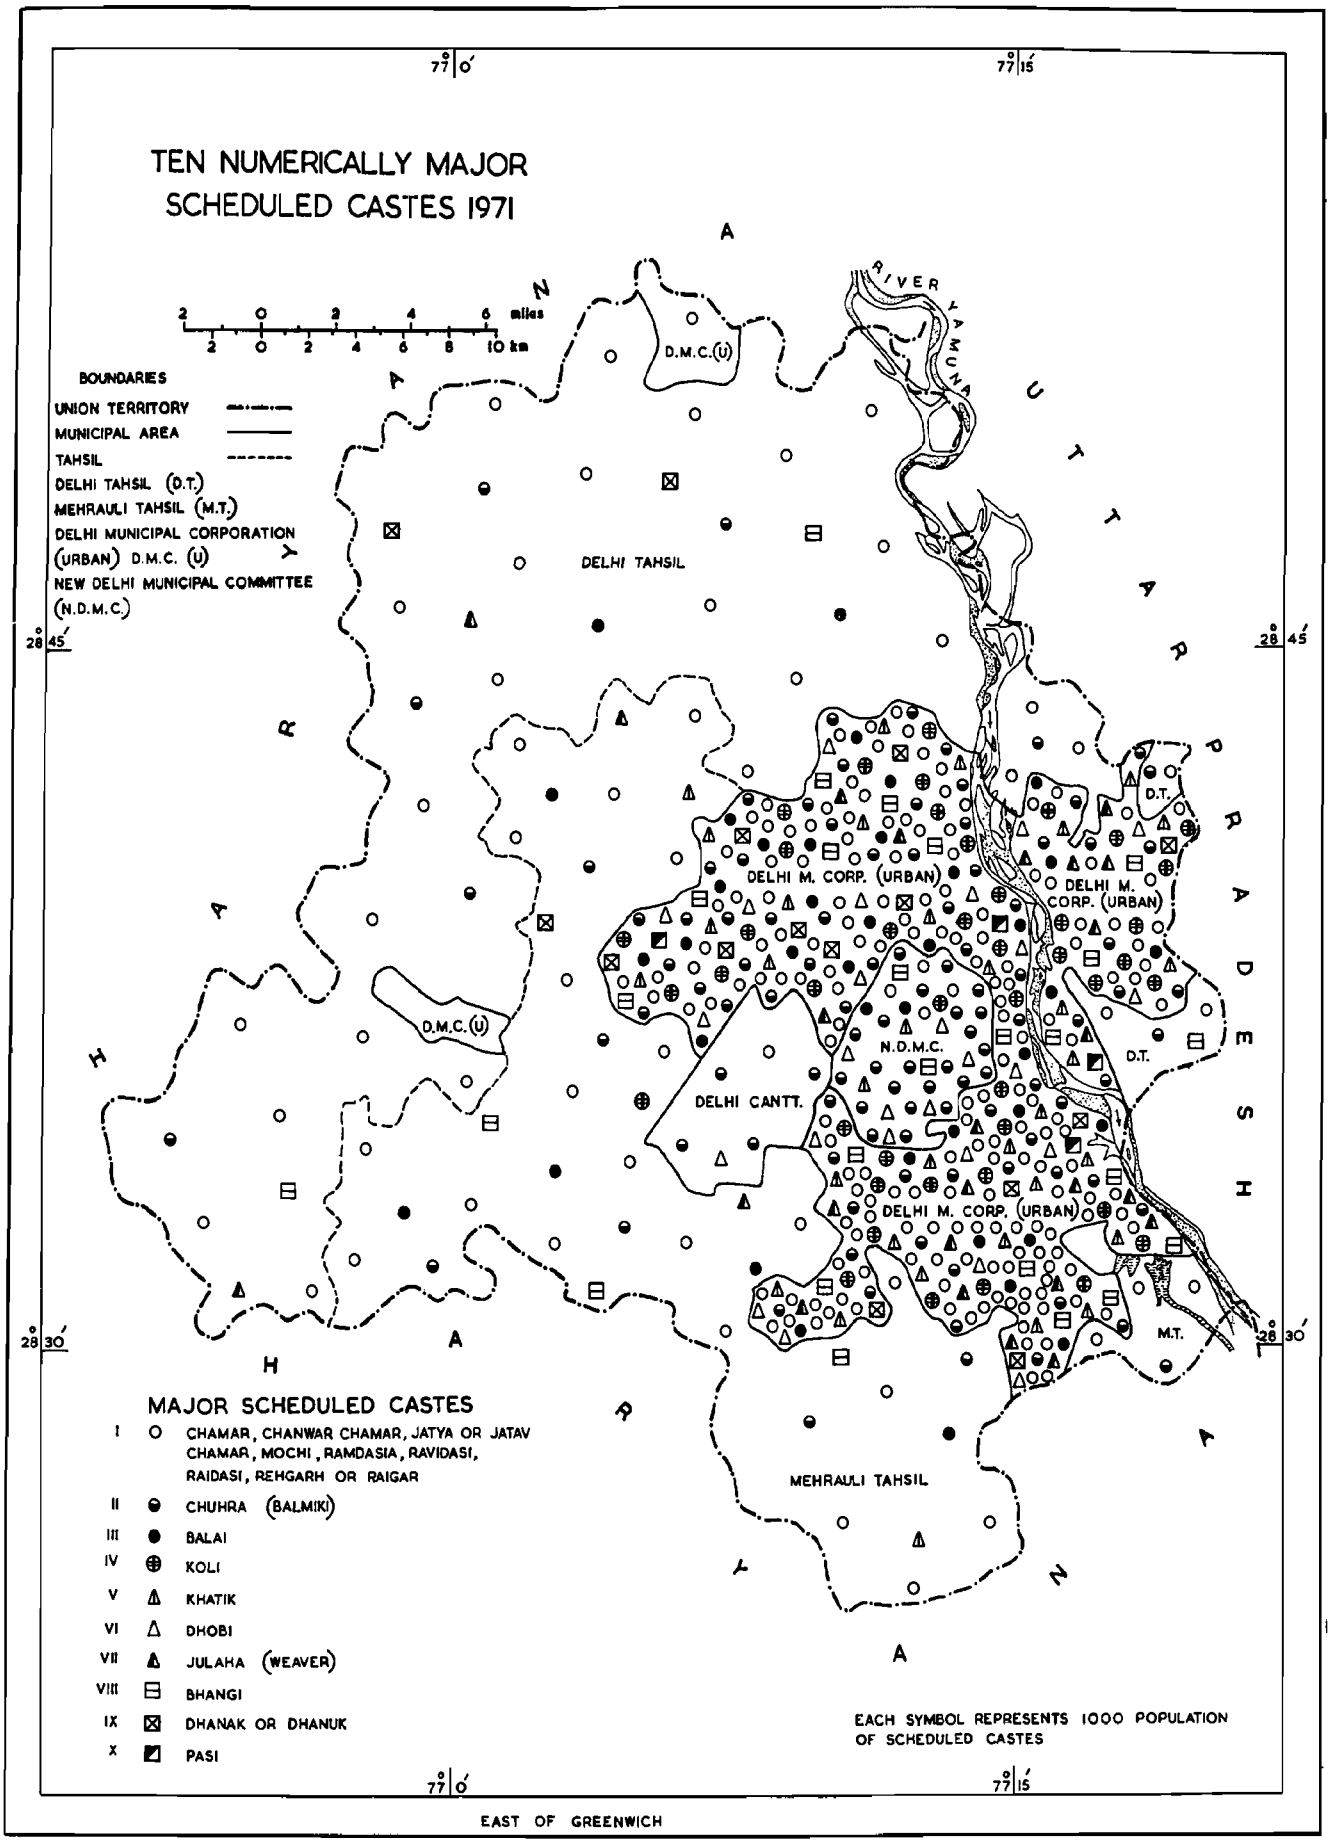

Following ten numerically major scheduled castes are taken (1) Chamar, Chanwar, Chamar Jatya or Jatav Chamar, mochi, Ramdasia, Ravidasi, Raidasi, Rehgarh or Raigarh (2) Chuhra (Balmiki) (3) Balai (4) Koli (5) Khatik (6) Dhobi (7) Julaha (weaver) (8) Bhangi (9) Dhanak or Dhanuk (10) Pasi. Distribution of these scheduled castes is shown by different symbols as depicted in the legend of the map. Each symbol represents 1,000 population of scheduled caste.

Major concentration of above scheduled castes population is in DMC(U) and NDMC. In Delhi Cantonment, Delhi Tahsil, and Mehrauli Tahsil they are thinly distributed.

Chamars form more than one-third of the total scheduled castes population and ranks at the top in DMC(U) Delhi Tahsil and Mehrauli Tahsil. In NDMC and Delhi Cantonment Chuhras out-number all other scheduled castes. In all other units Chuhras occupy second place. It is noted that 86·0% pasis are clustered in DMC(U).

MAJOR RELIGIONS 1971

Proportions of population of major religions are depicted in this map. In the category of major religions are Hinduism, Islam, Sikhism and Jainism, population having faith in other religions is classed as 'Other religions'.

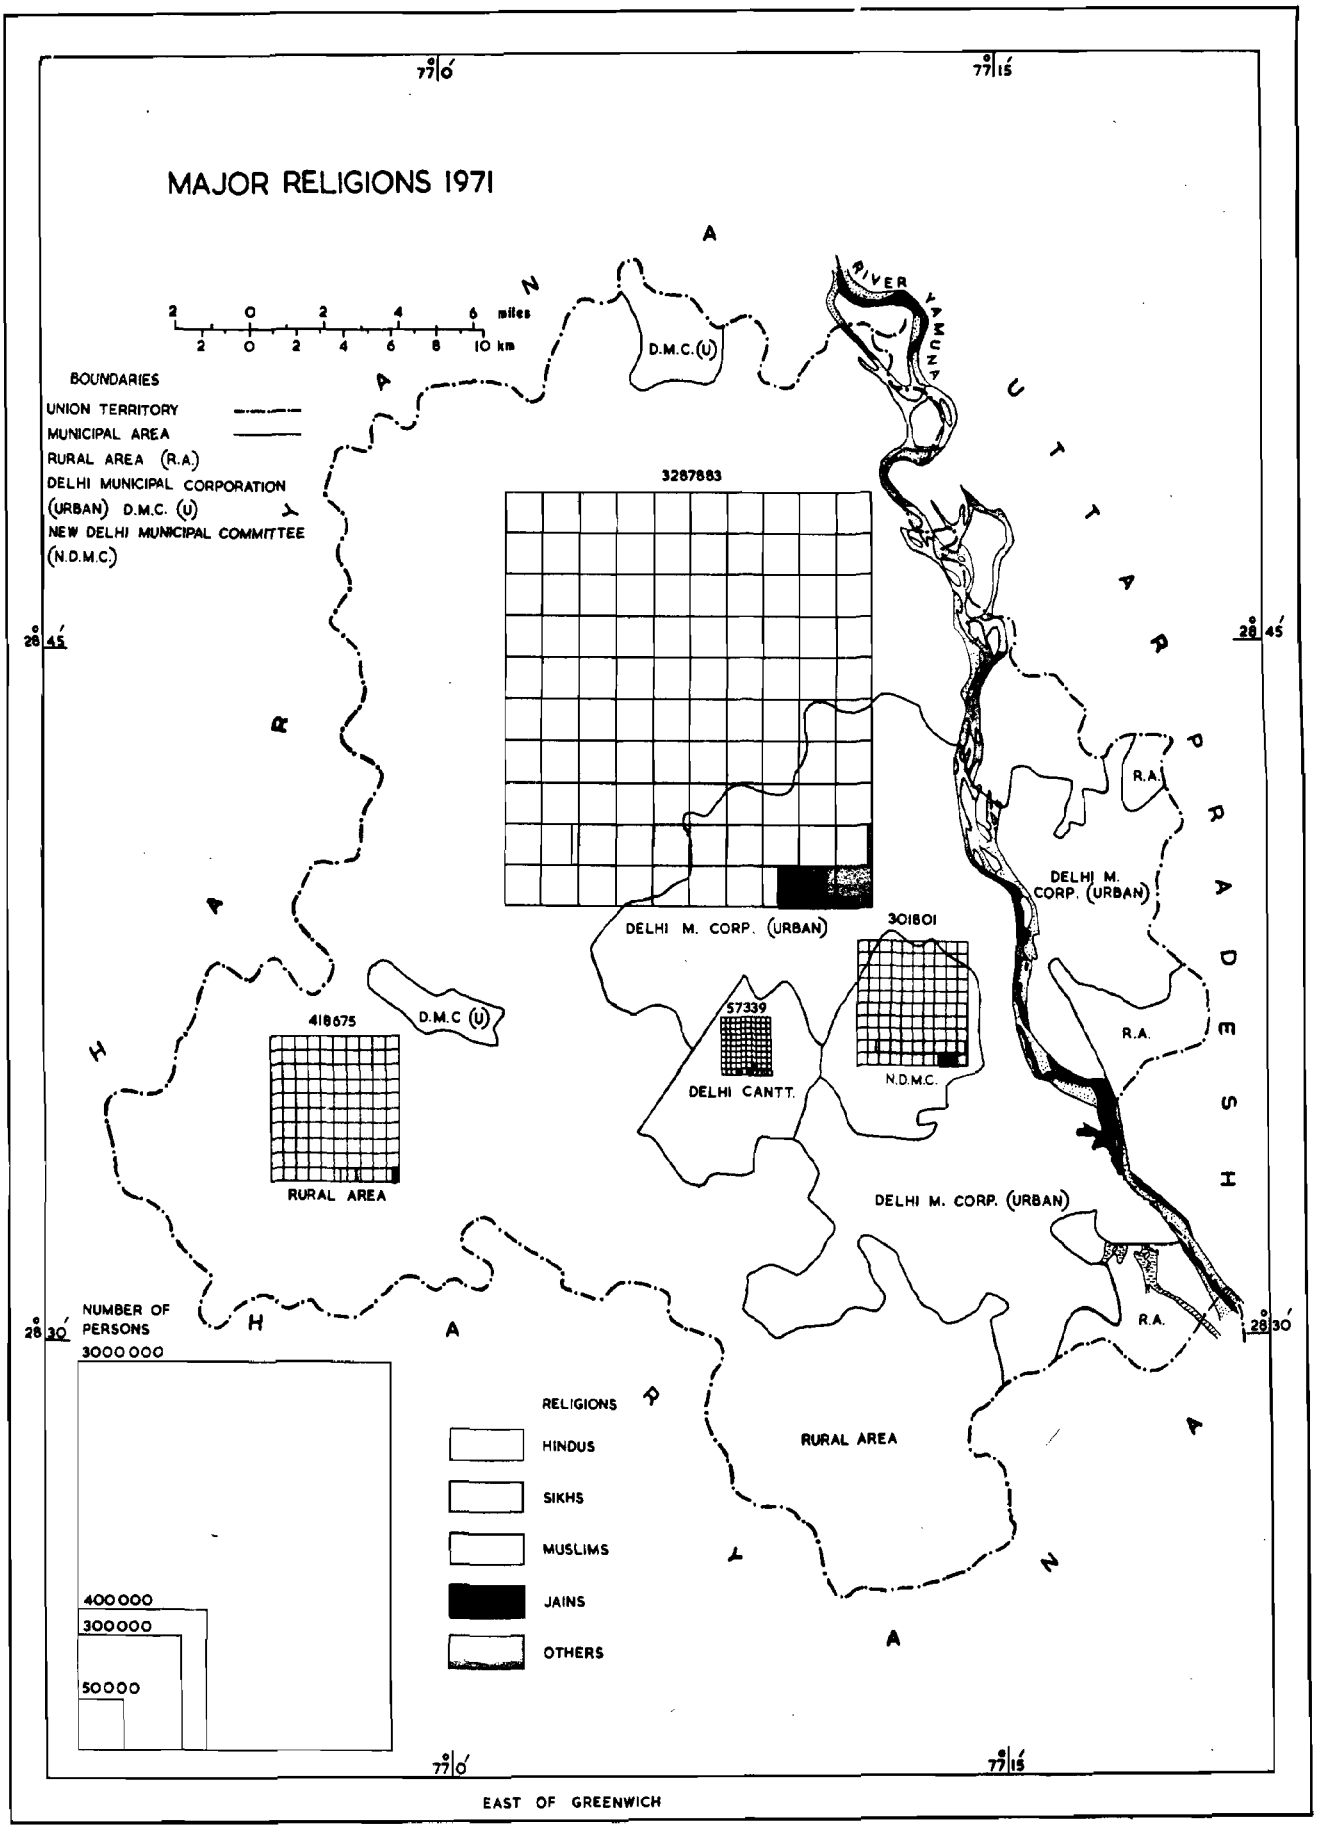

In each of the units, a square in proportion of the total population is drawn with a division of 100 grids, each representing 1% of the population having faith in any of the religions. Five different colours are used to depict different religions as per legend in the map.

In Delhi UT, Hinduism out numbers all other religions with proportion of its followers as (83·8%). It is followed by Sikhs (7·2%), Muslims (6·2%) and Jains (1·2%).

In rural Delhi, again Hindus are in an overwhelming majority (95·6%). Unlike Delhi UT as a whole, in rural areas, Muslims (2·7%) predominate Sikhs (1·2%).

FEMALE LITERACY 1971

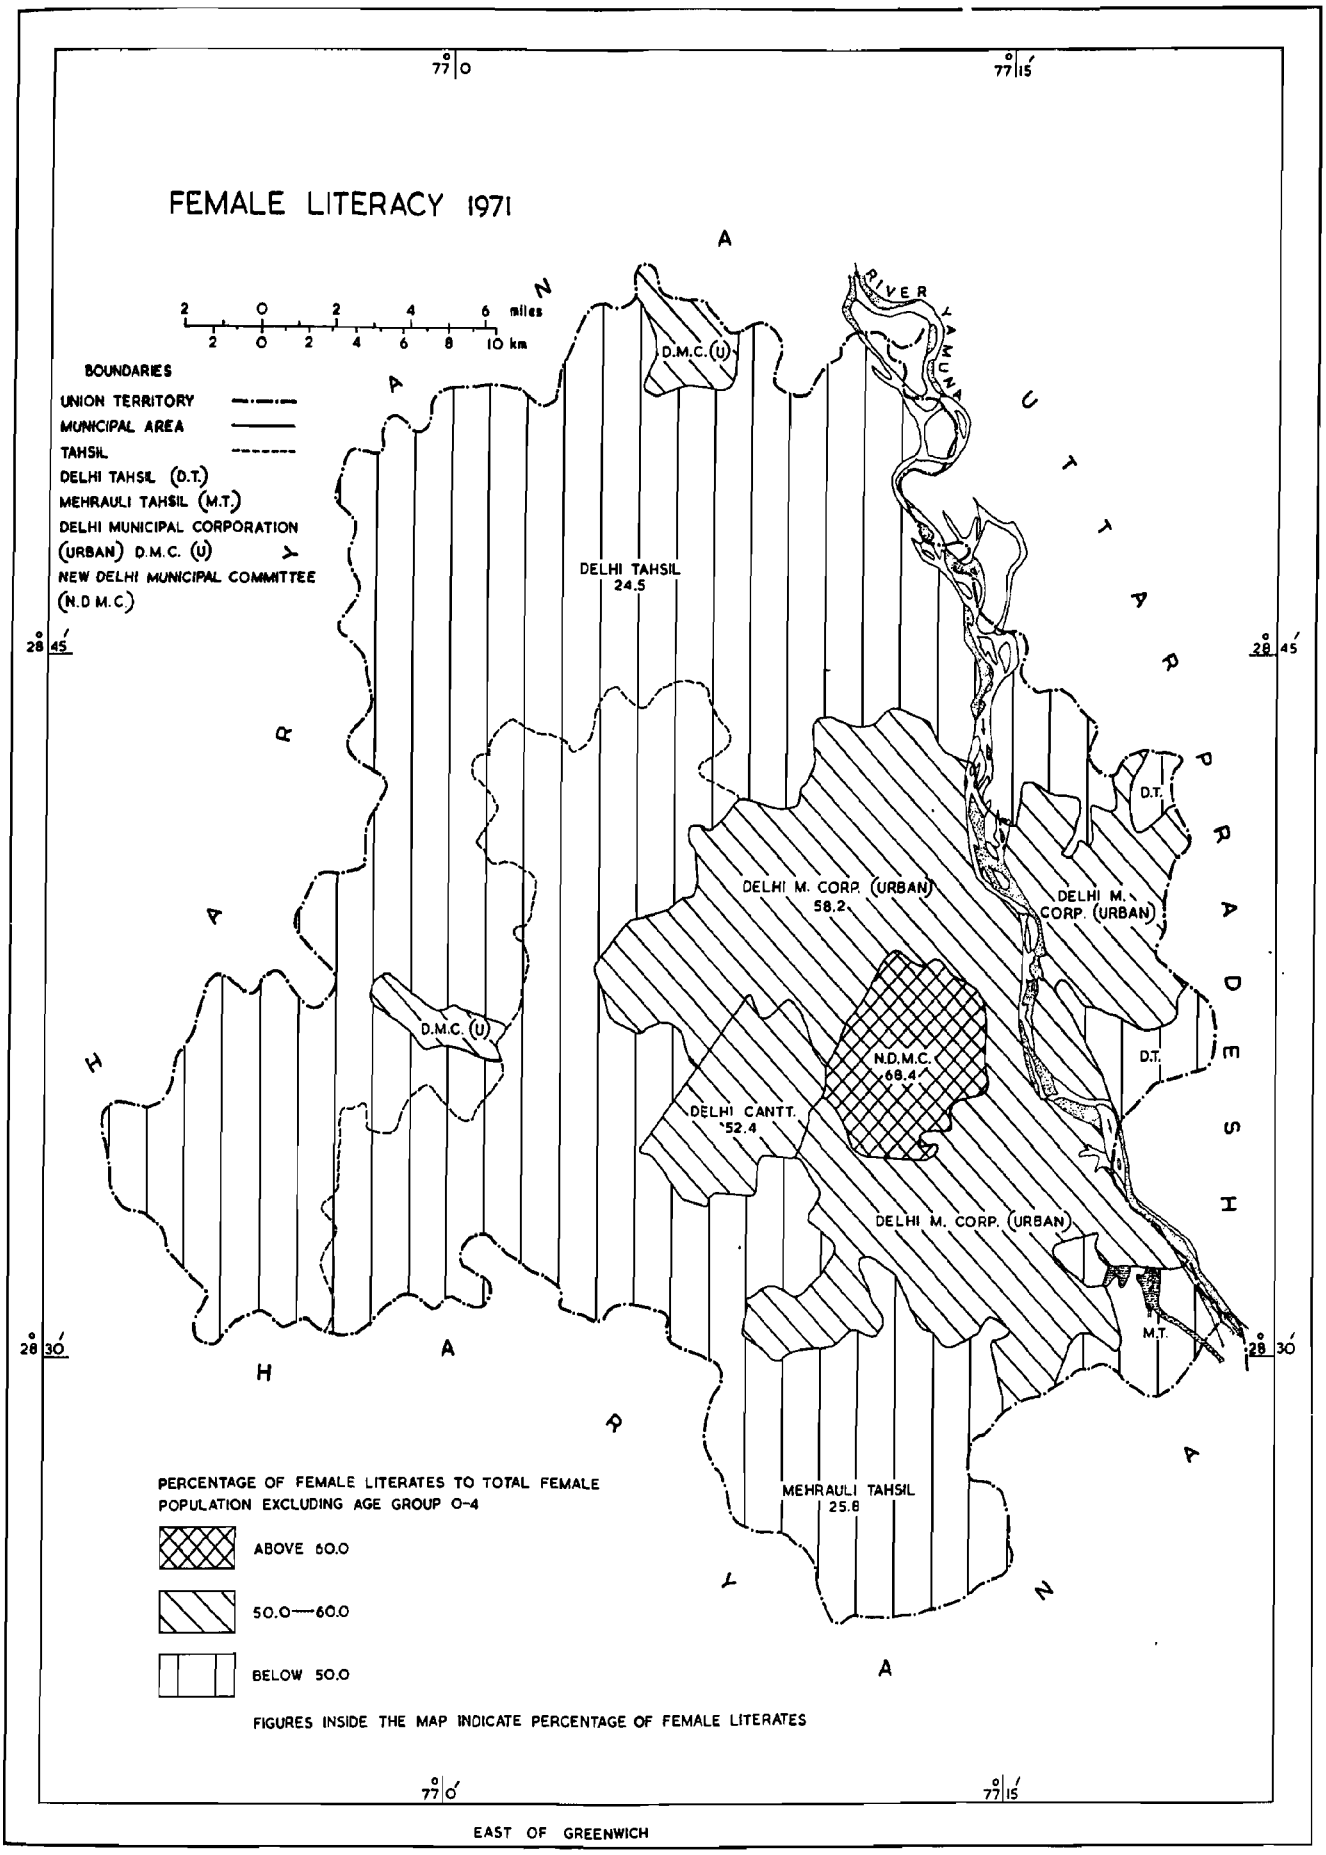

This map shows the proportion of female literates to total female population of age 5 and above.

The percentages of female literates are calculated from the total female population (exluding age 0-4). Percentage figures are grouped into three categories and are hatched according to proportions high and low as shown in the legend.

In comparison to rural areas, the percentage of female literates in urban agglomeration is more than the double. The highest proportion is in NDMC (68·4%) and is followed by DMC(U) (58·2%) and Delhi Cantonment (52·4%). In Delhi Tahsil and Mehrauli Tahsil it is 24·5% and 25·8% respectively.

Map 77

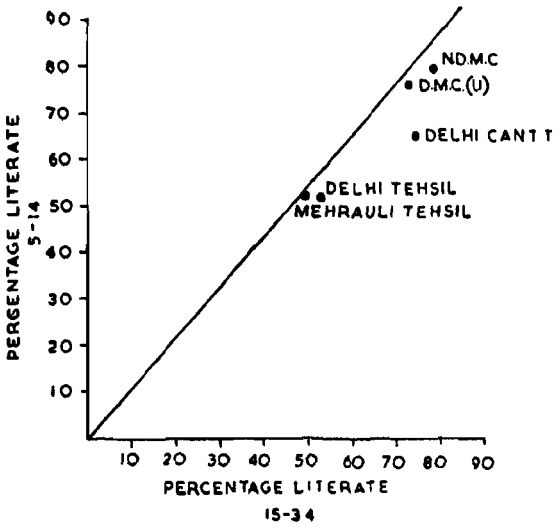

LITERATES PER 1000 OF POPULATION IN AGE 5—14 OVER LITERATES PER 1000 OF POPULATION IN AGE 15—34 1971

Variation of literates per 1000 population in the age 5—14 over those in age 15—34 are depicted in this map.

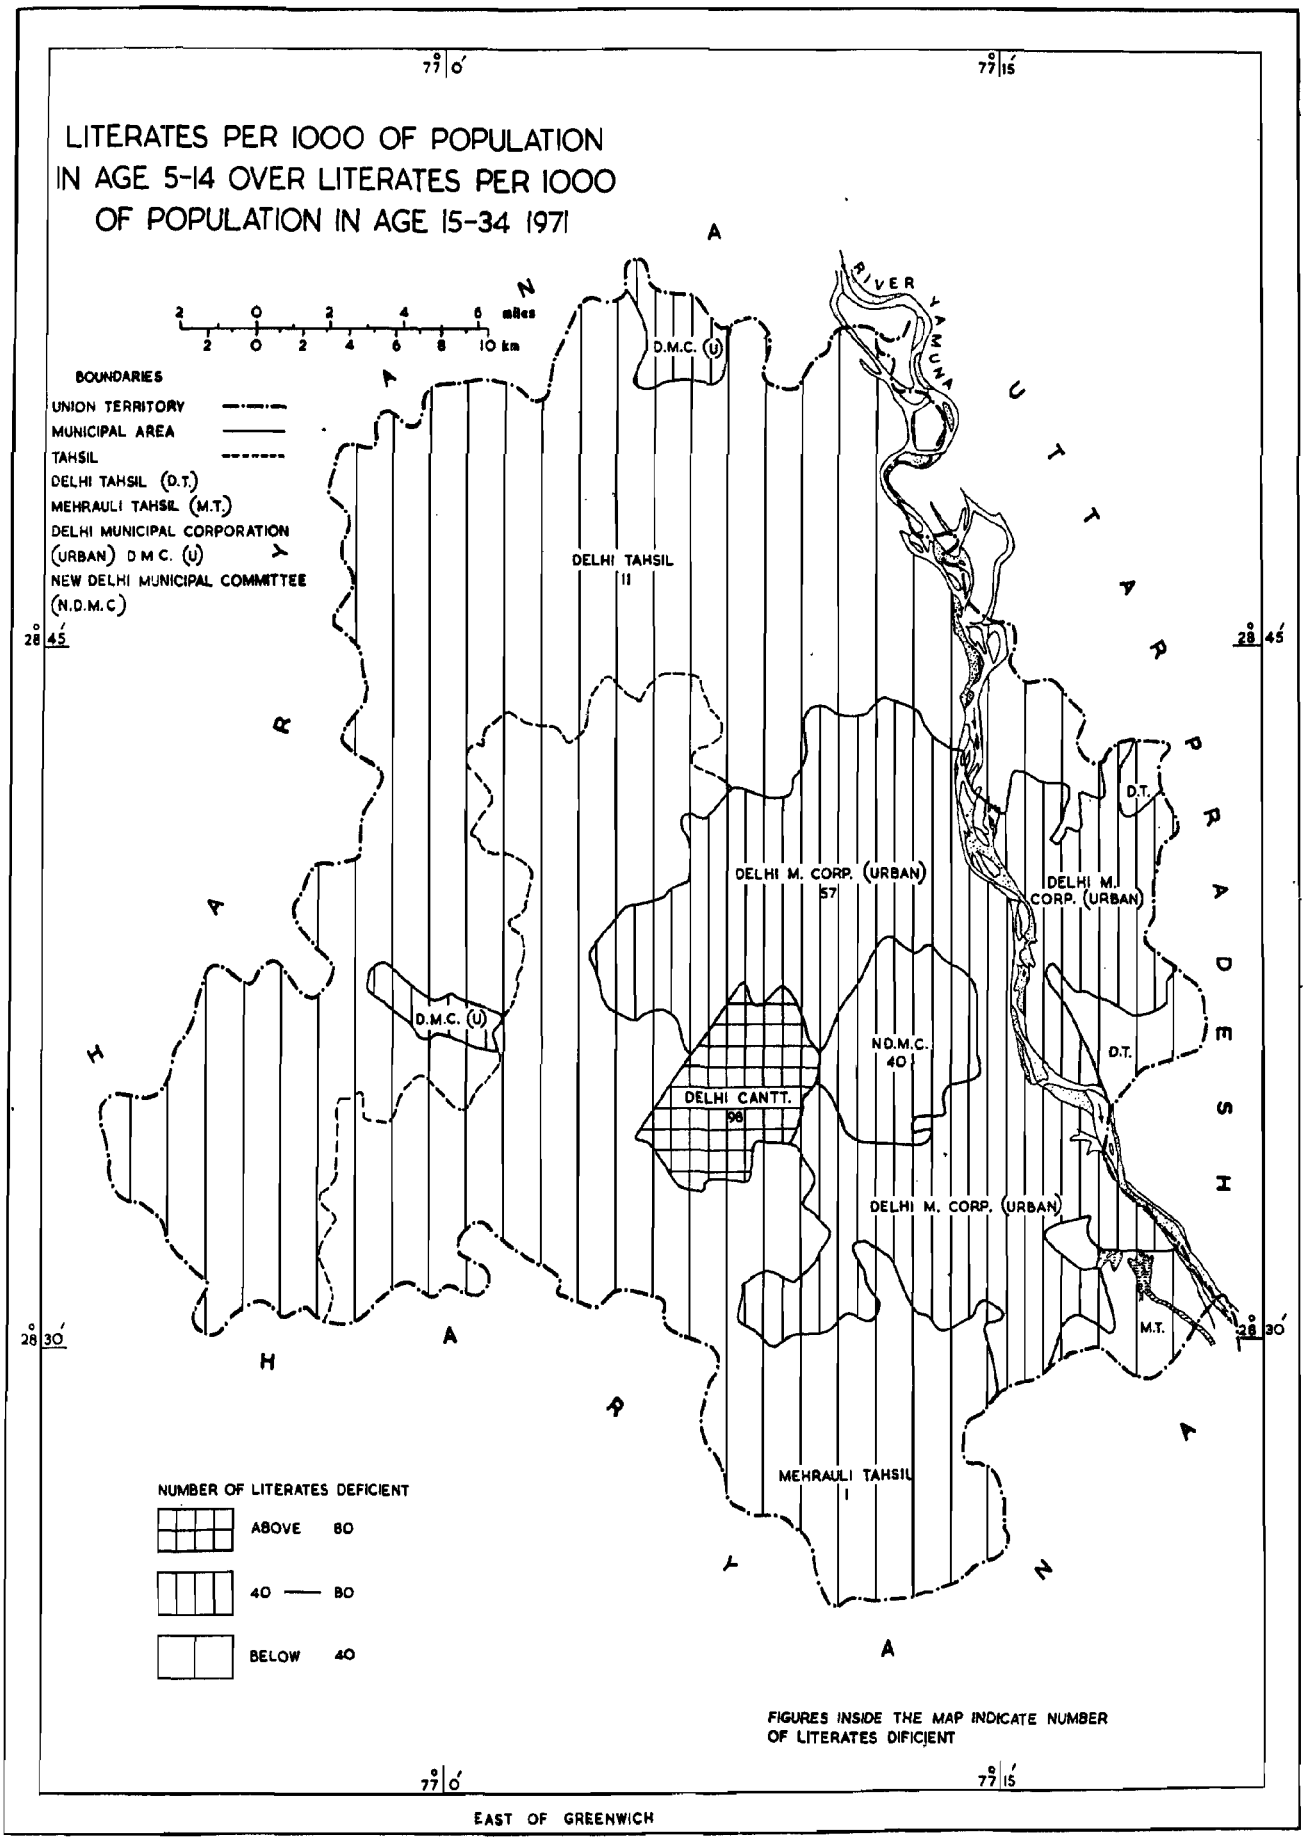

Proportions of literates per 1000 of population in ages 5—14 and 15—34 are worked out. Since the proportions of literates in age 5—14 are deficient as compared to those in age 15—34, deficient values are grouped into three categories and are hatched in accordance with the deficient values from high to low.

The highest deficient proportion of literates in age 5—14 is in Delhi Cantonment (98) as against the UT average of (56). In DMC (U) and NDMC it is (57) and (40).

It is interesting to note that the deficient literates in Delhi Tahsil & Mehrauli Tahsil are —11, and —1 respectively.

Map 84

TEACHERS FOR 1000 OF STUDENTS AT PRIMARY, SECONDARY, UNIVERSITY LEVEL AND OF ALL GRADES PER 100 SCHOOLS 1971

Four comparative maps, showing the proportions of teachers per 1,000 of students at primary, secondary, university level and of all grades and percentage of teachers of all grades per 100 schools and other educational institutions in rural and urban areas are drawn. These maps have been numbered from A to D respectively and are reproduced on the plate.

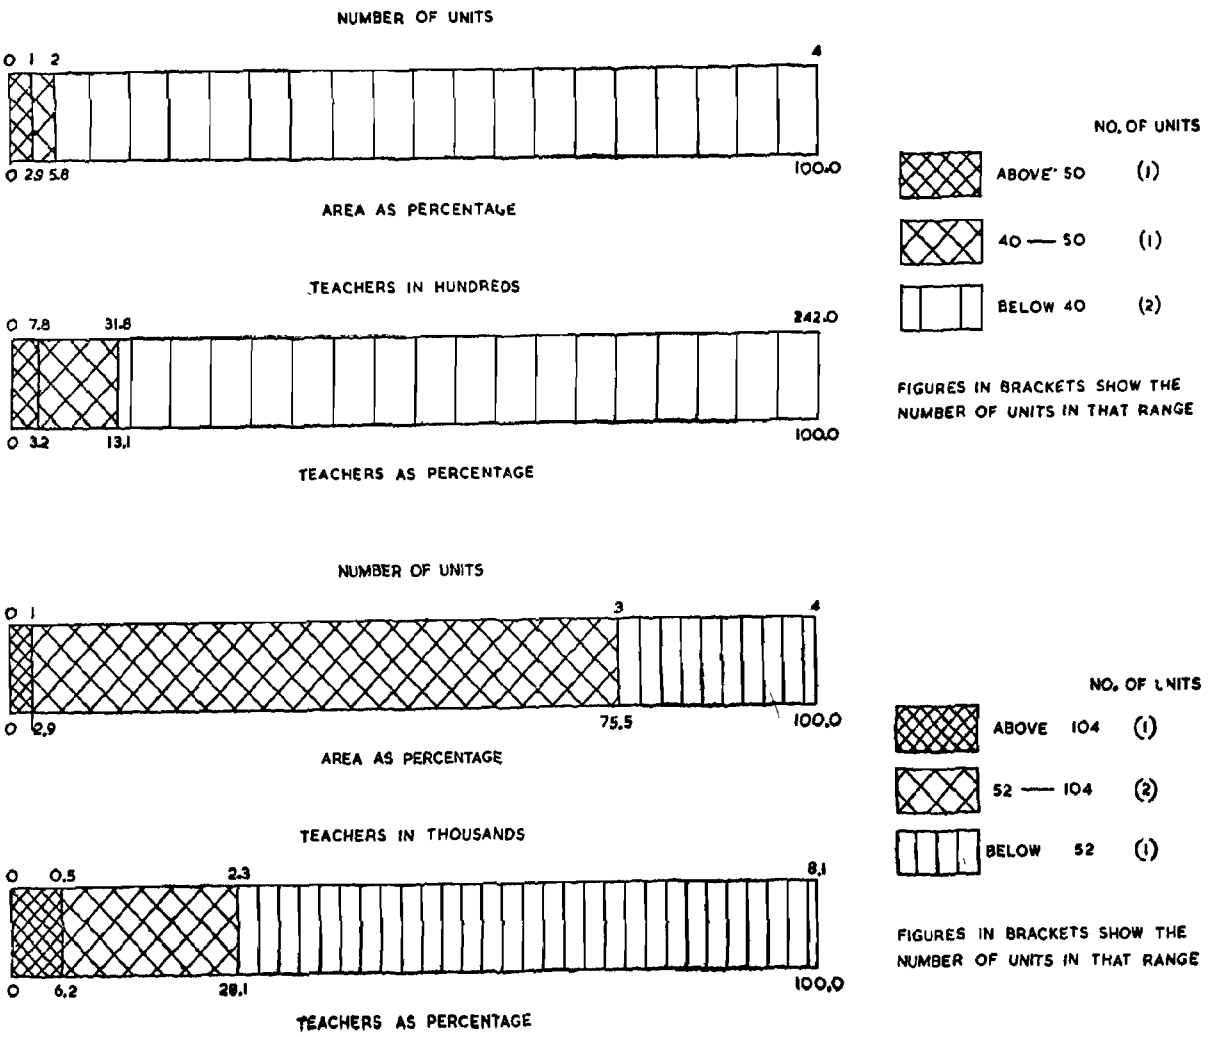

For first three maps (A, B, D) proportion of teachers at primary, secondary and university level are suitably grouped into three ranges and hatching is done at per legends. For Map (C) the number of teacher per 100 of schools and other educational institution, suitably grouped into two ranges and hatching is made as per legend given in the map.

MAP A : Proportion of teachers per 1000 of students of primary is reported highest in Delhi Cantonment (85), closely followed by NDMC (41). It is interesting to note that the rural area (37) as comparatively higher proportion than the DMC(U) (35).

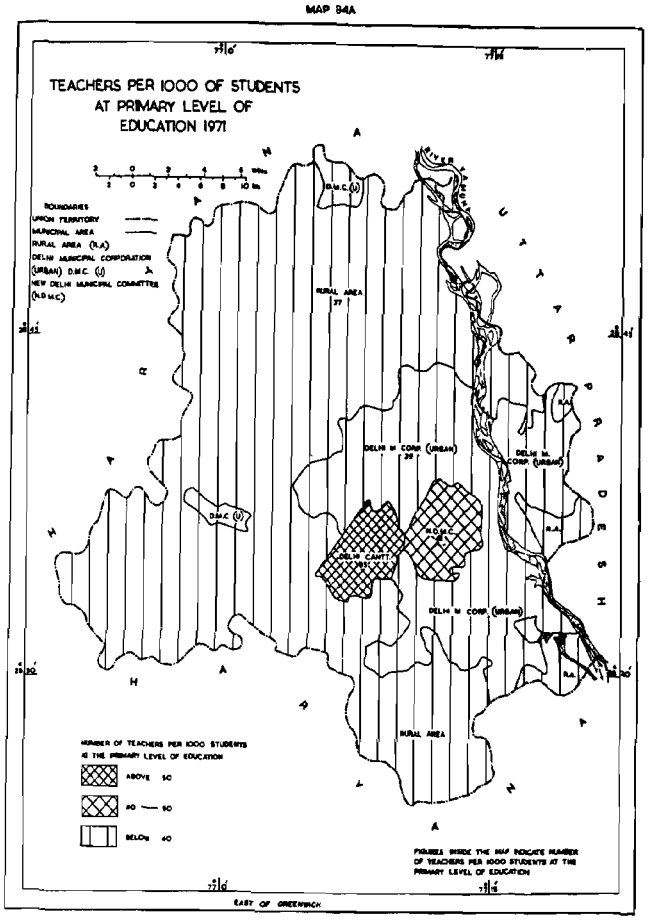

MAP B : Proportion of teachers at secondary level is as high as 189 in Delhi Cantonment which is almost thrice than that of any other unit. Proportions pertaining to NDMC (56), rural area (54) and DMC (U) (50), however, does not differ much.

MAP C : The number of teachers per 1000 of students at university level is 112 in NDMC, which is almost double than that of DMC(U) and rural areas as both have the same number of (65). Since in Delhi Cantonment, no university exists, hence the number of teachers at this level is nil.

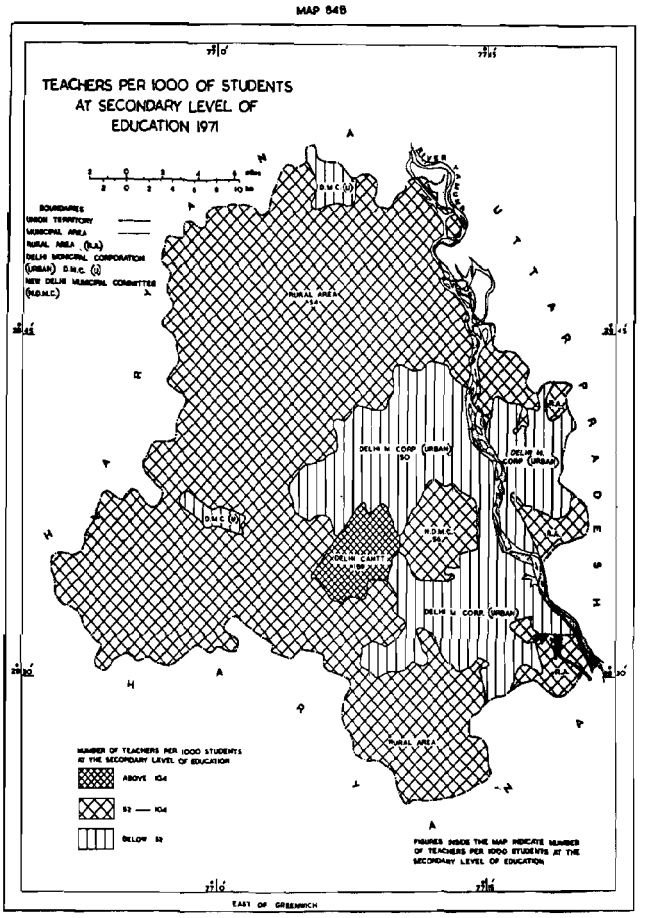

MAP D : The number of teachers of all grades per 100 schools and other educational institutions in rural ares is 850 which stands at the bottom. For the various urban units the respective figures are Delhi Cantonment (3556), NDMC (2400), and DMC (U) (1717).

Map 86

LITERATES HOLDING NON-TECHNICAL AND TECHNICAL DIPLOMA OR CERTIFICATES 1971

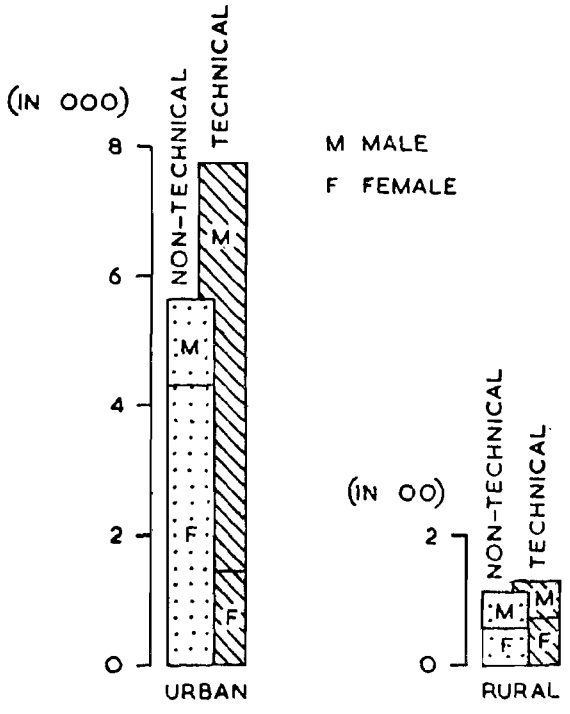

This map depicts the number of non-technical and technical diploma or certificates holders per 10,000 literates.

The number of technical and non-technical diploma holders per 10,000 literates is represented in each of the units by choropleth. The number is grouped into three categories. The proportion of technical and non-technical diploma or certificate holders are depicted by the proportionate circles.

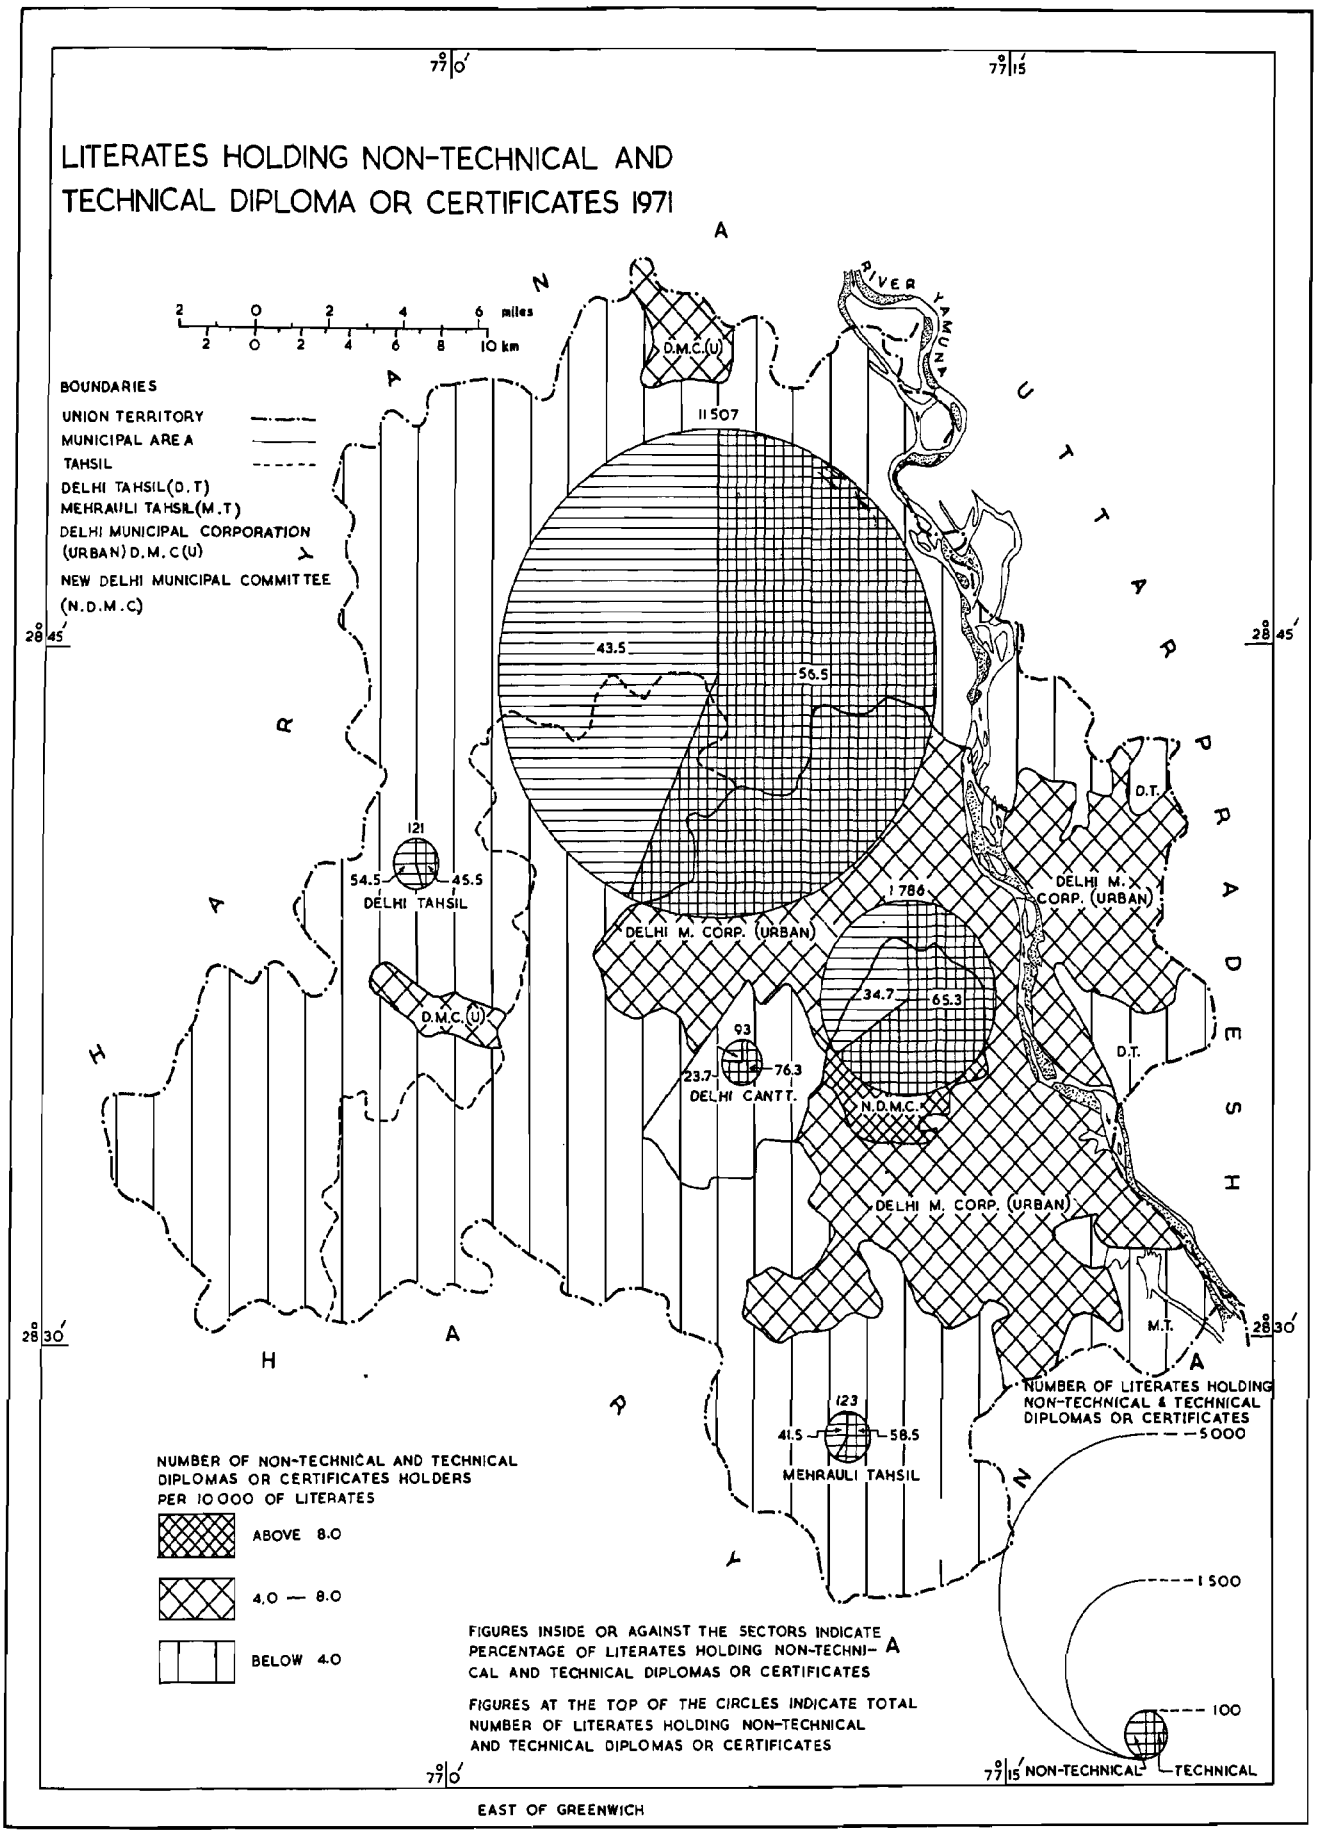

The proportion of technical hands in the Delhi Cantonment (75·3%) is highest, closely followed by NDMC (65·3%). In other units like DMC (U), Mehrauli Tahsil, Delhi Tahsil the respective proportions are 56·5%, 58·5% and 45·5%.

The number of technical and non-technical diploma, or certificate holders per 10,000 literates are higher in NDMC (8·83) than the DMC (U) 6·01 Delhi Cantonment, Delhi Tahsil and Mehrauli Tahsil have respectively 2·74, 1·46 and 1·79%.

LITERATES HOLDING UNIVERSITY DEGREES/DIPLOMAS OF THE GRADUATE LEVEL AND ABOVE 1971

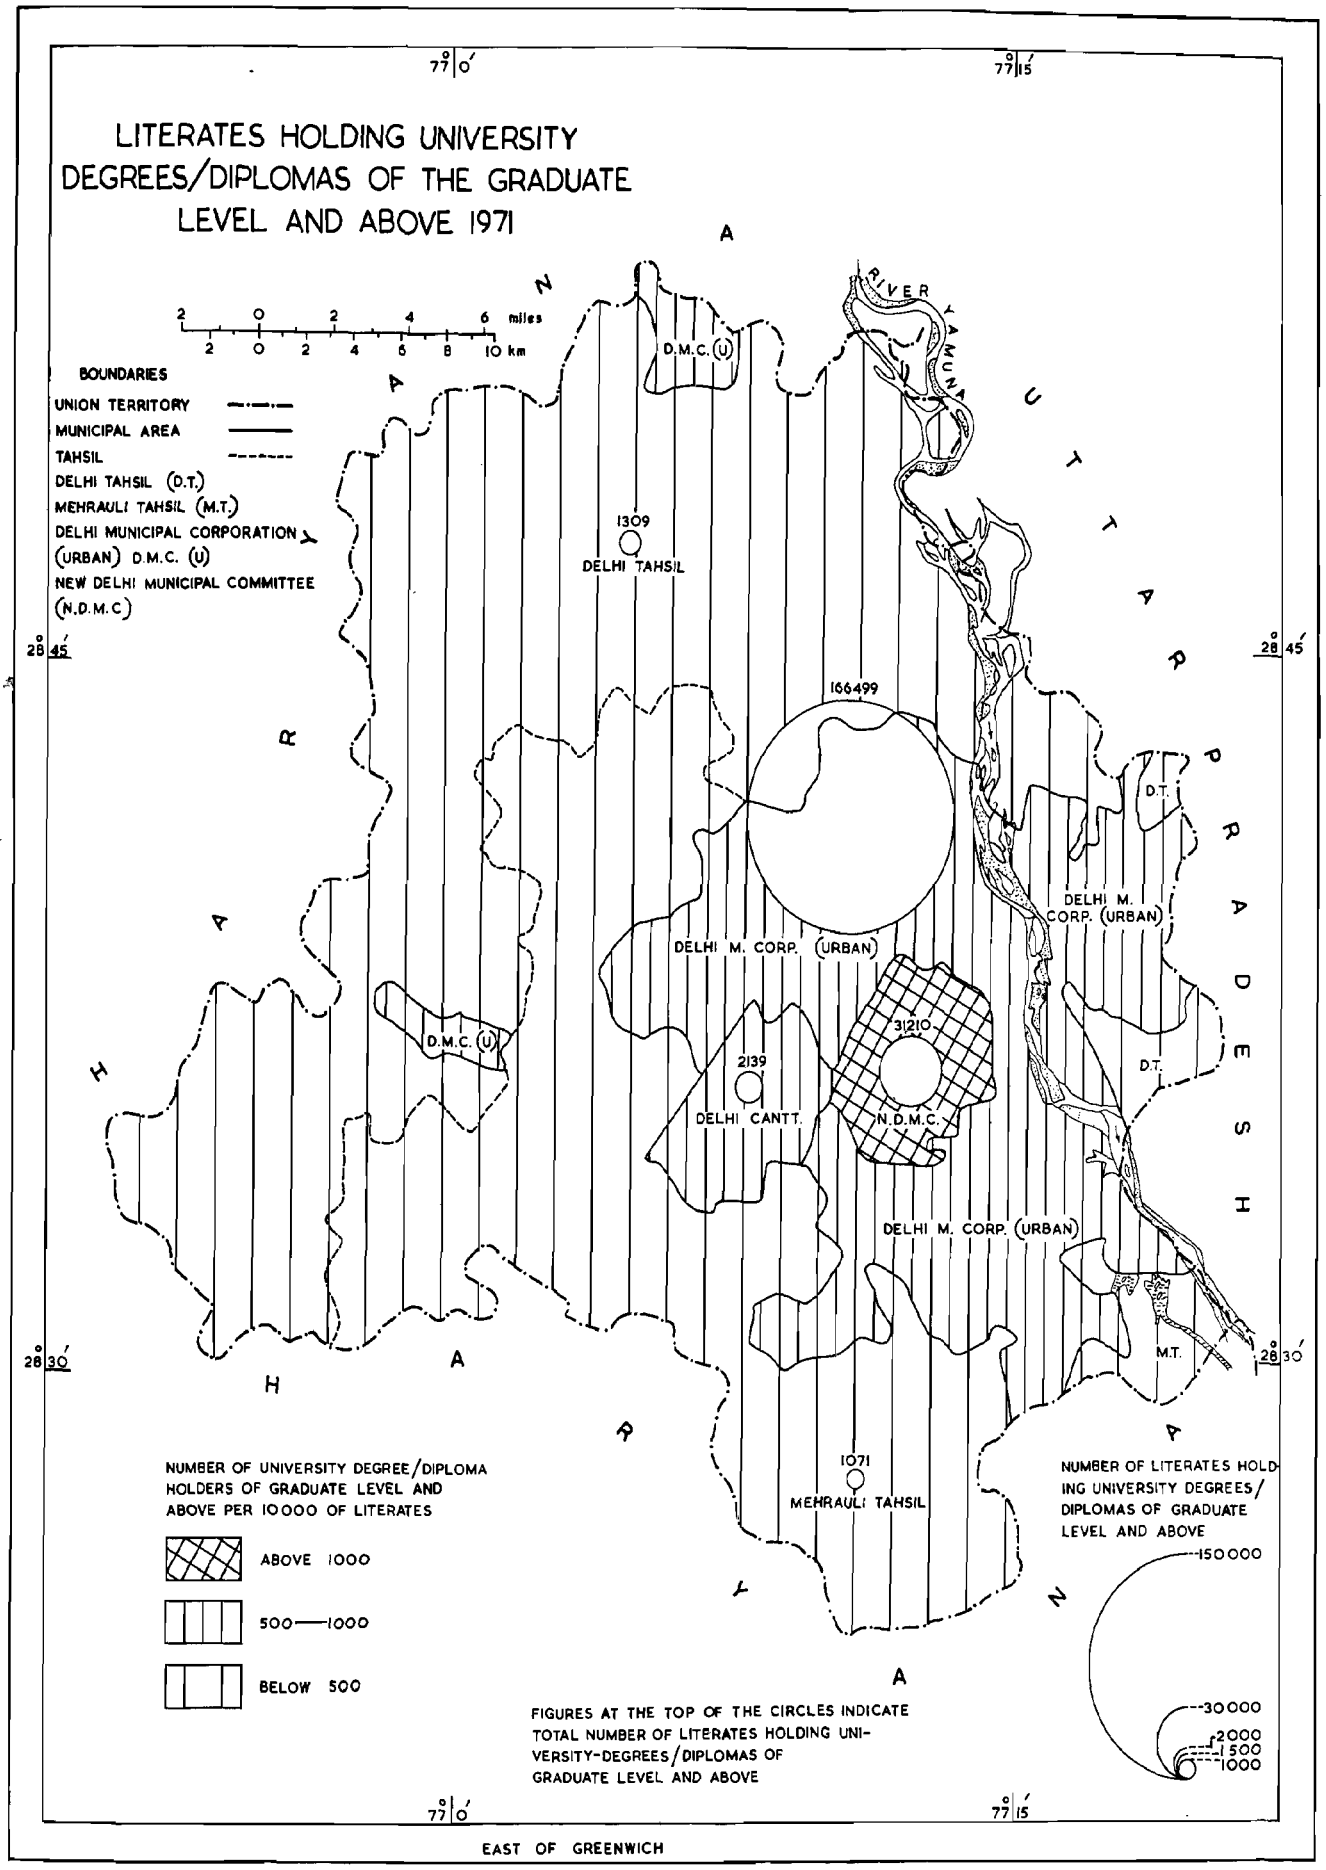

Number of university degree/diploma holders of the graduate level and above per 10,000 of literates in each of the units of the Delhi UT is depicted in this map.

Proportions of university degree/diploma holders per 10,000 of literates are grouped into three categories and are shown by the Choropleth technique as per legend.

Proportion of degree/diploma holders per 10,000 of literates, in various units are : NDMC (1544), DMC (U) (870) and Delhi Cantonment (630). In rural area, the proportions are very low i.e., in Delhi Tahsil (158) and Mehrauli Tahsil (156).

Map 88

RURAL POPULATION LIVING IN VILLAGES CONTAINING 50 AND BELOW, 51 -100 AND ABOVE 100 HOUSES 1971

This map shows the distribution of rural population living in villages containing 50 and below, 51-100 and above 100 houses.

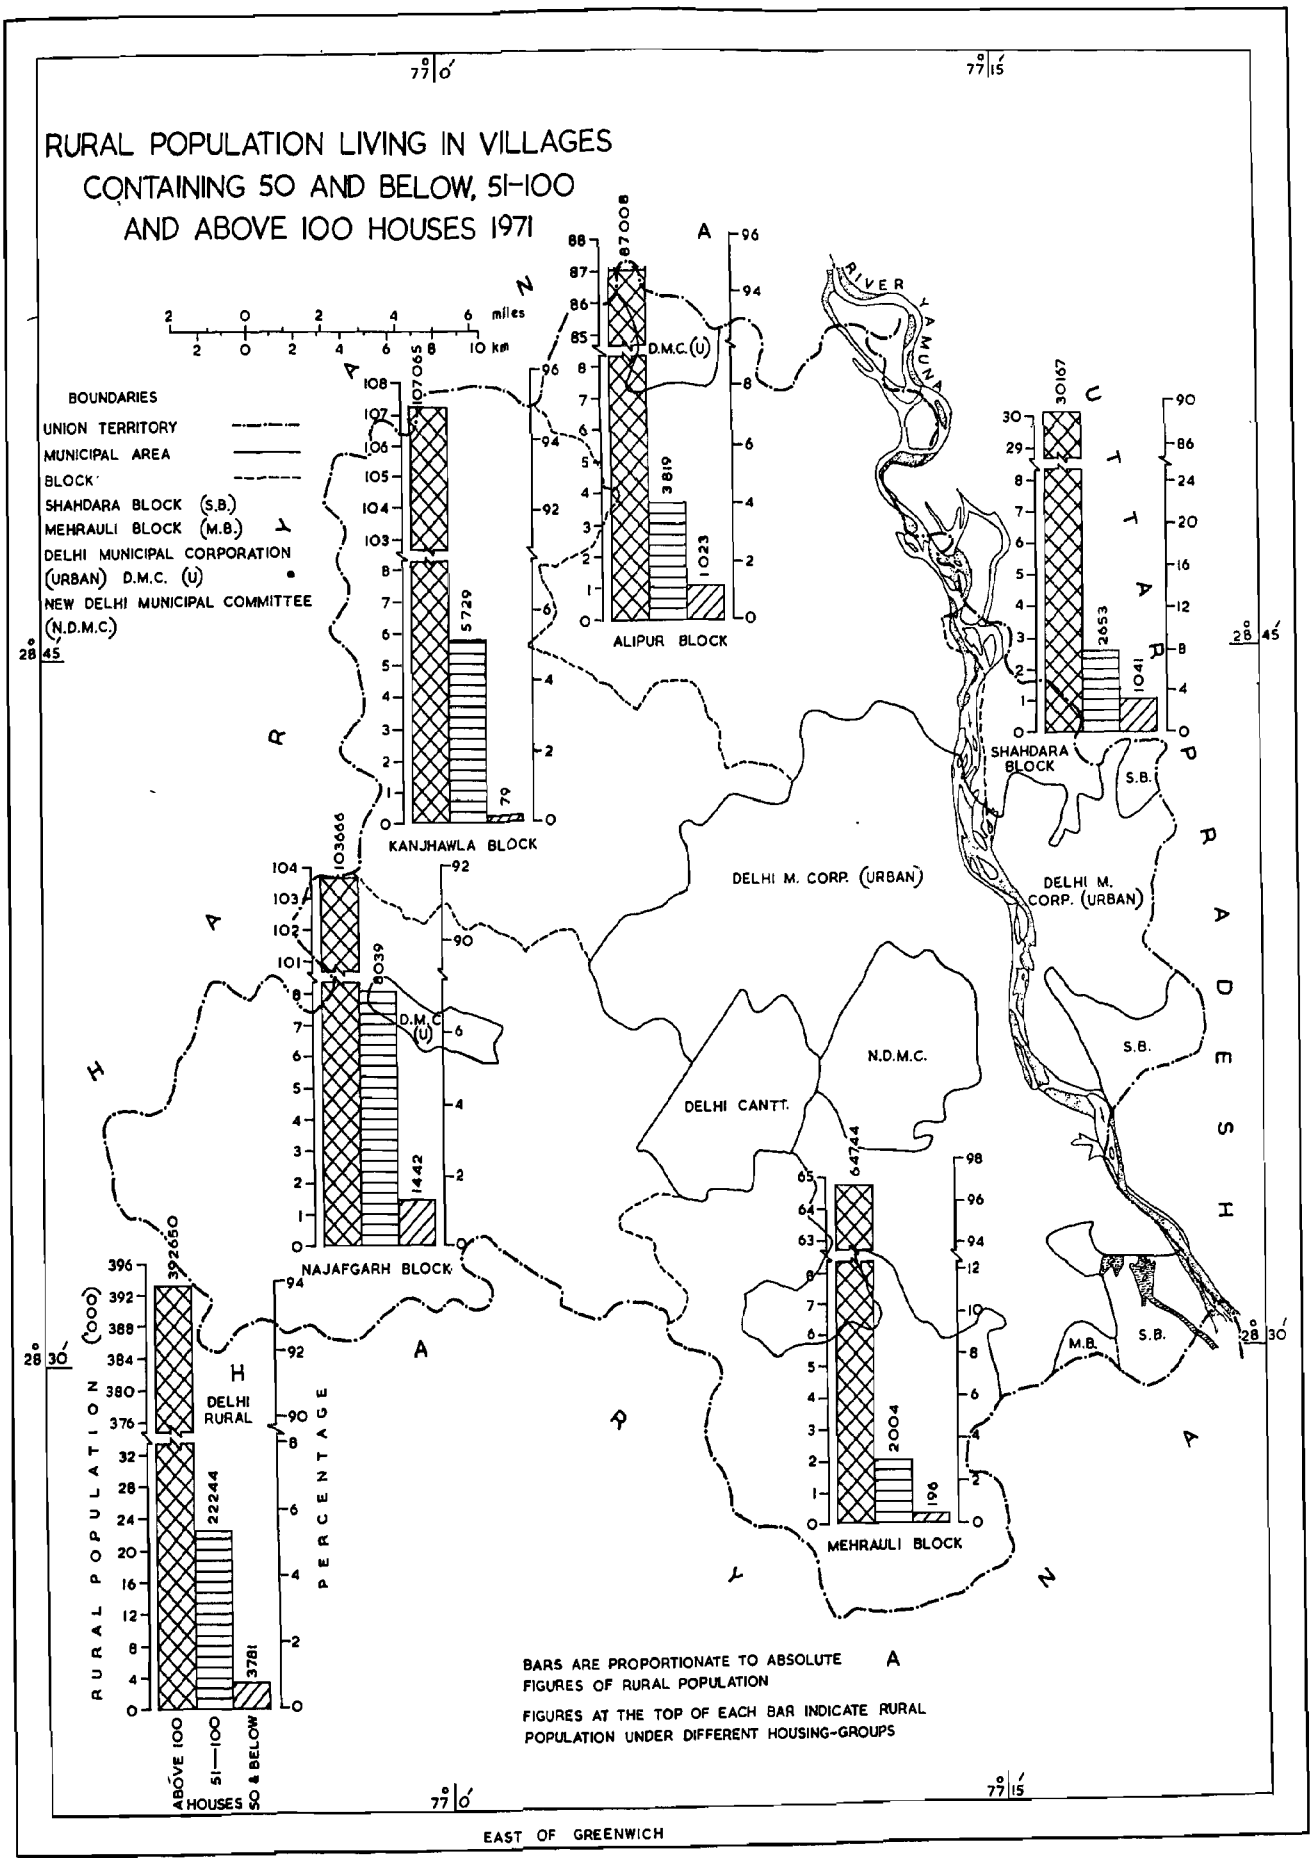

The percentages of population living in villages with houses (50 and below, 51-100, and above 100) to the total rural population are shown by bar diagrams.

An over whelming majority (93·8%) rural population of Delhi UT lives in villages having 100 and above houses

The proportions of the villages having 51-100 and below 50 houses respectively are 5·3% and 0·9%. The highest proportion of villages with 100 and above houses is reported in the area covered by the Mehrauli Developmental Block (96·7%)

In the ranges of villages with 51-100, and below 50 houses, shahdara Block stand at the top with the respective proportions 7·8% and 3·1%.

Map 89

HOUSEHOLDS BY NUMBER OF ROOMS OCCUPIED 1971

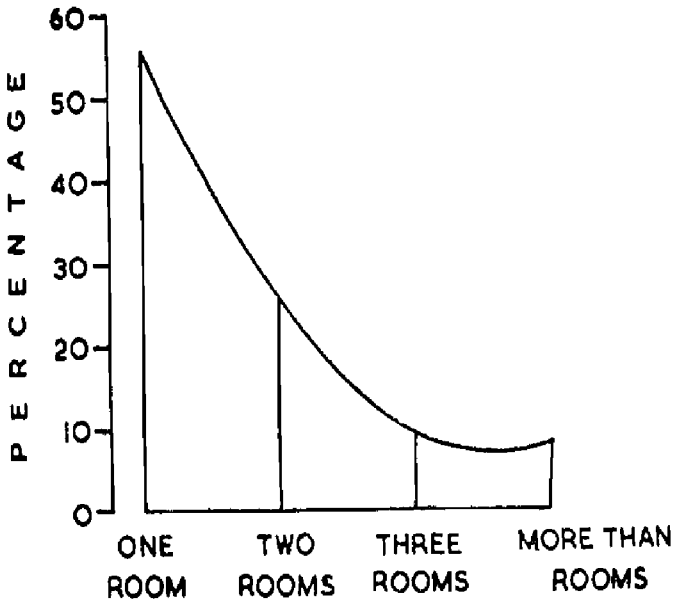

Households living in census houses with one, two, three and more than three rooms are depicted in this map.

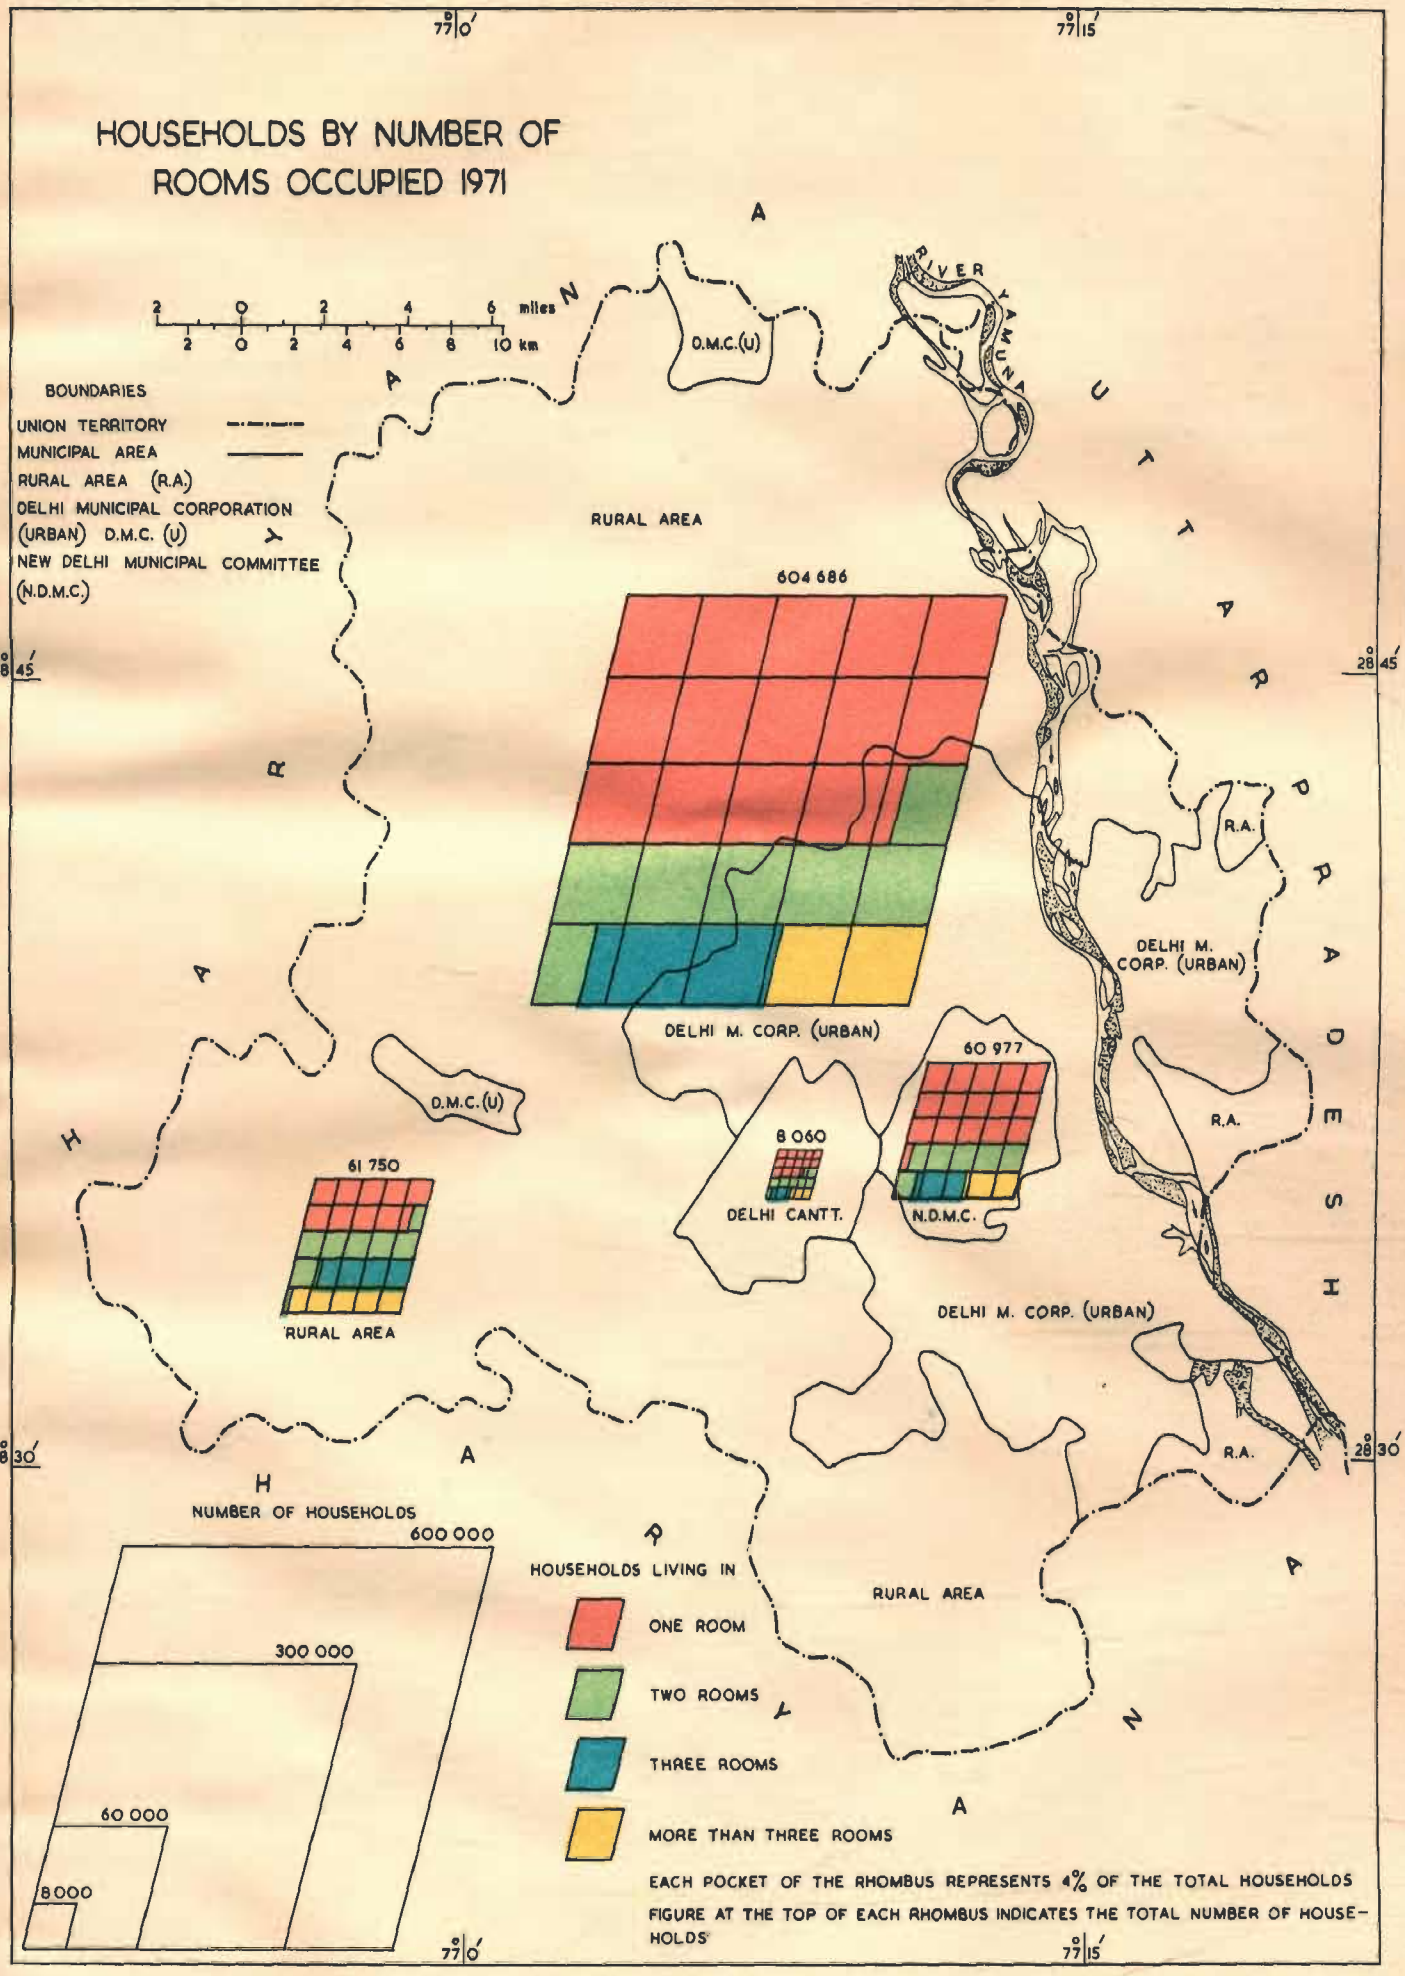

Rhombuses are drawn in proportion of the number of households in each unit of the UT. Each rhombus is divided into 25 equal parts representing 4% of the total households. The pockets represent the households occupying one, two and three rooms and are shaded in different colour. Households occuyping more than three rooms are given in pale colour.

In Delhi UT, a majority of households live in one room (55·7%). Next in order are the households living in two rooms (25·9%), three rooms (9·9%) and more than three rooms (8·7%) . Only a negligible proportion (0·2%) households are reported to be living in unspecified number of rooms, which have been adjusted without any mention in the map.

An overwhelming majority of households, amongst all the units, living in one room is in the NDMC (60·8%). Highest proportion of households living in two rooms is in Delhi Cantonment (28·8%) in three rooms and more than three rooms is in Delhi rural i.e. 16·2% and 19·5% respectively.

Map 90

CENSUS HOUSES ACCORDING TO THEIR USES 1971

In this map is shown the proportion of houses used for different purposes. Census houses are classed into five categories : I-residence, II-shop-cum-residence, workshop-cum-residence including household industry, III-hotel, sarais, dharamshalas, tourist homes, eating places, places of entertainment and community gathering (panchayat ghar) and places of worship, IV-shops excluding eating houses, business houses and offices, V-factories, workshops and workshades.

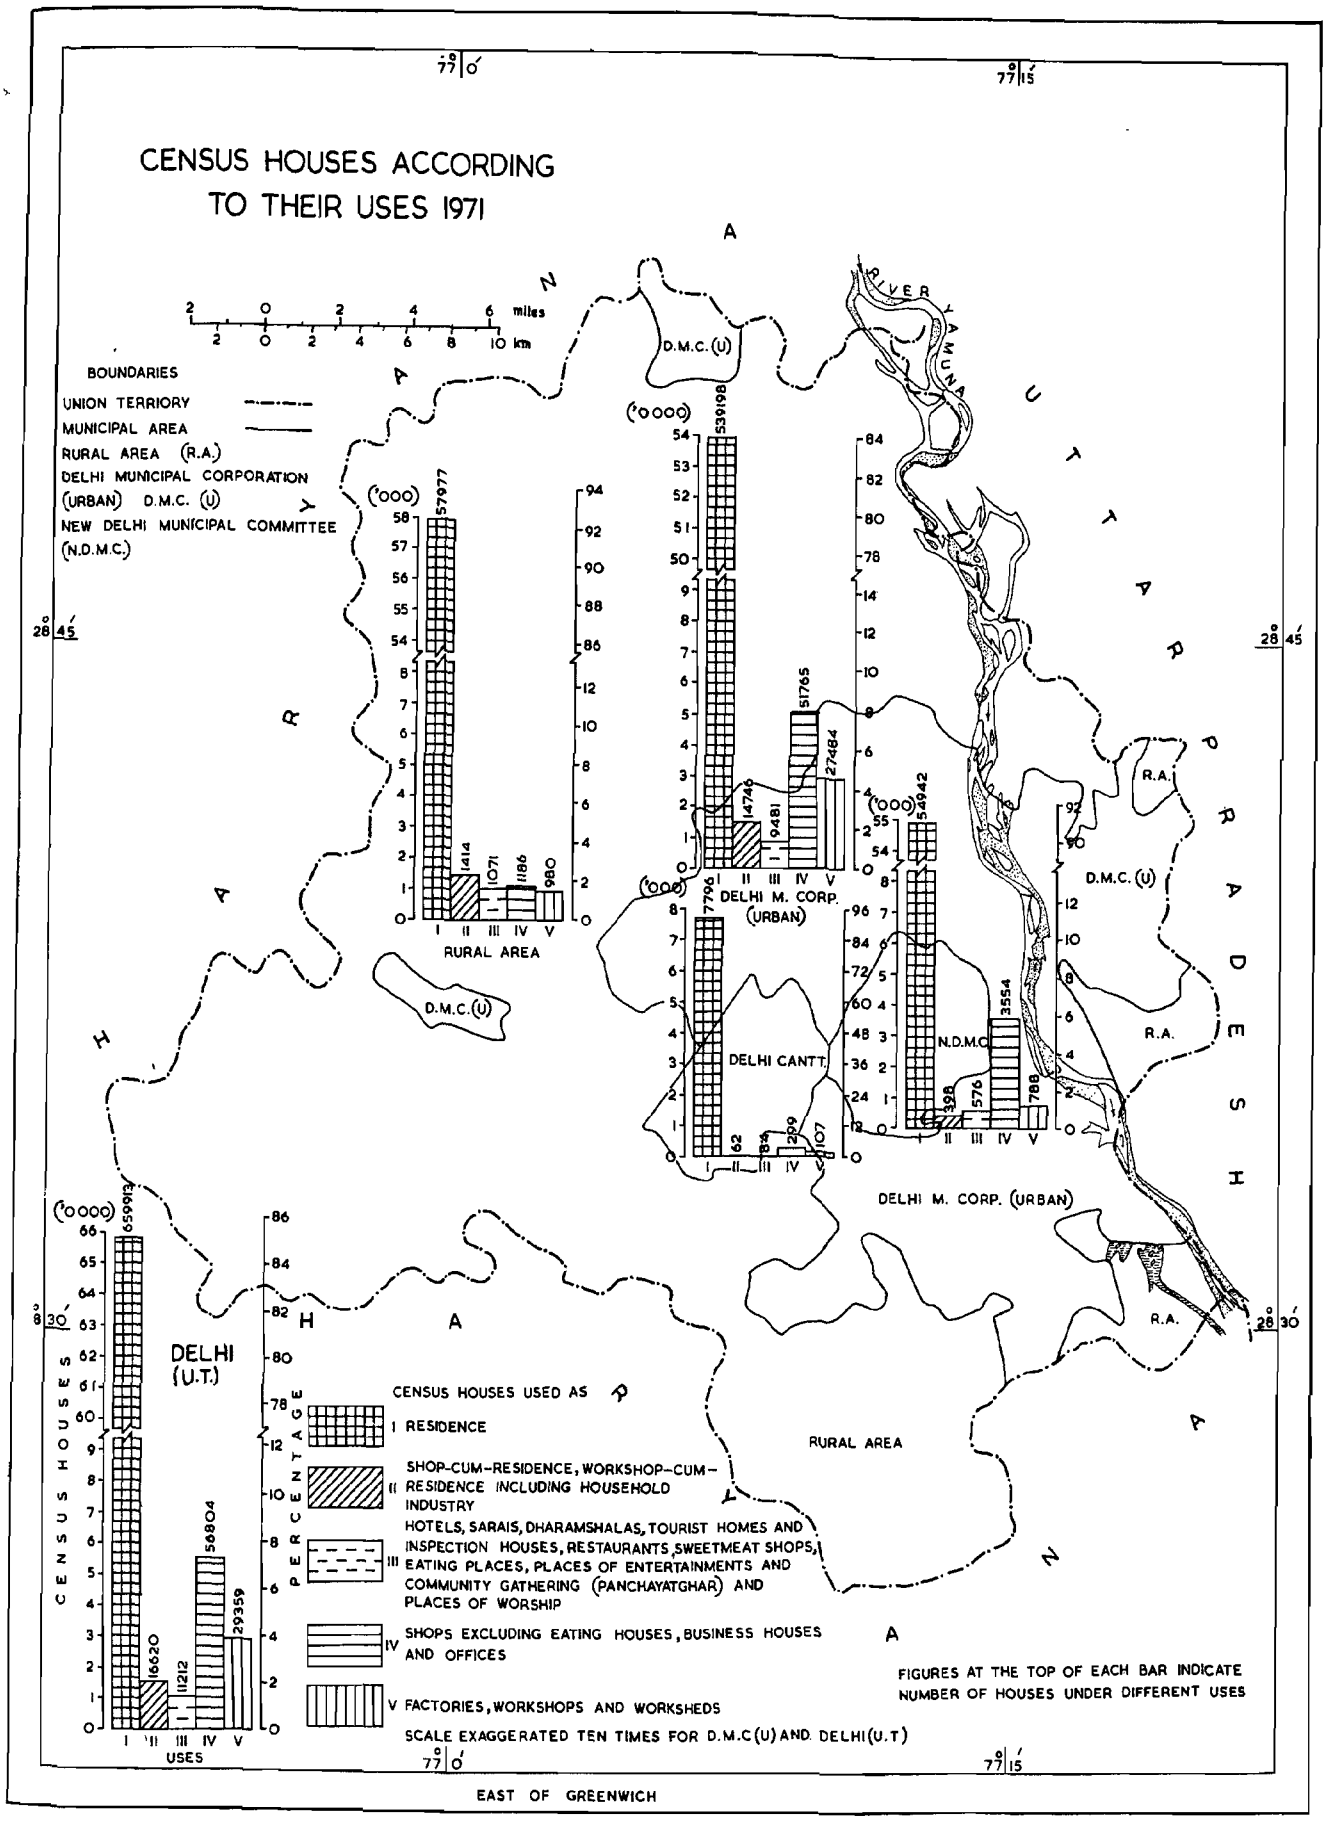

Five different bars are drawn in each unit and shaded as per legend.

In Delhi UT, proportion of census houses used for residential purpose is 85·3%. Next in the order come shops (excluding eating houses, business houses and offices) which are accounted 7·3%.

Highest proportion of houses used for residential purposes are located in Delhi Cantonment (93·4%) and NDMC (91·2%) occupies second position.

Maximum number of shops (excluding eating houses, business houses and offices) with a percentage of 8·1% are concentrated in DMC (U).

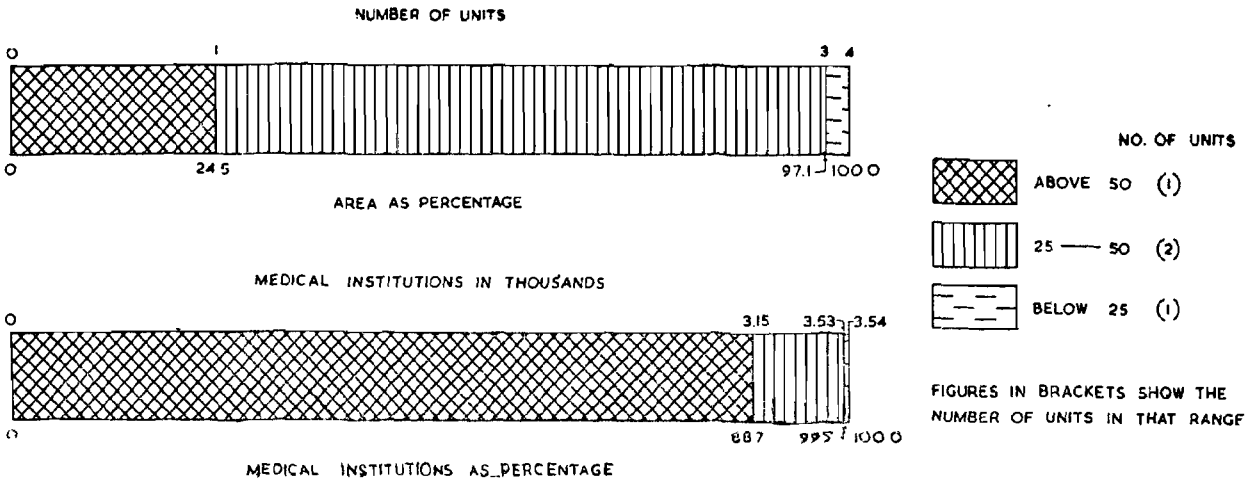

Map 92

MEDICAL INSTITUTIONS PER 10,000 OF CENSUS HOUSES 1971

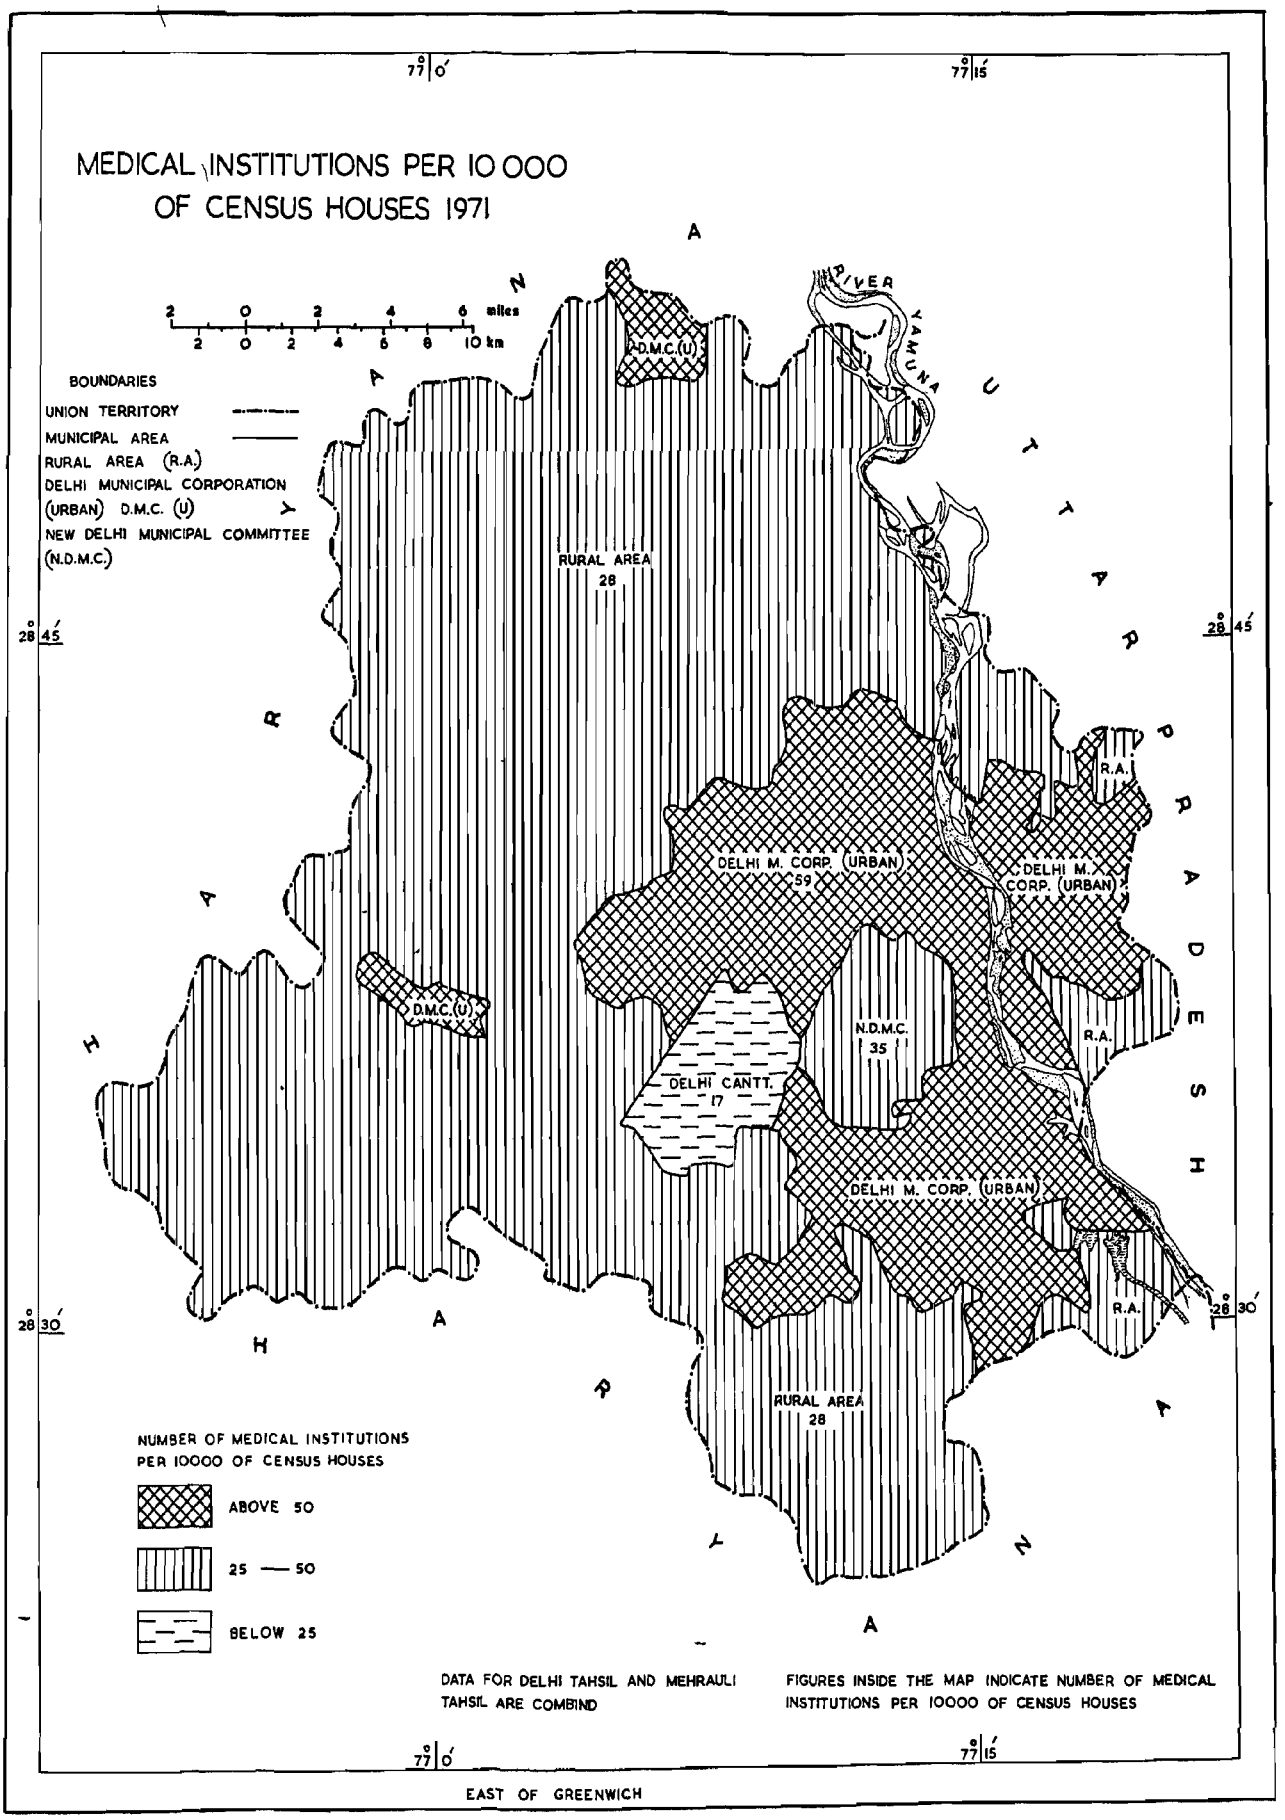

In this map is shown the number of medical institutions per 10,000 of census houses.

Values of the medical institutions (per 10,000 census houses) are unit-wise worked out and grouped into three categories as given in the map. Units are hatched from dark to light according to the values.

DMC(U) with a number of 59 medical institutions (per 10,000 census houses) occupies the highest rank. In NDMC (35) Delhi Cantonment (17) and Delhi rural (28), it is fairly low as compared to DMC(U).

REGISTERED MEDICAL PRACTITIONERS PER 100,000 POPULATION 1971

Registered medical practitioners per 100,000 population are exhibited in this map.

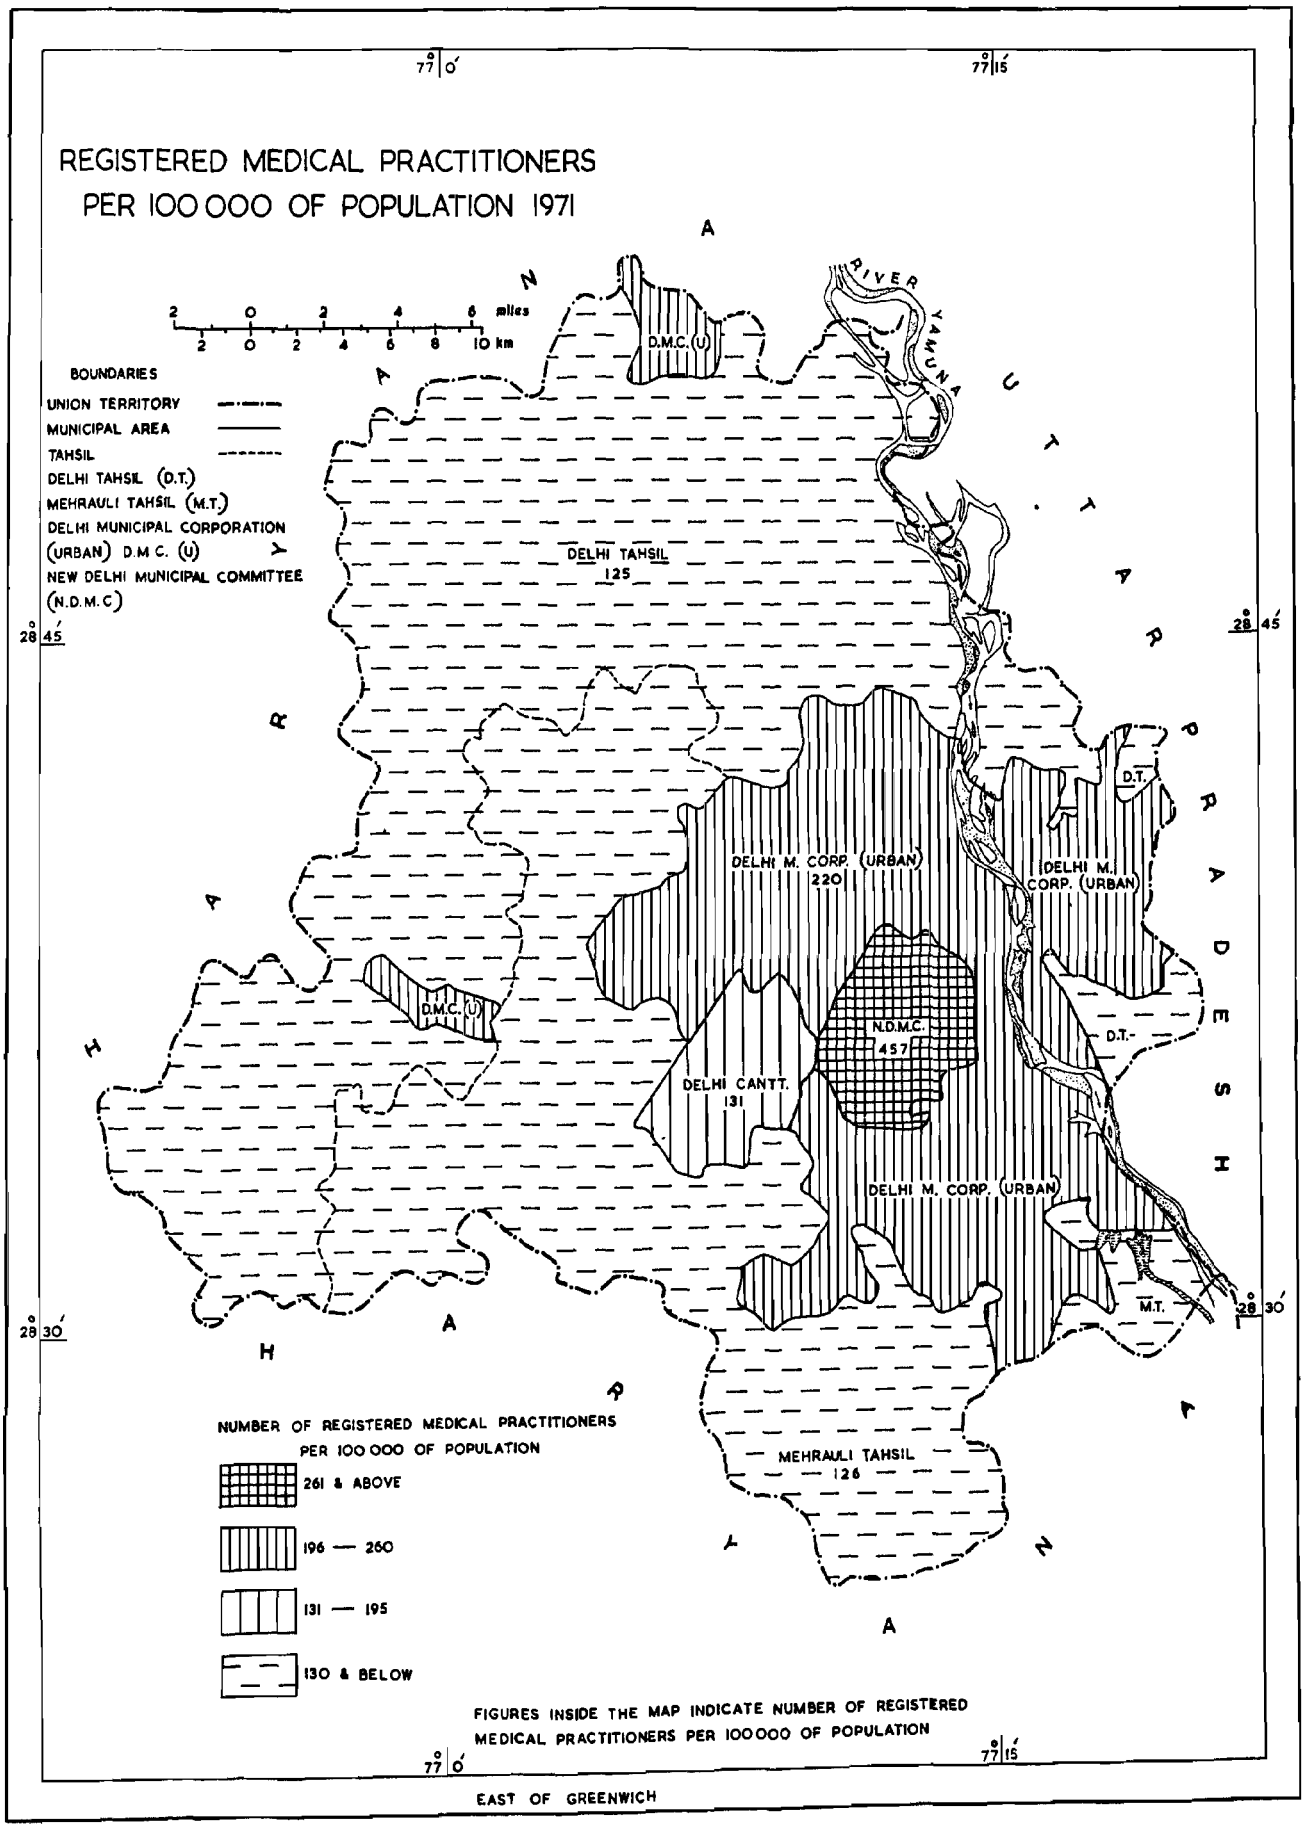

Values of registered medical practitioners per 100,000 population, in respect of each unit, are grouped into four categories as given in the map. All the units are hatched according to their values from dark to light as per legend.

NDMC is having 457 practitioners (per 100,000 population) which is highest among all the units. In DMC (U) and Delhi the number is 220 and 131 respectively. In rural area, it has further been reduced i.e., Mehrauli Tahsil (126) and Delhi Tahsil (125).
