CENSUS OF INDIA 1951

VOLUME VI—PART III

CALCUTTA CITY

A. MITRA
of the Indian Civil Service,
Superintendent of Census Operations
and
Joint Development Commissioner, West Bengal

PUBLISHED BY THE MANAGER OF PUBLICATIONS, DELHI.
PRINTED BY THE GOVERNMENT OF INDIA PRESS, CALCUTTA, INDIA.
1954.

Price : Rs. 17-12 or 27sh. 6d.

THE CENSUS PUBLICATIONS

THE CENSUS PUBLICATIONS for West Bengal, Sikkim and Chandernagore will consist of the following volumes. All volumes will be of uniform size, demy quarto $8\frac{3}{4}'' \times 11\frac{1}{4}$

Part IA—General Report by A. Mitra, containing the first five chapters of the Report in addition to a Preface, an Introduction, and a Bibliography. 587 pages.

Part IB—Vital Statistics, West Bengal, 1941-50 by A. Mitra and P. G. Chowdhury, containing a Preface, 60 tables, and several appendices. 75 pages.

Part IC—General Report by A. Mitra containing the Subsidiary tables of 1951 and the sixth chapter of the Report and a note on a Fertility Inquiry conducted in 1950. Some reprints and Special notes. A report on the natural resources, trades and industries of the State with two bibliographies by Chanchal Kumar Chatterjee and Kamal Majumdar. 517 pages.

Part II—Union and State Census Tables of West Bengal, Sikkim and Chandernagore by A. Mitra. 535 pages.

Part III—Report on Calcutta City by A. Mitra. (The present volume.)

Part IV—Tables of the Calcutta Industrial Region by A. Mitra. 438 pages.

Part V—Administrative Report of the Census Operations of West Bengal, Sikkim, Chandernagore and Calcutta City: Enumeration: by A. Mitra. 96 pages.

The Tribes and Castes of West Bengal—edited by A. Mitra, containing 1951 tables of Scheduled Castes and Scheduled Tribes in West Bengal. A monograph on the Origin of Caste by Sailendranath Sengupta, a monograph on several artisan castes and tribes by Sudhansu Kumar Ray, an article by Professor Kshitishprasad Chattopadhyay, an article on Dharmapuja by Sri Asutosh Bhattacharyya. Appendices of Selections from old authorities like Sherring, Dalton, Risley, Gait and O'Malley. An Introduction. 414 pages and eighteen plates.

An Account of Land Management in West Bengal, 1872-1952, by A. Mitra, containing extracts, accounts and statistics over the 80-year period and agricultural statistics compiled at the Census of 1951, with an Introduction. 312 pages.

Fairs and Festivals in West Bengal by A. Mitra, containing an account of fairs and festivals classified by villages, unions, thanas and districts. With a foreword and extracts from the laws on the regulation of fairs and festivals. 41 pages.

District Handbooks for each West Bengal District by A. Mitra. Each volume contains an Introductory essay, bringing the old Gazetteer up to date, several important appendices, and about 82 tables, together with a list of ancient monuments in each district. Contains also a village directory where the J.L. No. of every village, its name, area, total population, number of houses, number of literates and population classified into eight livelihood classes are tabulated. The whole series is expected to be complete by February 1954. Each volume will contain about 300 pages (14 volumes).

A catalogue of the better known ancient monuments of West Bengal by A. Mitra. Will contain brief descriptions of extant ancient monuments in each district of the State, dating up to 1800, with exact location and present state. Translations of all inscriptions found in West Bengal and an account of all invasions or conquests of Bengal mentioned in inscriptions. With many plates. About 600 pages.

PREFACE

:A now belongs as much to West Bengal
India and the world. Her features,
y local and individual, have acquired
ality. Originating as a small town she is
rsting at the seams with overgrowth. She
he record for density. Her population is
', steeply on the increase, due, as a deputy
an of the city's Corporation fifty years
iimed, to 'the benefits conferred by the
ibused Calcutta Corporation', as much as
act that the city is as acceptable to the man
ich of a situation in her vast folds as to the
ravelled and educated mind.

Growth of Population

increase in population within the last
years has been as remarkable as her
during the past two centuries. The
t area of Calcutta is 32·32 square miles
within municipal limits) and the population
urch 1, 1951, 2,548,677; in 1931, with almost
me area, her population was 1,163,771. In
y years the population has thus more than
ed. In 1801, the area of the town was only
acres and its population under 140,000. In
he area was only 1,682 acres with a popula-
of 10,000. The regular decennial census
in 1881 with a total population that year
,658. In 1901, the population was 949,144
over thirty-seven per cent. of her present
tion. The rate of increase of the popula-
f the metropolis of India has been greater
nost cities of comparable size.

average density is 88,953 persons per
mile or 139 persons per acre within the
pal area. The places of greatest density
rabagan (491 per acre), Jorasanko (458)
lootola (399); they have been the heart of
y since the seventeenth century. There
wever, wards like Watganj and Hastings
density as low as 31, while wards 15 to
cepting ward 23) are generally on the low
The Calcutta Improvement Trust are
ping areas on the fringe of the city—tanks
ddy fields are being gradually covered with
and mortar and rural lanes and muddy
ransformed into macadamized roads, with
id channel stones—and offer them for sale,
serve to attract hungry settlers away from
igested areas of the city and distribute the
. The State Transport Department and
alcutta Electric Supply Corporation are
on public services and electricity with com-
ole speed, helping people to settle over a
larger area, while several schemes are under the active consideration of the government to improve suburban rail and road services; and the city's police have quietly and steadily done a great deal to keep the road traffic reasonably mobile, and bring the far flung suburbs within less than an hour's bus ride to the heart of the city.

The population in the immediate surroundings of the city, that is, in areas which are within half an hour's bus ride to a city terminus, has remarkably increased in the course of the last ten years, and is now 1,024,475. They are the spill areas of Calcutta, served by municipalities, and include Garden Reach (109,160), South Suburbs (Behala: 104,055) and Tollyganj (149,817) in the south; the Dum Dum group (Dum Dum, South Dum Dum and North Dum Dum: 87,549) in the north-east; Baranagar (77,126) in the north; and Howrah City (433,630) and Bally (63,138) in the west. This may be called the well-knit Calcutta Area, the population of which, including Calcutta's, comes to 3,573,152. The corresponding population in 1941 was 2,839,726, and in 1931, 1,581,335. In twenty years the population of this area has increased 2·3 times.

The 'displaced' or refugee population returned from this area is 624,164 (Calcutta 433,228) which is roughly a third of the entire displaced population in West Bengal. An official survey reveals that about one hundred and ten colonies of all sizes of Displaced persons have sprung into existence within this area east of the Hooghly river.

But this account of averages or even what is said below can at best give only an approximate idea of the real condition of the people. An area covered by buildings of 'the character of Queen Anne's mansions in London', or nearer home, in the Camac Street area, and having the same density per acre as an area covered by the class of structures found in a Calcutta *bustee*, would obviously be inhabited by a population which lived in conditions essentially different from those prevailing in the latter area. We can, therefore, arrive at a much more correct idea of the actual condition of the people by considering the question of house accommodation. The city's housing and other amenities, meagre and unsatisfactory since her origin have been put to a sudden and serve strain since 1947. On March 1, 1951, there were 606,026 census units consisting of one room or more each and 710,579 living rooms; the average number of living rooms per census unit came to 1·17. They accommodated 2,548,677 persons or 4·2 persons

per census unit. Of these, 453,822 persons did not lead family lives and 2,094,855 live on a normal family pattern in 350,916 families. The average works out at 3·6 persons per living room (an average which masks acute cases of congestion where more than two families of different castes were frequently found to occupy the same room), and 6·0 persons per family, also a high figure which indicates that most families are now obliged to 'keep' distant relations or unrelated persons. The full impact of the sudden influx of a large Displaced population (433,228) cannot be analyzed in this short space, but it will be sufficient to reflect that in the 3,615 *bustees* of Calcutta, having 21,556 huts and 155,624 living rooms, containing 617,374 souls (almost a quarter of Calcutta's population) no less than 112,515 are Displaced refugees (18·2 per cent. of the *bustee* population).

Predominance of Males over Females

When the results of the 1901 census were submitted the Lieutenant-Governor of Bengal observed that, next to the general expansion of the population of the town which proceeded during the nineteenth century, 'at a more rapid rate even than that of London', the most prominent features of the population were 'the predominance of males over females', and the 'increasing immigration of upcountry men'. It is significant that these two features still continue to be pre-eminent.

The excessive predominance of the male element has been an abiding feature of Calcutta. In 1901, there were almost twenty males to every ten females. In 1951, in spite of the immigration of a large number of 'displaced' *families,* the unbalance is almost just as great: 515 females to 1,000 males in 1901, 570 females to 1,000 males in 1951; in 1931, it was as bad as 465 females to 1,000 males. As in 1901, this is largely due to the large number of immigrants who have come to the city for work, having left their women behind at home, and proves that business, work, and livelihood are still the city's predominating characteristic. It is evident that in Calcutta there has never been much of family life and associated conditions; this is reflected not a little in her configuration. Until the Improvement Trust was constituted there were very few exclusively residential areas; business and factory areas made large inroads into them, and *bustee*—hives of artisans and labourers designed for single lives—were overrun by countless families. A great deal of disorder and untidiness persists with which the Improvement Trust, the transport network, and the police wage daily battle. It is by no means stretching a point too far to argue that the notorious instability of the city's civic attributable to a certain measure to this between males and females, the absence, e ing recklessness, of family life which moods of violence, the proximity of resi place of work.

A cursory examination of Calcutta condition will further illustrate this poi lack of space figures of 1901 and 1951 o quoted but an analysis of the figures o mediate censuses will broadly confirm t clusions of this paragraph. In 1901 the 274,747 unmarried, 532,436 married and widowed persons of both sexes: a total of Their proportion to the total populatio therefore 29·8, 57·8 and 12·4 per cent. resp The ratio of unmarried males to un females was a little less than 5:2, that of males to married females 2·7:1, indicat a large number of married men left the behind at home. On the other hand, the considerably more than three times a widowed females as widowed males. In a systematic sample of 211,102 persons population of 2,115,449 (exclusive of the D population of 433,228 which will be d separately), there were 89;597 unmarried, married and 16,739 widowed or divorced of both sexes. Their proportion to the population (the same proportion may be t apply to the whole population) was 42·5, 4 7·9 per cent. respectively. The ratio of ur males to unmarried females was 1·8:1 a of married males to married females Widowed or divorced females are about t numerous as widowed or divorced mal important point to remember in this co is that there is always a considerable pr population in Calcutta. In 1901, the maj them returned themselves as widows, whe 1951, as a result of a recent Act seeking to s immoral traffic, most of them except tho are matronly, have returned themselves a ed. This point duly considered, it will that Calcutta has made little progress normal home life. A total of 433,228 D population shows 234,242 males and females. The proportion of unmarried n and widowed among them to their total tion is 55·5, 36·1, and 8·4 per cent. resp The ratio of the males to their females nearly 1·2:1 (1000:849), that of unmarrie to unmarried females 1·6:1, and that of males to married females 1·05·1. Although them widowed females are more than si as numerous as widowed males, yet, con the more even ratio of males to their fema the parity between their married males to

females, it may be concluded that the Displaced population has introduced an element of social health in the life of the city. A point although trite is worthy of note in this connection. The bulk of refugee demonstrations that have protested on the streets of Calcutta in recent years were composed of persons imported from outside the city. Normal family life is a big stake to be risked in minor civil strife.

POPULATION DISTRIBUTION BY RELIGIOUS COMMUNITIES, NATIONALITIES AND MIGRANTS AND LANGUAGES SPOKEN

Of the total population of 2,548,677, Hindus number 2,125,907, Muslims 305,932, Christians 75,836, Sikhs 14,166, Jains 11,741, and Buddhists 9,427. Together they account for 2,543,009. The remainder (5,668) is made up of Jews (1,935), Zoroastrians (1,623), other religions, atheists, and persons who did not return a religion. The proportion of females to 1,000 males among the main religions is, for Hindus 578, for Muslims 398, for Christians 1,389, for Sikhs 587, for Jains 569, and for Buddhists 602.

57,335 persons have returned themselves as non-Indian nationals, of whom 41,576 are males and 15,759 females: 32,330 as Pakistani, 8,717 as British, 6,645 as Nepali, 5,710 as Chinese, 679 as American, 411 as Australian, 316 as Burmese, 265 as Armenian, 175 as Afghan, 168 as Portuguese, 162 as Irish, 146 as Dutch, 133 as French, 132 as Goanese, 125 as Italian, 122 as Danish, 114 as Israelite and 106 as Iranian. Eleven nationalities have returned between 25 and 100 persons each while twenty-eight others have returned below 25 persons each. Some are lone representatives of their country.

The extent of migrants who have swarmed into Calcutta may be judged from the fact that only 846,500 persons or less than a third (33·2 per cent.) of the total population returned themselves as having been born in the city, another 313,154 (12·3 per cent.) having been born in other districts of West Bengal. 677,071 (26·6 per cent.) persons were born in other States of India, of whom 430,320 (16·9 per cent.) were born in the States neighbouring West Bengal. 685,672 persons (26·9 per cent.) were born in Pakistan, of whom 433,228 (17 per cent. of Calcutta's population) are now settled as 'displaced' in the city. Excluding those born in Pakistan, the number of persons born in 'countries in Asia beyond India' (including U.S.S.R.) is 19,690, in European countries, (excluding U.S.S.R.) 5,444, in Africa 112, in the two Americas 926, in Australasia 104. The number of mother tongues spoken is 80 of which 29 are non-Indian (not counting English which is the mother tongue of a large number of Indian nationals). Bengali is the mother tongue of 1,670,601, Hindi of 516,953, Urdu of 171,339, Oriya of 57,835, English of 27,288, Gurumukhi of 20,855, Nepali of 16,508 and Gujarati of 13,533. Another eight languages claim between 2,000 and 10,000 persons each as their mother tongue, and a further eighteen between 100 and 2,000 persons each; the remainder below 100 persons each. 206,052 persons (8·1 per cent. of the total population) speak a subsidiary Indian language (English being *omitted* as a subsidiary *Indian* language) besides their mother tongue, the chief subsidiary languages used being Hindi (93,226), Bengali (79,160), Urdu (24,324), Oriya (3,415) and Assamese (1,717). This gives a brief idea of the very complex mosaic that is Calcutta's population.

DISTRIBUTION BY OCCUPATION

No less impressive are the city's occupations. For the purpose of the census all principal livelihoods were divided into two broad classes—agricultural and non-agricultural. Each class was further divided into four categories: the agricultural into (i) cultivators of land wholly or mainly owned and their dependants, (ii) cultivators of land wholly or mainly unowned and their dependants, (iii) cultivating labourers and their dependants, and (iv) non-cultivating owners of land, agricultural rent receivers and their dependants; the non-agricultural into persons (including their dependants) engaged in, (v) production other than cultivation, (vi) commerce, (vii) transport, and (viii) other services and miscellaneous sources. Category (i) claims 4,697, (ii) 309, (iii) 285, (iv) 17,405, (v) 547,262, (vi) 756,168, (vii) 287,681, and (viii) 934,870. In the agricultural occupations (i to iv—22,696) 6,081 were self-supporting persons, 16,280 fully dependants and 335 earning dependants. In the non-agricultural classes (v to viii—2,525,981) 1,106,429 were self-supporting persons, 1,391,232 fully dependants and 28,320 earning dependants. Among self-supporting persons of all categories 76,001 are females (about 3 per cent. of the total population) and 4,954 females are earning dependants. The three per cent. is significant inasmuch as employment for women except in teaching, midwifery, nursing and domestic service was thrown open in other directions only after the advent of World War II. For each of about 211 occupational groups adopted under the Indian Census Economic Classification Scheme, Calcutta claims a fair number of adherents. Among self-supporting persons engaged in profitable occupations, 52,037 persons returned themselves as employers, 700,860 as employees and 327,452 as independent (on own account) workers. The corresponding figures of self-supporting females are 580, 52,059, and 15,138 respectively: a total of 67,777.

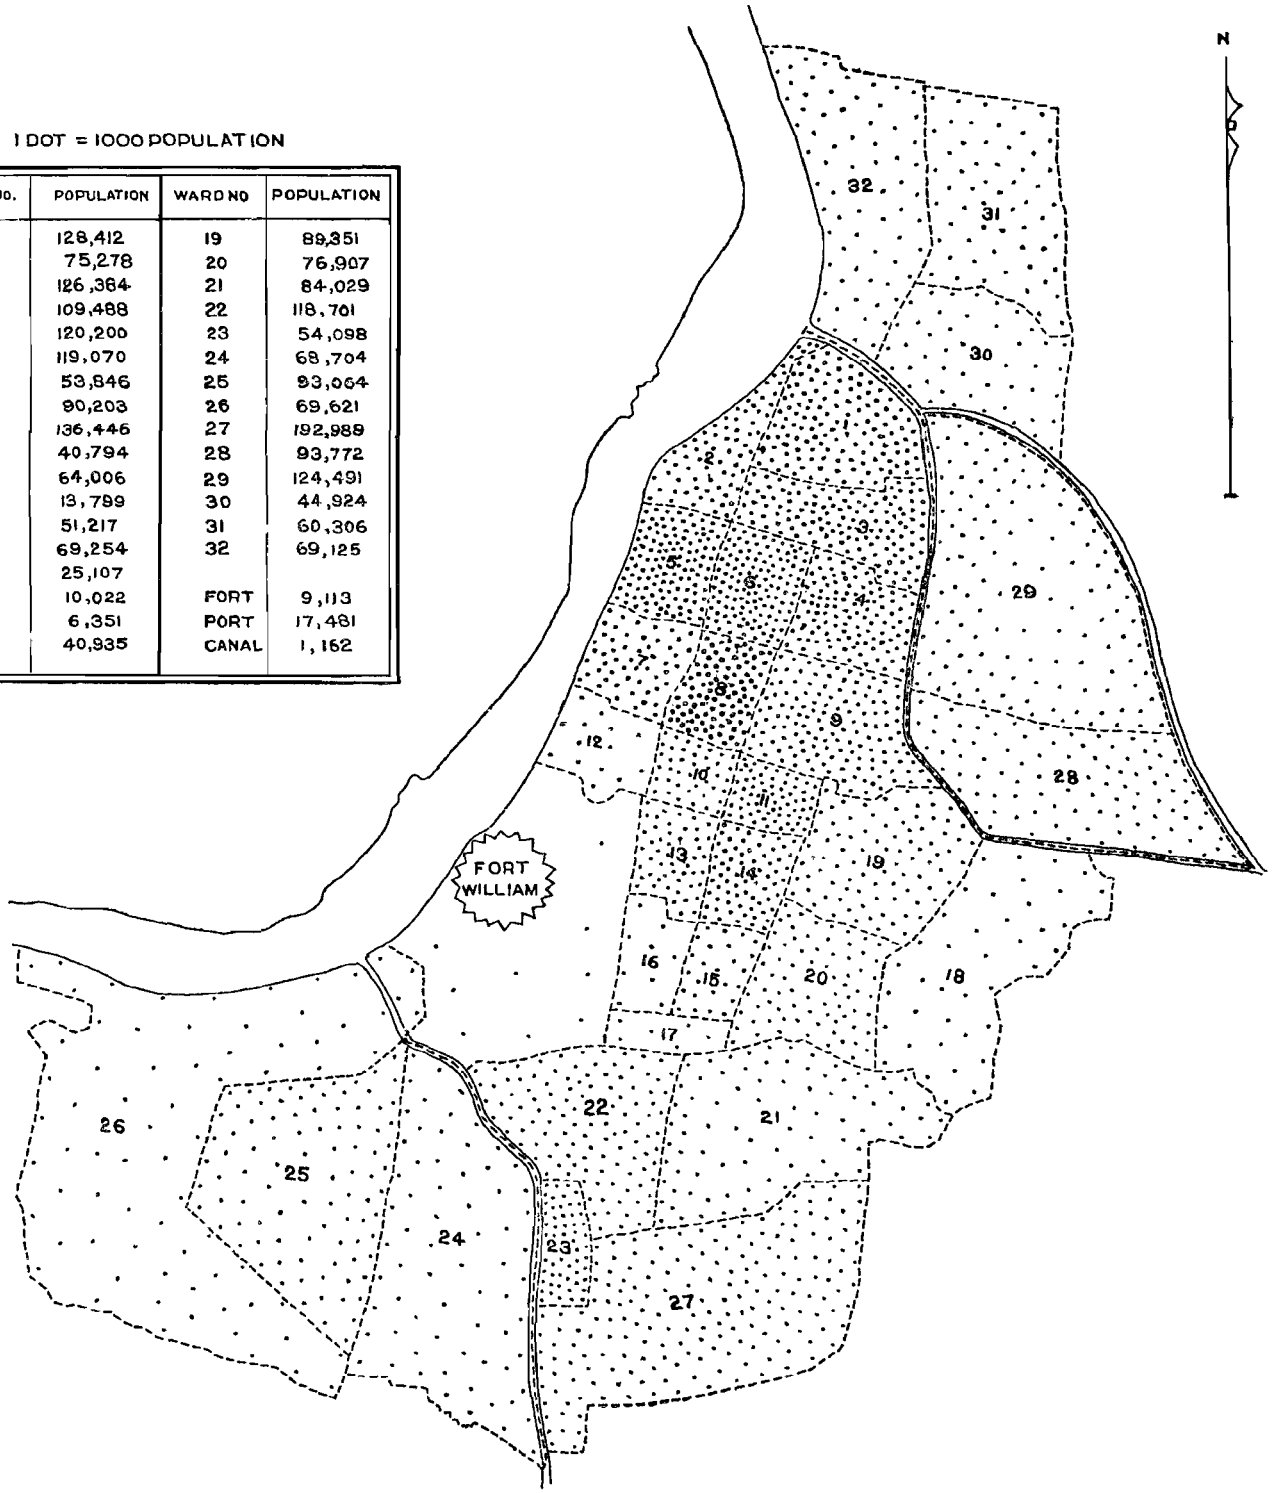

Small scale Industries

A census of small scale industries, that is, those which do not fall under the Factories Act, was taken in the city. 20,575 such industries were found to operate, of which only 98 were handloom establishments employing 301 handlooms and 606 persons. The rest include a very great diversity of small scale production of food, raw materials and finished merchandise and employ a total of 72,428 persons.

A NOTE ON THE GROWTH OF POPULATION IN THE CITY

Details of the growth and movement of population in Calcutta will be found in the tables. A brief account of the city as a whole is all that needs to be given here. The percentage growth of the wards of Calcutta from decade to decade since 1872 and the three periods 1872-1921, 1921-51, and 1901-51 is furnished below.

	Percentage variation 1901-51	Percentage variation 1921-51	Percentage variation 1872-21	Percentage Variation 1941-51	1931-41	1921-31	1911-21	1901-11	1891-01	1881-91	1872-81

Eyebrows were raised in surprise and doubt when the population of the Calcutta municipal area was first announced in March 1951. Many had imagined that the city's population would exceed four millions. Some were frankly disappointed. Doubts were openly expressed in the Press. It is hardly as if an apology were needed in presenting a total which fails to come up to popular expectations. But it may be interesting to discuss the implications were the population of Calcutta really 4 millions in all or 1·54 millions more than the 1951 count.

A population of 2,548,677 for a city with an area of only 32.32 square miles of which again only 18,136 acres or 28.34 square miles constitute the city proper is no mean figure. It means a density of 89,932 persons per square mile in the populated area. If we leave out of account the total surface area of the maidan, the roads, streets, lanes, parks, ponds and other public places, and remember that, according to municipal regulations, one-third and in some areas two-thirds of every plot of residential land must be left vacant, the built-on ground area shrinks very considerably so much so that the overall density of 78,858 persons per square mile or 123·2 persons per acre really rises to more than 350 persons per acre of built-on land. A closer calculation will probably put the figure at over 370 persons per acre and the thought of 370 persons jostling one another on every acre of land can be very painful indeed. In the next place, more people than at any time before 1947 now come to Calcutta for a living from the suburbs which have overnight as it were produced three new cities (not to mention the growth of other towns in the industrial area), all of which inject into Calcutta for the day a large proportion of their population. The immediate suburbs of Calcutta, Barrackpur subdivision, Tollyganj, South Suburbs, Garden Reach and Bishnupur police stations contain the majority of the refugee population of 24-Parganas which is 527,262, and it is not unreasonable to assume that a great part of this population comes into Calcutta daily in search of a living and swells the city's traffic. In the next place, more young men and women are now out on the streets in search of situations, who even a few years ago would be studying in schools and colleges and therefore keep off the roads during business hours. Further, during the period of rapid expansion since 1930 Calcutta has not much grown skywards in multistoreyed buildings but has grown and built only in the south over a

space of about six square miles. It is worth while, when one imagines a population of 4 millions in an area of 28·34 square miles, to pause and think what the implications are of such a large population in such a small area. It means a density of 141,143 per square mile in the populated area and in terms of the city's built-on area a density of about 650 persons per acre. Greater Bombay, which is nearest to Calcutta in population, has a population of 2,839,270 in 210·9 square miles or a density of only 13,463 per square mile or 21 persons per acre. Delhi, another large and growing city has a population of 1,191,104 in an area of 39·52 square miles, or a density of only 30,139 per square mile or 47 persons per acre. Good Independent checks are available to corroborate why the city's population cannot be much more than 2·55 millions. They are (1) the tardy growth of housing in Calcutta between 1921 and 1951, of 'pucca' or brick-built and 'bustee' or mud, mat or tin walled premises on the municipal assessment rolls; (2) the city's limited filtered water supply and sewage amenities; (3) a preliminary count taken in the first fortnight of December 1950 in the city and all over West Bengal by a set of persons called house numberers who were different from the final set of enumerators who were recruited after this preliminary count; (4) the population under adult franchise recorded in the electoral rolls of the Corporation area; (5) the exodus of Muslims between 1947 and 1950; and finally (6) the number of food ration cards in circulation in February-March 1951. This six-fold tally will be discussed presently, but it will be well to precede it with a brief review of the population of the city in the 1941 census count.

In fact, this is where the 1951 count sounds improbable and it hurts the citizen's civic pride to accept that after all the water that has flowed under the bridges between 1941 and 1951 the population should have grown by a paltry 439,786 (2,548,677 in 1951 less 2,108,891 in 1941) of which the Displaced population alone who came to Calcutta after 1946 account for 433,228. A growth of only 6,558 in ten years, however large may have been the consequences of the famine and epidemics of 1943-44, the Great Killing of August 1946, the communal riots of January-February 1950, and the exodus of Muslims between 1947 and 1950 sounds improbable to put it very mildly.

And yet if one were to put it another way and to say that in 1931 the population of Calcutta was 1·141 million and in the course of the last twenty years Calcutta has increased to 2·549 million or by 1·408 million, or as much again and a quarter more than 1931, the increase, far from appearing suspect, would sound very plausible indeed. It was a one-night census in 1931 and persons who came from suburbs of Calcutta to work for the day in the City were counted in the city and included within its population. At a conservative estimate this population could not have been less than 30,000. So the resident population of Calcutta in 1931, with which a comparison of that in 1951 is feasible, was about 1·11 million. There has been thus a minimum increase of 1·438 million during twenty years.

The population of Calcutta in 1941 therefore cannot be allowed to go unchallenged and it is here that the answer to the question of Calcutta's growth between 1941 and 1951 will be found.

In para. 41 of his report of the Census of Calcutta, incorporated at page 194 of the 1941 Report of the Census Superintendent of Bengal (typed script of which is preserved but was not printed owing to economy dictated as a war measure), the Special Officer for Calcutta makes the following observation:

> The house population as recorded in the house lists for the Calcutta Municipal area was 1,730,074 and the provisional total reached after enumeration was 2,078,370, showing an increase of 19 per cent. This deficiency in house population in the house lists has been variously explained. It has been said that the more ignorant section of the public laboured in the house numbering stages under the misconception that the census inquiry had some fiscal object in view and that their taxes would be enhanced or assessment rates increased. There was also a rumour that a labour force would be imprest and compulsory military service introduced. No doubt these factors explain some deficiency and some inflation at the enumeration stage is not improbable, as both the major communities vied with each other in carrying on a feverish census propaganda towards the end. But the major explanation must be the difficulty of house-numbering and the preparation of the houselists in the bustees. Besides, during the Puja holidays when the house-numbering was mainly done in Calcutta the house population was below its normal strength on account of the Puja exodus to the villages and the health resorts. In any case the variation from the house list population compares favourably with that of the other big municipalities, as the following table will show:

Name of Municipality	House list total	Provisional total	Percentage increase
Dacca	178,222	214,028	20 per cent
Chittagong	64,963	83,848	29 ,,
Howrah	289,071	379,576	31 ,,
Calcutta	1,730,074	2,078,370	19* ,,

* *(sic) should be 20·1 per cent.*

The house-list figure of Howrah is a misquotation; it should have been 278,866 in 69,478 census houses (District Census officer of Howrah's letter No. 4283-G., dated 20 December 1940). The figures finally published in the 1941 Census Tables of Bengal were:

Howrah	379,292
Calcutta	2,108,891

All papers and files of one census are preserved until the conclusion of the next. Files relating to estimate of charges, circles, blocks, mauzas, and

temperate comments in the Press, exacerbated tempers, until all moderation evaporated in the heat of competition. During the count itself excitement passed all bounds, communal passions inundated the country and the air was loud with rumour. The extent to which this agitation affected the actual count is a theme for speculation which experts will doubtless essay, but which is not germane to the object of this report. No estimate is expressed here. It will suffice to observe that the implications have not been left unconsidered, and that the tables would not be published under official authority if it were felt that they were seriously in error".

The logic of facts therefore suggests a ceiling population of 1,730,074 for Calcutta in 1941 and not of 2,108,891 as finally printed. The latter must have been the outcome of much corrupt practice on the part of the citizen.

Normally there should be a close correspondence between the preliminary estimate of the houselists and the final population because if there is a slack in the organisation as late as December it is difficult to make it up in less than two months. The following statement shows the correspondence between the houselist and final populations of Calcutta in 1951. The houselist population of the wards was forwarded by the Special Officer of 1951 in his letter No. 403/CC, dated the 13th December 1950 and of the Special Areas in his memo. No. 204/CC, dated the 16th January 1951.

Houselist and Final Populations in the Wards of Calcutta, 1951

33 Fort William	..	9,113	..
34 Port	..	17,481	..
35 Canals	..	1,162	..
	2,407,468	2,548,677	+8,320
74 Special Areas	132,889		
	2,540,357		

These 74 Special Areas were after the enumeration merged in the respective wards to which they territorially belonged. In January 1950 the population of Fort William was estimated at 9,159. The final population of the Port represents the population on the river in ships, steamers and boats and on that part of the land outside the Calcutta Corporation which falls in South Suburbs municipality and King George's Dock in Garden Reach municipality. The greater portion of the excesses in the final count in wards Cossipur, Jorabagan, Jorasanko, Bara Bazar, Waterloo Street, Ekbalpur and Watganj and Hastings is explained by the fact that parts of the Hooghly riverside and the Port of Calcutta fall within these wards and as the note in the Tables Volume of this Report will show, the populations of these sections of the Port and riverside as well as the population of Special Areas falling within these wards have been amalgamated in the ward population. Sukea Street, Colootola, Fenwick Bazar, Manicktola, Belliaghata, Belgachia and Cossipur wards used to contain mixed populations of Hindus and Muslims before the riots of January-February 1950. During the riots most of the bustees were deserted and many empty hutments were later gutted by fire by hooligans. Between December 1950 and March 1951 almost all these deserted areas were rehabilitated and filled up by large settlements of Displaced Hindus from East Bengal in certain wards and large blocks of resettled Muslims from various parts of the city and Howrah in others. They finally sorted out no more in mixed but clear cut blocks of communities. In Beniapukur, Bhowanipur, Alipur, Tollyganj and Satpukur Displaced persons poured in between December 1950 and March 1951 as a result of the West Bengal Government's scheme of dispersal from Refugee Transit Camps at that time. This explains all the major discrepancies between the houselist population of Calcutta and its final population within an interval of two months and a half, and the small unexplained discrepancy that still remains is easily explained by migrations and the balance of births and deaths during the interval.

Incidentally, this disposes of the third method of tally mentioned at the beginning of this discussion. The first kind of tally may now be taken up, which is the growth of housing between 1921 and 1951, of *pucca* and *bustee* houses. The following figures have been obtained by courtesy of the Calcutta Corporation. The wardwise breakup of *pucca* and *kutcha* houses in October-December 1940 is recorded at page 268 of the 1941 Census Report of Bengal, and their totals (70,754 *pucca* and 5,139 *bustee*) are, as they should be, mid-way between the figures of 1940 and 1941 supplied by the Corporation.

provisional houselist estimates (called second charge abstracts) for every area are preserved for the guidance of the next census, as they constitute the only guides for printing of circulars and forms on the next occasion. As anything but close estimates are liable to land the census organisation either in a bad hold-up in the event of a shortage, or to let up the budget on much unnecessary expenditure in extravagant surpluses which its leanness cannot afford, these files are particularly carefully preserved. Fortunately preliminary estimates of houselist populations for every district, city or town of Bengal in 1941 were available in January 1950 when the census department opened shop again, except the file on the houselist estimates of Calcutta which repeated searches have failed to trace. If that were available it would help us to pin point those areas which harboured mischief in 1941 but that was not to be.

The possible reasons for a smaller houselist estimate advanced by the Special Officer of 1941 do not bear scrutiny. It will be remembered that in December 1940 World War II had just started and was in the "phoney" stage. Calcutta did not have a war atmosphere at all until well after Japan had entered the war in December 1941. If fear of conscription or tax had deterred citizens in December 1940 it would have deterred them equally in March 1941. If it were a genuine apprehension it could have been countered by proper public assurances but no publicity was required in 1940-41 to impress that the census had nothing to do with any prescriptory law. As for the difficulty of housenumbering and preparing houselists in the bustees which the Special Officer cited as the "major" reason the following is an extract from paras. 38 and 39 of his report at page 192 of the Census Report of 1941. It may be said by way of explanation that estimates of population are based on the houselists and not on housenumbers.

On the whole the preparation of the houselists was done better than the actual numbering of the houses. In many cases, though the tar mark was omitted, the houselist often enough showed the details of the several census house. Except in ward 21 (Ballyganj) the mistakes and omissions were not so many that the lists failed to give a sound basis for the information that the enumerator required as to the places he had to visit on his rounds. When after the completion of the houselists at the end of December, the public were invited to report the cases of omission and mistake, several complaints poured in. In most cases they were based on a misunderstanding of the census procedure in Calcutta.

The Special Officer then goes on to enumerate the misunderstandings which were also the experience of the 1951 operations. But to judge by the results of the 1951 estimate they could not have been good enough to account for a difference in 1941 of about 379,000. In 1951 they accounted for only 8,320 persons. The Report of 1941 does not attempt even a brief analysis of the two totals ward by ward. Even a population of 1,730,074 in 1941 sounds a great deal more than it need have been because it gives an increase of 589,212 on the 1931 population. Already, long before the houselist population was estimated in December 1940, the rot had started in April 1940 when, as the records show, the two major communities were locked in combat and their leaders had begun to exhort their followers to show themselves strong in the ensuing census. It is therefore unlikely that the population of 1,730,074 itself should not have been an exaggeration. It yields a ratio of 4·6 persons per census house which is quite large for Calcutta. The houselist population of Howrah yielded only 4 persons per census house.

The variations are as follows:

	Census house	Population	Number of persons per census house
I CALCUTTA			
According to houselists of 1941	376,158	1,730,074	4·6
According to final figures published 1941	376,158	2,108,891	5·6
According to houselists of 1951	654,415	2,540,357	3·9
According to final figures published 1951	606,026	2,548,677	4·2
II HOWRAH			
According to houselists of 1941	69,478	278,866	4·0
According to final figures published 1941	64,757	379,292	5·9
According to houselists of 1951	90,291	447,882	5·0
According to final figures published 1951	96,287	433,630	4·5

NOTE—The number of census houses in Calcutta at the houselist stage of 1941 is not available, and so the final figure has been taken. From the trend of the 1941 Special Officer's report it will appear that not more than 5,000 census houses were missed at the housenumbering stage. In 1951 the number of census houses at the houselist stage exceeded the final figure because it was finally decided to call one room one census house even if it contained more than one social unit.

It will thus appear that none of the reasons except one listed by the Special Officer of 1941 can bear scrutiny. The only valid reason was communal rivalry and the whole of the Special Officer's report is interlarded with complaints against the spirit that prevailed. It is embarrassing for a public servant to lay the charge of corrupt practice at the door of the citizen but that charge seems irresistible. The Special Officer's hesitancy and reticence are therefore understandable.

It is needless to quote passages of comment from official records on the contemporary scene except the following from paras. 8 and 9 of the Superintendent's report of 1941: "Rival exhortations begot mutual suspicions, charge and countercharge were hurled from opposing quarters, in-

Year	Pucca Houses	Bustee Houses	Total
1921	44,721	5,283	50,004
1931	62,140	5,750	67,890
1935	66,819	5,485	72,304
1936	63,137	5,425	68,562
1937	64,501	5,386	69,887
1938	66,225	5,348	71,573
1939	67,977	5,267	73,244
1940	69,754	5,184	74,938
1941	71,488	5,067	76,555
1942	72,932	5,005	77,937
1943-44	74,702	4,875	79,577
1944-45	75,303	4,805	80,108
1946	75,550	4,660	80,210
1949	77,329	4,394	81,723
1950	78,005	4,308	82,313
1951-52	78,697	3,690	82,387

The decrease of *pucca* houses in 1935-36 and of *bustees* from 1931 onwards are due to the activities of the Calcutta Improvement Trust in improving the city's living conditions on account of which the Trust has been systematically clearing up congested areas and slums in the north and north-east while creating new building areas in the south and south-east. As a result of the Trust's activities there are fewer *pucca* houses and *bustees* in the northern and north-eastern wards of the city to-day than in 1931 or 1941 and the slack in *pucca* houses in these wards has been more than made up in the southern and south-eastern wards. While new *bustees* are discouraged and perhaps prevented, except those that grow on the sly, by the Trust in the city, new *bustees* and slums are raising their ugly heads just outside its jurisdiction in Tollyganj.

Returning from this digression one would like to have a look at the ratios in 1921, 1931, 1941, and 1951. The following statement shows in the last column the ratios of population to total houses in 1921 and 1931; for 1941 separately the ratio of houselist population and of final population to total houses, and for 1951 the ratio of final population to total houses in 1950 and the ratio of a hypothetical population of 4 millions to total houses in 1950.

Year	Population	Total Municipal premises	Population per Municipal premise in Calcutta
1921	1,031,697	50,004	20·6
1931	1,40,862	67,890	19·8
1941	1,780,074 (Houselists)	76,555	22·6
1941	2,103,891 (Final)	76,555	27·5
1951	2,548,677 (Final)	82,313	31·0
	4,000,000 (Hypothetical)	82,313	48·6

The plausibility of Calcutta having had a population nearer to 1,730,074 than to 2,103,891 in 1941 is at once brought out by the above statement. Overcrowding and housing shortage was not at all acute in 1941. As a matter of fact the housing situation in 1941 was almost as easy as in 1931 and 1921; which is to say that building kept pace with the growth of population. The pinch started in 1944 when Bengal became a full-fledged rear of the war in the east. If the population were really four millions today we would have an average of 49 persons per house. That is indeed a pretty impossible figure considering the size of houses in Calcutta. Besides, the number of living rooms as counted in December 1950 was 710,579. The average number of persons per room with the population at 2·55 millions works out at 3·6, but with a population of 4 millions it would work out at 5·6 each. This is much too high a figure for rooms even with a very generous average of 12 feet by 12.

It is worth while to estimate the exodus of Muslims from Calcutta between 1941 and 1951 and the extent of the living accommodation vacated by them to be by the Displaced population later utilised. This also will give us an idea of the extent of the Displaced and other immigrant population that have in an absolute way contributed to over-crowding and the housing shortage in the city. The following is a statement of Hindus and Muslims in Calcutta between 1901 and 1951.

Year	Hindu population	Muslim population	Muslim population as percentage of Hindu population
1	2	3	4
1901	603,310	270,797	44·9
1911	672,206	275,280	41·0
1921	725,561	243,912	34·3
1931	796,628	281,520	35·3
1941	1,531,512	497,535	32·5
1951	2,125,907	305,032	14·4

The ratio of 1941 is suggestive of the clever way in which both communities inflated their strength in the 1941 count. The diminishing ratio of Muslims from 1901 onwards is accounted for by the increasing proportion of immigrants in the population of Calcutta and the preponderance of Hindus among them. The ratio of 1951 is low. If from the total population of Hindus in 1951, the Displaced population (433,228) were deducted, the proportion of Muslims would rise to 18·1 which would still be low. If the balance of total immigrants between 1941 and 1951 were deducted the proportion would rise to 21·2. The following statement illustrates in tabular form the implications of these hypotheses. It has been assumed for the purpose of simplicity and elimination of error that

all immigrants and emigrants in 1941 and 1951 have been Hindus.

1	Population of Hindus in Calcutta in 1951 including Displaced Persons	2,125,907
2	Population of Hindus in Calcutta in 1951 excluding Displaced Persons	1,692,679
3	Population of Muslims in Calcutta in 1951	305,932
4	Population of immigrants in 1951 including Displaced Persons	1,389,023
5	Population of estimated emigrants to other States of India in 1951	44,536
6	Population of Displaced Persons in 1951	433,228
7	Population of immigrants in 1941 . .	690,550
8	Population of emigrants in 1941 .	26,591
9	Net migration in Calcutta during 1941-51 between Bengal and other States excluding from calculation the Displaced population of 1951 (Item 4—item 6—item 5—item 7+item 8)	247,300
10	Assumed net population of Hindus in 1951 (excluding Displaced Persons)=1,692,679—247,300	1,445,379
11	Percentage of 3 to 10	21·2

This (21.2) would also be a low figure if we assumed that no Muslim had left Calcutta on the eve of the 1951 Census count. It is low particularly because we have put the population of Hindus at a low mark first by deducting the net migration between 1941 and 1951 and secondly by making another assumption that all net immigration from outside Bengal was Hindu. From the trend of figures since 1901 we might regard 30 per cent. as nearer the mark in 1951 than 21.2, assuming that no Muslim had migrated or left Calcutta. In that eventually the population of Muslims in the 1951 count would stand approximately at 433,614. If the percentage of Muslims were to be 32, the population of Muslims would be 462,521. We may therefore put our estimate of the number of Muslims who were away from Calcutta on the eve of the 1951 Census at about 127,682. The outside limit of this figure would be 156,589. For a corroboration that the number would be somewhere in between we may consider the natural population of Calcutta in 1941. The figure of immigration for that year suggests that that too was falsely inflated. Since we have no information on the religious pattern of migration for 1941 it would be safe to assume the population of Calcutta in 1941 to have been its houselist population of 1,730,074. On applying the observed trend of Muslims constituting roughly 30 per cent. of Hindus which for the purpose of this paragraph has been made synonymous with the non-Muslim population in 1941 a Hindu population of 1,330,826 and a Muslim population of 399,248 are obtained for 1941. If, as has been done, a net Hindu population (excluding Displaced persons and net immigrants during 1941-51) of 1,445,379 in 1951 is assumed it represents a growth rate of 8·6 per cent. for the ten-year period on the deduced Hindu population of 1941 (1,445,379 less 1,330,826 as a percentage of the latter). This is the growth rate for the Muslim population as well between 1941 and 1951 (433,614 less 399,248 as a percentage of the latter). But since the observed rate of growth among Muslims is slightly higher than among Hindus it may not be going far out to put the rate at between 9 and 10 per cent. for the ten-year period, which would place the Muslim population in Calcutta, had it kept to the city entire, at about 437,000 in 1951. Thus it may be assumed that about 131,000 Muslims were away from the city on the eve of the 1951 count. The West Bengal Government put the number of Muslims who migrated from Calcutta to East Bengal through fear of disturbances at 15,000 of whom 11,000 later returned. About 116,000 Muslims, therefore, left Calcutta for other reasons.

The growth rate of 8·6 for Hindus for the decennium 1941-51 for Calcutta and of about 9·5 for Muslim cannot be regarded as either low or high in view of the famine and epidemics of 1943-44 and the riots of 1946 and 1950.

Thus while about 131,000 Muslims had left Calcutta on the eve of the 1951 Census about 433,288 Displaced Hindus had come in, giving a net increase of about 302,228 to the city in 1951.

The number of effective food ration cards in circulation in Calcutta municipal area is another good check on the 1951 count. Shortly after the 1951 Census a conference was held with the Food Commissioner, West Bengal. The figures for the six cities were as follows:

City	Total population according to 1951 Census	Ration cards	
		Registered	Effective
Calcutta	2,548,677	3,090,204	2,879,638
Howrah	433,630	600,812	568,901
Tollygunj	149,817	188,643	181,411
Bhatpara	134,916	132,291	124,534
Garden Reach	109,160	160,505	145,951
South Suburbs	104,055	120,373	115,648

The Food Commissioner recorded the minutes of the conference of 14 May 1951 as follows:

A conference was held today with the Superintendent of Census Operations, West Bengal and Sikkim, and Director of Rationing. Attempt was made to reconcile the total number of effective ration cards in Calcutta Industrial Area minus the outside rationed area population with the census figures in the following way—

Total effective cards	52·78 lakhs
Deduct—·50 lakh on account of people living outside rationed areas but drawing ration from Employers' shops	
Deduct ·15 lakh on account of pavement population omitted from census enumeration	
	52·13 lakhs
Deduct—5·21 lakhs as probable number of ghost cards at the rate of 10 per cent	
Total . . .	46·92 lakhs

or say 47 lakhs against the total census figure of 45·50 lakhs (*sic.*, should be 45·78 lakhs). There is thus a difference of 1·50 lakhs (*sic.*, should be 1.22 lakhs) which cannot be reconciled today. It appears that the difference

between the number of effective cards and the census figure is proportionately very high in respect of Howrah and Tollyganj (24-Parganas) Rationing Areas. It is decided that further investigation is necessary as to whether in these two areas the number of ghost cards is appreciably higher than 10 per cent. of the number of effective cards or whether the census enumeration in these two areas was an accurate as in other areas.

The accuracy of the 1951 Census count with reference to effective ration cards so far as the Calcutta Municipal area is concerned is therefore established. As for Howrah and Tollyganj the following note, dated 17th July, 1951 of the Director of Rationing to the Food Commissioner explains the differences rather satisfactorily.

Enquiries reveal that (*a*) at Howrah the census figures have excluded (i) a large number of floating population with ration cards, who attend hats during the day and move away to neighbouring non-rationed areas at night ; (ii) continuous stream of temporary visitors from non-rationed areas who were already enumerated in such areas; (iii) certain Bihari population who wanted to have themselves enumerated in their mother state. This has been ascertained from one of the Rationing Officers who has amongst his staff, an enumerator. This tendency might have been wide-spread. The Census Superintendent also tells me that about that time (meaning the census period—A.M.) owing to closure of certain jute mills some of the labour population having ration cards might have left. (*b*) As regards Tollyganj the discrepancy is due to refugees dispersed from camps to neighbouring non-rationed areas and still drawing rations from the sub-area. Now with the rewriting of cards they are being chased out. I think all these factors would explain the discrepancy of 1·50 lakhs (*sic.*, should be 1·22 lakhs). It may be safely assumed as suggested by Food Commissioner that 10 per cent. of the cards are spurious.

This brings us to the other check of the 1951 count with the help of Voters' Lists for the General Elections of 1951. The draft rolls containing 1,406,834 voters for the Calcutta Municipal Area were published on 21 December 1950. The final rolls containing 1,418,637 voters were published on 7 September 1951. The first or draft figures are nearer to the census in point of time than the final lists. Under adult franchise, the percentage of population over 21 in Calcutta was 60 of the total population. If 1,406,834 represents the adult population of Calcutta of over 21 then its total population would be 2,344,723. To this is to be added 162,912 Displaced persons who came after the 1st August 1949 and were debarred from the vote. The total makes 2,507,635 against the actual of 2,548,677. The Election Department, however, does not claim that its voters' lists covered all adults.

As for the checks obtainable from the city's water supply and sewage disposal the following statement gives the figures for 1931, 1941 and 1951. Supposing for the sake of argument that the population of Calcutta were 4 millions in 1951 it would at once appear that the majority of the population in that event would go without drinking water or even unfiltered water for common washing purposes and, moreover, stink in their own sewage. Things have not come to such a pass yet.

	1931-32	1941-42	1950-51
Average daily supply of filtered water in million gallons	59·6	72·8	87·5
Average daily supply of above *per capita* in gallons	52·3	34·5	26·5
Average daily supply of unfiltered water in million gallons	50 3	67·9	98·3
Average daily supply of above *per capita* in gallons	44·1	32·2	38·6
Average daily disposal of sewage in million gallons	188·0	192·8	217 0
Average daily disposal of sewage *per capita* in gallons	164·8	91 2	82·8

Calcutta has grown largely on immigrants. The following statement shows the proportion of two age groups (*a*) the young population of 0-15, (*b*) the adult population of ages 15-60. The proportion of married women (15-40) to total population will show how heavily Calcutta leans on an adult non-family population.

Percentage of age groups and of married women (15-40) to total population and of children (0-5) to married women (15-40) in Calcutta, 1901—51

Year	Percentage of persons, males and females to total population						Percentage of married women (15-40) to total population	Percentage of children (0-5) to married women (15-40)
	Age group 0-15			Age group 15-60				
	P	M	F	P	M	F		
1	2	3	4	5	6	7	8	9
1901	21·9	18·4	28·6	73·1	77·6	64·5	10·9	65·2
1911	22·1	18·2	30·0	73·3	78·1	63·5	10·9	63·8
1921	23·0	19·3	30·9	72·9	77·3	63·5	11·1	61·1
1931	24·7	20·3	34·1	72·2	77·1	61·8	11·7	72·5
1941	24·5	20·0	34·5	72·7	77·7	61·6	10·7	72·2
1951	29·7	24·3	39·4	67·4	73·2	56·9	11·3	99·6

A comparison with statements of other districts will at once illustrate the peculiarities of Calcutta's population. Whereas in other districts south of the Ganges the proportion of the young population (0-15) is about 35 to 37 or more of the total population, in Calcutta it is as low as about 23. The proportion of boys (0-15) to total male population is as low as about 19, which is a welcome feature in the sense that not many young boys below 15 roam the streets and factories of Calcutta for a living. By contrast the relative abundance of young girls among the total female

population is due to several reasons: (*a*) the absolute number of females in Calcutta is small as a result of which ages are more sharply distributed; (*b*) there are still many young brides of age below 15 in the country and city whose proportion is accentuated in the small female population of Calcutta; (*c*) there are large female populations who are on their own and underdeclare their ages; (*d*) on account of the facilities afforded by girls' schools in Calcutta parents all over the country prefer to put their daughters in school in the city, whenever they can afford to do so; (*e*) specific mortality among women is much greater than specific mortality among men. This last reason of course is the most important. The high proportion of males aged 15-60 in Calcutta's population shows the effect of the preponderance of a large immigrant adult working population, and column 8 shows what a small percentage of Calcutta's population, compared to other districts, live normal family lives. This proportion is usually 16 and above in other districts. Column 9 shows for 1921 the effect of the influenza epidemic and conditions created by World War I, and for 1931 and 1941 a slight increase in the size of the family. Figures for 1951 in every column have been thrown out of plumb by a large Displaced population (433,228) who have settled in Calcutta, wives, children and all, thus introducing an element of social health in the city and a little more of the normal family pattern in its life. But the city still remains predominantly a place of business and work.

Immigration and emigration in Calcutta from and outside the State, 1891-1951

	1951	1941	1931	1921	1911	1901	1891
Actual population	2,548,677	2,108,891	1,140,862	1,031,697	998,012	920,933	711,889
Immigration	1,389,023	690,550	378,776	371,575	397,274	324,911	249,891
Emigration	44,536	26,591	22,301	16,000	34,000	3,344	5,500
Natural population	1,204,190	1,444,932	784,387	706,122	634,738	599,363	497,498
Percentage variation	16·7	+84·2	+11·1	+11·2	+5·9	+20·5	..

The figure for 1951 includes 433,228 Displaced persons. The statement shows the slow pace at which Calcutta progressed up to 1931 and the rapid bounds immigration made in 1941 and 1951 owing to the prospects of employment the city offered during World War II and the boom thereafter. The years 1921 and 1931 suggests a depression in the working centres of Calcutta. The statement below shows how much of employment the small space of 32·32 square miles provides to immigrants from other districts in the State.

Migration between Calcutta and other districts of Bengal in 1891-1921 and West Bengal in 1951

Year	Immigration				Emigration			
	From contiguous districts		From other districts		To contiguous districts		To other districts	
	M	F	M	F	M	F	M	F
1891	35,433	27,941	126,022	54,906	632	850	3,260	3,699
1901	55,110	40,324	245,389	82,518	8,517	8,659	8,023	8,043
1911	58,000	46,000	125,000	54,000	25,000	23,000	5,000	5,000
1921	61,000	38,000	123,000	53,000	16,000	13,000	6,000	7,000
1951	87,141	51,657	115,766	58,590	69,842	30,417	17,506	26,422

This shows to what extent men only are inducted into Calcutta from other districts except Howrah and 24-Parganas from where immigrants usually move in with their families. Emigration predominantly represents those whose parents were on short or periodic visits to Calcutta on business.

The extent of migrants who have swarmed into Calcutta may be judged from the fact that only 846,500 persons or a third of the total population returned themselves as having been born in the city, another 313,154 or about 12 per cent. as having been born in other districts of West Bengal; 676,660 (26·5 per cent.) persons in other States of India, of whom 425,797 persons (about 17 per cent.) were born in Bihar, Orissa and Assam. 685,672 persons (27 per cent.) were born in Pakistan of whom 433,228 (17 per cent. of Calcutta's population) are now settled as 'displaced' in the city. Excluding those born in Pakistan, the number of persons born in 'countries in Asia beyond India' is 19,690; in European countries 5,444; in Africa 112; in the two Americas 926; in Australasia 104. This gives a brief idea of the very complex mosaic that is Calcutta's population.

THE RISE AND GROWTH OF CALCUTTA IN THE EIGHTEENTH AND NINETEENTH CENTURIES

There are probably few cities in the world that, from so humble an origin, and apparently under such unfavourable conditions, have within so short a period attained the position now occupied by the capital of India. Less than two centuries ago the site of the present city of Calcutta presented the ordinary aspect of a rural district in the delta of Lower Bengal—a flat rice-swamp, interspersed with patches of jungle, with a few scattered villages on the river-bank. Few would have ventured to predict that here would shortly arise a "City of Palaces"; that physical drawbacks would be made to yield to the indomitable energy of a foreign race; that in spite of morasses, malaria, hurricanes, and the difficult navigation of a treacherous river, Calcutta would in the nineteenth century be an emporium of trade of the first magnitude, and the Capital of an Empire in the East.

Within the limits of the present town of Calcutta stood formerly three villages—Sootalooty, Calcutta and Govindpore. Of these villages (see Appendix I), Sootalooty was the northermost, being situated near Hatkhola in the Koomartooly ward; Calcutta was somewhere between the present Mint and the Custom House; and Govindpore on the southern glacis of the Fort.* The earliest British connection with these places according to Orme, was in 1686, when Job Charnock withdrew the English factory from Hooghly to Sootalooty; but it was not till August 1690 that he succeeded in establishing a firm footing in that village. In the next year the English obtained a patent from Aurungzebe allowing them to trade free of customs duty, on condition of an annual payment of Rs. 3,000. It was some years, however, before they were allowed either to fortify their factory or to exercise jurisdiction over the natives employed by them. But on a revolt of Sobha Singh and others against the Burdwan Rajahs in 1696, the European settlements declared for the Nawab, and were authorised to defend themselves; and two years later, when the Emperor's grandson, Azim-us-shan, was deputed to Bengal, the English "obtained his permission to purchase from the zemindar or Indian proprietor the towns of Sootalooty, Calcutt, and Govindpore, with their districts, extending about three miles along the eastern bank of the river Hooghly, and about one mile inland.† The prince, however, reserved the annual fine of Rs. 1,195; which this ground used to pay to the Nawab of the province".‡

During the next seven years the settlement of Calcutta, we are told, attracted such a number of inhabitants as to excite the jealousy of the Governor of Hooghly, and the increasing importance of the colony induced the Company in 1707 to declare Calcutta a separate presidency, accountable only to the Directors in London. In 1715 the oppressions and exactions of the Nawab Jafir Khan determined the English to send an embassy to the Court of Delhi, the result of which was that in 1717 they obtained the confirmation of all their former privileges, with permission to purchase thirty-eight villages extending down both sides of the Hooghly for a distance of ten miles (see Appendix II). This latter concession, however, was practically frustrated by the Nawab, who deterred the holders of the land from parting with their property; and it is by no means clear what were the exact boundaries of Calcutta at that time. Captain Alexander Hamilton, who visited Calcutta in the year 1710, says—"The Company's colony is limited by a land-mark at Governapore and another near Barnagul" (elsewhere spelt Barnagur, where, he says, the Dutch had a house and garden), "about six miles distant, and the Salt-water Lake bounds it on the land side. It may contain in all about 10,000 or 12,000 souls, and the Company's revenues are pretty good and well paid. They rise from ground-rents and consulage on all goods imported and exported by British subjects; but all natives besides are free from taxes".§ At that time the Old Fort (see Appendix III) had been constructed (the garrison consisting in 1706 of 129 soldiers, of whom 66 were Europeans); old St. John's Church (see Appendix IV) on the site of the west end of Writers' Buildings (see Appendix V), was also in existence.

Mr. Millet says that the revenue of the 38 villages granted in 1717 was Rs. 8,121-8-0; "but", so ran the firman, "you must buy them and satisfy the owner. . . . . according to former custom. The Duan Suba will not impede you". Bolts says: "The 38 villages were not given to the English by the Emperor, but it was only allowed them to purchase the same. However, the

* This short account has been adapted from pages 31 to 54 of H. Beverley's Report on the Census of the Town of Calcutta, 1876. Appendices I to XIV have been prepared by Sri Bepin Vihary Roy, late of the Calcutta Corporation.
In an old map by Captain Cameron (without date) preserved in the Surveyor-General's Office, "Govindpore" is marked on the site of the present race-course. In Orme's map "Governapore" is placed on the river-bank near Hastings or Kidderpore.

† Bolts says "to the extent of about one mile and a half square".—*Considerations*, 2nd edit., 1772, p. 60.

‡ Orme, II, 17.

§ *A New Account of the East Indies*, being the observations and remarks of Captain Alexander Hamilton, 2 vols., 1727

zemindars in Jafir Khan's time would not part with them, and they were at last mostly wrested from them by fraud and violence."†

"In the year 1742" (the year of the Mahratta invasion of Bengal), says Orme, "the Indian inhabitants of the colony requested and obtained permission to dig a ditch at their own expense *round the Company's boundary* from the northern part of Sootanutty to the southern part of Govindpore. This work would extend seven miles, whilst the force to defend it did not exceed 300 Europeans and 500 peons. In six months three miles were finished, when the inhabitants, seeing that no Mahrattas had ever been on the western side of the river within sixty miles of Calcutta, and that Aliverdy exerted himself vigorously to prevent their incursions into the island of Cossimbazar, discontinued the work, which from the occasion was called Mahratta Ditch"‡ (see Appendix VI).

In 1752 Holwell states that "within the Company's bounds", the districts of Simlea, Molunga, Mirzapore and Hogulkuria, estimated altogether at 3,050 bighas, were still held by private proprietors, inasmuch as they could not be prevailed on to alienate to the Company.‖ In the same letter Holwell mentions, and indeed includes as part of Calcutta, "the out-towns of Banian Pooker, Puggladanga, Tengra and Dollond", estimated to contain 228 bighas, for which the Company had paid rent since June 1746 to Rajah Kissenchand and other zemindars at the rate of Sicca Re. 1 per bigha. Two years later it appears that Holwell got possession of Simlea ("being a part of Calcutta in a manner itself") on behalf of the Company, obtaining the pottah from Rasid Mullik and Narwaji Mullik for Rs. 2,281.§ It would seem that Rajah Kissenchand, the Nuddea Rajah, who seems to have held a good deal of property in and about Calcutta, attempted to take possession of Tengra on a spurious title, but failed. Simlea and Puggladanga are said to have contained 2,245 bighas, besides 116 bighas rent-free. They composed one-third of the possessions purchased for the Company, who secured them at a ground-rent of Sicca Rs. 4,961.

From all these statements it seems quite clear that although in a certain sense of the Mahratta ditch might be called the boundary of Calcutta, yet all the lands within it had not yet been acquired by the Company. Within the present limits the area of Calcutta is some 15,000 bighas, or, excluding the Fort and Esplanade, 11,000 bighas. Holwell's estimate of the Company's lands in 1752 is 5,244 bighas only, exclusive of *John Nagore* (Jannugger), which lies outside the ditch. The 2,245 bighas purchased two years later is said to be altogether one-third of the Company's possessions. It would thus seem that the Company had acquired at that time less than one-half of the present area of the town. It would be a mistake to suppose that the Mahratta ditch was intended as a sort of ring-fence to mark off the Company's lands from those of other zemindars.

Of such lands, moreover, as the Company had acquired, it was, as Mr. Bolts says, merely the zemindar. It had to pay revenue into the Imperial exchequer, and was incompetent to enhance the rents beyond Sicca Rs. 3 per bigha.§§ The revenue was originally Sicca Rs. 1,195,‡‡ but "in the reformed standard assessment of Jafir Khan in 1722, set forth in the Ausil Toomary of 1135 A.H.", was valued at Rs. 8,836. This probably included some of the 38 villages granted by the firman of 1717.

The siege and capture of Calcutta by Suraj-ud-dowlah in 1756, the tragedy of the Black Hole, and the re-conquest of the settlement by Clive and Watson in January of the following year, are matters of history too well known to be recapitulated in this place. By the treaty with Suraj-ud-dowlah on the 9th February 1757, it was demanded and agreed "that the villages that were given to the Company by the firman, but detained from them by the Soubah, should be likewise allowed them, and that no impediment or restriction should be put upon the zemindars". "How the Company really became possessed of them", writes Mr. Millett, "I do not know; but as, on obtaining the grant of the 24-Pergunnahs zemindarry, the Government ousted all the zemindars then in possession, it is not improbable that they gained possession of the above villages by a similar process." Still the Company were no more than zemindars; it was only by the treaty

† *Considerations*. 1772, App. p. 1, *note*.

‡ The course of the ditch is for the most part coincident with the Circular Road, though in places it takes an irregular direction outside that road. A notable instance is Hulseebagan. From the old maps it is clear that the Mahratta Ditch was as first being dug so as to exclude this garden, which was then the property of Omichand, the Company's contractor, and it may have been owing to his position that it was afterwards comprehended within "the Company's bounds".

‖ *Indian Tracts*, 2nd edit., 1764, p. 140. Letter dated 15th December 1752.

§ *Selections from the Unpublished Records of Government*, 1748-67, vol. 1, 1869, p. 53.

§§ Mr. Millett quotes Francis to the effect that in 1732, when the Company contemplated an enhancement of rents above this limit, the Soubah forbade them.

‡‡ *Fifth Report*.—Grant's *Vive of the Revenues of Bengal*, page 491, Higginbotham's edition.

with the new Soubah, Jafir Ali Khan, in the following June, that they obtained what may be called the fee-simple of the town.* In that treaty, after articles stipulating for the payment of compensation for losses incurred in the capture of Calcutta, clauses 8 and 9 run as follows:—

> "Within the ditch which surrounds the borders of Calcutta are tracts of land belonging to several zemindars; besides this, I will grant the English Company 600 yards without the ditch. All the land lying south of Calcutta as far as Culpee shall be under the zemindarry of the English Company, and all the officers of those parts shall be under their jurisdiction; the revenues to be paid by them in the same manner with other zemindars."

Accordingly, in the following year, a sunnud was obtained for the free tenure of the town of Calcutta. The *Fard-sawal* runs thus: "The noblest of merchants, the English Company, represent that, the factory for carrying on their trade in the pergunnah of Calcutta lying near the sea and being liable to continual alarms and interruptions from the enemy, for their defence they have made a tank of water round their factory, and left an esplanade on all sides at the distance of a cannon shot, and that the mouzas of Govindpoor, &c., adjoin thereto, they request that a sunnud exempting them from the payment of rents be granted them." The reply was to the effect that "the rents of the aforesaid mouzas, which adjoin to the factory of the most noble of merchants, the English Company, amounting to Rs. 8,836 and something more, from the 1st Rabbi al Sauni, 5th sun (December 1758), are forgiven according to the endorsement, to the end that they provide for the defence of their factory and the safeguard of the seaports herewith." The schedule annexed to this sunnud contains mention of 20½ mouzas, situated in pergunnahs Calcutta, Paikan, Manpoor and Amirabad, besides two markets, and the *abwab foujdari*. The twenty entire mouzahs were *Govindpoor, Mirzapoor, Chourungee, Dhullund, Jella Colunda, Dheladange, Anhatte, Salduah, Bharee Birjee, Kispoorparra, Bharee Serampoor, Sootalootee, Hoculkooria, Shimla, Maukhund, Audinghee, Dhee Calcutta, Deccan Paikparra, Birjee,* and *Serampoor*; the half mouzah being "*Gunnispoor* in the bounds of the Molunga of the Khalsa". The two markets were Sootalootee and Govindpoor. The total revenue remitted was Rs. 8,836-4-3-2.†

From the wording of the above treaty it would seem that all the above villages were situated either within the ditch, or within a distance of 600 yards outside. In common parlance, indeed, the ditch seems even at that period to have been spoken of as the boundary of the Company's possessions‡, though, as we have seen, the Company had neither acquired all the land lying within it, nor had they been restricted from acquiring land outside. The difficulty of identifying the lands at the present day is enhanced by the fact that under the same treaty the Company acquired at the same time the zemindarry of the 24-Pergunnahs,§ and one of the first steps of the Company on entering upon the management was, according to Holwell, to annex "a considerable tract of land taken from the pergunnahs adjoining to Calcutta in order to extend its bounds". This tract was ever afterwards kept separate from the rest of the 24-Pergunnahs under the name of the fifteen *dhees* or the 55 villages (Punchannogram); (see Appendix VII) and it is now-a-days nearly identical with the Suburbs of Calcutta.** In 1759 the 24-Pergunnahs were conferred as a Jagir upon Lord Clive, that is to say, the Company had to pay him the revenue (Sicca Rs. 2,22,958) which, as zemindars, they would otherwise have paid into the Nizamat exchequer, and in 1765 this grant was reserved to Lord Clive for a further term of ten years with reversion to the Company in perpetuity; the arrangement being confirmed by a Royal firman. On acquiring the zemindary, the Company at once proceeded to eject the former zemindars, so that having *khas* possession both of the town lands and also of the neighbouring pergunnahs, it was hardly to be expected that any hard and fast boundary between them would be maintained. The Collector of Calcutta was also the Collector of the 24-Pergunnahs and Punchannogram. Thus several of the villages mentioned in the sunnud for the free tenure of the town were situated outside the ditch, and are now included in Punchannogram. Such, for instance, are Dukhin Paikpara, parts of Simlea and Mirzapore, Saldua (Sealdah) and Serampore. At what precise date the boundary between the town and Punchannogram was first laid down does not appear. By the proclamation of 1794 we learn that questions had arisen

* Bolts says (page 81) that by this treaty the Nawab granted to the English Company, *as zemindars*, all the land about Calcutta to the extent of 600 yards without the ditch called the Mahratta ditch, which partly surrounds the town, and likewise the land lying south of Calcutta, generally known by the name of the 24-Pergunnahs.

† *A View of the Rise, Progress and Present State of the English Government in Bengal.* By Harry Verelst, 1772; Appendix, page 154.

‡ One of Bolt's recommendations in 1772 was "not to confine the jurisdiction of His Majesty's courts within the Mahratta ditch which surrounds Calcutta".

§ Not the whole district as at present constituted, but some 884 square miles only, for the most part lying south of Calcutta on the left bank of the Hooghly.

** By Act XXI of 1857 the Suburbs were defined to include all lands within the general limits of Punchannogram, but it is believed that a small portion has since been excluded.

regarding the boundary, which was accordingly defined to be the inner side of the Mahratta ditch "as far as the remains of the Mahratta entrenchment are visible". This ditch, as we know, was never completed, and it would seem that no trace of it could be found south of Muchooa Bazzar Street. South of that point, then, the boundary was taken to be the Circular Road (then called the Boitakhana Road) as far as the Alipore bridge, and thence the southern bank of Tolly's Nullah. What was the southern limit of Calcutta before 1794 is anything but clear. The old map of Calcutta in 1757 is either not drawn to scale, or shows a very different boundary line from the present, the Esplanade being represented as about one-half its actual area. On the other hand, in his evidence before the Fever Hospital Committee in 1838, Dr. S. Nicolson mentioned a stone pillar as having existed thirty years before, nearly half a mile to the south of the General and Military Hospitals, with an inscription—"Here terminates the Esplanade of Fort William".

Having thus attempted to sketch the manner in which the Town of Calcutta was acquired, it may be interesting to trace its growth so far as the materials available will permit us.

In the *East India Gazetteer* (1815) Walter Hamilton gives the following "correct description" of Calcutta as it existed in 1717: whence the description is taken, he does not say.

The present town was then a village appertaining to the district of Nadia, the houses of which were scattered about in clusters of ten or twelve each, and the inhabitants chiefly husbandmen. A forest existed to the southward of Chandpal Ghat, which was afterwards removed by degrees. Between Kidderpore and the forest were two villages, whose inhabitants were invited to settle in Calcutta by the ancient family of the *Seats*, who were at that time merchants, of great note and very instrumental in bringing Calcutta into the form of a town. Fort William and the Esplanade are the site where this forest and the two villages above mentioned formerly stood. There are still inhabitants alive who recollect a creek which extended from Chandpal Ghat to Balliaghat, and who say that the drain before the Government House is where it took its course. To the south of Boitakhanna there is still a ditch which shows evident traces of the continuation of this creek. In 1717 there was a small village consisting of straggling houses surrounded by puddles of water, where now stand the elegant houses at Chowringhee; and Calcutta may at this period be described as extending to Chitpore bridge, but the intervening space consisted of ground covered with jungle. In 1742 a ditch was dug round a considerable part of the boundaries of Calcutta to prevent the incursions of the Mahrattas, and it appears from Mr. Orme's History of the War in Bengal that at the time of its capture in 1756 there were about 70 houses in the town belonging to the English. What are now called the Esplanade, the site of Fort William and Chowringhee, were so late as 1756 a complete jungle interspersed with a few huts and small pieces of grazing and arable land.

I am not aware if the map of Calcutta, referred to by Holwell in his letter to the Court of Directors, dated 30th November 1756, as "an exact plan of your settlement and of every house in it", is still in existence at the India Office. The earliest maps with which I am acquainted are those published in Orme's History, which were lately reproduced for the Record Commission. The first of Orme's maps represents the European town merely, and is intended to illustrate the operations of the siege of 1756; the other is a map of the whole settlement on a smaller scale, to illustrate the second attack of Suraj-ud-dowlah in 1757. These plans show the English town as occupying the space between Banstolla Street and the Esplanade, and extending inland from the river as far as Lower Chitpore Road and Bentinck Street. In other words, it was as nearly as possible conterminous with the present wards of Burra Bazar and Waterloo Street. These wards, however, were not crowded with buildings as they are in the present day, but might be more fitly compared to the English quarter of a large mofussil station. "The houses of the English inhabitants", writes Orme, "occupied the ground 600 yards towards the east, and half a mile to the north and south of the Fort" (the site of the present Custom House and Post-Office), "but lay scattered in spacious and separate enclosures". Beyond the precincts of the English town as above defined, patches of cultivation are represented interspersed with jungle, and dotted all over with native houses. These houses are most numerous in the Koomartooly, Jorabagan, Jorasanko, Colootola, and Bow Bazar wards. In speaking of the siege of 1756, Orme says, "the Nawab's troops set fire to the great bazar or market within half a mile north-east of the Fort" (Burra Bazar), "and took possession of the quarter inhabited by the principal Indian merchants, which commenced half a mile to the north and extended mostly along the bank of the river" (Jorabagan and Koomartooly). The south of the town apparently was only imperfectly known, the Esplanade and Chowringhee being shown as occupying about one-half their actual area, and of incorrect proportions. No human habitations whatever are shown in this part of the town, though we know that several villages had to be cleared away to make room for the new Fort.

The population of Calcutta was estimated in 1710 at 10,000 or 12,000 souls. From this figure we leap at a single bound to Mr. Holwell's estimate, forty-two years later, 409,056. That the population of the town increased with great rapidity during this period is not only probable, but may be proved by indirect evidence. The rapid growth of the English settlement was continually exciting the jealousy and alarm of the

fawab, and it was probably one of the causes that nduced Suraj-ud-dowlah to attack Calcutta. During the government of Manikchand, which ollowed the capture of the town, Orme says that bout 50,000 of the Indian inhabitants returned to neir dwellings. In the ten years following 1738, efore the discovery of the frauds of Govindram litter, the town-duties had doubled themselves.* 'otwithstanding all this, there is reason to believe nat Holwell's estimate was far in excess of the eal population of the town.

Holwell's estimate is arrived at as follows:— or some 5,472 bighas of the town, he appears to ave had before him information showing that ney contained 9,451 "pottahs or houses", from 'hich he erroneously deduces an average of one igha and three-quarters to each pottah or house, ne real average being about half a bigha. ertain other parts of the town, for which he had o information, he estimates at 3,050 bighas, which calculated agreeably to the foregoing proporon", would contain 5,267 houses, making a total f 14,718. Holwell proceeds no further on this asis, but he informs us that, "agreeably to the xactest judgment he can make, as well as the est information he has acquired", each principal ottah-holder of one bigha of land has five undernants holding of him. The 8,522 bighas would nus be occupied by 51,132 families, or reckoning ight to a family—"a very moderate estimate"—09,056 souls.

The empirical character of this estimate is atent on the face of it. If accepted, it gives an verage density of 140 souls to the acre for the hole area mentioned—that is, a density which nil remains to be exceeded in several wards at ne present day. But the area of the town is nuch more than that given by Holwell, and at nat time the Esplanade had not been cleared. On ne same basis of calculation, therefore, it might e asserted that the entire population of Calcutta 1 1752 was double Holwell's figure, or 800,000 ouls, without taking into account the population f the suburbs. This calculation, however, epends upon a series of assumptions that give the character of mere conjecture. For the area nentioned it is assumed that every bigha has its ottah, that every pottah-holder has five undernants, and that each of these tenants has a mily of eight souls. The recent census has nown that five persons is more than a full averge for each family in Calcutta, and this single orrection would suffice to reduce the estimate something like 250,000 souls. There is reason believe that even this figure is in excess of the tual population at that time.

The number of Europeans in the town is more sily determined. At the time of the siege it may be presumed that every able-bodied man would be enrolled in the defence of the settlement, yet the garrison and militia together numbered only 514 men, of whom no more than 174 were Europeans, the rest being "Topasses, Armenians, and Portuguese".

The history of Calcutta in the 18th century has yet to be written, and the materials extant are so scanty and so dispersed that, by whomsoever it is undertaken, it cannot fail to be a work of immense labour and perseverance. The official records prior to 1756 were mostly destroyed in the siege of Calcutta, and of those of a subsequent date many have been injured by the effect of the climate and the depredations of white ants. The Record Commission did good service in the last century by publishing a series of Selections from the old records, and such as relate to Calcutta have been collected in a compendious form by H. J. Rainey when at Jessore. Similar contributions to the history of the town might no doubt be collected in the Commonwealth Office in London, more particularly for the period prior to the siege of 1756. It is extraordinary, indeed, how soon official papers seem to disappear in this country. As an instance, I may mention that although I have caused search to be made in several of the public offices for some record of the census of the town that was taken by the Chief Magistrate in 1850, no papers relating to it can be traced. But besides official records and the notices of Eastern travellers, the future historian of Calcutta will have to draw for his materials upon the domestic archives of the leading Indian families in the town. What has hitherto been written, indeed, mainly concerns the European quarter: the history of Burra Bazar and the Indian town generally is as yet a sealed book to us. In the following pages I have merely attempted to sketch the gradual extension and improvement of the town, so far as existing records have been available to me. The time that I have been able to snatch from my regular official duties and the simultaneous supervision of a large census establishment has not permitted me to attempt more. Still it is hoped that what has been written will not only be interesting in itself, but will prove of value as a contribution to an account of the town on a more ambitious scale, whenever such a work shall be undertaken.

Modern Calcutta dates from the year 1757. The battle of Plassey, fought on the 23rd of June in that year, established the English supremacy in Bengal, and from that date the growth and prosperity of the new capital has been unchecked. During its brief occupation by the Nawab's troops, when its name was temporarily changed to Alinagar, the houses of the English were for the

* *Indian Tracts*, 1761, page 153.

most part pillaged and destroyed. But by the treaty with the new Nawab, Mir Jafir Khan, one crore and seventy-seven lakhs of rupees were stipulated to be paid as compensation, and on the distribution of this money "commerce revived and affluence began to spread in every house". The houses of the English were now rebuilt; the Esplanade was cleared and the construction of the present Fort commenced; the Indian town, too, rapidly extended itself, but unfortunately without that unity of design and those sanitary precautions the want of which there is only too much reason to deplore even in the present day.

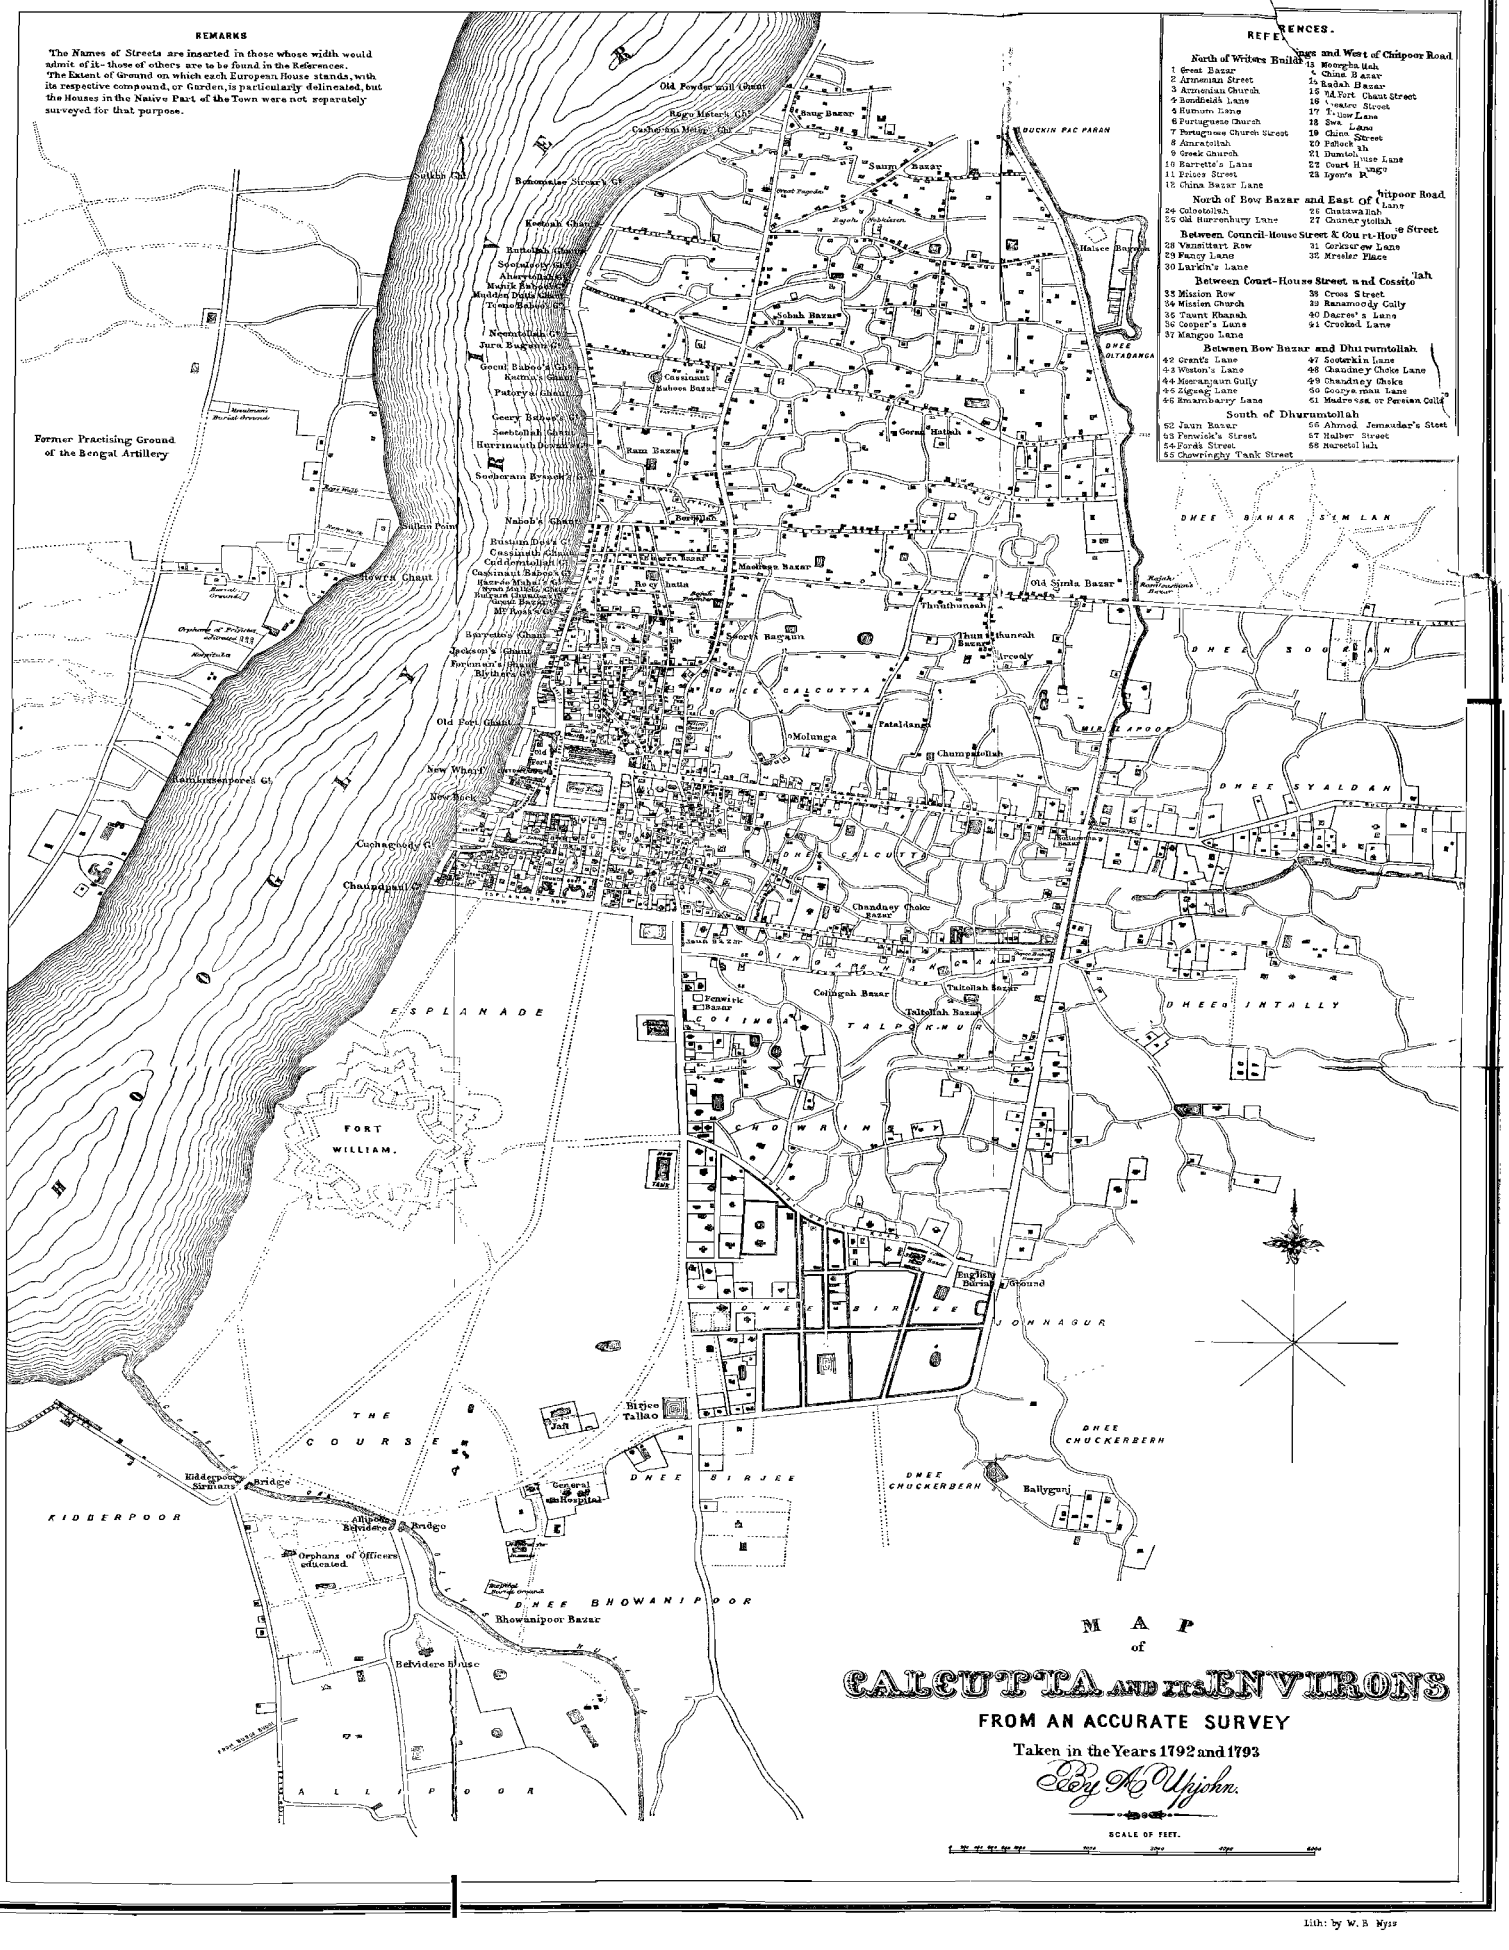

Perhaps there is no better way of tracing the gradual growth of the town than by a comparison of such maps of Calcutta and its neighbourhood as are still in existence. I have already referred to the plan of Calcutta in 1756, "when there were but seventy houses in the town; when the site of the present Fort was a jungle, and modern Chowringhee, with other parts of the town, consisted of bamboo groves and paddy-fields".* Perhaps the oldest map in existence in Calcutta is one which bears the title of a "Map of Company's lands and lakes, by Captain Cameron," and which shows the soundings in the river. Unfortunately it bears no date. The village of "Govindpore is marked on the site of the present race-course, south-east of the new Fort, which is called the "Citadel". Tolly's Nullah is called "Gonadosara Nullah". A "Company's Garden" is shown on the site of Middleton Row (see Appendix VIII). Only a single house, "Dr. Taylor's garden", is shown in Garden Reach. On the opposite side of the river an avenue apparently led down to the Fort of Tanna on the site of the Botanical Gardens. Another old map, still preserved in the Surveyor-General's Office, bears the name of "Claud Martin, a Captain of Infantry" (the founder of the Martinieres at Calcutta and Lucknow). This map also bears no date, but has been referred to the years 1760-64. It has a plan of the lands around Calcutta on both sides of the river, but is on too small a scale to be of much value as regards the town. It has also been much eaten away by age and additions have clearly been made to it since the date of its original preparation. It shows three houses in Chowringhee south of Park Street. The General Hospital (purchased in 1768) is marked on the map (see Appendix IX), as are also the Alipore Bridge (constructed in 1763) and the Kidderpore Bridge. Behind "Belvider" (see Appendix X) is a road running east and west, and marked "Road to the Governor's". The Tanna Fort is shown, as also the "Budge-budgia new road", "Surman's Point", and "Colonel Watson's Garden-house". Several houses are marked in Garden Reach, one of which is designated th "Nabob's".

The next map to which I shall refer is one b Colonel T. Call, Chief Engineer, dated 1786, c which the Surveyor-General's Office possesses copy made in 1817. This map shows very fev houses in Colinga and Chowringhee - only fou in fact, south of Park Street. Of these fou houses, one would appear to have occupied th site of the Loreto House in Middleton Row, on was at the corner of Elysium Row, now Lor Sinha Road, in Theatre Road, and two lay nea Park Street between Middleton Row and Russe Street. In the north of the town brick house are comparatively sparse. The various *bagan* are represented as actual groves of trees, anc apparently a good deal of jungle was still to b found within the precincts of the town. Th "creek" is shown in existence north of Dhurum tolla. The only tanks shown besides that in Dalhousie Square, are Monohur Das's, Birjee, anc the Jinjheree tank near the Museum. Numerou garden-houses are shown at "Sealdanga" Alipore, and all the way down Garden Reach The site of "intended docks" is marked a Kidderpore.

In October 1792 Mr. William Baillie published a "plan of Calcutta reduced by permission o the Commissioner of Police from the original executed for them by Lieutenant-Colonel Mark Wood in the years 1784 and 1785". In the advertisement in the *Calcutta Gazette* (29th Novembe 1792), the original of this map is said to have bee on the scale of 26½ inches to the mile. Its publi cation was delayed in the hope "that the street in the native part of the town would have receiv ed new names, as those in the European quarte have lately done". A postscript gives the follow ing important information: "The ground and new buildings at Chowringhee, south of the Burying-ground road, are taken from an accurate survey made last year". The map was re-published by the Record Commission in 1869.

This is a map of the town proper within the present municipal limits. (See Appendix XI). The boundary on the land side is the Mahratta Ditch, which is shown as though it ran all round Calcutta to the point of meeting of the Circular and Chowringhee roads. Perhaps its most in teresting feature is that it distinguishes the parts of Calcutta inhabited by Europeans from those which were inhabited by Indians. Thus the European quarter extended from Esplanade Row to Armenian Street, and inland as far as Chunaritola and Chandney Chowk. Besides this, Europeans seem to have occupied both sides of Bow Bazar Street and Dhurrumtolla as far as the

* *Selections from "Calcutta Gazette"*, volume VI, *Preface*.

REMARKS
The Names of Streets are inserted in those whose width would admit of it- those of others are to be found in the References.
The Extent of Ground on which each European House stands, with its respective compound, or Garden, is particularly delineated, but the Houses in the Native Part of the Town were not separately surveyed for that purpose.

CALCUTTA AND ITS ENVIRONS
FROM AN ACCURATE SURVEY
Taken in the Years 1792 and 1793
By A. Upjohn.
SCALE OF FEET.
Lith: by W. B. Wyse

Circular Road, as well as the west side of Circular Road between Jaun Bazar Street and Park Street. "Dingabanga" is shown south, and not north, of Dhurrumtolla. Taltolla (called Talpooker), Colinga, and Fenwick Bazar, are occupied almost entirely by Indians. Chowringhee (south of Park Street) is represented as a paddy-field, by which name indeed—Dhankhet—it long continued to be known. The main streets, however, are marked out (with some few others which are not now in existence), and some forty-five houses are shown in this part of the town. For the rest of the town, with some few exceptions, the parts inhabited by Europeans and Indians are merely distinguished by the shading.

Two years later A. Upjohn published his well-known map of "Calcutta and its environs, from an accurate survey taken in the years 1792 and 1793."* This map, which was later reproduced by photozincography at the Surveyor-General's Office, is 4 feet by 2 feet 7 inches, being on a scale of nearly 8 inches to the mile. The whole town (with the exception of Chowringhee) is divided into small patches, which may possibly be intended to represent the pottah-holdings. Each of these patches in the Indian part of the town contains a few trees, a certain amount of jungle, and in many cases what appears to be a pucka house. In the European quarter, on the other hand, the compounds appear free from jungle, though the houses are still detached in separate enclosures. Between Tank Square and Mission Row, for instance, where now is an uninterrupted row of buildings, there were in 1794 only five houses. (See Appendix XII). It is clear, however, that land in this part of the town was becoming too valuable to allow of the large compounds that existed in 1756. The consequence is that the wealthier Europeans have begun to move out of town, and a new suburb has arisen at Sealdah and Entally. Both sides of the Circular Road are studded with European houses; and a "West End" is rapidly coming into existence at Chowringhee. The state of this part of the town is of course very similar to that shown in "Baillie's map," published two years before. Between Jaun Bazar Street and Burial-Ground Road (Park Street) some forty European residences are shown on the map, and about an equal number south of the latter road lying for the most part along that and Chowringhee roads. In this part of the town, moreover, the streets are laid out with perfect regularity, very different from the rest of the town, which presents a network of lanes and bye-lanes,** the irregularity of which shows that they arose spontaneously out of the necessities of the times without any regard to public convenience, and apparently without the slightest control on the part of the authorities.†

The last map I shall describe in this place is that known as Schalch's map, which was published in 1825, the year in which its author died. It is entitled a "Plan of the city of Calcutta and its environs, surveyed by the late Major J. R. Schalch, for the use of the Lottery Committee, and containing all their improvements, with additions from the Surveyor-General's Office and from recent surveys by Captain J. Prinsep". Beneath the title is a view of Government House, (see Appendix XIII), without the garden to the south which now forms so ornamental an addition. This map is on a scale of 9¾ inches to the mile, and is drawn with remarkable clearness and accuracy. The first thing that strikes one on looking at it is the enormous number of tanks and pools of water throughout the town, almost every square inch on the map containing two or more of them.‡ Old Calcutta now appears thickly populated, the streets being mostly lined by continuous rows of houses. Similarly, the Koomartooly ward is densely studded with pucka houses, and the Colootola and Bow Bazar wards also show a fair proportion of dwellings. But the pucka buildings, especially in the north of the town, grow fewer in number as we move inland, very few such buildings being shown east of Cornwallis Street. There are also comparatively bare patches in Shampooker, the north of Jorabagan and Jorasanko, and the north-east corner of Colootola. In the southern quarter of the town there has evidently been a great increase of pucka houses since 1794. The south-east corner of Chowringhee (called Hastings Place in the map) is, however, still unoccupied, with the exception of a few houses in the neighbourhood of what are known as the "Panch Kotee."

The next map of Calcutta to which reference may be made is that compiled from Simms's survey in 1850; but as this forms the basis of all the maps of Calcutta in present use, it is unnecessary to notice it more fully. I have been at pains to describe in some detail the above-mentioned maps, because they afford to a certain extent a comparatively safe index whereby to test the actual condition of the town at certain stated

* This map has been reprinted in this volume.

** The names of some of these lanes are sufficiently suggestive, as for instance, Zigzag Lane, Crooked Lane, Serpentine Lane, and Corkscrew Lane.

In one corner of Upjohn's Map is given a "Plan of the Territory of Calcutta as marked out in the year 1742, exhibiting likewise the military operations at Calcutta when attacked and take by Suraj-ud-dowlah on the 18th of June 1756." This merely Orme's Map, but it refers to the military operations of 1757, not 1756.

† In 1837 Dr J. R Martin stated that the number of tanks in the town was 537 Dr Payne, in his last Quarterly Report says they number 795.

epochs · and in this view it may be necessary to refer to them again in the remarks I may have to make regarding its growth and improvement.

To return, however, to the Calcutta of the last century.

In every Asiatic city where Europeans have settled there have generally arisen, side by side, what are called a White and Black Town; and those who are acquainted with Calcutta in the present day will not be surprised to learn that the two towns presented a remarkable contrast in the last century. Though not much to boast of perhaps, the European town was even at that time clean and ornamental compared with the Indian quarter. Speaking of the early English settlers, Price says: "Round their little fort and close to it, by degrees they built themselves very neat, useful, if not elegant houses, a church, a court-house, &c., laid out walks, planted trees, and made their own little district neat, clean and convenient." The houses, however, were without flues, venetians, glass windows or punkahs; they had panelled doors only, and frames with a network of cane for windows. "Carriages they had none, for there were no carriage roads then in the country, nor for many years after." "The then town", says Hamilton, "was built without order, as the builders thought most convenient for their own affairs, everyone taking in what ground best pleased them for gardening, so that in most houses you must pass through a garden into a house; the English building near the river-side and the natives within land."

Of the Indian town, however, as it was in 1780, Mackintosh writes as follows:

It is a truth that, from the western extremity of California to the eastern coast of Japan, there is not a spot where judgment, taste, decency and convenience are so grossly insulted as in that scattered and confused chaos of houses, huts, sheds, streets, lanes, alleys, windings, gutters, sinks and tanks, which, jumbled into an undistinguished mass of filth and corruption, equally offensive to human sense and health, compose the capital of the English Company's Government in India. The very small portion of cleanliness which it enjoys is owing to the familiar intercourse of hungry jackals by night, and ravenous vultures, kites and crows by day. In like manner it is indebted to the smoke raised in public streets, in temporary huts and sheds, for any respite it enjoys from mosquitos, the natural production of stagnated and putrid waters.

Grandpre, who visited Bengal in 1789, writes:

A we enter the town, a very extensive square opens before u with a large piece of water in the middle for the public use The pond has a grass plot round it, and the whole is enclosed by a wall breast-high, with a railing on the top. The sides of this enclosure are each nearly five hundred yards in length. The square itself is composed of magnificent houses, which render Calcutta not only the handsomest town in Asia, but one of the finest in the world. One side of the square consists of a range of buildings occupied by persons in civil employments under the Company, such as writers in the public offices Part of the side towards the river is taken up by the old fort, which was the first citadel built by the English after their establishment in Bengal.

And in another place he says:

"Calcutta, exclusively of this mode, abounds with all sorts of carriages, chariots, whiskies and phaetons, which occasion in the evening as great a bustle as in one of the principal towns in Europe."

Grandpre, however, lodged opposite the Tiretta Bazar, and he gives a frightful account of the conservancy of that part of the town. The roads were merely made of earth; the drains mere ditches between the houses and the side of the road, the receptacles of all manner of filth and abomination.

"Such animals as die in the streets or in the houses," he says, "are thrown into the drains, and they lie there and putrefy. From want, sickness or accident, many a poor wretch of the human species also expires in the streets. * * * I have seen the body of a poor creature lying dead at my door serve two nights for food to some of these hungry animals (jackals)."

Similarly, in 1803, Lord Valentia remarked: "The town of Calcutta is at present well worthy of being the seat of our Indian Government, both from its size and from the magnificent buildings which decorate the part of it inhabited by Europeans." "Chowringhee", he says, "is an entire village of Palaces, and altogether forms the finest view I ever beheld in any city." "The Black town, however", he goes on to say, "is as complete a contrast to this as can well be conceived. Its streets are narrow and dirty, but the houses of two stories, occasionally brick, but generally mud and thatched, perfectly resembling the cabins of the poorest class in Ireland."

"It is surprising", wrote Dr. Ranald Martin so late as 1837, "how much the condition of the native portion of the town has been neglected in this great city and its suburbs, in which are to be found all the faults of all the cities of India."

The universal custom of the natives, writes Price, when they obtain a small spot on which to build a hut, is to dig a hole, raise one part of the ground with the earth from the other, and make the walls of their house of the same materials from the same place, and then cover it with straw tied on reeds or split bamboos; the hole in the ground is made smooth, and as deep as they can, and when the periodical rains set in, it becomes a little pond or tank, in which they wash their bodies and clothes, as directed by their religion. Vegetation is so quick and powerful, and shade so necessary, that in six months' time the little hut is absolutely hid from the eyes, and almost from the knowledge of everybody but the inhabitants of neighbouring huts. A little path of a foot or two broad is all those harmless people want to go from home into the common highway leading to the public market. Thousands of these huts are run up wherever they are permitted to build near European settlements. * * * Much ground was cleared to make room for a new fort; many thousand huts thrown into the holes from whence they had been taken, to form roads and an esplanade; but every man who lost a hut had ground given him on which to make another, and always of more extent and more value than what had been taken away from him.

Much was done by Governor Vansittart, Lord Clive, Governor Verelst, Governor Cartier, and Governor Hastings, to cleanse the town and make it wholesome and convenient. When Mr Hastings came to the government, he added some new regulations, and gave a degree more power to the officers of police, divided the Black and White town into thirty-five wards, and purchased the consent of the natives to go a little further off.

There are no stones, gravel, or other hard substances within fifty leagues of Calcutta with which to mend the roads. Burnt and broken bricks are all the materials we have, and very expensive they are; for lay them down as thick as you will, so rotten is the soil that in two years' time they will be sunk a fathom deep. With Mr Francis came the Judges of the Supreme Court, the laws of England, partial oppression and licentious liberty * * * and the natives were made to known that they might erect their chappor (thatched) huts in what part of the town they pleased. * * * Every man permitted his own servants to erect straw huts against the outside of his house, but without digging holes, to prevent more disagreeable neighbours from occupying the spot. All distinction of character and order was thrown down as much as if there had been a civil war in the town; and in fact there was a civil and a judicial war too, for the Council General and Supreme Court, who both arrived at the same time, went together by the ears about their different powers; and every inhabitant in the town, black and white, did that which seemed best to be done in his own eyes.

In August and September the waters from the inland provinces come down, in consequence of the heavy periodical fall of rain, in such inundations that at the high water at Calcutta, which is twice in twenty-four hours, the level of the lower part of the town is four feet below the surface of the river. At this time of the year it rains incessantly, and all the lower floors of common houses are under water, except such as stand near to the old Fort, or where the first European houses were built.

What would now be termed the municipal administration of the town was in its early days entrusted to one of the Company's civil servants, who was called the zemindar of Calcutta. This officer appears to have had entire control in executive and revenue matters, besides possessing civil and criminal jurisdiction over the native inhabitants. Thus he collected the ground-rents and town-duties. In 1749 we find the zemindar ordered to survey the drains and make an estimate for their improvement, as "the most effectual method for making the settlement sweet and wholesome". Two years later he is directed to cut down all the old trees and underwood in and about the town. In these matters he was assisted by a native dewan or deputy, commonly known as the black zemindar. When Holwell was appointed zemindar about 1751, the dewan was the notorious Govindram Mittra. Holwell, however, had not been long in office before he succeeded in detecting the gross frauds of his deputy, and his ruthless exposure of them resulted in Govindram's dismissal from the Company's service (see Appendix XIV).

After the acquisition of the 24-Pergunnahs, the administration of the Town and Suburbs, as well as of that district, seems to have been made over to an officer who was styled the Collector, and who held his office inside the Town. The Collector, writes Bolts:

has charge of the revenues of those districts, and superintends, nay absolutely directs, all judicial matters arising within the jurisdiction of the said 24-Pergunnahs. He is, from the nature of his office, greatly concerned also in the police of the town of Calcutta, issuing, under the Company's seal, the leases called *pottahs* to the inhabitants, for the tenures of their houses and grounds; *repairing the roads* and disposing of the petty farms which constitute a considerable part of the revenue of the town of Calcutta; granting licenses to the natives to marry, on which the Company also collect a duty (three sicca rupees from each party), as well as on the sales of registered slaves and new-built sloops. All grain brought into the *gunges* or public granaries, as well as every necessary of life, with many other articles brought to the bazars or public markets in Calcutta, pay a duty upon importation, the collection of which is superintended by the Collector The privilege of exercising many handicraft trades is likewise farmed out by the Collector to farmers, who collect from some a certain sum for the license of exercising their respective trades, and from others even a part of their daily wages.

The Collector, in fact, in those days had well nigh despotic power, an example of which is recorded in 1760, when, in order to expedite the building of the new Fort, he was authorised to impress and bring in 8,000 coolies from the interior of the district. After the introduction of the Supreme Court in 1774, and during the struggle that took place between its members and those of the Government, his authority was probably curtailed. As we read in the extract from Price's *Observations* already quoted, it seems to have been a period of general lawlessness, and the state of the Capital, as of the rest of the country, was probably never more lamentable than during the few years that followed the passing of the Regulating Act.

From the following extract from Grant's *View of the Revenues of Bengal,* it would seem that an attempt was being made even at that time to organise a municipal fund. After stating that the *Kifayat* or profits of every denomination, ground-rent, farms and duties, realized by, and properly belonging to, the Company as talookdars prior to the revolution of 1517 (1757 ?) amounted to Sa. Rs. 98,295, exclusive of the revenue of Sa. Rs. 8,836, Mr. Grant goes on to say:

As to the town of Calcutta, its rents have been rapidly on the increase; though latterly, by unconstitutional means, in admitting, as it would seem unnecessarily, the interference of a British Court of Common Law to give efficacy by registration to a simple financial operation of the Bengal exchequer, in levying a house-tax of two or three lakhs of rupees to defray the expense of cleansing and ornamenting the place internally, besides a revenue before collected (exclusive of the customs or port duties) of 1,10,000 Sa. Rupees, of which about one-third under the head of chowkeedaree or police tax, to retain an undisciplined battalion of

thanadars and peons, constituting the only established guard or night-watch of the city; more precisely in 1190 the gross jumma was 1,22,418, and charges police were 48,857 Sa Rupees.

This is probably what is referred to in the following extract from Martin's *Medical Topography of Calcutta*:

In *Hickey's Gazette* for 1781 I find notice of a proposal submitted to the 'Board' (meaning, I suppose, the Council Board) by a Colonel Campbell for cleaning and draining the town on an estimate of two lakhs of rupees *per annum*; but it would seem that the Board, 'for certain reasons best known to the parties themselves', declined the Colonel's plan, and actually imposed or intended to impose a 'stupendous tax' of from 7 to 14 per cent on landed property for the same object; whether this latter measure was found impracticable in itself, or whether it gave way to measures of external political importance, I cannot say, as there is no further notice regarding it.

From the year 1794, however, a municipal fund was raised under the authority of an Act of Parliament. By 33 Geo. III, Chapter 52, Section 151, the Governor-General in Council was authorised to appoint Justices of the Peace,* and by Section 158 of the same statute it was enacted that the Justices for Calcutta might appoint scavengers for cleansing the streets, and might order their being watched and repaired, and make assessments for these purposes. Such assessment was not to exceed five per cent. of the gross annual value of the houses, buildings and grounds in the Town, except in case of urgent necessity, when the Governor-General in Council might impose a further rate of two and a half per cent.; but the money so raised was not to be used for any other purpose than repairing, watching, and cleansing the streets. Section 159 further empowered the Justices to grant licenses for the sale of spirits within the Town, and authorized the Governor-General in Council to prescribe the limits of the Town for the above purposes.

It appears from Mr. Millett's minute that there was a measurement of the Calcutta lands in 1774-75, and again in 1790, the next survey being that carried out by Mr. Simms in 1850. In 1762 the ground-rents appear to have amounted to Rs. 17,744 for an area of 6,056 bighas. In that year, the Company being now not merely zemindars but the imperial lords of the soil, an edict went forth for the doubling of the rents and resumption of the charity lands; but it is probable that this order referred merely to the *khamar* or waste lands in the *khas* possession of the Company, the rent of lands occupied or tenanted by others being limited to Sa. Rs. 3 per bigha. Even at the date of Mr. Millett's minute in 1848 it would seem that when lands in Calcutta were sold by the Government, they were sold subject to a fixed ground-rent of Sa. Rs. 3, or Co.'s Rs. 3-3-3 per bigha; while, if leased merely, they were let to the highest bidder at a rent sometimes as high as Rs. 60 a cottah. Under Act XXIII of 1850, the legal rate is now Rs. 3-12-0 a bigha, the holdings being redeemable by a payment of twenty-five times the annual rent. In 1836 the gross revenue seems to have been Rs. 19,011; in 1847, Rs. 20,264; in 1850-51, Rs. 24,167;** in 1875-76 it amounted to Rs. 24,029. In former years, however, the rents were very carelessly collected, and large remissions had to be made, over a lakh of rupees being written off in 1850-51.

The first assessment under the Act referred to above was made in 1794 or 1795 by a Mr. Mackey; in 1809 there was a new assessment by Mr. Laprimaudye, the result being a considerable increase in the amount of assessment. In 1819 the Town was newly assessed by four surveyors, under the superintendence of the same Mr. Laprimaudye. After this, alterations were made from time to time as necessary until 1838, at which time it would appear that the number of premises assessed was 16,364, of which 12,106 were valued at less than Rs. 20 a month, 2,671 at from Rs. 20 to 50, 820 from Rs. 50 to Rs. 100, and 767 at Rs. 100 and upwards. The Burra Bazar, Waterloo Street, Colootola, and Bow Bazar Wards, paid half the total rates, which seem to have aggregated about Rs. 2,66,000 per annum.

In the year 1800 the Justices of the Peace for Calcutta were appointed to be Magistrates of the 24-Pergunnahs and the parts of adjacent districts within a radius of twenty miles.† In 1808 a Superintendent of Police was appointed for the Town, and he was also appointed to be one of the Justices of the Peace and a Magistrate of the 24-Pergunnahs. The present Commissioner of Police and the Police Magistrates derive their authority from Act XIII of 1856.

It is quite impossible to predicate with any certainty what were the numbers of the population at this time. Such scattered glimpses as we obtain in the old records from time to time are too fragmentary and indistinct to allow of any

* Till the passing of this Act, the only Justices of the Peace in Bengal were the Governor-General, the Members of Council, and the Judges of the Supreme Court.

** This revenue was derived from three sources: (1) the mouroosee talook of Sootalooty, at a jumma of Rs. 1,024-14-4; (2) ground-rent on lands the property of individuals, agreegating Rs. 19,850; and (3) rents of lands which were the property of Government yielding Rs. 3,123-3-3½. The number of *khas* holdings found at the settlement which followed Simms's survey was 10,815, covering an area of 6,679 bighas, and bearing an aggregate jumma of Rs. 7,109.

† The 24-Pergunnahs at that time formed a part of the civil jurisdiction of the Hooghly district. A separate Judge was, however, appointed by Regulation VII of 1806, partly in consequence of "the increasing population of the suburbs of Calcutta".

t rustworthy conclusions. No doubt the population then, as now, was a very variable one, and it was probably much oftener thinned by famine and pestilence. We have seen that in 1752 Holwell estimated it at over 400,000 souls. In that year there seems to have been a severe famine. Holwell himself speaks of "walking skeletons" in the streets, and of parents selling their children for a rupee apiece. In their letter of the 25th March 1757 (which must have been written before the news of the capture of Calcutta had reached England), the Court of Directors speak of the population having of late been greatly diminished. In that year the settlement was visited by a severe epidemic. In 1762 followed another, which is said to have carried off 50,000 blacks and 800 Europeans. In 1770 occurred perhaps the greatest famine on record in Bengal, which, according to Mr. Hickey, carried off, between the 15th July and 10th September, no less than 76,000 souls in the streets of Calcutta.** Notwithstanding this, in 1772 Mr. Verelst wrote: "Calcutta now contains a greater number of people than Muxadavad (Moorshedabad) in its most flourishing state". In 1782 Macintosh recorded that it was remarkable for "its immense population and great commerce". "Soon after the re-occupation of Calcutta by the British," writes Martin, "an extraordinary impulse seems to have been given to the spirit of improvement, so that within forty years, and notwithstanding all the disadvantages of position, it became a city numbering 500,000 individuals—a degree of prosperity unparalleled perhaps in any other quarter of the world, and which had increased to such a degree that in 1796 some commercial houses were supposed to have had dealings to the amount of two crores of rupees annually". Grandpre, who was in Calcutta in 1789-90, says of the Black Town:—"It is extremely large, and its population at the time of my last voyage was computed at 600,000 Indians, women and children included". In 1800 the Police Committee appear to have estimated the population of the town at 500,000 souls; in 1802 the Magistrates put it at 600,000; in 1814 Sir Edward Hyde East set it down at 700,000; in 1815 the *East India Gazetteer* said "probably half a million will be a tolerably correct approximation to the real number".

It is clear that no great reliance can be placed on vague statements like these. People were surprised at seeing a large populous city spring up so rapidly, and, carried away by enthusiasm, unwittingly magnified its numbers. A city with half a million of inhabitants was somewhat rarer a phenomenon in those days than it is in the middle of the 20th century. London itself more than trebled its population within the nineteenth century; in the seventeenth century its population within the then Bills of mortality did not exceed half a million. Mr. Verelst, it will be seen compares Calcutta with Moorshedabad, and there is no reason to suppose that Moorshedabad ever had a population of even one-half this figure. Some of our largest Indian cities in the present day have populations not exceeding half a million.

In 1821 four assessors were employed to revise the assessments for the house-rate; and the opportunity was taken to obtain a census of the population of the town, which was accordingly "prepared from authentic statements furnished by the assessors". The result was published in the *John Bull* of the 8th August 1822 as follows:—

Christians	13,138
Mahomedans	48,162
Hindoos	118,203
Chinese	414
TOTAL	179,917

But the Magistrates in their report, says Simms, calculated:—

Upper-roomed houses	5,430×16 =86,880
Lower-roomed houses	8,800× 8 =70,400
Tiled huts	15,792÷4× 5½=21,714
Straw huts	35,497÷4× 5½=51,558
TOTAL	230,552

It may be useful to quote here the remarks upon the above figures which appeared in the *John Bull* of the date referred to:—

The great difference between this total amount and former estimates is very striking, and a general opinion prevailed that the population could not but exceed the total returned by the assessors. But it has been ascertained that the extent of Calcutta from the Mahratta Ditch at the northern extremity to the Circular Road at the southern circuit of Chowringhee is not more than 4½ miles, and that its average breadth is only one mile and a half. The lower or southern division of the town, which comprises Chowringhee, is but thinly peopled; the houses of Europeans widely scattered, and Colinga, which is a part of it, is chiefly occupied by natives. The division between Dhurrumtolla and Bow Bazar has a denser population; it comprises the most thickly inhabited European part of Calcutta, as well as a great number of country-born Christians, who reside in the town with their families. The north division, between the Bow Bazar and Muchooa Bazar, comprises perhaps the most dense part of the population of Calcutta. The upper division to the north of Muchooa Bazar is, comparatively speaking, but thinly covered with habitations, presenting towards the north and east extensive gardens, large tanks, and ruinous habitations. It is not improbable, therefore, that the large estimates made of the population of Calcutta at former periods may be owing to the crowds or artisans, labourers, servants and sircars, and to the numerous strangers of every country which constantly meet the eye in every part of

** Martin's *Medical Topography*, page 10.

the town. Indeed, the numbers entering the town daily from the suburbs and opposite side of the river are estimated by the Magistrates at 100,000. This was done by stationing sircars and peons at all the principal outlets of the town. The peons counted the passengers by flinging to the sircars a cowrie for every hundred passengers, noting separately the carriages and hackeries; and the average of different returns gave an influx of about 100,000 individuals, besides carriages and horses. Upon the whole, then, it appears to be the opinion of the Magistrates of Calcutta, from all the returns laid before them, that, by taking the resident population at about 200,000, and the numbers entering the town daily at 100,000, we shall have a statement of population not much wide of the truth.

In 1831 Captain Steel, the Superintendent of Police, took a census of the population of the town, the result of which was to show that it contained 70,076 houses, having 187,081 inhabitants. The details for each of forty thanas are given in the appendix to Simms's Survey Report, and Simms himself adds by way of note:—"By this result I would say that no calculation had been made of women and children nor servants,* and I think it would be fairer to calculate by 10, 6 and 4 (for pucka houses, tiled and straw huts respectively), making a total of 410,930, which is much nearer the old calculation". Without seeing the original papers, it is quite impossible to say whether women and children were comprised in the returns or not; there is nothing in the statement published by Simms to show that they were excluded.

On 1st January 1837 Captain F. W. Birch, the Superintendent of Police, took another census, the details of which are also given by Simms. The total population of the Town amounted to 229,714, of whom 144,911, or 63 per cent., were males, and 84,803, or 37 per cent., females. Of the males, 36,236, or 25 per cent., were under 20 years of age; of the females, 28 per cent. were under 20. The population of the first division was 94,907; of the second, 64,853; of the third, 21,453; and of the fourth, 48,501. The numbers of each nationality are as follows:

English	3,138
Eurasians	4,746
Portuguese	3,181
French	160
Chinese	362
Armenians	636
Jews	307
Mahomedans	58,744
Hindoos	137,651
Mogul	527
Parsees	40
Arabs	351
Mugns	683
Madrassees	55
Native Christians	49
Low Castes	19,084

* The statement contains a column headed "Servants".
** Simms' Report page 80.
† *Calcutta Review* Vol. XXXV, page 166.

Mr. J. H. Stocqueler is referring to this census when, in his *Handbook of India* (1844), he says that "recent and accurate surveys have sufficiently established the fact that the resident population does not much exceed 220,000 comprised within the proper limits of the city;" "though, like other overgrown towns, it has flowed over into its suburbs, it is not yet occupied with urban fulness or regularity". It is to be observed, too, that in their first report, dated 1840, the Fever Hospital Committee adopt the idea of "a fixed population estimated at under 200,000 or a floating population of 300,000".

The next estimate that we meet with is that of Simms, based entirely on the number of houses found at the time of his survey. From 1,036 native huts and 357 pucka houses in which the inhabitants were actually counted, Mr. Simms arrived at an average for the former of 5 and for the latter of 8·7 persons in each house; and upon this basis the population of the Town proper (exclusive of Fort William and the jail) was estimated at 361,369 souls, which Mr. Simms considered to be "rather under than over the actual numbers". But in the same year (1850) a census was taken by the Chief Magistrate, the result of which gave a total population of 413,182 souls.** This total so closely approximated to that of the first official census that further particulars regarding it would be most interesting and valuable. Unfortunately, neither in the Police Office nor in the Bengal Secretariat is any record of it forthcoming, and the only detailed figures that I have been able to discover are to be found in the pages of the *Calcutta Review*.† From that authority it would appear that the numbers and nationalities of the population were as follows:

Nationality.	Males	Females	Total
Europeans	4,848	2,686	7,534
Eurasians	2,472	2,188	4,660
Armenians	499	393	892
Chinese	699	148	847
Hindoos	165,817	108,689	274,506
Mahomedans	72,476	38,694	111,170
Others	8,225	7,229	15,454
Total	255,036	160,027	415,063

It is of course uncertain whether these figures include Fort William and the shipping; but the proportionate numbers of each nationality, and the ratio of the sexes to each other, are singularly like the results of the first census. The males, it will be observed, compose 61 per cent. of the total population. The number of Eurasians appears comparatively small, but the definition of the term may have been restricted, and some of the mixed races included under the heading "Others".

Few Governor-Generals have done as much for Calcutta as Lord Wellesley effected during his tenure of office from 1798 to 1805. To him we owe not only Government House and the Circular Road, but many minor improvements. His minute, recorded on the 16th June 1803, is of so great interest in view of what was accomplished for the Town in the first half of the 19th century that I may be allowed to reproduce it in this place. It commences thus*:

The increasing extent and population of Calcutta, the Capital of the British Empire in India and the seat of the Supreme authority, require the serious attention of Government. It is now become absolutely necessary to provide permanent means of promoting the health, the comfort, and the convenience of the numerous inhabitants of this great Town.

The construction of the public drains and water-courses of the Town is extremely defective. The drains and water-courses in their present state neither answer the purpose of cleansing the town, nor of discharging the annual inundations occasioned by the rise of the river, or by the excessive fall of rain during the south-west monsoon. During the last week a great part of this Town has remained under water, and the drains have been so offensive that unless early measures be adopted for the purpose of improving their construction, the health of the inhabitants of Calcutta, both European and Native, must be seriously affected.

The defects of the climate of Calcutta during the latter part of the rainy season may indeed be ascribed in a great measure to the state of the drains and water-courses, and to the stagnant water remaining in the town and its vicinity.

The health of the town would certainly be considerably improved by an improvement in the mode of draining and cleansing the streets, roads and esplanade. An opinion is generally entertained that an original error has been committed in draining the town towards the river Hooghly, and it is believed that the level of the country inclines towards the Salt Water Lake, and consequently that the principal channels of the public drains and water-courses ought to be conducted in that direction.

Experience has manifested that during the rainy season, when the river has attained its utmost height, the present drains become useless: at that season the rain continues to stagnate for many weeks in every part of the Town, and the result necessarily endangers the lives of all Europeans residing in the Town, and greatly affects our native subjects.

Other points connected with the preservation of the health of the inhabitants of this Capital appear also to require immediate notice. No general regulations at present exist with respect to the situation of the public markets, or of the places appropriated to the slaughter of cattle, the exposure of meat, or the burial of the dead. Places destined to these purposes must necessarily increase in number with the increasing population of Calcutta. They must be nuisances wherever they are situated, and it becomes an important branch of the Police to confine all such nuisances to the situations wherein they may prove least offensive. It must, however, have been generally remarked that places of burial have been established in situations wherein they must prove both injurious and offensive; and bazars, slaughter-houses and markets of meat now exist in the most frequented parts of the Town.

In those quarters of the Town occupied principally by the native inhabitants, the houses have been built without order or regularity, and the streets and lanes have been formed without attention to the health, convenience or safety of the inhabitants. The frequency of fires (by which many valuable lives have been annually lost and property to a great extent has been destroyed) must be chiefly ascribed to this cause.

It is a primary duty of the Government to provide for the health, safety and convenience of the inhabitants of this great Town by establishing a comprehensive system for the improvement of the roads, streets, paths, drains and water-courses, and by fixing permanent rules for the construction and distribution of the houses and public ediffices, and for the regulation of nuisances of every description.

The appearance and beauty of the Town are inseparably connected with the health, safety and convenience of the inhabitants; and every improvement which shall introduce a greater degree of order, symmetry and magnificence in the streets, roads, ghats and wharfs, public ediffices and private habitations, will tend to ameliorate the climate, and to promote and secure every object of a just and salutary system of police.

The minute then proceeds to appoint a Committee of thirty members (including the four Magistrates for the Town) to take these matters into consideration, and lays down certain detailed instructions for the guidance of the Committee. It does not appear, however, that this Committee was really appointed till the following year, and I have unfortunately not had access to the records of its proceedings. Its attention was, in the first place, directed to the frequent fires which took place in the Town, and it was called upon to report on their causes and means of prevention. Special Committees were appointed for this and other purposes, and on the 4th July 1804 the Committee submitted a report, which, with the Government orders on it, is almost the only record of its labours that I have been able to trace.** Even in regard to fires the Government hesitated, on account of the poverty of the native inhabitants to adopt any real remedial measures, and it was not till long after that the erection of

* William Hickey had, however, some mordant comments in his Memoirs on the endeavours of Lord Wellesley. An extract is given from Volume IV of his Memoirs in Appendix XV.

** In a minute by H. J. Shakespear, Esq., dated 13th January 1820, I find the following reference to this Committee: "The improvements then contemplated, although sanctioned by Government and intended to be defrayed from its funds, were never carried into effect. Why they were relinquished, or where the records of that Committee are to be found, I have not been able to discover; but if they were necessary *then*, they are greatly more so *now*, when the population of the town, and particularly the European portion of it, has so much increased". The records of the Committee from 1807 to 1814 were transferred to the Lottery Committee, of which Mr. Shakespear was himself a member, in 1817. -See Proceedings.

thatched houses was prohibited.* The Committee appears to have become defunct about the year 1814: there is no reference to it in the Government order of 1817 appointing the new Lottery Committee.

The plan of raising funds for public or charitable objects by means of public lotteries appears to have come into vogue in England some time during last century, and was introduced into this country towards its close. Among the records for 1793 we find a notice by the Commissioners for the Bengal Lottery of that year, intimating that the Committee for the Native Hospital had declined to receive the fund raised for it, and that it had consequently been given to the fund for the relief of insolvent debtors. The Town Hall, it is well known, was entirely constructed out of the proceeds of such lotteries. These lotteries were inaugurated in 1805 under the immediate patronage of the Governor-General himself. In that year the lottery was advertised for five lakhs of rupees in 5,000 tickets of Rs. 1,000 each. There were 1,000 prizes and 4,000 blanks. Ten per cent. was deducted from the prizes to go to the Town Hall Fund, besides two per cent. for expenses. In 1806 the lottery was for seven lakhs and a half; and so on. And so successful and popular apparently was this method of raising money for public objects, that on the 20th January 1809 the Governor-General in Council established an official organisation consisting of six Commissioners, a Superintendent and a Registrar for the conduct of lotteries for the improvement of the Town of Calcutta. The proceeds of these lotteries seem to have been at first expended by Lord Wellesley's Improvement Committee, though in the absence of the records of that Committee, it is impossible to say on what precise works the funds were spent. It would appear that Eliot's Tank** and one or two others were excavated at this time. The Balliaghatta Canal was, we know, originally constructed out of the Lottery funds. Eliot Road was opened about this time, and the idea was conceived of a great central road, to run north and south throughout the whole length of the Town, with open squares and large reservoirs of water at stated intervals. Altogether, between 1809 and 1817, seventeen Improvement lotteries appear to have been held (exclusive of the Town Hall lotteries); and assuming the profits to have aggregated not less than twelve lakhs of rupees, a sum of seven lakhs and a half must have been spent during that period in improvements in the Town. The balance, taken over by the Lottery Committee in 1817, amounted to about four lakhs and a half.

When Lord Wellesley's Committee was dissolved is not quite clear; but on the 21st October 1817 the Vice-President in Council appointed the famous Lottery Committee to which most of the early improvements in Calcutta are justly attributed. To this Committee were transferred the functions of the former Lottery Commissioners, and they were further vested, as a Committee of Improvement, with the powers assigned to Lord Wellesley's Committee, which seems to have been already defunct. In the order of Government constituting the new Committee it was laid down that the Lottery fund should be considered applicable to the expense of excavating new tanks and filling up old ones, of opening new streets or roads, of constructing aqueducts, bridges, ghauts, and other similar works calculated to improve the health, convenience and comfort of the inhabitants of the city and suburbs, but not to the keeping in repair streets, roads, drains, of other works alluded to, when finished, and that, generally speaking, no expense would be charged to the fund which could properly be included in the assessment department. In other words, the Conservancy Department was to remain, and did remain in charge of the Magistrates under the Act of Parliament above mentioned, and the appropriation of the taxes raised under its authority was limited to the purposes therein specified. The Lottery funds, on the other hand, were to be devoted to new works, the construction of which was to be superintended by the Lottery Committee.†

At one of the earliest meetings of the Committee, a minute was submitted by G. J. Gordon, Esq., one of the Commissioners of the Court of Requests, and generally acquiesced in by the rest of the Committee, regarding the relative importance of the objects which the Committee was directed to carry into effect. It was therein stated that the health of the inhabitants should be the first object of the Committee's proceedings, and that with this view their funds ought to be applied (1) to filling up, deepening or cleansing miry tanks or jheels, (2) to preventing the accumulation of filth by the construction of new

* The erection of thatched huts in Calcutta was prohibited by Act XII of 1837, repealed by Act XIV of 1856. They had been prohibited in Madras and Bombay as far back as 1805.

** Among the items of the balance taken over by the Lottery Committee we find- Amount of a treasury order of 1813-14 on account of the excavation of a tank to the north of the Great Jail, and balance of ditto of 1812-13 for Sa. Rs. 14 789 on account of a new tank proposed to be dug at Chowringhee- -probably Eliot's tank, opposite Harrington Street

† Up to 1819 it would seem that certain conservancy charges were debited to the Lottery Fund. Before the appointment of the Lottery Committee, the Magistrates appear to have executed new works--the aqueduct along Chowringhee Road, for instance, in 1815-16. They seem to have been seven in number at this time.

drains, and (3) to promoting ventilation by cutting down trees and increasing the number and size of streets running north and south; that, next to the health of the inhabitants, the Committee should consider the personal safety of passengers in the streets by widening narrow streets, rounding off sharp angles, and forming footpaths where possible; that convenience and ornament should be also kept in view but postponed to the foregoing objects; and that a preference should be given to such plans of improvement as combined the greatest number of important objects at the smallest expense.

A full account of the works effected by the Lottery Committee would form one of the most interesting chapters in the history of the City. Unfortunately, I have only had access to the records of their proceedings for a very limited period. Three large manuscript volumes, containing their proceedings from the date of the Committee's appointment in 1817 to the close of 1821, are still in existence in the Municipal Office; the remainder seem to have disappeared like the records of Lord Wellesley's Committee. Judging from the contents of the three volumes referred to, this loss is, I think, to be regretted. During the four years to which they refer, the Committee appear to have either executed or had in contemplation such a formidable list of improvements as eventually to have startled even the Court of Directors. The first work undertaken, namely the opening of Wellington Street and Wellington Square,* was a legacy bequeathed to them by a former Committee, and occupied several years. Meanwhile other works were in progress. Hastings and Hare Streets were opened out to the river; Mangoe Lane and Cossitola were widened; Creek Row was formed on the site of the Dingabhanga Creek; Free School Street was opened; Kyd Street was improved; arrangements were made for the extension of Wellington Street as far as College Square to the north and Park Street to the south; the Secretary's Walk and the Children's Walk along Chowringhee Road, with the adjoining balustrades, were constructed at this time; a new survey of the Town was entrusted to Lieutenant Schalch; a regular system for metalling the roads was set on foot at a cost of some of Rs. 25,000 a year; arrangements were made for watering the streets, and an engine was erected at Chandpal Ghat; Mr. Camac's estate in Short's Bazar was purchased, and improved by the excavation of several large tanks. And last, but not least, the Strand Road along the river-bank was designed, and that part of it which lies within the Waterloo Street ward put in execution.

During the next few years College Street, Cornwallis Street and Wellesley Street were constructed, with the squares and tanks of the same names; the Strand Road was completed from Nimtolla Ghat to Hastings; Colootola, Amherst and Mirzapore Streets were opened, and the Soortibagan and Mirzapore Tanks constructed, besides the extensive improvements carried on in Short's Bazar.

The Lottery Committee would seem to have been still in existence at the time of the Fever Hospital Committee's first report. On 1st December 1833, however, Mr. M'Farlan had already recorded that "the Lottery Funds might now be said to be extinct for all purposes of improvement in Calcutta". A strong feeling had set in against the morality and usefulness of the public lotteries, and this feeling showed itself in a corresponding falling off in the profits derived from them. During the twelve years from 1825 to 1836 the gross profits aggregated Rs. 10,19,349 giving an average for the whole period of Rs. 84,945 per annum; but in point of fact the annual profits fell off during this period from a lakh and a half of less than one-third of that sum, one lottery in 1834 actually showing a loss of Rs. 9,135. It would appear, moreover, that on 1st November 1836 the Committee was indebted to Government to the extent of nearly four lakhs of rupees, or after deducting the estimated value of land in its possession, Rs. 1,71,000, exclusive of interest due to Government on the loans borrowed. When the Committee was formerly dissolved I have not been able to ascertain.

We have seen what the state of the roads and drains was in the 18th century; and it would not seem that much improvement had been effected up to the date of the appointment of the Lottery Committee. On the 13th February 1818, Mr. Henry Wood brought prominently to the notice of the Committee "the inadequate manner in which the establishment entertained for the purpose performed its duty in removing the filth, which, except in the vicinity of Government House and Chowringhee, is allowed to accumulate to the great annoyance of the inhabitants,

* This quarter of the Town was previously called Biparitola. It was first proposed to call the square Moira Square, but in a minute, dated 20th October 1820 Lord Hastings suggested that it should be dignified with the name of Wellington Square, as "humble tribute to a hero whose name is the glory of the British nation". One of the ruinous marble domes in the palace at Agra was to be transported and erected in the square, as a receptacle for a bust of the Duke whose name it was to bear. The excavation of the tank was considerably delayed in consequence of numerous springs on the site, which caused the banks to give way, but it was ultimately completed in 1821 at a cost of Rs. 2,76,000. Simon tells us, however, that this tank continued to give trouble till 1849, when the Commissioners under Act XVI of 1847 had the bed puddled. It now forms a subterranean reservoir in connection with the Water Works.

and causing much unhealthiness". The drains were at that time nothing more than earthen ditches at the sides of the road, and "not intended in theory to do more than carry off rain-water"*; when they were cleaned, it was by digging and carting away a certain quantity of earth out of them, the earth being used to fill up tanks and other low ground.** The streets themselves throughout the greater part of the Town were simply kutcha lanes; it was not till 1820 that a systematic plan for metalling them year by year was adopted. At the same time an attempt was made to improve the surface drains. For these and similar improvements the Town was indebted to the energetic exertions of Mr. H. J. Shakespear, one of the Magistrates for the Town and Suburbs. His letters to the Committee abound in descriptions of the neglected state of the public roads and drains even in the most open parts of the Town. But while doing the best he could with the materials and the funds at his command, he was always careful to point out that it was only by a comprehensive system, involving an expenditure greater than could be afforded by the proceeds of the lotteries, that the drainage of the Town could be permanently and substantially improved. "Unless, therefore, the Government comes forward to rescue the inhabitants of its Capital from the baneful effects of living in swamps and breathing a polluted atmosphere, the conclusion of each rainy season must bring with it a return of disease and mortality that has, particularly of late years, committed such ravages amongst the inhabitants of the Town."

The first scheme suggested for a representative municipal government in Calcutta was submitted to Government in December 1833 by Mr. D. M'Farlan, Chief Magistrate of the Town. This scheme was circulated among the ratepayers by Mr. M'Farlan, and will, with several valuable minutes on the same subject, be found in Appendix F to the first report of the Fever Hospital Committee. Mr. M'Farlan declared that the introduction of such a system was to him "an object of the highest ambition", and expressed his conviction that, even should the efforts then made be premature, some similar arrangement would sooner or later be adopted. In accordance with this scheme, the Government sanctioned the appointment of a committee for one division of the Town as an experimental measure, but two years later Mr. M'Farlan reported that the scheme had proved an utter failure, inasmuch as the inhabitants would not take the trouble to nominate committees.

The Committee for the establishment of a Fever Hospital, and for inquiring into local management and taxation in Calcutta, was appointed under somewhat peculiar circumstances by Lord Auckland in 1836. Its appointment was due in great measure to the philanthropic exertions of Surgeon (afterwards Sir) James Ronald Martin, whose *Medical Topography of Calcutta* has been already referred to in these pages (The first sixty-seven pages of this book are reproduced in Appendix XVI -A.M.), and to whom primarily perhaps Calcutta may be said to be indebted for its Medical College Hospital. The Committee, under the able presidency of Sir John Peter Grant, laboured for many years, recording a mass of evidence and collecting a vast fund of information on the various questions connected with the administration and improvement of the town, as well as on the more special subject of the establishment of a fever hospital. It submitted three reports, one on the 7th January 1840, a second on the 7th August 1846, and a third, I believe, in the following year. The two first reports occupy 315 closely printed foolscap pages, while the appendixes fill several bulky volumes. The first report contains "the results of very extensive inquiries into the drainage, cleansing, ventilation and communications of the city of Calcutta, and the supplying it with water; the establishment of an hospital or hospitals and of additional dispensaries for the treatment of diseases among the native poor; the causes of disease and obstacles to convenience and improvement which abound in it; the state of the suburbs; the system of collecting and appropriating the taxes of the town; and the state of the police as well in the town as on the river which forms its harbour". The second report deals with the question of the drainage of the Salt Water Lake, a question, however, in regard to which the Committee had already expressed their conviction "that the salubrity of the city and suburbs was not wholly dependent upon the removal of this marsh, but was immediately dependent upon that which it was in the immediate power of the Government to effect without incurring the dangers of a partial and progressive drainage of a large extent of water and moist ground". The third report, I believe, had reference solely to the new Clinical Hospital in connection with the Medical College.

* Report of Fever Hospital Committee, Appendix F, page 33.

** It was by this means that the present Circular Road was made on the site of what was formerly a broad deep ditch.

The state of the Town at this time is fully exposed in the Committee's first report*. They found the following three propositions indisputably established.

I. That there is no natural impediment nor any difficulty which a due application of science and capital cannot readily overcome to the thoroughly draining, cleansing, and ventilating, and supplying with wholesome water, the whole city and suburbs of Calcutta.

II. That the parts of the city inhabited by the natives, forming a great population, to whose numbers the British inhabitants bear a very small proportion, and the whole of the suburbs, are in all these respects in a condition of such total neglect as to render them necessarily the seats of diseases destructive of individual happiness and of life, and inconsistent with moral improvement and political prosperity, and that the still imperfect, though improved, condition in these respects of those parts of the city inhabited by the British, and the noxious exhalations produced all round them by the state of the native town and the suburbs and the marshes called the Salt Water Lake, produce in these parts effects inconsistent with salubrity.

III.- -That the removal of the causes which now generate the pestilential seeds of disease to so frightful a degree would be effected by the thoroughly draining, cleansing and ventilating the city and suburbs, and draining the Salt Water Lake, and that an ample supply of water for watering the roads and for all purposes of cleanliness, and of good and wholesome water for drinking and preparing food, would be afforded to every part of the city by the formation of a sufficient head of water within it, and the excavating a sufficient number of tanks, and thus the city would be rendered a healthy residence for the natives of the climate, and not otherwise injurious to European constitutions than through the operation during the greater part of the year of tropical heat in a climate no doubt naturally damp but unassisted by unwholesome exhalations from the soil or miasmata.

At the time of the Committee's report, the only funds strictly belonging to the Town were the house-tax and the abkari-tax; the ground-rents being, strictly speaking, imperial revenue, and the town duties having been abolished by Act XIV of 1836. For that year the house-tax is put down at Sa. Rs. 1,97,200, and the abkari at Sa. Rs. 1,46,100, making a total of Sa. Rs. 3,43,300, or nearly three lakhs and a half. Against this sum were charged the expenses of cleansing, watching and repairing the streets, estimated at Sa. Rs. 2,83,866; but besides this a further sum of Sa. Rs. 2,46,128 was expended by Government for "judicial and conservancy charges", the total police charges thus aggregating Sa. Rs. 5,29,995.

The Chief Magistrate was paid Rs. 3,000 a month; four other Magistrates received salaries of Co.'s Rs. 1,463, 1,254, 1,045, and 1,000, respectively; the Superintendent of Police, Rs. 500 per mensem. The condition of the roads was considered by the Chief Magistrate to be good; their aggregate length was 170 miles, the cost of keeping them in repair being from Rs. 40,000 to Rs. 50,000 per annum. The watering of the roads cost about Rs. 25,000, including the cost of working the engine at Chandpal Ghat. The lighting (consisting of 307 oil lamps for the whole city) cost Sa. Rs. 6,253.

On the question of municipal self-government, the following remarks of the Committee may be of interest at the present time:

Your Committee have received only two plans of municipal government, one from C. K. Robinson, Esq., Magistrate, and the other from the Trade Association; the Chamber of Commerce declining to enter upon the subject, as being beyond their province. Your Committee have every reason to believe that the members of the Trade Association would perform the duties which they have proposed laboriously and zealously, and that if the inhabitants of Calcutta were all or even a majority of them, Europeans, such a plan based on election by inhabitant householders would be found well adapted for municipal government; but considering that the European inhabitants are an insignificant part of the whole population of Calcutta, and that by far the greater part of them can only be regarded as temporary residents, your Committee cannot take upon themselves to recommend what they consider wholly unsuited to the present state and condition of the great majority of the inhabitants.

Your Committee are, however, of opinion that, considering the rapid progress now making in education, many years will not elapse before a class of natives will be found in Calcutta able and willing to aid their European townsmen in performing those municipal duties usually entrusted to the inhabitants of cities in Europe, and your Committee therefore feel anxious that some preparation should, if possible, be made for so training the inhabitants of Calcutta that they may in time relieve the Government entirely from the attention which it is now compelled to give to these minute local details. At present, however, and until a more definite plan can be matured and approved, your Committee can only offer the following suggestions:—

As the whole income of the town cannot be placed under the charge of the inhabitants, there being at present, so far as your Committee can see, no means of establishing an efficient and practical plan of management based on election by inhabitant householders, your Committee are of opinion that the revenue in the conservancy department, including the collection of the house-tax and abkari-taxes, should be placed under executive officers, and that a Board of Commissioners of Public Health and Conservancy should be annually elected by resident householders, occupying houses of at least the value of Rs. 50 per mensem, with power to examine and audit all accounts relating to the conservancy department, and to report on the same to Government, and also to suggest the opening of new thoroughfares and other improvements, the Government being empowered by law to carry their suggestions into effect, if it approve of them.

In accordance with these suggestions, the first attempt at municipal government was made in the year 1840. Act XXIV of that year not only *declares the purposes to which the rates levied* under 33 Geo. III., Chap. 52, may be applied—

* Extracts from pages 2 to 17 of the Abridgement of the Report of the Committee are given in Appendix XVII.

such purposes being the lighting and watering of the streets, and the cleaning and repairing of the roads and drains—but provides for a voluntary system of self-government. The town being divided into four divisions, the Government was empowered, on the application of two-thirds of the rate-payers in any division, to entrust to them the assessment, collection, and management of the rates of such division. This privilege, however, was so fettered by conditions that it is not surprising that it proved a failure. It is believed that not a single application was made to Government under the Act; and in 1847—that is, after the second report of the Fever Hospital Committee had been submitted to Government—another attempt was made to introduce a system of local self-government. The preamble to Act XVI of 1847 recites that the sewerage and drainage of the town of Calcutta, and the supply of water for the domestic use of the inhabitants thereof, and the due cleansing of drains therein and the means of providing for the due ventilation of the town, and the repairing, cleansing and lighting the roads and streets, and the making convenient lines of communication by spacious streets, and the preventing and removing of nuisance, and the due provision of adequate means for the relief of the sick-poor in the said town, are very defective, all which cause excessive disease and great mortality. The Act accordingly provides for the cessation of the conservancy functions of the Justices of the Peace for Calcutta from 1st January 1848, and for their exercise from that date by a Board of seven Commissioners, of whom three were to be appointed by Government and one elected by the rate-payers for each division of the town. This Act also for the first time authorises the levy of a tax on horses and vehicles. A scheme for the election of Commissioners under the act was agreed upon by a meeting of the rate-payers and approved by the Government. This Act, however, as we learn from Act X of 1852, was also found inconvenient and ineffectual for the intended purposes thereof. The Town was accordingly divided into the Northern and Southern divisions, and the Board of Commissioners reduced to four in number, two of whom were to be appointed by Government. The Commissioners, whether elected or nominated by Government, were to receive salaries not exceeding Rs. 250 a month. The house-rate was raised to 6¼ per cent., but the assessment apparently was to continue to be made by the Justices of the Peace for the Town. Act XII of 1852 conferred certain further powers upon the Commissioners. But this attempt at municipal government seems to have been no greater success, for by Act XXVIII of 1854 the provisions of the former Act relating to the election of Commissioners were repealed, it being left to the Lieutenant-Governor to fill up vacancies in their number.

In his evidence before the Municipal Committee of 1861, Lieutenant-Colonel Thuillier contrasted the merits of these several systems as follows.

> A board of seven members—four Europeans and three Natives—used to talk a great deal and write immensely, but very little was ever effected. The board of three Europeans has worked admirably, and effected very much with utterly inadequate means. There can be no comparison between the two, as the results in the annual and other reports will clearly testify. The board of four—two Europeans and two elected Natives—was only worked through the casting vote of the Chairman; and I look on such a board as a perfect farce.
>
> Wherefore, for the above reasons, I look upon a large board of honorary members as the very worst form of administration. I have heard that Calcutta was better cared for when Captain Abercrombie, of the Engineers, had sole and entire charge of municipal affairs than in any other period; but then there was a separate department altogether for improvements, viz., the Lottery Committee, with ample funds at their disposal. The lotteries were abolished, and with them Calcutta improvements, and no attempt has ever been made to give to the town municipal funds in lieu of the profits derived from the lotteries, and it has therefore suffered much in consequence.

And in another passage he says:

> The chief objection to the electoral system was that it caused undue and dangerous temporary interference with the collection of the taxes—a point of the most vital importance to a municipality with no other financial means. The qualification of a voter was that all his bills for previous quarters had been paid up. The object therefore in the electioneering contest was to prevent an opponent's voter from paying these bills, and the collecting sircars were tampered with accordingly and induced to hold back bills in their hands.
>
> The far greater proportion of the house proprietors in this city being natives, the votes are all in their hands, and consequently they are sure to elect natives. The great trouble and annoyance of the elections and the small remuneration offered, deterred many native gentlemen from becoming candidates.

The last report of the Commissioners under the Act of 1852 is signed by S. Wauchope, Major H. L. Thuillier, Tariney Churn Banerjee, and Dinnobundoo Dey, their Secretary and Engineer being the Mr. William Clark, to whom Calcutta owes its present drainage scheme. From this report it would seem that the house-tax for the year 1856 amounted to Rs. 3,58,716, the whole expenditure for the year being something under four lakhs, but still nearly half a lakh in excess of the previous year. This sum was mainly laid out in repairing and cleansing the roads and drains. The lighting of the town cost Rs. 18,263; the watering of the streets, including the working of the engine at Chandpal Ghat, Rs. 23,464. A sum of Rs. 28,412 is charged on account of a new street in Soortee Bagan (Halliday Street).

The next Municipal Acts were passed in 1856. Act XIV of that year was a very complete Conservancy Act; Act XXV consolidated the provisions regarding the assessment and collection of the rates, and Act XXVIII of the same year provided for the appointment of Municipal Commissioners and the levying of rates and taxes. Under this last Act the number of the Commissioners was fixed at three, all of whom were to be appointed by the Lieutenant-Governor, and to be removable at his pleasure. The pay of a Commissioner was not to exceed Rs. 10,000 a year if he held no other appointment, or Rs. 4,000 a year if he had other occupation. The house-rate was raised to 7½ per cent., out of which a lakh and a half was to be set aside to provide a complete system of drainage, besides Rs. 30,000 for water-supply. A tax was imposed upon vehicles and animals. Carriages and carts plying for hire were to be registered. The Act also provided for a lighting rate at 2 per cent., and a drainage rate of 2½ per cent. in such portions of the suburbs as might be included within the system of sewerage and drainage.

The Commissioners under this Act were Messrs. Wauchope, Thuillier and Dowleans, the last named having no other occupation and performing the great bulk of the work. Mr. W. Clark was appointed municipal engineer on Rs. 1,500, and Mr. Turnbull secretary on Rs. 500 per mensem. Under this commission the drainage scheme was put in hand, and if the Commissioners had effected no more, they would have merited the gratitude of the Town. The commission, like its predecessors, however, was not destined to live long. In 1861 the subject of the municipal government of Calcutta was once more agitated, and a committee appointed, with Mr. Seton-Karr as president and Lord Ulick Browne as secretary, to inquire into and report on the whole subject. The report of the committee is dated 31st August 1861. It recommended that the Town should be divided into six divisions, for each of which a board of six members should be appointed, who should have complete control over the conservancy and the construction of new works in the division. A central board, consisting of a delegate from each of the six local boards and six other representative members, was to exercise a general control, determining questions of assessment, laying down plans for new works and voting supplies to the local boards. This scheme, however, was not approved and in the following year the Municipal Commissioners were superseded by the Justices of the Peace for the Town of Calcutta.

Act VI of 1863 was passed by the Bengal Legislative Council to vest the property of the Town of Calcutta and the management of its municipal affairs in a corporation, and to make better provision for the conservancy and improvement of the Town, and for the levying of rates and taxes therein. It commences by repealing the three Acts of 1856. The corporation was to consist of all Justices of the Peace for Bengal, Behar, and Orissa who might be resident in Calcutta, as well as of the Justices of the Peace for the Town. The Chairman was to be appointed by Government, but he might be removed by a resolution of two-thirds of the Justices. The Justices nominated their own Vice-Chairman, but the appointment required the approval of the Lieutenant-Governor. They also appointed their own Secretary, Engineer, Surveyor, Health Officer, Collector of Taxes, and Assessor, minor officials being appointed by the Chairman. Besides the rates and taxes already in force, licenses were imposed on trades and professions, power was given to levy a maximum house-rate of 10 per cent., and provision was made for the imposition of water-rates.

In 1866 the Act was amended, but the alterations at that time were not of such a nature as to call for special notice in this place. By Act IX of 1867 the Justices were debarred from borrowing a greater sum than 55 lakhs of rupees exclusive of loans from the Secretary of State on account of the water-supply, and by the same Act the water-rate was limited to 4 per cent. upon the annual value of the premises. Act XI of the same year provided for the levy of a police-rate not exceeding 3 per cent. Act I of 1870 raised the limit of the water-rate to 5 per cent. By Act VI of the following year the constitution of the corporation was modified, and only those Justices of the Peace for Bengal, Behar and Orissa, who were specially appointed to be Justices for the Town, were henceforth to be members of the corporation. Act VIII of the same year empowered the Justices to borrow six lakhs for the erection of markets. Act I of 1872 increased the general borrowing powers of the municipality to the extent of thirty lakhs. Act II of 1874 authorized an additional market loan of seven lakhs.

All the foregoing Acts were repealed, and the law relative to the municipal affairs of Calcutta consolidated, by Act IV of 1876, which came into force on the 1st of July. By that Act the number of the Commissioners is fixed at 72 (exclusive of the Chairman and Vice-Chairman), of whom two-thirds were to be elected by the ratepayers, the remaining one-third being appointed by the local Government. The new Act clearly specified the purposes to which the municipal funds shall be applicable, and amongst other things it was laid down (by section 27) that the

Commissioners shall provide for the payment of interest on the municipal debt and for the formation of a reserve fund; that they shall provide such funds as may be necessary for the maintenance of the police; that they shall complete and extend throughout the town the new underground drainage works now under construction; that they shall maintain the water-supply, and make adequate and suitable provision for the cleaning and conservancy of the Town. In the event of the Commissioners failing to comply with the last requirement, the local Government is empowered to appoint a commission, and on its report to direct the Chairman to carry out the necessary works at the cost of the municipal fund.

APPENDIX I

Bengal Consultations, June, 1707

"Account of ground in Buzzar and Three Towns as it was measured":—

(1) Govenpore	Bigs. Cots.
Houses	57- 9

APPENDIX II

List of Villages Purchased by the English which now form Calcutta City

The English were permitted in 1717 by the Emperor of Delhi to purchase 38 villages in close proximity to their settlement, which went to the making of Calcutta proper of to-day. Some of the names of these villages still survive in the street-names of Calcutta to-day, as follows:—

1 Belgashia (Belgachia Road)
2 Hogulchundey (Hogulkuria Lane)
3 Ultadang (Ultadanga Road)
4 Simliah (Simla Street)
5 Cancergasoia (Kankurgachi Road)
6 Bagmarrey (Bagmari Road)
7 Arcooly (Arpuli Lane)
8 Mirsapoor (Mirzapur Street)
9 Cooliah (Kulia Tangra Lane)
10 Tangrah (Tangra Road)
11 Sundah (Sura East Road)
12 Tiltola (Tiljala Road)
13 Topsiah (Tapsia Road)
14 Cherangy (Chowringhee Road)
15 Colimba (Collin Street)
16 Goborah (Gobra Road)
17 Sirampur (Dihi Serampur Road)
18 Chittpoor (Chitpur Road)

[NOTE.—The name of (2) Hogulkuria Lane was changed some years ago to " Sahitya Parisad Street ".
The name of (15) Colimba or Colingah was formerly kept in the name of " Colinga Bazar Street ". That street had acquired an unsavoury reputation owing to the presence of women of the town, and after the women had been made to remove elsewhere under police orders, some 30 years ago, the name of the street was changed by cutting off some letters and turning it to " Collin Street ".]

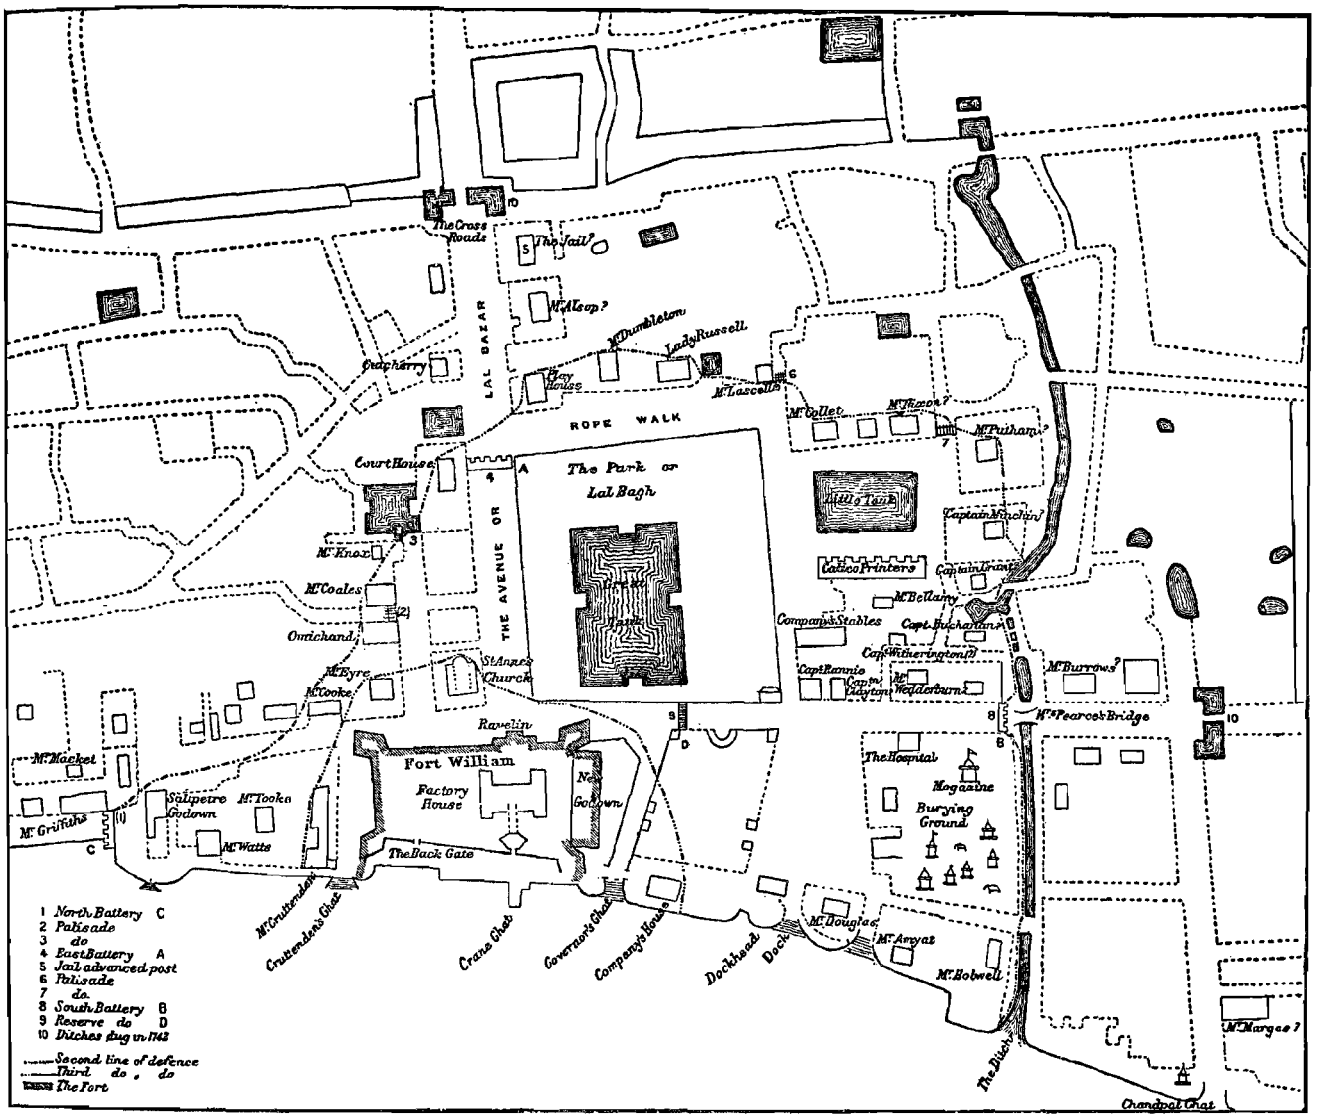

APPENDIX III

Old Fort William

The old Fort occupied the site to the west of the Lal Dighi, roughly speaking, from Koilaghat Street on the south to Fairlie Place on the north now occupied by the General Post Office, Calcutta Collectorate, Customs House and East Indian Railway Offices. The circumstances in which the old Fort was built, have already been described above. When the Council was debating on the various plans for the defence of Calcutta prepared by different experts, " amidst many differences of opinion the authorities agreed that the Fort was so much surrounded with buildings that the enemy could make their approach near under that cover, and that there could be no proper fortifications till these buildings were removed "[1]. As a matter of fact, this is exactly what happened when the armies of Nawab Seraj-ud-dowla attacked Calcutta in 1756 and took it. The invaders entered the city from the north-east on the 17th June, and after they had fought their way up to the Lal Dighi area, most of the European population, including a large number of half-caste Portuguese men, women and children, had crowded into the shelter of the Fort, making the task of its defence much more difficult. The attackers finally occupied several of the houses surrounding the Fort[2], and placing cannon on the roofs, fired directly into the Fort, creating great havoc. All this time, the women and children were being removed to the ships waiting on the river and were being conveyed downstream. On the 19th June the Governor, Roger Drake, fled to a ship along with other officers and men. After the flight of Drake, J. Z. Holwell, the famous Collector of Calcutta, was unanimously elected Governor, and the Fort managed to hold out till about 3 p.m. on the next day (the 20th) when Holwell decided to surrender. The remaining garrison at this time consisted of about 200 men, Europeans, half-caste Portuguese and Armenians. Accordingly Holwell gave up his sword to the Nawab, who was carried round the Fort in a litter, from which he gave directions to his men to guard the prisoners. The Nawab left Calcutta after a few days, having renamed it Alinagar, and leaving about 3,000 men under the command of his General, Raja Manikchand. Early in the next year (1757) Clive came back with Admiral Watson and sufficient forces, and recaptured the city.

The attack had so severely damaged the Fort as to render it practically useless. A small portion of it remained standing, in which one room was used for a Chapel by the English residents for some years, as there was no Protestant Church in Calcutta then. " After Calcutta was recovered by the English, it was thought desirable to build an entirely new Fort, apart from the residential quarter, and the old Fort was therefore not repaired. The houses and other buildings were adapted for immediate use and in 1766 the whole was handed over to the Customs authorities, in whose occupation it remained till 1818, when the old Fort was pulled down to make way for new warehouses "[3]. The construction of the new Fort William was commenced in 1758 and completed in 1773.

1753
By Lieut. William Wills.

APPENDIX IV

St. John's Church

This Church which stands to the north of Hastings Street, was the second place of Protestant worship, in Calcutta, the first being Kiernander's Mission Church. The former was built from private subscriptions.

The first church built by the English in Calcutta was St. Anne's Church, which occupied the site on which the south-western block of Writers' Buildings now stands. It was consecrated on June 5, 1709. The church was heavily damaged in the great cyclone of 1737. Previous to this, it had been struck by lightning on September 19, 1724, so that the steeple and belfry had been severely damaged. The end came when Seraj-ud-dowla's armies attacked and took Calcutta in June 1756, when the Church was used as a gun-post by besiegers and besieged alike, so that it was absolutely wrecked. During the next few years, there was no English Church in Calcutta, but a room left standing in the old Fort was used as a Chapel.

"After having been talked of for years, the scheme for building a new Presidency Church took shape in December 1783, when a public meeting was held, and a Committee headed by Warren Hastings, the Governor-General was appointed to receive subscriptions which amounted to no less a sum than Rs. 35,950 on the first day, and totalled over Rs. 170,000 by the time the Church was completed. The ground selected for building the Church was the old Powder Magazine yard, which adjoined the burial ground on the east. This plot of land had been sold by the Government to Maharaja Nobkissen, who now conveyed it back to Warren Hastings for the purpose of building a Church, Actually, however, the Church was erected entirely within the boundaries of the old burial ground, and the land given by the Maharaja formed the churchyard on the east."*

The foundation stone of the church was laid on 6th April 1784, and the church was consecrated during the rule of Lord Cornwallis in 1787. It is a large square structure of the Grecian type of architecture, surmounted by a stone tower and spire, 174 ft. in height.

St. John's remained the Presidency Church till 1814, when Calcutta was constituted a Bishopric, and St. John's became the Cathedral. It was not until 1839 that, it having been found impracticable to enlarge St. John's to meet the growing needs of the community, the scheme for building a new Cathedral took definite form, and St. Paul's Cathedral in Chowringhee was built, and consecrated in October, 1847.

Armenian Church

This is situated in the "Chinabazar" locality and is the oldest place of Christian worship in Calcutta. It was erected in 1724 by the May or family on the site of the Armenian burial-ground. In 1790 Catchick Arakiel built the adjoining clergy-room and surrounding walls.

APPENDIX V

Writers' Buildings

In the year 1776 a "Khamar" plot of waste land belonging to the Company lying to the north of the great Tank (Lal Dighi) was leased out to Thomas Lyon by a "Pattah" dated 18th November 1776, "for the purpose of erecting a range of buildings for the accommodation of the junior servants of the Company". Every year a number of these junior servants or "writers" came out from England, and quarters had to be provided for them by leasing private houses as required, for their occupation. These writers, in common with all civil servants, drew numerous allowances in the shape of diet-money, palanquin hire, house-rent, etc. In 1785 it was ordered that all writers drawing less pay than 300 rupees a month, should be allowed quarters in the "New building"—two to each "house" or set of apartments, and should receive 100 rupees a month *in lieu* of all former allowances. When their pay exceeded 300 rupees in any new appointment, their right to these quarters ceased. The Buildings contained 19 sets of apartments, each furnished with a separate set of out-offices, and the rent was 200 Arcot rupees per month for each set of apartments.

"For nearly 50 years Writers' Buildings continued in the use for which it was originally intended, and maintained a reputation for fast living and extravagance of every kind, which was only natural under the circumstances. The youthful writer, arriving in India, released from the irksome monotony of a weary six months' voyage, and free for the first time from the strict control of his pastors and masters, was prepared to bear his part bravely in the reckless expenditure and wild excesses which he found to be the fashion among his fellow-writers... ...The costly champagne suppers of Writers' Buildings were famous, and long did the walls echo to "the joyous song and loud rehearsing tallyhoes" of many generations of writers. Gradually, however, there came a change; the age for entering the Company's civil service was raised, the period of a writer's stay in Calcutta was reduced, and, at last, writers were no longer provided with quarters, but lived with friends or in lodgings at their own expense. For some years Writers' Buildings remained deserted; then the sets of apartments were let to private individuals or for offices. The next change saw them occupied as Government offices; and lastly came alterations and additions which crowned the old bare range with domes, and masked it with a stately facade, the Writers' Buildings were lost in the Bengal Secretariat"[1]

The "alterations and additions" mentioned above, which transformed the bare range of Mr. Lyons's barracks into an ornate and handsome building, were thus described in the Calcutta Gazette of the 9th August 1821[2]:—

"The Writers' Buildings, from being remarkable only for the nakedness of their appearance, which conveyed the idea of a warehouse or range of warehouses, have been ornamented with three pediments in front, supported on colonnades, which form handsome verandahs. The lower floor contains the lecture rooms of the College, and the second has been fitted up for the College library".

The College mentioned was the College of Fort William established on 18th May 1800, for imparting teaching in various vernacular languages such as Hindi, Urdu, Bengali, etc., to civilians appointed to the Company's service. It was abolished in 1830. The library of the College contained about 4,000 volumes and on the abolition of the College, the books formed the nucleus of the Calcutta Public Library. The Public Library again, was amalgamated in 1903 with the Imperial Library, which has now become the National Library.

The following note regarding Thomas Lyon, the builder of Writers' Buildings, appeared in the Calcutta Gazette of 1799 and was quoted in "Bengal Past and Present":—

> "Thomas Lyon, architect, died at Berhampore in May 1799. Name—father of Lyon's Range in Calcutta, a "Pattah" was granted to him in 1776 for erecting "a range of buildings for the accommodation of the junior servants of the Company"..... Mr. Justice Hyde records in his notebook "He is a house-builder and is said to have made a large fortune, and is now going to England". He returned to Bengal in 1786 and in 1788 was appointed "to make a canal of communication between the turns of the river at Cossimbazar".

APPENDIX VI

The Mahratta Ditch

The inhabitants of Calcutta are frequently referred to in old writing as "Ditchers", but in the present day there are very few people who know about the interesting origin and history of the Mahratta Ditch, of which the only memory that survives to-day is an obscure lane in north Calcutta, named "Mahratta Ditch Lane"

In order to understand properly the causes which led to the Ditch being dug, it is necessary to go back to earlier times, and take into account the reasons that led the English to build a Fort in Calcutta. Owing to the unsettled state of the country at that period (end of the 17th century) the English were constantly in a state of apprehension for the safety of their men and merchandise in Calcutta. While not desiring to give the Nawab of Bengal any cause for affront or suspicion by making warlike preparations, it was decided by the Company that some kind of fortifications as well as a Fort were urgently required for the protection of the "Town", *i.e., the English settlement centred in* and around the Lal Dighi area (modern Dalhousie Square). Accordingly, after obtaining the Nawab's formal permission, a Fort was built to the west of the Lal Dighi, between the years 1702 and 1715. It stood roughly on the site now covered partly by the General Post Office, the Calcutta Collectorate, Customs House and East Indian Railway offices. The river then flowed farther to the east than it does now, and the western walls of the Fort abutted on the river bank.

The Fort structures were much damaged by the great cyclone of 1737, and when an incursion of Mahratta raiders into Bengal began in 1742, the English were scared and began hastily to improvise various schemes for the protection of the "Town" or English settlement. "Unused to war's alarms, the Council met on April 20, in much trepidation, to take steps for the defence and security of the place"[1]. Four officers were deputed to make a survey of the town, who reported "We have been round the Town and taken a survey of the avenues and passes into it which are so numerous that we apprehend it requires a much superior force to defend them than can be raised at present". They therefore merely recommended the setting up of seven batteries of guns at different points, which was done. Also one ship, the *Tigress*, was kept moored with strong chains at Perrin's Point (Bagbazar) to guard the river approach. Thereafter many experts came and prepared projects for the defence of the town, which were all rejected as either too ambitious or too costly. The Directors of the Company in London, who had in the meantime been informed of the peril to Calcutta, sent instructions that three points were to be observed, *viz.*, (1) not to give offence to the Nawab's Government by too much warlike preparations; (2) not to spend too much money; and (3) to remember that further defences were not required for the Company's Estate—the Fort and the Marines were sufficient for that—but only for the encouragement and protection of the Native Merchants. While the Council were thus vacillating between different plans, the Mahratta raiders approached to within a few miles of Calcutta, though on the opposite bank of the river. Much alarmed at this, the inhabitants of Calcutta proposed, at their own cost "to dig a ditch 42 yards wide, from the Battery of the Prison round the Company's bounds as far as the *Chowkies* beyond Perrin's Garden"[2]. The Council agreed to the proposal of the inhabitants and on March 23, 1743, they sanctioned an advance of 25,000 rupees for the purpose. "This work, had it been completed, would have extended seven miles. In six months, three miles of it were finished, when the inhabitants finding that the Mahrattas did not approach Calcutta, desisted from the works".

Roughly speaking, the Ditch was dug from the Bagbazar end of the town in a semicircle extended up to where Lower Circular Road now bends westwards. It may be mentioned here that the Ditch, instead of running straight from the present Shambazar-Cornwallis Street crossing, formed a loop in the modern Halsibagan area, in order to take in two large gardens and houses belonging respectively to Omichand, the Sikh financier, and Gobindram Mitra, the Black Zemindar of Calcutta. With the passage of time, the Ditch became a convenient dumping ground for all kinds of filth and garbage, and was therefore filled in, and a broad road built over it—the Circular Road, Upper and Lower. It was in 1799 that this road was metalled.

Coming to recent times, the following note prepared by T. Emerson, Chairman, Calcutta Improvement Trust, throws light on the survival of at least a small portion of the Mahratta Ditch up to the 20th century:—

> "When the Trust started operations in 1913 on the Shambazar Improvement Scheme, there was still a portion of the Mahratta Ditch in existence running from No. 225 Upper Circular Road to within a few feet of Cornwallis Street. Two small portions had been filled up by the Corporation but the rest was an open ditch about 600 ft. long, varying in width from 12 ft. to 4 ft. and having a depth of about 6 ft. The Ditch was filled up by the Trust about 1917, during the progress of the scheme, and now forms part of building plots. Between Pal Lane and Cornwallis Street a lane runs over the site of the Mahratta Ditch. Immediately west of Cornwallis Street the Ditch has been built over, but west of these plots, the Mahratta Ditch Lane follows the site of the original ditch halfway to Chitpore Road."

The Mahratta Ditch defined the limits of the jurisdiction of the Supreme Court when it was established in 1774, and of the High Court when it was established in 1872.

APPENDIX VII

Dihi Panchanno-gram

List of 55 villages added to Calcutta:—

1. Dihi Sinthee
   (1) Sinthee
   (2) Cossipur
   (3) Paikpara
2. Dihi Chitpore
   (4) Chitpore
   (5) Tallah
   (6) Beerpara
   (7) Kalidaha
3. Dihi Bagzollah
   (8) Dakhindarie
   (9). Kankooria
   (10) Noabad
4. Dihi Dakhin Paikparah
   (11) Belgatchya
5. Dihi Ooltadangah
   (12) Ooltadangah
   (13) Bagmari
   (14) Gouriberh
6. Dihi Similiah
   (15) Bahir Simliah
   (16) Narikeldanga
7. Dihi Soorah
   (17) Soorah
   (18) Kankoorgatchi
   (19) Koochnan
   (20) Duttabad
8. Dihi Cooliah
   (21) Mullickabad
   (22) Cooleah
9. Dihi Sealdah
   (23) Sealdah
   (24) Baliaghata
10. Dihi Entally
    (25) Entally
    (26) Pagladanga
    (27) Neemuckpota
    (28) Gobrah
    (29) Tangrah
11. Dihi Topsiah
    (30) Topsea
    (31) Tiljulla
    (32) Baniapooker
    (33) Kareya
12. Dihi Serampur
    (34) Chowbagah
    (35) Dhullunda
    (36) Saupgatchee
    (37) Auntobad
    (38) Nonadanga
    (39) Bondel-Ooloberia
    (40) Beddeadanga
    (41) Koostea
    (42) Purranuggur
    (43) Ghoogoodanga
    (44) Serampur
13. Dihi Chukerberh
    (45) Ballygunj
    (46) Gudshaha
    (47) Chuckerberh
14. Dihi Bhowanipur
    (48) Bhowanipur
    (49) Neejgram
15. Dihi Monoharpur
    (50) Beltola
    (51) Kalighat
    (52) Monoharpur
    (53) Moodeali
    (54) Shahanagar
    (55) Koykalee.

NOTE.—The location of most of these villages can still be traced by their names surviving as locality or street-names in Calcutta, while some names have completely disappeared. "Gudshaha" has become Garcha, "Monoharpur" turned into Monoharpukur and so on.

Survivals of names of Punchannogram

Later, in 1758, after the fall of Nawab Seraj-ud-dowla, under the terms of a treaty with the new Nawab Mirjafar, the English purchased 55 more villages for the expansion of Calcutta. The names of some of these villages still survive in the street-names of Calcutta or as locality-names today, as follows:—

1 Sinthee (South Sinthee Road)
2 Cossipur (Cossipur Road)
3 Paikpara (Paikpara Row)
4 Chitpore (Chitpur Road)
5 Belgatchya (Belgachia Road)
6 Dihi Ooltadangah (Ultadanga Road)
7 Bagmari (Bagmari Road)
8 Narikeldanga (Narkeldanga Road)
9 Soorah (Sura East Road)
10 Kankoorgatchi (Kankurgachi Road)
11 Cooleah (Kulia Tangra Lane)
12 Baliaghata (Beliaghata Road)
13 Pagladanga (Pagladanga Road)
14 Gobrah (Gobra Road)
15 Tangrah (Tangra Road)
16 Topsea (Tapsia Road)
17 Tiljulla (Tiljala Road)
18 Baniapooker (Beniapukur Road)
19 Kareya (Karaya Road)
20 Bondel-Ooloberia (Bondel Road)
21 Serampur (Dihi Serampur Road)
22 Ballygunj (Ballygunge Place)
23 Gudshaha (Garcha Road)
24 Chuckerberh (Chakraberia Road)
25 Beltola (Beltala Road)
26 Kalighat (Kalighat Road)
27 Manoharpur (Manoharpukur Road)
28 Moodeali (Mudiali Road)
29 Shahanagar (Shahanagar Road)

[NOTE.—In course of time the name of the village Monoharpur (No. 27) has been turned into pukur" Road, while "Gudshaha" (No. 23) has become "Garcha" Road.]

APPENDIX VIII

Impey's House and Deer Park

The house now occupied by the Loreto House in Middleton Row has a tablet on its wall with the following inscription:—

> "This house was the garden-house of Mr. Henry Vansittart, Governor of Bengal 1760-64. It was occupied by Sir Elijah Impey, the first Chief Justice of the Supreme Court, Calcutta 1774-82, and also by Bishop Heber a few months in 1824."

The garden, and probably also the house, belonged to William Frankland in 1749. Frankland was among those who were in Fort William during the attack in 1756 by the armies of Nawab Seraj-ud-dowla, and he escaped from the Fort along with others in the ship "Dodalay". The following resolution appears in the "Bengal Public Consultations" dated January 5, 1761:—

> "There being no garden-house for the refreshment of the Governor when the Lord of Business will permit him to retire, and we being convinced the Hon'ble Company will have no objection to so reasonable and indulgence. Agreed we purchase the garden-house formerly belonging to Mr. Frankland for that use, at the price of ten thousand Arcot rupees, which we esteem it is well worth."[1]

The Court of Directors, however, disagreed, and thought it should be purchased at the Governor's private expense. A general letter from Bengal to the Court of Directors dated October 30, 1762, says that Vansittart himself paid the purchase money of the garden-house.

Later, in 1774, the house was occupied by Sir Elijah Impey, and at that time the park stretched from Chowringhee almost up to Camac Street. "The present Middleton Row" (named after the Police Magistrate, Samuel Middleton) was its central drive. "It was surrounded" writes the Rev. Mr. Long, "by a fine wall, a large tank was in front, and plenty of room for a deep-park; a guard of *sipahis* was allowed to patrol about the house and grounds at night, and occasionally firing of their guns and muskets to keep off the *dakaits*." The house is the present Loreto House in Middleton Row, and was occupied for some time by Bishop Heber. Heber found it so large as to exclude all ideas of comfort. "I feel" he writes "almost lost in a dining room sixty-seven feet long, a drawing room of the same dimensions, a study supported by arcades, and though low in proportion to its size, forty-five feet square." He was, therefore, removed to another house, No. 5, Russell Street.[2]

In this connection it may be mentioned that the present Park Street, so named after Impey's deer park, was originally named "Burying Ground Road", from the burial ground at its eastern end now known as South Park Street Cemetery. The first burying ground of the English settlers was situated slightly to the north of modern Hastings Street, and was absorbed within the compound of St. John's Church when it was built. The proceedings of the Board for September 24, 1766, record that

> "the present burying ground situate in the middle of the town, is very detrimental to the health of the inhabitants, and too much confined; the Civil Architect is therefore directed to point out a more convenient situation for one to be made of proper dimensions."

A year later, in August 1767, the President acquainted the Board that the new Burying Ground was ready; and on the same day, the 25th August 1767, the first funeral took place there: it was that of Mr. Wood, a writer in the Council House".[3]

APPENDIX IX

The Presidency General Hospital

The old hospital building was situated to the east of the burial-ground (now included within St. John's Churchyard). It occupied roughly the site of No. 1, Garstin Place and all the premises thence eastward up to the road (Council House Street). "It was a veritable death-trap to those unfortunates who were driven to seek its shelter, and had been the subject of constant complaint for years. At last, in 1768, a house was purchased from a native gentleman for the purpose of a hospital. It stood to the south of the Maidan, practically in the country. This house, with various alterations and additions including two other buildings erected in 1795, remained in use as the Presidency General Hospital up to the last few years, when (at about 1900) it made way for a new hospital on the same site, in keeping with the requirements of modern science".[1]

The central block of the old Presidency General Hospital was once the garden house of J. Z. Kiernander, founder of the old Mission Church (q.v.). At a consultation held on April 26, 1768, the Council decided to purchase the house for 98,900 Arcot rupees. Kiernander resided in the Central block while the east and west blocks were being built. In a letter written by him dated May, 7, 1770, he says: "The first house or central building was delivered up and taken possession of on June 20, 1769.....the west wing was begun to be inhabited by sick people on April 2, 1770".[2]

[2] Thacker's Guide to Calcutta by Rev. W. Firminger.

APPENDIX X

The Belvedere

This is a building in the Italian Renaissance style, with large grounds, situated in Alipore. The origin of the house is obscure and different views have been put forward by different writers. The generally accepted version is that it was built as a garden-house for Prince Azím-us-shan, grandson of the Emperor Aurungzeb, who held the office of Governor of the provinces of Bengal and Behar, and the date of the building is placed at 1700. Miss Blechynden says that "when Tolly bought Belvedere, for the sake, no doubt, of its convenient situation as regards his canal (Tolly's Nulla)[1] he probably did so from the Murshidabad family. During the Nawab Jaffir Ali's residence in Alipore, his family and retainers must have occupied a very large number of houses, forming a colony.....Tolly bought it and adapted it to European requirements and named it Belvedere"[2]. Anyway, it was in 1778 that we find Hastings leasing out the Belvedere House, along with the villages of Gopalnagore and Zeerut, to Captain William Tolly, an Engineer in the service of the Company. Two years later, in 1780, the house was purchased outright by Tolly. On the death of Tolly in 1784, the house was put up for sale, but appears not to have found a purchaser, and was again advertised for sale in 1802. The house once more came into the market in 1809, and was described as "that superb mansion lately occupied by the Commander-in-Chief at the monthly rent of sicca rupees 450, and well known as Belvedere House". The house changed owners for the last time in 1854. At that time its owner was Charles Prinsep, and it was purchased from him, to be the official residence of the Lieutenant-Governors of Bengal. "When the Government bought Belvedere, the land had been divided, and a comparatively small portion went with the house.... ....Some years later, the remainder of the ground, one hundred bighas, was offered for sale—and was purchased by Government; forty bighas were added to Belvedere and the remaining sixty bighas were subsequently made over to the Agricultural and Horticultural Society"[2]. The house continued to be the official residence of the Lieutenant-Governors of Bengal from 1854 to 1912. After the removal of the capital from Calcutta to Delhi, it was used as the residence of the Viceroy when he came to Calcutta. It was lately (since 1949) been used for housing the National Library.

It was to this house that Philip Francis, Senior Member of the Council, was brought wounded, after his historic duel with Warren Hastings on the morning of the 17th August 1780.

[1] "Tolly's Nulla" was dug by Col. Tolly at his own expense in 1775, its length being about 17½ miles from Hastings (where it runs into the river Ganges) to Samukpota, where it meets the river Bidyadhari. Its channel was called Gobbindapore Creek, and is really part of the old bed of the Ganges. It is popularly known as "Adi-Ganga".

APPENDIX XI

Baillie's Map of Calcutta, 1792

Out of the list of 82 names given in Baillie's Map* of Calcutta published in 1792, some names still survive in the street-names of modern Calcutta. In some cases there has been some change in the spellings, which are given within brackets.

1 Tank Square (Dalhousie Square).
2 Council House (Disappeared).
3 Vansittart Row.
4 Larkin's Lane.
5 Corkscrew Lane (Disappeared).
6 Wheeler Place (Disappeared).
7 Fancy Lane.
8 Hastings Street.
9 Post Office Street (Old Post Office Street).
10 Church Lane.
11 Old Fort Gaut Street (Koilaghat Street).
12 King's Bench Walk (Disappeared).
13 Tackshall Street (Disappeared).
14 Bankshall Street.
15 Old Fort Street (Netaji Subhas Road—*portion*).
16 Clive Street (now Netaji Subhas Road).
17 Swallow Lane.
18 Lyon's Range.
19 Theatre Street (now Road).
20 Council House Lane (Council House Street).
21 Radhabazar.
22 China Bazar.
23 China Lane.
24 Pollock Street.
25 Doomtullah (Ezra Street).
26 Mission Row.
27 Old Taunt Connah (Disappeared).
28 Mangoe Lane.
29 Ranee Moody Lane (British Indian Street).
30 Cross Street.
31 Crooked Lane.
32 Dacres Lane.
33 Cooper's Lane.
34 Chandnee Choke Lane.
35 Sooterkin Lane.
36 Emambarry Lane (Imambari Lane).
37 Zig Zag Lane (Metcalfe Lane).
38 Weston's Lane (Weston Street).
39 Grants Lane.
40 Chandee Choke.
41 Gooreamer Lane (Guriama Lane).
42 Bow Bazar.
43 Shankerytollah.
44 Mirzapore.
45 Talpookerear and Bazar (Taltola).
46 Haree tollah.
47 Halber Street.
48 Colingaha Bazar (Collin Street).
49 Ahmed Jummadaur Street.
50 Fenwick's Bazar Street.
51 Ford Street (Sudder Street).
52 Chouringhy Tank Street (Kyd Street).
53 Dingabhanga (Wellington Lane & Creek Row).
54 Chunary Tollah.
55 Tuntunneah.
56 Chumpatollah.
57 Pataldangah.
58 Molungah.
59 Chattawollah Lane (Chatawala Lane)
60 Old Hurrinbaree Lane.
61 Colotoolah.
62 Moorgyhatta Street (Canning Street).
63 Price's Street.
64 Bondfield's Lane (Bonfield Lane).
65 China Bazar Lane.
66 Hummum Lane (Disappeared).
67 Armenian Street.
68 Portuguese Church Street.
69 Ameratullah (Amratola Street).
70 Soorty Bagaan.
71 Great Bazar.
72 Houehatta (Cotton Street).
73 Burtulla (Bartala Street).
74 Mutchwa Bazar (Mechuabazar Street).
75 Hureenaut Dewan Street.
76 Damer Bagaan.
77 Jura Bagaan Road } Jorabagan Street.
78 Jurra Bagaan Lane }
79 Patoreea Street (Pathuriaghata Street).
80 Ketooah Street.
81 Areetollah Street (Ahiritola Street).
82 Chitpur Road.

It will be seen that in the above list are included many locality-names, most of which still survive as locality-names, such as:—

Radhabazar, China Bazar, Bowbazar, Mirzapur, Thanthania (the locality nearabout the present College Street-Mechuabazar Street junction) etc. "Bonfield's Lane" named after a wellknown Auctioneer of the 18th century, William Bondfield, has dropped a "d" and become Bonfield's Lane.

Regarding Nos. 13 and 14, *viz.*, Tackshall Street and Bankshall Street, the former is the Dutch name for Custom House, and the latter stands for Marine Yard. The following lines taken from Miss Blechynden's "Calcutta, Past and Present" relate to these two names:—

"Bankshall Street was named from the Marine House, known by the Dutch name of Bankshall, which, with the Master Attendant's office, stood on the site now occupied by the small Causes Court. Another Dutch name then in use was Tackshall for Custom House; this stood in the south-west angle of the old Fort, and the street which led to it from the Great Tank was called Tackshall Street, now Koilaghat Street." It may be noted that what was originally "Killaghat" Street, *i.e.*, Fort Ghat Street, turned later into "Koila Ghat" street.

No. (26) Mission Row, was originally known as the Rope Walk, and the space between it and the Great Tank (Lal Dighi) was entirely open during the 18th century. It was named Mission Row after the Mission Church, founded by a Swedish Missionary named Rev. J. Z. Kiernander, who came to Calcutta in 1758, and died here on the 10th May 1799 aged 88 years. This Church was established in 1770 and still exists, being now the oldest Protestant church in Calcutta.

No. (27) "Old Taunt Connah" or Tant-Khana, *i.e.*, weaving shed, has disappeared. It stood to the east of Mission Row. The site was later built over.

No. (53) "Dingabhanga" meaning "broken boat" was the name given to the locality running south of and parallel to Dharamtala Street from its junction with Wellington Square eastwards. The creek which ran from the river from what is now Hastings Street almost straight east to the Beliaghata lakes, had once been wide enough to be navigable by large boats. The name Dingabhanga commemorates some occasion when a boat

* Not reproduced—A.M.

had been beached and broken. The creek gradually dried up, and by the end of the 18th Century only a small portion of it remained, between Circular Road and Wellington Square, which was then filled up.

The second list in Baillie's Map is of prominent buildings in Calcutta, marked by letter A, B, C, etc., *viz.*:—

A—Government House } (Disappeared).
B—Council House }
C—Accountant-General's Office.
D—New Court House (High Court).
E—Old Court House (Disappeared).
F—New Church (St. John's Church).
G—Mission Church.
H—Old Fort (Disappeared).
I—Mint (Disappeared).
K—Great Tank (Lal Dighi).
L—Writers' Buildings.
M—Theatre (Disappeared).
N—Bankshall (Disappeared).
O—Tiretta's Bazar.
P—Portuguese Church.
Q—Armenian Church.
R—Madrasa or Persian College.
S—The Monument (Disappeared).
T—Sherburne's Bazar.
U—English Burying Ground (Disappeared).
V—Short's Bazar (Disappeared).
W—Manage (Disappeared).
X—Great Pagoda (Disappeared).
Y—Raja Nobo Kisson's.
Z—Raja Nobokisson's Bazar.

Most of the above buildings as noted in Baillie's Map, have disappeared, and a brief account of some of them is given here.

A—*Government House* }
B—*Council House* }

These stood side by side on the Esplanade, slightly to the east of the Town Hall. At that time the Esplanade ran straight from Chowringhee Road in the east to the riverbank on the west. The Esplanade had to be curved round Government House when it was built. Construction of the Government House (or Raj Bhaban, as it is called now) was completed, and it was occupied, in 1803, during the regime of Lord Wellesley. Lord Curzon, in his work "The British Government in India" (published in London 1925) remarks that this Government House "is without doubt the finest Government House occupied by the representative of any sovereign or Government in the world" and goes on to say that "the French are proud of their new Palace de Government at Saigon in Cochin China, and the Portuguese of their ancient dilapidated Palace at Goa. I have stayed in both, and can assert that no comparison is possible". In this connection the following lines are taken from Miss Blechynden's "Calcutta Past and Present":—

"The building in the opening years of the 19th century of a new Government House..... not only gave a stimulus to the desire to improve the Town, but obliged a rearrangement of the streets in its immediate vicinity. The new Government House occupied the entire space which had been sufficient for the old Government House, the Council House, and the grounds of both the houses to the north. The two southerly wings of the new building rested on the Esplanade Road, while the two wings on the north extended to Wheeler Place. This road led from Old Court House Street to a large private house, probably Mr. Wheeler's House which stood just where the north-east wing of Government House ends. This house was pulled down, as were five other dwelling houses; Wheeler Place, carried through to Council House Street, became, as it remains to this day, the carriage-drive within the gates, and the Government House grounds were extended to the north to a new road. Government Place, which was made in continuation of Hastings Street, and from which another new road, Wellesley Place, was made to lead to Tank Square. Fancy Lane, Larkin's Lane, and Vansittart Row still remain what they were, but Corkscrew Lane which led by devious twists from Wheeler Place to Fancy Lane, was improved away."

E—*Court House*

The building marked E in the Map, *viz.*, the old "Court House" has disappeared. It stood at the north end of the present Old Court House Street (which is named after it) and on its site now stands St. Andrew's Church, built in 1815. In the year 1727, by a Royal Charter, a Municipal Corporation of Calcutta was constituted, consisting of a Mayor and nine Aldermen, with the power of holding a Court with jurisdiction in all causes, civil, criminal and ecclesiastical, in which an Englishman was a party (high treason only being excepted). For the purpose of holding this Court, a house standing at the north-eastern corner of Dalhousie Square was rented by the Government, and this house became known as the Mayor's Court, or the old Court House. Considerable additions and alterations were made to the building at Government expense in 1762. When in 1774 a Supreme Court was established in Calcutta, the Mayor's Court was abolished and the building was pulled down in 1792. As no separate building had as yet been constructed for the Supreme Court when it was established in 1774, the Court was held in the Mayor's Court building for some years, and it was here, in 1775, that the famous trial of Maharaja Nanda Kumar was held, on a charge of forgery. The charge was laid against the Maharaja on the 6th May 1775, and he was taken into jail custody the same night. The trial was held from 8th to 16th June, the Court sitting daily from 8 in the morning till late at night. The verdict of the Jury was not given until 4 o'clock in the morning of the 16th June, and the Chief Justice, Sir Elijah Impey, pronounced sentence of death on the same day. The sentence was carried out on the 5th August 1775.

I—*The Mint*

The building marked I—the Mint, had stood a little to the west of St. John's Church, where later the stamp and stationery office in Church Lane was located. This was the first Mint established by the English in Calcutta, and there is some difference of opinion among historians as to the time when it was established. The Rev. J. Long, well-known for his researches into the history of old Calcutta, wrote in the Calcutta Review (Vol. XVIII) that "the fifth article of the Treaty signed between Clive and Seraj-ud-dowla provided that *siccas* be coined at Calcutta in the same manner as at Murshidabad, and that the money struck in Calcutta be of equal weight and fineness with that of Murshidabad. The *Purwannah* for the Calcutta Mint was granted by the Nawab (Mir Jafar) in 1760... .In 1762 the first money was coined in Calcutta with the Mogul's head and a Persian inscription..... .. For some years the minting was done by contract with John Prinsep at Fulta; in 1784 he handed over his tools to Government, and in 1791 a Mint was established in Calcutta (*vide* "Thacker's Guide to Calcutta" by Rev. W. K. Firminger). The second Mint to be established in Calcutta was on the Strand Road, where it still stands.

It foundation was laid on 31st March 1824, and its construction and equipment completed in 1830, at a cost of about 24 *lakhs* of rupees. Minting of coins was begun here from 1835. A third Mint has now been established at Alipur.

M—*The Theatre*

The first Theatre, or Play House, in Calcutta established "sometime before 1750" stood at the corner of Mission Row and Lalbazar Street. The Theatre shown in Baillie's Map was the second theatre, established in 1775. It stood at the corner of Lyon's Range and Clive Street (now Netaji Subhas Road), *i.e.*, behind and to the north of Writers' Buildings.

S—*The Monument*

Commonly known as the Hollwell Monument, was an obelisk standing at the north-western corner of Dalhousie Square. It commemorated the "Black Hole" tragedy of 1756, about the truth of which there has been so much controversy. The monument was removed after much agitation and popular demand for its removal in 1940.

T—*Sherburne's Bazar*

Was situated where the Chandney Chawk now stands on Dharamtala Street. Joseph Sherbourne, the owner of the Bazar, was appointed "Scavenger of Calcutta" under the Commissioner of Police in 1785. The term "Scavenger" is derived from "Scavage"—"a tax levied upon goods offered for sale, which were subject to duty, and the Scavenger was the officer charged with inspection of the goods and collection of the tax" (Hobson-Jobson). The modern significance of being in charge of conservancy-work is due to the fact that later, the scavenger was entrusted with Municipal duties. Sherburne was later Collector of the 24-Parganas and of Bhagalpore, and died at Monghyr in 1805.

U—*The English Burying-ground*

Was situated slightly to the north of Hastings Street and was absorbed within the churchyard when St. John's Church was built in 1780. The next burying-ground was at the eastern end of Park Street, which was formerly named "Burying-ground Road".

V—*Short's Bazar*

Stood near the eastern end of Park Street. Nearby is Short Street, named after Charles Short, the owner of the bazar, who also owned other properties in this locality.

W—*The Manage*

(the correct spelling of this French word is Manege, a place where horses are trained and broken in). It was situated at the north-western corner of Park Street where it joins Chowringhee Road, where horses were trained and riding practised.

X—*The Great Pagoda*

Was a large temple standing near the north end of Chitpur Road, which had been built by Gobindaram Mitra, the Black Zemindar of Calcutta. It was surmounted by a cupola and was said to be 165 ft. in height. It was heavily damaged in the great Cyclone of 1737, but some remains existed till the middle of the 19th century. Thus writes the Rev. J. Long, in the Calcutta Review 1851:—"There is still to be seen the remains of the largest temple in Calcutta called the Nava Ratna or Nine Jewels temple built by Gobindram Mitra. It was once crowned with a lofty cupola visible for a distance of many miles."

APPENDIX XII

Some Notable Spots Near Tank Square

The old Court House and Free School Institution

The history of the old Court House, the first in Calcutta, is so intermingled with the history of the Charity School which later became the Free School Institution, that they may be dealt with together.

First, as to the Court House, a Royal Charter was granted in 1726 to the Company by which power was given to the President and senior five members of the Council to "act as Justices of the Peace, and Commissioners of Oyer and Terminer and Gaol delivery, to hold Quarter Sessions, and to proceed to try, hear and punish, in all criminal cases except only of High Treason, as Commissioners of Oyer and Terminer do in England, appointing and summoning Grand and Petty Juries for the purpose". A court was accordingly established in 1727, and a Mayor, a Sheriff and nine Aldermen were appointed as directed in the Charter.

At first the Court was held in a rented house situated at the corner of Lalbazar and Bentinck Street (south-east corner of the present Police offices), which was known as the "Ambassador's house". "In 1712 the timid and obsequious merchants (of the Company) were visited by two Ambassadors accredited to the Court of Delhi, *viz.*, the King of Pegu's Ambassador and also the Persian Ambassador, for whom a house was rented, where he stayed for eight months" (9).

The following appears in "Bengal Public Consultations" of 2nd June 1729:—

> "Agreed that the Embassadour's house and compound be appropriated to hold the Mayor's Court as well as a Court of Oyer and Terminer, and to make a Town Gaol."

Later, in 1732, we find the following recorded in the "Consultations":—

> "Have sold the House commonly known as the Embassadour's for Rs. 3,560, reserving out of it a large piece of ground with buildings, for a Town Gaol" (10).

On the Ambassador's house being sold, the Mayor and Court removed to St. Anne's Charity School, a house standing at the north-eastern corner of Lal Dighi, where St. Andrew's Church now stands. The house belonged to Mr. Arthur Bourchier, Master-Attendant of the Port of Calcutta, who "gave it to Government for holding the Mayor's Court on condition that Government should pay 4,000 Arcot rupees a year to support a Charity School, and for other benevolent purposes" (11).

Coming now to the Charity Fund and School, it was some time between 1726 and 1731 that a Fund named "St. Anne's Charity Fund" was started by voluntary subscriptions from the European residents of Calcutta, for feeding, clothing and teaching of indigent Christian children. Besides subscriptions, the Fund also received an endowment out of the Restitution Money paid to the residents of Calcutta by Nawab Mir Jafar in 1757 (12) plus a legacy of Rs. 7,000 left by Mr. Constantine. When the house was rented by the Government for the Mayor's Court, the rent went to the support of the School. Later "in December 1789 the Free School Society was established (in connection with Padre Kiernander's Mission Church) and its management placed in the hands of a Committee including the Governor-General. The old Charity School was amalgamated with this in the year 1800, and the Free School Institution was the result" (13). The School, after amalgamation, was removed to its present site in Free School Street where a house was purchased. This house had been for some time occupied by Justice Le Maistre, one of the four Judges who came out from England in 1774 on the establishment of the Supreme Court. It was in this house that, on the 6th May 1775, a charge of forgery was laid before Justice Le Maistre (in his dual capacity of Sitting Magistrate) against Maharaja Nanda Kumar by Mohan Prosad and Kamal-ud-din. Le Maistre being unable to make a commitment forthwith, requested the assistance of Justice Hyde, and both sat together in this house up to 10 p.m. when a commitment was made against the Maharaja. The old house collapsed in 1854 through the foundations being undermined by jackals, and a new house was built on the site.

Coming back to the old Court House, it was here that the famous trial of Maharaja Nanda Kumar on a charge of forgery was held from the 8th to the 16th June 1775, and sentence of death was pronounced against the Maharaja (a complete account of this trial and the events leading up to it, has been given by Mr. H. Beveridge, I.C.S., in his book entitled "The trial of Maharaja Nandakumar—narrative of a Judicial Murder"). The Court building was enlarged in 1762 by adding verandahs, halls, etc., at Government expense "in order that it might be used as an Exchange, Post Office, Quarter Sessions Office, and for public entertainments, and as Assembly rooms". On the establishment of the Supreme Court in 1774, the Mayor's Court was abolished, and the house was pulled down in 1792. St. Andrew's Church was built on its site in 1815. "Old Court House Street" still carries the memory of the Mayor's Court which stood at its north end.

The new Court House

(Supreme Court)

Under an Act of the British Parliament (Lord North's Regulating Act of 1773) a Governor-General was appointed in Calcutta together with four Members of his Council, and at the same time Letters Patent were issued "establishing a Supreme Court of Judicature at Fort William in Bengal" bearing date the 26th day of March in the 14th year of the reign of George III. Accordingly Sir Elijah Impey as Chief Justice and three Puisne Judges named Chambes, Le Maistre and Hyde, were sent out from England. They arrived in

(9) Bengal Past and Present, 1922.

(10) Bengal Past and Present, 1922.

(11) William Carey's "Good old days of John Company

(12) "Restitution money" to the amount of 177 *lakhs* of rupees was paid by Nawab Mir Jafar, when he ascended the Musnud of Murshidabad in 1757, to make good the losses suffered by the inhabitants of Calcutta during the attack on the city by Nawab Seraj-ud-dowla in 1756. Mr. A. K. Roy in his "Short history of Calcutta" says:

> "The restitution money went largely into the pockets of the European inhabitants of Calcutta, including the Company's servants who had sustained damage during the siege. . . . . A Commission was appointed to apportion a part of the balance of the restitution money among the native sufferers, and although some of the Commissioners, notably Gobindram Mitra and Sogharam Bysack, paid themselves the lion's share of it, and thereby created much heart-burning, it was felt that the fault did not lie with the Company, who had wished to deal squarely with all classes of residents."

(13) W. Carey's "Good old days of John Company

Calcutta in 1774, and sittings of the Supreme Court were at first held in the old Mayor's Court building. On the complaint of the Judges that the accommodation was too limited and inconvenient, a larger house on the Esplanade belonging to a private owner was rented for the Supreme Court. In the Note books of Justice Hyde which are still preserved in the Bar Library of the High Court, the following entry appears under date 2nd January 1782:

> "We sat this day for the first time at the New Court House which has been taken by the Company for the use of the Court at a monthly rent of Rs. 2,500. The New Court House is near Chandpal Ghat and is near the road which bounds the Esplanade on the one side. The house is the property of Archibald Keir, Esqr., and is let by him to the Company for five years".

The construction of the Supreme Court building (on the site of the present High Court) was commenced in 1792. This building was demolished, to be replaced by the present High Court building, which was completed in 1872. It is in an ugly socalled gothic style of architecture and was designed by Walter Granville on the model of the Town Hall at Ypres, Belgium.

The Mission Church

This church still stands in Mission Row, and was founded by J. Z. Kiernander, a Swedish Missionary who had been sent out to India by the S. P. C. K. (Society for the Propagation of Christian Knowledge). He arrived in India in 1739 and began work in Cuddalore, about 12 miles south of Pondicherry, but owing to the Wars of the Carnatic between the French and the English, was forced to abandon his work there, and came to Calcutta in September 1758. In Calcutta he started work with characteristic energy and founded a school in December 1758. He lost his first wife in May 1761, and a few months later married for the second time a wealthy widow named Mrs. Woolley, who brought him a fortune of £25,000 (2½ lakhs of rupees). About this time Kiernander also received a legacy left by his elder brother in Sweden, and thus being in affluent circumstances, resolved to build a Church. A sum of Rs. 67,000 was spent for this purpose, of which only about Rs. 2,000 was from subscriptions, the rest being Kiernander's money. The Church was opened for worship in December 1770, and is the oldest Protestant Church in Calcutta.

A few words relating to Kiernander's later life may be added. He lost his second wife in June 1773, after which he built a school-room attached to the Church; built two houses, one in Short Street and the other, which still stands, in Bhowanipur (24) and also purchased a plot of ground adjacent to the Park Street cemetery for a private burial ground. In later life he suffered much from eye-trouble and left the management of his affairs in the hands of his son Robert, who unfortunately began to indulge in speculations in house-property which brought the family to ruin. Kiernander then left Calcutta and took service as Chaplain of the Dutch Church in Chinsurah. In the year 1795, a state of war existed between the English and the Dutch, and on the English taking Chinsurah, Kiernander, became technically a prisoner of war, though he was allowed his liberty. In 1796 he resigned from the Chaplaincy and returned to Calcutta, where he died in May 1799, at the ripe old age of 89 years.

(24) This building was known as the London Missionary Society's Institution at the junction of Elgin Road and Asutosh Mukherjee Road, and is now known as the Davidian Girls' School.

APPENDIX XIII

The Council House and Government House

These two houses are shown in Baillie's Map as standing side by side on the Esplanade, facing south, a little to the east of the present Town Hall. It will be convenient to deal with the history of both the houses together, as both were absorbed into the present Government House when it was built. The Government House shown on the map (also known as "Buckingham House") belonged to Nawab Md. Reza Khan, once Deputy Nazim under Nawab Mubarak-ud-dowla of Murshidabad. It was let out to the Company by Reza Khan at a rent of Rs. 1,000 a month, which was later raised to Rs. 1,500. The Council House adjoining it belonged to the Company and had been used by successive Governors such as Vansittart, Verelst, Cartier, etc., as their official residence as well as Council House, up to 1773. When Warren Hastings was appointed the first Governor-General in 1774, he refused to occupy the house on the grounds of inconvenience, and the adjoining house belonging to Reza Khan was therefore rented for use as his residence. Hastings occupied it until he left for England in 1785.

It was Lord Wellesley who decided to build a new Government House—the present "Raj Bhaban"— and the work was commenced by the first stone being laid on February 5, 1799. The building was completed by 1802, and on January 27, 1803 "a most splendid entertainment" was given at the new Government House "in honour of the general peace" and "perhaps as a fitting display to the formal opening of the new palace. The ramparts of Fort William, the shipping in the river, and the Esplanade were all brilliantly illuminated. ..... In January 1903, H. E. the Viceroy (Lord Curzon) marked the anniversary by a great Ball at which the guests made their appearance in costumes of Lord Wellesley's time" (1).

The architect of the Government House was an Engineer Officer named Captain Wyatt, and the total cost over 13 lakhs of rupees (2). As already stated, the old Government House and Council House were both demolished, and the sites absorbed within the present Government House.

[1] Thacker's Guide to Calcutta by Rev. W. K. Firminger.

[2] The actual cost of the house, including marble and iron-work was Rs. 506,326. Further expenses for extra works such as gateways, iron railways round the area, etc., came to Rs. 126,994, and the ornamental works within the house to Rs. 69,000, bringing the total to Rs. 702,320. The cost of purchasing the land and houses came to Rs. 571,500 and the cost of making two new streets (Government Place North and Wellesley Place) came to Rs. 27,466. The grand total was therefore Rs. 1,301,286 (all the figures given are in sicca rupees)—Lord Curzon's "British Government in India".

APPENDIX XIV

The Black Zemindar

In order to understand the implications of the term "Black Zemindar" it is necessary to have an idea of what may be called the Municipal Government of Calcutta in the early 18th century days. There was a European "Zemindar" (later styled Collector of Calcutta) who was not only responsible for the collection of revenue, but exercised various other functions besides, *viz.*, farming out the monopolies, collecting the rents, as well as deciding civil and criminal suits; that is to say, the civilian styled the zemindar administered the municipal, fiscal, civil and criminal affairs of the town "as far as the natives were concerned". As it was impossible for one man to attend to such multifarious duties, he had as an assistant a native who was known as the Black Deputy or the Black Zemindar. The following description was given by J. C. Marshman*.

"The Municipal, fiscal, civil and criminal affairs of the town, so far as natives were concerned, were administered by a civilian who was styled the Zemindar. He collected the rents, farmed out the monopolies, and he decided all civil and criminal suits. In all actions for property, an appeal lay from his award to the President.

In capital cases, the confirmation of the death-sentence by the President was necessary. In all other cases, the investigation by the Zemindar was summary and his decision final. He had the power of fining, flogging and imprisoning. He was Judge, Magistrate and Collector, and he was consequently the most important personage in the rising town.....He was never allowed to remain long enough in office—being changed once and sometimes thrice in a twelve month—so that he might acquire any knowledge or experience of his duties. He was almost in every instance a total stranger to the native language.....and to complete his helplessness, all accounts were exclusively kept in the native language. His salary was Rs. 2,000 a year, with a percentage on the farms, etc. He was always involved in trade, from which he drew an income ten times the value of his salary."

It can therefore be very well understood that the zemindar was a mere figurehead, and the actual power was wielded by his Black Deputy, who did not fail to avail himself of the immense opportunities that came to his hands.

The first zemindar or Collector of Calcutta appointed in the year 1700, was Ralph Sheldon, whose Deputy in 1705 was Nundoram Sen. Nundoram was detected in a defalcation and was deprived of his post, but was somehow reinstated in 1707. He again embezzled a sum of money and fled to Hooghly, but was apprehended there by the *Fouzdar* and sent back to Calcutta, where he was forced to make good the loss. Two more Black Deputies succeeded him named Rambhadra and Jagat Das, about whom nothing much is known. Then, in the year 1720, Gobindram Mitra was appointed the Black Zemindar, and he held the post for about 30 years, in the course of which he amassed a huge fortune. His salary for many years was Rs. 30 a month, later raised to Rs. 50, but "his opportunities for amassing wealth must have been almost unlimited, and we may feel assured he did not neglect them". His downfall was brought about by John Zephaniah Holwell, who was appointed Zemindar of Calcutta in 1752, and who succeeded in unearthing sufficient evidence of Gobindram's having defrauded the Company. But, although Holwell pressed for his punishment The East India Company's Council was slack about it, and nothing was done except to deprive him of the post of Black Zemindar of Calcutta.

Gobindram had built a huge temple with a lofty cupola (said to be 165 ft. in height) in the Chitpur area, called the Navaratna or Nine Jewels Temple. This Temple was severely damaged in the great Cyclone of 1737, but some ruins existed about a hundred years ago, as appears from the following written in 1851**:—

> "Gobindram Mitter was the Black Zemindar for 25 years and amassed an immense fortune. He also held large farms from the Nawab of Murshidabad There is still to be seen the remains of the largest Temple in Calcutta called the Nava Ratna or Nine Jewels Temple built by Gobindram. It was once crowned with a cupola visible for a distance of many miles."

The following list of principal signatories to the Petition for Reprieve of Radhanath Mitra, another Black Zemindar, will recall many familiar and important names.

Naba Krishna Munshi, Huzuri Mull, Gokul Chandra Ghosh, Dayaram Ghosh, Sukdeb Mullick, Rashbehari Sett, Nemai Churn Sett, Madan Mohan Dutt, Shamchand Dutt, Hare Krishna Dutt, Maniklal Dutt, Kandarpa Ghosh, Ramchand Ghosh, Sankar Haldar, Purnananda Basack, Sobharam Basak, Radhamohan Basak, Durgaram Sen, Nandaram Sen, Dayaram Sharma, Ramlal Sharma, Joy Krishna Sharma, Udayram Sharma, Radhakanta Sharma, Ramnidhi Sharma, Radha Churn Mullick, Pitambar Sett, Binodbehari Sett, Guru Churn Sett, Nilambar Sett, Gokul Kisore Sett, Kunda Ghosal, Baburam Palit, Bonomali Banerjee, Radha Krishna Mullick, Dayaram Mukherjee, Monohar Mukerjee, Totaram Basu, Ramsankar Basu, Durgaram Dutt, Churamani Dutt, Kissen Chand Dutt, Ramnidhi Tagore, Biswanarayan Tagore, Dayaram Tagore, Durgaram Tagore, Hori Kissen Tagore, Shamlal Chakrabarty, Kebalram Tagore, Ram Charan Roy, Kriparam Mitra, Ramsundar Mitra, Gobardhan Mitra, Ganes Chandra Basu, Gangaram Mitra, Gokul Mitra, and many others besides.

APPENDIX XV

Lord Wellesley's Magnificence and Palaces of Posterity

(Extract from Memoirs of William Hickey, Vol. IV, pp. 236-238)

Marquis Wellesley was in no way sparing of the Company's cash. His Lordship's own establishment of servants, equipages, etc., were extravagant in the superlative degree, not only in point of number, but splendour of dress, the whole being put to the account of the chaste managers of Leadenhall Street. Not content with all this parade of suite, the newly created Marquis gave directions for various improvements and alterations to be immediately carried into effect, not only within the town of Calcutta itself, but in the environs. One of the most marked and decided of these improvements was a new road sixty feet wide which was carried completely round the town of Calcutta, except towards the river Hooghly, to an extent of eight miles. A prodigious improvement it assuredly was, not only proving conducive to the health of the inhabitants in general, but likewise affording an agreeable morning or evening ride to those Europeans who were fond of exercise. His Lordship also determined upon building a palace suitable to his magnificent ideas, and such a one as would be proper for the residence of the British Governor-General of India. This he immediately caused to be commenced, partly upon the site of the old Government House, but taking in the Council House and about sixteen other handsome private mansions, many of them not having been erected above five years, the whole of which were pulled down, the ground upon which they had stood being cleared away to create superb open square area, in the middle of which his meditated palace was to stand.

Not content with thus squandering in every direction the funds of the Leadenhall Street managers, his Lordship had another scheme in contemplation, that of embanking the river on the Calcutta side, from the foot of the Glacis of Fort William to the northern end of the town, something of the style of the Adelphi or Somerset House in London, by forming a solid wharf of masonry the whole extent, on particular spots of which he proposed having suitable warehouses for the reception of merchandise as well as the Custom House and other public offices that he considered ought always to be contiguous to the river. Plans and drawings of this stupendous work which would have been full five miles long from south to north were made and delivered to his Lordship.

Not content with having works of such magnitude and unbounded expence on foot, he at the same time commenced a second palace at Barrackpore, almost rivalling in magnificence the Calcutta one, which he intended as a country residence for future Governor-Generals as he could not expect it would be completed within his own reign. The grounds which of themselves were very pretty he laid out with extraordinary taste and elegance, upon different parts of which he erected a threatre, a riding-house, with probably the finest aviary and menagerie in the world, the two latter buildings being stocked with the rarest and most beautiful birds, and beasts equally uncommon, collected from every quarter of the globe. He also prepared to establish a College for the education of the junior servants of the Company on their first arrival, principally in Oriental languages, with a regular establishment of Provost, Vice-Provost, Professors of various descriptions and other officers similar to our Universities of Oxford and Cambridge. For the furtherance of the last-mentioned scheme he purchased the five first houses and grounds in Garden Reach, one of which was the late Mr. William Burke's[1], which until then we had never been able to dispose of for near the amount of a mortgage there was upon it, which Mr. Burke in his lifetime had executed when pressed for payment or security of an old English debt to Rundell the Jeweller on Ludgate Hill.

As it was necessary there should be a representative of Mr. Burke upon the spot, in order to sign the proper deeds of conveyance of the premises to the East India Company, I at the request of the Members of Government took out Letters of Administration for that express purpose, regularly executed the deeds, and received the purchase money, being sicca rupees, thirty-five thousand, out of which sum I discharged the full amount, principal and interest of the said mortgage, being thirty-two thousand odd hundred sicca rupees. Until the intended College should be completed Lord Wellesley took upon lease a very spacious mansion which a speculating dancing master, named Macdonald had planned and erected for a Public Exchange, in the most central part of Calcutta, but which speculation not answering the proprietor's hopes and expectations he was glad to let it on lease to such good tenants as the East India Company. In this house, when fitted up as a College, there was a daily dinner provided for the students, at which meal either the Provost or Vice-Provost was obliged to preside at the head of the principal table. This whole scheme was put a stop to, and the intended College done away with altogether, by the most peremptory orders from the Court of Directors, and which orders for a wonder the noble Marquis thought proper to obey, more owing probably to an exhausted Treasury and the extreme difficulty he experienced in his attempts to raise money from private individuals upon the Company's security too, than to any real inclination he felt to comply with the absolute commands of his honourable masters.

[1] He died in 1798.—Ed.

APPENDIX XVI

Extracts from "Notes on the Medical Topography of Calcutta"

PAGES 1 TO 67
BY JAMES RANALD MARTIN

HISTORICAL NOTICES OF CALCUTTA

The English careless in selecting healthy sites for their colonied cities: the reason

It has been observed that of all the European nations, who have planted distant settlements the English have invariably shewn least regard to the proper selection of localities for the sites of their colonial cities; and this, I think, must in general be ascribed to the commercial spirit taking the lead: a good harbour and soundings, or else the embouchures of great rivers were the first objects of desire; and it generally happened that both led to the positions the most unfavourable to health.

Illustrated in the West Indies

The same in Bengal

This has been almost universally the case in our West Indian colonies; but here, we have not even the consolation of a commercial expediency in favour of the choice of site for our metropolis; for I believe, there are many places between us and the sea, better suited for shipping, while there exist none so ineligible as to their immediate and surrounding localities. Captain Alexander Hamilton, who visited various parts of India between the years 1688 and 1733, says, that "a more unhealthful place could not be chosen on all the river".

Capt. Hamilton's objections to the site of Calcutta

Foundation of Calcutta by Mr. Job Charnock

The site of Calcutta was chosen about the year 1689-90, through accident!: it possessed a "large *shady* tree", under which its founder, Mr. Job Charnock, could enjoy his repose and his hookah; and therefore it was that he chose it for his "emporium". Having determined to quit the Factory at Hooghly, he first tried to establish himself at Oolabariah, on the western bank of the river, but the village of Sootanutty with its various attractions, and large shady tree, carried the palm.

The name Calcutta derived from the temple of Kalee

"The villages of Chuttanutty, Govindpore, and Calicotta, which, in virtue of the Prince's Nishan, had been purchased from the Zemindars with their districts, extended about three miles on the eastern side of the Bhaggarutty river, and about one mile inland. The latter of these villages takes its name from a temple dedicated to Kalee, the Hindoo goddess of time; and from it the English called their town Calcutta."—Stewart's History of Bengal.

In the East Indian Chronologist, published here by Mr. Hickey in 1801, I find the following mention of the founder of Calcutta; and, notwithstanding the faults of his character, it is not right that he should be altogether forgotten:

Historical notices

> "When peace was established between the great Emperor Aurungzebe and the English, Job Charnock, the Company's Chief at Hooghly, twice removed the Factory, and in the year 1689-90 finally formed an English settlement at Calcutta, which are one century terminated, became a mighty city, the magazine of trade, the arbitress of kingdoms and the seat of empire."

Mr. Job Charnock's reason for choosing his site

"Mr. Charnock chose the ground where infant Calcutta stood, for the sake of a large shady tree which was contiguous: the situation then and for many years afterwards proved very unhealthy; but by the exertions of able engineers, and the industry of individuals since the victory of Plassy, the surrounding woods have been cleared, and health has fixed her residence in that great and grand emporium."

Biographical notices of Mr. Job Charnock

"Tribunis, (I believe Colonel Ironside) in the first volume of the Asiatic Miscellany, terms Mr. Charnock, the illustrious Charnock, the first conspicuous Englishman in this side of the world. Mr. Orme says (Book the VI) Mr. Charnock was a man of courage, without military experience, but impatient to take revenge on a Government, from which he had personally received the most ignominious treatment, having been imprisoned and scourged by the Nabob. The sense of such an indignity was doubtlessly deeply rooted in the mind of Mr. Charnock, and perhaps was one of the reasons for that severe usage of the natives, ascribed to him by Captain Hamilton, who says, the Governor at the hour of dinner and near his dining room, had delinquents punished that he might satiate himself with their cries."

Mr. Charnock built a bungalow at Barrackpore

"From an oral tradition still prevalent among the natives at Barrackpore (now an established military cantonment fourteen miles distant from Calcutta) we learn that Mr. Charnock built a bungalow there, and a flourishing bazar arose under his patronage before the settlement at Calcutta had been determined on."

Barrackpore known to the natives by the name of Chanock

"Barrackpore is at this day best known to the natives by the old name Chanock, and Captain Hamilton, misled by their method of pronunciation, invariably writes the name without the letter r."

Death of Charnock

"Governor Job Charnock died on the 10th of January 1692, and if the dead knew anything of the living and could behold with mortal feelings this sublunary world, with what sensations would the Father of Calcutta glow to look down this day upon his city. Charnock! may your name and your city be immortal, and may Calcutta, the sister of England, last till time itself expires!"

Purchase of the Zumeendary right to Govindpore, Sootanutty and Calcutta

In 1698, the grandson of the Emperor Aurungzebe having visited Bengal, permission was obtained to purchase the Zumeendary rights to the villages of Govindpore, Sootanutty and Calcutta, to the extent of a mile and a half square, at an annual revenue

of £130; thus was begun, "cautiously so as not to alarm the native Government", the construction of old Fort William.

Possession of 38 villages confirmed to the English through the disinterested conduct of Mr. William Hamilton, Surgeon

In 1717, the possession of thirty-eight villages was confirmed to the English at the solicitation of Mr. William Hamilton, Surgeon to the Embassy to Delhi.

"Ferrokhsere had been some time engaged to marry the daughter of Raja Ajeet Singh, one of the Rajepoot Princes; and the bride had arrived, for that purpose, at the capital: but the Emperor, being afflicted with a complaint which all the skill of his own physicians could not cure, was under the necessity of postponing the marriage. At length, in consequence of the recommendation of Khan Dowran, he permitted Mr. Hamilton, the Surgeon of the Embassy, to attend him; and that gentleman having, by a judicious operation, restored the Emperor to health, became very deservedly a great favourite with his majesty, who, in addition to many proofs of the royal munificence, promised to grant any other favour he should ask. Mr. Hamilton, instead of requesting any further reward for himself, besought his majesty to concede to the English Ambassadors the object of their mission. The Emperor surprised at Mr. Hamilton's disinterestedness, promised that as soon as the marriage ceremonies were over, he would take the petition into his serious consideration, and grant the English every indulgence he could, consistent with the dignity of his own empire."

In clearing away the ground for the foundation of the new Church in Calcutta, about thirty years ago, the tombstone of Mr. Hamilton was discovered; which, in addition to an English epitaph bore a Persian inscription, thus translated by Mr. Gladwin; "William Hamilton, Physician in the Service of the English Company, who had accompanied the English Ambassador to the enlightened presence, and having made his own name famous in the four quarters of the earth by the cure of the Emperor, the Asylum of the World, Mohammed Ferrukhseer the Victorious; and, with a thousand difficulties, having obtained permission from the Court, which is the refuge of the universe, to return to his country; by the Divine decree, on the fourth of December 1717, died in Calcutta, and is buried here".--*Stewart's History.*

> "For the honor of the faculty", says Mr. Hickey, "be it remembered, that this is the second time the Hon'ble Company were eminently served by that learned body. The memory of Boughton and of Hamilton ought to be a standing toast at the polite tables of Calcutta".

But little known relating to Calcutta for many years after Mr. Charnock's death

For many years from the time of Job Charnock's death, little is known of the progress made in his emporium; indeed in 1717 it remained but a straggling village of mat houses, the whole of the ground south of Chandpal Ghaut being thickly covered with jungle and forest trees: near Tolly's Nullah there were two villages, the inhabitants of which were induced to settle in Calcutta by the ancient family of Set, at that time the wealthiest merchants residing here. The present site of Chowringhee was occupied by villages of the most miserable kind, surrounded with marsh and jungle, and although Calcutta may be said to have extended to Chitpore Bridge, yet the intervening space was in no better condition than the rest; all was jungle and marsh.

Former state of Chowringhee

Commerce seems, however, to have grown up very early.

Early commercial prosperity

"Success", says Stewart, "produced new adventurers; and besides a number of English private merchants licensed by the Company, Calcutta was, in a short time, peopled by Portuguese, Armenian, Moghul, and Hindoo merchants, who carried on their commerce under the protection of the English flag: thus the shipping belonging to the port, in the course of ten years after the Embassy, amounted to ten thousand tons; and many individuals, amassed fortunes, without injury to the Company's trade or incurring the displeasure of the Moghul Government".

Captain Hamilton speaks in great praise of the kindness and hospitality towards strangers shewn by the residents of his day: he adds however, that, "in Calcutta all religions are freely tolerated but the Presbyterian, and that they brow-beat". An old Annalist refers to 1737, as a period when we had "opulent merchants, in days when gold was plenty, labour cheap, and not one indigent European in all Calcutta; but the same year brought with it a great calamity, and from the extent of loss reported, the Factory must even then, have been one of growing commercial importance.

Terrible inundation of 1737

"In the night between the 11th and 12th of October 1737, there happened a furious hurricane at the mouth of the Ganges, which reached sixty leagues up the river. There was at the same time a violent earthquake, which threw down a great many houses along the river side in Golgoto (*i.e.*, Calcutta) alone, a port belonging to the English, two hundred houses were thrown down, and the high and magnificent steeple of the English Church sunk into the ground without breaking. It is computed that 20,000 ships, barks, sloops, boats, canoes, &c., have been cast away: of nine English ships, then in the Ganges, eight were lost and most of the crews drowned. Barks of sixty tons were blown two leagues up into land over the tops of high trees; of four Dutch ships in the river, three were lost with their men and cargoes: 300,000 souls are said to have perished. The water rose forty feet higher than usual in the Ganges,"--*Gentleman's Magazine for 1738-9.*

Construction of the Maharatta ditch in 1742

In 1742 was began the ditch around Calcutta, intended at the time as a defence against the incursions of the Maharattas. It never completely invested the town, but, in so far as it went, it may have had the effect of draining the grounds to the north and east, though for purposes of defence, it could not have proved of much use.

Modern Calcutta dates from 1756

We may in reality then, date the origin of Calcutta from the year 1756, when the reconstruction of the city commenced, after its capture and destruction by Suraj-ud-Doulah, at which period, according to Orme, there were but seventy houses belonging to the

English. What are now called the Esplanade, the sites of Fort William and Chowringhee, were so late as the above year, a complete jungle, interspersed with huts, and small pieces of grazing and arable land. The old Fort and Clive Street, then and for many years afterwards, comprehended the whole of Calcutta, Clive Street being the place of all business.

It rapid rise and prosperity

Nowhere has the activity and enterprise of British commerce been better displayed than in the rapid rise of this capital; for, even within the memory of persons still living, the houses of Europeans were few in number, and of mean appearance. Previously to 1756, Calcutta was, in short, but a trading factory—a valuable one to be sure, but yet affording little promise of its future greatness. It has often happened that the value of an acquisition has only become known by its loss; and it may have been here, as elsewhere, that necessity has proved our best friend, and, without our knowledge, turned out the best promoter of public health. Soon after the re-occupation of Calcutta by the British, an extraordinary impulse seems to have been given to the spirit of improvement, so that within forty years, and notwithstanding all the disadvantages of position, it became a city numbering five hundred thousand individuals—a degree of prosperity unparalleled perhaps, in any other quarter of the world, and which had increased to such a degree, that in 1796, some commercial houses were supposed to have had dealings to the amount of two crores of Rupees annually.

The New Fort begun by order of Lord Clive

Soon after the battle of Plassey, 1757, Fort William was commenced by order of Lord Clive; and I know of no other work performed at the instance of Government, of the same value to public health, through the opening out and clearing of so large a piece of ground. It has justly been said that the Esplanade of Fort William forms the *lungs of Calcutta*, and certain am I that we should breathe but thickly without them.

Severe famine of 1770 and consequent sufferings

The year 1770 was memorable for a grievous famine and pestilence which afflicted Bengal generally, and carried off, according to Mr. Hickey, 76,000 souls in the streets of Calcutta, between the 15th July and 10th September. In addition to that calamity, several great granaries were destroyed by terrible fires which occurred in May and June. "There was not a corner in the city or any lurking-place in the vicinity of Calcutta where the living, the dying and the dead, were not mingled or heaped together in melancholy confusion. It was impossible to stir abroad on business or recreation, where these offensive and mortifying associations were not in the way. The daily employment of hundreds was to remove the dead in proportion as they became a nuisance to the living. These in cart-loads, and without any funeral or religious obsequies, were promiscuously plunged into the river. By this increasing and prodigious mortality, notwithstanding the most constant attentions to decency and cleanliness, the town and suburbs were so much infested, that from the raging heat of the weather, the foul congregation of vapours which incessantly ascended from the unburied dead, and the torid or intemperate state of the atmosphere, a pestilential influenza was generally and seriously apprehended. Fortunately an extraordinary flock of carnivorous birds, animals and vermin, were allured from their fastnesses and their solitudes by the putrefaction of the scene. The water of the Ganges became loathsome and corrupt from the loads of dead bodies which it daily received. Pork, geese, ducks and every species of provisions fattened by substances thus gross and abhorrent, were avoided as poisonous. The fish in the river were noxious, and even sometimes fatal to those who eat them. Mutton, which could hardly be obtained at any price became the only food which could be enjoyed with safety or satisfaction."—*Tansactions in Bengal.*

Plan for improving Calcutta submitted to Government by Colonel Campbell, in 1781

In Hickey's Gazette for 1781, I find notice of a proposal submitted to the "board" (meaning I suppose the Council Board) by a Colonel Campbell, for cleaning and draining the town, on an estimate of two lacks of rupees per annum; but it would seem that the Board, "for certain reasons best known to the parties themselves", declined the Colonel's plan and actually imposed or intended to impose, a "stupendous tax" of from 7 to 14 per cent. on landed property for the same objects; whether this latter measure was found impracticable in itself, or whether it gave way to measures of external political importance, I cannot say, as there is no further notice regarding it. In 1784, a Mr. Henckell effected a clearing of considerable portions of Sunderbund land near the town, which greatly contributed to diminish the local sources of fever.

Progressive clearing of Sunderbund land around Calcutta

Construction of Circular Road by order of Lord Wellesley

One of the first acts of the Marquess Wellesley was, in 1799, to enlarge and extend the roads around Calcutta especially the Circular Road, a great improvement; but to effect which the famous "Bythna Kanna" tree was cut down: it had been the place of assemblage for native merchants from the earliest period, and its fall was looked upon with superstitious regret.

The greatest of the modern improvements executed thro' the Lottery Committee

Calcutta of the present century owes the greater part of its improvements, certainly those affecting health, to the well directed labours of the Lottery Committee. I believe it was at the instigation of this intelligent public body, that the river-bank has been cleared for the construction of the present ghauts, and the magnificent Strand Road, the two greatest improvements within my personal recollection. I believe also, that all the new squares and fine open roads leading to and from them in various directions, owe their construction to the same authority. There can be no doubt of the beneficial effects of these measures in repressing the causes of fever, by draining, cleaning and promoting freedom of ventilation and cleanliness. But so long as we are without a complete system of draining, all else is but palliative; for if it amounts to a demonstration, as stated by a distinguished author, that "freedom from some of the most fatal scourages of the

All improvements of but partial benefit, so long as we are without an affective

plan of draining

human race, and a gradual amelioration of health" can be traced to the "free exposure of the streets of London to the sun and wind, a hard regular pavement preserved clean by proper scavengers; the construction of common sewers and privies, and the advantage of a flowing stream", what amelioration of the public health may not be expected from similar measures in such a city as this, situated as it is within the tropics?

Former state of London as compared to its present healthiness

Dr. Caius, the most eminent physician in England at that period, states that the mortality of London from ague in 1588 was such that the living could hardly bury the dead: now, such is the effect of local improvement on health, that ague is *almost unknown* in modern London. Even in this city, such had also been the result of all the progressive improvements above noted, that

Dr. Lind's notices of the former and present state of Calcutta

Dr. Lind comparing the state of health in his time to what it had once been, says, "Calcutta built literally on a swamp, on the east side of the Hoghly, and surrounded to this moment by immense lakes at a few miles distance, has by the draining of that part of the city inhabited by Europeans, become as healthy as any country of the same latitude on earth.*

> "Ten miles below the city where the country is not cleared, and the rapidity and rankness of vegetation is suffered to infect the air, the jungle or violent bilious fever is sure to attack any one who comes for a time within its atmosphere: yet the old village of Fultah, while the Dutch had an establishment there, was healthy, because the ground was cleared; since they left it, it has become more unhealthy."

Malte-Brun on climate

Malte-Brun, when speaking of the most temperate climates, declares "that it is man himself who has in a great measure created these salubrious climates. France, Germany and England, not more than twenty ages ago, resembled Canada and Chinese Tartary, countries situated, as well as our Europe, at a mean distance between the equator and the pole".

Capt. Hamilton on Calcutta in his time

On the insalubrity of Calcutta in the earlier period of its occupancy by Europeans, we have again the evidence of Captain Hamilton. "One year I was there, and there were reckoned in August about twelve hundred English, some Military, some servants of the Company, some private merchants residing in the town, and some seamen belonging to shipping lying at the town, and before the beginning of January, there were four hundred and sixty burials registered in the Clerk's book of mortality."

This, worse than Batavian condition, and frightful sacrifice of life, are ascribed by the same authority to the annual subsiding of the Salt-Water Lake, leaving its marshy banks covered with fish and exposed to a vertical sun. No doubt this had a most injurious effect, but the unimproved state of the ground in and about the town itself, consequent on the unsettled state of our possessions previously to the grant of 1765; the marsh and rank vegetation, producing constand and unwholesome exhalations, retained and accumulated in a humid atmosphere—these too had their full share.

Europeans used to meet on 15th November to congratulate each other on being alive

In more recent times, it was the custom of the European inhabitants of Calcutta to meet on the 15th of November of each year, to congratulate each other on their escape from the period so emphatically marked by Captain Hamilton; but though this is no longer considered necessary on account of the insalubrity of the place, still I think it will not be difficult to shew that we are far indeed from having effected for our "emporium" all that might or ought to be done for it. For many years to come, little more can be done or expected from that commercial or private enterprize to which Calcutta has hitherto owed so much. From the natives we cannot expect any great aid, *until they are shewn* the *usefulness* of *public work*, when, I am confident, they will readily comprehend how clearing and proper draining will certainly make the value of landed property in certain quarters incalculably greater than it is now, by rendering what is at present useless, fit for building and similar purposes; so that what *we* know to be most conducive to *health*, *they* may at the same time be led to perceive as greatly conducive to their pecuniary interests.

> "It is only by constant efforts of industry that the salubrity of any spot is maintained; when these are relaxed or when prosperity and civilization decline, the seeds of diseases are immediately deposited in the earth."**

Again, if we accord with Sir Gilbert Blane's opinion that all predominant diseases are referable to the following general heads, *viz.*- 1st, Vitiated exhalations and secretions of the human body;—2nd, Noxious exhalations of the earth; and, 3rdly, Depraved habits of life; we shall at once see how much of public health, in the great matter of *prevention* of disease, may be effected through a practical application of the science of Medical Topography.

The injury from human exhalation is removed simply, by prevention of crowding, by exposure of the streets and houses to the sun and wind, cleanliness, &c.; and that from terrestrial exhalation, by draining, clearing, levelling and paving, &c.

The brief Topographic History of Calcutta here attempted, proves what may be done by a well applied capital to render one of the worst known localities habitable; it also proves, that a further application of the same means might even render it healthy.

CALCUTTA

Viewing modern Calcutta as depicted on a Military Map, which, as exhibiting the most perfect and detailed topography, should always be preferred, it may be described as occupying a space along the left bank of the Hooghly of four miles and a half estimated

* I fear the Doctor here has gone a little too far, and that we have not as yet reached that point of excellence.
** Hawkins' Statistics.

Topographic Sketch

from Chitpore to Kidderpore, north and south, and of one mile and a half from west to east, that is, from the river-bank to the Circular Road. To the north, it is bounded by the outer suburb of Chitpore, and to the east and south-east by those of Nundenbagh, Behar-Simlah, Sealdah, Entally, and Ballygunge; beyond which are the two canals and the Salt-water Lake. South of the town and fort are the great suburbs of Bhowaneepore, Allipore and Kidderpore.

More remotely, Calcutta has to the south and east, extending for 180 miles along the sea, the woody tract of the Sunderbunds, consisting of Jungle and marsh, including the embouchures of the Ganges: to the north and west, is the tract of annual inundation, anciently called Beng: "the work of the Ganges",—deeply covered over during the rains, and intersected by innumerable rivers. Like Guiana, the delta of the Ganges is below the general level of the sea at high water mark; and like the same country, it would be uninhabitable from continued stagnation, but for the fluctuating declivity occasioned by the retiring tides. The reason why the delta of the Nile is not infested with remittent and intermittent fevers is, that the fall towards the sea is so great as to admit of no stagnation.

NATIVE CITY

The native town and the portion occupied by Europeans must be described separately, as they have few points of resemblance.

Native City

The former fortunately occupies the northern section of the area already described: had it been ordered otherwise by Mr. Job Charnock, and that we had the black town to windward during the S.W. monsoon, then must the Europeans have tried their fortune somewhere else: here, at least, accident has favoured us. The lower or southern division of the town which comprises *Chowringhee* is but thinly peopled; the houses of Europeans being widely scattered, and *Kolingah*, which is a part of it, is chiefly occupied by natives.

The division between *Durrumtollah* and *Bow Bazar* has a denser population; it comprises the most thickly inhabited European part of Calcutta, as well as that occupied by a great number of country-born Christians, who reside in the town with their families.

The north division between the *Bow Bazar* and *Muchoa Bazar* comprises perhaps the most dense part of the native population of Calcutta. The upper division to the north of *Muchoa Bazar*, is, comparatively speaking, but thinly covered with habitations, presenting towards the north and east, extensive gardens, large halfdried tanks and ruinous tenements. It is surprising how much the condition of the native portion of the town has been neglected in this great city and its suburbs, in which are to be found all the faults of all the cities in India. It may not be very easy efficiently to interfere in this matter, and it may be very true that it is less difficult to find fault, than to remedy the evil complained of; but in an affair of so much importance to the public health, *something* may be done and at least ought to be tried, if only in the way of municipal or police regulation.

In the event of a contagious disease (and there is no reason why such should not occur here), the dense state of the Burra Bazar and surrounding parts, the want of water courses, and means of facility for removing accumulations of filth, &c., would stand as insuperable bars to the best devised regulations of medical police. All masses of buildings should be opened out, old walls and decayed houses removed; for even under ordinary circumstances these are fertile sources of fever.

DWELLINGS

"The people of India are not infected with that plague of building, as the Italians call it. The poor cannot afford to erect sumptuous piles, and the grandees do not care to do it."—*Old History.*

The houses of the wealthier classes are brickbuilt, from two to three stories high, closely constructed and divided only by dirty, narrow and unpaved streets; the roofs are flat and terraced. This is the general character of that portion of the black town called *Burra Bazar*, in which are to be found, however, some residences which, on account of their peculiar arrangement, require a separate mention, I mean the houses of the Baboos. These are uniformly built in the form of a hollow square, with an area of from 50 to 100 feet each way, which, on the occasion of Hindoo festivals, is covered over, and when well lighted up, looks very handsome. The house itself is seldom of more than two stories, the lower portion, on three sides of it, being used only for store-rooms, or for domestics, on the remaining side, and that always the northern one, is to be found the Thakoor-Ghur, or abode of the Hindoo gods; this is always finished with care, and when the owner is wealthy, the lustres contained in this sacred apartment are of considerable value. Above stairs are the public apartments, with verandahs, always inwards. these are generally long narrow slips, containing a profusion of lustres and wall lights, altogether affording but a mean view to an European. Jutting out from this main building are situated the accommodations allotted to the females, and family: they consist of smaller hollow squares, with petty verandahs opening inwards, and some houses have two or three sets of these zunnanahs, with one or more tanks attached, but which are generally kept in a very neglected state. Altogether, this form of building, if placed on open ground and made more roomy, would not appear ill calculated for the climate.

Houses of the Baboos

The mass of labouring classes live in huts, the walls of which are of mud, or of matted reed or bamboo, roofed with straw or tiles, according to the means of the occupant; these would not be so bad, but that they are uniformly placed on the bare ground, or on damp mud, but little raised, which continually emits injurious exhalations.

Houses of the Poorer classes

Great numbers know nothing of the comforts of a bedstead, and the inconveniences to which they are subjected, are greatly increased by the pits of stagnant water often made close to their doors.

Mode of buildings amongst the Burmese excellent

While in Ava, I was forcibly struck with the superior style of buildings amongst the natives, which, in point of airiness, elevation and mode of construction, constitute the best habitations for the poor I have ever seen in any country; and I have no doubt they contribute much to form the hale constitution of the Burmese as contrasted with other Asiatic races. There, every man is raised above the ground in proportion to his means, and even the poorer classes are three feet above it; while here, nine-tenths of the entire population sleep on the bare ground. In this important matter the Bengallee is behind many savage tribes. The miserable wood-cutter on the banks of the Mississippi raises his hut as high as he can on posts, and the Guanaco of the Delta of the Orinaco climbs into the tallest palm trees, as a protection from the exhalations with which both are surrounded.

The Bengallee behind savage tribes in his mode of buildings

Dr. MacCulloch, in his account of the Hebrides, states that, while the inhabitants had no shelter but huts of the most simple construction, which afforded free passage to currents of air, they were not subject to fever; but when, through the good intentions of the proprietors, such habitations were provided as seemed more comfortable and commodious, but which afforded recesses for stagnating air and impurities, febrile infection was generated

In 1793 the number of houses, shops, and other habitations in the town belonging to individuals was as follows:

To natives of Great Britain .	4,300
Armenians . . .	640
Portuguese & other Christians . . .	2,650
Hindoos . . .	56,460
Mahomedans . .	11,700
Chinese	10
Total independently of Government premises .	75,760

The number of premises in Calcutta to be considered as containing any population amounted in 1822 to a total of 67,519, of which 5,430 were upper-roomed houses, 8,800 lower-roomed houses, 15,792 tiled houses, and 37,497 straw huts. By the very latest returns, but little increase would seem to have taken place in either kinds of premises, since 1822.

THE STREETS

Streets require to be opened out

Whoever has visited the native portion of the town before sun-rise, with its narrow lanes, and "rankest compound of villanous smells that ever offended nostril", will require no argument in favour of widening the streets, so as to effect the two greatest improvements of all as respects the salubrity of a city, free exposure to the sun, to rarefy and elevate the vapours, and to the winds to dilute and dissipate them.

It were easy to point out where clearing out masses of building, and widening and new forming of streets should be effected; but here I shall only indicate the necessity for these measures, in almost every part of the native town: the details could easily be arranged. Where new streets are formed, they should be as much as possible in the direction of the prevailing winds: all streets should have raised pavements on each side for foot passengers.

The absence of watering injurious to health

The want of watering has been severely felt in every part of Calcutta of late years, and the more the city extends, the greater is a matter of so much importance to health needed.

Dr. Fordyce considered the dust of the streets of London, in his day, "a serious detriment to health".

The deficiency in the supply of water is highly injurious in other ways, and in order to illustrate this point, I may mention, that during an epidemic fever in Belfast, the quarter where water was wanting, and consequently, where cleanliness and sewerage were comparatively deficient, supplied *three-fifths* of the whole amount of fever cases.

Great value of public cleanliness

It must be confessed, the natives have yet to learn, in a public and private sense, that the "sweet sensations connected with cleanly habits, and pure air, are some of the most precious gifts of civilization, and that a taste for them tends to give a distaste to degrading and grovelling gratifications: the common saying that 'cleanliness is next to godliness', is founded on reason, in as much as it is conducive to moral purity as well as health and pleasure".

DRAINS AND SEWERS

Great importance of this subject

There is probably no subject connected with the public health and comfort of a city, of more consequence than the state of the sewers.

Those of Calcutta throughout, I believe to be defective in number, construction, and fall, without which last the most approved plan gives no real usefulness. It is *stagnation* from want of sufficient fall in the drains, that gives rise to deleterious exhalations, and the same applies to the half-dried tanks so numerous here, and to the water retained by inequalities of soil. The great sewers should be of solid masonry, arched over; they should also have lesser communicating sewers proceeding from each house, and their fall should be such as to admit of no arrest of their contents: such of the sewers as must terminate in the river, should have their mouths at ordinary low water mark. Open sewers, or surface-drains, should when practicable, be made in the direction of the prevailing winds, and wide, so as to admit of exposure to the sun, and free ventilation.

Stagnation from want of sufficient fall very injurious

Great Sewers

State of the level from a survey made some years ago

Some years ago a careful survey was made of the area comprised within Chitpore and Kidderpore, north and south, and from the Circular Road, to the river, east and west, with the view to fixing the exact level.

From this survey it resulted that the whole extent of the river bank is the highest, declining gradually towards the Salt-water

Lake. The mean height of the surface of the town is about two feet below the river at its greatest height in the rains, or twelve feet above the Salt Lake at the same season. Most of the streets are on this level; Clive Street is the highest, and Muchoa Bazar Street is the lowest. The former near Meerbhur's Ghaut is 8 feet above, and the latter, near its centre, is 6 feet below the top of Chandpaul Ghaut, which is commonly between 2 and 3 feet higher than the river in the rains at spring tides; parallel to the river, there is a gentle slope towards Muchoa Bazar Street from Chitpore Bridge on the one side, and a line drawn half way between the Bow Bazar and the Durrumtollah on the other: south of this line there is a declivity towards the Brijeetolao. A very important fact which must from the basis of any plan for draining the town, has been proved, by the survey of the levels of Calcutta being followed by an examination of the Salt Lake to the eastward of it, namely, the great difference in the relative heights of the river, and the Salt Lake in the rains, when one or both of these must be looked to for the purpose of receiving the matter to be carried off in draining.

In the months of July, August and September, the tides rise in the river at an average to 11 feet above the Salt Lake, and only fall to 2 feet below it; but on some days, the river does not descend to within a foot of the level of the Lake, while at high spring tide the river attains a height of between 13 and 14 feet above it. Hence the impracticability of draining the town into the river in the rains, except for a few hours during the latter part of the ebb, is as evident as the superiority of employing the Salt Lake for that purpose is manifest; that body of water remaining at a uniform height throughout the rainy season, uninfluenced either by freshets or tides, and giving a fall even if the mouths of the drains were carried to its level half a mile beyond the Circular Road, of 5½ feet in the mile, or about 1¼ inch in 100 feet. From this also it appears, that, if the water which descends on the surface of the town, during a heavy fall of rain, be equally distributed by cross drains into the great sewers, and these be made of a sufficient capacity and slope, no obstacle will be opposed to its free passage into the Lake.

The expediency of placing stones embedded in masonry, in certain parts of the town, to register their relative height, was suggested, and immediately ordered, so that the construction of aqueducts, drains, &c., will be an easy task, it being only necessary to examine these register stones to discover immediately whether any one spot is higher or lower than another, and to have the channels between them constructed accordingly. This idea is new, although a register of levels seems to be quite as important as a register of distances; and might lead to the practice of their being established in other large cities, and to that of inscribing the height of places, above some level on every mile stone in the country; for a certainty regarding the one might often be as useful to be known as the other It follow from the above, that one or two head waters properly located would wash out the drains and empty themselves eastward of the town at all seasons.

THE TANKS

Owing to the water of the river being brackish during a great part of the year, and unfit for general use, the chief supply for all classes of natives is derived from tanks, which for the whole town are about 537 in number, and if properly constructed, they ought generally to contain wholesome water.

Importance of pure water, the natives not aware of it

The natives, however, do not seem any where impressed with the importance to health of purity in this element, and therefore it is that every where one finds the tanks in an impure and neglected condition, from the annual accumulations of the vegetation going on at the bottom, so as to render them progressively shallow, until at length they become the half-dried, green and slimy puddles, which so contaminate every portion of the native town.

Rain water used by European

The better classes of Europeans use rain water, kept in the common Pegujars, and which on account of their great dimensions and narrow mouths, seem well adapted to the purpose.

This being the purest of the natural waters, ought to be more in use in a country where it can be so readily obtained.

The construction of tanks on approved plans, and at convenient distances, is yet a desideratum in Calcutta: it would prove of value to the native community, not only as affording a supply of good water at all seasons, but as helping to carry off underground moisture.

Half-dried tanks to be filled up

All half-dried tanks should be filled up, and bathing only permitted in such as are unfit for other purposes: clothes-washing should be prohibited.

Tanks within the Baboos' premises

The Police should look to the condition of the tanks within the premises of the Baboos; for no person ought to have exclusive property or right in what is injurious to the public health.

All I have said of the native city applies to the portions called Kurbulla, Simla, Mirzapore, Paritollah and Collingah, where defective drainage and half-dried tanks are every where to be found; but as details would occupy more space than such a sketch as this admits of, I proceed to notice the condition of the outer Suburbs.

THE SUBURBS

Attention to the state of the Suburbs necessary in the first instance

Without attention to the state of the Suburbs in the first instance, it is useless to attempt any great improvement within the city: while every square acre of the circumference is left in a state worse than that of nature, it were in vain to work in the centre. The improvement of the Suburbs too, as it will prove of the greatest benefit to health, so I think it will also be least in point of cost: here, great works in masonry will not be required.

VILLAGES ALONG THE CANAL

Village along the canal

What I am about to notice is from repeated personal observation. I began north-east of the town about Chitpore, and carried my examinations towards the south, until I reached Mr. Kyd's dock-yard. I have personally examined Chitpore, Nundenbagh, Behar-Simlah, Komarparrah, and Sealdah, and find one description will serve for all; *viz.*, general irregularity of ground, affording lodgement of various extents for stagnant offensive waters; drainage every where defective, and good tank water scarce. There are also belts of jungle and underwood, obstructing ventilation. In all these villages the replies of the natives confirmed what, indeed, any one could have predicted, the general prevalence of remittent and intermittent fevers, with their sequelae, during the whole period of the drying process, from October till June. The new earth dug from the canal, and now heaped all round, might readily be made use of to level and fill up the thousand pits and half-dried tanks, which now form such fertile sources of noxious exhalation in these villages.

Their miserable condition

Canal and its banks

The banks of the canal should also be carefully preserved from accumulations of filth, and rank vegetation. This applies especially to the head of the old Canal at Baliaghatta, which should be deepened, and where I have observed the banks to be in a noisome and neglected state.

Specious tanks should be dug at convenient distances and the earth thus procured, made use of to fillup the irregularities of ground. All underwood and belts of jungle trees should be rooted out.

ENTALLY

From the frequency with which I have seen the unhealthy state of the suburb of Entally set forth in the daily prints by persons professing themselves inhabitants, I had expected to find more of the sources of fever there than in the last mentioned villages; but in truth they are all bad enough, and the difference as regards Entally lies chiefly in this, that a large proportion of its inhabitants are Christians, and can make their grievances known. Entally is fully in as neglected a state as any locality pointed out in this paper, and any one need only observe, to know the remedy. It is so obvious, that I need not enter on what would be but repetition. The drains here and at Bally Gunge are all in a neglected condition, and require clearing, with a proper fall. There is also much bamboo and other jungle all round which ought to be rooted up. I know of no quarter near Calcutta so much in need of this measure.

Entally as bad as any of the Suburbs

BALLY GUNGE

Here, I beg to solicit attention for a moment to the beneficial effects resulting from very simple, and apparently trifling improvements, executed at my suggestion some years back, in the cantonment of Bally Gunge.

Former unhealthiness

Having shortly before served with troops in the field in the very unhealthy countries of Orissa, along the borders of the Chilka Lake towards Ganjam, and in the interior of Gundwana, on the Mahanuddy, I was appointed to the charge of the Governor General's Body Guard at Bally Gunge, in 1821; and there, I found severe remittent fever, such as I had first seen and personally suffered from in the jungles, prevailing to a great extent, and I learnt that it had been so for years. To ascertain the cause of a state so different from what I had been led to expect, I made several careful examinations of the localities, and discovered that in the men's lines alone, besides stagnant drains, there were sixty pools and pits of various dimensions, to all which, and the neglected state of the grounds around the regimental hospital, I had no hesitation in referring as a sufficient cause of the extreme unhealthiness of the corps. I represented the necessity of drainage with a sufficient fall- -the filling up of the pools and pits, and the construction of two large tanks at a proper distance from the lines. The Governor General, the Marquess of Hastings, was pleased to order all my suggestions to be carried into effect, and the result during the three following years, was, a reduction in the frequency and intensity of fever, as remarkable as it was satisfactory. I had intended to have brought the details to the notice of the authorities, but I lost my papers in a ship-wreck on the coast of Ava, when proceeding thither, during the late war, with the Body Guard. The fact, however, is as I have stated.

of Bally Gunge remedied at the suggestion of the author in 1821

BHOWANEEPORE

This is the most populous of the native suburbs, and I believe it was the most severely visited by the epidemic remittent fever of 1833. To this calamity it would seem peculiarly exposed through its low, closely-built, and illventilated streets, its great stagnant ditches, lined with rank vegetation, its background of extensive marsh and underwood, and its innumerable half-dried tanks and pools. The native residents, whom I questioned on the spot, spoke of the last year's fever as universal, and declared its ravages to have been more extensive than the oldest of them had ever previously seen. No doubt all this is true, for epidemics are observed in all countries to fasten with the firmest grip on such localities.

Bhowaneepore; sufferings of the Natives in 1833

Good tanks are very much wanted in this Suburb, the inhabitants having now to proceed to the distant "General's Tank" in Chowringhee, that being their only source for the supply of wholesome water.

ALLIPORE

Allipore has long been considered a healthy locality, and was early occupied by Europeans. It still contains the favourite villa of Warren Hastings. Cossipore and Russapuglah are also esteemed more healthy than Calcutta, and I believe with justice. This Suburb (Allipore) from being better raised and better drained, did not suffer nearly so much from the fever of 1833, although natives of respectability assured me it carried off at the rate of eight out of ten of the occupants

Allipore a better locality

of each house in the villages to the south and east of us during that season. This circumstance is well deserving of notice when compared with the state of Garden Reach, where scarcely a house escaped the epidemic fever, and I knew one, in which every individual was attacked. Finally, it may be said with truth, that in all the places noticed, there are not six square acres of soil occupied by natives, which do not contain marsh and other concentrated sources of periodic fevers, which in the course of time establish their inevitable sequelae of spleen and fatal diarrhoea—the brief history of the life and death of two-thirds of all the poor inhabitants around us.

General unhealthiness of the Suburbs

Where all positions are so bad, I find it difficult to select, even by comparison, what are usually designated by medical topographers healthy situations, and unhealthy situations. The sections Boitakana and Entally, I am informed by a gentleman, now 50 years resident in Calcutta, were considered healthy, when about 35 years ago, he first took up his residence at the former place; but since the construction of the canals, they have become notoriously the reverse: fevers formerly infrequent, are now general, especially on the drying up of the rains, and are commonly attended with yellow suffusion of the surface. The cause of this change, appears to me to arise from the banks of the canals impeding the natural drainage towards the east; and the inquiries made among natives would lead to the belief that the inhabitants suffer severely at all seasons. Those who frequent the borders of the Lake and places about Ullabarea, to collect the reeds used for the manufactory of floor mats in common use here, are unusually short-lived, and in the season of the inundation, in 1833, most of them died.

Difficulties in their present state to say which is best and which the worst

KIDDERPORE

I thought I had visited the worst of the Suburbs in Bhowaneepore, but Kidderpore, which is next in populousness, greatly surpassed it. I think I never saw in any part of Bengal or Orissa, a locality so generally bad, and the result corresponds entirely with its condition. Fever is general throughout, even in the healthiest season, and the want of good water forms an universal complaint amongst the inhabitants. There is not a square road that is not in a surprising state of neglect, and the portion between the bridge-end and Kyd's dock is one entire jheel. I need not again speak of the remedy for all this; but I beg to mention what I would consider a great improvement to this and the other Suburbs, *viz.*, flood gates, from the Tolly's nullah, to wash out the drains. Those from the left bank would fall into the Hooghly, clearing out the drains of Garden Reach in their course, whilst those from the right bank, having swept through Bhowaneepore, should enter the Maharatta Ditch, and pass along the Circular Road, terminating in the head of the Canal. Calcutta itself would be much improved by this measure!

Kidderpore; its neglected state

From their situation and neglected state, the great Suburbs of Bhowaneepore and Kidderpore are peculiarly exposed to the effects of inundations such as occurred here in 1833.

HOWRAH

Howrah is directly opposite to Calcutta, and like the parent city, it has its proportion of marsh in its rear.

This would appear to have been the oldest of our Suburbs, and to have been considered by Captain Hamilton as preferable for the site even of the great emporium. Speaking of Howrah in his time (1688-1733) he says,—

The oldest Suburbs of Calcutta

> "On the other side of the river are docks made for repairing and fitting their ships' bottoms, and a pretty good garden belonging to the Armenians, that had been a better place to have built their fort and town in, for many reasons. One is, that, where it now stands, the afternoon's sun is full in the fronts of the houses, and shines hot on the streets that are both above and below the fort; the sun would have sent its hot rays on the back of the houses, and the fronts had been a good shade for the streets."

Captain Hamilton's description of, in 1688-1733

For the following particulars I am chiefly indebted to Dr. Duncan Stewart, many years Civil Surgeon of Howrah, and the founder of the excellent establishment for European seamen.

This Suburb is long and straggling, extending along the river about six miles, its greatest breadth being about two miles.

The country around and inland is very low; the river bank, on which the better of the houses are built, being like Calcutta, the higher, and having at some places an elevated upright river front, shewing that the deep channel formerly took this course. Of late years a sand bank has been rapidly forming south from the headland at Howrah Ghaut, which now crosses the stream near to Calcutta, and extends down to Seebpore.

Description

Inland, the country is very low, and like that beyond Calcutta, is devoted to rice culture, with here and there patches of underwood; it may be said to be in a humid state for nine months in the year. The number of houses is shewn in the following table:

Houses

Mehals	Brick Houses of one Floor.	Brick Houses of two Floors.	Matted & Thatched Houses.	Tiled Huts.	Native Chowks
250	1982	1215	47178	573	

DRAINS

There are no *puckah* drains, but the water has free course; the bank being high, and great attention being paid in repairing the drains that exist. In the back part of the Suburb the necessary fall being wanting, there exist many stagnant pools and half-dried tanks.

Drains

WELLS

The number of *puckah* wells is 54—*kutcha* wells 216—tanks and pools 380.

Wells

PUBLIC BUILDINGS

There are three churche capable of accommodating about 150 persons; there are likewise two hospitals, one for natives supported by voluntary contributions, and furnishing medical aid to about 30 to 40 patients daily, and the hospital for European seamen established by Dr. Stewart at Howrah Ghaut: the number of patients admitted into this latter from the shins in the river have been, within the last twelve months, 348. There is besides the above a District Charity Fund similar to that in Calcutta for the relief of needy Christians. The Government Salt Golahs form an extensive range of building, very defective in original construction and constantly in need of repair. The roads and houses in their vicinity are often encrusted with a deposit of salt, and the natives employed suffer in consequence from ophthalmia and other diseases of the eye.

There are seven or eight docks on this side of the river, the older ones being the most spacious and considered the best. A Slip Dock has lately been built, and with these exceptions all the rest are mud docks. In all of them much attention is paid to the proper accommodation of the workmen.

POPULATION

Population

The following is the population, according to a census taken last year:

Resident Hindoo Adults	Resident Hindoo Children 6 yrs. old and under.	Hindoos in Service	Mosulmaun Adults	Mosulmaun Children 6 yrs. old and under	Mosulmaun Servants	Native Lodgers or Passengers	European Adults	European Children	East Indian Adults	East Indian Children	TOTAL
33,223	20,342	8,106	12,154	4,395	2,019	3,153	43	24	63	49	83,571

Howrah healthier than Calcutta

Dr. Stewart considers that the Howrah side of the river is the more salubrious from the S.W. monsoon blowing fresh along and across the river. The inhabitants residing along the bank he considers healthier than such as occupy the low back grounds bordering on the marsh. He likewise considers the locality of the Bishop's College healthy, and ascribes this to the circumstance of the grounds about it being kept in a state of dryness by sluice drains.

Bishop's College healthy

In the docks, he says, the natives employed in stripping off old copper from the ships' bottoms frequently suffer from "sudden attacks like cholera or apoplexy".

POPULATION OF CALCUTTA

The population of Calcutta has long been an object of curiosity, and till lately has never, I believe, been accurately ascertained.

In the year 1800, according to the report of the Police Committee, furnished to the Governor General, the population of the town, exclusive of the Suburbs, was estimated at 500,000, and according to another calculation in 1814, at 700,000.

The former return was given on the authority of the Magistrates of Calcutta, but the data on which it was founded cannot be now ascertained: the latter computation was adopted probably on a consideration of the above estimate taken in connection with a supposed increase in the wealth and prosperity of the town. The employment however of four Assessors in 1819, to revise the whole of the rates assessed upon the houses, buildings and premises of Calcutta, seemed to the Magistrates to present a favourable opportunity of obtaining an accurate census of the population, which one of the gentlemen of the Committee undertook to prepare from authentic statements furnished by the Assessors, the result of which is here submitted.

Recent employment of Assessors

The following were the returns given for the four divisions of Calcutta:

Total Christians	13,138
Mahomedans	48,168
Hindoos	118,203
Chinese	414
Total	179,917

The great difference between this total amount and former estimates is very striking and a general opinion prevailed that the population could not but exceed the total returned by the Assessors.

But it has been ascertained that the extent of Calcutta, from the Maharatta Ditch at the northern extremity, to the Circular Road at the southern circuit of Chowringhee, is not more than four and a quarter miles, and that its average breadth is only one mile and a half. It is not improbable therefore, that the large estimates made of the population of Calcutta at former periods; may be owing to the crowds of artisans, labourers, servants and sircars, and to the numerous strangers of every country which constantly meet the eye in every part of the town. Indeed the numbers entering the town daily from the Suburbs and opposite side of the river, were estimated by the Magistrates at 100,000. This was done by stationing sircars and peons at all the principal outlets of the town. The peons counted the passengers by flinging to the sircar a cowrie for every hundred passengers, noting separately the carriages and hackeries, and the average of different returns gave an influx of about 100,000 individuals, besides carriages and horses. Upon the whole then, it appeared to be the opinion of the Magistrates of Calcutta, from all the returns laid before them, that by taking the resident population at about 200,000, and numbers entering the town daily at 100,000, we shall have a statement of population probably not much wide of the truth.

Mode adopted for ascertaining the population

It has been ascertained in the course of the inquiries which led to the result above given, that the number of respectable and

wealthy native house-holders is not increasing in Calcutta; on the contrary, that they have been decreasing.

W. Hamilton states that the great native families who now contribute to its splendor are of very recent origin; indeed, scarcely ten could be named who possessed wealth before the rise of the English power, it having been accumulated under our sovereignty, chiefly in our service, and entirely through our protection. In the visits which the Magistrates are continually making to the various parts of the town, they do not observe the same rapid progress of building in the Native as in the European quarter, whilst they are perpetually struck with the appearance of ruinous and decayed premises, either vacant, or occupied by the remnants of wealthy families.

We may naturally ask what has led to this? It has been conjectured that the mercantile adventurers of Calcutta had retired to spend their wealth in other quarters, and that the old and indigent habitants of the place had not been able to preserve their former station in the increased prosperity of the place, but we very much fear that this is not the cause assigned by the natives themselves.*

I have been favoured with the following return by Captain Birch. It is the latest, and the most correct:

English,	3,138
Eurasians,	4,746
Portuguese,	3,181
French,	160
Chinamen,	362
Armenians,	636
Jews,	307
Western Mahomedans,	13,677
Bengal Mahomedans,	45,067
Western Hindoos,	17,333
Bengal Hindoos	120,318
Moguls,	527
Parsees,	40
Arabs,	351
Mugs,	683
Madrassees,	55
Native Christians,	49
Low Castes,	19,084
Total	229,714

MORALS

"It is the duty of the medical philosopher to investigate the nature and causes of moral evil as well as of physical ills—and for this good reason, that both are inseparably connected, in causes, effects, and consequences."
—*Dr. James Johnson*

A knowledge of the morals of a people of great importance to the medical topographer

It has been asked, says Hennen, what has a medical topographer to do with the morals of the natives of a country? And it has been asserted that their immoralities cannot affect the health of the troops quartered among them, if proper discipline be observed. These opinions, however, are founded upon a very superficial view of the subject. The soil and the inhabitants, if I may be allowed the expression, always react on each other. A sober, industrious race of inhabitants, for example, will have a greater desire to improve their country than men of a contrary character, and will also possess greater physical power to carry their desire into execution. Place such a body of men in a district overrun with noxious weeds and timber, and fast degenerating into a morass; and can there exist any rational doubt that they will clear it sooner, and longer preserve it in that improved state, than men of a different disposition? Place in a similar situation, or even in the district thus improved, a body of men who are idle and intemperate, and the immediate result will be, that the soil will deteriorate for want of proper care, the weeds will re-appear, the drains will become obstructed, the edible products of the earth will lessen in quantity, and diminish in their nutritive quality: the inhabitants will become unhealthy from the bad state of their grounds; and the diminution of their physical powers thus produced, will disable them progressively more and more from remedying the causes of the evil. Many of these effects will doubtless first be felt in their own persons, but it is undeniable that they must ultimately operate on their visitors. On this obvious principle is founded the axiom of medical topography "that a slothful squalid-looking population invariably characterizes an unhealthy country."**

Moral character of the Bengallee

The Bengallee, unlike the Hindoo of the north, is utterly devoid of pride, national or individual. His moral character is matter of history; and I think it were unworthy now, when we are looking forward with such well-founded hope to the improved results of European knowledge and example diffused amongst the natives, to bring into relief their worst qualities, or those engendered by ages of atrocious tyranny, civil and religious. Let those who like it, follow the Bengallee in his practice of falsehood and perjury—his insensibility to the feelings of others—his "perfection in timidity"—his cruelty and ferocity—his litigiousness—his physical uncleanliness and obscene worship; for my part, I prefer turning my recollections, although it may be a digression, towards that class of Hindoos whose sense of military honour forms so powerful an incentive to good conduct in civil life—the up-country sepoys—a class of men at all times respectable, when justly treated. When treated otherwise, as I have seen them, and that under privations of active service, their worst, instead of their best qualities, may be elicited; yet under a humane and just treatment, together with the example of their officers, it is surprising how respectable the sepoy may be rendered, even in the estimation of the soldiers of His Majesty's army, who are not lavish of compliments. Those

Excellent character of the Hindoo sepoys

* Calcutta Journal.
* Dr. Hennen's Note.

who observed the good conduct, on all occasions, of the Body Guard in Ava, felt satisfied that Captain William's account of the Bengal sepoy is in no way exaggerated.

The influence of education in Calcutta

In Calcutta, the influence of education and European example is seen to influence the moral character of the more enlightened classes of natives in a surprising manner, and in a thousand ways. Here I shall only mention one of these—I mean the humane and charitable feeling evinced by the educated Baboos, as contrasted with that of the bigotted, or, as they call themselves, the orthodox Hindoos—the one bestows largely; the other gives nothing.

Charity of the educated as contrasted with the orthodox Hindoos

An hospital for the sick poor, says Dr. Tennant, was never known in India before the establishment of the British, though there were for dogs, cats, &c. !!

EMPLOYMENTS, CUSTOMS AND AMUSEMENTS

Cabanis's just views on the subject

It has been well observed by Cabanis, that it is difficult to separate the customs of a people from their employments. In many countries some employments depend on the customs of the people, and in others again the customs are but the necessary result of the employments to which the greater portion of the people give themselves up, or those who exercise the greatest influence in society; thus manners, in some countries, have rejected certain kinds of occupations, whilst these again are encouraged in others to the extent of becoming objects of passionate taste, or wants of necessity. Under the barbarous institutions and absurd prejudices of the Spartans and Romans, all the labours of industry and of commerce withered. Arts which wanted, delicacy, and that were carried on by the rudest hands, could not progress: they were a kind of disorder in the State. Most of the Egyptian works seem to have been the product of slave labour, whilst all those of Greece were the occupations of freemen: those of the Phoenicians and Carthaginians were in keeping with the ingenious commercial industry of a people who placed riches above all things. The labours of the Romans were those of a conquering people, and differed but little whether in the highest or lowest stage of their fortunes. Their habits were essentially predatory. Employments, customs and amusements are likewise powerfully influenced by climate and form of government: the effects of both these are every where conspicuous in Asia. The languid and slothful habits of the Hindoos, together with the absence of motive for labour, are all rightly ascribed by Mill to their "wretched government, under which the fruits of labour were never secure".

Influence of Government on employments, customs and amusements

Influence of climate

Climate again, which enables the Hindoo to live heedless and slothful, forces the native of Holland to be careful, laborious and attentive to excess; or, as remarked by Cabanis, he must render back to the ocean, that soil, which a free Government and his own care enable him to secure.

These three, architecture, weaving and jewellery, says Mill, are the only arts for which the Hindoos have been celebrated; and even these, with the exception to weaving, remained in a low state of improvement. He might have added that all three are arts found to flourish under despotic Governments, and that frequently to the exclusion of others of more general utility. There are no remains of great public works in any of our eastern dominions—none certainly of utility belonging to the Hindoos; and most of those that belonged to their more civilized conquerors of the Mahomedan faith, have fallen into decay. I have never seen but two or three natives who seemed to be fully alive to the value of public works.

With exception to a few educated Baboos, the Hindoo, of whatever fortune, still retains his narrow ideas and parsimonious habits. His pious contributions, and the expenses of the Zunana, are the greatest drains upon his income: in his dress and table there is little devoted either to the purposes of elegance or magnificence, unless the insipid nautches, marriage and religious festivals deserve that name.

Injurious effects of caste

Were I to mention all the customs of the Hindoos that are injurious to health, I should write a respectably sized book. The institution of caste is of itself an enormous injury to public health, because prejudicial to public happiness. It is truly said by Ward, to be at war with every passion of the human mind, good as well as evil.

The abominations of the Kooleen Brahmins is alike destructive to health and morals, by its excessive poligamy, through which it is said that in Calcutta alone above a thousand abortions are procured monthly. You, procuress of abortion, is said to be a common expression of reproach amongst females who pretend to respectability ! ! The ordinary poligamy, together with the early marriages of the Hindoos, are productive of indescribable miseries. The numbers of festivals and the great multitudes that on these occasions are obliged to sleep on the bare ground, exposed to all the inclemencies of the weather, and irregularities in diet, are also great sources of injury to health. A festival always brings a crowd to the Native Hospital.

Injurious consequence of borrowing

The general practice of borrowing even among the poor, and that at a most enormous interest (as high as 30 per cent.) is a heavy tax on industry, and keeps the lower orders in a wretched state of dependence. A Hindoo seldom makes provision for the future: he borrows to supply his most common wants, and then evades payment as long as he can I am told this is the case with all (even the best paid) labourers employed by Europeans in Calcutta, and that not satisfied with borrowing from the Shroffs, they are largely paid in advance by their employers. The extraordinary sums spent at marriages as well as at the celebration of the rites for the repose of the dead, entail future poverty: not a vestige remains, says Ward, by which

Poverty caused by lavish expenditure at

Various ceremonies

the married pair may be made happy or wealthy; the whole sum evaporates in show, noise, or smoke. The Bengallees are a loquacious people only in bargaining and wrangling; the noise at one of their hauts or markets, goes beyond any thing of the kind in any European country; they are on the other hand never seen assembled in groups, like all European people, to discuss news or matters of public interest. The long fasts likewise practised by the lower orders are injurious, as is the Hindoo habit of dress, especially in the cold weather. Away from the ceremonies of religion, marriage, &c., the Bengallees have no public amusements,—no manly sports or exercises,—nothing to develope the muscular frame. They take no pleasure in agriculture—"their prejudices prevent them from rearing poultry, and but few possess the convenience of a kitchen garden". If the Bengallee be in easy circumstances, the whole day is passed in eating, smoking, and chewing the pawn, reclining and sleeping. It is a proverb amongst them, that the life of a woman being more sedentary, is happier than that of man, and that nothing but the dangers of bringing forth children "makes them content to be men still". The natives are very fond of pantomimical entertainments, and I am told that all manner of jugglers thrive here. They are also much given to musical entertainments, of which, the singing at their nautches is the best specimen, though sufficiently monotonous to an European ear; but in regard to their band music (if I may so call it) at marriages, &c. and on religious ceremonies, never was the maxim de gustibus, &c. more true than here. It is impossible to speak of Bengallee music with any feeling short of disgust, or to compare it to any thing but the noise made by cows in distress, with an admixture of the caterwaulings of a feline congregation and the occasional scream of an affrighted elephant. It is said of the natives that our superiority in every respect is readily acknowledged, but that we are altogether deficient in music !! Gambling is eagerly pursued, and the numerous gaming houses wherein stolen goods are receiving from servants in order to entice them to play, are every day crowded in certain parts of the town and Suburbs. The languid game of *Pucheesee*, is the one in general use on these occasions.

They have no public amusements

Indolence proverbial amongst them

Eager pursuit of gambling

CONCLUSION

When the child is born, the father puts a piece of *money* into his hand, and when the man dies, the same father employs two or three persons of the vilest caste, with long bamboos "to keep the limbs and bones in the fire". The ceremony at birth and at death is performed with the same want of natural feeling: in the one case there is no rejoicing, and in the other "no children or relations are seen weeping over the pile;" none of the tender feeling cherished in burying the dead among Christians, and "no vestige that can remind the living of their deceased friends". When we reflect on the habits and customs of the natives, their long misgovernment, their religion and morals, their diet, clothing, etc., and above all, their *climate*, we can be at no loss to perceive *why* they should be what they are.

Diet—Clothing—Bedding—Fuel

"La diete attenuante, que les legislatures de beaucoup d'orderes religieux ont prescrite n'a pas l'effet de diminuer les desirs veneriens (au contrair) mais d'enflammer, ou de deregler l'imagination, eu diminuant les forces, et de rendre par la, les hommes plus faibles, plus malheureux, et plus aises a dominer."—CABANIS.

The diet of the Hindoos prescribed by the founders of religion and not by climate

Whether the founders of the Hindoo faith were aware of it or not, is immaterial to the present inquiry; but there can be no question that, by depressing all the physical energies through a diet purely vegetable, they fastened with a stronger hand the moral bonds of Brahminical domination on the people. It has always appeared to me a great mistake to view the diet of the Bengallee as *prescribed* by *climate*: on the contrary, I believe it to be far below the standard required for his support under all the changes of his seasons: in the hot weather and rains, it is not sufficient to supply the great waste, and in the cold weather, its poverty is eminently injurious to his health.

Sufferings in the cold season from want of clothing

W. Hamilton, speaking of the luxuries of woollen clothing and fires used by Europeans in the cold season, says, the natives enjoy neither luxury, and suffer exceedingly all night; they shiver and lament, and in the morning continue benumbed, both in body and mind, until the sun acquires some height, dispels the fogs, and invigorates them by its cheering beams.

Who can doubt the beneficial effects of a more generous plan of diet, and better clothing, on both mind and body; but the Brahmins have ordered it otherwise! Poverty instead of exciting pity in this country, only gives rise to the reflection: "He belongs to a degraded class; he is suffering for the sins of a former birth, and is accursed of the gods."

The diet common to the Bengallee

Let us now enquire what the actual diet is, which supports the miserable existence of the Bengallee. I do not here speak of the well-paid labourers of Calcutta, or of the servants of the Europeans, (the Topographer has little to do with the habits or luxuries of the well-paid or the wealthy) but of the great mass of the people; and it is truly surprising in what a state of indigence they are placed by their own inveterate habits of indolence derived from long political and religious misrule. In some places their wages do not exceed a penny a day; in others three halfpence, and in others two pence. To enable us to form some idea how these people are able to maintain their families on so small a sum, it is necessary to consider that their firewood, herbs, fruits, &c., cost them nothing;

(that is, in the country) they wear no shoes nor hats; they lie on a mat laid on the floor; the wife spins thread for her own and her husband's clothes, and the children go naked at all seasons

A man who procures a rupee monthly, with his wife, and two children, eat two maunds of rice in the month, the price of which is one rupee; they eat twice in the 24 hours, at 8 A.M. and at 10 P.M. From hence it appears, that such a day-labourer must have some other resource, otherwise he could not live: if he is a Musselman, he rears a few fowls; or if a Hindoo he has a few fruit trees near his house, and he sells the fruit. If by these, or any other means, the labourer can raise half a rupee or a rupee monthly, this procures him salt and a little oil, and one or two other prime necessaries; though vast multitudes of the poor obtain only from day to day boiled rice, green pepper pods, and boiled herbs; the step above this is a little oil with the rice.* The lowest class often want beetle and salt, and in place of the latter use the ashes of various plants containing different saline substances. Altogether, we may conclude with Dr. Hamilton, that "whoever has travelled much with the natives and been witness to the weakness of their constitution, in resisting the changes of air or water, will agree with me in saying that those who enjoy a diet which includes animal food and strong liquors in moderate quantities, are best able to resist the influence of unhealthy climates, and the sudden change of air". The more rational religion of Mahomed permits a better system of diet to its followers, and they are therefore on the whole more robust and more capable of sustaining effort than their Hindoo brethren; if the very poor of them imitate the Hindoos in their nakedness and poverty of diet it is through necessity alone, not choice.

A better system of diet conducive to health and vigour

Clothing

Wretched clothing remains the same under all the changes of season

If the Bengallee had any thing deserving the name of clothing, the circumstance of its remaining the same under all the various changes of their seasons would render it useless. The kummerbund, of the protecting influence of which so much has been said, is in reality too slight, and worn too low down over the haunches, to be any protection to the abdomen. The head and feet are uncovered, and during the cold season the poor are eager to obtain shreds of coarse woollen cloth, and their general dislike of this season proves that they suffer much from it. The garments of a farmer for a year (two suits) cost about two rupees. Diseases of the skin are of extraordinary prevalence among the lower orders, arising no doubt from poverty of diet and the absence of due clothing.

Bedding

Bedding of any kind but little used

Of bedding, but little need be said, as there is in reality none in use by the lower orders. Many poor natives, says Ward, sleep in places where, if some people were to set their feet, they would receive cold. Almost on the soft earth, with a single cloth for their covering, multitudes may be seen every night lying by the side of the street in Calcutta. One night's lodging of this kind would, in all probability, hurry an European to his grave. A remarkable illustration of the value of comfort in this article is given in the Madras report of Drs. Ainslie, Smith and Christie, wherein it is said that the inhabitants who were elevated ever so little above the soil on bed-frames or who were defended by rugs, were decidedly more exempt from fever and its fatal consequences, than such as had not these advantages.

Remarkable illustration of the value of comfortable bedding

Fuel

I am not aware that fuel is used, even by the wealthier classes of natives, for purposes other than the dressing of food: fire, as a luxury in the cold season, or to dispel the excessive damp during the rains, is unknown to the natives, generally. Though familiar with the establishments of the Baboos of Calcutta, I have never seen any thing like a fire-place in any of their houses: when they do use fire in their rooms, it is in the form of a moveable grate filled with charcoal. The common fuel of the poor of Bengal is bamboo, certain kinds of reeds, and cowdung mixed with husks of rice, dried in the sun. In Calcutta, the fuel in general use is the soondree wood from the Sunderbuns; and a servant who receives monthly wages of six rupees, expends half a rupee on this article.

Tho luxury of fire-places unknown to the Natives

POPULAR MEDICINE AND SURGERY EMPIRICS

Those who have not considered the extreme deficiency of medical knowledge, even in our own days, in European countries, otherwise highly civilized, and who are not aware of the difficulties of medical science, have expressed much surprise of the degraded state of medicine and surgery amongst the Hindoos. It may be said with truth, I think, that all their institutions, but especially those of religion, were in opposition to any great advance in this humane pursuit, both from the feelings that were aroused by them, and those they suppressed. The active humanity of all Europeans, and the habitual indifference to the feelings of others, so general in Asia, would of themselves go far to account for the difference in knowledge in the healing art, without going deeper into their relative institutions of Government, and national character.

Medicine and Surgery in a degraded state not matter of surprize

All the institutions of the Hindoos opposed to advancement in these humane sciences

Even medicine and surgery, says Mill, to the cultivation of which so obvious and powerful an interest invites, had scarcely, beyond the degree of the most uncultivated tribes, attracted the rude understanding of the Hindoos.

Though the leisure of the Brahmins has multiplied books on astrology, on the exploits of the gods, and other worthless subjects, to such a multitude "that human life," according to Sir W. Jones, "would not be sufficient to make oneself acquainted with any considerable part of Hindu literature, he yet confesses, there is no evidence that in any language of Asia, there exists one original

Leisure of Brahmins worthlessly used

* Ward.

treatise on medicine considered as a science". "Surgery," says an author, who believes in the high civilization of the Hindoos, "is unknown among the people. In the case of gunshot or sabre wounds, all they did was to wash the wound and tie it up with fresh leaves, the patient during the period of convalescence, eating nothing but the water gruel of rice." The examples of native surgery that have come under my observation were much worse than this;—all cases of wound or fracture having been tied so as to impede circulation and thereby invariably cause mortification of all the parts. Many such cases have been presented at the Native Hospital. Of native medicine and medical treatment, I cannot speak more favorably. The articles employed in medicine by the Hindoos are doubtless extremely numerous, and some of them are of great value: there are others the value of which is not well ascertained, and the practitioners have not the semblance of correct instruction in this or any other department of professional knowledge: were any of them to seek it, he could only be referred to the "hundred sections of a thousand stanzas each" of the Ayurveda—the very title of which is unknown to most of the present day, who seem to have forgotten that one of the fourteen retnas or precious things, which their gods are believed to have produced by churning the ocean, was a learned physician. The inductive mode of reasoning is unknown to the Brahmins; they have never been observers of common facts: there are no treatises on particular diseases, all they have of record in medicine is in the shape of diffuse general system, or systems, of which the greater part relates more to mythology than medicine. Professor Wilson, to whose learning and accuracy of observation we hope to be under further obligations, states that "in the treatment of disease, the Hindoo writers are essentially deficient, and the notion of augmenting efficacy by multiplying ingredients disfigures their works with a prodigious number of the most preposterous and ridiculous compounds". The professor adds, "that in proportion as the work is more modern, the compounds become more extravagant, and assume a more important place in practice". "The imperfection of their medical system", says Ward, "and the ignorance and rapacity of the quacks who bear the character of physicians, greatly adds to the general misery". After this, it were unprofitable to pursue the native empirics, whether Hindoo or Mahomedan, in all their shameless impostures on their fellow countrymen. It is sufficient to remark here, that they are not to be surpassed by any of their trade in any country, for mystery of department or self-sufficient and impudent knavery.

Miserable state of Surgery

Examples brought to the Native Hospital

The practice of Medicine equally worthless

Inductive mode of reasoning unknown to the Brahmins

Ignorance and rapacity of empirics a great addition to the general misery

The foundation of an English School of Medicine of vast importance

The abolition for ever of the barbarous rite of the Suttee, will doubtless hand the name of Lord William Bentinck to the grateful remembrance of remote ages in India; but the foundation of an *English* School of Medicine (the success of which is no longer doubtful) will prove of far greater importance, in as much as the diffusion of European medical science, with its collateral branches, must prove one of the most direct and impressive modes of demonstrating to the natives, the superiority of European knowledge in general, and that they must cultivate it actively, if they would rise in the scale of nations.

* Encyclopaedia Britannica.

CHOWRINGHEE—THE EUROPEAN QUARTER

Chowringhee extends south of the native town, and from the corner of the Dhurrumtollah road, is a mile and a quarter in extent: it faces the glacis of Fort William, and is altogether as well arranged as the locality admits: the ground is also well drained, excepting those portions of it occupied by natives, which are in an extremely neglected condition. The houses of this quarter, and of Garden Reach, have an imposing exterior, which incautiously obtained for them from strangers, the magnificent appellation of palaces!

The European quarter

The style of building is Grecian, ornamented with spacious verandahs, the pillars of which are generally too lofty to afford much protection from the sun's rays. Each house has a piece of garden ground, which gives to this quarter as well as to Garden Reach, a great advantage in point of airiness over the commercial part of the European city.

Style of building

It becomes me to speak with diffidence on an architectural question; but I cannot help thinking that a different arrangement of the interior of the houses, with an eastern and western aspect, the entrance being always to the east, would be more suitable to the climate. Facing in this manner to the cardinal points, the eastern face becomes rapidly a complete shade in the afternoon, at all seasons; whereas the present mode, with a northern entrance, causes the portico, which should be arched and not pillared, as now too common, to be raked by the sun from 6 to 9 A.M. and from 3 to 6 P.M.; besides admitting currents of chilling wind during the N.E. monsoon.

Construction of the houses defective

A modern scientific writer proposes an easy mode, if it be a correct one, of determining the proper aspect.

Mode to determine the proper aspect

The most healthy exposure, he says, is to be found "by cutting one of the trees that grow there transversely with a saw, observing the rings; the side of the tree on which the distances between each ring is widest is the most healthy exposure, and the windows of the house, all other circumstances being the same, should ever face that way".*

All dwellings in countries subject to inundation like Bengal, should be raised on arches of from 4 to 8 feet in rise, and have western as well as southern verandahs, the lower portion to be arched, and the upper pillared. Private rooms should for coolness and convenience, be larger and loftier than are now common, and their windows fewer in number, loftier and narrower. The importance of space in private apartments is forcibly impressed by the fact stated by Dr. Edwards, "that persons who have what is called delicate lungs, owe in a great degree the difficulty and oppression which they feel,

Buildings in Bengal should be raised on arches

to the smallness of their apartments, a difficulty which decreases on going into a large room or into the open air." The lower floors of our Calcutta houses as now constructed, become sooner or later unfit for habitation, depending as to time, on the quality of the building material and the nature of the locality. I have known the ground floors of some houses to become useless in five years—so that, even on the score of economy, it were best in the end to build on arches.

Injury to health from occupying the ground floors of houses

The lower ranges of dwellings are generally believed to have an attractive power over marsh exhalations; and hence, in malarious countries, the second stories of houses are always found to be more salubrious than the first. I have frequently known slow fever contracted by persons occupying the ground floors of our houses and which yielded only on a removal to the upper rooms. I have also known severe visceral congestions produced by occupying the same situations during the cold season, as offices of business. Troublesome opthalmies, various local rheumatisms, and swelled face, are the more ordinary effects of inhabiting the floor ranges, and will be found very prevalent amongst the natives employed as writers in the Government and mercantile offices of this city.

Private dwellings have been erected by the natives as a speculation, and are not built with reference to climate or convenience

Hitherto, private dwellings have been erected by natives and other speculators on their own plans, at the cheapest rates, and for the mere purpose of letting to the highest profit: no wonder then, that they should be constructed without reference to locality, climate or convenience.

Great importance of the subject

That this is a matter of importance to health will be made evident from the following report of Mr. Ralph of H.M.'s 2nd regiment of Foot, on the difference of health between the upper and lower stories of barracks occupied by that corps in the West Indies. "By a calculation it appears that in the month of August, one case of fever presented itself in every *twentieth* man of those quartered on the *ground floor*, and in each thirtieth man of those in the upper floor. During that part of September which has elapsed, each *twenty-fourth* man was attacked with fever of those stationed in the *upper rooms*, and each fourteenth among those in the *lower*."

Dr. Ferguson found two-thirds more men were taken ill on the ground floors at St. Domingo, and the same observation was made by Cullen at Porto Bello in 1740. Walcheren afforded several instances to the same effect.

FORT WILLIAM

Latitude of Fort William

The citadel of Fort William stands in lat. 22-23 N. and longitude 88-20 E. about a quarter of a mile below the town, and is superior in strength and regularity to any fortress in India. It is of an octagon form,

Construction

five of the sides being regular, while the forms of the other three next the river, are according to local circumstances. The works are *scarcely raised above the level of the* surrounding country, and make not imposing

The Ditch

appearance. The ditch is dry, with a cunette in the middle, which receives the water of the ditch by means of two sluices that are commanded by the Fort. The garrison usually consist of a regiment of European infantry and one of sepoys, with a detachment of artillery. For purposes of defence five times this number would be requisite.

The Garrison

The Barracks

The barracks five in number

There are five barracks for the accommodation of officers, one of which is three-storied. They are generally well arranged, and excepting the Staff Barracks, they are not intended for habitation on the ground floor.

Dimension

The Artillery Barrack for the men is 420 feet in length by 320, height 36 feet. On the peace establishment, it is arranged for 1,000 men, and in war for 1,782. The Infantry Barrack 313 by 300, and 27 feet high, accommodates 900 men on the peace establishment and 1,602 in war. Both are damp on the ground floor.

Hospitals

New Hospital for H. M.'s troops on Dr. Burke's plan well constructed

There is no room within the Fort for sick accommodation, and the Garrison Regimental Medical establishments are therefore placed in one of the three buildings composing the General Hospital. From this it has always been the anxious desire of the late Inspector General Burke, a man of talent and extended experience as a Military Surgeon, to remove the sick of H.M.'s troops, and an hospital on a suitable scale was erected on his plan and recommendation five years ago. The building is airy and commodious, and beyond all comparison superior to any hospital at the presidency; but after having lain empty since its completion, it was, recently, and for reasons I am not acquainted with, given over for the accommodation of the chief Civil and Criminal Court.

Opinion as to the aspect and mode of erecting Hospitals in Bengal

So far as I have been able to consider the matter, I am disposed to think that hospitals in the Lower Provinces should face directly east and west, with a spacious verandah on these two faces.

By this arrangement, the convalescents would have complete shade in either verandah, morning and evening for exercise—an advantage not possessed under the now prevalent mode of building, with a southern and northern aspect. It may be objected, that by the eastern and western aspects, the long face of the buildings will be exposed morning and evening to the direct rays of the sun; but spacious verandahs will obviate this, and it should be recollected that in the end the most expensive hospital will prove the least so in lives. It is a solecism in economy, says Dr. Mosely, to have a bad one. I lost (he continues) more value in men at Castille Fort and Up Park in three months from the miseries of the hospital alone, than would have been adequate to the expense of erecting a proper one for all the troops in the island—meaning Jamaica. St. Sauveur remarks of a badly constructed hospital at Corfu: "C'est la, que *le soldat alloit au devant de la mort plutot* que de la sante."

The selection of the aspect now generally adopted in Bengal appears to originate in the desire to solicit, what is called a "thorough

draught," by means of a thousand doors and windows, such being considered necessary to due ventilation. I believe this to be a mistake, and one from which a large portion of sick suffers injury, especially during the cold season, when the strong northerly current is felt to be very uncomfortable, even by persons in health. The most liberal ventilation should doubtless prevail in all hospitals, but this is best secured, and a lower temperature maintained, by space, especially elevation, aspect, etc., and a proper adjustment of doors and windows, open down to the floor, with alternate apertures in the upper and lower walls, fire-places, etc. etc. In lower Bengal and countries like it, all such buildings should be raised on six or eight feet arches, left open for ventilation.

APPENDIX XVII

Extracts from Abridgement of the Report of the Committee appointed by Right Hon'ble the Governor of Bengal, in 1845

Appendix (D) pages 4 to 45

From all the answers which they received, it appears that the state of the Drains is the subject of general complaint. They are represented generally to be in the most offensive state in the Native part of the Town, in consequence of all sorts of dirt and filth that are thrown into them; and there does not appear to be any contradiction to this statement in any of the answers.

In regard to Tanks, and receptacles for water, the result of the answers is, that out of many Tanks in almost every neighbourhood very few are kept clean; and that the rest, forming an immense majority, are foul and offensive; the stench of some of them being, in the words of one of the Respondents, "like that of a corrupted corpse"—that in some places there is not a single Reservoir of wholesome water in a neighbourhood; and that numerous filthy Ponds alone supply the poorer classes with water for culinary and other purposes.

The existence of numerous pools and holes, which receive ordure, and puddles which are receptacles of filth, and the sources of disease, are complained of in the majority of the localities from which answers have been obtained. The clustering of huts and houses, so that in spots densely inhabited there is no free circulation of air, is universally stated; and by several of the intelligent Native Respondents considered as a great source of unhealthiness.

Appendix (D) pages 54 and 61

Lieutenant Abercrombie says, that the formation of Tanks in the parts of the Town on the lowest horizontal level would turn filthy places into clean Tanks—that the present Tanks, in the Native parts of the Town, are small and extremely filthy—that the only broad Streets in the Native part of the Town, are Amherst Street and the Central Road; the former unfinished, and neither of them considerable thoroughfares—that the Chitpore Road is the great thoroughfare—that it is narrow, winding, dirty and encroached upon—that the cross-ways are all Lanes very narrow, very filthy, and bounded generally by deep open ditches, the road being supported by perpendicular retaining walls—that Sobhabazar Street and Nimtollah, are the only two cross-streets which form an exception to the above—that they are both, however, bounded by deep ditches, and not above 25 feet in width—that none of the large open Drains are paved, and there are, of course, inequalities in their bottoms in which the water lodges; but it is so mixed up with black mud and filth, that these are the chief nuisance, and not the water itself—that the smaller Drains not being paved, it is impossible that they should always act or keep their level—that they are liable to be deepened too much in one place, and not enough in another—that coolies are continually employed in cutting here and there wherever considered necessary by the Overseers—that the Drains are not formed in a judicious and scientifick manner—that the cuttings are merely temporary expedients, liable to be filled up next day with dirt—that there is a great deposit of wet filth during the rains—that in the dry weather, what falls or is thrown in hardens, and is not removed till it does so—that during the rains, the way the Drains are cleansed is by a bundle of straw twisted into hard ropes, six or nine inches diameter, and three or four feet long, dragged by ropes at each end by coolies, with great labour, along the bottom of the Drains—that it answers the temporary purpose, but that it is impossible to use it so often in each Drain as to keep it in any efficient state of cleanliness—that there is no such flow of water at present into the Drains, or such fall preserved in them, as to keep them in any tolerable state of cleanliness—that it is impossible to accomplish these objects without an entirely new construction of Drains—that the publick convenience was never thought of in lining out the Streets and Lanes of the Native part of the Town—that the Streets are covered with dirt thrown out *ad libitum*, and the Drains frequently filled with filth from privies, in addition to other nuisances.

From Captain Thomson's evidence it appears, that there are several Drains the bottoms of which are nearly two feet below the outlet; and which must therefore be emptied by evaporation only—that they are not paved, nor have any fixed depth—and the coolies continue to dig them deeper every year—that he should say there was very little deposit of water in the Drains, considering the extent of them—that there is a deposit of filth in them to a very great extent—that there is a general deposit of five or six inches, which is carried off by the carts, principally decomposed animal and vegetable matter, the cleansing of the houses, &c. creating generally over the Native Town a very disagreeable stench at all times of the day, but particularly in the morning—that the carrying off the filth of privies, though very well managed considering the difficulties, and that the whole must be carried off by carts, is not so done as to prevent their being a nuisance—that the publick privies are a very great nuisance to the parts of the town where they are—that there are an immense number of them—that none of the houses have a private one, unless sufficiently large to have a Compound and a Tank—that the present open Drains, and the covered ones, are intended to serve the purpose of Cleansing as well as Draining—that there

Appendix (D) page 67

are about 30 miles of Drains altogether; about 20 miles of them bricked—that the whole covered Drains would not exceed five miles of these 20—that four miles, perhaps, would be nearer the mark—that the covered Drains are quite ineffectual in respect of Cleansing—that the mode of cleansing the bottom of the Drains with twisted straw, mentioned by Mr. Abercrombie, is used wherever the deposit is liquid, but is interrupted every 20 or 30 feet by bridges, and is rendered very ineffectual for this reason—that they are obliged to let the mud and filth dry in order to remove it from beneath these bridges—that he does not believe one-tenth of the Drains have a sufficient fall to keep them clean—that in dry weather they have no flow of water in them whatever—that for one-half of the year they may have sufficient water in them to keep them moist, but they are then in a worse condition after occasional showers than after long continued dry weather—that it washes the dust off the road into them and makes mud of it—that in long dry weather they contract the dust which is blown about by the wind—that all the covered Drains are great nuisances.

Appendix (F) page 2

The following is the general description of the state of the Native part of the Town in regard to Cleansing and Drainage, given in Observations offered to your Committee at their request by Mr. John Phipps, "after a residence of upwards of forty years in Calcutta." "In many parts of this City, and more especially in the most densely populated parts of it not intersected by Streets which can be traversed by the scavenger's carts, the Drains, many of them merely irregular furrows in the soil without any brick-work, are continually left in a most filthy uncleaned state, emitting the most noisome effluvia, doubtless highly pernicious to the health of the inhabitants dwelling in such situations. Perhaps persons long inured to such nuisances become less susceptible of their pernicious effects than others would be. Such sinks of filth and consequent malaria are, I believe, but little, if at all, known to any scarcely but to those who occasionally pass by; but lying for the most part in obscure parts of the City, are not seen by the higher classes. I speak from experience in my perambulations to the abodes of many of the poor, as a visiting member of the District Charitable Society. Contiguous to my own dwelling there have long existed several cutcha Drains grievously offensive. There are many vacant premises in different parts of the City in ruins, choked with jungle, rank weeds, and filth deposited by Natives; there are also several dirty Tanks in different quarters, which are also great nuisances from not being cleaned out. The Mehter's tatties [*i.e.*, publick necessaries] are likewise an abominable nuisance."

Appendix (D) page 74

Two of the members of the Second Sub-Committee, Sir John Grant and Rustomjee Cowasjee, Esq., personally inspected the great part of the Roads and Lanes in the Native part of the Town, and on the 19th of November 1836, they gave the following evidence to the Sub-Committee:—

"We have passed through the greater part of the Roads and Lanes in the Native part of the Town, bounded by Lal' Bazar, Clive Street, Mutchooa Bazar, and College Street. Setting out from Tank Square, we passed through Old China Bazar, passed the Armenian Church up to Burra Bazar, through all the windings of which we passed as far as the Mint: from thence to the Portuguese Church, Moorgheehatah, along the Chitpore Road to Mutchooa Bazar, and back through Colootollah Road. Through several of the Lanes and Alleys we could not pass, the same not being wide enough for the admission of any wheeled carriage or cart. The whole of this space, with the exception of some places near College Street, is most thickly inhabited; the houses and shops adjoin; and though not lofty, are sufficiently high to exclude sun and air, the free circulation of the latter of which is effectually prevented by the extreme narrowness, sharp angles, and perpetual tortuosities of the Streets; few Streets being more than a quarter of a mile in length in the same direction, and many not so much; none of the Streets, except those to be presently mentioned, much exceeding twelve feet between the front walls of the opposite houses, many being much narrower; and of this space from one foot, to one and a half foot in width, being occupied by a kennel on each side. These kennels are apparently two or two and a half feet deep with brick sides, the bottoms filled with perfectly stagnant water and filth; and the tops covered, at distances of from one foot to two feet and two and a half feet apart, with buildings from six to ten feet in length, which in a few places are the entrances to houses; but which in all other instances are the supports of the platforms used as shops; which platforms are erected immediately over the kennel, from one foot to three feet above it, the space between the bridge and the platform being closed to the front; so that no part of the kennel is accessible for the purpose of cleansing it but the above mentioned intervals of one, two, or two and a half feet in length, at various distances, of not less than six, or more than ten feet from each other; while the whole stench freely escapes into the streets and houses."

Mr. Rustomjee Cowasjee adds, that he has frequently seen the part of the Town above described during the rains, and that after an ordinary fall of rain, the kennels, having no outlet, overflow, and cause the water to cover the Streets to the depth of one foot or more—and that it sometimes takes a whole day to run off, seldom less than eight hours, during which there is no passage but through this water; and the houses (of which there are many), which are a few inches lower than the road, or street, have the lower part overflowed, and rendered uninhabitable.

The space above described is the most populous part of Calcutta, and forms the

"chief seat of its wealth, and place of the residence of all the Native Bankers, Merchants, and Tradesmen of Calcutta.

Having completed their Survey of the Native parts of the Town, the above two members, on the 24th of December 1836, made the following addition to their evidence upon the subject:—

"We again visited the Native parts of the Town, but have nothing new to add to what has been described by us in our former evidence, recorded in the Proceedings of the 9th of November last, except that in some places which we visited there were nuisances of a worse description; and such encroachments on the publick Roads as to obstruct the passage of carriages, which the Magistrates appeared to take no notice of."

Appendix (D) page 79

From the evidence of Mr. Ryper, Apothecary at Gurranhatta Dispensary, it appears that he attributes the bowel complaints and dysentery—some of the most usual diseases of the Native part of the Town, generally to the living in a damp house and eating unwholesome food—that the dampness of the houses proceeds from the marshy ground on which they stand—that this applies generally to the Native Town—that the situation of the Native houses is likely to produce these fatal complaints of the bowels—that the want of Drainage has a considerable effect upon the amount of disease in the Native part of Calcutta—that he thinks the Native part of Calcutta less healthy than Towns in other parts of Bengal—and that this greater unhealthiness is produced by the want of carrying away the filth.

Appendix (D) page 81

Mr. Brett, Surgeon to the Governour General's Body Guard, remarks a decided difference in the healthiness of the Sepoys serving in the Western Provinces, and of the Body Guard who come from the same Provinces stationed here; which he attributes partly to the general circumstances of the climate of Bengal, and partly to the want of good Drainage, and to stagnant Pools, and the quantity of miasma created by these causes. He thinks these causes prevail with great intensity in Ballygunge and Calcutta. Of 401 Medical cases which occurred within the period of two months at his Hospital, a Charitable Institution which he had lately established in Calcutta, dysenteries, remittent and intermittent fevers, affections of the spleen, and rheumatick attacks, constituted 266, which would be greatly diminished by good Drainage and Ventilation. He says, that during two months since the establishment of his Hospital, of which he had already given in to the Committee a description and account, he had pretty generally visited, either personally or through his Native doctors, those whom he could not receive into the Hospital, and whose cases were serious—that he had thus been acquainted with the situation and circumstances in respect to salubrity of the habitations of many of the Native inhabitants of the labouring classes in about the centre of the Native Town—that he observed universally a want of Cleanliness, Drainage, and Ventilation in a great and remarkable degree—that the necessary consequence was the fevers and other complaints which he had mentioned—that he thought the prevalence of fevers and other disorders he had described was much greater generally all over Calcutta than that of typhus or typhoid fever in the most unhealthy part of Westminster—that when he was attached to St. George's Infirmary, London, it was his duty for two years to attend the sick at their own houses in some of the most unhealthy parts of St. George's Parish, St. Giles, Pancras, and Marylebone—that the diseases were more fatal, but their number not so great as they are generally all over the Native Town of Calcutta at the healthiest time of the year—that he attributed the excessive prevalence of disease in the Native part of Calcutta partly to the general effect of the climate, but in a much greater degree to the want of Drainage, Ventilation, and the Cleansing away of the filth from the houses—that the prevalence of disease amongst the lower orders is very striking to an European Medical man in all great Cities in India, but much more so in Calcutta—that he attributed this to the climate generally, in part, but in a greater measure to the local circumstances; the want of Drainage, Ventilation and Cleansing, to which the natural dampness of the climate gave additional effect—that he might illustrate the effects in the climate of Bengal of Drainage, and Ventilation, and Cleansing, by reference to the Garrison of Fort William—that there is the strictest attention there to those points, and to the removal of all exuberant vegetation—that the consequence is, that the general health of the Native camp followers in the Fort is remarkably good—that he does not think the Sepoys afford a good ground of comparison with the Native population of Calcutta, they being Up-country men, of good constitution and well provided with every comfort—that he spoke from the experience of five months, during the most unhealthy season of the year—that he had charge of all the Native establishments of the Fort—that the number of diseases during that time was very small; indeed very few remittent fevers, or dysenteries, or cases of splēen, or any diseases—that he attributed the difference to the difference in Drainage, Ventilation, and Cleansing.

Appendix (D) page 205

Appendix (D) page 85

Modoosoodun Goopto Kobeeruttan, who had practised medicine in Calcutta for 12 years among the Native population, and was educated in the Sanskrit and English College for six years, and was afterwards Professor of Sanskrit Medicine there, having been assistant to Dr. Tytler and Dr. Grant for the last two years, during which he attended their Lectures upon Anatomy and the Theory and Practice of Medicine and Surgery, stated, that his practice had been among the respectable, the middle, and the poorer classes of Natives, most among the middle classes,—that he had seen a great deal of the diseases of the lower classes—that he

thought he could give the Committee a pretty accurate and full account of the diseases prevalent among the Natives in Calcutta—that fevers are the most prevalent diseases; bilious, remittent, and intermittent—that enlargement of the spleen is the general termination of the two last descriptions of fever—that diarrhoea, dysentery, dyspepsia, rheumatism, and venereal disease are the most prevalent diseases in the Town, among the Native population—that there are very few inflammatory diseases—that the fevers, except the intermittent, are dangerous to life, and certain to be fatal if not attended to medically—that the intermittent Fever, unless it produces diarrhoea, does not produce an enlargement of the spleen; but if it is attended with diarrhoea, it almost always produces an enlargement of the spleen—that the diarrhoea following intermittent fever, is generally fatal, if not medically attended to—that the enlargement of the spleen is not generally fatal of itself; but if not cured produces dyspepsia, oedematous swellings of the legs, and hands, and loins, and anasarcha, which are fatal—that dysentery is always dangerous, and if not medically attended to in time always fatal—*that nearly two-thirds of the Native population in the Town have dyspepsia*—that it is not of itself fatal, but produces debility, which predisposes to other diseases, diarrhoea, dysentery, and piles—that rheumatism is very frequent—that if often arrives at a height among the labouring classes to prevent their obtaining their bread—that the children of the Hindoo inhabitants of Bengal are generally weakly, and that they are subject to several diseases; hooping cough, which he considers in this country not an infectious disease, dyspepsia, diarrhoea, dysentery, and all the fevers beforementionted—*that he does not see in the Town of Calcutta, any children are in perfect health.* He says that the treatment of the mother and the child at and just after the time of its birth injures the constitution of the child materially. But, being asked generally upon a subsequent examination to what he attributed the prevalence of the diseases he had mentioned, he replied "to the narrowness of the Streets, and the Canals being full of putrefied vegetable and animal matter"—that the Drains are generally offensive in Calcutta particularly in Burra Bazar, Mutchooa Bazar, Colootolah, and Jorasanko—that he observes a very great difference in the health of the inhabitants in different parts of the town—that the places above mentioned are the most unhealthy—that he reckons Baug Bazar, Bar Simlah, and Shaum Bazar the most healthy parts of the Town for Native inhabitants—that he attributes the greater degree of salubrity of these places to their being very thinly inhabited, the Roads being broad, and the Tanks good. Being asked whether he would attribute the prevalence of the diseases he had mentioned more to the Water, to the want of Ventilation, or the want of Drainage, he said that all were injurious; the Water most so, the want of Ventilation next, then the Drainage—that the Natives are accustomed to live crowded, and therefore do not suffer so much from want of air—that the houses of the Natives are generally in damp situations—that he attributes much of their diseases to that cause, intermittent fever and rheumatism—that, from his observation of the state of health in the most healthy parts of Calcutta, he had no doubt that, if proper Ventilation, proper Drainage, and a supply of wholesome Water were provided, Calcutta might be rendered a healthy place—that he thought that the circumstances he had mentioned contributed to produce cholera—that there are many small private Tanks which contain bad water and produce miasmata, and many old Tanks filled up with filth, which causes a bad smell for four or five months, and is injurious to the health of the neighbourhood—that he considers the dust injurious to health—that it produces cough and ophthalmia—that there is much opthalmia in the hot season from the dust—that the publick privies are not properly cleaned—that there are many of them, and that this is injurious to the comfort and salubrity of the Town.

Upon this statement your Committee would remark, that, although this very intelligent witness, in the order in which he classes the circumstances to which he would attribute the prevalence of the diseases he had mentioned, places the Water first, as the most injurious to the health of the inhabitants, the want of Ventilation next, and the want of Drainage last—it must not be taken as his opinion that the want of Drainage is less injurious to the Native constitution than the want of Ventilation; for he immediately adds, that they do not suffer so much from want of air, owing to their being accustomed to live crowded; and the whole evidence taken by your Committee goes to prove, that, next to the unwholesomeness of the Water, the greatest cause of the insalubrity of Calcutta is the want of Drainage.

Mr. J. R. Martin, Surgeon to the Native Hospital, said that he had perused the evidence of Modoosoodun, the last witness—that he concurred in his opinion as to the nature and extent of the diseases—that he believed, however, he had underrated the prevalence of fever, and its sequelae spleen and diarrhoea, which carry off more Natives than any other diseases—that the dyspeptick complaints of which he spoke he, Mr. Martin, knew to be very general. Being asked if he had any further observations to make with regard to the salubrity of Calcutta, he said that he should hand in his Report in a few days. This was accordingly done in a printed form, and your Committee will presently call your Honour's attention to it. Appendix (D) page 95

The above mentioned respectable witness, Modoosoodun Goopto, being subsequently examined by the First Sub-Committee as to the prevalence of disease, stated, that the most unhealthy season of the year was from Appendix (C) page (clix)

August to November—that during these months the people suffer under intermittent, remittent, and bilious fevers, and dysentery and cholera—that the number of people whom he supposed to suffer from those diseases at that season amounted to about 500 in each Thannah, including Bengallees, Mahomedans, Up-country people, and East Indians. It being remarked to him that that would be upwards of 18,000 people, he answered, "Yes," but that in some Thannahs there were less, in others more; but the average would amount to the number above stated, and that the greater part of them were severely affected. And, it being directly put to him whether he did not overstate the number, he said "No; that although the number appeared large, the population of the Native part of the Town was great—that even in poor families there were twenty-five inmates in each house—and that he meant the total number in those four months." He said that the fevers usually last from sixteen to twenty days, during which time the persons afflicted are confined to bed and unable to work—that the greater part recover and are able to work, but that some continue sick for life—that the relief these people get now is by the purchase of Native medicine (Panchun) and the employment of quack doctors (Natives).

Appendix (D) page 93

The evidence of Dr. W. Graham is generally to the same effect with that already noticed in regard to the present state of Calcutta, with reference to its salubrity. He says, that it is impossible for the Drains to be in worse state than they are at present; rudely constructed without any knowledge of the principle of draining, the centre of the Conduit being in many places below the level of the extremities—that even on the Chitpore Road the Drains are so useless after a heavy fall of rain as to render a canoe the preferable mode of transit—that he has observed the road impassable after a fall of less than an hour's duration. He considers these Drains as the hot beds of disease—that the consequence of their state, and the want of Ventilation, is of course disease, oftentimes to an alarming and distressing extent—that the Suburbs, may, indeed, the entire Native Town, must be considered unhealthy from inefficient or rather no Drainage, tainted Tanks, and an external mass of animal and vegetable matter in a state of decomposition surrounding them—that the state of the Tanks as at present is most injurious to life—that even thus early in the season (February 28th, 1837) they were nearly all putrid and dry—that, as the publick privies were constructed at present, he was satisfied they were fruitful sources of disease, and destructive to the comfort of the residents in their vicinity—that tainted Tanks, want of Water, poisonous Drains, and imperfect Ventilation, were the circumstances presenting themselves in the state of the Town and situation of the inhabitants as in his opinion affecting injuriously the general health and comforts of the population. "Improve these" he says, "widen and water the Roads, and Calcutta will be as healthy as any City in the world."

The Report with regard to the salubrity of Calcutta promised by Mr. Martin, in his examination on the 29th of April, 1837, was delivered to your Committee in the form of a pamphlet, entitled, "Notes on the Medical Topography of Calcutta," some little time afterwards. A copy of it accompanies this Report. This Work is a great extension of the Notes upon the same subject, formerly delivered to the Governours of the Native Hospital. Your Committee understood Mr. Martin to intend it to be considered as, in truth, his evidence upon the subject. He cites Sir Gilbert Blane's opinion, that all predominant diseases are referable to the following general heads, *viz.*, 1st, Vitiated Exhalations and Secretions of the Human Body; 2nd, Noxious Exhalations of the Earth; and 3rd, Depraved Habits of Life. And Mr. Martin adds, that, if we accord with this opinion, we shall at once see how much of publick health in the great matter of prevention of disease may be effected through a practical application of the science of Medical Topography. The injury from human exhalation is removed simply by prevention of crowding, by exposure of the streets and houses to the sun and wind, cleanliness, &c.; and that from terrestrial exhalation by draining, clearing, levelling, and paving, &c. He says, that the brief Topographical History of Calcutta which he has attempted proves what may be done, by a well applied capital, to render one of the worst known localities habitable. He adds, that it also proves that a further application of the same means might even render it healthy.

He proceeds accordingly to give a Topographick Sketch of Calcutta. Your Committee will only notice some of the most striking parts of the narrative, referring to the Work itself for a more complete exposition of the points which he considers to be established. The extreme insalubrity of Calcutta, in the earlier period of its occupancy by Europeans, is proved, he says, by the evidence of Captain Hamilton, who states, that in one year (about the years 1710—15) there were reckoned in August about 1,200 English—some military, some servants of the Company, some private merchants residing in the Town, and some seamen belonging to the shipping lying at the Town—and before the beginning of January there were 460 burials registered in the Clerk's Book of Mortality. In more recent times it was the custom of the European inhabitants of Calcutta to meet on the 15th of November of each year, to congratulate each other on their escape from the periods so emphatically marked by Captain Hamilton.

Your Committee, although agreeing with Mr. Martin that we are far indeed from having effected for this City all that might or ought to be done for it, think that it is not necessary to go further than a comparison of

the state here described with the present state of that part of Calcutta which is inhabited by the British, to prove how much may be done "to render one of the worst known localities habitable" by clearing, draining, cleansing, and ventilating it, though but in an imperfect degree; and they think that the state of insalubrity of the part of Calcutta inhabited by the Natives, where little or nothing has been done towards these objects, affords under our own eye proof as well of the efficacy as of the necessity of carrying such measures into complete effect.

Mr. Martin, describing that part of the City occupied by the Natives, says, that the North Division between the Bow Bazar and Mutchooa Bazar comprises perhaps the most dense part of the Native population of Calcutta—that the Upper Division to the north of Mutchooa Bazar is comparatively speaking but thinly covered with habitations, presenting towards the north and east extensive Gardens, large half-dried Tanks, and ruinous Tenements. "It is surprising," he says, "how much the condition of the Native portion of the Town has been neglected in this great City and its Suburbs, in which are to be found all the faults of all the Cities in India."

He proceeds to say, "In the event of a contagious disease, and there is no reason why such should not occur here, the dense state of the Burra Bazar and surrounding parts, the wants of water-courses, and means of facility for removing accumulations of filth, &c., would stand as insuperable bars to the best devised Regulations of Medical Police: all masses of building should be opened out, old walls and decayed houses removed, for even under ordinary circumstances these are fertile sources of fever." "Whoever," says Mr. Martin, "has visited the Native portion of the Town before sunrise, with its narrow lanes and 'rankest compounds of villainous smells that ever offended nostril,' will require no argument in favour of widening the Streets, so as to effect the two greatest improvements of all, as respects the salubrity of the City,—free exposure to the sun, to rarefy and elevate the vapours—and to the winds, to dilute and dissipate them."

"The want of Watering," he says, has been "severely felt in every part of Calcutta of late years; and the more the City extends the greater is a matter of so much improtance to health needed." Dr. Fordyce considered the dust of the Streets of London in his day a serious detriment to health. "The deficiency in the supply of water," he adds, "is highly injurious in other ways; and, in order to illustrate this point, I may mention what has been already quoted regarding an epidemick fever in Belfast."

"There is probably," he says, "no subject connected with the publick health and the comfort of the City of more consequence than the state of the Sewers. Those of Calcutta throughout I believe to be defective in number, construction, and fall; without which last, the most approved plan gives no real usefulness. It is stagnation from want of sufficient fall in the Drains that gives rise to deleterious exhalations, and the same applies to the half dried Tanks so numerous here. and to the water detained by inequalities of soil."

In speaking of Ballygunge, Mr. Martin solicts attention to the beneficial effects resulting from very simple, and apparently trifling, improvements executed at his suggestion some years back in the cantonment of that place. Having been appointed to the charge of the Governour General's Body Guard at Ballygunge in 1821, he there found severe remittent fever prevailing to a great extent, and learnt that it had been so for years. He made several careful examinations of the localities, and discovered that in the Lines alone, besides stagnant Drains, there were sixty pools and pits of various dimensions; to all which and the neglected state of the grounds around the Regimental Hospital, he had no hesitation in referring as a sufficient cause of the extreme unhealthiness of the corps. He represented the necessity of Drainage with a sufficient fall, the filling up of the pools and pits, and the construction of two large Tanks, at a proper distance from the Lines. The Governour General, then the Marquis of Hastings, was pleased to order all his suggestions to be carried into effect; and the result during the three following years was a reduction in the frequency and intensity of fever as remarkable as it was satisfactory.

Upon the subject of the supply and the quality of the Water necessary for drinking, for preparing food, and for the purposes of personal and domestick cleanliness, all the answers received to the twenty-six queries circulated amongst the inhabitants, concur in stating that good Tanks and clean well repaired Wells are to be found in very few parts of the Town—that the Well water used, in some places generally, by the lower classes of people is seldom clean or wholesome—that the River water is generally used by the Hindoo inhabitants, especially of the higher castes, both for drinking and culinary purposes, although in some instances it is said that Tank water, or that of a Well, is also used, and that those who live at a distance from the Ganges, and are needy and cannot pay the cost of bringing it, use other water that is at hand for all purposes. It is said that the River water is wholesome for drinking and culinary purposes from October to March, but becomes injurious to health from April to September—that from April until the rains set in it is saline, when drinking water is variously obtained by the better classes—some of whom provide for this season by keeping in store a certain number of jars filled with River water in the month of February--others bring River water for drinking from Balaghur, Santipore, and other places up the country, where its quality and taste remain almost unaltered, or from

Appendix (D) pages 4 to 45

the Tank square, Janjree Tullao, or some other Tanks in gardens in the Suburbs of the City, whose water is known to be clean and sweet—while the lower classes of people drink the water taken up from the River the same day, or procured on the 9th, 10th or 11th day of the moon, as circumstances admit —that during autumn the River becomes muddy, when people take the precaution of having the River water cleaned and purified with alum, nirmole, and the like substances.

One Native gentleman states, that the state in which water is used for drinking and cooking by the generality of Natives, be it Tank, Well, or River water, is in his opinion decidedly unwholesome. He says there are very few Wells or Tanks really kept clean, so as not to be offensive.

Another Hindoo gentleman says, that there are numerous filthy Pools which supply the poorer classes with water for culinary and other purposes.

Appendix (D) page 54 Mr Abercrombie states, that there must be a want of clean water in the Native parts of the Town—that the present Tanks there are small, and extremely filthy in the dry weather, covered with slime and green vegetables—that there are no publick Tanks along the Circular Road, and the inhabitants, about a month or six weeks before his examination, made a request to the Conservancy Department to have three Tanks excavated.

Appendix (D) page 71 Captain Thomson states, that the price paid for one mussack of water (about 8 gallons) brought to the Streets and sold there by water carriers, who make their livelihood of it, is a quarter of an anna, *i.e.*, one-third of a penny English at 2s. per Rupee. This is the lowest quantity, he thinks, allowed as the average per head *per diem* in England in calculating the necessary supply of water. In London the supply at present is nearly 20 gallons per head *per diem*. Constantinople is the only Town inhabited by persons of Eastern habits that he knows of, which is supplied with water, for household purposes only, brought by pipes or aqueducts into the Town. There the quantity allotted to each person is 35 gallons. In Rome the supply is fully as much. The water so sold in Calcutta is brought from the Tank, in Tank Square, and is believed to be good and wholesome water.

Appendix (D) page 90 Modoosoodun Goopto states, that the Natives generally drink Ganges water; he means only the middle and higher classes; the inferiour classes drink what is nearest—the better classes are prejudiced against any but Ganges water—many of the higher classes drink Tank water from the higher parts of the Town—that he does not think the prejudice of the Hindoo inhabitants against drinking any but Ganges water is very strong—and that he thinks the Ganges water not wholesome in Calcutta—that the Natives take pains to draw the River water during the ebb—that they take it at the time of the year when it is least salt, and on the 10th day of the moon—that some bring it from Hooghly and Culna—that the water of the Tanks in the Native part of the Town is generally unwholesome, and some very much so—that he doe not find any good Tank in the Native part of the Town—that the water which the Natives are compelled to drink has very great influence in the production of the diseases he had enumerated—that it is the first cause of dyspepsia—that the Water, the want of Ventilation, and the want of Drainage are all injurious; the Water the most so. Being asked, in regard to the water of the Tanks, whether he knows of any wholesome Tank in Calcutta, he says that in Nobin Sing's garden there is a good Tank, and the Loll Digghee, and some of the Chowringhee Tanks are good; but he does not mention any others. He says, in a subsequent part of his evidence, that the unwholesomeness of the Ganges water is increased by the dead bodies floating in the stream, and the filth thrown in.

Dr. Graham says, that the water in use amongst the Natives is bad and defective, in many places not to be obtained except from a great distance, and that tainted and in small quantity—that the state of the Tanks in respect of salubrity is as at present most injurious to life. Appendix (D) page 93

Mr. Martin states, that the deficient supply of water for drinking and culinary purposes is an enormous evil, and one that is very loudly complained of by the Natives. In speaking of Bhowaneepore, "the most populous of the Native Suburbs," and one of the most unhealthy, he says that good Tanks are very much wanted in this Suburb, the inhabitants having now to proceed to the distant General's Tank in Chowringhee, that being their only resource for the supply of wholesome water. Appendix (D) page 96 Notes on Med. Topog. of Cal. page 34

Mr. Martin, in his Notes on the Medical Topography of Calcutta, says, that, owing to the water of the River being brackish during a great part of the year and unfit for general use, the chief supply for all classes of Natives is derived from Tanks, which for the whole Town are about 537 in number, and if properly constructed they ought generally to contain wholesome water —that the Natives, however, do not seem any where impressed with the importance to health of purity in this element, and therefore it is that everywhere one finds the Tanks in an impure and neglected condition, from the annual accumulations of the vegetation going on at the bottom, so as to render them progressively shallow, until at length they become the half dried, green and slimy puddles which so contaminate every portion of the Native Town. The better classes of Europeans use rain water kept in the common Pegue jars. This, he says, being the purest of the natural waters, ought to be more in use in a country where it can be so readily obtained. The construction of Tanks on approve plans and at convenient distances is yet, he says, a desideratum in Calcutta. Ibid., page 27

In a joint Paper drawn up by Baboo Ramcomul Sen and Dr. Jackson, laid before the Appendix (A) page 16

Governours of the Native Hospital and printed with their Proceedings of 21st May 1835, the want of Tanks in different parts of the Native Town to supply wholesome water for drinking, is stated as amongst the various causes productive of fever—it is said that the want of good Tanks in Calcutta is severely felt by the Native population—that the only Tanks they have in Town are the Loll Digghee, Wellington Square, Pudduldanga, and Hadooa—that the first of these is crowded from six in the morning till ten at night—that of the second the water is said not to be very good—that the third one is shallow, and the little water which it contains in the dry season is not fit for ordinary purposes, and that it has moreover been spoiled by being frequently filled with water carried from the publick Drains—that the water of the fourth is very little used, but owing to what circumstances the writers do not know—that as to the River, they need not describe the insalubrious and filthy state of the water during the greater part of the year—that for want of proper Reservoirs poor people are obliged to use any water which they find conveniently within their reach—that there are a great many shallow Tanks within the Town, which have very little water, and that of the worst quality, during the greatest part of the year, the effluvia from which is sufficient to sicken people passing by or near them.

Appendix (C) page cxxxix

In a Paper delivered in to your Committee, in May 1837, by Rustomjee Cowasjee, Esq. one of its members, which is valuable for its suggestions, but still more so for the philanthropick and generous offer which it contains, that gentleman states that he had been present at several of the (then) late fires which had devasted the City, and begged to lay before the Meeting a statement of facts that came under his personal observation. During the great fire which prevailed all along the Upper Circular Road, he particularly noticed the scarcity of water in that direction—he observed some fire-engines on the spot, but they were rendered perfectly useless for want of water, there being few, if any, Tanks in the vicinity of the fire. The consequence was, that there was nothing to check the fury of the flames, which went on consuming every hut and building in the way with prompt rapidity—he thought the Committee ought to bring this to the notice of Government without delay, as a more favourable opportunity for purchasing ground and digging Tanks could not present itself than the present He would recommend that a line of deep large Tanks should be immediately dug at convenient distances all along the Upper Circular Road, where water is more scarce than in any other of the Town—he thought that Government ought to bear the expense, but as an inducement for them to come forward, *he would undertake, if Government would buy the ground, to ercavate at his own expense four large Tanks between the Boitakhana, Mirzapore, and Manicktollah*—and he was sure that many rich landholders would readily do as much or more in other parts of the Town.

In a subsequent Minute, which the same zealous and active member of your Committee delivered in on the 23rd of the same month of May, he stated, that, on the subject of the scarcity of water in various parts of the Town, as pointed out in his former Minute, he had been requested to lay before the Committee an accompanying Petition, which he delivered in, signed by a great number of the inhabitants of Boitakhana and Bow Bazar, which was intended for the Lottery Committee but the subscribers having learnt that that Committee had not power to attend to their suggestion, had through their representative, Mr. A. DeSouza, requested him to lay it before your Committee, in order to ensure its coming under the perusal of the Government—and your Committee would, he said, observe, that not only was it represented therein that a great scarcity of water existed in cases of fire, but that even for culinary and other purposes the inhabitants are greatly inconvenienced by the want of Tanks—and he particularly directs the attention of your Committee to a suggestion in Mr. DeSouza's Letter and in the said Petition, that a Tank should be dug on the site of the late Boitakhana Bazar, behind the Roman Catholic Church—that the ground belonged to the Government, who, it seemed, were about to dispose of it; but if applied to for the purpose suggested by Mr. DeSouza, he was sure the Government would grant the request.

Appendix (C) page cxiii

The Address to the Lottery Committee laid before your Committee along with Mr. DeSouza's Letter to Mr. Rustomjee Cowasjee by the latter gentleman, is signed by ninety of the inhabitants residing in the Lower Bow Bazar, Boitakhana Street, and middle Circular Road—and purports to be on behalf of themselves, and other inhabitants residing in those places, in order to draw the attention of those to whom it is addressed to the want of a publick Tank in a central situation in their neighbourhood. It says, that there are a few Tanks to which they could without molestation resort, but the water in them in the dry season is in a state of stagnation, and over its surface a green slimy substance coagulates, rendering it more filthy than it would otherwise be, and totally unfit for domestick purposes—and that it was doubtful, in their opinion, whether the drinking of it would be healthy—in which, as matter of doubt, your Committee do certainly not concur, holding it to be without all doubt that water in such a state must be in the highest degree unwholesome to drink. The paper goes on to state, that the water from one or two Tanks of private individuals, which is permitted to be taken only during the rainy season, allows but a scanty supply, and that at certain hours in the day, which the inhabitants cannot always command—that in consequence they are put to frequent and great distress

Appendix (C) page cxliv

for the want of water, an article so necessary, particularly in the scorching heat of the dry season—and the writers add, that it is really a pity to see the poor and indigent class of the native population begging about for water from place to place. The Paper concludes by stating, that the extreme dusty state of the Road is a circumstance which has had a considerable effect in depreciating the value of the property in that Street—and that the want of a Tank debars the principal inhabitants from having the Roads watered in front of their respective premises.

Appendix (F) page 31

On the 4th of May 1836, several of the inhabitants in the neighbourhood of the Circular Road addressed a Letter to the Chief Magistrate of Calcutta, on the subject of the want of water in that neighbourhood; in which they state that there is not a publick Tank along the line of the Lower and Upper Circular Roads: and the consequence is, that a grievous want of water is generally felt both by Christians and Natives—that in this absence of one of the first necessaries of life, they beg respectfully and earnestly that he will do them the favour to submit the subject for the consideration of Government and obtain its sanction for two publick Tanks being excavated in that direction —that these Tanks at due distances, would enhance the value of the ground, with a corresponding addition to the revenue of Government—that they would further be ornamental, and useful at the same time as a resort for children of families resident in that part,—and same many a Native from sickness, and perhaps premature death, arising out of the unavoidable use of bad and unwholesome water. They conclude by trusting that the Chief Magistrate will be pleased to view the request submitted to him with favour, and take measures to recommend in the proper quarter the early excavation of Tanks, which are so loudly called for, and so pressingly required for the healths and comfort of those residing along the borders of the Circular Road.

Appendix (F) page 28

The Chief Magistrate states in his letter to your Committee of the 18th August 1837, that he had received the above letter in June 1836, "but it appeared to him hopeless to press the Government about it." In a former part of the same letter the Chief Magistrate says, that he has often wished to apply to Government on the subject of constructing a Tank in the neighbourhood of the Bow Bazar, the part of the Town he says unquestionably most deficient in the artificial supply of water, "but had been deterred by a feeling that he could point to no available fund to defray the expense." For the good intentions of the Chief Magistrate your Committee entertain the highest respect. But they must be permitted to consider as a mistake, much to be regretted, the withholding from the Government the just and crying complaints of any portion of the inhabitants, or suggestions for their benefit, upon speculations regarding matters which are only for the consideration of the Government itself, with whom ought to rest the grave responsibility of judging of the grounds for disregarding such complaints or suggestions.

By this evidence your Committee think it is established that pure and wholesome water for drinking and preparing food is extremely scarce in Calcutta—that the River water is unwholesome during about three months of the year, being impregnated with salt, and turbid and unfit for drinking unless artificially purified for three months more—so that it is wholesome and fit for use only during half the year, while at its best it is defiled by the quantity of nastiness of which it is the receptacle, and the number of dead bodies which are floated down it, rendering its purification before use necessary to health and comfort—that except one in Nobin Sing's garden, there is no wholesome Tank in the Native part of the Town, and no publick Tank of any sort in the neighbourhood of the Circular Roads, and that, in the part of the Town which is chiefly inhabited by the British, and in Chowringhee, the only Tanks containing wholesome water are the Loll Digghee in Tank Square, and one or two of the Tanks on the Esplanade—that, in the whole of Calcutta and Chowringhee, there is not one Well which produces wholesome water—that the length of the Native Town to the northward of the part chiefly inhabited by Europeans, and consequently to the northward of Tank Square in which is the nearest wholesome Tank, is three miles and a quarter, and the breadth of it from the River is one mile and a quarter upon the average, in the whole of which space, most thickly inhabited, there is not one Tank or Well which affords wholesome water—that wholesome water consequently is procured by the rich with considerable trouble and cost, and is denied to the poor, the Europeans in easy circumstances catching rain water and preserving it for use at some expense, and the richer Natives paying for bringing it from a distance—that the cost in Calcutta of a quantity of wholesome water, equal to the smallest quantity of water allowed, in calculating the necessary supply of water as the average per head *per diem* in England, where much less water is necessary than here—amounting only to two-fifths of the supply in London—and to less than a fourth part of the quantity allotted in Rome and Constantinople is a quarter of an anna, in a country where the wages of an ordinary labourer do not exceed two annas per day—that the great majority of the inhabitants are therefore driven to the use of unwholesome water for drinking and preparing their food—and that this is one great cause of the frightful amount of disease which pervades the Town—that for the other purposes to which water is necessary, the preserving personal and domestic cleanliness and the cleansing and watering the Streets, all matters essential to the health of the inhabitants—and for extinguishing occasional fires, which is essential to their safety—the supply of water is lamentably deficient.

Your Committee have thus laid before your Honour at considerable length, but not at greater than, in their apprehension, the importance of the subject to the health and welfare of this Capital of British India, and of its large population requires, the evidence by which they think the following propositions indisputably established.

I. That there is no natural impediment, nor any difficulty which a due application of science and capital cannot readily overcome, to the thoroughly Draining, Cleansing, and Ventilating, and supplying with wholesome Water, the whole City and Suburbs of Calcutta.

II. That the parts of the City inhabited by the Natives, forming a great population, to whose numbers the British inhabitants bear a very small proportion, and the whole of the Suburbs, are, in all these respects, in a condition of such total neglect, as to render them necessarily the seats of diseases destructive of individual happiness, and of life, and inconsistent with moral improvement, and political prosperity; and that the still imperfect, though improved, condition in these respect of those parts of the City inhabited by the British, and the noxious exhalations produced all round them by the state of the Native Town, and the Suburbs, and the marshes called the salt Water Lake, produce in these parts effects inconsistent with salubrity.

III. That the removal of the causes, which now generate the pestilential seeds of disease to so frightful a degree, would be effected by the thoroughly Draining, Cleansing, and Ventilating the City and Suburbs, and draining the Salt Water Lake—and that an ample supply of water for watering the Roads, and for all purposes of cleanliness, and of good and wholesome water for drinking, and preparing food, would be afforded to every part of the City by the formation of a sufficient Head of Water within it, and the excavating a sufficient number of Tanks—and thus the City would be rendered a healthy residence for the Natives of the climate, and no otherwise injurious to European constitutions than through the operation, during the greater parts of the year, of tropical heat, in a climate, no doubt naturally damp, but unassisted by unwholesome exhalations from the soil, or miasmata.

APPENDIX XVIII

Proclamation Fixing the Limits of the Town of Calcutta

Issued by the Governor-General in Council on the 10th September 1794

Whereas in and by the 159th section, Chapter 52 of an Act passed in the 33rd year of His Majesty's reign, entitled "an Act for continuing in the East India Company, for a limited time, the possession of the British territories in India, together with their exclusive trade, under certain limitations; for establishing further regulations for the government of the said territories, and the better administration of justice within the same; for appropriating to certain uses the revenues and profits of the said Company; and for making provision for the good order and government of the towns of Calcutta, Madras and Bombay," it is enacted that if any question shall arise touching or concerning the true limits and extent of said towns and factories, or any of them, the same shall be inquired into by the Governor-General in Council at Fort William in respect to the limits and extent of Calcutta, and by the Governor in Council of Fort St. George in respect to the limits and extent of Madras, and the Governor in Council at Bombay in respect to the town of Bombay, and that such limits as the said respective Governments, by order in Council, shall declare and prescribe to be the limits of the said towns and factories, respectively, shall be held, deemed and taken in law as the true limits of the same, any custom or usage to the contrary notwithstanding. And whereas such question, as in and by the said clause of the said Act is meant and referred to, has arisen and been made with respect to the limits of the said town of Calcutta, and the Governor-General in Council, in pursuance of the authority vested in him by the said Act, has inquired into the same, and by an order duly made in Council has declared and prescribed the limits of the said town, and has directed and commanded the same to be publicly notified, in order that the said limits, so declared and prescribed, may be known to the inhabitants of the said town, and to all persons whom the same may in anywise concern,—

It is hereby publicly notified that the town of Calcutta, in respect to all legal intents and purposes, extends to, and is bounded by, the several lines, limits, and boundaries hereinafter mentioned and described, that is to say—

The northern boundary is declared to commence, and does accordingly commence, on the west side of the river Hooghly at the post or mete No. 22, situated at the north point of Colonel Robertson's garden called Jackapore, immediately opposite to the mouth of the brook called Chitpore Nullah or Baug Bazar Nullah; and the said Northern boundary is from thence declared to continue, and is continued accordingly, by a line drawn across the river from the aforesaid point to the south corner of the mouth of the said Nullah unto the post or mete No. 1 near the foot of the Chitpore Bridge, and from thence by a line drawn eastward and passing the south end of the said Bridge to No. 2, and from thence along the south side of the said Nullah or brook to the post or mete No. 3, and thence on to the post or mete No. 4, passing the old Powder Mill Bazar until it reaches the foot of the bridge leading to Dum-Dum, where the post or mete No. 5 is.

The Eastern boundary is declared to commence, and does accordingly commence, at the said post or mete No. 5, and is declared to continue, and does accordingly continue, by a line traced along the west or inner side of the Mahratta ditch or entrenchment and the east side of the road adjoining thereunto until it reaches the post or mete No. 6, at the northern angle next to the road of an enclosure called Halsee Bagan, which said Halsee Bagan is included within the said town of Calcutta; and from the said northern angle by a line drawn east ward along the southern side of the ditch or trench which encloses the said Halsee Bagan to the post or mete market No. 6; and from thence southward along the western side of the said ditch or trench to the post or mete also marked No. 6; and from the said last-mentioned post or mete westward along the northern side of the said ditch or trench until the said line reaches mark No. 7, where there is a thana; and from the said last-mentioned post or mete by a line drawn southward and on the western side of the Mahratta entrenchment and the eastern side of the Boitaconnah Road as far as the remains of the said Mahratta entrenchment are visible to the post or mete No. 8, at the corner of Raja Ramlochun's Bazar, and of the road leading to Ballea Ghaut immediately opposite to Narain Chattoorjee's Road; and from the said last-mentioned post or mete No. 8 by a line continued in a southern direction passing through Mirzapore and drawn along the eastern side of the Boitaconnah Road, and leaving the Portuguese burying ground to the east, until it reaches the Boitaconnah tree, where the two posts or metes marked, respectively, No. 9 and No. 10 are fixed on each side of the road opposite to the Bowbazar Road and Boitaconnah Bazar; and from the last-mentioned post or mete marked No. 10 by a line drawn along the eastern side of the said Boitaconnah Road to the post or mete No. 11 opposite to Gopee Baboo's Bazar, which bazar is situated between the Jaun Bazar and Dhurrumtollah Roads; and from thence in the same direction until the said line reaches the post or mete No. 12, at the point of turning of the said road towards the west, leaving Dhee Seerampore on the east, and hereby including within the limits of Calcutta the Protestant burying ground, Chowringhee, and the lands hereunto belonging, called Dhee Birjee.

The Southern boundary is declared to commence, and does accordingly commence, from the last-mentioned post or mete No. 12, and is declared to continue, and does accordingly continue, by a line drawn from thence to the westward with a little inclination to the southward along the southern side of the public road excluding Dhee Chukerbeer, and including Bunneapokah, otherwise called Arreapokah in Dhee Birjee, until the said line reaches the beginning of the Russapuglah Road immediately opposite to Chowringhee High Road, where the post or mete No. 13 is fixed; and from the said post or mete No. 13 by a line running to the westward along the southern side of the public road to the post or mete No. 14, fixed between the thana and the General Hospital, and passing on westerly to the post or mete No. 15 at the foot of the Alipore Bridge, and excluding the General Hospital aforesaid, the Hospital for Insanes, and the Hospital burying ground, situated in Dhee Bowanipore; and from thence and from the southside of the said Alipore Bridge by a line drawn and continued along the south side of the Nullah, commonly called Tolly's Nullah, at high-water mark to the post or mete marked No. 16; and from thence passing the foot or south end of Surmon's Bridge, commonly called Kidderpore Bridge, and extending to

the mouth of the said Nullah, where it enters the River Hooghly excluding Watson's Dock, and to the post or mete marked No. 17, and then proceeding from east to west across the said River Hooghly to the south-east point of Major Kyd's garden, and excluding the said garden and village of Sheebpore, at which point a post or mete marked No. 18 is directed to be fixed ; and

The western boundary is declared to commence, and does accordingly commence, at the said point where the said post or mete marked No. 18 is fixed, and is declared to continue and does accordingly continue, from thence by a line drawn at low-water mark along the western side of the said River Hooghly, but excluding the ghauts of Ramkissenpore, Howrah and Sulkea, where posts or metes are fixed, marked respectively Nos. 19, 20 and 21, until the said line reaches the northern point of Colonel Robertson's garden or Jackapore aforesaid, where a post or mete is fixed, marked No. 22, and immediately opposite to the post or mete No. 1, at Chitpore Bridge.

Declared and proclaimed by order of the Governor-General in Council of Fort William in Bengal this 10th day of September 1794.

E. HAY,
Secretary to the Government.

N.B.—It does not appear that the local Government have since the passing of the 55 Geo. 3, c. 84, availed themselves of the power conferred on them by that statute of extending the limits of Calcutta.

R. H. MYTTON,
Magistrate.

NOTE- -The jurisdiction mentioned above continued until 1913, when, on the removal of the Presidency Jail, popularly known as the Harinbari Jail, to the other side of the Adi Ganga or Tolly's Nullah, it was amended to include the new jail and the route to it. In 1919 a special Act was passed indicating the new jurisdiction of the Ordinary Original jurisdiction of the Calcutta High Court and stone pillars, and boundary marks were relaid along the new boundary. I am indebted to Sri Jatindramohan Datta for this information—A.M.

APPENDIX XIX

Changes in the Jurisdiction of the Municipal Limits of Calcutta

I

The Calcutta Gazette, October 23, 1867, page No. 1619

NOTIFICATION

The 17th October, 1867—Under the provisions of Section I, Act II of 1866, of the Bengal Legislative Council (an Act to provide for the better regulation of the Police within the suburbs of the Town of Calcutta), the Lieutenant-Governor is pleased to exclude the portion of the suburbs of the Town of Calcutta defined below from the General Police District of Bengal, and to direct that the said Act shall come into operation within the boundaries specified :—

The present northern boundary of the suburbs to the point where it meets the Eastern Bengal Railway, along the eastern boundary of the Railway to the Canal Bridge at Ooltadangah, then across the canal and along its eastern bank till it joins the Balliaghata Canal at the Dhappa Toll House, thence along the present boundary line until it joins the mouth of the Calcutta new main drain, along this drain to the spot where the south Tangrah Road crosses over the drain, and from this point along the south Tangrah road till it meets Christopher's lane and joins the old Gobrah road, along this road till it touches Tupasseah road, along Tupasseah road to No. 4 Bridge of the Calcutta and south Eastern Railway, thence along this line of Railway to its junction with the present boundary, and thence along the existing boundary to the river Hooghly.

All Railways, Canals, Tramways, Drains, Lanes, etc., on the boundary line (with the exception of the Calcutta Circular Road and Mahratta Ditch), to be included in and to form part of the suburbs, together with the drains on both sides of all such roads and lanes.

The above will constitute the outer boundary of the suburbs of Calcutta, from the bank of the Hooghly at the northern extremity of Purramanick's Ghat to the bank at the southern extremity at the Dumdummah drain.

The inner boundary will be the boundary of the Town of Calcutta.

II

The Calcutta Gazette, April 1, 1868. Page No. 472

NOTIFICATION

The 30th March, 1868—It is hereby notified, under section II of Act XX of 1856, that the said Act shall have effect from the 1st proximo in the area recently excluded from the suburbs of the town of Calcutta, under the notification, dated the 17th October, 1867.

It is further notified, under section 3 of Act XX of 1856, that the several hamlets, villages, bazars, mohullahs, and the places lying between the old and the new boundaries of the said suburbs, as defined in the notifications dated 8th July, 1864, and 17th October, 1867, respectively, are united to the Extra Suburban Union formed by the notification dated 23rd July, 1867, the provisions of which said notification regarding the Extra Suburban Union as there formed are hereby notified under sections 4 and 10 of Act XX of 1856 to be extended to the said Union as now enlarged.

III

The Calcutta Gazette, June 16, 1869. Page 1191

NOTIFICATION

The 5th June 1869—The limits of the tract of country within which Act II (B.C.) of 1866 **(an Act for the better regulation of Police within the Suburbs of the Town of Calcutta)**, is in operation, were defined by the Government Notification of the 7th October 1867, published in the **Calcutta Gazette** of the 23rd idem, it is hereby notified that, under the power vested in him by section I of the Act, the Lieutenant-Governor has been pleased to make the following alteration in the limits aforesaid :

The northern, eastern, and western boundaries of the tract in question will be the same as defined in the Notification of the 7th October 1867. The Southern boundary will also remain unaltered from the South-Eastern Railway to Tolly's Nullah. From thence it will run across the Nullah and by the Tollygunge, Shahpore, and Goragatchee roads, and the road which passes through the villages Dowlutpoor No. 441, Indree No. 446, and Durreepin No. 383, to and westward along the Circular Garden Reach or Moocheekhola road to the point where the Durreepin boundary crosses it, and thence along the road which diverges from that point through the villages of Singerathee No. 444, Futtehpoor No. 430, and Ramdasathee No. 432, and thence northward by the cross road through the villages of Futtehpoor No. 430 and Ramessurpoor No. 300, till it joins the western boundary line at the junction of boundary villages Ramessurpoor and Garden Reach.

A. EDEN,
Secretary to the Government of Bengal.

IV

The Calcutta Gazette, September, 28, 1870. Page No. 1714

NOTIFICATION

The 22nd September, 1870—Under Section 3, Act III (B.C.) of 1864, the Lieutenant-Governor has been pleased to revise the southern boundary of the suburbs of Calcutta as defined for Municipal purposes by notifications dated the 8th July, 1864 and 30th March, 1868, and to declare that the southern boundary of the Municipality shall henceforth be the boundary of the special police jurisdiction defined under Act II (B.C.) of 1868, by a notification of the 5th June, 1869, published on page 1191 of the **Calcutta Gazette** dated the 16th June 1869.

The notification will take effect from the 1st of October 1870, and will not affect any liabilities incurred before the said date.

A. EDEN,
Secretary to the Govt. of Bengal.

V

NOTIFICATION

Defining the Police and Municipal Jurisdiction of the SUBURBS of CALCUTTA.

Dated 10th September 1877—In modification of the boundaries declared in the Government notifications dated 17th October 1867, 5th June 1869, 30th March 1868 ,and 22nd September 1870, and published respectively in the **Calcutta Gazette** of the 23rd October 1867, 16th June 1869, 1st April 1868, and 28th September 1870, the following are declared to be the revised boundaries, with effect from the 1st October 1877 :

Northern Boundary

Commencing from the north-west angle at Paramanick Ghat on the River Hooghly, the boundary follows the northern side of Paramanick Ghat Road eastwards to its Junction with the Cossipore Road ; thence northwards along the western side of the Cossipore Road till its junction with Dhareabagan Road; thence eastwards along the northern side of the Dhareabagan Road till it meets the Barrackpore Trunk Road, which it crosses ; and thence continues along the northern side of the North Sinthee Road eastwards till it meets the Eastern Bengal Railway line, crossing to the eastern side of the said line at No. 2 Bridge, north of the Dum Dum station.

Eastern Boundary

The boundary on the east follows the eastern side of the Eastern Bengal Railway line southwards till it meets the bridge over the new canal at Ooltadangah ; from thence it follows the eastern bank of the new canal till it joins the Balliaghatta Canal at the Dhappa Toll-house ; thence crosses the Baliaghatta Canal to its southern bank ; thence westwards along the southern bank of the Baliaghatta Canal till it meets Pugladanga Canal Road ; thence along the eastern side of the Pugladanga Canal Road to its junction with the Pugladanga Road ; thence along the eastern side of the Pugladanga Road till it meets the Chingreeghatta Road ; thence southwards to the Punchannogram iron boundary pillar ; thence southwards along the eastern side of an unmetalled road till it meets the municipal tramway ; thence it turns westwards along the southern boundary of the municipal tramway till it meets the South Tangrah Road ; thence it follows the eastern side of the Tangrah Road till it meets Christopher's Lane and Topseeah Road ; thence along the eastern side and afterwards along the southern side of the Topseeah Road till it joins the Tiljullah Road ; thence along the southern side of the Tiljullah Road to No. 4 Bridge of the Calcutta and South Eastern State Railway line ; thence along the eastern side of the line of Railway till it meets the Kankilay Road ; thence westwards, crossing the railway, it follows the southern side of the Kankilay Road till it meets the Gurreahat Road ; thence southwards along the eastern side of the Gurreahat Road till it meets the Mollahatty Road.

Southern Boundary

Leaving the Gurreahat Road, the boundary runs westwards along the southern side of the Mollahatty Road till it meets the Russapugla Road ; thence northwards along the western side of the Russapugla Road till it meets the Tollygunge Bridge Road ; thence along the southern side of the Tollygunge Bridge Road westwards to Tollygunge Suspension Bridge, where it crosses Tolly's Nullah ; from thence it runs along the southern side of the Tollygunge, Shahpore, Goragachee, and the Taratolla Roads, which latter passes through the villages of Dowlutpore No. 441, Indree No. 446 and Durrepin No. 383 ; thence westwards along the southern side of the Circular Garden Reach or Moocheekhola Road to the point where the Dureepin boundary crosses it ; and thence along the southern side of the Paharpore Road, which diverges from that point through the villages of Singerathee No. 444, Futtehpore No. 430, and Ramasathee No. 432 ; and thence northwards along the west side of the above road through the villages of Futtehpore No. 430 and Ramesssurpore No. 300, till it joins the western boundary line at the junction of the boundary villages Ramessurpore and Garden Reach ; the boundary then proceeds northwards for a short distance up to Garden Reach Road, following the boundary common to Moodially, Dhobapara and Dum-Duma on the one side and Garden Reach on the other, up to the Dum-Duma drain ; thence along the eastern cut of the Dum-Duma drain in a straight line to the river Hooghly.

Western Boundary

Starting from the trijunction of the village of Dum-Duma, Garden Reach and River Hooghly, it proceeds along the southern bank of the River Hooghly as far as Hastings Bridge ; it thence follows the northern bank of Tolly's Nullah up to Jerut Bridge ; thence along the northern approach to the bridge to the Lower Circular Road ; thence along the southern and eastern side of the Circular Road up to Manicktollah Road ; then eastwards along the northernside of the road to a point where the Mahratta ditch touches the Manicktollah Road ; thence along the Mahratta ditch northwards till it meets the Upper Circular Road ; thence northwards along the Circular Road to the point where it meets the Halsee Bagan Road ; thence along the northern side of the Halsee Bagan Road eastwards till it meets the Mahratta ditch (which is the boundary between Halsee Bagan and Goureeber), which it follows till it meets the Ooltadangah Road, following the southern side of the said road till it joins the Upper Circular Road, and follows the eastern side of the same road and the eastern and northern banks of the Mahratta ditch till it joins the River Hooghly at Permit Ghat ; thence it proceeds along the eastern bank of the Hooghly River up to the Paramanick Ghat.

1. NOTE—All railways, canals, tramways, drains, lanes, etc. (with the exception of the Calcutta Circular Road and Mahratta ditch), situated on the above boundaries are included in the suburbs of Calcutta, together with the drains on both sides of all such roads and lanes.

2. NOTE—The villages of Nyenan, Neej-Nyenan, Nyenan (east) and Neej-Sinthee, situated north of the northern boundary line of the suburbs as above defined, are attached to thana Burranagor of district 24-Pergunnahs.

3. NOTE—The portion of village Neemuckpooktan, situated east of the Pugladanga Road is attached to thana Tollygunge of district 24-Pergunnahs.

4. NOTE—The village of Govindpore and parts of villages Aurukpore, Silimpore and Dhacoorea, situated west of the Gurreahhat Road and north of the Mollahatty Road, are included in the police and municipal jurisdiction of the suburbs of Calcutta.

HORACE A. COCKERELL,
Offg. Secretary to the Government of Bengal.

VI

NOTIFICATION

Defining of the limits of the PORT of CALCUTTA

The 10th August 1879—It is hereby notified for general information that the limits of the Port of Calcutta, and of the navigable river and channels leading thereto, as fixed with the sanction of the Governor-General in Council, are severally as described below—

The limits of the Port are—

On the north, a line drawn from the boundary pillar at the Cossipore Gun Foundry Ghat to a point on the opposite side at Ghoosery.

On the south, a line drawn from a point called Paikpara on the north to a creek called Nardukhal on the south.

So much of Tolly's Nullah as lies to the west of a line drawn across the Nullah 25 feet to the west of Hastings Bridge.

The limits of the Port include to the east and west so much of the River Hooghly and the shores thereof as are within 50 yards of high-water mark spring tides.

N.B.—Within the above limits the Port is subject to the jurisdiction of the Commissioners for making Improvements in the Port of Calcutta, under the powers conferred upon them by the Lieutenant-Governor of Bengal by an order published in the **Calcutta Gazette** of the 5th April 1875, which vested them with the powers of Conservators of the Port.

The limits of the navigable river and channels leading to the Port are

On the north, the Port of Calcutta as above defined.

On the south, a line drawn east and west from the Eastern Channel floating light-vessel.

All parts of the navigable channels called the Eastern and the Western Channels, and of the River Hooghly between the said limits and below high-water line at spring tides.

N.B.—The Port Officer, Calcutta, is the Conservator of the navigable river and channels thus defined, and they are under his jurisdiction.

VII

The Calcutta Municipal Act, 1899 (Bengal Act III, 1899)

Schedule I—Calcutta

Schedule I—" Calcutta "

See Section 3, Clause (7)

" Calcutta " is the area bounded as follows :—

by a line drawn along the southern and western bank to the Circular Canal from the River Hooghly to the point where it meets the Beliaghatta Canal; thence eastward along the southern bank of the Baliaghatta Canal to the point where it meets the Pagladanga Road ; thence along the northern and eastern edge of the Pagladanga Road to the point where it meets the Chingrighatta Road ; thence along the southern edge of the Chingrighatta Road to the point where it meets the South Tangra Road ; thence along the eastern and southern edge of the South Tangra Road to the point where it meets the Tapsia Road ; thence along the eastern, southern and western edge of the Tapsia Road to the point where it meets the Tiljala Road ; thence westward along the southern edge of the Tiljala Road to the South-Eastern State Railway ; southward along the western edge of the line of the Railway, and westward along the northern edge of the Budge-Budge Branch of the Railway, to the Russa Road, South ; thence southward along the eastern edge of Russa Road, South, to the point where it meets the Tollygunge Circular Road ; thence along the southern edge of the Tollygunge Circular Road to the point where it meets the Shahapur Road ; thence westward along the southern edge of the Shahapur Road and its continuation, the Guragacha Road and the Taratala Road, to the point where it meets the Sonai Road ; thence northward along the western edge of the Taratala Road and the Nimakmehal Ghat Road to the River Hooghly ; and thence along the left bank of the River Hooghly to its junction with the Circular Canal, except that it does not include—

(1) Fort William,
(2) the Esplanade, or
(3) that part of Hastings north of the south edge of Clyde road, and the new road to the river bank, which have hitherto been excluded from Calcutta.

VIII

The Calcutta Municipal Act, 1923 (Bengal Act III of 1923)

(Schedule I—Calcutta)

Schedule I—" Calcutta "

[See section 3, clause (11) and sections 483 and 543]

" Calcutta " is the area included within the following boundaries except that it does not include :—

(1) Fort William,[1]
(2) the Esplanade, or
(3) that part of Hastings[2] north of the south edge of Clyde Row and Strand Road to the river bank.

Boundaries

A line drawn along the outer edge of Paramanik Ghat Road, Cossipur Road, Kasi Nath Dutt Road, Kali Charan Ghose Road and Ramkrishna Ghose Lane : thence southward along the western edge of the Eastern Bengal Railway to the point where the boundary line meets the New Canal : thence eastward along the southern bank of the New Canal to the point where it meets the Baliaghatta Canal ; thence westward along the southern bank of the Baliaghatta Canal to the point where it meets Pagladanga Road ; thence along the northern and eastern edge of Pagladanga Road to the point where it meets Chingrighatta Road ; thence along the southern edge of Chingrighatta Road to the point where it meets Tangra Road, South ; thence along the eastern and southern edge of Tangra Road, South, to the point where it meets Topsia Road, North ; thence along the eastern and southern edge of Topsia Road, North, to the point where it meets Hughes Road ; thence along the eastern edge of Hughes Road to the point where the Town and Suburban High Level Sewers meet; thence along the southern edge of the new road to the point where it meets Topsia Road, South ; thence along the southern edge of Topsia Road, South, to the point where it meets Tiljala Masjidbari Lane ; thence along the eastern and southern edge of Tiljala Masjidbari Lane to Tiljala Road, formerly known as Maulvi Ahmad Khan Bahadur's Road ; thence westward along a line drawn in continuation of the southern edge of Tiljala Masjidbari Lane to the Eastern Bengal Railway line ; thence southward along the western edge of the line of that Railway, and westward along the northern edge of the Budge-Budge Branch of that Railway, to Russa Road, South ; thence southward along the eastern edge of Russa Road, South, to the point where it meets Tollygunge Circular Road ; thence along the southern boundary of Tollygunge Circular Road to the point where it meets the southern boundary of Port Commissioners' land acquired for the purpose of constructing King George's Dock and its connected works, and thence

[1] As to the Government of Fort William, see the Fort William Act, 1881 (XIII of 1881), Bengal Code, Vol. I.
[2] But as to land and buildings in Hastings, see ss 547 to 550, ante.

along the southern boundary of the Port Commissioners' land above referred to, as it stands at the commencement of this Act up to the point where it meets Diamond Harbour Road; thence along the eastern boundary of Diamond Harbour Road, to the point where it meets the southern boundary of the Port Commissioners' land above referred to; thence along the southern and western boundary of the said land up to the point where it meets the village Singarhatty; thence along the northern border of villages Belpukuria, Ramdashutty, Makalhutty and Kismat Dum Dum till it meets the Government embankment; and thence westward along the Government embankment till it meets the River Hooghly; thence along the River Hooghly to the western terminus of the outer edge of the Paramanik Ghat Road.

IX

The Calcutta Municipal Act, 1951 (West Bengal Act XXXIII of 1951)

(Schedule I—Calcutta)

Schedule I—"Calcutta"

[See section 5, clause (11) and sections 532, 592 and 594] and 594]

"Calcutta" is the area included within the following boundaries except that it does not include—

(1) Fort William, or

(2) that part of Hastings north of the south edge of Clyde Row and Strand Road to the river bank.

Boundaries

A line drawn along the outer edge of Paramanik Ghat Road, Cossipur Road, Kasi Nath Dutt Road, Kali Charan Ghose Road and Ramkrishna Ghose Lane; thence southward along the western edge of the East Indian Railway to the point where the boundary line meets the New Canal; thence eastward along the southern bank of the New Canal to the point where it meets the Balliaghatta Canal; thence westward along the southern bank of the Beliaghatta Canal to the point where it meets Pagladanga Road; thence along the northern and eastern edge of Pagladanga Road to the point where it meets Chingrighatta Road; thence along the southern edge of Chingrighatta Road to the point where it meets Tangra Road, South; thence along the eastern and southern edge of Tangra Road, South, to the point where it meets Topsia Road, North; thence along the eastern and southern edge of Topsia Road, North, to the point where it meets Hughes Road; thence along the eastern edge of Hughes Road to the point where the Town and Suburban High Level Sewers meet; thence along the southern edge of the new road to the point where it meets Topsia Road, South; thence along the southern edge of Topsia Road, South, to the point where it meets Tiljala Masjidbari Lane; thence along the eastern and southern edge of Tiljala Masjidbari Lane to the Tiljala Road; thence westward along a line drawn in continuation of the southern edge of Tiljala Masjidbari Lane to the East Indian Railway line; thence southward along the western edge of the line of that Railway, and westward along the northern edge of the Budge-Budge Branch of that Railway, to Russa Road, thence southward along the eastern edge of Russa Road, to the point where it meets Tollyganj Circular Road; thence along the southern boundary of Tollyganj Circular Road to the point where it meets the southern boundary of the Port Commissioners' land acquired for the purpose of constructing King George's Dock and its connected works and thence along the southern boundary of the Port Commissioners' land above referred to, as it stands at the commencement of this Act up to the point where it meets Diamond Harbour Road; thence along the eastern boundary of Diamond Harbour Road to the point where it meets the southern boundary of the Port Commissioners' land above referred to; thence along the southern, western and northern boundary of the said land up to the point where it meets the Circular Garden Reach Road at its junction with New Taratala Diversion Road; thence eastward along the northern edge of Circular Garden Reach Road to the point where it meets the Port Commissioners' land above referred to; thence northward along the western boundary of this land to the point where it meets Garden Reach Road; thence westward along the northern edge of Garden Reach Road; thence westward along the northern edge of Garden Reach Road to the point where it meets Prince Delwarjah Lane; thence northward along the eastern edge of Delwarjah Lane; thence northward along the eastern edge of Prince Delwarjah Lane and the western boundary of the Port Commissioners' land above referred to, to the point where it meets the river Hooghly; thence along the river Hooghly to the western terminus of the outer edge of the Paramanik Ghat Road.

APPENDIX XX

A Note on the Trust's New Development Scheme and Their Financial Implications

By S. K. Gupta, I.C.S., *Chairman, Calcutta Improvement Trust*

The activities of the Improvement Trust are at present confined to East-Central Calcutta (Entally area) and East Calcutta (between Beliaghata Main Road and Maniktala Main Road), while at Cossipore, where the preliminary survey has just been completed, the stage is set for the preparation of alignments and schemes.

The three schemes in the Entally area link up Park Circus to Middle Road, Entally, and then to Lower Circular Road near its junction with Dharamtala Street. A broad 100-ft. dual carriageway track, complete with underground sewer and distribution mains, now runs from Suhrawardy Avenue to Middle Road, Entally, and an equally wide road is under construction from that point up to its junction with Lower Circular Road. Provision has been made for four well-laid out parks along these roads, three of which will be for adults, and the fourth for children. All of them will be planted with trees and shrubbery and at least one will have a swimming pool. The total length of main roads in the three schemes is approximately 1½ miles, while the total net cost in land acquisition and engineering works is estimated at about Rs. 1·10 crores. Before development, the area contained huts, tanks and rank vegetation. Now it is a fine residential zone and the architecture of many of the buildings already erected on the main roads is pleasing. Of the 20·2 acres of surplus land available to the public as building sites, all but 2·2 acres have been sold.

Costly Experiments

The fringe areas of East Calcutta—Beliaghata and Maniktala—presented a different and a difficult problem. The main railway line had split the city into two distinct urban types, and the separation was accentuated by the Circular Canal which is inadequately served with bridges. The low clearance between the railway tracks and the roads beneath made the provision of a tram or bus service difficult. For these reasons and owing to the absence of sewerage and an indifferent water supply, the Trust could not for long give much attention to this part of Calcutta. During the last two or three years, however, the two districts have received close consideration.

The 4,358 acres of Maniktala and Cossipore provide an enormous field for Trust activity, but for obvious reasons they have to be taken in sections. The improvement schemes which will take priority are those through which the main sewers are routed. Under the revised scheme, designed to ensure greater efficiency in sewerage disposal as well as to reduce the cost and duration of the work, the two districts will be separately drained, the southern portion of Maniktala being drained to the Dhapa Pumping Station, and the northern, together with Cossipore, to an outfall and disposal plant located across the Canal opposite the eastern extremity of Ultadanga Main Road. The separate responsibilities of the Trust and the Corporation in the development of this area have been clearly defined and agreed on between the two bodies. No improvement of East Calcutta is possible unless there is a substantial increase in the supply of water both for domestic consumption and for the flushing of sewers, but as augmentation of water supply is the responsibility of the Corporation, the latter has agreed to install large bore tube-wells at locations in Maniktala which can be integrated with the improvement schemes. The Trust has undertaken the installation of the extensive distribution system. As for sewage disposal, it has accepted liability for the construction of the proposed sewage disposal plant, while the Corporation has agreed to provide the effluent channel and to keep it in commission. The water supply will be a single source supply—not a dual supply of filtered and unfiltered water, as is the case in Calcutta proper.

Four Major Schemes

The area between Beliaghata Main Road and Maniktala Main Road is covered by four major improvement schemes, estimated to cost Rs. 2·90 crores. Three of these may be described as street schemes, intended to carry the underground and overground municipal services along the streets laid out, while the primary purpose of the fourth is excavation of earth for raising the level of the surrounding low-lying area. But incidental improvements arising out of these schemes greatly outweigh in importance the initial purpose of all the schemes and more particularly that of the fourth.

The three street schemes cover the construction of main sewers ranging from a 14 ft. × 13 ft. culvert section to an 8′-6″ and 5′-0″ diameter circular brick sewer, which starts from the Corporation pumping station near Dhapa Lock, passes along Beliaghata Main Road and through open country to Narkeldanga Main Road and terminates at Maniktala Main Road. Over the sewers will run wide and improved roads suited to conditions of modern traffic, *viz.*, a 100-ft. wide diagonal road linking Beliaghata Main Road and Narkeldanga Main Road and a 120 ft. wide dual track road between Narkeldanga Main Road and Maniktala Main Road. The approximate length of the principal roadways covered by these schemes is 2½ miles and there will be a large number of subsidiary side roads for opening up the building sites. All other usual services, *viz.*, parks, street lighting, water mains, and roadside trees, are provided. Construction is expected to be completed within 2½ years, when about 5,290 kottahs of first-class building land will be available to the public.

Lakes and Parks

The fourth scheme in the series provides for the development of a 100-acre park and recreation ground. It has been the policy of the Trust to provide as much recreation space as possible in every improvement scheme, though the soaring land prices make it a costly amenity. But the experience of the Dhakuria Lakes showed that when there was a series of contiguous schemes for the development of a low-lying area, the dual purpose of getting the requisite quantity of earth and constructing a park was best achieved by securing a large tract of land, for excavation purposes which when complete would provide the city with a park and lake of great beauty and utility. Considerable progress has already been made with the lake at Beliaghata. More than 25m cubic feet of earth has been excavated by digging up to a depth of 30 ft. within the area earmarked for the lake, extensive land raising within the park area has been done, and of the two artificial islands planned, one has been made and trees are already growing on it. Within the

park area avenues of trees have been planted and most of them have survived. The lake, though far from complete, is already attracting visitors.

The development of North-Eastern Calcutta will not be complete till the fifth scheme framed by the Trust and submitted to Government for sanction is executed. Estimated to cost Rs. 3·36 crores in engineering works and another Rs. 2 crores (gross) in land acquisition, this scheme will carry the 120-ft. wide dual track roadway from Maniktala Main Road northward to Ultadanga Main Road where it will link up with the Grey Street Extension Scheme, now under construction. One large park, 47 acres in extent, and three smaller parks have been provided, the system of zoning for commercial purposes and light industries has been introduced for the first time, and about 982 kottahs of land have been reserved for rehousing of persons who will be displaced as a result of the operation of these schemes. Seventy acres of building land will be available for sale to the public.

When the last scheme is under way, the turn will come for Cossipore to be developed, but preliminary steps thereto will have to be taken well in advance. The backbone of all Trust improvement schemes are the sanctioned alignments. It is on these that new traffic routes are developed, clearance schemes planned and sewerage schemes planned and sewerage schemes designed. One such alignment has already received sanction and all are expected to be submitted to and sanctioned by the State Government during the course of the current year.

Housing the Displaced

The Trust have an obligation under the Act to rehouse persons of the poorer classes displaced or likely to be displaced as a consequence of an improvement scheme. Before the last war the rehousing of tenants disturbed in clearance schemes was no problem. There was then no serious housing shortage and tenants ejected from their homes found no difficulty in securing other accommodation. Since the end of the war, however, conditions have changed and houses, huts and indeed any kind of accommodation are at a premium. The Trust is, therefore, compelled to embark on a house building programme for the rehousing of displaced persons. In all new improvement schemes, including those in Maniktala, sites for housing estates have been reserved. A small housing scheme in the Entally district has been sanctioned and work on the construction of two building blocks with 70 dwelling units has begun. This initial scheme, which will be completed early next year, will cost Rs. 6 lakhs. Other housing schemes will follow.

It would be a mistake to think that the execution of these schemes will complete the improvement of the areas mentioned above. Insanitary pockets will still continue in recesses away from the new main routes, though they will be easier to eliminate once the broad foundations are well and truly laid. We are sometimes flooded with requests from residents of these pockets to undertake their improvement. The above resume will show that the commitments of the Trust are already too heavy to permit of much additional responsibility for some time to come. To the understandable exasperation of these people, I can only plead that our limited financial resources compel us to "cut our coat according to our cloth".

APPENDIX XX

The Calcutta Improvement Trust Schemes

LIST OF IMPROVEMENT SCHEMES PUBLISHED OR SANCTIONED

(The Schemes marked with asterisk were abandoned)

I—Surtibagan—Halliday Street to Chitpore Road.
I-A—Surtibagan—North Road—Tara Chand Dutt Street to Harrison Road.
I & I-A—Alteration.
I-B—Surtibagan—South Road—Zacaria Street to Kalutola Street.
I-C—Surtibagan—Ismail Madan Lane Area.
II—Shambazar Bridge Road.
II-A—Cornwallis Street Widening.
III—Ward's Institution Lane.
IV—Russa Road Widening—Elgin Road to Hazra Road, Chowringhee Road Widening—Lower Circular Road to Elgin Road.
IV-A—Russa Road Extension—Hazra Road to B. and A. Railway.
V—Bhowanipore between Elgin Road and Hazra Road and between Lansdowne Road and Russa Road.
V—Bhowanipore (alteration).
*VI—New Chinabazar—Dalhousie square (North-east corner to Strand Road up to Howrah Bridge Approach).
VII—Chittaranjan Avenue—Machuabazar Street to Beadon Street.
VII.C.S.—Chitpur Spur Section.
VII-A—Chittaranjan Avenue—Halliday Street Widening—Kalutola Street to Machuabazar Street.
VII-B—Chittaranjan Avenue—Kalutola Street to Bowbazar Street.
VII-C—Manicktola Spur—Jorapukur Square Lane to Upper Circular Road.
VII-D—Chittaranjan Avenue—Bowbazar Street to Prinsep Street.
VII-E—Chittaranjan Avenue—Prinsep Street to Chowringhee (Revised).
VII-F—Chittaranjan Avenue to Upper Chitpur Road.
VII-G—Jagannath Ghat Road from Upper Chitpore Road to Strand Road North.
VII-H—Central Avenue (Beadon Street to Grey Street).
VII-J—Central Avenue (Grey St. to Shambazar St.).
VIII—Park Street Extension—Park Street to B. & A. Railway, through Ward No. 20.
VIII-A—Outer Park Street—Lower Circular Road to Park Circus in Scheme No. VIII.
* VIII-B—Gora Chand Road Area—Extension of the proposed Park in Scheme No. VIII and construction of a 100-ft. road to the north of this Park joining the Circus with Darga Road Widening.
VIII-C—Syed Amir Ali Avenue.
IX—Old Post Office Street Widening near High Court.
X—Ripon Street Triangle.
XI—St. James Square.
XII—Park St. Widening (Chowringhee to Wellesley Street).
XII-A—Park St. Widening (Wellesley St. to Loudon St.).
XIII—Marcus Square Extension—between Munshi Sadaruddin Lane and Machuabazar Street.
XIV—Desabandhu Park—between Canal West Road and Shambazar Bridge.
*XIV-A—Dhaniabagan Road Extension.
XV-A—Tolly's Nullah to Russa Road.
XV-B—Rashbehary Avenue.
XV-C—Gariahat Road to Ballygunge Station.
XV-D—Lansdowne Road Extension.
XVI—Diamond Harbour Road Widening—Kidderpore Bridge to Sterndale Road.
XVI-A—Diamond Harbour Road Widening—Sterndale Road to 42, Diamond Harbour Road.
XVII—Chatawala Gullee—40-ft. Road between Lower Chitpore Road & Chatawala Gulee.
XVII-A—Chatawala Gullee to Eden Hospital Road (cancelled by Govt. in Notification No. 1032M, dated 29-3-28).
* XVIII—Armenian Street to Harrison Road.
XIX—Gariahat Road Diversion.
XX—Dharamtala Street to Corporation Street.
XXI—Dalhousie Square Improvement.
XXII—(Revised)—Sashi Bhusan Dey Street Widening—St. James Square to Bowbazar Street.
* XXIII—In continuation of the Trust's 20 feet road on the north in the Kerbala Tank Lane Rehousing Scheme.
*XXIV—Lindsay St. Extension.
* XXV—Kapalitola Lane Widening—Nalanda Square to Scheme No. VII-D.
XXVI—(Revised)—Darpanarayan Tagore Street to Pathuriaghata Street (Portion of Proposed Public Street No. XIV).
XXVII—Barrabazar—Maidapati Area.
XXVIII-A—Strand Road Widening—Raja Woodmunt Street to Howrah Bridge Approach.
XXIX—Road Connecting Cossipore Chitpore Open Space with Belgachia Road.
XXX—Alms House Site Open Space.
XXXI—Mati Sil Street Widening and Extension—Chowringhee Place to Dharamtala Street.
XXXII—Widening of a portion of Banstala Street.
XXXIII—Southern Avenue (1st Section).
XXXIV—Mission Row Widening.
XXXV—Eastern Park to Gorachand Road.
XXXVII—Chittaranjan Avenue to Shambazar.
XXXVIII—Mission Row to Chittaranjan Avenue.
* XXXIX—Humayan Place Widening and Extension and Bertram Street Widening.
XL—Chittaranjan Avenue to Wellington Street.
XLI—Chandni Chak Street Widening.
XLII—Kalakar Street, etc., Widening.
XLIII—Dharmahata Street Widening (portion).
XLIV—Diagonal Road—Grey St. to Nimtala Ghat Street.
XLV—Howrah Bridge Approach—Dalhousie Sq. North to Canning Street.
XLVI—Scheme No. VII-G Extension—from Strand Road to Port Trust Railway.
XLVII—Eastern Portion of Southern Avenue.
XLVIII—Old Ballygunge Road and Gariahat Road widening between Ballygunge Station Road and Ekdalia Road.
XLIX—Gora Chand Road to South Road, Entally
L—Howrah Bridge Approach—Canning Street to Strand Road.
LI—Central Avenue to Upper Chitpore Road.
LII—South Road, Entally to Middle Road, Entally.
LIII—Chittaranjan Avenue to Wellington Street.

* LIV—Topsia.
LV—Widening of Middle Road, Entally.
* LVI—Chowringhee—Park Street Junction.
LVII—Chittaranjan Avenue to Blackburn Lane.
LVIII—Raja Rajbullav Street to Baghbazar Street.
* LIX—Park Circus.
LX—Re-alignment of Roadways—South of Govt. House.
LXI—Sankar Bose Road—Chetla.
*General Improvement Scheme No. 1—Burrabazar.
Maniktala Scheme No. I—From Upper Circular Road to Baldiapara Road and Maniktala Bridge Approaches.
Maniktala Scheme No. IA—Maniktala alteration.
Maniktala Scheme No. II—Beliaghata Bridge Approaches.
Manicktala Scheme No. III—Narikeldanga Bridge Approaches.
Maniktala Scheme No. IV—Beliaghata Main Road to Narkeldanga Main Road.
Maniktala Scheme No. IV—Supplementary Excavation of earth.
Maniktala Scheme No. V—Upper Circular Road to Ultadanga Main Road.
Maniktala Scheme No. VI—Narkeldanga Main Road to Maniktala Main Road.
Maniktala Scheme No. VII—Maniktala Main Road to Ultadanga Main Road.
Howrah Scheme No. I—New Howrah Bridge to Maulna Abul Kalam Azad Road.
Bustee Improvement Scheme No. I.

LIST OF ALIGNMENTS (PROPOSED PUBLIC STREETS) PUBLISHED OR SANCTIONED

(Those marked with asterisk were abandoned.)

I—Central Avenue Extension—Beadon Street to Shambazar Street.
II—Dhurrumtolla Street Extension—from the junction with Lower Circular Road to Tangra Road.
III—Gobra Main Road—Lower Circular Road eastwards to Kamardanga Road South.
IV—Portuguese Church Diagonal—Roman Catholic Cathedral to Chitpore Road.
V—Bowbazar Parallel—Royal Exchange Place to Chunapuker Lane.
VI—Ahiritolla Diagonal—Nimtolla Ghat Street to Upper Chitpore Road.
VII—Inner Strand Road, North—North and South Road, Ward No. 2—Nimtola Ghat Street at its junction with Baisnab Charan Set Street to Sovabazar Street.
VIII—Ahiritolla Street Widening from its junction with Darmahatta Street.
IX—Central Avenue Extension—Shambazar Street to Galiff Street.
X—Bentinck Street Widening from its junction with Lalbazar and Bowbazar Street to Mangoe Lane.
XI—Dhurrumtolla Relief Road—Mangoe Lane Extension—Dhurrumtolla Street to Lall Bazar Street.
XII—Ballygunge Main Road—Ekdalia Road to Jhowtola Road.
XIII—Jagannath Ghat Road—Central Avenue—Jorapuker Square Lane to Jagannath Ghat.
XIV—Inner Stand Road, South, North and South Road, Ward No. 5,—Nimtola Ghat Street at its junction with Baisnab Charan Set Street to Durpo Narain Tagore Street.
*XV—Darmahatta Street Widening.
XVI—Amherst Street Extension—Amherst Street to Loudon Street.
XVII—Kyd Street Extension—Western Section—Kyd Street to Marquis Street.
XVIII—Kyd Street Extension—Eastern Section, Wellesley Street to Circular Road along Alimuddin Street.
* XIX—Taltola Diagonal—Alimuddin Street to Dhurrumtolla Street.
XX—Shambazar Street Widening—East of Central Avenue—Raja Raj Bullav Street to Cornwallis Street.
XXI—Ahiritolla Diagonal Extension—From Upper Chitpore Road at its junction with proposed Public Street No. VI to Proposed Public Street No. I.
XXII—Kumartuli Ghat Road—Kumartuli Ghat to Central Avenue.
XXIII—Outer Circular Road—Gobra Main Road to Park Circus.
XXIV—Linton Street Area.
XXV—Gora Chand Road Area.
XXVI—Entally Park Avenue.
XXVII—Tiljala Area.
XXVIII—Howrah Bridge Approach.
XXIX—Strand Road North Widening.
XXX—Diamond Harbour Road Widening.
XXXI—New Ultadingi Road.
XXXII—Amherst Street to Circular Road with Baitak Khana Road Diversion.
XXXIII—Park Street Widening.
XXXIV—Area between Lansdowne Road and Ballygunge Circular Road.
XXXV—Diamond Harbour Road Widening—Southern Section.
XXXVI—Russa Road South Extension.
*XXXVII—Armenian Street to Harrison Road.
XXXVIII—Diamond Harbour Road Extension.
XXXIX—Haldar Lane to Wellington Street.
XL—Chowringhee Place—Moti Sil Street Widening and Extension.
XLI—Southern Avenue.
XLII—Chandni Chawk Street Widening.
XLIII—Belliaghatta Road Widening, Sibtala Lane to Canal West Road.
* XLIV—Middle Road Entally to South Road Entally.
XLV—Extension of Pathuriaghata Street to Strand Road.
XLVI—Widening of a portion of Manicktala Street.
XLVII—Ballygunge Avenue to Southern Avenue.
XLVIII—McLeod Street to Lower Circular Road.
XLIX—Convent Lane to Pottery Road.

BURRABAZAR

I—South-East Section.
II—North-East Section.
III—North-West Section.

MANICKTALA

I—Belliaghata Main Road.
II—Narkeldanga Main Road.
III—Manicktala Main Road.
IV—Ultadingi Main Road.
V—Town High Level Sewer Road to New Canal Road.
VI—Narkeldanga Main Road to Proposed Alignment No. IX (Manicktala).
VII—Narkeldanga Main Road to Canal Circular Road.
VIII—Beliaghata Main Road to Narkeldanga Main Road.
XIV—From Beliaghata Canal to Manicktala Main Road.

†Under section 25, Chapter I, page 4 of the Code of Census Procedure in Bengal for 1901, "House" means a building to which a separate number has been affixed.

*Note—Asterisks denote Fringe Area Wards. Before the amalgamation of the greater part of the old suburbs with Town in 1888 they formed portions of thanas Ooltadangah, Manicktollah, and Balliaghatta. The bulk of the area of these three thanas, which is situated between Circular and new cut Canals was formed in 1889 into the Manicktollah Municipality. The portions left over on the west of the Circular Canal, that is, between the Circular Road of the town and the Manicktollah Municipality, being but small strips situated on the eastern fringe of the town bordering on Circular Road, were amalgamated with the town area wards adjoining under the designation of the Fringe Area Wards. The strip contiguous to Ward No. 1 has, for the purposes of the present census, been called Ward 1FA ; that adjacent to Ward No. 3, Ward No. 3FA ; and so on.

**All ships, vessels and boats have been reckoned as kutcha houses.

‡For the Fort and Suburbs the ratio of pucca and kutcha houses has been assumed to be as 1 : 2.

For references of (a) to (i) see next page.

ANNEXURE A

I (vii) Census of the City of Calcutta taken on the night of the 26th February 1931

Area, Occupied houses, Population and Persons per acre

This table corresponding to imperial table I of 1921 shows for Calcutta by municipal districts and wards, Fort William and the Maidan, Calcutta Port and Canals, suburbs of Calcutta in 24-Parganas district and Howrah City the area in acres with the number of occupied houses, population and number of persons per acre. The addition of figures for municipal districts in Calcutta City, with a consequent irregularity in the presentation of wards in the order of their serial numbers, is an innovation intended to make the tables of more use in the actual administration of the city.

2. For the area of localities in this table no more reliable figures are known than those which have previously appeared in the census reports and which, for the wards of Calcutta Municipality, are those ascertained at a plane-table survey conducted in connection with the census of 1901. The figures given in 1921 have consequently been taken as the basis on which those now shown are calculated. By the Calcutta Municipal Act (Bengal Act III of 1923) the municipalities of Cossipore-Chitpore (2,093 acres), Maniktola (2,182 acres) and Garden Reach (2,752 acres) were added to the municipal limits and in 1924 the Ballygunge Pumping Station and High Level Outfall Sewer (about 160 acres) and some 960 acres of South Suburban Municipality fell under the Calcutta Corporation. The total area thus added to the Calcutta Municipality is 8,147 acres and by this amount all figures in which the Calcutta Municipality is included exceed the figures given for the same areas in 1921. Wards 1-17 and 22-25 remain as in 1921 though ward 17 is known now as Baman Bustee instead of Victoria Terrace, but wards 18-21 have suffered changes of boundry and the areas newly absorbed in and after 1923 have been differently distributed. Cossipore-Chitpore Municipality now forms wards 30, 31 and 32: wards 28 and 29 cover what was the municipality of Maniktola: wards 19 (Entally) and 20 (Beniapukur) of 1921 are now wards 18, 19 and 20: and the double ward Ballygunge-Tollygunge (No. 21 of 1921) with the addition of the pumping station is now divided into wards 21 and 27. Finally Garden Reach ward (No. 26) comprises not only the old Garden Reach Municipality but also the area of 960 acres taken from the South Suburban Municipality. Ward 26, therefore, is shown to be of the same area as its two component parts together, but in the other cases no accurate figures exist. Those furnished by the municipal authorities did not agree with the totals adopted for the reason already stated and were based on nothing more reliable than planimetre calculations from a small scale map: and in reaching the figures of area given in this table for wards 18-21 and 27-32 the figures adopted from the report of 1921 have been divided in the same proportion as the figures of area for the same wards calculated by the corporation. The statement below shows how this distribution has been effected: areas are shown in acres:—

No. and Name of Ward	Area in 1921	Area as given by the Calcutta Corporation	Area adopted in Imperial Table I
1	2	3	4
18	1,111	919	953
19		526	546
20		429	444
21	2,067	810	838
27		1,344	1,389
28	2,182	836	839
29		1,335	1,343
30	2,093	548	559
31		734	750
32		765	784

3. No figures have been forthcoming for the area of individual wards in Howrah. The population of each ward by sexes is shown in columns 2-4 of imperial table XVI, *infra*.

*2,804 acres of the Port Area are included in the wards of Calcutta Corporation and in the total of 18,136 acres of Calcutta Municipal Area, the remainder 986 acres or 1.54 sq. miles representing Calcutta's share of the river Hooghly, being shown under Calcutta. 64 acres of the Port falling within South Suburbs Municipality are not shown although the population of this strip has been included here under the Port. The population of inland and ocean-going vessles, counted outside this area by the Port authorities has also been included under Port.

[1]The figures in this column for the Calcutta District relate to number of households as distinct from census houses.
