PREFACE

The Government used to compile and publish District Manuals for each district prior to 1905. The manuals became obsolete within a few years of their publication, containing as they did not only matter of a more or less permanent character such as physical characteristics, history, religion and ethnography, as also statistical matters which soon became out of date. The Government decided to replace the District Manuals by another publication known as the District Gazetteer, consisting of two volumes, A and B. The A volume contained descriptive matter and such general figures, as might be necessary to explain the text, and the B volume contained detailed statistics. They also decided that the B volume should be brought out periodically, especially after each decennial census. Between 1905 and 1927 A volumes for thirteen districts were published. In 1927 they were discontinued. B volumes for all the districts were published between 1906 and 1915. They were continued to be published even after the 1931 census. They were not published after the 1941 census.

Village Statistics, containing the results of the census for every village in the State, were first compiled and published in 1872, at the instance of Mr. C. E. Gover, who was then the Census Officer in Madras. His successor, in 1882, considered that this publication led to needless expenditure and trouble in printing the tables villagewar, but the Government decided that the Village Statistics should continue to be published. The practice of issuing Village Statistics at every census was followed subsequently. The Village Statistics merely showed the number of occupied houses and population of each village and town by religions.

The idea of preparing the present volume, viz., the District Census Handbook for each district was put forward by Sri R. A. Gopalaswami, I.C.S., Registrar-General, India, and ex-officio Census Commissioner of India, as part of a plan intended to secure an effective method of preserving the census records prepared for areas below the district level. He proposed that all the district census tables and census abstracts prepared during the process of sorting and compilation should be bound together in a single manuscript volume, called the District Census Handbook, and suggested to the State Governments that the handbook (with or without the addition of other useful information relating to the district) should be printed and published, at their own cost, in the same manner as the Village Statistics in the past. In accepting this suggestion, the Government of Madras decided to print and publish the more important portion of statistical data relating to the district and to preserve the rest of the records in a manuscript volume for any future use, to which they may be put.

2. The statistical data embodied in the District Census Handbook have to be understood from the background of the changes introduced in the 1951 census. The most important and fundamental change introduced in the 1951 census consists in the substitution of an economic classification of the people for the classification based on Religion and Communities

adopted in the past. The people were divided into two broad livelihood categories, the Agricultural and Non-Agricultural. Four agricultural classes and four non-agricultural classes were prescribed as shown below :—

Agricultural Classes—

I. Cultivators of land, wholly or mainly owned, and their dependants,
II. Cultivators of land, wholly or mainly unowned, and their dependants,
III. Cultivating labourers and their dependants,
IV. Non-cultivating owners of land, agricultural rent receivers and their dependants.

Non-Agricultural Classes—

Persons (including their dependants) who derive their principal means of livelihood from—

V. Production other than cultivation,
VI. Commerce,
VII. Transport, and
VIII. Other services and miscellaneous sources.

Each of the above eight livelihood classes were divided into three sub-classes with reference to their economic status as below :—

(i) Self-supporting persons,
(ii) Non-earning dependants, and
(iii) Earning dependants.

These livelihood sub-classes have been defined in detail in the fly-leaf notes attached to Economic Table B-I included in this Handbook.

All non-earning dependants are economically passive, all earning dependants are economically semi-active. All self-supporting persons are ordinarily economically active, but the classes and groups specified below constitute an exception to this rule :—

(1) Self-supporting persons of Agricultural Class IV,

(2) Self-supporting persons of Livelihood Class VIII, who derive their principal means of livelihood from any source other than through economic activity, viz.—

(*a*) Non-working owners of non-agricultural property;

(*b*) Pensioners and remittance holders ;

(*c*) Persons living on charity and other persons with unproductive occupations; and

(*d*) Inmates of penal institutions and asylums.

Economically active persons engaged in cultivation are either cultivators or cultivating labourers. Economic Table B-I gives particulars of the population classified according to eight livelihood classes and three sub-classes mentioned above.

Economically active persons engaged in industries and services have been classified with reference to the nature of the commodity produced or service performed. They are further divided into three sections, viz., Employers, Employees and Independent Workers.

Economic Table B-III gives particulars of the economically active persons classified under the divisions and subdivisions of industries and services of the Indian Census Economic Classification Scheme.

Table C-I included in this Handbook covers the population of sample households and Tables C-II and C-IV cover a 10 per cent sample population. The method adopted for extracting these samples has been described in detail in the fly-leaf notes attached to the relevant tables.

3. *Scheme of the Census Handbook.*—The Handbook has been divided into two parts ; Part I consists of three sections, namely, Section (i) containing the general population tables (A series), the Economic Tables (B series), Summary figures for Taluks (Table E), Tables I, II and III relating to Small-scale Industrial establishments and Table L showing the Incidence of Leprosy ; Section (ii) containing the Rural statistics, and Section (iii) containing the Urban statistics ; and Part II containing the Household (size) Table C-I, and Tables showing Livelihood classes by Age-groups and Literacy (C-II and C-IV), the Social and Cultural Tables (D series) and an abstract of non-agricultural occupations in the district. Among the tables included in the Handbook, Table A-IV Towns classified by population with variations since 1901, Economic Table B-II—Secondary means of livelihood under livelihood class and Table C-II—Livelihood classes by age-groups furnish information at the district level. The other population tables in the A series, the summary figures for taluks (Table E) and the Infirmity (Table L) showing the incidence of leprosy furnish information for each taluk in the district with a district total. The rural statistics in Part I—Section (ii) furnish basic information in respect of every village and town arranged according to census tracts. In addition to the total population of the villages, and its distribution among the eight livelihood classes, information regarding the number of literates, the cultivated area, the number of small-scale industrial establishments under categories, textile and non-textile and the number of leprosy cases and doubtful cases has been included.

The urban statistics in Part I, Section (iii) furnish similar information except that relating to cultivated area in respect of every unit classified as city or census town in the district with ward-wise data. All other tables included in the Handbook provide information for units called census tracts with totals for the district.

4. *Census Tracts.*—A distinctive feature of the census statistics is its rural urban break up designed with a view to compare the conditions and characteristics of the rural and urban population. The rural areas of each district were therefore kept distinct from the urban areas. For facilitating tabulation these areas were divided into a number of rural and urban tracts. As far as possible, the rural area in each taluk was constituted into a single rural tract. In a few cases however where the taluks were small in size with reference to their population, the rural areas of more than one taluk were taken together as a single rural tract. The urban tracts have been formed out of areas declared as cities and census towns in each district. Every city was treated as a separate tract. Towns other than cities were grouped together to form non-city urban tracts. Wherever possible, the towns in each taluk were constituted into a single non-city urban tract. In cases where the towns in a taluk had a population of less than 50,000 the towns in more than one taluk were grouped

together to form a non-city urban tract. All the rural tracts in the State have been assigned numbers in one series, the non-city urban tracts in another series and the city tracts in a third series. In all the tables where the data have been furnished for tracts, the tracts have been denoted by numbers that have been assigned to them. A list of tracts into which the district has been divided and the areas comprised in each is furnished in the fly-leaf note to Economic Table B-I relating to the district.

The districts, taluks and villages mentioned in the Tables and Abstracts have been shown along with the census location code numbers assigned to them for purposes of census operations.

The numbers given to the Tables in this publication correspond to those given in the State Census Report.

Elaborate notes explaining the scheme of each Table has been introduced in the fly-leaf attached to each with a view to enable the reader to get a precise idea of the data furnished in the Tables.

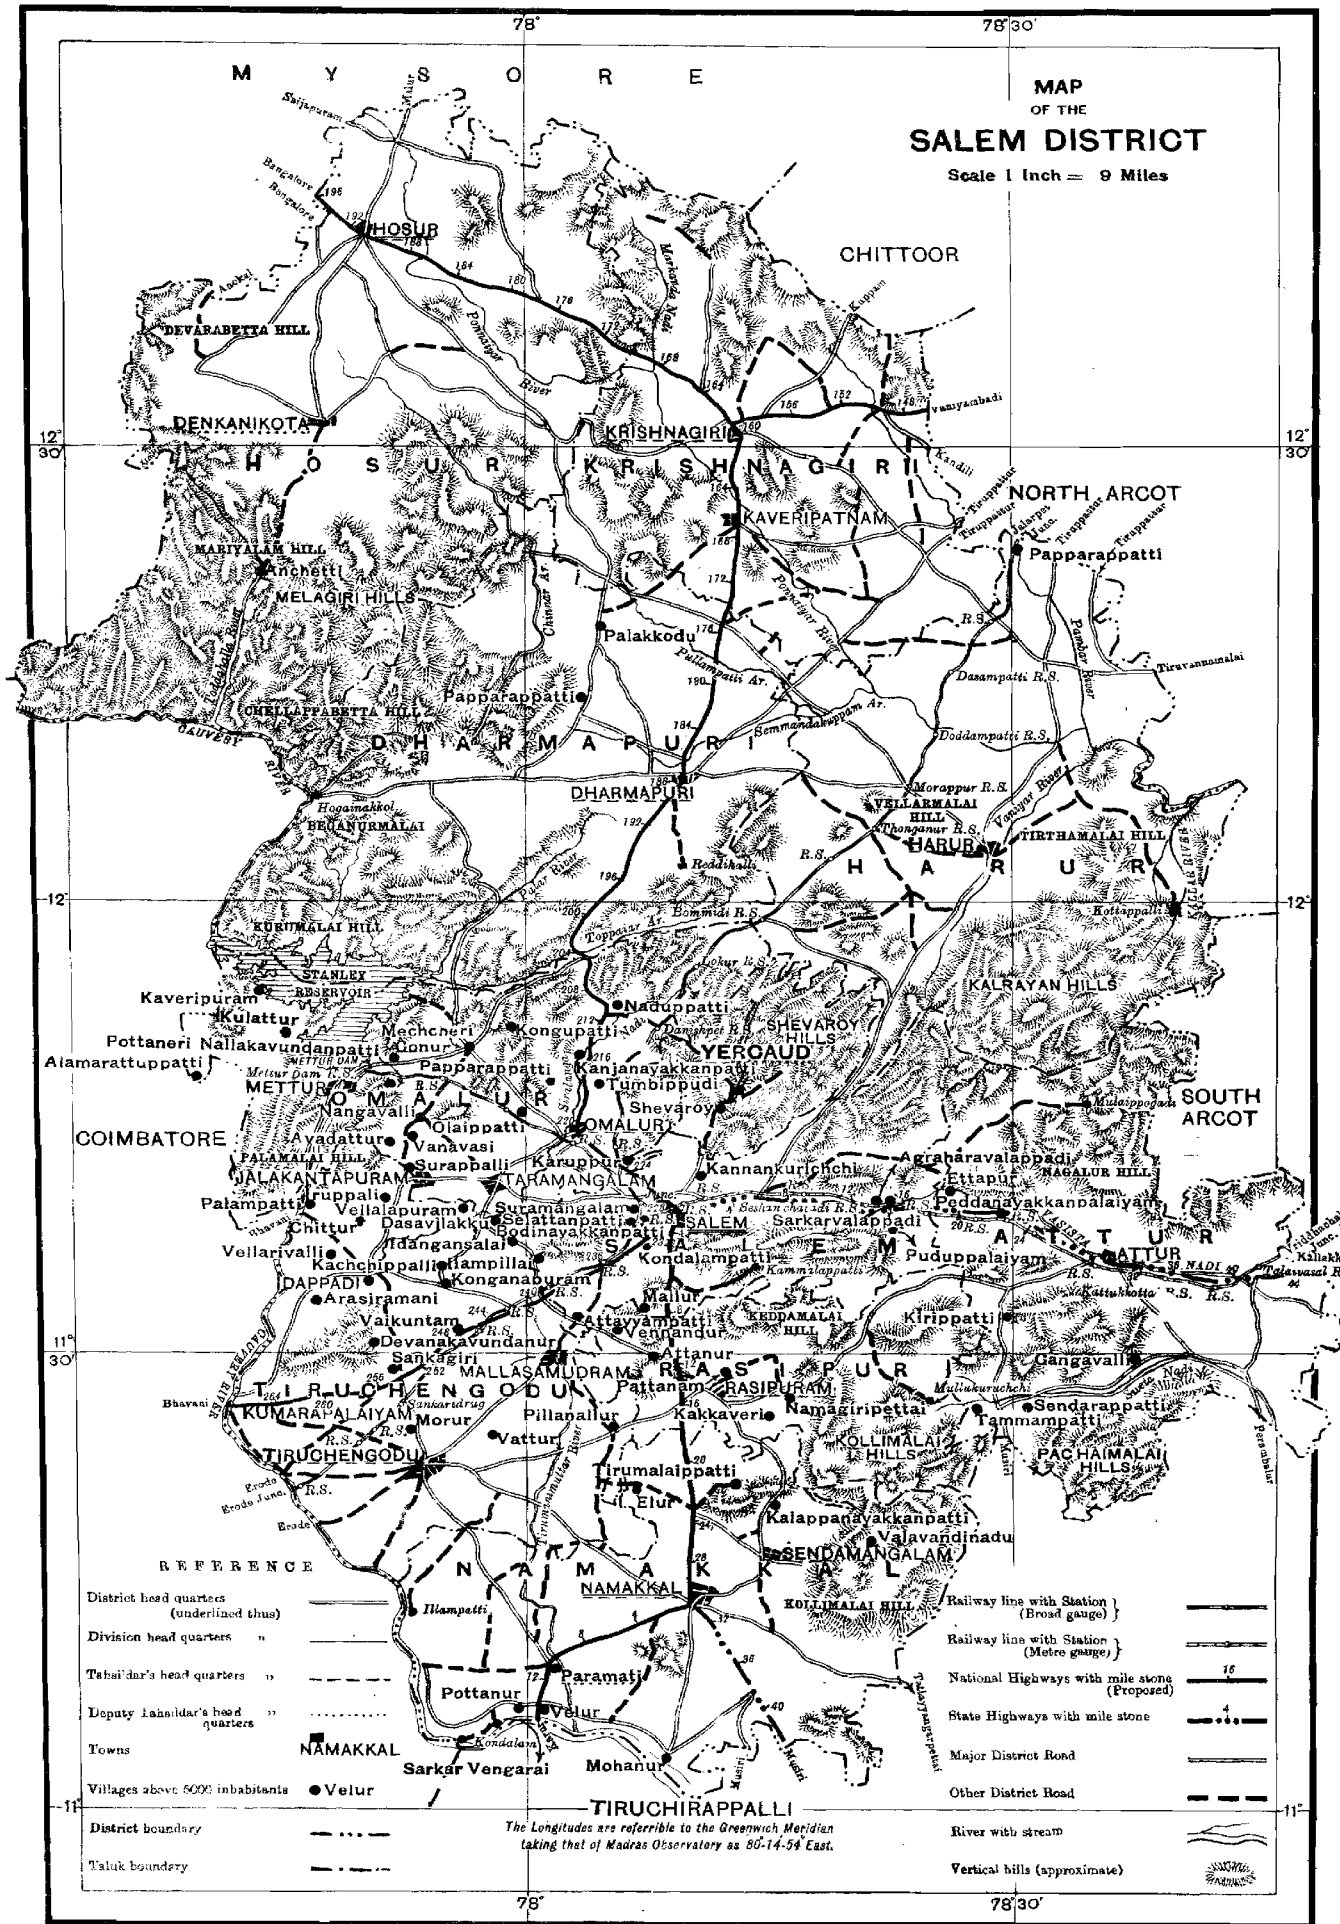

5. *Tables relating to Small-scale Industries.*—In the year 1950 a census of Small-scale Industries was instituted under the orders of the Government. The object was to get some idea about small industries such as cottage and home industries, small establishments, workshops, etc., where articles were produced, repaired or otherwise treated for sale, use or disposal and small mines. The enquiry was confined to establishments to which the Factories Act was not applicable. Individuals who worked on their own and did not employ other people were left out of account. From the data collected three Tables were prepared and they have been included in the Handbook. Information giving villagewise and wardwise information for Small-scale Industries have been incorporated in the rural and urban statistics. The details collected and embodied in the Tables are not to be considered accurate or exhaustive, as the enumeration staff employed had not been trained for the purpose and some cases of under enumeration were noticed. However, the figures given in the Tables may be sufficient to give an insight into the nature of the industries prevalent in the different parts of the district.

6. Opportunity has been taken to put in a short introductory note detailing the salient points connected with the district, such as the physical features, climate, rainfall, irrigation and drainage facilities, roads and other communications, crop statistics, education, industries and other matters of general interest. The information contained in the introductory note is based on the materials furnished by Collectors of districts and Departments of Government. The District Gazetteer was also freely referred to. The relevent paragraph of the 1951 Census Report discussing the growth of population in the district has also been incorporated in the proper place.

A district map showing taluk boundaries, physical features, important roads and places with a population exceeding 5,000 is also attached.

It is hoped that this Handbook will serve as a book of reference on matters relating to the district and that it will be found useful both by Departments of Government and the public.

INTRODUCTION
TO
SALEM DISTRICT

I. (*a*) *Situation.*—Salem district lies between 11° and 12° 55′ of the northern latitude and 77° 28′ and 78° 50′ of the eastern longitude. The district has the Mysore State and Chittoor district on the north, North Arcot and South Arcot districts on the east, Tiruchirappalli district on the south and Coimbatore district and Mysore State on the west. The villages of Morasur, Madivalam, Ettakodi, Araleri, Rayasandiram and Tholakanapalli originally attached to this district were transferred to the Mysore State, and Koladasanapura village formerly of the Mysore State was absorbed in this district. For purposes of Revenue administration the district has been divided into the following divisions and taluks :—

Name of Revenue Division.	Headquarters of Revenue Division.	Taluks comprised in the Revenue Division.	Area of taluk (sq. miles).	Headquarters of taluk.
Hosur	Hosur	Hosur	1,168	Hosur.
		Krishnagiri	688	Krishnagiri.
		Dharmapuri	946	Dharmapuri.
Salem	Salem	Harur	915	Harur.
		Omalur	557	Omalur.
		Salem	377	Salem.
		Yercaud	148	Yercaud
Namakkal	Namakkal	Tiruchengode	603	Tiruchengode.
		Rasipuram	316	Rasipuram.
		Namakkal	682	Namakkal.
		Attur	651	Attur.
		Total	7,051	

Physical characteristics.—The district is elongated from south to north. Hosur taluk is in the north-west with Krishnagiri taluk adjoining it to its east. Dharmapuri and Harur taluks lie to the south of these taluks, the former on the west and the latter on the east. To the south of these taluks from west to east lie Omalur, Salem and Attur taluks. To the south of Omalur taluk lies Tiruchengode taluk. To the south of Salem taluk lies Rasipuram taluk. Namakkal taluk occupies the extreme southern part of the district.

The district may broadly be divided into three natural zones.—(i) The Balaghat plateau which is a continuation of the Mysore Table Land comprising the major portion of Hosur and part of Krishangiri taluks, (ii) the Barmahal basin intermediate between the Table Land and the Plains comprising the other parts of Hosur and Krishnagiri taluks and the taluks of Dharmapuri, Harur and Yercaud and (iii) the Talaghat plains comprising the rest of the district. The table land portion has an average elevation of 3,000 feet above sea level and dips to the south-west. The second zone is of an average elevation of 1,300 feet above sea level. The elevation of the plains ranges from about 1,200 feet to 550 feet.

Hills.—The district is intersected by numerous hill ranges and valleys running parallel to one another. The plateau region, however, is somewhat monotonous, the only conspicuous heights being the Devarbatta Hill in the north-western corner of the district with an elevation of 3,364 feet and the Hosur Hill 3,116 feet in the north of Hosur taluk. The plateau breaks into the upper line of the Ghats to the south and east. The approach to the Ghats from the plateau is marked by a scattered chain of hill forts such as the Sulagiridurgam, the Anchetti Durgam, Muneswarakonda, the Nilagiri, the Hude Durgam, Ratnagiri, the Mallikarjunadurgam and the Kundakotakonda in the south of Hosur taluk. The upper line of the Ghats which fringe the Barmahal zone on the north and west consist of the Melagiri hills comprising the Anchetti, the Nattarapalayam and Urgam valleys, the Manchimalai and the Bettamugalalam plateau in the southern and the south-eastern portion of the Hosur taluk, the Guttirayan Hill peak (4,578 feet) on the border of the Hosur and Dharmapuri taluks and the Uchikal and Erimalai hills in the western portion of Dharmapuri taluk.

Across the Morappur Valley in Dharmapuri taluk are the Pikkili Hills with peaks over 3,000 feet the chief of which is the Tambirayan.

The Rayakotta group of hills lie on the southern border between Hosur and Krishnagiri taluks, and the south-western border of Krishnagiri taluk.

Another group of hills called the Ankusagiri group consists of the spurs of the Mysore plateau southwards from the western borders of Krishnagiri taluk. They are the Kundanimalai, Ankusagiri drug and Balakonda drug on the western border of Krishnagiri taluk

and the Malakonda, Geddikonda and Boggulukonda groups (2,500 feet) in the north of Krishnagiri taluks. Further east of this group lie the Maharajagadai hills (3,383 feet high) in the north of Krishnagiri taluk. Further east of Maharajagadai hills lies the Madugampatti hill with heights not exceeding 2,100 feet.

There are out-liers of the Mysore plateau in the eastern part of Krishnagiri taluk called the Gaganagiri or Periamalai, Tattakkal, Jagadevidurgam, Nagamalai, Pumalai and Mallapadi hill, all of about 2,500 feet in height.

The lower ghats consist of various hills. On the west of Dharmapuri taluk there is a lofty ridge east of the Cauvery consisting of Biganurmalai, Kopumalai, Kadirappanmalai and Segalamalai peaks, all between 2,000 feet and 3,000 feet in height. Between this ridge and the Cauvery there is a smaller ridge containing Karalamalai and Karungal peaks about 1,500 feet high. East of these ridges across the Madalapalam river lies the Perumbalai hill plateau 1,400 feet to 1,900 feet in height.

The Manukondamalai, the Ramasamimalai and the Gundakalmalai hills lie south of Thoppur river in Omalur taluk. North of the Thoppur river in Dharmapuri taluk is situated the Vattalamalai, an abrupt narrow ridge 11 miles in length, culminating in the Mukkanur peak (4,201 feet) in the eastern border of Dharmapuri taluk.

The Shevaroys covering about 100 square miles with the greatest length of 17 miles and the greatest width of 12 miles are situated in the Yercaud taluk. They attain a height of 4,000 feet to 4,800 feet with peaks over 5,000 feet. An out-lier of the Shevaroys is the Kavaramalai group in the south-western corner of Harur taluk which is an irregular group nine miles long and three miles broad with half a dozen peaks exceeding 2,000 feet in height and the highest being Kavaramalai 2,994 feet. South-west of the Shevaroys is another out-lier, the Nagaramalai, in Salem taluk, a small group of hills, the highest point of which is 2,030 feet.

East and north-east of the Shevaroys are the Tenandemalai Range in the south-east of Harur taluk. It consists of the Tirthamalai in the north, the Chitterimalai in the centre and the Aranuttumalais in the south. The Tirthamalai rises up to 3,228 feet in height, but the other two barely rise above 2,500 feet.

The Kalroyan range of hills occupy the northern part of Attur taluk. The northern portion is called Chinna Kalroyans and the southern portion the Periya Kalroyans. The northern portion averages about 2,700 feet in height. The southern portion is of greater height with peaks over 4,000 feet. The Kalroyans extend into the South Arcot and North Arcot districts.

The Pachamalais are partly situated in the southern portion of Attur taluk and partly in Tiruchirappalli district.

The Kollimalais are situated in the east of Rasipuram and Namakkal taluks and partly in Tiruchirappalli district. The former have peaks up to 3,500 feet and the latter have peaks over 4,000 feet.

The Bodamalais is a lofty ridge running east and west nine miles south of Salem over a length of 12 miles. North of the Bodamalais are three sets of hills, the westernmost of which is called Jerugutenmalai.

The Sithamalai is in the west of Omalur taluk, where the Mettur dam joins the Sitamalai and Palamalai.

The Kanjamalai is a rough ridge 4½ miles long and two miles broad with the highest peak of 2,336 feet lying some five miles south-west of Salem. The Godumalai about four miles long lies to the east of Salem rising upwards of 1,500 feet. There are also some other minor hills in the district.

(*b*) *Rivers.*—The chief rivers in the district are the Cauvery, the Vasishtanadi, the Swetanadi and the Ponniyar.

The Cauvery enters the district at the south-western corner of Hosur taluk. Flowing west to east along the southern boundary of the taluk, it takes a southerly course when it flows along the western boundary of Dharmapuri taluk. At the south-western corner of Dharmapuri taluk it turns east into Omalur taluk and then flows south between the Palamalai and the Sithamalai where it is dammed to create the biggest reservoir in the State known as the Mettur Reservoir. It then flows along the western boundary of Tiruchengode and Namakkal taluks and on the south-western corner of the latter taluk it again takes an easterly direction and enters Tiruchirappalli district. The chief tributaries of the Cauvery are the Sanatkumaranadi (Chinnar), the Thoppur river, the Sarbhanganadi and the Tirumanimuttar.

The Sanatkumaranadi rises near Talai in Hosur taluk and flows east and south of the Melagiri hills and joins the Cauvery below the Hagenakal falls in Dharmapuri taluk.

The Thoppur river rises in the Shevaroys and flowing along the southern border of Harur and Dharmapuri taluks joins the Cauvery at Solappadi.

The Sarbhanganadi formed by the union of two streams rising in the Shevaroys flows across Omalur and Tiruchengode taluks and joins the Cauvery near Kaveripatti.

The Tirumanimuttar is formed by two streams which unite three miles above Salem. It flows south across Salem and Rasipuram taluks, the eastern part of Tiruchengode taluk and the western portion of Namakkal taluk eventually joining the Cauvery.

The Vasishtanadi and the Swetanadi flow across Attur taluk into South Arcot District draining the country between the Kalroyan Hills and the Pachamalais and the Kollimalais. The Vasishtanadi which is the northern of the two is also called Perar. It rises in the Aranuttumalai in Salem taluk. It receives the combined waters of the Kariyarkoil river and the Ammapalayam river. The river is also fed by the Mekapalli river and the Singapuram river.

The Swetanadi (white river) drains the entire Kollimalai and Pachamalai areas. The Vasishtanadi and Swetanadi unite together in South Arcot district and take the name of Vellar.

The Ponniyar rises near Nandidrug in Mysore State flows in a south-easterly direction across Hosur, Krishnagiri and Harur taluks. Its chief tributaries are the Markandanadhi, the Kambayanallur river, the Pambar and the Vaniyar. The Kambayanallur river drains the major portion of Dharmapuri taluk and is joined by the Pulahari river and the Dharmapuri river. The Pambar rises in the Javadis in North Arcot district and flows south across the eastern portion of Krishnagiri and Harur taluks before it joins the Ponniyar. The Pambar in turn is fed by the Mathur river, the Barkur river and the Sandur river in Krishnagiri taluk. The Vaniyar rises in the Shevaroys near Yercaud. It reaches the plains at Venkatasamudram and flowing across Harur taluk joins the Ponniyar below its confluence with the Pambar.

(*c*) *Forests.*—About a fifth of the area of the district is covered by forests. The area of forests in the district is 1,565·822 square miles. Their taluk-wise distribution is given below :—

Name of taluk.	Total square miles (reserved forests).
Hosur	392·67
Krishnagiri	48·95
Dharmapuri	251·682
Harur	296·77
Omalur	118·09
Salem	168·58
Yercaud	
Tiruchengode	12·90
Rasipuram	82·65
Namakkal	59·24
Attur	134·29
Total ..	1,565·822

The forests contain deciduous species with thorny undergrowth. Sandal and bamboos occur in abundance. The forests also contain good grazing grounds. Game such as sambhur, spotted deer, panther, etc., are present in small numbers in the higher regions.

(*d*) *Climate and rainfall.*—The hottest months are April and May. The heat declines steadily from June on the outbreak of the south-west monsoon on the West Coast. But, owing to the stillness of the atmosphere in September and October, the temperature is oppressive. Most of the rainfall of both the monsoons fall between August and October. Irregular showers are had in June and July and summer showers in May. The dryness of the atmosphere, the comperatively cool nights and the drop in temperature from June onwards render the climate of the district on the whole pleasant. The Shevaroys in Yercaud taluk enjoy a very pleasant climate with a mild temperature all the year round and good rainfall. Yercaud is a hill station.

The particulars of monthly mean of daily maximum and daily minimum temperature, the highest recorded and the lowest recorded temperature and the mean of monthly rainfall for the years 1881–1940 and similar particulars and actual rainfall for the year 1951 as recorded at Salem are given in the subjoined statement :—

(*e*) *Soils.*—The soils are mostly black clay, mixed or black loam, black sand, mixed or loamy red ferruginous and red sand or gravel. The black or regar loam is considered most fertile. It absorbs moisture from the atmosphere and retains it. The red sandy soils are equal to loams in productivity. In Hosur taluk the soil is chiefly red and sandy loam. Harur taluk consists mostly of poor sandy soil. Considerable stretches of good loams and black clay are found in parts of Dharmapuri and Krishnagiri taluks. In the immediate vicinity of Dharmapuri town black cotton soil is present. In the Talaghat section red soils predominate. In and around Attur the soil is black (due to alluvial deposits with red sub-soil). The percentage distribution of the various types of soils in the various taluks is given below :—

(*f*) *Irrigation and drainage facilities and liability to famine.*—The chief sources of irrigation are the river systems of the Cauvery, the Tirumanimuttar, the Sarbhanganadi, the Swetanadi, the Vasishtanadi, the Ponniyar, the Chinnar or the Sanatkumaranadi and the Vaniyar. There are also irrigation tanks which are rainfed. In some places there are wells to supplement the tank irrigation.

Hosur taluk.—Irrigation is carried on by tanks and anicut channels. The tanks are mainly rainfed except two which are fed by anicut channels. The taluk is not liable to famine.

Krishnagiri taluk.—The chief irrigation source is the Barur tank serving about 3,853 acres for a first crop and 2,238 acres for a second crop. The tank is fed by the channel taking off from the left flank of the Nadungal anicut across the Ponniyar. On the right flank of the anicut the Agaram channel takes off and irrigates several villages terminating at Devarhatti tank. The Perukandapuram tank which was built as a famine relief work is fed by the Sandur river and the Mettur river of the Pambar basin. Another source is the Badathalev Project. The taluk is not liable to famine.

Dharmapuri taluk.—There are 6 big irrigation tanks, numerous minor tanks and a few anicut channels. Most of the tanks are rainfed. The taluk is not liable to famine.

Harur taluk.—There are numerous small tanks with ayacuts less than 10 acres. The Alapuram and Venkatasamudram tanks are important and are fed by the Vaniyar. The supply in the Harur tank, Tirthagiri velasai tank and Pariapalli tank is supplemented by anicut channels. All the other tanks are mainly rainfed. The taluk is not liable to famine.

Omalur taluk.—The chief irrigation source is the Sarbhanganadi with its tributaries. There are three big tanks and numerous anicut channels and minor tanks. The taluk is not liable to famine.

Salem taluk.—Irrigation is carried on mainly by anicut channels from the Tirumanimuttar and the Sarbhanganadi. There are many small tanks mostly rainfed and a few fed by river channels also. The major irrigation sources are Naikarapatti tank, Ammapalayam tank, Sandyar Attiyampallimookaneri and Kannankurichi tank. The taluk is not liable to famine.

Tiruchengode taluk.—The chief irrigation sources are the Sarbhanganadi and the Tirumanimuttar. Anaiperur tank and Yedapudi tank are fed by the former. There are anicuts across Sarabhanganadi at Vellalapuram, Vembaneri, Molai and Thevur. Mangalam and Mallasamudram tanks are fed by the Ponnar, a tributary of the Tirumanimuttar. Kottapalayam tank, Poruthipalli tank and Illupalli tank are fed by the Tirumanimuttar, across which there are anicuts at Konnaiyur, Kothambundi and Laddivadi. There are some small minor irrigation tanks which are scattered over the taluk and are rainfed. The taluk is not liable to famine.

Rasipuram taluk.—There is irrigation under the Tirumanimuttar both by anicut channels and tanks fed by these channels. The important tanks are the Thoppapatti tank, Akkaraipatti tank, Anaipalayam tank, Pattanam tank and Sirapalli tank. There are besides several rainfed minor irrigation tanks. The taluk is not liable to famine.

Namakkal taluk.—The Cauvery channels irrigate some villages in the taluk. They are the Raja Channel 21 miles long, the Komarapalayam channel 11 miles long and the Mohanur Channel 16 miles long. In addition, there are several big tanks and minor irrigation tanks scattered all over the taluk. Most of the minor tanks are rainfed, while some of the big tanks are fed by supply channels taking off from the anicuts built across the Tirumanimuttar. The taluk is free from famine.

Attur taluk.—The taluk has good irrigation facilities on account of the Vasishtanadi and the Swetanadi which get abundant freshes. There are several anicuts across these rivers and several big tanks are fed by them. The taluk is free from famine.

A statement showing the number of minor irrigation sources, area irrigated by them and the area irrigated by major irrigation sources is given below:

II. (*a*) (i) *Growth of population.*—The particulars of population of the district and taluks in 1941 and 1951 and the percentage of variation are furnished below :—

Name of district and taluk.	Population. 1941.	Population. 1951.	Percentage of variation.
Salem district	2,864,957	3,371,769	17·7
Hosur	219,971	270,687	23·1

Attur	221,505	265,471	19·8
Yercaud	17,245	19,739	14·5

The population has increased by 17·7 per cent during the decade under review, as against 17·9 per cent in the previous decade. The figures reflect the fact that, on the whole, the decade has been a prosperous one for this district. The marked increases, which call for comment are those in the Salem taluk 31·6 per cent, Omalur 29·1 per cent, Attur 19·9 per cent and Hosur taluk 23·1 per cent. The dominant factor in Salem taluk has been the industrial and commercial development of Salem Town. Two new textile mills have come into existence during the decade and also other industries, viz., magnesite mines, carpet and druggets factories, coffee curing factory, alluminium factory, tanning factory, sandal-wood oil factory, cinema studio, etc.

In Omalur taluk, the dominant factor has been the setting up of industries at Mettur—a textile mill, Mettur Chemicals, etc., and the large number of immigrants that have been attracted as a consequence. Attur taluk is the chief paddy producing centre for the district and has consequently attracted many families and labouring classes, from areas where there is food scarcity. The other attractions for immigrants have been the agricultural colonies opened in this taluk, motor works, opening of glass factories and rice mills. Hosur taluk has, it is reported, a plentiful supply of ragi which has attracted immigrants from scarcity areas. A large number of persons displaced from the Mettur Reservoir area have settled down in this taluk.

(Extracted from the Census Report—Part I.)

(ii) *Vital statistics.*—A statement showing the particulars of births and deaths and deaths due to various causes for the decennium, 1941–50 in the district is furnished as *Annexure II.*

Compared to the average birth and death rates of 31·7 and 21·2 per mille for the State during the decade under review, those for the district, 28·0 and 16·5 are low. The annual death rates show a downward trend from 21·1 per mille in 1943 to 14·5 per mille in 1950 recording a decrease of over 30 per cent. The district experienced a very severe epidemic of cholera in 1943, the death rate being 1·7 per mille as against the average rate of 0·4 per cholera in the district during the decade. Since 1946 there has been a noticeable fall in the mortality from fevers. The average death rate from fevers in the district during 1941–45 was 5·7 per mille and that during 1946–50 was 3·5 per mille, a reduction of about 40 per cent. The average death rates from smallpox,

fevers, dysentery and diarrhœa and respiratory diseases were less than the normal rates for the State.

The maternal mortality rate of 6·9 per mille is less than that for the State (8·1).

A—GENERAL POPULATION TABLES

A-I—Area, Houses and Population.

This table shows for the rural and urban areas of each taluk and for the district, the area, the number of inhabited villages and towns, occupied houses and the total population with distribution by sex.

2. The district area shown in column (2) of this table is that supplied by the Surveyor-General of India. Area figures furnished by the Central Survey Office, Madras, have been adopted for the taluks. The total area of the taluks as furnished by the Central Survey Office, Madras, shown within brackets in Col. 2 differs from the area of the district furnished by the Surveyor-General.

3. "*Village*" is the revenue administrative unit within defined boundaries. This table gives particulars in respect of all villages containing one or more groups of habitations. Villages with no habitations are not included in this table.

4. "*Town*" is a place of usually not less than 5,000 inhabitants, possessing distinct urban characteristics. Contonments have been treated as forming part of the towns in which they are situated.

5. "*House*".—Every dwelling with a separate main entrance has been treated as a house for census purposes.

15. SALEM DISTRICT.

A-II—Variation in Population during fifty years.

This table compares the population of the district and of each taluk in the district as ascertained at the Census of 1951 with the corresponding figures of the five previous Censuses. The figures recorded at the previous Censuses have been adjusted for subsequent territorial changes, if any, in order to afford a correct basis of comparison. The adjusted figures show the population of taluks and the district as constituted at present.

2. The main territorial changes that occurred during the decade is the transference of the following villages from this district to Mysore State :

Morasur, Madivalam, Ettakodi, Araleri, Rayasandiram and Tholakanapalli.

The district total affected on account of the transfers due to the exchange of enclaves is shown below :—

E—Summary figures by Taluks.

The data contained in this table have been given for each taluk in the district.

2. The areas shown in column (2) of the table for the district and the taluk 'total' are the latest figures furnished by the Central Survey Office, Madras. The areas given for "urban" are those furnished by the District Officers. The areas for "rural" have been obtained by deducting the figures for "urban" from those for district and taluk "total".

3. The district area furnished by the Surveyor-General India, which has been shown in Table A-I, could not be adopted in this table as talukwise figures have not been furnished by him. The district areas given by the Surveyor-General differ from those furnished by the Central Survey Office, Madras.

4. Previous census figures of population have been adjusted with reference to the merger of States, transfer of enclaves, and inter district transfers, if any. The rural and urban population figures have been taken as they were at the 1941 and 1931 Censuses and as they are at the present Census, regardless of the changes of rural areas into urban areas and *vice versa* from census to census, for the purpose of calculating percentage variation between 1931 and 1941 and between 1941 and 1951. For calculating density for 'rural' and 'urban' for 1941, the areas of the towns newly formed at the present Census rounded to the nearest square mile have been deducted from the areas given for urban in column (2) for 1951 and added to the areas given for 'rural', in the districts and taluks where new towns have been recognised.

5. In respect of Yercaud taluk which has no urban areas, the figures represent the totals alone.

B—ECONOMIC TABLES.

B-I—Livelihood Classes and Sub-classes.

This table shows by rural/urban break-up for each census tract in the district the distribution of population, sex-wise, among the eight livelihood classes and the three sub-classes, viz., self-supporting persons, non-earning dependants and earning dependants under each livelihood class into which the economic characteristics of the people have been classified under the I.C.E.C. Scheme—vide fly-leaf to Table A-V.

2. The areas comprised each of the Census tracts into which this district has been delimited for the purposes of Census tabulation are given below :—

3. The livelihood classification is based on the principal means of livelihood of the self-supporting persons, the principal means of livelihood for earning and non-earning dependants being the same as that of the self-supporting persons on whom they are dependant.

4. "The principal means of livelihood" is the means of livelihood which provides the largest or the major part of the income in the case of self-supporting persons who have more than one means of livelihood. In the case of other self-supporting persons, it is the only means of livelihood.

5. A person has been regarded as "Self-supporting" if the income secured by the person is sufficient at least for his (or her) own maintenance at the level of living and adopted by him (or her) at the time of the Census. The income secured may be in cash or kind. Anyone who is not a "Self-supporting" person in this sense has been regarded as a dependant. An "earning" dependant is a person who secures an income which is not sufficient to support him (or her). A person who does not secure any income either in cash or kind, is a 'non-earning dependant'.

6. The non-earning dependants include persons performing housework or other domestic or personal services for other members of the same family household, but do not include "unpaid family workers" or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise. These latter persons have been classed as either self-supporting or earning dependants according to the share of income attributable to them.

7. The self-supporting persons shown in Livelihood Class VIII include also persons who derive their income otherwise than through productive activity, i.e., persons coming under the following groups, details for which are given in the fly-leaf to Economic Table B-III :—

(1) Persons living principally on income from non-agricultural property ;

(2) Persons living principally on pensions, remittances, scholarships and funds ;

(3) Inmates of jails, asylums, alms houses and recipients of doles ;

(4) Beggars and vagrants ; and

(5) All other persons living principally on income derived from non-productive activity.

This table gives for the district the number of persons, in each of the eight livel hood classes mentioned in Economic Table B-I, who possess a secondary means of livelihood; and cross classifies them (according to the nature of such means of livel.hood) under the same eight livelihood classes.

B-III—Employers, Employees and Independent Workers in Industries and Services by Divisions and Subdivisions.

This table gives figures for each census tract in the district. The areas comprised in each census tract denoted by its number in column (1) have been specified in the fly-leaf to Table B-I. In this table the self-supporting persons in the four non-agricultural classes given in Economic Table B-I are distributed in the various divisions and subdivisions of Industries and Services under the Indian Census Economic Classification Scheme, according to their secondary Economic Status, namely, employer, employee, and independent worker.

2. (An) Employer (is) a person who employs other persons in order to carry on the business from which he secures his livelihood and pays them a salary or wage in cash or kind.

3. (An) Employee (is) a person who ordinarily works for some other person for a salary or a wage, whether in cash or in kind in order to earn his livelihood.

4. (An) Independent worker (is) a person who works on his own without being employed by anyone for a salary or wage and who does not also employ anyone else in order to earn his livelihood.

5. Under the New Indian Census Economic Classification Scheme all employers and independent workers have been classified with reference to the commodity produced or services performed by them individually. As regards employees, all persons engaged in Production, Commerce, or Transport (and not being domestic servants) have been classified with reference to their own activity and without reference to that of their employer. Domestic servants have been classified in one subdivision without reference to the nature of their work. All other Employees (including all managerial and supervisory employees, clerical services, messengers, watchmen and unskilled labour of every description) have been classified with reference to the commodity produced or services rendered by their employers.

6. The non-agricultural classes classified in Economic Table B-I, correspond to the divisions and subdivisions into which they are distributed in this table as follows :—

Livelihood class.	Division and subdivisions of the *I.C.E.C. Scheme.*
Class V—Production other than cultivation.	Division 0.—Primary Industries not elsewhere specified.
	Division 1.—Mining and Quarrying.
	Division 2.—Processing and Manufacture of Foodstuffs, Textiles, Leather and Products thereof.
	Division 3.—Processing and Manufacture—Metals, Chemicals and Products thereof.
	Division 4.—Processing and Manufacture—Not elsewhere specified.
Class VI—Commerce.	Division 6.—Commerce.
Class VII—Transport.	Subdivisions 7·0 to 7·4 of Division 7—Transport, Storage and Communications.
Class VIII—Other Services and Miscellaneous sources.	Division 5.—Construction and Utilities.
	Division 7.—Transport, Storage and Communications with the exception of subdivisions 7·0 to 7·4.
	Division 8.—Health, Education and Public Administration ; and
	Division 9.—Services not elsewhere specified.

Class VIII also includes persons who derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity), e.g., income from investments, pensions and family remittances, proceeds of begging and other un-productive activities. These are not however, included in this table as it is limited to industries and services. Hence there will be a difference to this extent between the total self-supporting persons of the non-agricultural class in Economic Table B-I and the total of this table. The reconciliation will be effected by adding the figures given in the next paragraph.

PART II.

C—HOUSEHOLD AND AGE (SAMPLE) TABLES.

C-I—Household (size).

This table has been prepared in respect of a population covering the members of sample households selected from the entries in the National Register of Citizens on the basis of one household for every one thousand households. The sample households selected include roughly every tenth household in every hundredth house-numbering block in the rural areas and every fiftieth household in every twentieth house-numbering block or locality in urban areas.

2. The agricultural and the non-agricultural classes refer to the four agricultural and the four non-agricultural classes given in Table A-V. The Backward Classes include the Scheduled Castes, the Scheduled Tribes and other classes not treated as non-backward by the State Government for the purpose of 1951 Census. Anglo-Indians are included among the non-backward classes.

3. Columns (2) to (5) of the table relate to all the households and household population in the entire district while columns (6) to (17) relate to the sample households selected.

4. The figures have been given for each Census tract denoted by its number in column (1). The areas comprised in each Census tract have been given in the fly-leaf to Table B-I.

C-II—Livelihood Classes by Age-groups.

This table shows the livelihood distribution by age-groups for rural, urban and district totals in respect of a sample population based on a ten per cent sample taken out when the enumeration slips were initially sorted. The ten per cent sample was taken out as follows :—

Each enumeration pad which consisted generally of 100 enumeration slips was broken and the slips relating to displaced persons which had been noticed during the process of the preliminary scrutiny were removed from the pack of slips for being dealt with separately. The pack was then "cut" as in a card-game. The lower portion was placed above the upper portion and the slips were dealt into two pigeon-holes one marked "G" and the other marked "S" as follows :

The first five slips were placed in the pigeon, hole "G", then one slip was placed in the pigeon-hole "S." Thereafter for every nine slips placed in the pigeon-hole "G", one slip was placed in the pigeon-hole "S" until the total number of slips left was less than 9 and these residuary slips were all put into hole "G." All the slips contained in the pigeon-hole marked "S" were taken out, counted and marked as 'Sample' slips.

No smoothing formula has been adopted in preparing the table as in previous Censuses and the figures have been tabulated as actually returned in suitable age-groups.

The figures under age '0' represent infants below one year.
