DISTRICT CENSUS HANDBOOK
1951

ALLAHABAD DISTRICT

FOREWORD

Several States, including Uttar Pradesh, have been publishing village statistics by districts at each census. In 1941 they were published in U. P. under the title "District Census Statistics" with a separate volume for each district. In the 1951 census, when the tabulation has been more elaborate than ever in view of the requirements of the country, the district-wise volume has been expanded into a "District Census Handbook", which now contains the District Census Tables (furnishing data with break-up for census tracts within the district), the District Index of Non-agricultural Occupations, agricultural statistics from 1901-02 to 1950-51 and other miscellaneous statistics in addition to the usual village population statistics. The village population statistics also are given in an elaborate form giving the division of the population among eight livelihood classes and other details.

2. It may be added here that a separate set of district-wise volumes giving only population figures of rural areas by villages and of urban areas by wards and mohallas and entitled "District Population Statistics" has already been published. This separate series was necessitated by the urgent requirements of the U. P. Government for elections to local bodies.

3. The number of District Census Handbooks printed so far is twenty-five. Special arrangements for speeding up the printing have now been made and it is hoped that the remaining Handbooks will be printed before the end of 1955.

RAJESHWARI PRASAD, I.A.S.,
Superintendent, Census Operations,
Uttar Pradesh.

RAMPUR:
April 30, 1955.

INTRODUCTION

A—The District

1. The district of Allahabad is bounded on the north for about a third of the distance by the river Ganga, which separates it from Rae Bareli and Pratapgarh districts, while for the remainder it marches with the latter district and Jaunpur. To the east and south-east lie the Banaras and Mirzapur districts, to the south and south-west is the State of Vindhya Pradesh and to the west are the districts of Banda and Fatehpur separated from each other by the river Yamuna. In the recent transfer of enclaves, villages Chaukhandi and Khoha of Karchhana tehsil covering an area of 3·4 square miles have been transferred to Vindhya Pradesh and village Chamur of former Rewa State having an area of 2·4 square miles has been absorbed in Karchhana tehsil of this district. The total area of the district as now constituted is 2,795 square miles which is more than the average district area of the State. Its population in 1951 was 20·48 lakhs. It has 8 tehsils, 14 parganas and 22 thanas.

Topography

2. The Ganga and Yamuna which unite at Allahabad, divide the district into three distinct parts, which differ from one another materially in their general appearance and physical features. The tract between the two rivers, commonly known as the *Doab*, comprises the tehsils of Chail, Sirathu and Manjhanpur. The trans-Ganga or Gangapar tract includes Soraon, Phulpur and Handia; while the trans-Yamuna country, known as Jamanapar, consists of Karchhana and Meja. Taken as a whole the *Doab* presents the appearance of a rich and fertile country. Save in the ravine belts it is remarkably well-wooded and through there is said to have been a great diminution in the grove area since the introduction of the railway, the large number of mango and *mahua* trees is still the chief feature of the country. The trans-Ganga or Gangapar tract bears a close resemblance to the adjoining parts of Avadh. Its southern edge is formed throughout by the Ganga and here are to be seen in places broad strips of rich *kachhar*. North of this is a broad expanse of clay which extends to the district boundary. This clay belt is very rich. The Gangapar tract differs in many respects from the *Doab*. In the latter *jhils* of any size are very rare, while in Gangapar they form the most noticeable feature of the country. Jamanapar, the third tract is entirely different from the rest of the district and geographically belongs to Bundelkhand or the Hills and Plateau Division of the State. In some respects the Karchhana tehsil resembles the *Doab* in both its crops and its soils, being an upland plain of loam and clay with the usual belt of light and indifferent soil along the banks of the Ganga, Yamuna and Tons On its western side, however, the *Doab* soils are replaced by a mixture of clay and the *mar* of Bundelkhand. South of the Tons in the Meja tehsil, there is a fairly rich plain of alluvium in the east. The Vindhyan hills run from the Mirzapur border past Manda, Meja and Kohrar to the western boundary and from their crest northwards as far as the Belan there extends a plateau of inferior *mar* and clay soils. The population of this part is scanty and the cultivation is poor and precarious. Weed or *kans* in this part has caused much land to be abandoned.

In most parts of the district the rivers, Ganga, Yamuna, Tons, Barna, Sai and Sasur Khaderi carry off the drainage with great rapidity, but in a few tracts the natural out-lets for the surface water are inadequate with the result that large and shallow *jhils* are formed. They are found mainly in Soraon, Phulpur and Handia tehsils.

Soils

3. The soils in the *Doab* and the trans-Ganga tracts present few peculiarities. They consist as usual of *balua* or sand, corresponding to the *bhur* of the other districts, found especially on the highest levels in the river banks; of *matiar* or clay in the depressions, the heavy variety which is fitted solely for rice cultivation and can only be worked when thoroughly soaked, going by the local name of *chanchar*; and of the mixture of sand and clay known as *dumat* or loam. In the trans-Yamuna country all these soils occur in the ordinary alluvium while in addition there are others which are characteristic of Bundelkhand. The chief is *mar* commonly described as black cotton soil. The stony soil on the hills is called *bhota* and is of little value while the inferior kind of *chanchar* at the foot of the hills is known as *chopar*.

Classification of area

4. The figures of the classification of area during the last fifty years are given in Table 2 of Part III of this volume. The proportion of area under the various categories works out as follows for 1950-51 :

Particulars	Actual figures (in acres)	Percentage
Cultivated area	1,068,706	58·7
Culturable waste (excluding current fallow)	316,245	17·4
Current fallow	105,057	5·8
Forest	..	..
Area not available for cultivation of which—	330,508	18·1
(a) *Covered with water*	*123,974*	*6·8*
(b) *Under sites, roads and buildings*	*59,153*	*3·2*
(c) *Barren*	*147,381*	*8·1*

The figure in the above table regarding culturable waste taken from the Season and Crop Report is, however, misleading. The State Agriculture Department conducted in 1949-50 a detailed enquiry through the District Officers regarding the nature of this area in each district. The following analysis of the area resulted from this enquiry :

Particulars	Area (in acres)	Percentage
Total culturable waste (A+B+C)	**284,843**	**100**
A—Area under culturable waste land not available for immediate cultivation ..	155,225	54·49
(i) Forest under any legal enactment	..	..
(ii) Groves	70,705	24·82
(iii) Forests of timber trees	1,980	0·70
(iv) Thatching grasses, shrubs and bushes	15,421	5·41
(v) Land kept for grazing	67,119	23·56
B—Area under culturable waste land available for immediate cultivation but which could not be cultivated	104,592	36·72
Of which due to—		
(i) *Kans* growth	390	0·14
(ii) Threshing floors	4,978	1·75
(iii) Malaria	34	0·01
(iv) Floods	3,266	1·15
(v) Lack of drains	6,307	2·21
(vi) Lack of water	22,044	7·74
(vii) Distance from *abadi*	4,109	1·44
(viii) Damage from wild animals	3,756	1·32
(ix) Other causes	59,708	20·96
C—Area under culturable waste land that can be brought under immediate cultivation after some improvements besides the area given against 'B'	25,026	8·79

From the above it will appear that of the total area recorded as cultivable waste, only 8·8 per cent. was really capable of being brought under immediate cultivation after some improvements.

Thus the land area cultivated and cultivable including current fallow *per capita* works out to 72·7 cents of which 57·3* cents have already been brought under cultivation and only about 1·2 cents can be further brought under the plough after some improvements. It is obvious that the saturation point for cultivation has already been reached in the district.

Climate and rainfall

5. The climate of the district is characterised by a delightful cold weather, a long and almost intolerably hot summer and a rainy season which at its commencement at all events is almost as pleasant as that of Bundelkhand. A marked feature of the climate is the extreme dryness of the atmosphere from November to the beginning of the rains; but when the monsoon bursts the conditions undergo a remarkable change. The temperature drops during the rains. On the whole the district is generally considered healthy but the low rice tracts in the northern tehsils are somewhat malarious during and immediately after the rains and the same may be said of the *mar* lands in the trans-Yamuna parganas.

The average rainfall for the last quinquennium was 41·57 inches. During the last 50 years the highest rainfall was 66·60 inches in 1948-49 and lowest was 24·28 inches in 1928-29,

Irrigation

6. Irrigation is derived from wells, canals, tanks, *jhils* and other sources. There is very little irrigation by tube-wells. In 1950-51 the irrigated area from wells other than tube-wells covered 65·4 per cent., by Government canals 17·8 per cent. and by other sources 16·8 per cent. ; tube-wells irrigated only 40 acres of land. Lack of water as mentioned before is experienced in many parts of the district.

*The f[illegible]

Crops

7. Both *kharif* and *rabi* crops compete each other. Sometime one leads and sometime the other. The area under *kharif* in 1950-51 was 668,378 acres, that under *rabi* 600,088 acres and that under *zaid* crops 10,970 acres. In 1949-50 the corresponding figures were 641,586, 669,909 and 10,930 respectively. The principal *kharif* crop is paddy followed by *bajra* and *juar* while the principal *rabi* crop is gram followed by barley and wheat.

B—Analysis of the Statistics

Population: General distribution and density

1. The table below shows the two basic figures—land area and population—and the derived figures of land area *per capita* :

Tehsil	Population (in lakhs)	Density (number per square mile)	Land area (in lakhs of acres)	Land area *per capita*
Chail	5·48	1,810	1·94	0·35
Handia	2·43	819	1·90	0·78
Karchhana	2·55	489	3·34	1·31
Manjhanpur	1·64	599	1·75	1·07
Meja	2·07	314	4·21	2·04
Phulpur	2·27	786	1·85	0·81
Sirathu	1·60	686	1·49	0·93
Soraon	2·44	925	1·69	0·69
Allahabad district	*20·48*	*721**	*18·17*	*0·89*

This district though tenth in order of area stands sixth in the State in respect of population. The district density is well above the average of the State 557. The density of the district has been to a very great extent affected by the presence of the large city of Allahabad. The rural density of the district is only 599 persons per square mile, the density of the rural parts of the tehsils being : Soraon 911, Handia 819, Phulpur 762, Chail 761, Sirathu 674, Manjhanpur 599, Karchhana 485 and Meja 301. The density of the rural parts of tehsils Meja and Karchhana is below the district average while that of Manjhanpur is at par. Meja and Karchhana are the trans-Yamuna tehsils which are more akin to the Hills and Plateau Division of the State. Soraon is the most fertile tehsil of the district. Thus it is clear from the above table that people in the district are not distributed among the different tehsils in any kind of orderly proportion to the land area. (*Vide* Table A-I and E)

Growth of population

2. The growth of population in the district during the last fifty years has been 37·5 per cent. a little greater than the average growth of population in the State which is 30 per cent. The table below exhibits the variation in the total, rural and urban population for the last five decades.

Census year	Population			Variation		
	Total	Rural	Urban	Total	Rural	Urban
1901	**1,490,113**	1,272,767	217,346			
1911	**1,466,862**	1,266,078	200,784	**—23,251** (—1·6)	—6,689 (—0·5)	—16,562 (—7·6)
1921	**1,404,241**	1,217,362	186,879	**—62,621** (—4·3)	—48,716 (—3·9)	—13,905 (—6·9)
1931	**1,491,328**	1,277,175	214,153	**+87,087** (+6·2)	+59,813 (+4·9)	+27,274 (+14·6)
1941	**1,811,950**	1,512,665	299,285	**+320,622** (+21·5)	+235,490 (+18·4)	+85,132 (+39·8)
1951	**2,048,250**	1,682,123	366,127	**+236,300** (+13·0)	+169,458 (+11·2)	+66,842 (+22·3)

*According to the area given by the Surveyor General, it is 733.

A noteworthy feature is that between 1901 and 1921 the population of the district recorded a decrease of 5·8 per cent. when that of the State decreased by 4·0 per cent. During the decades 1901—10 the district suffered from plague and also lost population due to temporary migration caused by plague at the time of the census of 1911. During 1911—21 it suffered from influenza. Abnormal deaths did not occur or were prevented from occurring in the post 1921 period and the population of the district recorded an increases of 45·9 per cent. since 1921 against an increase of 35·5 per cent. in the population of the State during the same period.

The variation in the population of the tehsils during 1941—50 is shown in the marginal table. In Chail tehsil, the larger increase is due chiefly to the growth of Allahabad city. The lowest increases have been shown by Handia and Manjhanpur. It appears that Handia lost its population to Allahabad city.

Tehsil	Percentage variation 1941—51
Allahabad district	*+15·0*
Chail	+19·8
Handia	+4·5
Karchhana	+14·1
Manjhanpur	+8·0
Meja	+11·2
Phulpur	+13·0
Sirathu	+12·6
Soraon	+12·2

Vital Statistics

3. Births and deaths mainly account for the trends in population growth. Migration also is a factor though of lesser importance. The following table gives the mean decennial registered birth and death-rates and the calculated natural increase rates and population growth-rates of the last three decades for the district as a whole and for its rural and urban areas :

	Total	Rural	Urban
Mean decennial birth-rate			
1941—50	15·1	12·6	27·6
1931—40	28·4	27·3	34·2
1921—30	30·3	30·0	32·3
Mean decennial death-rate			
1941—50	9·7	7·8	18·6
1931—40	15·9	14·9	21·8
1921—30	22·2	21·8	24·3
Mean decennial rate of natural increase			
1941—50	5·4	4·8	9·0
1931—40	12·5	12·4	12·4
1921—30	8·1	8·2	8·0
Mean decennial growth-rate			
1941—50	12·2	10·6	20·1
1931—40	19·4	16·9	33·2
1921—30	6·0	4·8	13·6

There are large omissions in the registration of births and deaths and so the above rates do not represent the true picture at all. They may, however, be taken to be roughly indicative of trends. Both birth and death-rates have fallen during the last decade.

The figures of natural increase and growth-rate suggest considerable gain of population by migration during 1931—40 and 1941—50. The city of Allahabad has been attracting the migrants in large numbers. The reverse trend during 1921—30 appears to be the result of temporary migration caused by plague at the time of the census.

The average yearly mortality from various causes in the district during 1941—50 was as follows :

Causes	Number of deaths	Percentage of total deaths
Fever	10,806	57·9
Dysentery and diarrhoea	306	1·7
Respiratory diseases	2,575	13·8
Plague, cholera and small-pox	1,275	6·8
Others	3,694	19·8

As in the rest of the State 'fever' is responsible for a majority of deaths. But fever covers a number of ailments which the reporters are unable to identify. (*Vide* Table 1, Part III of this volume.)

Migration

4. About 92 per cent. of the people enumerated in the district at the census of 1951 were born there, 5·6 per cent. were born in the other districts of the State, 1·6 per cent. were born in other parts of India and only 0·8 per cent. came from other countries. Of the immigrants from the districts of the State as many as 48,496 (males 18,015, females 30,481) are from the other districts of the same natural division and 66,341 (males 26,589, females 39,752) are from other parts of the State. Most of the migration from the neighbouring district is marriage migration. Of 23,102 immigrants from the adjacent States 10,527 (males 4,081, females 6,446) are from Vindhya Pradesh, 4,963 (males 2,807, females 2,156) are from Bihar, 2,676 (males 1,232, females 1,444) are from Madhya Pradesh, 2,021 (males 1,599, females 422) are from Punjab and 1,160 (males 798, females 362) are from Madhya Bharat. The male immigration is largely due to Allahabad city and is of semi-permanent type with or without families. Quite a large female migration from Vindhya Pradesh and some of it from Madhya Pradesh is marriage migration.

Of the immigrants who have come from territories beyond India 16,159 (males 7,961, females 8,198) are born in Pakistan and 1,503 (males 1,037, females 466) had their birth-place in other territories. The Pakistan-born are the displaced persons who numbered 13,817 (males 7,267, females 6,550). Of the immigrants born in other territories 873 (males 657, females 216) are Nepal-born. The sex proportion suggests that the migration from Nepal is semi-permanent labour migration.

Of the 417 non-Indian nationals 166 belong to Nepal, 79 to Britain, 37 to Afghanistan, 33 to America, 28 to China and the rest are from other countries.

Unfortunately the figures of emigration are not available. On the balance of migration according to Vital Statistics, however the district lost about 30,000 persons in the decade 1921—30, while during 1931—40 and 1941—50 it gained about 115,000 and 130,000 respectively. But it should be borne in mind that the figures contain an element of registration error and are only indicative of trends.

Decline of cultivation *per capita*

5. We may now analyse the growth of population in the district during the last thirty years in relation to the growth of cultivation during the same period. The figures relating to this aspect are shown in the marginal table. (Figures of area shown under census years are quinquennial averages for the five years ending with the crop year immediately preceding the census year). It is obvious that cultivation has failed to keep pace with population. The cultivated area *per capita* has gone down to 52·0 cents in 1951 from 73·3 cents in 1921. The magnitude of this drop is about one-third of the 1921 level. It means that (other things being equal) every man, woman and child must expect to get less food and other agricultural produce from the land in 1951 than in 1921.

Census year	Population*	Net area sown (in acres)	Area of cultivation *per capita* (in cents)
1921 ..	1,404,445	1,029,731	73·3
1931 ..	1,491,913	1,031,423	69·2
1941 ..	1,812,981	1,048,169	57·9
1951 ..	1,048,250	1,066,437	52·0

Double cropped area *per capita*

6. It may be examined whether this shortage has been compensated by an increase in the yield per acre. Increase in yield can be brought about by more double cropping, more irrigation, better fertilisation and better culture. The average (quinquennial) area sown more than once was 219,100 acres in 1921 for the district. It decreased to 201,548 acres in 1931. There was an increase to 210,343 acres in 1941. In 1951 there was a substantial increase to 238,228 acres. The figures of double crop cultivation *per capita* in cents are as below.

Particulars	Quinquennial averages for the year preceding			
	1951	*1941*	*1931*	*1921*
Double crop cultivation *per capita* in cents	11·6	11·6	13·6	15·6
Unirrigated double crop cultivation *per capita* in cents ..	11·1	11·2	12·9	14·8
Irrigated double crop cultivation *per capita* in cents	0·5	0·4	0·7	0·8

It is evident that the double cropped area has not kept pace with the rate of growth of population on upto 1941. Since 1941, however, it has just equalled the growth-rate of population.

*The figures of population of the various censuses relate to the then lay-out of the district.

Irrigated area *per capita*

7. The average area irrigated in this district was 244,983 acres in 1921. The figures were 172,396 acres for 1931, 231,533 acres for 1941 and 166,482 acres for 1951. The average area irrigated more than once was 10,769 acres in 1921, 9,855 acres for 1931, 7,439 acres for 1941 and 10,211 acres for 1951.

The figures for irrigation *per capita* are shown in the table below :

Particulars	Years			
	1951	1941	1931	1921
Irrigated single crop cultivation *per capita* in cents	7·6	12·4	10·9	16·7
Irrigated double crop cultivation *per capita* in cents	0·5	0·4	0·7	0·8

The trend is distinctly towards a decline.

Cropped area

8. It is also significant that in spite of the rapid growth of population there has been only a little change in the cropping pattern of the district. The area under food crops has been slowly going up and that under non-food crops has been going down. During the quinquennium 1901—06, 93·4 per cent. of the cropped area was under food crops and only 6·6 per cent. of it was under non-food crops. The corresponding figures for the quinquennium 1906—11 were 93·8 and 6·2, for 1941—46, 94·3 and 5·7 and for 1946—51, 95·0 and 5·0.

The proportionate area under different crops between 1911 and 1951 was as below :

Quinquennial average of	Total cropped area	Percentage of cropped area under							
		Rice	Wheat	Barley	Juar	Bajra	Maize	Gram	Others
1911—16	1,203,305	18·9	6·4	14·9	7·5	9·7	0·1	19·0	23·5
1916—21	1,216,492	19·8	7·2	14·3	7·3	9·8	0·1	19·2	22·3
1921—26	1,223,394	19·3	7·9	13·4	8·1	8·9	0·1	21·7	20·6
1926—31	1,227,815	18·6	8·1	14·3	9·1	7·9	0·1	19·9	22·0
1931—36	1,195,067	16·2	8·1	15·6	9·0	9·1	0·1	18·9	23·0
1936—41	1,266,081	18·6	8·2	13·7	7·6	8·7	0·1	18·7	24·4
1941—46	1,271,902	18·4	6·7	14·1	7·8	9·6	0·1	19·8	23·5
1946—51	1,302,240	21·6	7·2	16·3	7·2	8·2	0·1	17·7	21·7

Opium and indigo are two non-food crops which have gone out of cultivation. In 1901-02 the area under opium was 6,722 acres while in 1950-51 it was nil. In 1901-02 the area under indigo was 2,552 acres, while in 1950-51 it was 1 acre only. The area under cotton has also shown a decreasing trend. It was 13,663 acres in 1901—02 which is now reduced to 133 acres.

Live-stock, ploughs and carts

9. Live-stock in this country live for a large part of the year on by-products of agriculture supplemented by green fodder crops. They have, therefore, to be correlated not only with the grazing available but also with the total area under cultivation which carries a major portion of the burden of supporting the cattle population.

As will appear from Table 3 of Part III the total number of cattle and buffaloes which had been increasing ever since 1920 except for 1935—44 has during 1944—51 increased from about 9 lakhs to about 10 lakhs in this district.

The number of working cattle and buffaloes in the district had decreased from 358,248 in 1935 to 338,711 in 1944. But it increased to 386,728 between 1944—51. This number of working cattle appears to be governed by the number of ploughs and carts. The number of ploughs has gone up from 1·68 lakhs in 1944 to a little over 2·03 lakhs in 1951 due apparently to progressive fractionalisation of holdings. The average net cultivated area per plough works out to 5·26 acres in 1951 as against 6·40 acres in 1920 and the average net cultivated area per pair of working cattle works out to 5·53 acres in 1951 as compared to 5·78 in 1935.

The number of breeding cows and she-buffaloes which practically stood at 3 lakhs during 1935—44 increased to 3·3 lakhs in 1951. The cows and female buffaloes in milk per 1,000 of human population were 42 and 30 respectively. Owing to the poor milk yield the share of milk per head is only a few ounces per day.

The number of sheep decreased from 114,796 in 1920 to 105,006 in 1951 apparently due to shortage of pasture. Goats have been going down in number since 1935 when they were 286 thousands. Their number in 1951 was only 192 thousands.

Horses and ponies also are declining in number. They were 18,776 in 1935 and in 1951 they decreased to 14,712. Donkeys which showed slight fall from 7,015 in 1935 to 6,674 in 1944 have again gone up to 7,199 in 1951. Poultry showed a fall from 101,626 in 1944 to 85,639 in 1951.

Distributed on 1,000 of human population the figures of the main categories of live-stock in 1951 are as follows :

Cattle	Buffaloes	Sheep	Goats	Poultry	Others
357	123	51	94	42	49

10. To sum up, the population of the district is growing up at the biological natural rate since 1921 but, on the other hand, the land area *per capita*, the double crop area *per capita* and the irrigated area *per capita* are steadily declining. There is at the same time no evidence that crop yield per acre has increased nor has there been a material change in the cropping pattern. The cultivated area *per capita* in the district has now become so small that even a slight disturbance by drought is likely to cause scarcity conditions.

Villages and towns

11. The district has 3,524 villages and 10 towns. Out of about 20·5 lakhs of people who were counted at the census of 1951, 16·8 lakhs were found in villages and 3·7 lakhs in the towns, i.e., there are 821 people per 1,000 of the population who live in the rural areas and only 179 of them live in the towns. The corresponding figures for the State as a whole are : rural 864, urban 136.

The rural population per inhabited village works out to 477. But the villages do not necessarily comprise of a single compact size. There are 11,758 hamlets in the district. The population per hamlet is only 143. The medium-sized village with inhabitants numbering between 500—2,000 is the dominant type in the district. Of the rural population 57·7 per cent. live in such villages, 32·6 per cent. in small villages of population under 500, 8·9 per cent. in villages of population between 2,000—5,000 and only 0·8 per cent. in big villages of population over 5,000.

Towns vary in number of inhabitants even more widely than villages. Allahabad city has a population of 332,295, i.e., 90·7 per cent. of the urban population of the district ; 6·2 per cent. of the people live in towns of less than 5,000 population (viz., Bharat Ganj, Sarai Aqil, Sirsa, Bharwari Chamandha, Karma and Jhusi); and the remaining 3·1 per cent. live in towns of population between 5,000—10,000 (viz., Phulpur and Mau Aimma). It is significant to note that Allahabad city has recorded 27·5 per cent. increase in population since 1941. The increase in its population since 1921 is 111 per cent. Mau Aimma, Sarai Aqil and Jhusi appear to be declining towns. The percentage decrease in the population of these three towns during 1941—51 is 3·7, 3·1 and 9·9 respectively. (*Vide* Tables A-III and A-IV)

Occupations: Livelihood pattern

12. Out of the total population of 2,048,250 (rural 1,632,123, urban 366,127) 1,416,467 (rural 1,395,434, urban 21,033) or 69·2 per cent. depend on agriculture for their principal means of livelihood and 631,783 (rural 286,689, urban 345,094) or 30·8 per cent. depend on non-agricultural sources. The following table gives the distribution of 100 persons of the total, rural and urban population of the district and also Allahabad city under the different livelihood classes :

Description	Agricultural classes					Non-agricultural classes				
	Total	I	II	III	IV	Total	V	VI	VII	VIII
Total	**69·2**	**55·7**	**4·5**	**8·1**	**0·9**	**30·8**	**8·2**	**6·1**	**2·5**	**14·0**
Rural	**82·9**	67·1	5·3	9·7	0·8	**17·1**	5·4	3·1	1·0	7·6
Urban	**5·7**	3·3	0·7	0·6	1·1	**94·3**	21·1	20·0	9·5	43·7
Allahabad city	**3·9**	2·1	0·6	0·1	1·1	**96·1**	20·7	19·3	9·9	46·2

It is obvious that the district is less agricultural as compared to most of the other districts of the State. Apparently due to Allahabad city, the percentage of agricultural population is only 69·2 as against 74·2 per cent. in the whole State. The percentage of agricultural population in the rural area is 83 as against 84 in the whole State.

Of the total population of the district 1,071,743 (males 448,946, females 622,797) or 52 per cent. have been classified as non-earning dependants. The percentage of non-earning dependants in the agricultural population works out to 48 per cent. and that among non-agricultural classes as 61 per cent. It will be observed that in the main they consist of women. The male non-earning dependants are mostly children. 367,776 persons (males 101,471, females 266,305) or 18 per cent. of the population are earning dependants. Among the agriculturists their proportion is 23 per cent. and among non-agriculturists they form only 8 per cent. Agriculture is a family occupation and it provides work to the women and grown up children in the family. The remaining 608,731 persons (males 501,605, females 107,126) or 30 per cent. of the population consists of self-supporting persons. Their proportion among agriculturists is 29 per cent. and among non-agriculturists 31 per cent. Of the self-supporting persons 411,662 (males 329,763, females 81,899) belong to the agricultural classes and 197,069 (males 171,842, females 25,227) to the non-agricultural classes. On an average a self-supporting person maintains two non-earning dependants.

Of the 197,069 self-supporting persons belonging to the non-agricultural classes 7,071 persons (rural 3,573, urban 3,498) earn their livelihood from non-productive sources. Of the remaining 189,998 persons (rural 87,637, urban 102,361) 5,631 (rural 2,210, urban 3,421) or 3·0 per cent. are employers, 73,939 (rural 20,055, urban 53,884) or 38·9 per cent. are employees and 110,428 (rural 65,372, urban 45,056) or 58·1 per cent. are independent workers.

The distribution of 10,000 self-supporting persons of non-agricultural occupations classified according to the Economic Divisions is as follows :

Name of division	Self-supporting persons by divisions
All Industries and Services	10,000
0—Primary industries not elsewhere specified	125
1—Mining and quarrying	125
2—Processing and manufacture—foodstuffs, textiles, leather and products thereof	1,112
3—Processing and manufacture—metals, chemicals and products thereof ..	323
4—Processing and manufacture—not elsewhere specified	951
5—Construction and utilities	360
6—Commerce	1,854
7—Transport, storage and communications	852
8—Health, education and public administration	1,497
9—Services not elsewhere specified	2,801

Under Division 1—mining and quarrying, the district has the second highest proportion in the State, Jhansi being the first. The figures under this division are mainly for stone quarrying and *bajri* extraction. The Kaimur sandstone is of excellent quality and is found in the trans-Yamuna tract in considerable quantity.

Among the large scale industries the principal is printing, publishing and allied industry. The largest factory in the district is the military arsenal in the Fort. Of almost equal size is the Government Press. Among the cottage industries the principal are handloom, cloth weaving, art silk, woollen carpet, *tat patties*, leather tanning, brass and copper wares, iron utensils and steel trunks.

Variation in the livelihood pattern

13. In the district the proportion of population depending on agriculture for their livelihood was 68·4* in 1951. The corresponding figure for 1901 was 69·2. The proportion was increasing up to 1921. Since 1921 it came down from 75·8 to 68·4 in 1951. The actual number of persons who depend on agriculture has increased to 1,401,322 in 1951 from 1,063,958 in 1921 or by 31·7 per cent., while the cultivated area has remained almost unchanged. This has resulted in the progressive fragmentation and subdivision of holdings and pressure on impoverished soil. There appears to have been a gradual decline in village arts and handicrafts. The cumulative effect is a fall in the proportion of workers and a corresponding rise in the dependency. The proportion of workers in the total population in 1951 was only 47·7 per cent. (agricultural 35·0 per cent., non-agricultural 12·7 per cent.) against 60·6 per cent. (agricultural 47·4 per cent., non-agricultural 13·2 per cent.) in 1921. The proportion of non-earning

*The figure includes earning dependants according to their secondary means of livelihood while the figure of 69·2 in paragraph 12 includes earning dependants according to their principal means of livelihood and hence the difference.

dependants has consequently increased from 39·4 per cent. (agricuitural 28·4 per cent., non-agricultural 11·0 per cent.) in 1921 to 52·3 per cent. (agricultural 33·4 per cent., non-agricultural 18·9 per cent. in 1951. All this is an index of the increasing unemployment and under-employment. It is only by diversion of the population to cottage and other industries that the present severe disequilibrium in the economy of the district can be redressed. (*Vide* Tables B-I, B-II and B-III)

(and households

14. There were 364,496 occupied houses in the district, 322,552 in villages and 41,944 in towns. That gives an average of 5,215 persons per 1,000 houses or 5·2 persons per house in the rural areas and 8,729 persons per 1,000 houses or 8·7 persons per house in the urban areas.

There were 399,518 households in the district—342,002 in villages and 57,516 in the towns. That gives an average of 4,913 persons per 1,000 households or 4·9 persons per household in the rural areas and 6,143 persons per 1,000 households or 6·1 persons per household in the urban areas. The marginal table shows the development in the size of the household since 1921. The rural household has been more or less stationary in size and is smaller than the average State rural household (5·07). Both the rural and urban household have registered a continuous increase.

Census year	Persons per 1,000 households of Rural Population	Urban Population
1921 ..	4,464	4,051
1931 .	4,587	4,354
1941 ..	4,897	5,074
1951 ..	4,913	6,143

Out of 4,913 persons in every 1,000 rural households 2,480 are males and 2,433 are females. There is a male excess numbering 47 in every 1,000 households. Out of 6,143 persons in every 1,000 urban households 3,361 are males and 2,782 females. There is a male excess numbering 579 in every 1,000 households. The migration to the urban areas will account for the difference.

Information regarding types of household relationships was also collected at this census with the help of a sample of about 4 per cent. According to this in every 1,000 sample households there are 4,863 persons (males 2,493, females 2,370) in the district. The corresponding figure for the total count is 5,090.

The table below shows the distribution by size of 1,000 sample households :

Description	Small with 3 members or less	Medium with 4—6 members	Large with 7—9 members	Very large with 10 members or more
Total	**344**	**441**	**160**	**55**
Rural	330	450	163	57
Urban	430	384	143	43

Medium households are the dominant type in the villages, while small households are more numerous in the towns. Quite a large number of migrants live in the towns without families.

Family composition of 1,000 sample households is as follows :

			Number in 1,000 households
A	Heads of households	Males (married)	619
		Males (widowers)	288
		Females	93
	Wives of heads of households		619
			1,619
B	Sons of heads of households		1,096
	Daughters of heads of households		833
			1,929
C	Male relations of heads of households (other than sons) . ..		463
	Female relations of heads of households (other than daughters)		794
			1,257
D	Persons unrelated to the heads of the households	Males	27
		Females	31
			58
		Grand total ..	***4,863***

Sons outnumber the daughters of heads of households. The latter leave the homes of their parents after marriage. Female relations (other than daughters) outnumber the male relations (other than sons). Such females are generally those who become members of these households by marriage. (*Vide* Tables A-I and C-I)

Sex-ratio

15. In the district as a whole the sex-ratio was 947 i.e., there are 947 females to every 1,000 males. It varied among the tehsils. The lowest value was 860 for Chail tehsil. The highest value was 1,021 in Soraon tehsil. The wide differenee in the former is caused by Allahabad city where the males largely exceed the females. The difference in the latter is the result of male migration. Soraon is the most densely populated tehsil of the district. The ratio was 1,020 in Handia, 1,008 in Phulpur, 974 in Meja, 959 in Sirathu, 941 in Manjhanpur and 930 in Karchhana. The figure for Handia also indicates male migration from the tehsil in large numbers.

The sex-ratio is smaller in towns than in villages. For the district as a whole the sex-ratio in villages is 980 while that in towns is only 808. The sex-ratio for Allahabad city was only 795.

The corresponding figures of sex-ratio for the district was 945 in 1921, 944 in 1931, 953 in 1941 and 947 in 1951. The sex-ratio has been decreasing and increasing alternately.

Age-structure

16. The number in each age-group in the district is shown below as a percentage of the total number of all ages in the total, rural and urban population separately :

Age-group		Total population			Rural population		Urban population	
		Persons	Males	Females	Males	Females	Males	Females
Infants and young children	0—4	13·4	6·4	7·0	6·4	7·1	6·4	6·1
Boys and girls ..	5—14	27·1	14·2	12·9	14·5	13·2	13·1	11·6
Young men and women ..	15—34	31·3	16·3	15·0	15·2	14·9	21·7	15·4
Middle-aged men and women	35—54	20·6	11·1	9·5	11·2	9·8	11·0	7·8
Elderly persons	55 and over	7·6	3·6	4·0	3·6	4·1	3·6	3·3

It will be seen that the population is progressive. 40·5 per cent of the population is of age under 15 and only 7·6 per cent. of it consists of elderly persons. Again, it may be noted that proportionately larger numbers in the working ages (15—54) are found in the urban areas. This is the effect of migration of workers to the towns from the villages many of whom are unaccompanied by their families. (*Vide* Table C-III)

Marital status

17. Out of every 10,000 persons in the district there are 5,178 males and 4,822 females.* Among them 2,020 males and 1,609 females are unmarried. If we reckon males and females together the unmarried people are 36·3 per cent. of the population.

Of the males 39·0 per cent. were unmarried, 54·0 per cent. were married and 7·0 per cent. were widowed or divorced. Among the females 33·4 per cent. were unmarried, 55·1 per cent. were married and 11·5 per cent. were widowed or divorced.

Of the married males 15·6 per cent. were of ages below 15, 43·9 per cent. were of ages 15—34, 32·4 per cent. were of ages 35—54 and 8·1 per cent. were of ages 55 and over. Among the married females 16·4 per cent. were of ages below 15, 51·7 per cent, were of ages 15—34, 27·2 per cent. were of ages 35—54 and 4·7 per cent. were elderly women.

Marriage is universal. Among males and females aged 35 years and over only 5·6 per cent. of the males and 0·5 per cent. of the females were found unmarried. Most of the females are married before they attain the age of 25. Child marriage is still prevalent. As many as 21·2 per cent. of the males of ages 0—14 and 22·0 per cent. of the females of ages 0—14 were returned as married. (*Vide* Table C-III)

Languages

18. 98·5 per cent. of the people of the district retuned Hindi, Hindustani or Urdu as their mother-tongue. Among the other mother-tongues spoken the main are Bengali (0·6per cent), Punjabi (0·5 per cent) and Sindhi (0·1 per cent). Of the 20·48 lakhs of people in the district only 24,804 or 1·2 per cent. were bilingual (in an Indian language). Those whose mother-tongue is other than Hindi, Hindustani or Urdu are generally the migrants who are able to speak any of these as a subsidiary language. Persons returning Hindi, Hindustani or Urdu as secondary language were 22,762 or 91·8 per cent. of those who were bilingual in some Indian language. (*Vide* Table D-I)

Religion and special groups

19. Out of 10,000 population of the district the number of people belonging to the different religions is : Hindus 8,673, Muslims 1,278, Sikhs 16, Christians 28 and Jains 5 ; of 10,000 population in villages the numbers are : Hindus 8,972, Muslims 1,016, Sikhs 5, Christians 5 and Jains 2 ; and of 10,000 population in towns the numbers are : Hindus 7,295, Muslims 2,481, Christians 135, Sikhs 66, Jains 18 and others 5. Muslims, Christians and Sikhs are generally concentrated in the urban areas of the district as is the case in the other parts of the State.

*The corresponding figures for the total count are 5,136 and 4,864.

There are 410 thousands Scheduled Castes in the district. Their number per 10,000 of population works out to 2,003. In villages they are 2,284 for every 10,000 and in the towns their number per 10,000 is only 716. In the district there were 1,065 Anglo-Indians of whom 564 were males and 501 were females. (*Vide* Tables D-II and D-III)

Displaced persons

20. The number of displaced persons in the district at the census was 13,817 (males 7,267, females 6,550) a large majority of whom were concentrated in Allahabad city. Of them 80·8 per cent. have come from West Pakistan, 4·9 per cent. from East Pakistan and 14·3 per cent. from districts which could not be traced. (*Vide* Table D-V)

Literacy

21. The percentage of male literacy was 21·2 in the district while that of female literacy 5·2 only. As compared to this the percentage of literates among males in 1931 was 10·2; among females the percentage of literates in 1931 was 1·7.* On January 1, 1951, there were 727 primary schools in the district with enrolment of 78,606. (*Vide* Table D-VII)

C—Explanatory Note on the Statistics

The statistics in this volume have been presented in three parts :

I—District Census Tables

II—Village, Town, Pargana and Thana Statistics

III—Miscellaneous Statistics

Parts I and II contain census data. A brief account of the system of sorting of census slips and preparation of tables and abstract therefrom is given below.

Part III contains statistics throwing light on special aspects of population and its growth. These have been derived from miscellaneous sources. Table 1, "Vital Statistics", has been prepared from the published and unpublished records of the Director of Medical and Health Services, Table 2, "Agricultural Statistics", from the Annual Season and Crop Reports, Table 3, "Live-Stock, Agricultural Machinery and Implements", from the published figures of Live-Stock Census and Table 4, "List of Primary Schools", from information specially supplied by District Inspector of Schools.

Processing of census data

2. The census data presented here has been derived from the census slips by a process of sorting, compilation and tabulation. In previous censuses the slips were first sorted by religion and this division was maintained throughout so that all data was cross-tabulated by religion. This procedure has been abandoned at this census and substituted by a division based on economic characteristics of the population. The whole population has been divided into eight livelihood classes, four of which are of the agricultural category and four of non-agricultural category as follows :

Agricultural Classes—

I—Cultivators of land wholly or mainly owned ; and their dependants

II—Cultivators of land wholly or mainly unowned ; and their dependants

III—Cultivating labourers ; and their dependants

IV—Non-cultivating owners of land ; agricultural rent receivers ; and their dependants

Non-agricultural Classes—

V—Production (other than cultivation)

VI—Commerce

VII—Transport

VIII—Other services and miscellaneous sources.

Another special feature of the sorting of this census was the separation, from the very start, of slips of displaced persons and of a 10 per cent. random sample from the remainder. This has enabled the data of displaced persons to be presented separately while the 10 per cent. sample has been utilized for the preparation of Age Tables.

The slips of this census have been copied by Households into a National Register of Citizens, which has been prepared village-wise for rural areas and mohalla/ward-wise for urban areas. Table C-I is based on a 4 per cent. sample extracted from this Register.

*The numbers per mille (of the 10 per cent. sample population) of each sex aged 5 years and over who were returned as literates are as below:

Males		Females	
1951	1931	1951	1931
233	118	61	20

Tracts

3. The slips were first sorted by villages for the preparation of the Primary Census Abstract. For the purpose of further sorting the State was divided into tracts consisting of (*a*) *rural tracts*, comprising the rural population of each tehsil, (*b*) *urban city tracts*, comprising the population of areas which had been declared as cities, (*c*) *urban non-city tracts*, comprising the population of urban areas of a district excluding areas declared as cities. Each tract was treated as a unit for sorting of slips. All data were compiled first by tracts and then by districts. This volume presents the tract-wise data for one district (with the exception of A and E Tables, which have been presented tehsil-wise), while the district-wise data for the whole State is contained in the following State volumes :

Part I-B—Subsidiary Tables

Part II-A—General Population Tables

Part II-B—Economic Tables

Part II-C—Age and Social Tables

Explanatory notes

4. Detailed explanatory notes are appended to each State table in the printed volumes of State tables. They apply to the tables in this volume also and should be referred to when necessary. A few notes of some of the tables are reproduced below :

Table A-I—Column 5 relating to "hamlets" has been introduced for the first time. Any distinctive cluster or agglomeration of houses has been treated as a "hamlet".

A clear distinction has been made in this census between a "House" and a "Household". A house is any human dwelling having a separate main entrance while a household is any commensal unit living in a census house. In previous censuses the figures under "Occupied Houses" used to be that of households, while the figures under columns 7—9 of the present tables refer to occupied census houses as distinct from households.

The Economic Tables—The Indian Census Economic Classification Scheme, 1951 together with the occupational division and sub-division adopted for this census are given in Part II-B of the Report.

Table B-I—Each of the eight livelihood classes mentioned above has been divided into three sub-classes, with reference to the economic status, as follows :

(*i*) Self-supporting persons ;

(*ii*) Non-earning dependants ; and

(*iii*) Earning dependants.

These were defined in the Instructions to Enumerators as follows :

> "A 'self-supporting person' is one who is in receipt of an income and that income is sufficient at least for his own maintenance. To be 'self-supporting' a person need not be able to support his family. All that is necessary is that he should be earning sufficient for his personal needs. For purposes of this question the person enumerated is the unit and not the family or household. Any one who is not a 'self-supporting' person in this sense is a 'dependant'. A 'dependant' may be either an 'earning dependant' or a 'non-earning dependant'. The test is whether he secures a regular (and not casual) income, even though it may be small. Such income may be in cash or kind ; it may be continuous or seasonal employment. When the income which he secures is not sufficient to support him that person is an 'earning dependant'. A person who does not earn any income either in cash or kind is a 'non-earning dependant'. Where two or more members of a family household jointly cultivate land and secure an income therefrom, each of them should be regarded as earning part of the income. None of them is, therefore, a non-earning dependant. Each of them should be classed either a 'self-supporting person' or 'an earning dependant' according to the share of income attributable to each. The same applies to any other business carried on jointly. The share of the income is what the head of household deems it to be. This does not mean that every one who works is necessarily a self-supporting person or an earning dependant. Thus, for instance, a housewife who cooks for the family, brings up the children or manages the household is doing very valuable work. Nevertheless, her Economic Status is that of a non-earning dependant, if she does not also earn an income, and should be recorded as such."

Economically active, Semi-active and Passive persons—All non-earning dependants are economically passive. They include persons performing house-work or other domestic or personal services for other members of the same family household. But they do not include "unpaid family workers" or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise.

All earning dependants are economically semi-active only. Though they contribute to the carrying of economic activities, the magnitude of their individual contribution is deemed to be too small to justify their description as economically active. (Their contribution to economic activity is, however, taken into account in the tabulation of data based on secondary means of livelihood.)

All self-supporting persons are ordinarily economically active with the exception of the following classes and groups :

(*a*) All self-supporting persons of Agricultural Class IV.

(*b*) The following groups of self-supporting persons who are included in Non-agricultural Class VIII and derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity) :

(i) Persons living principally on income from non-agricultural property ;

(ii) Persons living principally on pensions, remittances, scholarships and funds ;

(iii) Inmates of alms-houses and recipients of doles ;

(iv) Beggars and vagrants ; and

(v) All other persons living principally on income derived from non-productive activities.

Table B-II—For a self-supporting person who has more than one means of livelihood the *secondary means* of livelihood is the livelihood next in importance to his principal means of livelihood. For an earning dependant it is the source from which he secures his own income, where there are more than one subsidiary occupations only the one providing the largest income has been taken into account.

Table B-III—"Employers", "Employees" and "Independent Workers" have been defined as follows in the Instructions to Enumerators :

An "employer" is only that person who has necessarily to employ other person in order to carry on the business from which he secures his livelihood. Thus if a person employs a cook or any other person for domestic services, he should not be recorded as an "employer" merely for that reason.

An "employee" is a person who ordinarily works under some other person for a salary or a wage in cash or kind as the means of earning his livelihood. There may be persons who are employed as managers, superintendents, agents etc., and in that capacity control other workers. Such persons are also employees only and should not be regarded as employers.

An "independent worker" means a person who is not employed by any one else and who also does not employ anybody else in order to earn his livelihood. (Sweepers, *dhobies*, *kahars* etc., who work for several masters are independent workers. If, however, any of them accepts whole-time employment under one master he becomes "employee". Daily wage-earners who work for different masters are likewise independent workers. But if they accept employment under one master, e.g., under a factory, they become "employees".)

Tables C-II, C-III, C-IV and C-V—The figures presented in these tables are based on single year age returns and have not been smoothed.

Tables D-V (i) *and* (ii)—For the purpose of these tables a "displaced person" has been defined as follows :

"A displaced person means any person who has entered India having left or being compelled to leave his home in Western Pakistan on or after the 1st March, 1947, or his home in Eastern Pakistan on or after the 15th October, 1946, on account of civil disturbances or on account of the setting up of the two Dominions of India and Pakistan."
