DISTRICT CENSUS HANDBOOK
1951

FATEHPUR DISTRICT

FOREWORD

Several States, including Uttar Pradesh, have been publishing village statistics by districts at each census. In 1941 they were published in U. P. under the title "District Census Statistics" with a separate volume for each district. In the 1951 census, when the tabulation has been more elaborate than ever in view of the requirements of the country, the district-wise volume has been expanded into a "District Census Handbook", which now contains the District Census Tables (furnishing data with break-up for census tracts within the district), the District Index of Non-agricultural Occupations, agricultural statistics from 1901-02 to 1950-51 and other miscellaneous statistics in addition to the usual village population statistics. The village population statistics also are given in an elaborate form giving the division of the population among eight livelihood classes and other details.

2. It may be added here that a separate set of district-wise volumes giving only population figures of rural areas by villages and of urban areas by wards and mohallas and entitled "District Population Statistics" has already been published. This separate series was necessitated by the urgent requirements of the U. P. Government for elections to local bodies.

3. The number of District Census Handbooks printed so far is twenty-five. Special arrangements for speeding up the printing have now been made and it is hoped that the remaining Handbooks will be printed before the end of 1955.

RAJESHWARI PRASAD, I.A.S.,
Superintendent, Census Operations,
Uttar Pradesh.

RAMPUR:
April 30, 1955.

INTRODUCTION

A—The District

1. The district of Fatehpur lies in the eastern or lower portion of the *Doab* between the Ganga and the Yamuna and is bounded on the north-west by Kanpur and on the south-east by Allahabad. To the north, beyond the Ganga lie the districts of Unnao, Rae Bareli and Pratapgarh, while on the south Yamuna separates Fatehpur from Hamirpur and Banda districts. It has a total area of 1,621 square miles and its population in 1951 was 9·09 lakhs. It has 3 tehsils, 13 parganas and 13 thanas.

Topography

2. The physical characteristics of the district are mainly determined by the two great rivers on the north and south. As in other parts of *Doab*, the land in the neighbourhood of the rivers stands high, and thence falls slightly towards the centre. Below the high bank of the Ganga, in the river bed, there are considerable stretches of new alluvium in which large areas of good crops can be raised but these are liable to constant change owing to the action of the river. On the other side, the land in the bed of the Yamuna is less frequently culturable, save for a strip of varying width directly under the cliff and in isolated patches elsewhere. Above and behind the high bank which borders the bed of the Ganga there is a narrow strip of lightish soil. Much of this is good firm soil. Where, however, the bank is lower it tends to be broken by undulations and ravines. On the Yamuna side the ravines are more formidable and extend in places 3 miles or more into the country above while the spaces between them are often barren. Where the soil is level it is not infertile but cultivation is precarious owing to the great depth of water and the consequent absence of irrigation. Between these fringes along the great rivers, the large central tract is of a type common in the *doab*. It is a level plain, though in some cases ravines occur. The prevailing soil is a good sound loam, interspersed with *usar* in large or small patches, but varied in tracts of interrupted drainage by stiff clay in the numerous depressions. These are found mostly in the central tehsil Fatehpur and in the adjoining portions of Khajuha and Khaga tehsils to the west and east respectively.

Fatehpur tehsil is made up of three sharply divided topographical divisions. The Ganga tract in the north lies between the river and the watershed. It has a light and sandy soil on the high plateau which lies 50 feet above the river and below this is a narrow strip of *khadir* separated from the former by shallow ravines. The tract south of it and lying in the valley of the Bari Nadi forms part of the central plateau and comprises a stretch of country in which well wooded strips of loam land alternate with clay depressions suitable for rice cultivation and liable to saturation in the rains. Below it is the Yamuna tract which comprises the alluvial land along the river, the high bank cut up by numerous and extensive ravines, and the upland plateau in which the water level is extremely deep and the soils are all of a light and inferior description resembling those found in Bundelkhand to the south of the river. This tract is well-drained and possesses no *jhils* of any size.

Khaga tehsil is the eastern sub-division of the district and comprises a compact stretch of country extending from the Yamuna on the south, to the Ganga on the north between the Allahabad district on the east and Fatehpur on the west. In the north, beyond the Ganga watershed, is a high lying tract with a light but fertile soil, well wooded and studded with numerous small villages, this being one of the most prosperous part of the district. To the south of this lies the central plain which contains the valleys of the Sasur Khaderi in the North, the Chhoti Nadi in the centre and the Bari Nadi in the South. The two first in their upper reaches are mere series of swamps, but they ultimately assume well defined beds and waterlogging disappears. The Bari Nadi in this tehsil has a deep channel, and the country along its course is broken by ravines. Between the Bari Nadi and the Yamuna is a narrow plateau indented by extensive ravines which have cut their way through the high bank and carry down the drainage to the Yamuna which flows at a level of 100 feet below the uplands. Between the Fatehpur branch canal and the Sasur Khaderi is a level stretch of country containing the valuable rice tract known as the Haveli.

Khajuha tehsil is the western sub-division of the district extending from Fatehpur on the east to the Kanpur border on the west and north-west. The tract is divided into two distinct portions by the Rind which flows from north-west to the south-east and unites with the Yamuna. The part south of Rind constitutes about one-third of the whole and from this a small area is cut off by the Nun river in the south-west corner. These streams run in deep channels and in consequence these banks are fissured with numerous small watercourses and steep ravines while above the Yamuna the soils frequently resemble those of Bundhelkhand to the south. Near the Ganga and Pandu Nadi the soil is light and contains a large proportion of sand but to the south of the watershed loam predominates in the Rind valley, while to the east is the tract which forms part of central depression.

The drainage of the district is from the north-west to the south-east. Save for the fringe of light soil along the Ganga which extends practically to the local watershed between the two great rivers and is unbroken by any stream except the Pandu in the extreme north-west the trend of the whole drainage is towards the Yamuna whose important affluents are the Nun in the south-west, the Rind cutting across from west centre to the south centre and the Bari Nadi which flows from the north-west to south-east wards. Outside the central plateau the drainage is effective. In the central plateau there is inadequate gradient and the course of the streams is in very tortuous channels. Consequently in wet years the depressed areas become full to over flowing and the result is water logging.

Soils

3. The composition of the soil is closely connected with the question of drainage, and a line drawn from north to south across the *doab* will clearly illustrate the changes resulting from the variation in the level. Along the slope of the Ganga the soil contains a large proportion of sand and is known as *bhur*. Crossing the watershed the soil gradually changes into

loam or *dumat*. Beyond, in the centre of the *doab* is the clay tract in which depressions abound and the drainage is defective. This clay is generally known as *matiyar*. Where the interior streams have formed definite channels the sandy soil again appears on either side while on the higher land, *dumat* of good quality is found in strips between the river valleys. The clay tract, however, contains large areas of barren *usar* land and in its neighbourhood an inferior and very similar soil called *chanchar* is frequently to be found. It is capable of producing a poor crop of rice under favourable circumstances. Further south towards Yamuna the soil again turns into a kind of loam but lighter in texture than *dumat* and known as *Sigon*. This *Sigon* gradually merges into the soils of Bundelkhand which are found along the Yamuna. The characteristic black soils of which the chief is *kabar* is found on the flatter portions of the Yamuna watershed. Another of Bundelkhand soils is *mar*, an intensely black friable soil with calcareous nodules occuring beyond the Nun and in a few other parts. Finally, in the river beds of Ganga, Yamuna and Rind there are various descriptions of alluvial soil termed locally *tarai* and *kachhar*. On the whole the soils of Fatehpur are heavier than those in the upper *doab*.

Classification of area

4. The figures of classification of area during the last fifty years are given in Table 2 of Part III of this volume. The proportion of area under the various categories works out as follows for 1950-51 :

Particulars	Actual figures (in acres)	Percentage
Cultivated area	650,750	62·0
Culturable waste (excluding current fallow)	149,745	14·2
Current fallow	30,462	2·9
Forest	..	..
Area not available for cultivation of which—	219,238	20·9
(a) *Covered with water*	*84,777*	*8·1*
(b) *Under sites, roads and buildings*	*30,707*	*2·9*
(c) *Barren*	*103,754*	*9·9*

The figure in the above table regarding culturable waste, taken from the Season and Crop Report is, however, misleading. The State Agriculture Department conducted in 1949-50 a detailed enquiry through the District Officers regarding the nature of this area in each district. The following analysis of the area resulted from this enquiry :

Particulars	Area (in acres)	Percentage
Total culturable waste (A + B + C)	150,578	100
A—Area under culturable waste land not available for immediate cultivation	49,103	32·61
(i) Forest under any legal enactment	..	..
(ii) Groves	22,888	15·20
(iii) Forests of timber trees	9,193	6·11
(iv) Thatching grasses, shrubs and bushes	3,088	2·05
(v) Land kept for grazing	13,934	9·25
B—Area under culturable waste land available for immediate cultivation but which could not be cultivated	63,406	42·11
Of which due to —		
(i) *Kans* growth	450	0·30
(ii) Threshing floors	523	0·35
(iii) Malaria	..	..
(iv) Floods	604	0·40
(v) Lack of drains	909	0·60
(vi) Lack of water	37,624	24·99
(vii) Distance from *abadi*	15,606	10·36
(viii) Damage from wild animals	6,700	4·45
(ix) Other causes	990	0·66
C—Area under culturable waste land that can be brought under immediate cultivation after some improvements besides the area given against 'B.'	38,069	25·28

From the above it will appear that of the total area recorded as culturable waste, only 25·3 per cent. was really capable of being brought under immediate cultivation after some improvements.

Thus the land area cultivated and cultivable including current fallow *per capita* works out to 91·4 cents of which 74·9* cents have already been brought under cultivation and only about 4·2 cents can be further brought under the plough after some improvements.

Climate and rainfall

5. The average rainfall for the last quinquennium was about 38·75 inches. There is little difference between the amounts recorded in the tehsils excepting that of Khajuha on Kanpur border where it is generally less than the average for the rest of the district. The climate of Fatehpur generally resembles that of adjoining districts of Allahabad and Kanpur. The western half on the whole is cooler than the rest but the climate in all parts is much hotter than in the tract north of the Ganga. The prevailing winds are westerly and during the hot wether they blow with considerable force although they are not so pronounced as in the districts further west.

Irrigation

6. Irrigation is derived from wells, rivers, tanks, lakes and other natural reservoirs. In 1950-51 the irrigated area from wells covered 49·6 per cent., from canals, 39·0 per cent. and from other sources 11·4 per cent.

Crops

7. More acreage is sown under *kharif* crops than in *rabi* crops. The area under *kharif* in 1950-51, was 392,303 acres ; that under *rabi* 362,423 acres ; and that under *zaid* crops 2,193 acres. The principal *kharif* crop is rice while the principal *rabi* crop is gram followed by barley.

B—Analysis of the Statistics

Population : General distribution and density

1. The table below shows the two basic figures—land area and population—and the derived figures of land area *per capita* :

Tehsil	Population (in lakhs)	Density (number per square mile)	Land area (in lakhs of acres)	Land area *per capita*
Fatehpur	3·58	558	4·11	1·15
Khaga	2·75	566	3·10	1·13
Khajuha	2·76	537	3·29	1·19
Fatehpur district	*9·09*	*554†*	*10·50*	*1·16*

The district is fortieth in order of area as well as of population in the State. The district density per square mile is only 554 while the average density of the State is 557. The district density is low owing partly to the absence of towns, but also to the low density of rural areas. The rural density of the district per square mile is 529, the density of the rural parts of the tehsils being : Khajuha 509, Khaga 556 and Fatehpur 524. (*Vide* Tables A-I and E)

Growth of population

2. The growth of population in the district during the last fifty years has been phenomenal. The population of the district in 1951 was 32·4 per cent. higher than what it was fifty years ago. Compared to this the increase in the population of the State during the corresponding period has been only 30 per cent. The table below exhibits the variation in the total, rural and urban population for the last five decades.

Census year	Population			Variation		
	Total	Rural	Urban	Total	Rural	Urban
1901	**686,391**	649,687	36,704			
1911	**676,939**	648,782	28,157	**—9,452** (—1·4)	—905 (—0·1)	—8,547 (—23·3)
1921	**652,392**	625,133	27,259	**—24,547** (—3·6)	—23,649 (—3·6)	—898 (—3·2)
1931	**688,789**	656,636	32,153	**+36,397** (+5·6)	+31,503 (+5·0)	+4,894 (+18·0)
1941	806,944	763,066	43,878	**+118,155** (+17·2)	+106,430 (+16·2)	+11,725 (+36·5)
1951	**908,985**	861,348	47,637	**+102,041** (+12·6)	+98,282 (+12·9)	+3,759 (+8·6)

A noteworthy feature is that between 1901 and 1921 the population of the district recorded a decrease of about 5 per cent. when that of the State decreased by 4·0 per cent. only. Plague at the time of census of 1911 was responsible for the decrease during 1901—11. The urban population suffered heavily from it. During 1911—21 the district suffered from influenza. Abnormal deaths did not occur or were prevented from occurring in the post—1921

*The figure also includes the area classed as current fallow.
†According to the area given by Surveyor General, it is 551.

period and the population of the district recorded an increase of 39·3 per cent. since 1921 against an increase of 35·5 per cent. in the population of the State during the same period. The increase in this district during 1921—31 has been slightly below the State average but during 1931—41 and 1941—51 the increases have been fairly high. During 1921—31 the district suffered from agricultural calamities and lost population on account of migration.

The variation in the tehsils during 1941—51 is shown in the following table. In tehsil Khajua the biggest increase has occurred.

Tehsil	Percentage variation 1941—51
Fatehpur district	+12·6
Fatehpur ..	+5·1
Khaga ..	+15·9
Khajuha ..	+20·4

Vital Statistics

3. Births and deaths mainly account for the trends in population growth. Migration also is a factor though of lesser importance. The following table gives the mean decennial registered birth and death-rates and the calculated natural increase rates and population growth-rates of the last three decades for the district as a whole and for its rural and urban areas:

	Total	Rural	Urban
Mean decennial birth-rate			
1941—50	26·4	26·4	25·8
1931—40	35·1	35·1	35·0
1921—30	30·0	30·4	22·3
Mean decennial death-rate			
1941—50	16·3	16·3	15·3
1931—40	18·5	18·3	22·5
1921—30	20·1	20·3	16·0
Mean decennial rate of natural increase			
1941—50	10·1	10·1	10·5
1931—40	16·6	16·8	10·5
1921—30	9·9	10·1	6·3
Mean decennial growth-rate			
1941—50	11·9	12·1	8·2
1931—40	15·8	15·0	30·8
1921—30	5·4	4·9	16·5

There are large omissions in the registration of births as well as deaths and so the above rates do not represent the true picture at all. They may, however, be taken to be roughly indicative of trends. Both birth and death-rates have fallen during the last decade.

The figures of natural increase and growth-rate suggest a substantial loss from migration during 1921—30, a small loss during 1931—40 and a considerable gain during 1941—50.

The average yearly mortality from various causes during 1941—50 was as follows:

Causes	Number of deaths	Percentage of total deaths
Fever	10,645	76·2
Dysentery and diarrhoea	127	0·9
Respiratory diseases	229	1·7
Plague, cholera and small-pox	686	4·9
Others	2,282	16·3

As in the rest of the State 'fever' is responsible for a majority of deaths. But fever covers a number of ailments which the reporters are unable to identify. Deaths from plague, cholera and small-pox are high in this district as compared to the deaths from these causes in other districts of the State. (*Vide* Table I, Part III of this volume)

Migration

4. About 90·8 per cent. of the people enumerated in the district at the census of 1951 were born there, 8·8 per cent. were born in other districts of the State, 0·3 per cent. were born in other parts of India and only 0·1 per cent. came from other countries. Of the immigrants from the districts of the State as many as 40,601 (males 16,305, females 24,296) are from other districts of the same natural division and 39,568 (males 26,763, females 12,805) are from other parts of the State. Quite a large part of the migration from neighbouring districts is marriage migration. Of 2,227 immigrants from adjacent States 537 (males 227, females 310) are from Madhya Pradesh, 472 (males 198, females 274) from Madhya Bharat and the rest are from the other States.

Of the immigrants who have come from territories beyond India 605 (males 324, females 281) were born in Pakistan and 42 (males 16, females 26) had their birth-place in other territories. The Pakistan-born are mostly the displaced persons who numbered 532. Of 42 immigrants born in other territories 22 (males 5, females 17) are Nepal-born.

Of 13 non-Indian nationals 8 belong to Nepal, 4 to America and 1 to Burma. (*Vide* Tables D-IV and D-VI)

Decline of cultivation *per capita*

5. We may now analyse the growth of population in the district during the last thirty years in relation to the growth of cultivation during the same period. The figures are exhibited in the marginal table. (Figures of area shown under census years are quinquennial averages for the five years ending with the crop year immediately preceding the census year.) It is obvious that cultivation has failed to keep pace with population. The cultivated area *per capita* has gone down to 68·3 cents in 1951 from 84·6 cents in1921. The magnitude of this drop is about one-fifth of 1921 level. It means that (other things being equal) every man and woman and child must expect to get less food and other agricultural produce from the land in 1951 than in 1921.

Census year	Population	Net area sown (in acres)	Area of cultivation *per capita* (in cents)
1921	652,392	552,557	84·6
1931	688,789	558,360	81·1
1941	806,944	579,131	71·8
1951	908,985	620,411	68·3

Double cropped area *per capita*

6. It may be examined whether this shortage has been compensated by an increase in the yield per acre. Increase in yield can be brought about by more double cropping, more irrigation, better fertilization and better culture. The average area sown more than once was 93,798 acres in 1921. It slightly decreased to 87,617 acres in 1931. There was a substantial increase to 95,041 acres in 1941 and to 110,355 acres in 1951. The figures of double crop cultivation *per capita* in cents are as below:

Particulars	Quinquennial averages for the year preceding			
	1951	1941	1931	1921
Double crop cultivation *per capita* in cents	12·2	11·8	12·7	14·3
Unirrigated double crop cultivation *per capita* in cents ..	10·4	9·9	10·4	11·5
Irrigated double crop cultivation *per capita* in cents	1·8	1·9	2·3	2·8

The double crop cultivation has slightly increased since 1941 but the figure has not touched the 1931 or 1921 level. It is obvious that the double crop area has not kept pace with population growth.

Irrigated area *per capita*

7. The average area irrigated in the district was 179,688 in 1921. The figures were 142,974 in 1931, 182,233 in 1941 and 173,954 in 1951. The average area irrigated more than once was 18,513 in 1921, 15,654 in 1931, 15,518 in 1941 and 16,036 acres in 1951.

The figures for irrigation *per capita* are shown below:

Particulars	Years			
	1951	1941	1931	1921
Irrigated single crop cultivation *per capita* in cents	17·4	20·7	18·5	24·7
Irrigated double crop cultivation *per capita* in cents	1·8	1·9	2·3	2·8

The trend is distinctly towards a decline.

Cropped area

8. There has been a very small change in the cropping pattern of the district. During the quinquennium 1916–21 90·2 per cent. of the cropped area was under food crops and only 9·8 per cent. of it was under non-food crops. Thirty years after, during 1946–51 the cropped area under food crops was 93·5 per cent. and that under non-food crops was 6·5 per cent.

The proportionate area under different crops between 1911 and 1951 was as below :

Quinquennial average of	Total cropped area	Percentage of cropped area under							
		Rice	Wheat	Barley	Juar	Bajra	Maize	Gram	Others
1911—16	604,379	10·9	9·5	14·3	14·3	5·4	0·1	23·1	22·4
1916—21	632,785	13·7	9·7	13·2	14·0	4·4	0·1	23·0	21·9
1921—26	645,399	13·5	10·7	12·9	15·3	3·7	0·1	26·2	17·6
1926—31	647,777	13·4	10·9	14·9	16·1	3·1	0·1	24·0	17·5
1931—36	637,883	12·7	10·0	15·1	15·8	3·9	0·1	23·6	18·8
1936—41	680,631	14·4	10·1	15·1	13·6	3·9	0·1	22·7	20·1
1941—46	702,348	14·2	8·3	14·5	14·9	4·8	0·1	23·8	19·4
1946—51	741,670	17·0	8·8	15·9	14·4	3·2	0·1	21·7	18·9

Cultivation of cotton has been on the decline while that of sugarcane has been steadily rising. In 1901-02 the area under cotton crop was 27,502 acres ; in 1950-51 it was only 128 acres. The area of sugarcane, on the other hand, was only 5,360 acres in 1901-02 while it was 16,710 acres in 1950-51.

Live-Stock, ploughs and carts

9. Live-stock in this country live for a large part of the year on by-products of agriculture supplemented by green fodder crops. They have, therefore, to be correlated not only with the grazing available but also with the total area under cultivation which carries a major portion of the burden of supporting the cattle population.

As will appear from Table 3 Part III the total number of cattle and buffaloes, which decreased between 1935 and 1944, has during 1944–51 increased from about 5·2 lakhs to about 6 lakhs.

The number of working cattle and buffaloes in the district has been increasing since 1935 and now stands at about 2·04 lakhs. This number of working cattle appears to be governed by the number of ploughs and carts. The number of ploughs has gone up from 76,903 in 1925 to 97,078 in 1951 due apparently to progressive fractionalisation of holdings. The number of carts started rising ever since 1920 and now stands at over 32,000. The average net cultivated area per plough works out to 6·7 acres in 1951 as against 7·2 acres in 1920 and the average net cultivated area per pair of working cattle works out to 6·4 acres in 1951 as compared to 6·9 in 1935. The number of breeding cows and she-buffaloes has been increasing since 1935 when it stood at 1·73 lakhs against 2·09 lakhs in 1951. In 1951 cows and female buffaloes in milk per 1,000 of human population were 61 and 48 respectively. Owing to the poor milk yield the share of milk per head is only a few ounces per day.

The number of sheep has been increasing since 1935 and now stands at about 87,000. Goats went down from 219,088 to 140,745 in 1944 and increased to 141,699 in 1951.

Horses and ponies have declined heavily during 1935—44 from about 13 thousands to about 8 thousands. The figure in 1951 almost remained stationary at about 8·3 thousands. Donkeys declined during 1935—44 but have increased slightly from about 2,800 to 3,500 in 1951 from 1944.

Poultry has increased from about 33,000 to 50,000 during 1935—44.

Distributed on 1,000 of human population the figures of the main categories of live-stock in 1951 are as follows :

Cattle	Buffaloes	Sheep	Goats	Poultry	Others
437	226	95	156	55	51

10. To sum up, the population of the district is growing up at the biological natural rate since 1921. The threat is not so much in the rate of population increase but in the sheer magnitude of the absolute numerical increase in relation to the practically stationary acreage under cultivation. The consequence has been that the land area *per capita*, the double crop area *per capita* and the irrigated area *per capita* are steadily declining. There is at the same time no evidence that crop yield per acre has increased.

Villages and towns

11. The district has 1,375 villages and 5 towns. Out of 9·1 lakhs of people who were counted at the census of 1951, 8·6 lakhs were found in villages and 0·5 lakhs in towns, i.e., there are as many as 948 people per 1,000 of population who lived in rural areas and only 52 of them lived in towns. The corresponding figures for the State as a whole are : rural 864, urban 136.

The rural population per inhabited village works out to 626. But the villages do not necessarily comprise of a single compact size. There are 3,290 hamlets in the district. The population per hamlet is only 262. The medium-sized village—with inhabitants numbering between 500—2,000—is the dominant type. Of the rural population 52·8 per cent. live in such villages ; 24·1 per cent. in small villages of population under 500,19·7 per cent. in large villages of population between 2,000 to 5,000 and only 3·4 per cent. in villages of population of 5,000 and over.

Towns vary in number of inhabitants even more widely than villages. Fatehpur town has a population of 24,301 or 51 per cent. of the urban population of the district ; only 23·0 per cent. of the population live in towns of population under 5,000 (viz., Jahanabad, Khaga and Kishanpur) and the remaining 26 per cent. of it lives in towns of population between 10,000 and 20,000 (viz., Bindki Municipal Board). It is significant to note that the population of Fatehpur town has decreased by 11·4 per cent. since 1941. The increase in its population since 1921 is 62·6 per cent. It has no industries of note and its only importance is that it is the headquarters of the district. (*Vide* Tables A-III and A-IV)

Occupations : Livelihood pattern

12. Out of the total population of 908,985 (rural 861,348, urban 47,637) 690,190 (rural 681,916, urban 8,274) or 75·9 per cent. depend on agriculture for their means of livelihood and 218,795 (rural 179,432, urban 39,363) or 24·1 per cent. depend on non-agricultural sources. The following table gives the distribution of 100 persons of the total, rural and urban population of the district under livelihood classes :

Description	Agricultural classes					Non-agricultural classes				
	Total	I	II	III	IV	Total	V	VI	VII	VIII
Total	**75·9**	**62·7**	**6·2**	**4·9**	**2·1**	**24·1**	**6·0**	**4·3**	**0·7**	**13·1**
Rural	79·2	65·5	6·5	5·1	2·1	20·8	5·5	3·1	0·5	11·7
Urban	17·4	12·6	1·8	0·3	2·7	82·6	15·5	26·1	3·4	37·6

It is obvious that this district is one of the predominantly agricultural districts of the State. Here as many as 75·9 per cent. of the people depend on agriculture as against 74·2 per cent. in the whole State.

Of the total population of the district, 554,595 persons (males 226,082, females 328,513) or 61 per cent. have been classified as non-earning dependants. The percentage of non-earning dependants in the agricultural population works out to 63·1 and that among the non-agricultural classes as 54·5. It will be observed that in the main they consist of women. The male non-earning dependants are mostly children. 105-205 persons (males 34,855, females 70,350) or 11·6 per cent. of the population are earning dependants. Among agriculturists their proportion is 12·2 per cent. and among non-agriculturists they form only 9·6 per cent. Agriculture is a family occupation and it provides work to the women and grown up children. The remaining 249,185 persons (males 213,835, females 35,350) or 27·4 per cent. of the population consist of self-supporting persons. Their proportion among agriculturists is 24·7 per cent. and among the non-agriculturists 35·9 per cent. Of the self-supporting persons 170,693 (males 145,715, females 24,978) belong to agricultural classes and 78,492 (males 68,120, females 10,372) to the non-agricultural classes. On an average a self-supporting person maintains two non-earning dependants.

Of the 78,492 self-supporting persons belonging to the non-agricultural classes 7,020 persons (rural 6,544, urban 476) earn their livelihood from non-productive sources. Of the remaining 71,472 self-supporting persons (rural 56,644, urban 14,828) 941 (rural 518, urban 423) or 1·3 per cent. are employers, 9,973 (rural 6,558, urban 3,415) or 14·0 per cent. are employees and 60,558 (rural 49,568, urban 10,990) or 84·7 per cent. independent workers.

The distribution of 10,000 self-supporting persons of non-agricultural occupations, classified according to Economic Divisions is as follows :

Name of division	Self-supporting persons by divisions
All Industries and Services	**10,000**
0—Primary industries not elsewhere specified	250
1—Mining and quarrying	13
2—Processing and manufacture—foodstuffs, textiles, leather and products thereof	1,200
3—Processing and manufacture—metals, chemicals and products thereof	155
4—Processing and manufacture—not elsewhere specified	912
5—Construction and utilities	808
6—Commerce	1,943
7—Transport, storage and communications	310
8—Health, education and public administration	365
9—Services not elsewhere specified	4,044

Among the large scale industries, there is none worth the name in the district. Among cottage industries, the principal are manufacture of *tat patties* and brass and copper wares.

Variation in the livelihood pattern

13. In this district the proportion of population depending on agriculture for their livelihood was 75·1* per cent. in 1951. The agricultural proportion had been increasing ever since 1901 when the figure stood at 70·2 per cent. It was 68·1 per cent. in 1911. It increased to 76·9 per cent. in 1921. In this census the speed of the process seems to have been arrested. The actual number of persons who depend on agriculture has increased to 682,292 in 1951 from 502,038, in 1921 or by 35·9 per cent. while the cultivated area has remained almost unchanged. This has resulted in the progressive fragmentation and sub-division of holdings and pressure on impoverished soil. There appears to have been a gradual decline in village arts and crafts. The cumulative result is a fall in the proportion of workers and a corresponding rise in the dependency. The proportion of workers in the total population in 1951 was only 39·0 per cent. (agricultural 27·2 per cent., non-agricultural 11·8 per cent.) against 60·1 per cent (agricultural 46·6 per cent., non-agricultural 13·5 per cent.) in 1921. The proportion of non-earning dependants has consequently increased from 39·9 per cent. (agricultural 30·3 per cent., non-agricultural 9·6 per cent.) in 1921 to 61·0 per cent. (agricultural 47·9 per cent., non-agricultural 13·1 per cent.) in 1951. All this is an index of the increasing unemployment and underemployment. It is only by the diversion of the population to cottage and other industries that the present severe disequilibrium can be redressed. (*Vide* Tables B-I, B-II and B-III)

Houses and households

14. There were 164,268 occupied houses in the district—155,977 in villages and 8,291 in towns. That gives an average of 5,522 persons per 1,000 houses or 5·5 persons per house in the rural areas and 5,746 persons per 1,000 houses or 5·7 persons per house in the urban areas.

There were 178,163 households in the district—168,928 in villages and 9,235 in towns. That gives an average of 5,088 persons per 1,000 households or 5·1 persons per household in rural areas and 5,135 persons per 1,000 households or 5·1 persons per household in the urban areas. The marginal table shows the developments in the size of the household since 1921. The rural household has been more or less stationary in size and is considerably bigger than the average State rural household (5·07). The urban household has registered a marked decrease in urban areas since 1941.

Census year	Persons per 1,000 households of	
	Rural population	Urban population
1921 ..	4,380	8,853
1931 ..	4,562	4,932
1941 ..	4,926	6,020
1951 ..	5,088	5,135

Out of 5,088 persons in every 1,000 rural households, 2,653 are males and 2,435 females. There is a male excess numbering 218 in every 1,000 rural households. Out of 5,135 persons in every 1,000 urban households 2,744 are males and 2,391 females. There is a male excess numbering 353 in every 1,000 urban households. The type of migration will account for the difference.

*The figure includes earning dependants according to their secondary means of livelihood while the figure 75·9 in paragraph 12 includes earning dependants according to their principal means of livelihood and hence the slight difference.

Information regarding types of household and household relationships was also collected at this census with the help of a sample of about 4 per cent. According to this, in every 1,000 sample households there are 5,061 persons (males 2,651, females 2,410) in the district. The corresponding figure for the total count is 5,091.

The table below shows the distribution by size of 1,000 sample households :

Description	Small with 3 members or less	Medium with 4—6 members	Large with 7—9 members	Very large with 10 members or more
Total	305	441	190	64
Rural	303	443	190	64
Urban	336	410	180	74

Medium sized households are the dominant type in the villages as well as in the towns.

Family composition of 1,000 sample households is as follows :

			Number in 1,000 households
A	Heads of households	Males (married)	643
		Males (Widowers)	290
		Females	67
	Wives of heads of households		643
			1,643
B	Sons of heads of households		1,126
	Daughters of heads of households		811
			1,937
C	Male relations of heads of households (other than sons)		556
	Female relations of heads of households (other than daughters)		831
			1,387
D	Persons unrelated to the heads of households	Males	36
		Females	58
			94
		Grand Total	*5,061*

Sons outnumber the daughters of the heads of households. The latter leave the homes of their parents after marriage. Female relations (other than daughters) outnumber the male relations (other than sons). Such females are generally those who become members of these households by marriage. (*Vide* Tables A-1 and C-1.)

15. In the district as a whole the sex-ratio was 915, i.e., there were 915 females to every 1,000 males. It varied among the tehsils. The lowest value was 891 in Khajuha. The highest value was in Khaga 946. In Fatehpur tehsil the sex-ratio was 910. **Sex-ratio**

The sex-ratio is smaller in towns than in villages. For the district as a whole the sex-ratio in villages is as high as 917 while that in towns it is 869.

The corresponding figures of sex-ratio for the district was 910 in 1921, 906 in 1931, 941 in 1941 and 915 in 1951.

Age-structure

16. The number in each age-group in the district is shown below as a percentage of total number of all ages in the total, rural and urban population separately.

Age-group		Total population			Rural population		Urban population	
		Persons	Males	Females	Males	Females	Males	Females
Infants and young children	0—4	12·4	5·3	7·1	5·1	7·2	6·8	6·1
Boys and girls	5—14	24·0	11·3	12·7	11·2	12·7	13·9	11·6
Young men and women	15—34	31·2	17·3	13·9	17·3	13·8	17·8	16·2
Middle-aged men and women	35—54	20·4	12·6	7·8	12·7	7·7	11·2	8·8
Elderly persons	55 and over	12·0	6·0	6·0	6·2	6·1	4·3	3·3

It will be seen that the population is progressive. 36·4 per cent. of the population is of age under 15 and about 12 per cent. of it consists of elderly persons. Again it may be noted that proportionately larger numbers in the working ages (15—54) are found in the urban areas. This is the effect of migration of workers to the towns from the villages many of whom are unaccompanied by their families. (*Vide* Table C-II)

Marital status

17. Out of every 10,000 persons in the district there are 5,255 males and 4,745 females*. Among them 1,864 males and 1,651 females are unmarried. If we reckon males and females together the unmarried people are 35·2 per cent. of the population.

Of the males 35·5 per cent. were unmarried, 50·3 per cent. married and 14·2 per cent. widowed or divorced. Among the females 34·8 per cent. were unmarried, 54·9 per cent. married and 10·3 per cent. widowed or divorced.

Of the married males 7·1 per cent. were of ages below 15, 47·9 per cent. of ages 15—34, 38·2 per cent. of ages 35—54 and 6·8 per cent. 55 and over. Among the married females 14·3 per cent. were under 15, 49·3 per cent. of ages 15—34, 22·9 per cent. of ages 35—54 and 13·5 per cent. of ages 55 and over.

Marriage is universal. Among males and females aged 35 years and over only 4·1 per cent. of the males and 0·4 per cent. of the females were found unmarried. Most of the females are married before they attain the age of 25. Child marriage is still prevalent. 11·3 per cent. of the males of ages 0—14 and 18·9 per cent. of the females of ages 0—14 were returned as married. (*Vide* Table C-III)

Languages

18. Over 99·9 per cent. of the people of the district returned Hindi, Hindustani or Urdu as their mother-tongue. The other important mother-tongue is Punjabi which covers about 0·1 per cent. of the speakers. Of the 9·1 lakhs of people in the district only 1,801 or 0·2 per cent. were bilingual (in an Indian language). Those whose mother-tongue is other than Hindi, Hindustani or Urdu are generally the migrants who are able to speak any of these as a subsidiary language. Persons returning Hindi, Hindustani or Urdu as secondary language were 280 or 15·5 per cent. of those who were bilingual in some Indian language. (*Vide* Table D-I)

Religion and special groups

19. Out of 10,000 population of the district the number of people belonging to different religions is : Hindus 8,907, Muslims 1,086, Sikhs 5 and Christians 2 ; of 10,000 population in villages the numbers are : Hindus 9,008, Muslims 985, Sikhs 5, and Christians 2 ; of 10,000 population in towns the number are : Hindus 7,079 Muslim 2,897, Sikhs 10, Christians 9 and others 5. Proportionately the Muslims, Sikhs and Christians are generally concentrated in the urban areas of the district as is the case in the other parts of the State.

There are 159 thousands Scheduled Castes in the district. Their number per 10,000 of population works out to 1,749. In villages they are 1,804 for every 10,000 and in the towns their number per 10,000 is only 761. In the district there are only 10 Anglo-Indians. (*Vide* Tables D-II and D-III)

Displaced persons

20. The number of displaced persons in the district at the census was 532 (males 285, females 247) a large majority of whom were concentrated in urban areas. Of them 95·9 per cent. have come from West Pakistan and 4·1 per cent. from East Pakistan. (*Vide* Table D-V)

Literacy

21. The percentage of male literacy was 18·7 in the district while that of female literacy was 4·1 only. Among males the figure in 1931 was 10·2 and among females it stood at 0·8†. On January 1, 1951 there were 398 primary schools in the district with enrolment of 37,960. (*Vide* Table D-VII)

C—Explanatory Note on the Statistics

The statistics in this volume have been presented in three parts :

I—District Census Tables

II—Village, Town, Pargana and Thana Statistics

III—Miscellaneous Statistics

*The corresponding figures for the total count are 5,223 and 4,777.

†The numbers per mille (of the 10 per cent. sample population) of each sex aged 5 years and over who were returned as literates are as below :

Males		Females	
1951	1931	1951	1931
3·3	1·8	2·6	0·9

Parts I and II contain census data. A brief account of the system of sorting of census slips and preparation of tables and abstract therefrom is given below.

Part III contains statistics throwing light on special aspects of population and its growth. These have been derived from miscellaneous sources. Table I, "Vital Statistics", has been prepared from the published and unpublished records of the Director of Medical and Health Services, Table 2, "Agricultural Statistics", from the Annual Season and Crop Reports, Table 3, "Live-Stock, Agricultural Machinery and Implements", from the published figures of Live-Stock Census and Table 4, "List of Primary Schools", from information specially supplied by District Inspector of Schools.

Processing of census data

2. The census data presented here has been derived from the census slips by a process of sorting compilation and tabulation. In previous censuses the slips were first sorted by religion and this division was maintained throughout so that all data was cross-tabulated by religion. This procedure has been abandoned at this census and substituted by a division based on economic characteristics of the population. The whole population has been divided into eight livelihood classes, four of which are of the argricultural category and four of non-agricultural category as follows :

Agricultural Classes—

I—Cultivators of land wholly or mainly owned, and their dependants
II—Cultivators of land wholly or mainly unowned ; and their dependants ;
III—Cultivating labourers ; and their dependants
IV—Non-cultivating owners of land ; agricultural rent receivers ; and their dependants

Non-agricultural Classes—

V—Production (other than cultivation)
VI—Commerce
VII—Transport
VIII—Other services and miscellaneous sources

Another special feature of the sorting of this census was the separation, from the very start, of slips of displaced persons and of a 10 per cent. random sample from the remainder. This has enabled the data of displaced persons to be presented separately while the 10 per cent. sample has been utilized for the preparation of Age Tables.

The slips of this census have been copied by Households into a National Register of Citizens, which has been prepared village-wise for rural areas and mohalla/ward-wise for urban areas. Table C-I is based on a 4 per cent. sample extracted from this Register.

Tracts

3. The slips were first sorted by villages for the preparation of the Primary Census Abstract. For the purpose of further sorting the State was divided into tracts consisting of (*a*) *rural tracts,* comprising the rural population of each tehsil, (*b*) *urban city tracts,* comprising the population of areas which had been declared as cities, (*c*) *urban non-city tracts,* comprising the population of urban areas of a district excluding areas declared as cities. Each tract was treated as a unit for sorting of slips. All data were compiled first by tracts and then by districts. This volume presents the tract-wise data for one district (with the exception of A and E Tables, which have been presented tehsil-wise), while the district-wise data for the whole State is contained in the following State volumes :

Part I-B—Subsidiary Tables
Part II-A—General Population Tables
Part II-B—Economic Tables
Part II-C—Age and Social Tables

Explanatory notes

4. Detailed explanatory notes are appended to each State table in the printed volumes of State tables. They apply to the tables in this volume also and should be referred to when necessary. A few notes of some of the tables are reproduced below :

Table A-I—Column 5 relating to "hamlets" has been introduced for the first time. Any distinctive cluster or agglomeration of houses has been treated as a "hamlet".

A clear distinction has been made in this census between a "House" and a "Household". A house is any human dwelling having a separate main entrance while a household is any commensal unit living in a census house. In previous censuses the figures under "Occupied Houses" used to be that of households, while the figures under columns 7—9 of the present tables refer to occupied census houses as distinct from households.

The Economic Tables—The Indian Census Economic Classification Scheme, 1951, together with the occupational division and sub-division adopted for this census are given in Part II-B of the Report.

Table B-I—Each of the eight livelihood classes mentioned above has been divided into three sub-classes, with reference to the economic status, as follows :

(i) Self-supporting persons ;
(ii) Non-earning dependants ; and
(iii) Earning dependants.

These were defined in the Instructions to Enumerators as follows :

> "A 'self-supporting person' is one who is in receipt of an income and that income is sufficient at least for his own maintenance. To be 'self-supporting' a person need not be able to support his family. All that is necessary is that he should be earning sufficient for his personal needs. For purposes of this question the person enumerated is the unit and not the family or household. Any one who is not a 'self-supporting person' in this sense is a 'dependant'. A 'dependant' may

be either an 'earning dependant' or a 'non-earning dependant'. The test is whether he secures a regular (and not casual) income, even though it may be small. Such income may be in cash or kind; it may be continuous or seasonal employment. When the income which he secures is not sufficient to support him that person is 'an earning dependant'. A person who does not earn any income either in cash or kind is a 'non-earning dependant'. Where two or more members of a family household jointly cultivate land and secure an income therefrom, each of them should be regarded as earning part of the income. None of them is, therefore, a non-earning dependant. Each of them should be classed either a 'self-supporting person' or an 'earning dependant' according to the share of income attributable to each. The same applies to any other business carried on jointly. The share of the income is what the head of household deems it to be. This does not mean that every one who works is necessarily a self-supporting person or an earning dependant. Thus, for instance, a housewife who cooks for the family, brings up the children or manages the household is doing very valuable work. Nevertheless, her Economic Status is that of a non-earning dependant, if she does not also earn an income, and should be recorded as such ".

Economically active, Semi-active and Passive persons—All non-earning dependants are economically passive. They include persons performing house-work or other domestic or personal services for other members of the same family household. But they do not include "unpaid family workers" or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise.

All earning dependants are economically semi-active only. Though they contribute to the carrying of economic activities, the magnitude of their individual contribution is deemed to be too small to justify their description as economically active. (Their contribution to economic activity is, however, taken into account in the tabulation of data based on secondary means of livelihood.)

All self-supporting persons are, ordinarily economically active with the exception of the following classes and groups:

(*a*) All self-supporting persons of Agricultural Class IV.

(*b*) The following groups of self-supporting persons who are included in Non-agricultural Class VIII and derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity):

(i) Persons living principally on income from non-agricultural property;
(ii) Persons living principally on pensions, remittances, scholarships and funds;
(iii) Inmates of alms-houses and recipients of doles;
(iv) Beggars and vagrants; and
(v) All other persons living principally on income derived from non-productive activities.

Table B-II—For a self-supporting person who has more than one means of livelihood the *secondary means* of livelihood is the livelihood next in importance to his principal means of livelihood. For an earning dependant it is the source from which he secures his own income, where there are more than one subsidiary occupations only the one providing the largest income has been taken into account.

Table B-III—"Employers", "Employees" and "Independent Workers" have been defined as follows in the Instructions to Enumerators:

An "employer" is only that person who has necessarily to employ other person in order to carry on the business from which he secures his livelihood. Thus if a person employs a cook or any other person for domestic services, he should not be recorded as an "employer" merely for that reason.

An "employee" is a person who ordinarily works under some other person for a salary or a wage in cash or kind as the means of earning his livelihood. There may be persons who are employed as managers, superintendents, agents etc., and in that capacity control other workers. Such persons are also employees only and should not be regarded as employers.

An "independent worker" means a person who is not employed by any one else and who also does not employ anybody else in order to earn his livelihood. (Sweepers, *dhobis*, *kahars* etc., who work for several masters are independent workers. If, however, any of them accepts whole-time employment under one master he becomes "employee". Daily wage-earners who work for different masters are likewise independent workers. But if they accept employment under one master, e.g. under a factory, they become "employees".)

Tables C-II, C-III, C-IV and C-V—The figures presented in these tables are based on single year age returns and have not been smoothed.

Tables D-V (i) *and* (ii)—For the purpose of these tables a "displaced person" has been defined as follows:

"A displaced person means any person who has entered India having left or being compelled to leave his home in Western Pakistan on or after the 1st March, 1947, or his home in Eastern Pakistan on or after the 15th October, 1946, on account of civil disturbances or on account of the setting up of the two Dominions of India and Pakistan."

PART I

DISTRICT CENSUS TABLES
