DISTRICT CENSUS HANDBOOK
1951

PILIBHIT DISTRICT

FOREWORD

Several States, including Uttar Pradesh, have been publishing village statistics by districts at each census. In 1941 they were published in U. P. under the title "District Census Statistics" with a separate volume for each district. In the 1951 census, when the tabulation has been more elaborate than ever in view of the requirements of the country, the district-wise volume has been expanded into a "District Census Handbook", which now contains the District Census Tables (furnishing data with break-up for census tracts within the district), the District Index of Non-agricultural Occupations, agricultural statistics from 1901-02 to 1950-51 and other miscellaneous statistics in addition to the usual village population statistics. The village population statistics also are given in an elaborate form giving the division of the population among eight livelihood classes and other details.

2. It may be added here that a separate set of district-wise volumes giving only population figures of rural areas by villages and of urban areas by wards and mohallas and entitled "District Population Statistics" has already been published. This separate series was necessitated by the urgent requirements of the U. P. Government for elections to local bodies.

3. The number of District Census Handbooks printed so far is fourteen. Special arrangements for speeding up the printing have now been made and it is hoped that the remaining Handbooks will be printed before the end of 1955.

RAJESHWARI PRASAD, I.A.S.,
Superintendent, Census Operations,
Uttar Pradesh.

RAMPUR :
March 31, 1955.

INTRODUCTION

A—The District

1. The district of Pilibhit extends eastwards from the border of the Bareilly district to the confines of Kheri on the east and the territory of Nepal on the north-east; on the north lie the *tarai* parganas of Naini Tal, while to the south is the district of Shahjahanpur. The district has a total area of 1,353 square miles which is less than the average district area of the State. Its population in 1951 was about 5·0 lakhs. It has 3 tehsils, 4 parganas and 9 thanas.

Topography

2. The district presents many diversities of feature, and topographically may be divided into several distinct tracts. In the north and north-west the country is a mere continuation of the *tarai*; the southern portion, comprised in the Bisalpur tehsil, being similar in most respects to the adjacent tracts of Bareilly and Shahjahanpur. The eastern and smaller section approximates rather to the undeveloped forest areas of Kheri though with the spread of cultivation the dissimilarity between Puranpur and the rest of the district is gradually becoming less marked. Taken as a whole the district is a gentle undulating plain, intersected by numerous streams which flow mainly in a southerly direction, following the slope of the country. Though there are no hills, the level surface is varied by many troughs and depressions, making the beds of the rivers and water courses which carry off the surface drainage. These low basins or *khadars* differ greatly in character from the upland stretches or *bangar*.

The low lying belt on the north-eastern extremity of the district has a character peculiarly its own. It possesses a moist alluvial soil, producing large quantities of tall grass and tamarisk; the climate is exceedingly unhealthy and the population very sparse. The tract is cut off from the rest of the district by a belt of forest. The area thus enclosed is an open plain with a light and indifferent soil, drained somewhat imperfectly by numerous streams that rise in the moist country on the inner edge of the forest zone. The southern extremities of the district have richer soil, more stable cultivation and more dense population. In the centre and north the soil becomes increasingly sandy and the proximity of the forest competes with the climate to render tillage precarious. The western belt of forest extends into the Pilibhit and Bisalpur tehsils. The north is mainly rice land, interspersed with stretches of grass jungle. On the whole Pilibhit would have been an immensely rich district but for the climate and the forest. Large number of minor swamps and depressions bear witness to local defects in the drainage system. There are no large open sheets of water that can be properly described as lakes, but small lagoons, *jhils* and tanks are fairly common in most parts of the district.

Soils

3. The soil of the district are identical with those found throughout the Gangetic plain and particularly those occuring in the sub-Himalyan belt. They consist in the main of sand or *bhur*, clay or *matiar* and the mixture of sand and clay in varying proportions, known as *dumat* or *doras* and usually styled loam. The presence of sand may invariably be attributed to fluvial action at some epoch. It is always the case that the sand is found on the highest levels of an alluvial tract, loam in the intermediate zone and the clay in the depressions. The clay is very retentive of moisture, requires more tillage, is too stiff to manipulate when baked in sun, but at the same time imbibes the rain water very freely. The best clay is *matiar* proper, a bluish or blackish soil. The greasy and sticky clay is *chiknot*: that found in low situations in a drainage line, where crops are exposed to damage from floods, is known as *jhada* or *jhabar* and can be much improved by an admixture of sand, frequent tillage and deep ploughing, so as to render it more porous. The whitish heavy clay, which becomes pasty with rain and as hard as iron with heat is known as *khapat*. It requires an abundant rainfall to be workable and then retains the moisture to such an extent that the water stagnates and the roots of the plants rot. Loam or *dumat* which is a light porous soil, is more common in the district.

Classification of area

4. The figures of classification of area during the last fifty years are given in Table 2 of Part III of this volume. The proportion of area under the various categories works out as follows for 1950-51:

Particulars	Actual figures (in acres)	Percentage
Cultivated area	403,014	46·5
Culturable waste (excluding current fallow)	247,045	28·5
Current fallow	44,984	5·2
Forest	95,608	11·0
Area not available for cultivation of which—	75,945	8·8
(*a*) *Covered with water*	*35,540*	*4·1*
(*b*) *Under sites, roads and buildings*	*25,588*	*3·0*
(*c*) *Barren*	*14,817*	*1·7*

The figures in the above table regarding culturable waste, taken from the Season and Crop Report is, however, misleading. The State Agriculture Department conducted in 1949-50 a detailed enquiry through the District Officers regarding the nature of this area in each district. The following analysis of the area resulted from this enquiry :

Particulars	Area (in acres)	Percentage
Total culturable waste (A + B + C)	**239,533**	**100**
A—Area under culturable waste land not available for immediate cultivation	100,075	41·78
(i) Forest under any legal enactment	2	..
(ii) Groves	12,328	5·15
(iii) Forests of timber trees	48,582	20·28
(iv) Thatching grasses, shrubs and bushes	35,860	14·97
(v) Land kept for grazing	3,303	1·38
B—Area under culturable waste land available for immediate cultivation but which could not be cultivated	62,332	26·02
Of which due to—		
(i) *Kans* growth	3,109	1·30
(ii) Threshing floors	373	0·16
(iii) Malaria	28,220	11·78
(iv) Floods	1,305	0·54
(v) Lack of drains	82	0·03
(vi) Lack of water	1,378	0·57
(vii) Distance from *abadi*	1,863	0·78
(viii) Damage from wild animals	13,187	5·51
(ix) Other causes	12,815	5·35
C—Area under culturable waste land that can be brought under immediate cultivation after some improvements besides the area given against "B."	77,126	32·20

From the above it will appear that of the total area recorded as culturable waste, only 32·2 per cent. was really capable of being brought under immediate cultivation after some improvements.

Thus the land area, cultivated and cultivable including current fallow *per capita* works out to 137·8 cents, of which 88·8* cents have already been brought under cultivation and 15·3 cents can be further brought under the plough after some improvements.

Climate and rainfall

5. The climate of Pilibhit exhibits considerable variations in the different parts of the district. While in the north and the east it approximates to *tarai*, in Bisalpur tehsil it differs but little in character from that of the adjoining parts of Bareilly and Shahjahanpur. It is characterised by dampness and moderate heat in summer, together with a partial immunity from the hot westerly winds which here blow but rarely after sunset and are never prolonged through the night. The heat is not excessive and the relief is frequently afforded, especially in the north of the area, by the storms which sweep down from the hills. The cold weather begins early. During winter rain falls about the later half of December and again at the end of January, while mists or fogs often come on during the night, sometimes lasting as late as noon. The climate during the rains is excessively damp and unhealthy.

The average rainfall for the last quinquennium was 47·59 inches. During the last 45 years the rainfall has been less than 30 inches in only three years and is usually above 40 inches. At all times the rainfall is considerably heavier than in the districts immediately to the south, and this is a factor of the highest importance in determining the nature of agriculture. Like all rice producing districts, it requires a great deal of rain and a well-sustained monsoon current : a premature cessation of the rains is the contingency most to be deprecated, since it involves the loss of the valuable transplanted rice, which requires water till within a short time of harvest.

Irrigation

6. Irrigation is derived from canals, tube-wells, wells and other sources. In 1950-51 the irrigated area from canals was 85·3 per cent., from tube-wells 0·1 per cent., from other wells 5·0 per cent. and from other sources 9·6 per cent.

Crops

7. More acreage is sown under *kharif* than under *rabi* crops. In 1950-51 the area under *rabi* was 195,063 acres, that under *kharif* was 291,437 acres and that under *zaid* crops was 801 acres. The principal *rabi* crop is wheat followed by gram and barley. The principal *kharif* crop is rice. Sugarcane is an important crop of the district. The area under it has risen from 38,561 acres in 1901-02 to 50,798 acres in 1950-51.

*This figure also includes the area classed as current fallow.

B—Analysis of the Statistics

Population : General distribution and density

1. The table below shows the two basic figures—land area and population—and the derived figures of land area *per capita* :

Tehsil	Population (in lakhs)	Density (number per square mile)	Land area (in lakhs of acres)	Land area *per capita*
Bisalpur	2·10	576	2·34	1·11
Pilibhit	2·07	444	2·98	1·44
Puranpur	0·87	170	3·28	3·76
Pilibhit district	*5·04*	*376**	*8·60*	*1·70*

This district though forty-sixth in order of area stands forty-eighth in the State in respect of population. Its density (376 per square mile) is even less than three quarters of the State average (557 per square mile) on account of the large forest areas in tehsils Puranpur and Pilibhit, the absence of towns, the precarious nature of much of the cultivation and the unhealthy climate. Bisalpur, the southern most tehsil approximates in character to the neighbouring districts of Bareilly and Shahjahanpur and consequently has a higher density. The rural density of the district is 321, the density of the rural parts of the tehsils being : Bisalpur 536, Pilibhit 333 and Puranpur 157. (*Vide* Tables A-I and E)

Growth of population

2. The population of the district in 1951 was only 7·2 per cent. higher than what it was fifty years ago. Compared to this the increase in population of the State during the corresponding period has been 30 per cent. The table below exhibits the variation in the total, rural and urban population for the last five decades.

Census year	Population			Variation		
	Total	Rural	Urban	Total	Rural	Urban
1901	**470,339**	415,519	54,820			
1911	**487,617**	436,331	51,286	+17,278 (+3·7)	+20,812 (+5·0)	—3,534 (—6·4)
1921	**431,601**	380,517	51,084	—56,016 (—11·5)	—55,814 (—12·8)	—202 (—0·4)
1931	**448,838**	385,246	63,592	+17,237 (+4·0)	+4,729 (+1·2)	+12,508 (+24·5)
1941	**490,718**	418,678	72,040	+41,880 (+9·3)	+33,432 (+8·7)	+8,448 (+13·3)
1951	**504,428**	429,289	75,139	+13,710 (+2·8)	+10,611 (+2·5)	+3,099 (+4·3)

A noteworthy feature is that between 1901 and 1921 the population of the district recorded a decrease of 8·2 per cent. when that of the State decreased by 4·0 per cent. only. During the succeeding three decades the increase in its population has been much below the State average. The population of the district recorded an increase of only 16·9 per cent. since 1921 against an increase of 35·5 per cent. in the population of the State during the same period. This is reported to be the most unhealthy district in the State. It suffers, especially the northern tehsil of Puranpur which lies in the *tarai*, from endemic malaria. The population of Puranpur tehsil has decreased by 1·2 per cent. since 1941, while the tehsils of Pilibhit and Bisalpur have recorded small increases of 4·1 per cent. and 3·2 per cent. respectively.

Vital Statistics

3. Births and deaths mainly account for the trends in population growth. Migration also is a factor though of lesser importance. The following table gives the mean decennial birth and death-rates and the calculated natural increase and population growth

*According to the area given by Surveyor General, it is 588.

rates of the last three decades for the district as a whole and for its rural and urban areas:

	Total	Rural	Urban
Mean decennial birth-rate			
1941—50	31·1	28·8	44·2
1931—40	42·4	41·8	46·1
1921—30	43·3	45·2	30·4
Mean decennial death-rate			
1941—50	21·5	19·7	31·5
1931—40	31·5	31·4	32·0
1921—30	36·1	37·3	27·8
Mean decennial rate of natural increase			
1941—50	9·6	9·1	12·7
1931—40	10·9	10·4	14·1
1921—30	7·2	7·9	2·6
Mean decennial growth-rate			
1941—50	2·8	2·5	4·2
1931—40	8·9	8·3	12·5
1921—30	3·9	1·2	21·8

There are large omissions in the registration of births as well as deaths and so the above rates do not represent the true picture at all. They may, however, be taken to be roughly indicative of trends. Both birth and death-rates have fallen during the last decade.

The figures of natural increase and growth-rate suggest loss of population by migration during 1921—30, 1931—40 and 1941—50.

The average yearly mortality from various causes in the district during 1941—50 was as follows :

Causes	Number of deaths	Percentage of total deaths
Fever	8,467	79·2
Dysentery and diarrhoea	187	1·8
Respiratory diseases	273	2·6
Plague, cholera and small-pox	293	2·7
Others	1,468	13·7

As in the rest of the State 'fever' is responsible for the majority of deaths. But fever covers a number of ailments which the reporters are unable to identify. (*Vide* Table I, Part III of this volume)

Migration

4. About 88 per cent. of the people enumerated in the district at the census of 1951 were born there, 10·7 per cent. were born in other districts of the State, 0·7 per cent. were born in other parts of India and only 0·6 per cent. came from other countries. Of the immigrants from the districts of the State as many as 49,258 (males 15,365, females 33,893) are from the other districts of the same natural division and 4,981 (males 2,874, females 2,107) are from other parts of the State. Most of the migration from the neighbouring districts is marriage migration. Of the 2,962 immigrants from the adjacent States 2,471 (males 1,759, females 712) are from Punjab.

Of the immigrants who have come from territories beyond India, 2,345 (males 1,336, females 1,009) were born in Pakistan and 532 (males 462, females 70) had their birth-place in other territories. The Pakistan-born are the displaced persons who numbered 2,308 in the district. Of the immigrants born in other territories 530 (males 460, females 70) were Nepal-born.

All the non-Indian nationals in the district, numbering 279, were Nepalese.

Unfortunately the figures of emigration are not available. According to the Vital Statistics, however the district appears to have lost 14,468 persons during 1921—30, 9,486

persons during 1931—40 and 34,257 persons during 1941—50 on the balance of migration. But it should be borne in mind that these figures include an element of registration error also. (*Vide* Tables D-IV and D-VI)

1921	431,601	416,512	96·4
1931	448,838	390,135	86·9
1941	490,718	392,525	80·1
1951	504,428	396,331	78·5

the crop year immediately preceding the census year). It is obvious that the cultivation has failed to keep pace with population. The cultivated area *per capita* has gone down from 96·4 cents in 1921 to 78·5 cents in 1951. The magnitude of this drop is about one-fifth of the 1921 level. It means that (other things being equal) every man, woman and child must expect to get less food and agricultural produce from the land in 1951 that in 1921.

Double cropped area *per capita*

6. It may be examined whether this shortage has been compensated by an increase in yield per acre. Increase in yield can be brought about by more double cropping, more irrigation, better fertilization and better culture. The average (quinquennial) area sown more than once was 75,189 acres in 1921. It decreased to 71,291 acres in 1931, increased to 78,818 acres in 1941 and further increased to 88,895 acres in 1951. The figures of double crop cultivation *per capita* in cents are as below:

Particulars	Quinquennial averages for the year preceding			
	1951	1941	1931	1921
Double crop cultivation *per capita* in cents	17·6	15·7	15·9	17·4
Unirrigated double crop cultivation *per capita* in cents ..	17·2	15·5	15·1	17·0
Irrigated double crop cultivation *per capita* in cents	0·4	0·2	0·8	0·4

The double cropped area *per capita* was steadily declining till 1941 but it is satisfactory to note that since then it has increased.

Irrigated area *per capita*

7. The average area irrigated in the district was 92,453 acres in 1921. It was 59,744 acres in 1931, 68,929 acres in 1941 and 76,265 acres in 1951. The average area irrigated more than once was 1,636 acres in 1921, 3,551 acres in 1931, 881 acres in 1941 and 2,108 acres in 1951.

The figures of irrigation *per capita* are shown in the table below:

Particulars	Years			
	1951	1941	1931	1921
Irrigated single crop cultivation *per capita* in cents	14·7	13·9	12·5	21·0
Irrigated double crop cultivation *per capita* in cents	0·4	0·2	0·8	0·4

The irrigated area *per capita* is steadily rising since 1931, but it has not yet reached the 1921 level.

Cropped area

8. The cropped area under food crops in 1916—21 was 88·1 per cent. and under non-food crops 11·9 per cent. The proportionate area under food crops has declined since then. Thirty years after, during 1946—51 the cropped area under food crops was only 83·6 per cent. and that under non-food crops was 16·4 per cent.

The proportionate area under different crops between 1911 and 1951 was as below :

Quinquennial average of	Total cropped area	Percentage of cropped area under							
		Rice	Wheat	Barley	Juar	Bajra	Maize	Gram	Others
1911—16	510,439	25·8	23·0	4·5	0·6	5·9	0·8	12·7	26·7
1916—21 ..	476,207	30·3	22·8	4·5	0·7	5·0	0·4	12·1	24·2
1921—26	492,331	29·8	20·2	4·1	0·7	3·4	0·2	19·2	22·4
1926—31	459,119	32·1	21·8	4·7	0·7	2·7	0·4	11·7	25·9
1931—36	455,125	27·9	23·5	2·4	1·0	2·9	0·2	13·6	28·5
1936—41	468,029	30·3	22·6	1·7	0·9	2·0	0·1	14 6	27·8
1941—46	460,419	25·8	24·8	2·0	1·4	3·1	0·2	14·1	28·6
1946—51	481,222	30·9	21·4	1·9	1·5	2·4	0·1	15·1	26·7

Linseed, cotton and opium are the three non-food crops which have been declining. In 1901-02 the area under linseed was 9,702 acres; in 1950-51 it was only 243 acres. In 1901-02 the area under cotton was 2,129 acres ; in 1950-51 it was only 11 acres. The area under opium in 1903-04 was 1,715 acres, whereas in 1950-51 it was nil. The area under sugarcane has been increasing. In 1901-02 the area under sugarcane was 38,561 acres while in 1950-51 it was 50,798 acres.

Live-Stock, ploughs and carts

9. Live-stock in this country live for a larger part of the year on the by-products of agriculture supplemented by green fodder crops. They have, therefore, to be co-related not only with the grazing available but also with the total area under cultivation which carries a major portion of the burden of supporting the cattle population.

As will appear from Table 3 Part III the total number of cattle and buffaloes has been decreasing since 1935. They were 3·33 lakhs in 1935, 3·29 lakhs in 1944 and 3·25 lakhs in 1951.

The number of working cattle and buffaloes in the district was 1·48 lakhs in 1935, 1·43 lakhs in 1944 and 1·46 lakhs in 1951. The number of ploughs has decreased during 1941—51 and now stands at 67·8 thousands. The number of carts was practically stationary during 1944—51. The average net cultivated area per plough works out to 5·94 acres in 1951 as against 6·93 acres in 1920 and the average net cultivated area per pair of working cattle works out to 5·52 acres in 1951 as compared to 5·21 acres in 1935.

Breeding cows and she-buffaloes have been increasing ever since 1935. They were 81·6 thousands in 1935, 86·8 thousands in 1944 and 88·9 thousands in 1951. The cows and female buffaloes in milk per 1,000 of human population were about 46 and 24 respectively. Owing to the poor milk yield the share of milk per head is only a few ounces per day.

The number of sheep has been decreasing ever since 1920 and now stands at 2·9 thousands. Goats have decreased from 80·8 thousands in 1935 to 34·3 thousands in 1951.

The number of horses and ponies has decreased from 4·7 thousands in 1935 to 4·2 thousands in 1951. Donkeys have practically remained stationary during 1944—51 and stand at 312.

Poultry has increased from 11·8 thousands in 1944 to 24·2 thousands in 1951.

Distributed on 1,000 of human population the figures of main categories of live-stock in 1951 are as follows :

Cattle	Buffaloes	Sheep	Goats	Poultry	Others
468	176	6	68	48	22

10. To sum up the population of the district is growing up at the biological natural rate since 1921 but on the other hand, the land area *per capita* has declined. There is, at the same time, no evidence that crop yield per acre has increased. If the present situation does not improve it is very doubtful that the district will be able to provide food for a rapidly increasing population.

Villages and towns

11. The district has 1,037 villages and 5 towns. Of the 5·04 lakhs of people who were counted at the census of 1951, 4·29 lakhs were found in villages and 0·75 lakhs in towns, i.e., there were as many as 851 people per 1,000 of the population who lived in rural areas and 149 of them lived in towns. The corresponding figures for the State as a whole were : rural 864, urban 136.

The rural population per inhabited village works out to 414. Most of the villages comprise of a single compact site. There are 1,301 hamlets in the district. The population per hamlet is 330. The medium-sized village with inhabitants numbering between 500—2,000 is the dominant type in the district. Of the rural population 56·9 per cent. live in such villages ; 37·7 per cent. of the rural population live in villages of population under 500 ; and only 5·4 per cent. live in villages of population between 2,000—5,000.

Towns vary in number of inhabitants even more widely than villages. Pilibhit city has a population of 46,225, i.e., 61·5 per cent. of the urban population. Of the urban population only 3·6 per cent. live in a town of population under 5,000 (viz., Bilsanda) ; 17·6 per cent. live in towns of population between 5,000—10,000 (viz., Neoria Husainpur and Puranpur) ; and 17·3 per cent. live in a town of population between 10,000—20,000 (viz., Bisalpur).

It is significant to note that Puranpur has registered 16·0 per cent. increase in population since 1941. Neoria Husainpur has recorded an increase of 7·5 per cent. since 1941. Pilibhit, Bisalpur and Bilsanda have not shown any significant increases. (*Vide* Tables A-III and A-IV)

Occupations : Livelihood pattern

12. Out of the total population of 504,428 (rural 429,289, urban 75,139) 381,775 (rural 369,643, urban 12,132) or 75·7 per cent. depend on agriculture for their means of livelihood and 122,653 (rural 59,646, urban 63,007) or 24·3 per cent. depend on the non-agricultural sources. The following table shows the distribution of 100 persons of the total, rural and urban population of the district and also of the Pilibhit city under the different livelihood classes :

Description	Agricultural classes					Non-agricultural classses				
	Total	I	II	III	IV	Total	V	VI	VII	VIII
Total	75·7	69·0	2·6	2·3	1·8	24·3	6·1	5·6	0·8	11·8
Rural	86·1	78·8	2·9	2·6	1·8	13·9	4·3	2·5	0·3	6·8
Urban	16·1	12·7	1·4	0·5	1·5	83·9	16·2	23·0	4·0	40·7
Pilibhit city ..	6·3	4·5	0·4	0·2	1·2	93·7	20·5	23·4	5·1	44·7

It is obvious that this district is one of the predominantly agricultural districts of the State. Here as many as 75·7 per cent. of the people depend on agriculture as against 74·2 per cent. in the whole State.

Of the total population of the district, 320,038 persons (males 104,486, females 215,552) or 63·4 per cent. have been classified as non-earning dependants. The percentage of non-earning dependants in the agricultural population works out to 63·6 and that among the non-agricultural classes to 62·9. It will be observed that in the main they consist of women. The male non-earning dependants are mostly children. 22,624 persons (males 12,825, females 9,799) or 4·5 per cent. of the population are earning dependants. Among the agriculturists their proportion is 4·8 per cent. and among non-agriculturists 3·4 per cent. The remaining 161,766 persons (males 154,197, females 7,569) or 32·1 per cent. of the population are self-supporting persons. Their proportion among the agriculturists is 31·6 per cent. and among non-agriculturists 33·7 per cent. Of the self-supporting persons 120,445 (males 116,253, females 4,192) belong to agricultural classes and 41,321 (males 37,944, females 3,377) to the non-agricultural classes. On the average a self-supporting person maintains two non-earning dependants.

Of the 41,321 self-supporting persons belonging to the non-agricultural classes 719 persons (rural 500, urban 219) earn their livelihood from non-productive sources. Of the remaining 40,602 self-supporting persons (rural 21,823, urban 18,779) 627 (rural 332, urban 295) or 1·5 per cent. are employers, 10,593 (rural 4,071, urban 6,522) or 26·1 per cent. are employees and 29,382 (rural 17,420, urban 11,962) or 72·4 per cent. are independent workers.

The distribution of 10,000 self-supporting persons of non-agricultural occupations, classified according to the Economic Divisions is as follows :

Name of division	Self-supporting persons by divisions
All Industries and Services	**10,000**
0—Primary industries not elsewhere specified	516
1—Mining and quarrying	5
2—Processing and manufacture—foodstuffs, textiles, leather and products thereof ..	1,683
3—Processing and manufacture—metals, chemicals and products thereof	111
4—Processing and manufacture—not elsewhere specified	540
5—Construction and utilities	292
6—Commerce	1,880
7—Transport, storage and communications	329
8—Health, education and public administration	673
9—Services not elsewhere specified	3,971

Sugar and oil are the two main large scale industries of the district. Among the cottage industries the principal are *tat patti*, agricultural implements, iron castings, weights and balances, *khandsari* sugar, basket making, *chick* making and unlacquered wooden articles, e.g., *dholak*, bed post, wooden troughs etc.

Variation in the livelihood pattern

13. In this district the population depending on agriculture was 75·3* per cent. in 1951. The unfortunate fact is that the agricultural proportion has been increasing ever since 1901 when the figure stood at 67·3 per cent. It was 68·9 per cent. in 1911 and 70·3 per cent. in 1921. The actual number of persons who depend on agriculture has increased to 379,816 in 1951 from 303,556, in 1921 or by 25·1 per cent. while the cultivated area has remained almost unchanged. This has resulted in progressive fragmentation and sub-division of holdings and pressure on impoverished soil. There appears to have been a gradual decline in village arts and handicrafts. The cumulative result is a fall in the proportion of workers and a corresponding rise in dependency. The proportion of workers in total population in 1951 was only 36·6 per cent. (agricultural 27·2 per cent., non-agricultural 9·4 per cent.) against 42·5 per cent. (agricultural 27·1 per cent., non-agricultural 15·4 per cent.) in 1921. The proportion of non-earning dependants has consequently increased from 57·5 per cent. (agricultural 43·2 per cent., non-agricultural 14·3 per cent.) in 1921 to 63·4 per cent. (agricultural 48·1 per cent., non-agricultural 15·3 per cent.) in 1951. All this is an index of the increasing unemployment and under-employment. It is only by the diversion of population to cottage and other industries and by providing subsidiary occupations to the agriculturists that the present severe disequilibrium in the economy of the district can be redressed. (*Vide* Tables B-I, B-II and B-III)

Houses and households

14. There were 74,800 occupied houses in the district, 62,665 in villages and 12,135 in towns. That gives an average of 6,851 persons per 1,000 houses or 6·9 persons per house in the rural areas and 6,192 persons per 1,000 houses or 6·2 persons per house in the urban areas.

There were 106,152 households in the district—90,933 in villages and 15,219 in towns. That give an average of 4,717 persons per 1,000 households or 4·7 persons per household in the rural areas and 4,910 persons per 1,000 households or 4·9 persons per household in the urban areas. The marginal table shows the developments in the size of the household since 1921. The rural as well as the urban household has increased since 1921. The rural household is still smaller than the average State rural household (5·07) but the urban household is bigger than the average State urban household (4·87).

Census year	Persons per 1,000 households of	
	Rural population	Urban population
1921 ..	4,496	4,447
1931 ..	4,440	4,765
1941 ..	4,672	4,743
1951 ..	4,717	4,910

Out of 4,717 persons in every 1,000 rural households, 2,538 are males and 2,179 females. There is male excess numbering 359 in every 1,000 rural households. Out of 4,910 persons in every 1,000 urban households 2,637 are males and 2,273 females. There is male excess numbering 364 in every 1,000 urban households.

*The figure includes earning dependants according to their secondary means of livelihood while the figure 75·7 in paragraph 12 includes earning dependants according to their principal means of livelihood and hence the difference.

Information regarding types of household and household relationships was also collected at this census with the help of a sample of about 4 per cent. According to this in every 1,000 sample households there are 4,487 persons (males 2,438, females 2,049) in the district. The corresponding figure for the total count is 4,745.

The table below shows the distribution by size of 1,000 sample households :

Description	Small with 3 members or less	Medium with 4—6 members	Large with 7—9 members	Very large with 10 members or more
Total	387	436	142	35
Rural	368	454	142	36
Urban	490	340	142	28

Medium households are the dominant type in the villages while the small households are relatively more common in urban areas. Quite a large number of migrants live in urban areas without families.

Family composition of 1,000 sample households is as follows :

			Number in 1,000 households
A	Heads of households	Males (married)	681
		Males (Widowers)	286
		Females	33
	Wives of heads of households		681
			1,681
B	Sons of heads of households		884
	Daughters of heads of households		606
			1,490
C	Male relations of heads of households (other than sons)		488
	Female relations of heads of households (other than daughters)		665
			1,153
D	Persons unrelated to the heads of households	Males	99
		Females	64
			163
		Grand total	*4,487*

Sons outnumber the daughters of heads of households. The latter leave the houses of their parents after marriage. Female relations (other than daughters) outnumber the male relations (other than sons). Such females are generally those who become members of these households by marriage. (*Vide* Tables A-I and C-I.)

Sex-ratio

15. In the district as a whole the sex-ratio was 858, i.e., there were 858 females to every 1,000 males. It varied among the tehsils. The lowest value was 840 in Puranpur. The highest value was 873 in Pilibhit. The ratio was 851 for Bisalpur.

The sex-ratio is smaller in towns than in villages. In this district the sex ratio in the villages was 858 while that in towns 855. The sex-ratio for Pilibhit city was 839.

The corresponding figure of sex-ratio for the district was 884 in 1921, 864 in 1931, 861 in 1941 as against 858 in 1951.

Age-structure

16. The number in each age group in the district is shown below as a percentage of the total number of all ages in the total, rural and urban population separately :

Age-group		Total population			Rural population		Urban population	
		Persons	Males	Females	Males	Females	Males	Females
Infants and young children	0—4	13·6	6·8	6·8	6·7	6·8	7·1	6·8
Boys and girls	5—14	24·0	13·0	11·0	13·1	10·9	12·6	11·4
Young men and women	15—34	33·9	18·9	15·0	19·0	14·9	18·6	15·5
Middle-aged men and women	35—54	21·5	12·1	9·4	12·2	9·4	11·7	9·2
Elderly persons	55 and over	7·0	3·4	3·6	3·3	3·7	3·6	3·5

It will be seen that the population is progressive. 37·6 per cent. of the population is of age under 15 and only 7·0 per cent. of it consists of elderly persons. (*Vide* Table C-II)

Marital status

17. Out of every 10,000 persons in the district there are 5,418 males and 4,582 females*. Among them 2,600 males and 1,693 females are unmarried. If we reckon males and females together, the unmarried people are 42·9 per cent. of the population.

Of the males 48·0 per cent. were unmarried, 45·0 per cent. were married and 7·0 per cent. were widowed or divorced. Among the females 37·0 per cent. were unmarried, 49·8 per cent. were married and 13·2 per cent. were widowed or divorced.

Of the married males 2·4 per cent. were of ages below 15, 50·6 per cent. were of ages 15—34, 38·0 per cent. were of ages 35—54 and 9·0 per cent. were of ages 55 and over. Among the married females 6·0 per cent. were of ages below 15, 61·2 per cent. were of ages 15—34, 29·2 per cent. were of ages 35—54 and 3·6 per cent. were elderly women.

Marriage is universal. Among males and females aged 35 and over only 6·2 per cent. of males and 0·2 per cent. of females were found unmarried. Most of the females are married before they attain the age of 25. Child marriage is still prevalent though it is not very common. 3·0 per cent. of the males of ages 0—14 and 7·7 per cent. of the females of ages 0—14 were returned as married. (*Vide* Table C-III)

Languages

18. Over 99·1 per cent of the people of the district returned Hindi, Hindustani or Urdu as their mother-tongue. Among the other mother-tongues spoken the main are Punjabi (0·73 per cent.) and Sindhi (0·09 per cent.) Of the 5·04 lakhs of the people in the district only 2,953 or 0·6 per cent. were bilingual (in an Indian language). Those whose mother-tongue is other than Hindi, Hindustani or Urdu are generally the migrants who are able to speak any of these as subsidiary language. Persons returning Hindi, Hindustani or Urdu as secondary language were 2,349 or 79·5 per cent. of those who were bilingual in some Indian language. (*Vide* Table D-I)

Religion and special groups

19. Of the 10,000 population of the district the number of people belonging to different religions is : Hindus 7,957, Muslims 1,973, Sikhs 54 and Christians 16 ; of the 10,000 rural population of the district the numbers are : Hindus 8,308, Muslims 1,630, Sikhs 51 and Christians 11; and of the 10,000 urban population of the district the numbers are : Hindus 5,952, Muslims 3,935, Sikhs 69, Christians 42 and Jains 2.

There were 64,480 persons belonging to Scheduled Castes in the district. Their number per 10,000 population works out to 1,278. In villages they were 1,429 for every 10,000 and in towns their number per 10,000 was only 417. In the district there were 19 Anglo-Indians. (*Vide* Tables D-II and D-III)

Displaced persons

20. The number of displaced persons in the district at the census was 2,308 (males 1,314, females 994). Of them 80·4 per cent came from West Pakistan, 1·1 per cent. from East Pakistan and 18·5 per cent. from the districts which could not be traced. (*Vide* Table D-V)

Literacy

21. The percentage of male literacy was 11·9 in the district while that of female literacy was 3·0 only. As compared to this the percentage of male literacy in 1931 was 4·6 and that of female literacy was 0·7†. On January 1, 1951 there were 314 primary schools in the district with an enrolment of 21,386. (*Vide* Table D-VII)

C—Explanatory Note on the Statistics

The statistics in this volume have been presented in three parts :

I—District Census Tables

II—Village, Town, Pargana and Thana Statistics

III—Miscellaneous Statistics

*The corresponding figures for the total count are 5,382 and 4,618.

†The numbers per mille (of the 10 per cent. sample population) of each sex aged 5 years and over who were returned as literate are as below :

Males		Females	
1951	1931	1951	1931
141	54	33	9

Parts I and II contain census data. A brief account of the system of sorting of census slips and preparation of tables and abstract therefrom is given below.

Part III contains statistics throwing light on special aspects of population and its growth. These have been derived from miscellaneous sources. Table I, "Vital Statistics", has been prepared from the published and unpublished records of the Director of Medical and Health Services, Table 2, "Agricultural Statistics", from the Annual Season and Crop Reports, Table 3, "Live-Stock, Agricultural Machinery and Implements", from the published figures of Live-Stock Census and Table 4, "List of Primary Schools", from information specially supplied by District Inspector of Schools.

Processing of census data

2. The census data presented here has been derived from the census slips by a process of sorting compilation and tabulation. In previous censuses the slips were first sorted by religion and this division was maintained throughout so that all data was cross-tabulated by religion. This procedure has been abandoned at this census and substituted by a division based on economic characteristics of the population. The whole population has been divided into eight livelihood classes, four of which are of the argricultural category and four of non-agricultural category as follows :

Agricultural Classes—

I—Cultivators of land wholly or mainly owned, and their dependants
II—Cultivators of land wholly or mainly unowned ; and their dependants ;
III—Cultivating labourers ; and their dependants
IV—Non-cultivating owners of land ; agricultural rent receivers ; and their dependants

Non-agricultural Classes—

V—Production (other than cultivation)
VI—Commerce
VII—Transport
VIII—Other services and miscellaneous sources

Another special feature of the sorting of this census was the separation, from the very start, of slips of displaced persons and of a 10 per cent. random sample from the remainder. This has enabled the data of displaced persons to be presented separately while the 10 per cent. sample has been utilized for the preparation of Age Tables.

The slips of this census have been copied by Households into a National Register of Citizens, which has been prepared village-wise for rural areas and mohalla/ward-wise for urban areas. Table C-I is based on a 4 per cent. sample extracted from this Register.

Tracts

3. The slips were first sorted by villages for the preparation of the Primary Census Abstract. For the purpose of further sorting the State was divided into tracts consisting of (*a*) *rural tracts*, comprising the rural population of each tehsil, (*b*) *urban city tracts*, comprising the population of areas which had been declared as cities, (*c*) *urban non-city tracts*, comprising the population of urban areas of a district excluding areas declared as cities. Each tract was treated as a unit for sorting of slips. All data were compiled first by tracts and then by districts. This volume presents the tract-wise data for one district (with the exception of A and E Tables, which have been presented tehsil-wise), while the district-wise data for the whole State is contained in the following State volumes :

Part I-B—Subsidiary Tables
Part II-A—General Population Tables
Part II-B—Economic Tables
Part II-C—Age and Social Tables

Explanatory notes

4. Detailed explanatory notes are appended to each State table in the printed volumes of State tables. They apply to the tables in this volume also and should be referred to when necessary. A few notes of some of the tables are reproduced below :

Table A-I—Column 5 relating to "hamlets" has been introduced for the first time. Any distinctive cluster or agglomeration of houses has been treated as a "hamlet".

A clear distinction has been made in this census between a "House" and a "Household". A house is any human dwelling having a separate main entrance while a household is any commensal unit living in a census house. In previous censuses the figures under "Occupied Houses" used to be that of households, while the figures under columns 7—9 of the present tables refer to occupied census houses as distinct from households.

The Economic Tables—The Indian Census Economic Classification Scheme, 1951, together with the occupational division and sub-division adopted for this census are given in Part II-B of the Report.

Table B-I—Each of the eight livelihood classes mentioned above has been divided into three sub-classes, with reference to the economic status, as follows :

(i) Self-supporting persons ;
(ii) Non-earning dependants ; and
(iii) Earning dependants ;

These were defined in the Instructions to Enumerators as follows :

> "A 'self-supporting person' is one who is in receipt of an income and that income is sufficient at least for his own maintenance. To be 'self-supporting' a person need not be able to support his family. All that is necessary is that he should be earning sufficient for his personal needs. For purposes of this question the person enumerated is the unit and not the family or household. Any one who is not a 'self-supporting person' in this sense is a 'dependant'. A 'dependant' may

be either an 'earning dependant' or a 'non-earning dependant'. The test is whether he secures a regular (and not casual) income, even though it may be small. Such income may be in cash or kind; it may be continuous or seasonal employment. When the income which he secures is not sufficient to support him that person is 'an earning dependant'. A person who does not earn any income either in cash or kind is a 'non-earning dependant'. Where two or more members of a family household jointly cultivate land and secure an income therefrom, each of them should be regarded as earning part of the income. None of them is, therefore, a non-earning dependant. Each of them should be classed either a 'self-supporting person' or an 'earning dependant' according to the share of income attributable to each. The same applies to any other business carried on jointly. The share of the income is what the head of household deems it to be. This does not mean that every one who works is necessarily a self-supporting person or an earning dependant. Thus, for instance, a housewife who cooks for the family, brings up the children or manages the household is doing very valuable work. Nevertheless, her Economic Status is that of a non-earning dependant, if she does not also earn an income, and should be recorded as such ".

Economically active, Semi-active and Passive persons—All non-earning dependants are economically passive. They include persons performing house-work or other domestic or personal services for other members of the same family household. But they do not include "unpaid family workers" or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise.

All earning dependants are economically semi-active only. Though they contribute to the carrying of economic activities, the magnitude of their individual contribution is deemed to be too small to justify their description as economically active. (Their contribution to economic activity is, however, taken into account in the tabulation of data based on secondary means of livelihood.)

All self-supporting persons are, ordinarily economically active with the exception of the following classes and groups:

(*a*) All self-supporting persons of Agricultural Class IV.

(*b*) The following groups of self-supporting persons who are included in Non-agricultural Class VIII and derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity):

(i) Persons living principally on income from non-agricultural property:
(ii) Persons living principally on pensions, remittances, scholarships and funds;
(iii) Inmates of alms-houses and recipients of doles;
(iv) Beggars and vagrants; and
(v) All other persons living principally on income derived from non-productive activities.

Table B-II—For a self-supporting person who has more than one means of livelihood the *secondary means* of livelihood is the livelihood next in importance to his principal means of livelihood. For an earning dependant it is the source from which he secures his own income, where there are more than one subsidiary occupations only the one providing the largest income has been taken into account.

Table B-III—"Employers", "Employees" and "Independent Workers" have been defined as follows in the Instructions to Enumerators:

An "employer" is only that person who has necessarily to employ other person in order to carry on the business from which he secures his livelihood. Thus if a person employs a cook or any other person for domestic services, he should not be recorded as an "employer" merely for that reason.

An "employee" is a person who ordinarily works under some other person for a salary or a wage in cash or kind as the means of earning his livelihood. There may be persons who are employed as managers, superintendents, agents etc., and in that capacity control other workers. Such persons are also employees only and should not be regarded as employers.

An "independent worker" means a person who is not employed by any one else and who also does not employ anybody else in order to earn his livelihood (Sweepers, *dhobis*, *kahars* etc., who work for several masters are independent workers. If, however, any of them accepts whole-time employment under one master he becomes "employee". Daily wage-earners who work for different masters are likewise independent workers. But if they accept employment under one master, e.g. under a factory, they become "employees".)

Tables C-II, C-III, C-IV and C-V—The figures presented in these tables are based on single year age returns and have not been smoothed.

Tables D-V (i) *and* (ii)—For the purpose of these tables a "displaced person" has been defined as follows:

"A displaced person means any person who has entered India having left or being compelled to leave his home in Western Pakistan on or after the 1st March, 1947, or his home in Eastern Pakistan on or after the 15th October, 1946, on account of civil disturbances or on account of the setting up of the two Dominions of India and Pakistan."

PART I

DISTRICT CENSUS TABLES

A—GENERAL POPULATION TABLES

A-I—Area, Houses and Population

Serial number	Tehsil	Area in square miles	Occupied houses: Villages	Hamlets	Towns	Total	Rural	Urban
1	2	3	4	5	6	7	8	9
	District Total	***1,343***	***1,037***	***1,301***	***5***	***74,800***	***62,665***	***12,135***

NOTE—The area figures given in column 3 are based on the district records of tehsil areas. The area of the district as communicated by the Surveyor General of India is 1,353 square miles.

A-II—Variation in Population during Fifty Years
