DISTRICT CENSUS HANDBOOK
1951

SHAHJAHANPUR DISTRICT

FOREWORD

Several States, including Uttar Pradesh, have been publishing village statistics by districts at each census. In 1941 they were published in U. P. under the title "District Census Statistics" with a separate volume for each district. In the 1951 census, when the tabulation has been more elaborate than ever in view of the requirements of the country, the district-wise volume has been expanded into a "District Census Handbook", which now contains the District Census Tables (furnishing data with break-up for census tracts within the district), the District Index of Non-agricultural Occupations, agricultural statistics from 1901-02 to 1950-51 and other miscellaneous statistics in addition to the usual village population statistics. The village population statistics also are given in an elaborate form giving the division of the population among eight livelihood classes and other details.

2. It may be added here that a separate set of district-wise volumes giving only population figures of rural areas by villages and of urban areas by wards and mohallas and entitled "District Population Statistics" has already been published. This separate series was necessitated by the urgent requirements of the U. P. Government for elections to local bodies. The printing of the District Census Handbooks involves colossal work and is bound to take some time.

RAJESHWARI PRASAD, I.A.S.,
Superintendent, Census Operations,
Uttar Pradesh.

RAMPUR:
December 31, 1954.

INTRODUCTION

A—The District

1. The district of Shahjahanpur occupies the south-east corner of the Rohilkhand division. It is bounded on the east by the Kheri district, on the south by Hardoi and Farrukhabad and on the west by Budaun and Bareilly, while to the north lie the Bisalpur and Puranpur tehsils of the Pilibhit district. The district has a total area of 1,709 square miles. Its population in 1951 was 10·04 lakhs. It has four tehsils, 12 parganas and 17 thanas.

Topography

2. The district presents the appearance of an open plain, well-wooded by reason of the numerous groves and scattered trees, and in a high state of cultivation. The general level is broken only by the valleys of the numerous streams which in most cases flow in a south-easterly direction, indicating the ordinary slope of the country. It exhibits a striking diversity of soils and natural features. The most obvious division is that into *bangar* or upland and *tarai* or lowland, the latter being also known as *khadar*. The *bangar* corresponding closely to *katehr* of Budaun and Moradabad is the old and stable alluvium, and consists of a level plain at a considerable elevation above the rivers, while the low valleys which have been formed by a long process of erosion, the width depending on both the violence of the current and the consistency of the soil, constitute the *khadar*. Generally speaking, the surface formation is similar to that found throughout the Gangetic plain and depends almost wholly on the rivers. They flow in their well marked valleys which are generally subject to innundation every year. From the sandy crests of the banks the land slopes gently towards the central plain till it rises again towards the bank of the next river while in the middle there is usually a shallow depression, marked as a rule by subsidiary drainage lines or mere strings of pools.

The first of the natural divisions is the tract in the extreme north-east comprising the Pawayan tehsil. This tract is bears a strong resemblance to the submontane *tarai* of Pilibhit and Naini Tal of which it is in fact a southerly continuation. It includes a good deal of swamps and some forest and has a fertile soil, a high water level, a climate which is popularly supposed to be most unhealthy and a somewhat sparse and fluctuating population. This *tarai* belt terminates on the west and south-west in a raised strip of high country with a light and sandy soil of a most unfertile character, roughly bounded by the Jhukna and the western high bank of the Gomti. On the whole this is one of the worst parts of the Pawayan tehsil.

The succeeding tract, the *bangar* on the other hand embraces the greater portion of the district, although it contains many internal subdivisions. It is a plain of light though moderately fertile loam, varied by heavy clay in the depressions and by light sandy soil on the river banks and higher levels.

The *bangar* finally terminates in the *tarai* of the Ramganga basin, which includes about half of Khera Bajhera pargana in tehsil Tilhar and a strip passing through Jalalabad. A similar strip of *tarai* is to be found along the Ganga, but here the good land is very restricted in extent. The last remaining tract is the *bankati* occupying the western and largest portion of Jalalabad pargana. The name denotes the cleared forest land and traces of its former appearance are to be seen in numerous scattered patches of '*dhak*' jungle.

Soils

3. The soils throughout the district correspond closely to the types prevailing over the whole Gangetic plain. They consists of *bhur* or sand, *matiar* or clay, and *dumat* or loam, the last being a mixture of the others, though the proportion of each varies to an infinitesimal degree and there is no hard and fast line of demarcation between any one kind and the next. The extent of clay is largest in the parganas of Jamaur, Jalalabad, Nigohi and Khera Bajhera. Kant and Khutar show the highest proportion of *bhur*, followed by Tilhar and Pawayan ; there is practically none in Jamaur, and very little in either Shahjahanpur or Baragaon. A few local variations of the natural soils may be recorded, such as *dhankar*, a term applied to land growing rice and no other crop, and *khapat*, which is the very hardest and poorest clay, usually found in the natural drainage and flood lines, where water collects and remains for weeks during the rainy season.

Classification of area

4. The figures of classification of area during the last fifty years are given in Table 2 of Part III of this volume. The proportion of area under the various categories works out as follows for 1950-51 :

Particulars	Actual figures (in acres)	Percentage
Cultivated area	791,943	70·2
Culturable waste (excluding current fallow)	169,920	15·0
Current fallow	64,121	5·7
Forest	101	..
Area not available for cultivation of which—	102,519	9·1
(*a*) *Covered with water*	*36,970*	*3·3*
(*b*) *Under sites, roads and buildings*	*40,645*	*3·6*
(*c*) *Barren*	*24,904*	*2·2*

The figures in the above table regarding culturable waste taken from the Season and Crop Report is, however, misleading. The State Agriculture Department conducted in 1949-50, a detailed enquiry through the district officers regarding the nature of this area in each district. The following analysis of the area resulted from this enquiry :

Particulars	Area (in acres)	Percentage
Total culturable waste (A + B + C)	**166,890**	**100**
A—Area under culturable waste land not available for immediate cultivation	97,968	58·70
(i) Forest under any legal enactment	..	..
(ii) Groves	25,607	15·34
(iii) Forests of timber trees	34,539	20·70
(iv) Thatching grasses, shrubs and bushes	32,792	19·65
(v) Land kept for grazing	5,030	3·01
B—Area under culturable waste land available for immediate cultivation but could not be cultivated.	12,242	7·34
Of which due to --		
(i) *Kans* growth	95	0·06
(ii) Threshing floors	441	0·26
(iii) Malaria	..	..
(iv) Floods	..	..
(v) Lack of drains	443	0·27
(vi) Lack of water	2,868	1·72
(vii) Distance from *abadi*	844	0·51
(viii) Damage from wild animals	2,479	1·48
(ix) Other causes	5,072	3·04
C—Area under culturable waste land that can be brought under immediate cultivation after some improvements besides the area given against B.	56,680	33·96

From the above it will appear that of the total area recorded as culturable waste, only 33·96 per cent. was really capable of being brought under cultivation after some improvements. Thus the land area cultivated and cultivable (including current fallow) *per capita* in the district works out to only 102·2 cents of which 85·2* cents have already been brought under cultivation and only about 5·6 cents can further be brought under cultivation after some improvements. In fact, saturation point appears to have been reached in respect of utilisation of land for cultivation.

Climate and rainfall

5. The rainfall is normally ample. The average for the last quinquennium was about 38·69 inches. During the last forty-five years the rainfall has been less than 25 inches in only one year and has usually been more than 38 inches. Generally speaking, the climate closely resembles that of Bareilly and the rest of Rohilkhand. It is distinctly more moist than that of the *doab* so that the country appears green and fresh for the greater part of the year, though the atmosphere is much drier than that of the eastern districts. The tract enjoys the long cold weather of the Rohilkhand and Meerut divisions while the heat in the summer is less excessive than in Lucknow and Agra. As in Bareily, the climate may be styled sub-Himalayan, the dominant features being dampness, moderate heat and partial immunity from violent hot winds, which rarely blow after sunset and are never prolonged through the night. In the cold weather the temperature reaches a low level and frosts are common. The general health is good in the upland areas as a whole, but the river valleys and the clay tract in which waterlogging occurs are less fortunate. The north-eastern part of Pawayan tehsil is the most unhealthy part of the district. There the climate resembles that of the *tarai* and malarial fever is extremely prevalent.

Irrigation

6. Irrigation is drived from canals, wells, tanks, lakes and other natural reservoirs. In 1950-51, the irrigated area from canals was 63·2 per cent., from wells 14·0 per cent. and from other sources 22·8 per cent.

Crops

7. More acreage is sown under *kharif* crops than under *rabi* crops. The area under *kharif* crops in 1950—51 was 479,949 acres, that under *rabi* was 407,684 acres and that under *zaid* crops was 2,083 acres. The principal *kharif* crops is rice while principal *rabi* crop is wheat followed by barley.

*The figure also includes the area classed as current fallow.

B—Analysis of the Statistics

Population : General distribution and density

1. The table below shows the two basic figures—land area and population—and the derived figures of land area *per capita* :

Tehsil	Population (in lakhs)	Density (number per square mile)	Land area (in lakhs of acres)	Land area *per capita*
Shahjahanpur	3·08	779	2·53	0·82
Pawayan	2·28	385	3·78	1·66
Jalalabad	2·04	566	2·31	1·13
Tilhar	2·64	641	2·64	1·00
Shahjahanpur district	*10·04*	*571**	*11·26*	*1·12*

The district stands 35th in position in the districts of the State both in area and population. Its density is 571 while the average density of the State is 557 only. The density of the district has been to some extent inflated by the presence of large towns. The rural density of the district is 489, the density of the rural parts of tehsils being ; Shahjahanpur 524, Pawayan 377, Jalalabad 549, Tilhar 566. The people are evenly distributed through out the district except for tehsil Pawayan which includes a good deal of forest and swamps and is unhealthy. (*Vide* Tables A-I and E)

Growth of population

2. The growth of population in the district during the last fifty years has been very slow. The population of the district in 1951 was only 6·9 per cent. higher than what it was fifty years ago. Compared to this the increase in the population of the State during the corresponding period has been as much as 30 per cent. The table below exhibits the variation in the total, rural and urban population for the last five decades.

Census year	Population			Variation		
	Total	Rural	Urban	Total	Rural	Urban
1901	939,451	818,912	120,539			
1911	963,188	849,738	113,450	+23,737 (+2·5)	+30,826 (+3·8)	—7,089 (—5·9)
1921	855,674	745,833	109,841	—107,514 (—11·2)	—103,905 (—12·2)	—3,609 (—3·2)
1931	904,844	780,500	124,344	+49,170 (+5·7)	+34,667 (+4 6)	+14,503 (+13·2)
1941	983,385	833,322	150,063	+78,541 (+8·7)	+52,822 (+6·8)	+25,719 (+20·7)
1951	1,004,378	853,978	150,400	+20,993 (+2·1)	+20,656 (+2·5)	+337 (+0·2)

A noteworthy feature is that between 1901 and 1921, the population of the district recorded a decrease of 8·9 per cent. when that of the State decreased by 4·0 per cent. only. Plague mortality during the decade 1901—11 was not very high and the district gained in population. But the small gain in this decade was more than counterbalanced owing to heavy losses in the decade 1911—21 (especially from influenza). During 1921—51 the population of the district recorded an increase of only 17·4 per cent. against an increase of 35·5 per cent. in the population of the state during the same period. During 1921—31 the district lost by emigration and disease and the increase was below the State average. The increase was again below the state average during 1931—41. The increase in the population of this district (2·1 per cent.) has been very slow in the last decade as compared to the State average (11·8 per cent.), the percentage increases in the tehsils being: Shahjahanpur 0·6, Pawayan 2·0, Jalalabad 3·1 and Tilhar 3·3. The district especially Shahjahanpur city, appears to have lost heavily on the balance of migration owing to the Muslim exodus.

Vital Statistics

3. Births and deaths mainly account for the trends in population growth. Migration also is a factor though of lesser importance. The following table gives the mean decennial registered birth and death-rates and the calculated natural increase rates and

*According to the area given by Surveyor General, the density is 588.

population growth rates of the last three decades for the district as a whole and for its rural and urban areas:

	Total	Rural	Urban
Mean decennial birth-rate			
1941—50	30·3	30·1	31·7
1931—40	39·2	40·3	32·9
1921—30	42·3	43·4	35·0
Mean decennial death-rate			
1941—50	21·3	21·1	22·4
1931—40	28·7	29·7	22·5
1921—30	32·6	33·5	26·9
Mean decennial rate of natural increase			
1941—50	9·0	9·0	9·3
1931—40	10·5	10·6	10·4
1921—30	9·7	9·9	8·1
Mean decennial growth-rate			
1941—50	2·1	2·4	0·2
1931—40	8·3	6·5	18·7
1921—30	5·6	4·5	12·4

There are large ommissions in the registration of births as well as deaths and so the above rates do not represent the true picture at all. They may, however, be taken to be roughly indicative of trends. In the district as a whole both birth and deathrates have fallen during the last decade.

The figures of natural increase and growth rates suggest considerable loss of population on the balance of migration during the last three decades.

The average yearly mortality from various causes in the district during 1941—50 was as followes :

Causes	Number of deaths	Percentage of total deaths
Fever	18,115	85·7
Dysentery and diarrhoea	198	0·9
Respiratory diseases	385	1·8
Plague, cholera and small-pox	532	2·5
Others	1,914	9·1

As in the rest of the State 'fever' is responsible for a majority of the deaths. But fever covers a number of ailments which the reporters are unable to identify. (*Vide* Table I, Part III of this volume)

Migration

4. About 90·5 per cent. of people enumerated in the district at the census of 1951 were born there, 8·8 per cent. were born in other districts of the State, 0·3 per cent. were born in other parts of India and only 0·4 per cent. came from other countries. Of the immigrants from the districts of the State as many as 60,301 (males 16,253, females 44,048) are from the other districts of the same natural division and 27,474 (males 7,465, females 20,009) are from other parts of the State. The sex proportion suggests that most of the migration from the neighbouring districts is marriage migration. Of the immigrants from the adjacent States 1,767 (males 1,054, females 713) are from Punjab and 327 (males 205, females 122) are from Bihar.

Of the immigrants who have come from territories beyond India 4,132 (males 2,421, females 1,711) were born in Pakistan and 218 (males 104, females 114) had their birth place in other territories. The Pakistan-born are generally the displaced persons who numbered 4,346, (males 2,328, females 2018) in the district. Of the immigrants born in other territories, 175 (males 82, females 93) were Nepal-born.

Of the 18 non-Indian nationals, 13 were Napalees, 1 Burmese, 3 British and 1 American.

Unfortunately, the figures of emigration are not available. According to recorded vital statistics, however, district appears to have lost about 36 thousand people in 1921—30, 21 thousands in 1931—40 and 69 thousands in 1941—50 on the balance of migration. But it should be borne in mind that the figures contain large element of registration error and are only indicative of trends.

Decline of cultivation *per capita*

5. We may now analyse the growth of population in the district during the last thirty years in relation to the growth of cultivation during the same period. The figures of the district are exhibited in the marginal table. (Figures of area shown under census years are quinquennial averages for the five years preceding the census year). It is obvious that cultivated area *per capita* has gone down to 77·8 cents in 1951 from 89·6 cents in 1921. It means that (other things being equal) every man, woman and child must expect to get less food and other agricultural produce from the land in 1951 than in 1921.

Census year	Population*	Net area sown (in acres)	Area of cultivation *per capita* (in cents)
1921	839,115	751,445	89·6
1931	905,131	721,359	79·7
1941	983,385	744,233	75·6
1951	1,004,378	781,631	77·8

Double cropped area *per capita*

6. It may be examined whether this shortage has been compensated by an increase in the yield per acre. Increase in yield can be brought about by more double cropping, more irrigation, better fertilization and better culture. The average (quinquennial) area sown more than once was 112,289 acres in 1921. It decreased to 108,458 acres in 1931 and further decreased to 95,131 acres in 1941. But in 1951 it has increased to 129,638 acres. The figures of double crop cultivation *per capita* in cents are given below :

Particulars	Quinquennial averages for the year preceding			
	1951	1941	1931	1921
Double crop cultivation *per capita* in cents	12·9	9·6	12·0	13·4
Unirrigated double crop cultivation *per capita* in cents ..	12·4	8·5	11·5	12·7
Irrigated double crop cultivation *per capita* in cents	0·5	1·1	0·5	0·7

The double cropped area has increased since 1941 but it has not yet touched the 1921 level.

Irrigated area *per capita*

7. The average (quinquennial) area irrigated in the district was 199,008 acres in 1921. The figures were 139,302 acres in 1931, 167,340 acres in 1941 and 142,556 acres in 1951. The average area irrigated more than once was 6,024 acres in 1921, 4,624 acres in 1931, 11,308 acres in 1941 and 4,723 acres in 1951. The figures of irrigation *per capita* are given below in the table :

Particulars	Years			
	1951	1941	1931	1921
Irrigated single crop cultivation *per capita* in cents	13·7	15·9	14·9	23·0
Irrigated double crop cultivation *per capita* in cents	0·5	1·1	0·5	0·7

The irrigated area *per capita* has declined since 1941.

Cropped area

8. It is also significant that in spite of the rapid growth of population, the area under food crops has declined in this district. During the quinquennium 1916—21, 89·03 per cent. of the cropped area was under food crops and only 10·97 per cent. was under non-food crops. Thirty years after during 1946—51, the cropped area under food crops was 86·77 per cent. and that under non-food crops was 13·23 per cent.

* The figures of population of various censuses relate to the then lay-out of the district.

The proportionate area under different crops between 1911 and 1951 was as given below :

Quinquennial average of	Total cropped area	Percentage of cropped area under							
		Rice	Wheat	Barley	Juar	Bajra	Maize	Gram	Others
1911—16	899,168	9·0	28·4	7·9	3·1	14·4	0·6	13·0	23·6
1916—21 ..	838,217	13·2	25·7	7·6	3·1	13·4	0·7	11·8	24·5
1921—26	883,684	13·5	23·5	6·9	3·1	9 8	0·5	20·1	22·6
1926—31	827,396	15·1	26·5	6·5	4·1	8·5	0·8	12·7	25·8
1931—36	834,813	12·8	29·3	4·5	4·3	8·9	0·6	12·5	27·1
1936—41	844,395	13·8	29·6	4·0	3·8	8·3	0·4	15·3	24·8
1941—46	864,461	12·4	28·0	4·1	4·4	9·4	0·6	15·5	25·6
1946—51	903,381	17·0	25·3	4·1	4 7	7·4	0·4	15·8	25·3

Cotton and indigo are two non-food crops which have almost gone out of cultivation. The area under cotton was 7,988 acres in 1901-02; it was only 78 acres in 1950—51. The area under indigo in 1901-02 was 1,233 acres; it was nil in 1950-51. Sugarcane is one of the most important crops and its area has risen considerably since 1930 with the establishment of sugar factories. It is now 65,572 acres.

Live-stock, ploughs and carts

9. Live-stock in this country live for a large part of the year on by-products of agriculture supplemented by green fodder crops. They have, therefore, to be co-related not only with the grazing available but also with the total area under cultivation which carries a major portion of the burden of supporting the cattle population.

As will appear from table 3 of part III the total number of cattle and buffaloes which decreasing from 1935 to 1944 has during 1944—51 increased from about 5·6 lakhs to 6·0 lakhs.

The number of working cattle and buffaloes in the district went down from 2·4 lakhs to 2·2 lakhs during 1935—44 and increased during 1944 – 51 to 2·5 lakhs. This number of working cattle appears to be governed by the number of ploughs and carts. The number of ploughs has gone up from 1·0 lakh to 1·2 lakhs in 1951 due apparently to progressive fractionalization of holdings. The number of carts started rising since 1930 except for the year 1944 and stands now at about 54 thousands. The average net cultivated area per plough work out to 6·49 acres in 1951 as against 7·84 acres in 1920, and the average net cultivated area per pair of working cattle works out to 6·37 acres in 1951 as compared to 6·20 acres in 1935.

Breeding cows and she-buffaloes have been increasing since 1935 from 1·64 lakhs to 1·8 lakhs in 1951. The cows and female buffaloes in milk per 1,000 of human population were 43 and 40 respectively. Owing to the poor milk yield the share of milk per head is only a few ounces per day.

The number of sheep has been going down since 1935 when the figure stood at about 16 thousands and now it has gone down to 9 thousands due apparently to shortage of pasture. Goats have been going down in number since 1935 when they were over 2 lakhs. Their number in 1951 was under 99 thousands, the reduction during 1944—51 alone being 22·9 per cent.

Horses and ponies also are declining in number since 1935. There was a fall during 1944—51 from about 7 thousands to 6 thousands. Donkeys have also decline during the same period.

Poultry continues to be steady at about 26 thousands.

Distributed on 1,000 of human population the figures of the main categories of live-stock in 1951 are as follows:

Cattle	Buffaloes	Sheep	Goats	Poultry	Others
383	216	9	98	26	25

10. To sum up, the population of the district is growing up at the biological natural rate since 1921 but on the other hands the land area *per capita* has decreased since 1921. The magnitude of the absolute numerical increase in relation to the parctically stationary acreage under cultivation is a great strain on the economy of the district.

Villages and towns

11. The district has 2,042 villages and 7 towns. Out of the 10·04 lakhs of people who were counted at the census of 1951, 8·54 lakhs were found in villages and 1·50 lakhs were found in urban areas, i.e., there were as many as 850 people per 1,000 of general population who live in rural areas and only 150 of them live in towns. The corresponding figures for the State as a whole are : rural 864, urban 136.

The rural population per inhabited village works out to 418. But the villages do not necessarily comprise of a single compact site. There are 2,860 hamlets in the district. The population per hamlet is only 299. The mediumsized village, with inhabitants numbering between 500—2,000, is the dominant type in the district. Of the rural population 51·1 per cent. live in such villages; 41·3 per cent. in small villages of population under 500 ; and 7·6 per cent. in large villages of population between 2,000—5,000.

Towns vary in number of inhabitants even more widely than villages. Shahjahanpur city has a population of 104,835 or 69·7 per cent. of the urban population of the district. Only 3·3 per cent. of the urban population lives in towns of population under 5,000 (viz., Khudaganj-Lachhmanpur) excluding the population of Shahjahanpur contonment 12·9 per cent. live in towns of population between 5,000 and 10,000 (viz , Pawayan, Katra and Jalalabad) and excluding the population of Shahjahanpur M. B. 14·1 per cent. live in towns of population over 20,000 (viz. Tilhar). Shahjahanpur city has recorded a decrease of 4·8 per cent. since 1941 due to heavy losses on the balance of migration. Katra, Jalalabad and Pawayan appear to be declining towns. (*Vide* Tables A-III and A-IV).

Occupations : Livelihood pattern

12. Out of the total population of 1,004,378 (rural 853,978, urban 150,400) 793,571 (rural 771,691, urban 21,880) or 79·0 per cent. depend on agriculture for their means of livelihood and 210,807 (rural 82,287, urban 128,520) or 21·0 per cent. depend on the non-agricultural sources. The following table gives the distribution of 100 persons of the total, rural and urban population of the district and also of Shahjahanpur city under the different livelihood classes:

Description	Agricultural classes					Non-agricultural classses				
	Total	I	II	III	IV	Total	V	VI	VII	VIII
Total	79·0	66·9	6·6	3·1	2·4	21·0	6·6	4·4	1·2	8·8
Rural	90·4	77·3	7·3	3·4	2·4	9·6	3·4	1·5	0·5	4·2
Urban	14·5	8·4	2·7	1·3	2·1	85·5	24·8	20·9	4·9	34·9
Shahjahanpur city ..	11·1	5·1	2·5	1·7	1·8	88·9	26·9	20·2	5·9	35·9

It is obvious that this district is one of the predominantly agricultural districts of the State. Here as many as 79·0 per cent. of the people depend on agriculture as against 74·2 per cent. in the whole State.

Of the total population of the district, 630,136 persons (males 202,373, females 427,763) or 62·7 per cent. have been classified as non-earning dependants. The proportion of non-earning dependants in the agricultural population works out to 62·8 per cent. and that among non-agricultural classes to 62·7 per cent. It will be observed that in the main they consist of women. The male non-earning dependants are mostly children. 28,714 persons (males 19,173, females 9,541) or 2·9 per cent. of the population are earning dependants. Among the agriculturists their proportion is 3·0 per cent. and among the non-agriculturists 2·3 per cent. Agriculture is a family occupation and it provides work to the women and grown-up children in the family. The remaining 345,528 persons (males 328,628, females 16,900) or 34·4 per cent. of the population consist of self-supporting persons. Their proportion among agriculturists is 34·2 per cent. and among non-agriculturists 35·0 per cent. Of the self-supporting persons 271,796 (males 261,878, females 9,918) belong to agricultural classes and 73,732 (males 66,750 females 6,982) to the non-agricultural classes. On an avarage a self-supporting person maintains two non-earning dependants.

Of 73,732 persons belonging to non-agricultural classes, 2,323 persons (males 1,018, females 1,305) earn their livelihood from non-productive sources. Of the remaining 714,09 persons (rural 32,139, urban 39,270) 911 (rural 98, urban 813) or 1·3 per cent. are employers, 19,099 (rural 6,224, urban 12,875) or 26·7 per cent. are employees and 51,399 (rural 25,817, urban 25,582) or 72·0 per cent. are independent workers.

The distribution of 10,000 self-supporting persons of non-agricultural occupations classified according to economic divisions is as follows :

Name of division	Self-supporting persons by divisions
All Industries and Services	10,000
0—Primary industries not elsewhere specified	259
1—Mining and quarrying	2
2—Processing and manufacture—foodstuffs, textiles, leather and products thereof ..	1,759
3—Processing and manufacture—metals, chemicals and products thereof	506
4—Processing and manufacture—not elsewhere specified	696
5—Construction and utilities	490
6—Commerce	1,939
7—Transport, storage and communications	550
8—Health, education and public administration	1,098
9—Services not elsewhere specified	2,701

Among the large scale industries of the district distillery is an important one. Among the small scale industries are *tat-patti*, ropes and *ban* of *moonj* and *bhabar* and mat weaving.

Variation in the livelihood pattern

13. The proportion of population depending on agriculture for their livelihood was 78·5* per cent. in 1951. The agricultural proportion has increased since 1901. In 1901, the figure stood at 67·8 per cent. It was 70·9 per cent. in 1911, 70·0 in 1921. against 78·5 per cent. in 1951. The actual number of persons who depend on agriculture was 788,258 in 1951 against 586,976 in 1921. This number has increased by 34·3 per cent. while the cultivated area has increased by only 4·0 per cent. This has resulted in the progressive fragmentation and subdivision of holdings and increased pressure on soil. There appears to have been a gradual decline in village arts and handi-crafts. The cumulative result is a fall in the proportion of workers and a corresponding rise in dependency. The proportion of workers in total population in 1951 was only 37·3 per cent. (agricultural 28·9 per cent., non-agricultural 8·4 per cent.) against 41·1 per cent. (agricultural 28·7 per cent. non-agricultural 12·4 per cent.) in 1921. The proportion of non-earning dependants consequently increased from 58·9 per cent. (agricultural 41·3 per cent.. non-agricultural 17·6 per cent.,) in 1921 to 62·7 per cent. (agricultural 49·6 per cent., non-agricultural 13·1 per cent.) in 1951. All this is an index of increasing unemployment and underemployment. It is only by the diversion of the population to cottage and other industries and by providing secondary occupation to the agriculturists that the present severe disequilibrium in the economy of the district can be redressed. (*Vide* Tables B-I, B-II and B-III)

Houses and households

14. There were 149,623 occupied houses in the district—130,288 in rural areas and 19,335 in urban areas. That gives an average of 6,555 persons per 1,000 houses or 6·6 persons per house in the rural areas and 7,779 persons per 1,000 houses or 7·8 persons per house in the urban areas.

There were 212,223 households in the district—184,072 in rural areas and 28,151 in urban areas. That gives an average of 4,632 persons per 1,000 households or 4·6 persons per household in rural areas and 5,296 persons per 1,000 households or 5·3 persons per household in the urban areas. The marginal table shows the developments in the size of household since 1921. The rural household has registered a marked decrease since 1941 and is considerably smaller than the average State rural household (5·07). The urban household has also registered a marked decrease since 1941.

Census year	Persons per 1,000 households of	
	Rural population	Urban population
1921 ..	4,524	5,266
1931 ..	4,586	4,791
1941 ..	4,830	5,925
1951 ..	4,632	5,296

Out of 4,632 persons in every 1,000 rural households, 2,544 are males and 2,088 are females. There is a male excess of about 456 in every 1,000 households. Out of 5,296 persons in every 1,000 urban households 2,826 are males and 2,470 are females. There again, is a male excess numbering 356.

*The figure includes earning dependants according to their secondary means of livelihood while the figure 79·0 in paragraph 12 includes earning dependants according to the principal means of livelihood and hence the difference.

Information regarding types of household and household relationships was also collected at this census with the help of a sample of about 4 per cent. According to this in every 1,000 sample households, there are 4,542 persons (males 2,494, females 2,048) in the district. The corresponding figure for the total count is 4,720.

The table below shows the distribution by size of 1,000 sample households :

Description	Small with 3 members or less	Medium with 4—6 members	Large with 7—9 members	Very large with 10 members or more
Total	**374**	**439**	**140**	**47**
Rural	361	447	144	48
Urban	445	393	122	40

Medium households are the dominant type in the villages whereas small households are the dominant type in the urban areas. Quite a large number of migrants live in the towns without families.

Family composition of 1,000 sample households is as follows :

			Number in 1,000 households
A	Heads of households	Males (married)	622
		Males (Widowers)	305
		Females	73
	Wives of heads of households		622
			1,622
B	Sons of heads of households		956
	Daughters of heads of households		594
			1,550
C	Males relations of heads of households (other than sons)		587
	Female relations of heads of households (other than daughters)		741
			1,328
D	Persons unrelated to the heads of households	Males	24
		Females	18
			42
	Grand total		*4,542*

Sons outnumber the daughters of heads of households. The latter leave the houses of their parents after marriage. Female relatives (other than daughters) out number the male relatives (other than sons). Such females are generally those who become members of these households by marriage. (*Vide* Tables A-I and C-I.)

Sex-ratio

15. In the district as a whole the sex-ratio was 826, i.e., there were 826 females to every 1,000 males. It varies among the tehsils. The highest value was 839 in Shahjahanpur tehsil and the lowest value was 787 in Jalalabad. The sex ratio was 838 in Pawayan and 830 in Tilhar. Contrary to the general trend, and sex-ratio was higher in towns than in villages. For the district as a whole, the sex-ratio in villages was only 819 while that in towns was 864

The corresponding figures of sex-ratio for the district was 852 in 1921, 836 in 1931, and 822 in 1941.

Age structure

16. The number in each age group in the district is shown below as a percentage of the total number of all ages in the total, rural and urban population.

Age-group		Total population			Rural population		Urban population	
		Persons	Males	Females	Males	Females	Males	Females
Infants and young childern ..	0—4	12·9	6·5	6·4	6·5	6·4	6·5	6·2
Boys and girls	5—14	23·5	12·9	10·6	13·0	10·5	12·2	11·4
Young men and women ..	15—34	32·3	18·3	14·0	18·3	13·8	18·2	15·3
Middle-aged men and women ..	35—54	23·0	13·3	9·7	13·4	9·8	12·6	9·3
Elderly persons	55 and over	8·3	4·3	4·0	4·3	4·0	4·5	3·8

It will be seen that the population is progressive. 36·4 per cent. of the population is of age under 15 and only 8·3 per cent. of it consists of elderly persons. (*Vide* Table C-II)

Marital status

17. Out of every 10,000 persons in the district, there are 5,530 males and 4,470 females*. Among them 2,831 males and 1,654 females are unmarried. If we reckon males and females together the unmarried people are 44·8 per cent. of the population.

Of the males 51·2 per cent. were unmarried, 41·4 per cent. were married and 7·4 per cent. were widowed or divorced. Among the females 37·0 per cent. were unmarried, 49·3 per cent. were married and 13·7 per cent. were widowed or divorced.

Of the married males 1·3 per eent. were of ages below 15, 46·0 per cent. were of ages 15—34, 41·8 per cent. were of ages 35—54 and 10·9 per cent. were of ages 55 and over. Among females 5·1 per cent. were of ages below 15, 58·7 per cent. were of ages 15—34, 32·2 per cent. were of ages 35—54 and 4·0 per cent. were 55 and over, i.e., elderly women.

Marriage is universal. Among males and females aged 35 years and over only 11·9 per cent. of the males and 0·6 per cent. of the females were found unmarried. Most of the females are married before they attain the age of 25. Child marriage is still prevalent but is not very common 1·5 per cent. of males of ages 0—14 and 6·6 per cent. of females ages 0—14 were returned as married. (*Vide* Table C-III)

Languages

18. About 99·5 per cent. of the people of the district returned Hindi, Hindustani or Urdu as their mother-tongue. Among the other mother-tongues spoken the main are Punjabi (0·4 per cent.), Bengali (0·03 per cent.) and Sindhi (0·04). Of the 10·04 lakhs of people in the district only 2,245 persons or 0·2 per cent. were bilingual (in an Indian language). Those whose mother-tongue is other than Hindi, Urdu or Hindustani are generally the migrants who are able to speak any of these as subsidiary language. Persons returning Hindi, Hindustani or Urdu as secondary language were 2,040 or 90·9 per cent. of those who were bilingual in some Indian language.

Religion and special groups

19. Out of 10,000 population of the district, the number of people belonging to different religions is; Hindus 8,480, Muslims 1,484, Sikhs 22, and Christians 14; of 10,000 population in villages the numbers are: Hindus 9,047, Muslims 936, Sikhs 11, and Christians 6, of 10,000 population in the urban areas, the numbers are: Hindus 5,257, Muslims 4,593, Sikhs 89, and Christians 61. Muslims, Sikhs and Christians are generally concentrated in urban areas of the district as is the case in the other parts of the State.

There were 170 thousand persons belonging to the Scheduled castes in the district. Their number per 10,000 of population works out to 1,692. In villages they are 1,898 for every 10,000 persons and in the towns their number per 10,000 is only 522. In this district there were only 5 Anglo-Indians. (*Vide* Tables D-II and D-III)

Displaced persons

20. The number of displaced persons in the district at this census was 4,346 (males 2,328, females 2,018) a large majority of whom were concentrated in urban areas. 93·3 per cent. of the displaced persons came from West Pakistan, 2·9 per cent. from East Pakistan and 3·8 per cent. from districts which could not be traced. (*Vide* Table D-V)

Literacy

21. The percentage of male literacy was 10·8 in the district, while that of female literacy was 2·7. In 1931 the literacy was 6·0 per cent. for males and 1·1†. per cent. for females. On January 1, 1951, there were 556 Primary Schools with an enrolment of 41, 685. pupils. (*Vide* Table D-VII)

C—Explanatory Note on the Statistics

The statistics in this volume have been presented in three parts :

I—District Census Tables

II—Village, Town, Pargana and Thana Statistics

III—Miscellaneous Statistics

*The corresponding figures for the total count are 5,478 and 4,522.

†The numbers per mille(of the 10 per cent. sample population) of each sex aged 5 years and over who were returned as literate are as below :

Males		Females	
1951	1931	1951	1931
126	70	27	13

Parts I and II contain census data. A brief account of the system of sorting of census slips and preparation of tables and abstract therefrom is given below.

Part III contains statistics throwing light on special aspects of population and its growth. These have been derived from miscellaneous sources. Table I, "Vital Statistics" has been prepared from the published and unpublished records of the Director of Medical and Health Services, Table 2, "Agricultural Statistics", from the Annual Season and Crop Reports, Table 3, "Live-Stock, Agriculture Machinery and Implements", from the published figures of Live-Stock Census and Table 4, "List of Primary Schools", from information specially supplied by district Inspector of Schools.

Processing of census data

2. The census data presented here has been derived from the census slips by a process of sorting compilation and tabulation. In previous censuses the slips were first sorted by religion and this division was maintained throughout so that all data was cross-tabulated by religion. This procedure has been abandoned at this census and substituted by a division based on economic characteristics of the population. The whole population has been divided into eight livelihood classes, four of which are of the argricultural category and four of non-agricultural category as follows :

Agricultural Classes—

I—Cultivators of land wholly or mainly owned, and their dependants
II—Cultivators of land wholly or mainly unowned ; and their dependants.
III—Cultivating labourers ; and their dependants
IV—Non-cultivating owners of land ; agricultural rent receivers, and their dependants

Non-agricultural Classes—

V—Production (other than cultivation)
VI—Commerce
VII—Transport
VIII—Other services and miscellaneous sources.

Another special feature of the sorting of this census was the separation, from the very start, of slips of displaced persons and of a 10 per cent. random sample from the remainder. This has enabled the data of displaced persons to be presented separately while the 10 per cent. sample has been utilized for the preparation of Age Tables.

The slips of this census have been copied by Households into a National Register of Citizens, which has been prepared village-wise for rural areas and mohalla/ward-wise for urban areas. Table C-I is based on a 4 per cent. sample extracted from this register.

Tracts

3. The slips were first sorted by villages for the preparation of the Primary Census Abstract. For the purpose of further sorting the State was divided into tracts consisting of (*a*) *rural tracts*, comprising the rural population of each tehsil, (*b*) *urban city tracts*, comprising the population of areas which had been declared as cities, (*c*) *urban non-city tracts*, comprising the population of urban areas of a district excluding areas declared as cities. Each tract was treated as a unit for sorting of slips. All data were compiled first by tracts and then by districts. This volume presents the tract-wise data for one district (with the exception of A and E Tables, which have been presented tehsil-wise) while the district-wise data for the whole State is contained in the following State volumes :

Part I-B—Subsidiary Tables.
Part II-A—General Population Tables
Part II-B—Economic Tables
Part II-C—Age and Social Tables

Explanatory notes

4. Detailed explanatory notes are appended to each State table in the printed volumes of State tables. They apply to the tables in this volume also and should be referred to when necessary. A few notes of some of the tables are reproduced below :

Table A-I—Column 5 relating to "hamlets" has been introduced for the first time. Any distinctive cluster or agglomeration of houses has been treated as a "hamlet".

A clear distinction has been made in this census between a "House" and a "Household". A house is any human dwelling having a separate main entrance while a household is any commensal unit living in a census house. In previous censuses the figures under "Occupied Houses" used to be that of households, while the figures under columns 7—9 of the present tables refer to occupied census houses as distinct from households.

The Economic Tables—The Indian Census Economic Classification Scheme, 1951, together with the occupational division and sub-division adopted for this census are given in Part II-B of the Report.

Table B-I—Each of the eight livelihood classes mentioned above has been divided into three sub-classes, with reference to the economic status, as follows ;

(i) Self-supporting persons ;
(ii) Non-earning dependants ; and
(iii) Earning dependants

These were defined in the Instructions to Enumerators as follows :

> "A" 'self-supporting person' is one who is in receipt of an income and that income is sufficien at least for his own maintenance. To be 'self-supporting' a person need not be able to support his family. All that is necessary is that he should be the earning sufficient for his personal needs. For purposes of this question the person enumerated is the unit and not the family or household. Any one who is not a 'self supporting person' in this sense is a dependant'. A 'dependant' may

be either an 'earning dependant' or a 'non-earning dependant'. The test is whether he secures a regular (and not casual) income, even though it may be small. Such income may be in cash or kind; it may be continuous or seasonal employment. When the income which he secures is not sufficient to support him that person is 'an earning dependant'. A person who does not earn any income either in cash or kind is a 'non-earning dependant'. Where two or more members of a family household jointly cultivate land and secure an income therefrom, each of them should be regarded as earning part of the income. None of them is therefore, a non-earning dependant. Each of them should be classed either a 'self-supporting person' or an 'earning dependant' according to the share of income attributable to each. The same applies to any other business carried on jointly. The share of the income is what the head of household deems it to be. This does not mean that every one who works is necessarily a self-supporting person or an earning dependant. Thus, for instance, a housewife who cooks for the family, brings up the children or manages the household is doing very valuable work. Nevertheless, her Economic Status is that of a non-earning dependant, if she does not also earn an income, and should be recorded as such".

Economically active, Semi-active and Passive persons—All non-earning dependants are economically passive. They include persons performing house-work or other domestic or personal services for other members of the same family household. But they do not include "unpaid family workers" or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise.

All earning dependants are economically semi-active only. Though they contribute to the carrying of economic activities, the magnitude of their individual contribution is deemed to be too small to justify their description as economically active. (Their contribution to economic activity is, however, taken into account in the tabulation of data based on secondary means of livelihood.)

All self-supporting persons are, ordinarily economically active with the exception of the following classes and groups:

(*a*) All self-supporting persons of agricultural Class IV.

(*b*) The following groups of self-supporting persons who are included in non-agricultural Class VIII and derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity):

(i) Persons living principally on income from non-agricultural property;
(ii) Persons living principally on pensions, remittances, scholarships and funds;
(iii) Inmates of alms-houses and recipients of doles;
(iv) Beggars and vagrants; and
(v) All other persons living principally on income derived from non-productive activities.

Table B-II—For a self-supporting person who has more than one means of livelihood the *secondary means* of livelihood is the livelihood next in importance to his principal means of livelihood. For an earning dependant it is the source from which he secures his own income, where there are more than one subsidiary occupations only the one providing the largest income has been taken into account.

Table B-III—"Employers", "Employees" and "Independant Workers" have been defined as fallows in the Instructions to Enumerators;

An "employer" is only that person who has necessarily to employ other person in order to carry on the business from which he secures his livelihood. Thus if a person employs a cook or any other person for domestic services, he should not be recorded as an "employer" merely for that reason.

An "employee" is a person who ordinarily works under some other person for a salary or a wage in cash or kind as the means of earning his livelihood. There may be persons who are employed as manager, superintendent, agents etc., and in that capacity control other workers. Such persons are also employees only and should not be regarded as employers.

An "independent worker" means a person who is not employed by any one else and who also does not employ anybody else in order to earn his livelihood (Sweepers, *dhobies*, *kahars* etc., who work for several masters are independent workers. If, however, any of them accepts whole-time employment under one master he becomes "employee". Daily wage-earners who work for different masters are likewise independent workers. But if they accept employment under one master, e.g. under a factory, they become "employees".)

Tables C-II, C-III, C-IV and C-V—The figures presented in these tables are based on single year age returns and have not been smoothed.

Tables D-V (i) *and* (ii)—For the purpose of these tables a "displaced person" has been defined as follows:

"A displaced person means any person who has entered India having left or being compelled to leave his home in Western Pakistan on or after the 1st March, 1947, or his home in Eastern Pakistan on or after the 15th October, 1946, on account of civil disturbances or on account of the setting up of the two Dominions of India and Pakistan."

PART I

DISTRICT CENSUS TABLES

A—GENERAL POPULATION TABLES

A-I—Area, Houses and Population

Serial number	Tehsil	Area in square miles	Villages	Hamlets	Towns	Occupied houses: Total	Occupied houses: Rural	Occupied houses: Urban
1	2	3	4	5	6	7	8	9
	District Total	***1,760***	***2,042***	***2,860***	***7***	***149,623***	***130,288***	***19,335***
