DISTRICT CENSUS HANDBOOK
1951

MORADABAD DISTRICT

FOREWORD

Several States, including Uttar Pradesh, have been publishing village statistics by districts at each census. In 1941 they were published in U. P. under the title "District Census Statistics" with a separate volume for each district. In the 1951 census, when the tabulation has been more elaborate than ever in view of the requirements of the country, the district-wise volume has been expanded into a "District Census Handbook", which now contains the District Census Tables (furnishing data with break-up for census tracts within the district), the District Index of Non-agricultural Occupations, agricultural statistics from 1901-02 to 1950-51 and other miscellaneous statistics in addition to the usual village population statistics. The village population statistics also are given in an elaborate form giving the division of the population among eight livelihood classes and other details.

2. It may be added here that a separate set of district-wise volumes giving only population figures of rural areas by villages and of urban areas by wards and mohallas and entitled "District Population Statistics" has already been published. This separate series was necessitated by the urgent requirements of the U. P. Government for elections to local bodies. The printing of the District Census Handbooks involves colossal work and is bound to take some time.

RAJESHWARI PRASAD, I.A.S.,
Superintendent, Census Operations,
Uttar Pradesh.

RAMPUR:
December 31, 1954.

NTRODUCTION

A—The District

1. The district of Moradabad forms the west-central portion of the Rohilkhand division. It is bounded on the north by the Bijnor and Naini Tal districts, on the east by Rampur, on the south by Budaun and on the west by the river Ganga which separates it from the districts of Bulandshahr and Meerut. The district has an area of 2,289 square miles and its population in 1951 was 16·6 lakhs. It has 6 tehsils, 6 parganas and 18 thanas.

Topography

2. There are no natural eminences of any importance in the district, the surface being broken only by sand-hills and river banks or else by the river valleys and a few shallow depressions. The country has a marked slope from north to south. In its general aspect it presents a very remarkable diversity of physical features and falls naturally into seven well defined tracts, the characteristics of which are determined largely by the rivers. The westernmost of these tracts is the low *khadar* of the Ganga, a narrow belt extending for some 40 miles along the western border, with a breadth varying from two miles in the north to about eight in the south. On the actual river bank is a strip of the most recent alluvium in places possessing a very fertile deposit of silt and elsewhere covered with a thick growth of tamarisk, which springs up with great rapidity on the sand left behind by the annual floods. Then follows the open *khadar* intersected by numerous drainage channels and backwaters of the river. The whole of it is subject to inundation from the river with the result that saturation often occurs and the fertility of the soil is much impaired by the presence of saline efflorescences. Further east is a belt of higher lands separated into two detached portions by the Mahawa river. It is covered with extensive patches of *dhak* jungle and palm trees. It improves towards the south. East of this again is an irregular chain of swamps lying at the foot of the upland ridge throughout its length from north to south. They are filled by the drainage from the uplands and also by the overflow from the Ganga which in wet years causes the whole of the *khadar* to be submerged. The grazing grounds of the northern *khadar* are very valuable.

Above the *khadar* to the east lie the sandy uplands known as the *bhur* tract, which comprises the rest of Hasanpur tehsil, save for a small block of good loam soil in the north-east corner, a minute portion of Amroha and the western part of Sambhal. The *bhur* extends the whole length of the district and is from eight to nine miles in width. The tract is devoid of rivers and consists of a series of sandy ridges. It is a very poor tract.

Adjoining the *bhur* on the east and extending from the south-west corner of the Amroha tehsil to a point some few miles west of Sambhal is a very peculiar block of country. It differs wholly from the *bhur* in appearance, having a hard and gritty soil and is known as *udla*. The water level is remarkably high at all times apparently because there is no escape for the drainage, which has consequently to be absorbed. In dry years the tract is not unfertile and the *rabi* crops can be irrigated with ease, but wet seasons are to be dreaded as in the *bhur*, and when once saturation occurs the tract takes long to recover.

The next main tract occupies the eastern half of Sambhal and the whole of Bilari tehsil extending to Rampur and Budaun borders on the east and south. This is the *katehr* or uplands, a name which in old days was applied to practically the whole of modern Rohilkhand. It is a wide level plain of great fertility rising here and there into ridges of lighter and sandier soil. The prevailing soil is a rich friable loam producing splendid crops of wheat, cotton, *juar* and sugar-cane, while irrigation is plentiful. The country is adequately drained by the Sot, the Ari and their affluents. There are very few depressions in the *katehr* and the clay area is small. The whole tract is highly developed and only in abnormally dry seasons is there any material contraction of the area under tillage.

Towards the north, the soil becomes lighter and less fertile, till it passes into the north central block, which embraces almost the whole of Amroha tehsil, the north-east corner of Hasanpur and the south-west of Moradabad. It is drained mainly by the Gangan and its tributaries, the Karula and the Ban and partly by the Sot, which rises in western portion. The country is far from homogeneous and has several natural sub-divisions. In the east is a high broad plateau between the Gangan and Ramganga valley in which the soil is generally poor and means of irrigation are very deficient. Down the centre passes a large ridge of *bhur*, running parallel to the course of Ban as far as the Sambhal border; and in the west is a block of undulating country which merges into the *bhur* of Hasanpur and Sambhal. The remainder consists mainly of a loam of mediocre quality, greatly inferior to *katehr*, and in places, especially to the south-east, there are considerable stretches of clay, in which rice is the chief staple.

The *khadar* of the Ramganga forms the next tract, and this differs materially from the Ganga valley in that it possesses an invariably fertile soil, save where the river has deposited sand after the annual flood. There is no saturation in this *khadar*. The grazing grounds of the *khadar* are particularly valuable.

The remainder of the district north of the Ramganga valley is a block of country intersected by a number of rivers and streams which flow southwards into the Ramganga. It comprises the whole of Thakurdwara and the greater part of Moradabad

tehsils; but while in general it represents a southerly continuation of the Naini Tal *tarai*, the country is very diversified owing to the constant changes of level and action of numerous drainage channels. The centre and north of Thakurdwara stand high and have a light and poor soil in which facilities for irrigation are deficient, much of the land being actually precarious. Elsewhere the prevailing soil is a stiff loam, having good crops of rice in the autumn. In the south of Thakurdwara, however, and in several parts of Moradabad, there are wide plains of clay, known as *jhada*, which bear little but rice and depend entirely on the rainfall.

Soils

3. Despite the great diversity of physical characteristics the soils throughout the district are of very similar composition, ranging from pure sand to stiff clay and including all possible combinations of the two. The former is known by the common name of *bhur* and the latter is called *matiar*, while the mixture is styled *dumat* or loam.

Classification of area

4. The figures of the classification of area during the last fifty years are given in Table 2 of Part III of this volume. The proportion of area under the various categories works out as follows for 1950-51 :

Particulars	Actual figures (in acres)	Percentage
Cultivated area	1,145,784	77·5
Culturable waste (excluding current fallow)	145,602	9·9
Current fallow	59,663	4·0
Forest	557	..
Area not available for cultivation of which—	126,394	8·6
(a) *Covered with water*	*43,467*	*3·0*
(b) *Under sites, roads and buildings*	*50,537*	*3·4*
(c) *Barren*	*32,390*	*2·2*

The figure in the above table regarding culturable waste taken from the Season and Crop Report is, however, misleading. The State Agriculture Department conducted in 1949-50 a detailed enquiry through the district officers regarding the nature of this area in each district. The following analysis of the area resulted from the enquiry :

Particulars	Area (in acres)	Percentage
Total culturable waste (A+B+C)	**148,278**	**100**
A—Area under culturable waste land not available for immediate cultivation ..	97,750	65·92
(i) Forest under any legal enactment	293	0·20
(ii) Groves	21,664	14·61
(iii) Forests of timber trees	95	0·06
(iv) Thatching grasses, shrubs and bushes	37,547	25·32
(v) Land kept for grazing	38,151	25·73
B—Area under culturable waste land available for immediate cultivation but could not be cultivated	40,831	27·54
Of which due to—		
(i) *Kans* growth	3,622	2·44
(ii) Threshing floors	383	0·26
(iii) Malaria	1	..
(iv) Floods	7,636	5·15
(v) Lack of drains	901	0·61
(vi) Lack of water	5,305	3·58
(vii) Distance from *abadi*	86	0·06
(viii) Damage from wild animals	2,121	1·43
(ix) Other causes	20,776	14·01
C—Area under culturable waste land that can be brought under immediate cultivation after some improvements besides the area given against B	9,697	6·54

From the above it will appear that of the total area recorded as culturable waste, only 6·5 per cent. was really capable of being brought under immediate cultivation after some improvements.

Thus the land area cultivated and cultivable *per capita* works out to 81·3 cents of which 72·6* cents have already been brought under cultivation and only 0·6 cents can further be brought under the plough after some improvements. It is obvious that the saturation point for cultivation has already been reached in the district.

Climate and rainfall

5. The rainfall is normally ample. The average for the last quinquennium was 41·07 inches. During the last forty-five years the rainfall has been less than 22 inches in only one year and has been usually over 35 inches.

The climate of the district resembles that of Bareilly, the proximity of the hills and the *tarai* rendering it cool and damp in comparison with the country to the south and west. There is considerable difference in this respect between the Thakurdwara tehsil in the north-east, which has a climate closely resembling that of Kashipur in the Naini Tal district and Hasanpur in the south-west, which is relatively much hotter and drier. Moradabad itself does not experience the same extremes of heat as the country south of Ganga. The hot weather does not commence till the end of April and the air is frequently cooled by the advent of hill storms the influence of which is felt over the greater part of this district. The bursting of monsoon brings about a marked fall in the temperature but though the mornings in the rains are generally cool and fresh, the atmosphere becomes very oppressive in the evenings and the climate in this season is much less pleasant or healthy. From November to the end of March the climate is superb. Frosts of considerable intensity are experienced in December and January, while sometimes a heavy mist or fog comes on during the night, at times lasting till midday and doing some damage to those crops which are susceptible to rust.

Irrigation

6. Irrigation is derived from canals, wells, reservoirs and other sources. In 1950-51, the irrigated area from canals was 10·4 per cent., from tube-wells 64·0 per cent., from other wells 17·5 per cent. and from other sources 8·1 per cent.

Crops

7. More acreage is sown under *kharif* than under *rabi*. In 1950-51 the area under *kharif* crops was 709,686 acres, that under *rabi* 606,443 acres and that under *zaid* crops 5,305 acres. The principal *kharif* crop is rice while the principal *rabi* crop is wheat followed by barley.

B—Analysis of the Statistics

Population: General distribution and density

1. The table below shows the two basic figures—land area and population—and the derived figures of land area *per capita* :

Tehsil	Population (in lakhs)	Density (number per square mile)	Land area (in lakhs of acres)	Land area *per capita*
Amroha	2·93	766	2·45	0·84
Bilari	2·95	886	2·13	0·72
Hasanpur	2·39	419	3·64	1·53
Moradabad	3·68	1,166	2·02	0·55
Sambhal	3·42	719	3·04	0·89
Thakurdwara	1·24	517	1·54	1·24
Moradabad district	*16·61*	*717*†	*14·82*	*0·89*

This district though eighteenth in order of area is tenth in the State in respect of population. The district density (717) is above the State average (557). It has been inflated by the presence of a large number of towns, especially of the cities of Moradabad, Amroha and Sambhal. The rural density is only 554, the density of the rural parts of the tehsils being: Amroha 583, Bilari 744, Hasanpur 374, Moradabad 662, Sambhal 575 and Thakurdwara 490. The density of the Hasanpur tehsil is low on account of the Ganga *khadar* included therein. That of Thakurdwara is also low due to somewhat precarious nature of its cultivation and also on account of seasonal migration to the Naini Tal *tarai*. (*Vide* Tables A-I & E)

Growth of population

2. The population of the district during the last fifty years has recorded an increase of 39·3 per cent. Compared to this the increase in the population of the State during the corresponding period has been 30 per cent. only. The table below exhibits

*The figure also includes the area classed as current fallow.

†According to the area given by Surveyor General, the density is 726.

the variation in the total, rural and urban population for the last five decades :

Census year	Population			Variation		
	Total	Rural	Urban	Total	Rural	Urban
1901	**1,192,392**	942,534	249,858			
1911	**1,263,326**	1,005,226	258,100	**+70,934** (+5·9)	+62,692 (+6·7)	+8,242 (+3·3)
1921	**1,198,739**	939,129	259,610	**—64,587** (—5·1)	—66,097 (—6·6)	+1,510 (+0·6)
1931	**1,284,108**	989,066	295,042	**+85,369** (+7·1)	+49,937 (+5·3)	+35,432 (+13·6)
1941	**1,473,151**	1,123,369	349,782	**+189,043** (+14·7)	+134,303 (+13·6)	+54,740 (+18·6)
1951	**1,660,955**	1,264,595	396,360	**+187,804** (+12·7)	+141,226 (+12·6)	+46,578 (+13·3)

Between 1901 and 1921 the population of the district recorded an increase of 0·5 per cent. when that of the State decreased by 4·0 per cent. Due to the heavy mortality from influenza epidemic in 1918-19, a decrease of 5·1 per cent. was recorded during the decade 1911—21 but the decade 1901—11 had fared well. The population of the district recorded an increase of 38·6 per cent. since 1921 against an increase of 35·5 per cent. in the population of the State during the same period.

The population of the district increased by 12·7 per cent. in the last decade, which is somewhat above the State average (11·8 per cent.). During this period Thakurdwara tehsil recorded the lowest increase (7·1 per cent.) in the district, the percentage increases in other tehsils being : Amroha 11·5, Bilari 14·9, Hasanpur 14·4, Moradabad 10·6 and Sambhal 15·5.

Vital Statistics

3. Births and deaths mainly account for the trends in the population growth. Migration also is a factor though of lesser importance. The following table gives the mean decennial registered birth and death-rates and the natural rate of increase and population growth-rates of the last three decades for the district as a whole and for its rural and urban areas :

	Total	Rural	Urban
Mean decennial birth-rate			
1941—50	**35·2**	33·3	41·2
1931—40	**45·9**	46·4	44·1
1921—30	**45·0**	47·2	37·2
Mean decennial death-rate			
1941—50	**20·8**	19·4	25·3
1931—40	**29·9**	30·5	28·0
1921—30	**34·8**	36·3	29·4
Mean decennial rate of natural increase			
1941—50	**14·4**	13·9	15·9
1931—40	**16·0**	15·9	16·1
1921—30	**10·2**	10·9	7·8
Mean decennial growth-rate			
1941—50	**12·0**	11·8	12·5
1931—40	**13·7**	12·7	17·0
1921—30	**6·9**	5·2	12·8

There are large omissions in the registration of births and deaths and so the above rates do not represent the true picture at all. They may, however, be taken to be roughly indicative of trends. Both birth and death rates have fallen during the last decade.

The figures of natural increase and growth-rates suggest considerable loss of population by migration during the last three decades.

The average yearly mortality from various causes in the district during 1941—50 was as follows :

Causes	Number of deaths	Percentage of total deaths
Fever	24,509	75·2
Dysentery and diarrhoea	1,374	4·2
Respiratory diseases	2,559	7·9
Plague, cholera and small-pox	550	1·7
Others	3,579	11·0

As in the rest of the State 'fever' is responsible for a majority of the deaths. But 'fever' covers a number of ailments which the reporters are unable to identify. (*Vide* Table I, Part III of this Volume)

Migration

4. About 92·6 per cent. of the people enumerated in the district at the census of 1951 were born there, 6·1 per cent. were born in other districts of the State, 0·3 per cent. were born in other parts of India and 1·0 per cent. were born in other countries. Of the immigrants from the district of the State as many as 87,546 (males 22,135, females 65,411) were from other districts of the same natural division and only 14,025 persons (males 5,661, females 8,364) were from other parts of the State. The sex proportion suggests that most of the migration from the neighbouring districts is marriage migration. Of 4,023 immigrants from adjacent States, 1,436 (males 815, females 621) were from Punjab and 956 (males 432, females 524) were from Delhi.

Of the immigrants who have come from territories beyond India, 16,562 (males 9,067, females 7,495) were Pakistan-born and 381 (males 278, females 103) had their birth-place in other territories. The Pakistan-born are the displaced persons who numbered 15,766 (males 8,333, females 7,433) in the district. Of the immigrants born in other territories 300 persons were Nepal-born.

The number of non-Indian nationals in the district was 77. Of them 16 were Nepalese, 23 British, 7 Irish, 1 German, 1 Norwegian, 17 other Europeans (nationality unspecified), 3 Americans, 3 Chinese, 3 Pakistanis, 2 Burmese and 1 Arab.

Unfortunately the figures of emigration are not available. On the balance of migration according to vital statistics, however, the district appears to have lost about 41,000 persons during 1921—30, 31,000 during 1931—40 and 38,000 during 1941—50. But it should be kept in mind that the figures contain an element of registration error and are only indicative of trends.

Decline of cultivation *per capita*

5. We may now analyse the growth of population in the district during the last thirty years in relation to the growth of cultivation during the same period. The marginal table shows the figures. (Figures of area shown under census years are quinquennial averages for the five years ending with the crop year immediately preceding the census year.) It is obvious that cultivation has failed to keep pace with population. The cultivated area *per capita* has gone down to 67·9 cents in 1951 from 88·8 cents in 1921. The magnitude of this drop is about one-eighth of 1921 level. It means that (other things being equal) every man, woman and child must expect to get less food and other agricultural produce from the land in 1951 than in 1921.

Census year	Population*	Net area sown (in acres)	Area of cultivation *per capita* in cents)
1921 ..	1,198,653	1,064,454	88·8
1931 ..	1,284,108	1,031,453	80·4
1941 ..	1,473,151	1,091,671	74·2
1951 ..	1,660,955	1,127,643	67·9

Double cropped area *per capita*

6. It may be examined whether this shortage has been compensated by an increase in the yield per acre. Increase in yield can be brought about by more double cropping, more irrigation, better fertilisation and better culture. The average (quinquennial) area sown more than once was 148,777 acres in 1921, 129,498 acres in 1931, 130,656 acres in 1941 and 177,706 acres in 1951. The figures of double crop cultivation *per capita* are as follows :

Particulars	Quinquennial averages for the year preceding			
	1951	1941	1931	1921
Double crop cultivation *per capita* in cents	10·7	8·9	10·1	12·4
Unirrigated double crop cultivation *per capita* in cents ..	10·4	8·5	9·9	11·9
Irrigated double crop cultivation *per capita* in cents	0·3	0·4	0·2	0·5

*The figures of population of various censuses relate to the then lay-out of the district.

It may be noted that the double crop cultivation *per capita* has increased since 1921 but it has not reached the 1921 level.

Irrigated area *per capita*

7. The average area irrigated in the district was 118,535 acres in 1921, 80,495 acres in 1931, 169,138 acres in 1941 and 181,648 acres in 1951. The average area irrigated more than once was 5,744 acres in 1921, 2,781 acres in 1931, 5,256 acres in 1941 and 5,590 acres in 1951. The figures of irrigation *per capita* are shown below :

Particulars	Years			
	1951	1941	1931	1921
Irrigated single crop cultivation *per capita* in cents	10·6	11·1	6·1	9·4
Irrigated double crop cultivation *per capita* in cents	0·3	0·4	0·2	0·5

The irrigated area *per capita* has declined since 1941.

Cropped area

8. During the quinquennium 1916—21, 84·1 per cent. of the cropped area was under food crops and only 15·9 per cent. was under non-food crops. Thirty years after during 1946—51 the cropped area under food crops was only 81·1 per cent. and that under non-food crops was 18·9 per cent. The proportionate area under different crops between 1911 and 1951 was as below:

Quinquennial average of	Total cropped area	Percentage of cropped area under							
		Rice	Wheat	Barley	Juar	Bajra	Maize	Gram	Others
1911—16	1,235,358	7·6	30·0	10.9	2·3	14·3	2·8	6·2	25·9
1916—21	1,186,143	9·8	27·6	9·8	1·8	13·4	3·9	5·5	28·2
1921—26	1,202,277	10·1	29·2	9·8	2·1	10·0	1·9	9·1	27·8
1926—31	1,162,789	11·7	30·5	8·6	2·9	9·1	2·6	6·3	28·3
1931—36	1,211,047	9·8	30·6	8·1	2·8	10·3	2·4	7·5	28·5
1936—41	1,223,918	10·0	31·4	7·0	2·6	9·4	2·9	7·4	29·3
1941—46	1,247,299	9·3	31·6	7·7	2·8	11·9	2·1	7·7	26·9
1946—51	1,304,846	12·1	28·3	6·7	2·7	10·0	1·4	10·2	28·6

Indigo was never an important crop of the district and has now gone out of cultivation. The area under cotton in 1901-02 was 36,290 acres; while in 1950-51 it was only 7,302 acres. The area under sugarcane was 33,064 acres in 1901-02; in 1950-51 it was 122,684 acres.

Live-stock, ploughs and carts

9. Live-stock in this country live for a large part of the year on by-products of agriculture supplemented by green-fodder crops. They have, therefore, to be correlated not only with the grazing available but also with the total area under cultivation which carries a major portion of the burden of supporting the cattle population.

As will appear from Table 3 of Part III the total number of cattle and buffaloes has been increasing since 1930 when the figure stood at about 759 thousands. It rose to 825 thousands in 1951.

The number of working cattle and buffaloes has increased from 287 thousands in 1935 to 337 thousands in 1951. The number of working cattle appears to be governed by the number of ploughs and carts. The number of ploughs has gone up from 132 thousands in 1935 to 155 thousands in 1951 due apparently to progressive fractionalisation of holdings. The number of carts started rising since 1930 when the figure stood at 52 thousands. The number was 79 thousands in 1951. The average net cultivated area per plough works out to 7·4 acres in 1951 as against 8·2 acres in 1920, and the average net cultivated area per pair of working cattle was 6·8 acres in 1951 as against 7·5 acres in 1935.

Breeding cows and she-buffaloes have also been increasing since 1935 when their figure stood at 204 thousands. They were 230 thousands in 1951. The cows and female buffaloes in milk per 1,000 of human population work out to 34 and 37 respectively. Owing to the poor milk yield the share of milk per head is only a few ounces per day.

The number of sheep which increased during 1935—44 from 24 thousands to 27 thousands has gone down to 19 thousands in 1951, due apparently to the shortage of pasture. Goats have been going down in number since 1935 when they were about 71 thousands. Their number in 1951 was about 37 thousands, the reduction during 1944—51 alone being 43·2 per cent.

Horses and ponies have increased in number slightly during 1944—51 from 9,531 to 9,908. Donkeys during the same period decreased from 4,672 to 4,588.

Distributed on 1,000 of human population, the figures of the main categories of live-stock in 1950-51 are as follows :

Cattle	Buffaloes	Sheep	Goats	Poultry	Others
345	152	11	22	44	17

10. To sum up, the population of the district is growing up at the biological natural rate since 1921 but on the other hand the land area *per capita* has been steadily declining. The magnitude of the absolute numerical increase in relation to the practically stationary acreage under cultivation is a great strain on the economy of the district.

Villages and towns

11. The district has 2,466 villages and 15 towns. Out of 1,661 thousand people, 1,265 thousands were found in villages and 396 thousands in towns, i.e., there were 761 persons per 1,000 population who lived in rural areas and only 239 of them lived in towns. The corresponding figures for the State as a whole were : rural 864, urban 136.

The rural population per inhabited village works out to 513. Quite a large number of the villages do not comprise of a single compact site. There are 3,389 hamlets in the district. The population per hamlet is 373. The medium-sized village with population between 500—2,000, is the dominant type in the district. Of the rural population 57·3 per cent. live in such villages, 32·4 per cent. live in small villages of population under 500, 9·0 per cent. live in villages of population between 2,000 and 5,000 and 1·3 per cent. live in villages of population over 5,000.

Towns also vary greatly in number of inhabitants. Of the urban population 78·5 per cent. of people live in towns with population of 20,000 and over (viz., Moradabad, Sambhal, Amroha and Chandausi), 17·8 per cent. in towns of population 5,000 to 10,000 (viz., Kanth, Bachhraon, Moradabad Railway Settlement, Sirsi, Bilari, Bahjoi, Thakurdwara, Kundarkhi, Dhanaura and Naugawan Sadat) and 3·7 per cent. in towns of population between 10,000 and 20,000 (viz., Hasanpur). Moradabad city has shown an increase of only 13·7 per cent. since 1941 while the percentage increases in Sambhal and Amroha have been only 14·0 and 5·6 respectively. The towns of Amroha, Kanth, Bachhraon, Sirsi, Dhanaura and Naugawan Sadat appear to be declining towns. (*Vide* Tables A-III and A-IV)

Occupations: Livelihood pattern

12. Out of the total population of 1,660,955 (rural 1,264,595, urban 396,360) 1,111,288 (rural 1,058,458, urban 52,830) or 66·9 per cent. depend on agriculture for their means of livelihood and 549,667 (rural 206,137, urban 343,530) or 33·1 per cent. depend on non-agricultural sources. The following table gives the distribution of 100 persons of total, rural and urban population of the district and of the three cities:

Description	Agricultural classes					Non-agricultural classes				
	Total	I	II	III	IV	Total	V	VI	VII	VIII
Total	**66·9**	**61·2**	**1·9**	**2·4**	**1·4**	**33·1**	**11·1**	**6·3**	**2·0**	**13·7**
Rural	**83·7**	77·9	1·8	2·9	1·1	**16·3**	5·6	1·7	0·7	8·3
Urban	**13·3**	7·9	2·0	0·7	2·7	**86·7**	28·8	20·9	6·3	30·7
Moradabad City ..	**4·6**	2·0	0·6	0·3	1·7	**95·4**	32·0	22·5	10·2	30·7
Sambhal City	**20·8**	13·6	2·0	2·0	3·2	**79·2**	28·7	15·7	2·4	32·4
Amroha City	**13·4**	3·0	5·0	0·4	5·0	**86·6**	30·0	20·3	4·0	32·3

This district is one of the less agricultural districts of the State. Here only as many as 66·9 per cent. of people are engaged in agriculture as against 74·2 per cent. in the State.

Of the total population of the district 1,095,768 (males 376,212, females 719,556) or 66·0 per cent. have been classified as non-earning dependants. The percentage of non-earning dependants in the agricultural population works out to 65·5 and that among the non-agricultural population to 66·9. It will be observed that in the main they consist of women. The male non-earning dependants are mostly children. 55,706 persons (males 35,292, females 20,414) or 3·3 per cent. of the population are earning dependants. Among the agriculturists their proportion is 3·5 per cent. and among non-agriculturists they form 3·0 per cent. Agriculture is a family occupation and it

provides work to the women and grown up children in the family. The remaining 509,481 persons (males 478,824, females 30,657) or 30·7 per cent. are self-supporting persons. Their proportion among agriculturists is 31·0 per cent. and among non-agriculturists 30·1 per cent. Of the self-supporting persons 344,077 (males 325,483, females 18,594) belong to the agricultural classes and 165,404 (males 153,341, females 12,063) belong to the non-agricultural classes. On an average a self-supporting person maintains two non-earning dependants.

Of the 165,404 self-supporting persons of non-agricultural population 2,898 persons (rural 1,778, urban 1,120) earn their livelihood from non-productive sources. Of the remaining 162,506 self-supporting persons (rural 68,710, urban 93,796) 5,651 (rural 415, urban 5,236) or 3·5 per cent. are employers, 42,171 (rural 10,079, urban 32,092) or 25·9 per cent. are employees and 114,684 (rural 58,216, urban 56,468) or 70·6 per cent. are independent workers.

The distribution of 10,000 self-supporting persons of non-agricultural occupations classified according to economic divisions is as follows:

Name of division	Self-supporting persons by divisions
All Industries and Services	**10,000**
0—Primary industries not elsewhere specified	199
1—Mining and quarrying	2
2—Processing and manufacture—foodstuffs, textiles, leather and products thereof	1,760
3—Processing and manufacture—metals, chemicals and products thereof ..	685
4—Processing and manufacture not elsewhere specified	758
5—Construction and utilities	508
6—Commerce	1,701
7—Transport, storage and communications	617
8—Health, education and public administration	994
9—Services not elsewhere specified	2,776

Among the large scale industries, the principal are oil mills and glass work. Among the cottage and small scale industries, the principal are handloom cloth weaving (cotton), calico printing, *tat patti*, brass and copper wares, artistic brass ware, spoons and forks, knives and *sarotas*, *ghee*, soap, basket-making, *moondhas*, *chick*, ropes and *ban* of *moonj* and *bhabar* and mat-weaving.

Variation in the livelihood pattern

13. In this district, the proportion of population depending on agriculture for their livelihood was 66·5* per cent. in 1951. The unfortunate fact is that the agricultural proportion had been increasing ever since 1901 and only in this census the process appears to have been arrested. The figure stood at 60·0 per cent. in 1901, 61·8 per cent. in 1911 and 67·8 per cent. in 1921. The actual number of persons who depend on agriculture has increased to 1,104,239 in 1951 from 813,115 in 1921, i.e., by 35·8 per cent. while the cultivated area has increased only by 5·9 per cent. This has resulted in progressive fragmentation and sub-division of holdings and pressure on impoverished soil. There appears to be a gradual decline in village arts and crafts. The cumulative result is a fall in the proportion of workers and a corresponding rise in the dependency. The proportion of workers in the total population in 1951 was only 34·0 per cent. (agricutural 22·6 per cent., non-agricultural 11·4 per cent.) against 40·6 per cent. (agricultural 25·6 per cent., non-agricultural 15·0 per cent.) in 1921. The proportion of non-earning dependants has consequently increased from 59·4 per cent. (agricultural 42·2 per cent., non-agricultural 17·2 per cent.) in 1921 to 66·0 per cent. (agricultural 43·9 per cent., non-agricultural 22·1 per cent.) in 1951. All this is an index of the increasing unemployment and under-employment. It is only by a greater diversion of the population to cottage and other industries and by supplying subsidiary occupations to agriculturists that the present economy of the district can be improved. (*Vide* Tables B-I, B-II and B-III)

Houses and households

14. There were 235,064 occupied houses in the district—185,974 in villages and 49,090 in towns. That gives an average of 6,800 persons per 1,000 houses or 6·8 persons per house in the rural areas and 8,074 persons per 1,000 houses or 8·1 persons per house in the urban areas.

*The figure includes earning dependants according to their secondary means of livelihood while the figure 66·9 in paragraph 12 includes earning dependants according to their principal means of livelihood and hence the difference.

There were 331,400 households in the district—255,605 in rural areas and 75,795 in urban areas. That gives an average of 4,946 persons per 1,000 households or 4·9 persons per household in rural areas and 5,170 persons per 1,000 households or 5·2 persons per household in urban areas. The marginal table shows the developments in the size of the household since 1921. The rural household has been increasing since 1931 but is smaller than the average State rural household (5·07). The urban household has registered a decrease since 1941.

Census year	Persons per 1,000 households of	
	Rural Population	Urban Population
1921 ..	4,596	5,080
1931 ..	4,500	5,141
1941 ..	4,624	5,561
1951 ..	4,946	5,170

Out of 4,946 persons in every 1,000 rural households 2,655 are males and 2,291 are females. There is a male excess numbering 364 in every 1,000 rural households. Out of 5,170 persons in every 1,000 urban households, 2,736 are males and 2,434 are females. There again is a male excess of 302 in every 1,000 urban households.

Information regarding types of household and household relationships was also collected at this census with the help of a sample of about 4 per cent. According to this in every 1,000 sample households there are 4,789 persons (males 2,569, females 2,220) in the district. The corresponding figure for the total count is 4,997.

The table below shows the distribution by size of 1,000 sample households :

Description	Small with 3 members or less	Medium with 4—6 members	Large with 7—9 members	Very large with 10 members or more
Total	**339**	**440**	**172**	**49**
Rural	336	452	167	45
Urban	347	404	189	60

Medium households are the dominant type in the villages as well as in the towns.

Family composition of 1,000 sample households is as follows :

			Number in 1,000 households
A	Heads of households	Males (married)	730
		Males (widowers)	223
		Females	47
	Wives of heads of households		730
			1,730
B	Sons of heads of households		1,151
	Daughters of heads of households		793
			1,944
C	Male relations of heads of households (other than sons)		436
	Female relations of heads of households (other than daughters)		630
			1,066
D	Persons unrelated to the heads of the households	Males	29
		Females	20
			49
		Grand total	*4,789*

Sons outnumber the daughters of heads of households. The latter leave the homes of their parents after marriage. Female relatives (other than daughters) outnumber the male relatives (other than sons). Such females are generally those who become members of these households by marriage. (*Vide* Tables A-I and C-I)

Sex-ratio

15. In the district as a whole the sex-ratio was 866, i.e., there were 866 females to every 1,000 males. It varies among the tehsils. The highest value was 891 in Amroha tehsil and the lowest value was 844 in Bilari. The sex-ratio in other tehsils was : Hasanpur 869, Moradabad 849, Sambhal 878 and Thakurdwara 867.

Contrary to the general trend, the sex-ratio is higher in the urban areas than in the rural areas. For the district as a whole the sex-ratio in villages was only 862 while that in towns was 877. The sex-ratio in the city of Moradabad was 840, in Sambhal 907 and in Amroha 964.

The corresponding figure of sex-ratio in the district was 876 in 1921, 867 in 1931 and 869 in 1941.

Age structure

16. The number in each age-group in the district is shown below as a percentage of the total number of all ages in the total, rural and urban population.

Age-group		Total population			Rural population		Urban population	
		Persons	Males	Females	Males	Females	Males	Females
Infants and young children	0—4	15·2	7·6	7·6	7·7	7·6	7·4	7·4
Boys and girls ..	5—14	24·3	13·1	11·2	13·1	10·9	13·2	12·3
Young men and women ..	15—34	31·5	16·9	14·6	17·1	14·5	16·3	15·1
Middle-aged men and women	35—54	20·5	11·6	8·9	11·6	9·1	11·5	8·3
Elderly persons ..	55 and over	8·5	4·9	3·6	4·7	3·7	5·2	3·3

It will be seen that the population is progressive. 39·5 per cent. of the population is of age under 15 and only 8·5 per cent. of it are elderly persons (55 and over). (*Vide* Table C-II)

Marital status

17. Out of every 10,000 persons in the district, there are 5,405 males and 4,595 females.* Among them 2,639 males and 1,917 females are unmarried. If we reckon males and females together, the unmarried people are 45·6 per cent. of the total population.

Of the males 48·8 per cent. were unmarried, 44·4 per cent. were married, and 6·8 per cent. were widowed or divorced. Among the females 41·7 per cent. were unmarried, 48·5 per cent. were married and 9·8 per cent. were widowed or divorced.

Of the married males 1·4 per cent. were below 15, 47·1 per cent. were of ages 15—34, 38·8 per cent. were of ages 35—54 and 12·7 per cent. were of ages 55 and over. Among females 4·0 per cent. were of ages below 15, 58·6 per cent. were of ages 15—34, 31·2 per cent. were of ages 35—54 and 6·2 per cent were of ages 55 and over.

Marriage is universal. Among males and females aged 35 years and over only 5·8 per cent. of the males and 0·7 per cent. of the females were found unmarried. Most of the females are married before they attain the age of 25. Child marriage is not very common. Only 1·6 per cent. of the males of ages 0—14 and 4·8 per cent. of females of ages 0—14 were returned as married. (*Vide* Table C-III)

Languages

18. Over 99·2 per cent. of the people of the district returned Hindi, Hindustani or Urdu as their mother-tongue. Among the other mother-tongues spoken, the main are Punjabi (0·62 per cent.), Bengali (0·05 per cent.) and Sindhi (0·02 per cent.). Of the 16·61 lakhs of people in the district only 11,687 persons or 0·7 per cent. were bilingual (in an Indian language). Those whose mother-tongue is other than Hindi, Hindustani or Urdu are generally the migrants who are able to speak any of these as subsidiary language. Persons returning Hindi, Hindustani or Urdu as secondary language were 8,317 or 71·2 per cent. of those who were bilingual in some Indian language. (*Vide* Table D-I)

Religion and special groups

19. Out of 10,000 population of the district, the number of people belonging to different religions is: Hindus 6,141, Muslims 3,706, Sikhs 76, Jains 7 and Christians 70. Of the 10,000 population in villages the numbers are: Hindus 6,733, Muslims 3,120, Sikhs 78, Jain 1 and Christians 68. Of the 10,000 people in towns the number are: Hindus 4,250, Muslims 5,577, Sikhs 69, Jains 25 and Christians 79. Muslims, Sikhs, Christians and Jains are generally concentrated in the urban areas of the district as is the case in the other parts of the State.

There were 251 thousand people belonging to the scheduled castes in the district. Their number per 10,000 of population works out to 1,508. In villages they are 1,818 for every 10,000 and in the towns their number per 10,000 is only 521. In this district there were 248 Anglo-Indians. (*Vide* Tables D-II and D-III)

Displaced persons

20. The number of displaced persons in the district at the census was 15,766 (males 8,333, females 7,433), a large majority of whom were concentrated in urban areas. 87·4 per cent. of the displaced persons were from West Pakistan, 1·1 per cent. from East Pakistan and 11·5 per cent. from districts which could not be traced. (*Vide* Table D-V)

Literacy

21. The percentage of male literacy was 12·7 in the district while that of female literacy was 4·6. In 1931, the literacy was 6·1 per cent. for males and 1·4 per cent. for females.† On January 1, 1951 there were 535 primary schools with an enrolment of 50,323. (*Vide* Table D-VII)

*The corresponding figures for the total count are 5,360 and 4,640.

†The numbers per mille (of the 10 per cent. sample population) of each sex aged 5 years and over who were returned as literate are as below:

Males		Females	
1951	1931	1951	1931
145	73	50	17

C—Explanatory Note on the Statistics

The statistics in this volume have been presented in three parts :

I—District Census Tables

II—Village, Town, Pargana and Thana Statistics

III—Miscellaneous Statistics

Parts I and II contain census data. A brief account of the system of sorting of census slips and preparation of tables and abstract therefrom is given below.

Part III contains statistics throwing light on special aspects of population and its growth. These have been derived from miscellaneous sources. Table 1, "Vital Statistics", has been prepared from the published and unpublished records of the Director of Medical and Health Services, Table 2," Agricultural Statistics", from the Annual Season and Crop Reports, Table 3, "Live-stock, Agricultural Machinery and Implements", from the published figures of Live-stock Census and Table 4, "List of Primary Schools", from information specially supplied by District Inspector of Schools.

Processing of census data

2. The census data presented here has been derived from the census slips by a process of sorting compilation and tabulation. In previous censuses the slips were first sorted by religion and this division was maintained throughout so that all data was cross-tabulated by religion. This procedure has been abandoned at this census and substituted by a division based on economic characteristics of the population. The whole population has been divided into eight livelihood classes, four of which are of the agricultural category and four of non-agricultural category as follows :

Agricultural Classes—

I—Cultivators of land wholly or mainly owned; and their dependants

II—Cultivators of land wholly or mainly unowned ; and their dependants

III—Cultivating labourers ; and their dependants

IV—Non-cultivating owners of land ; agricultural rent receivers; and their dependants

Non-agricultural Classes—

V—Production (other than cultivation)

VI—Commerce

VII—Transport

VIII—Other services and miscellaneous sources.

Another special feature of the sorting of this census was the separation, from the very start, of slips of displaced persons and of a 10 per cent. random sample from the remainder. This has enabled the data of displaced persons to be presented separately while the 10 per cent. sample has been utilized for the preparation of Age Tables.

The slips of this census have been copied by *Households* into a National Register of Citizens, which has been prepared village-wise for rural areas and mohalla/ward-wise for urban areas. Table C-I is based on a 4 per cent. sample extracted from this register.

Tracts

3. The slips were first sorted by villages for the preparation of the Primary Census Abstract. For the purpose of further sorting the State was divided into tracts consisting of (*a*) *rural tracts*, comprising the rural population of each tehsil, (*b*) *urban city tracts*, comprising the population of areas which had been declared as cities, (*c*) *urban non-city tracts*, comprising the population of urban areas of a district excluding areas declared as cities. Each tract was treated as a unit for sorting of slips. All data were compiled first by tracts and then by districts. This volume presents the tract-wise data for one district (with the exception of A and E Tables, which have been presented tehsil-wise) while the district-wise data for the whole State is contained in the following State volumes :

Part I-B—Subsidiary Tables.

Part II-A—General Population Tables

Part II-B—Economic Tables

Part II-C—Age and Social Tables

Explanatory notes

4. Detailed explanatory notes are appended to each State table in the printed volumes of State tables. They apply to the tables in this volume also and should be referred to when necessary. A few notes of some of the tables are reproduced below :

Table A-I—Column 5 relating to "hamlets" has been introduced for the first time. Any distinctive cluster or agglomeration of houses has been treated as a "hamlet".

A clear distinction has been made in this census between a "House" and a "Household". A house is any human dwelling having a separate main entrance while a household is any commensal unit living in a census house. In previous censuses the figures under "Occupied Houses" used to be that of households while the figures under columns 7—9 of the present tables refer to occupied census houses as distinct from households.

The Economic Tables—The Indian Census Economic Classification Scheme, 1951, together with the occupational division and sub-division adopted for this census are given in Part II-B of the Report.

Table B-I—Each of the eight livelihood classes mentioned above has been divided into three sub-classes, with reference to the economic status, as follows :

(*i*) Self-supporting persons ;

(*ii*) Non-earning dependants ; and

(*iii*) Earning dependants.

These were defined in the Instructions to Enumerators as follows :

> "A 'self-supporting person' is one who is in receipt of an income and that income is sufficient at least for his own maintenance. To be 'self-supporting' a person need not be able to support his family. All that is necessary is that he should be earning sufficient for his personal needs. For purposes of this question the person enumerated is the unit and not the family or household. Any one who is not a 'self-supporting' person in this sense is a 'dependant'. A 'dependant' may be either an 'earning dependant' or a 'non-earning dependant'. The test is whether he secures a regular (and not casual) income, even though it may be small. Such income may be in cash or kind; it may be continuous or seasonal employment. When the income which he secures is not sufficient to support him that person is an 'earning dependant'. A person who does not earn any income either in cash or kind is a 'non-earning dependant'. Where two or more members of a family household jointly cultivate land and secure an income therefrom, each of them should be regarded as earning part of the income. None of them is, therefore, a non-earning dependant. Each of them should be classed either a 'self-supporting person, or 'an earning dependant' according to the share of income attributable to each. The same applies to any other business carried on jointly. The share of the income is what the head of household deems it to be. This does not mean that every one who works is necessarily a self-supporting person or an earning dependant. Thus, for instance, a housewife who cooks for the family, brings up the children or manages the household is doing very valuable work. Nevertheless, her Economic Status is that of a non-earning dependant, if she does not also earn an income, and should be recorded as such."

Economically active, Semi-active and Passive persons—All non-earning dependants are economically passive. They include persons performing house-work or other domestic or personal services for other members of the same family household. But they do not include "unpaid family workers" or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise.

All earning dependants are economically semi-active only. Though they contribute to the carrying of economic activities, the magnitude of their individual contribution is deemed to be too small to justify their description as economically active. (Their contribution to economic activity is, however, taken into account in the tabulation of data based on secondary means of livelihood.)

All self-supporting persons are ordinarily economically active with the exception of the following classes and groups :

(*a*) All self-supporting persons of agricultural Class IV.

(*b*) The following groups of self-supporting persons who are included in non-agricultural Class VIII and derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity) :

(i) Persons living principally on income from non-agricultural property ;

(ii) Persons living principally on pensions, remittances, scholarships and funds ;

(iii) Inmates of alms-houses and recipients of doles ;

(iv) Beggars and vagrants ; and

(v) All other persons living principally on income derived from non-productive activities.

Table B-II—For a self-supporting person who has more than one means of livelihood the *secondary means* of livelihood is the livelihood next in importance to his principal means of livelihood. For an earning dependant it is the source from which he secures his own income, where there are more than one subsidiary occupations only the one providing the largest income has been taken into account.

Table B-III—"Employers", "Employees" and "Independent Workers" have been defined as follows in the Instructions to Enumerators :

> An "employer" is only that person who has necessarily to employ other person in order to carry on the business from which he secures his livelihood. Thus if a person employs a cook or any other person for domestic services, he should not be recorded as an "employer" merely for that reason.

An "employee" is a person who ordinarily works under some other person for a salary or a wage in cash or kind as the means of earning his livelihood. There may be persons who are employed as managers, superintendents, agents etc., and in that capacity control other workers. Such persons are also employees only and should not be regarded as employers.

An "independent worker" means a person who is not employed by any one else and who also does not employ anybody else in order to earn his livelihood. (Sweepers, *dhobies*, *kahars* etc., who work for several masters are independent workers. If, however, any of them accepts whole-time employment under one master he becomes "employee". Daily wage-earners who work for different masters are likewise independent workers. But if they accept employment under one master, e.g. under a factory, they become "employees".)

Tables C-II, C-III, C-IV and C-V—The figures presented in these tables are based on single year age-returns and have not been smoothed.

Tables D-V (i) *and* (ii)—For the purpose of these tables a "displaced person" has been defined as follows :

"A displaced person means any person who has entered India having left or being compelled to leave his home in Western Pakistan on or after the 1st March, 1947, or his home in Eastern Pakistan on or after the 15th October, 1946, on account of civil disturbances or on account of the setting up of the two Dominions of India and Pakistan."

PART I

DISTRICT CENSUS TABLES

A—GENERAL POPULATION TABLES

A-I—Area, Houses and Population

Serial number	Tehsil	Area in square miles	Villages	Hamlets	Towns	Occupied houses		
						Total	Rural	Urban
1	2	3	4	5	6	7	8	9
