DISTRICT CENSUS HANDBOOK
1951

BUDAUN DISTRICT

FOREWORD

Several States, including Uttar Pradesh, have been publishing village statistics by districts at each census. In 1941 they were published in U. P. under the title "District Census Statistics" with a separate volume for each district. In the 1951 census, when the tabulation has been more elaborate than ever in view of the requirements of the country, the district-wise volume has been expanded into a "District Census Handbook", which now contains the District Census Tables (furnishing data with break-up for census tracts within the district), the District Index of Non-agricultural Occupations, agricultural statistics from 1901-02 to 1950-51 and other miscellaneous statistics in addition to the usual village population statistics. The village population statistics also are given in an elaborate form giving the division of the population among eight livelihood classes and other details.

2. It may be added here that a separate set of district-wise volumes giving only population figures of rural areas by villages and of urban areas by wards and mohallas and entitled "District Population Statistics" has already been published. This separate series was necessitated by the urgent requirements of the U. P. Government for elections to local bodies.

3. The number of District Census Handbooks printed so far is fourteen. Special arrangements for speeding up the printing have now been made and it is hoped that the remaining Handbooks will be printed before the end of 1955.

RAJESHWARI PRASAD, I.A.S.,
Superintendent, Census Operations,
Uttar Pradesh.

INTRODUCTION

A—The District

1. The district of Budaun forms the southwestern portion of Rohilkhand. It is bounded on the north by the districts of Moradabad and Bareilly, and for a small distance by the Rampur district. To the east is the Shahjahanpur district, the boundary for a considerable portion of its length being formed by the Ramganga; while to the west and south the Ganga separates Budaun from the *doab* districts of Bulandshahr, Aligarh, Etah and Farrukhabad. The district has a total area of 1,996 square miles which is less than the average district area of the State. Its population in 1951 was 12·5 lakhs. It has 5 tehsils, 11 parganas and 16 thanas.

Topography

2. Topographically Budaun is included in the great Gangetic plain. In its general aspect it is a level expanse, but its surface and appearance vary to a considerable extent in different parts, being determined mainly by the course and character of the natural drainage channels. The slope of the country is from north-west to south-east and this direction governs the course of streams within the district. Ganga, Mahawa, Burdmar,Chhoiya, Bhainsaur, Sot, Aril and Ramganga are the main rivers of the district. There are many lakes, also, the chief among them being Purainia, Dhand and Nurpur *jhils*. The rivers which form the drainage lines of the country frequently fail to attain their object. The annual inundations of the alluvial lands along the Ganga and Ramganga are natural and generally of a beneficial nature, particularly in the case of the former; but in other places the recurring floods do nothing but damage except perhaps in the low clay soils of *bankati tract*, where abundant water is necessary for the rice crop. The worst damage is done by the Mahawa, which frequently destroys the good land and leaves behind it a barren silt.

Roughly speaking, the entire tract falls into three natural divisions known as the *bhur*, the *khadar* and the *katehr*. The first comprises the high ridge which enters the district from the Sambhal tehsil of Moradabad and passes through the eastern portions of the Asadpur and Sahaswan parganas and then continues through the centre of Ujhani and Usehat. This belt is rarely more than four or five miles in breadth and the soil throughout consists of sand. This tract is full of *kans*, *memri* (ushrub) and thatching grass and cultivations is, therefore, most unstable. In addition, agriculture is hampered by the presence of wild animals, especially pigs. *Juar* and *bajra* are the main crops of the *bhur*.

Between the *bhur* and Ganga is the lowlying *khadar*, a tract of very diverse appearance and fertility. Its eastern boundary is formed by the high cliff, below which lies a broad shallow depression representing the old river bed. In the north it is occupied by the Chhoiya, but further south this stream turns aside to join the Mahawa, and its place is taken by a chain of marshes and *jhils*. Beyond this waterlogged area, the tract has a good soil; and in it wells are easily constructed, cultivation is steady and the produce is excellent. In places, however, *usar* and *dhak* jungles make their appearance. This tract is traversed in Gunnaur and Sahaswan tehsils by numerous streams. They have a very irregular and ill-defined course and they do much damage by overflowing their bank and shifting their channels. Further south the *khadar* improves in richness and fertility. There is alluvial formation along the bank of the river Ganga which is known as the *bela*. The soil in this narrow belt is a thin layer of loam spread over a bed of sand. This *bela* tract is most marked in Gunnaur and Sahaswan.

To the east of the *bhur* tract lies the broad plain of the *katehr*, a level and perfectly homogeneous expanse of good fertile loam. This comprises the entire Bisauli tehsil, excepting the western corner of Pargana Islamnagar and also the whole of pargana Kot and half of Budaun and Ujhani. It consists of a loam soil, varied by clay in the depressions and is very fully cultivated. The eastern portion of the district, comprising the remainder of Budaun, a small strip of Usehat and the whole of Salempur lies within the influence of the Ramganga. In this eastern lowland *katehr* gives place to the *bankati* which extends as far as the Aril and possesses a heavy clay soil.

Soils

3. The three main divisions are loam, clay and *bhur* or sand and these together comprise the whole area. The *bhur* land is classified into three kinds known as the *thandi bhur*, that is to say, the chilled or moist sand; *lokhariya bhur* or the high sand in which the foxes have their earths; and the *urani bhur*, the sand blown by the wind. The *khadar* soils go by different names although they are practically all loam of varying consistency. There is also a marked difference between the so called clay found in the *khadar* and the stiff argillaceous soil of Dataganj; the former is of a lighter and more porous description and is consequently for more easy to work.

Classification of area

4. The figures of classification of area during the last fifty years are given in Table 2 of part III of this volume. The proportion of area under the various categories works out as follows for 1950-51.

Particulars	Actual figures (in acres)	Percentage
Cultivated area	1,017,064	78·7
Culturable waste (excluding current fallow)	112,523	8·7
Current fallow	49,972	3·9
Forest	998	0·1
Area not available for cultivation of which	111,191	8·6
(*a*) *Covered with water*	*35,886*	*2·8*
(*b*) *Under sites, roads and buildings*	*39,188*	*3·0*
(*c*) *Barren*	*36,117*	*2·8*

The figure in the above table regarding culturable waste taken from Season and Crop Report is, however, misleading. The State Agriculture Department conducted in 1949—50, a detaited enquiry through the District Officers regarding the nature of this area in each district. The following analysis of the area resulted from this enquiry :

Particulars	Area (in acres)	Percentage
Total culturable waste (A + B + C)	111,368	100
A—Area under culturable waste land not available for immediate cultivation ..	46,843	42·06
(i) Forest under any legal enactment	5	..
(ii) Groves	14,521	13·04
(iii) Forests of timber trees	..	..
(iv) Thatching grasses, shrubs and bushes	29,941	26·89
(v) Land kept for grazing	2,376	2·13
B—Area under culturable waste land available for immediate cultivation but could not be cultivated.	21,792	19·57
Of which due to—		
(i) *Kans* growth	6	0·01
(ii) Threshing floors	298	0·27
(iii) Malaria	..	..
(iv) Floods	193	0·17
(v) Lack of drains	..	..
(vi) Lack of water	1,498	1·34
(vii) Distance from *abadi*	222	0·20
(viii) Damage from wild animals	21	0·02
(ix) Other causes	19,554	17·56
C—Area under culturable waste land that can be brought under immediate cultivation after some improvements besides the area given against B.	42,733	38·37

From the above it will appear that of the total area recorded as cultura ble waste, only 38·4 per cent. was really capable of being brought under immediate cultivat ion after some improvements.

Thus the land area cultivated and cultivable including current fallow *per capita* works out to 94·3 cents of which 85·3* cents have already been brought under cultivation and only about 3·4 cents can be further brought under the plough after some improvements. It is obvious that the saturation point for cultivation has already been reached in the district.

Climate and rainfall

5. The average rainfall for the last quinquennium was about 36·57 inches. During the last 45 years the rainfall has been less than 17 inches in only two years and has been usually over 30 inches. The highest rainfall of 65·5 inches was recorded in 1936 –37. The fluctuations in the rainfall from year to year are remarkable. On an average Dataganj tehsil heads the list. The other tehsils in order of rainfall are Budaun, Bisauli, Sahaswan and Gunnaur. In the western parganas the precipitation is less than the general average.

*The figure also includes the area classed as current fallow.

The climate of Budaun resembles that of adjoining districts of Bareilly and Moradabad. At the same time it is undoubtedly more cool and moist than the adjacent portions of the *doab* beyond the Ganga. The rains are somewhat unhealthy, especially in the southern tracts which then become waterlogged. The district is comparatively healthy. Epidemics are not of frequent occurrence and the chief disease is malarial fever which is especially common at the end of the rains and the beginning of winter in the low-lying and ill-drained tracts.

Irrigation

6. Irrigation is mainly derived from wells, rivers, tanks and lakes. There is very little irrigation by canals. In 1950–51 the irrigated area from wells covered 35·4 per cent. (including 56·7 per cent. from tube-wells) and by other sources 14·6 per cent. (including ·06 per cent. from canals.)

Crops

7. Mere acreage is sown under *kharif* crops than under *rabi* crops. The area under *kharif* in 1950—51 was 600,941 acres and that under *rabi* crops 548,822 acres. In *kharif bajra* and paddy are the main crops while the principal *rabi* crop is what followed by gram and barley.

B—Analysis of the Statistics

Population : General distribution and density

1. The table below shows the two basic figures—land area and population—and the derived figures of land area *per capita* :

Tehsil	Population (in lakhs)	Density (number per square mile)	Land area (in lakhs of acres)	Land area *per capita*
Bisauli	2·61	724	2·30	0·88
Budaun	3·20	706	2·91	0·91
Dataganj	2·41	576	2·68	1·11
Gunnaur	1·90	530	2·30	1·21
Sahaswan	2·39	566	2·70	1·13
Budaun district	*1·251*	*621**	*12·89*	*1·03*

The district stands 23rd in the State both in order of area and population. Its density is 621 per square mile as against 557 per square mile for the State as a whole. The density of the district has not been to a very great extent inflated by the presence of large towns. Even its rural density is as high as 558, the density of the rural parts of the tehsils being : Bisauli 688, Budaun 564, Dataganj 541, Gunnaur 508 and Sahaswan 501. Density is fairly uniform throughout the district excepting tehsil Bisauli which has a relatively high density. (*Vide* Tables A-I and E)

Growth of population

2. The population of the district in 1951 was 21·9 per cent. higher than what it was fifty years ago. Compared to this the increase in the population of the State during the corresponding period has been 30 per cent. The table below exhibits the variations in the total, rural and urban population for the last five decades.

Census year	Population			Variation		
	Total	Rural	Urban	Total	Rural	Urban
1901	1,026,192	918,962	107,230			
1911	1,054,293	919,599	104,694	+28,101 (+2·7)	+30,637 (+3·3)	—2,536 (—2·4)
1921	975,684	837,025	138,659	—78,609 (—7·5)	—82,574 (—8·7)	+3,965 (+3·8)
1931	1,010,467	890,970	119,497	+34,783 (+3·6)	+23,945 (+2·8)	+10,838 (+10·0)
1941	1,162,322	1,022,401	139,921	+151,855 (+15·0)	+131,431 (+14·8)	+20,424 (+17·1)
1951	1,251,152	1,105,808	145,344	+88,830 (+7·6)	+83,407 (+8·2)	+5,423 (+3·9)

Between 1901 and 1921 the population of the district recorded a decrease of 4·9 per cent when that of the State decreased by 4·0 per cent. The increase in population during 1901—11 was small. The district has suffered severely from the epidemic malaria of 1908. Moreover, plague in Budaun in March 1911 was particularly severe. The population showed a large decrease in 1921 due to the heavy mortality from the influenza epidemic of 1918—19. Again during 1921—51 the increase in this district has been well below the State average. It was only 28·2 per cent. as against an increase of 35·5 per cent. in the population of the State. The decades 1921–31 and 1941—51 recorded low increases. During 1921—31 it suffered from fever, plague and small pox and it also lost a considerable population on the balance of

*According to the area given by Surveyor General, it is 627.

migration. Gunnaur, the most precarious tehsil in the district suffered heavily from floods (especially in 1924), brought and locusts. Sahaswan and Dataganj tehsils also suffered from floods. These calamities resulted in considerable emigration. During 1941—51 also the district appears to have lost a considerable population by emigration (especially of the Muslims). The increase in population has been 7·6 per cent. only against an increase of 11·8 per cent. in the State. The increase is spread evenly over Bisauli (8·9 per cent.), Budaun (8·9 per cent.), and Sahaswan (8·0 per cent.) tehsils, but that in tehsils Dataganj (5·5 per cent.) and Gunnaur (6·3 percent.) is ralatively low.

Vital Statistics

3. Births and deaths mainly account for the trends in population growth. Migration is also a factor though of lesser importance. The following table gives the mean decennial registered birth and death-rates and the calculated natural increase rates and population growth rates of the last three decades for the district as a whole and for its rural and urban areas:

	Total	Rural	Urban
Mean decennial birth-rate			
1941—50	33·3	32·4	40·7
1931—40	43·1	43·3	41·3
1921—30	39·2	40·4	29·7
Mean decennial death-rate			
1941—50	22·5	22·0	26·8
1931—40	27·0	26·9	28·1
1921—30	30·4	31·2	24·4
Mean decennial rate of natural increase			
1941—50	10·8	10·4	13·9
1931—40	16·1	16·4	13·2
1921—30	8·8	9·2	5·3
Mean decennial growth-rate			
1941—50	7·4	7·8	3·8
1931—40	14·0	13·7	15·7
1921—30		2·7	9·5

There are large omissions in the registration of births aud deaths and so the above rates do not represent the true picture at all. They may, however, be taken roughly to be indicative of trends. Both birth and death-rates have fallen during the last decade.

The figures of natural increase and growth-rates suggest continuous loss of population by migration since 1921.

The average yearly mortality from various causes in the district during 1941—50 was as follows :

Causes	Number of deaths	Percentage of total deaths
Fever	24,556	90·3
Dysentery and diarrhoea	291	1·1
Respiratory diseases	648	2·4
Plague, cholera and small-pox	641	2·3
Others	1,060	3·9

As in the rest of the State 'fever' is responsible for a majority of the deaths. But fever covers a number of ailments which the reporters are unable to identify. (*Vide* Table I, Part III of this volume)

Migration

4. About 92 per cent. of people enumerated in the district at the census of 1951 were born there, 7·4 per cent. were born in the other districts of the State, 0·3 per cent. were born in other parts of India and only 0·3 per cent. came from other countries. Of the immigrants from the districts of the State as many as 88,696 (males 16,038, females 72,658) are from the other districts of the same natural division and only 3,693 (males 1,221, females 2,472) are from other parts of the State. The sexratio suggests that most of the migration from the neighbouring districts is marriage migration. Of 3,176 immigrants from the

adjacent States 1,598 (males 236 females 1,362) are from Punjab, 1,015 (males 241, females 774) are from Delhi and 264 (males 143, females 121) are form Rajasthan. The migration from Punjab and Delhi is mostly marriage migration.

Of the immigrants who have come from territories beyond India 3,812 (males 1939, females 1,873) were born in Pakistan and 32 (males 21, females 11) had their birth place in other territories. The Pakistan-born are displaced persons who numbered 3,901 (males 2,066, females 1,835). Of the immigrants born in other territories, 24 (males 17, females 7) are Nepal-born. Immigration from countries beyond India is insignificant.

There is only one non-Indian national, an Arab, in the district.

Unfortunately the figures of emigration are not available. According to the Vital Statistics, however, the district appears to have lost 52,373 persons during 1921—30, 22,459 persons during 1931—40 and 41,627 persons during 1941—50,on the balance of migration. (*Vide* Tables D-IV and D-VI)

Decline of cultivation *per capita*

5. We may now analyse the growth of population in the district during the last thirty years in relation to the growth of cultivation during the same period. (The figures of area shown under the census years are quinquennial averages for the five years ending with the crop year immediately preceding the census year). It is obvious that cultivation has failed to keep pace with population. The cultivated area *per capita* has gone down to 81·3 cents in 1951 from 96·0 cents in 1921. The magnitude of this drop is about one-sixth of the 1921 level. It means that (other things being equal) every man, woman and child must expect to get less food and other agricultural produce from the land in 1951 than in 1921.

Census year	Population*	Net area sown (in acres)	Area of cultivation *per capita* (in cents)
1921	975,347	936,880	96·0
1931	1,010,180	873,066	86·5
1941	1,162,322	979,888	84·2
1951	1,251,152	1,015,968	81·3

Double cropped area *per capita*

6. It may be examined whether this shortage has been compensated by an increase in the yield per acre. Increase in yield can be brought about by more double cropping, more irrigation, better fertilization and better culture. The average (quinquennial) area sown more than once was 176,657 acres in 1921. It decreased to 121,513 acres in 1931 and then increased to 127,421 acres in 1941 and to 147,081 acres in 1951.

The figures of double crop cultivation *per capita* in cents are as below :

Particulars	Quinquennial averages for the year preceding			
	1951	1941	1931	1921
Double crop cultivation *per capita* in cents	11·8	10·9	12·1	18·1
Unirrigated double crop cultivation *per capita* in cents ..	11·4	10·4	11·7	17·4
Irrigated double crop cultivation *per capita* in cents	0·4	0·5	0·4	0·7

There is an increase in the *per capita* double cropped area since 1941, but the 1951 figure is well below that of 1921. It is, thus, evident that the double cropped area has also not kept pace with the rate of growth of population.

Irrigated area *per capita*

7. The average area irrigated was 172,770 acres in 1921, 113,668 acres in 1931, 173,587 acres in 1941 and 172,984 acres in 1951. The average area irrigated more than once was 6,729 acres in 1921, 3,564 acres in 1931, 6,189 acres in 1941 and 4,536 acres in 1951.

The figures of irrigation *per capita* are shown in the table below :

Particulars	Years			
	1951	1941	1931	1921
Irrigated single crop cultivation *per capita* in cents	13·5	14·4	10·9	17·0
Irrigated double crop cultivation *per capita* in cents	0·4	0·5	0·4	0·7

The trend is distinctly towards as decline.

Cropped area

8. It is also significant that in spite of the rapid growth of population, there has been only a small change in the cropping pattern of the district. During the quinquennium 1916—21, 89·5 per cent. of the cropped area was under food crops and 10·5 per cent. of it was under non-food crops. Thirty years after, during 1946—51 the cropped area under food crops was 91·2 per cent. and that under non-food crops was 8·8 per cent.

* The figures of popnlation of various censuses relate to the then lay-out of the district.

The proportionate area under different crops between 1911 and 1951 was as below :

Quinquennial average of	Total cropped area	Percentage of cropped area under							
		Rice	Wheat	Barley	Juar	Bajra	Maize	Gram	Others
1911—16	1,137,675	3·2	26·6	10·5	4·4	20·3	5·3	7·0	22·7
1916—21 .. .	1,083,631	4·6	23·8	9·3	4·0	20·5	6·1	8·7	23·0
1921—26	1,054,397	4·5	26·4	9·4	4·8	15·0	4·4	13·1	22·4
1926—31	1,007,747	4·5	28·6	8·5	6·4	16·8	5·7	8·1	21·4
1931—36	1,092,945	4·1	28·9	7·5	6·3	18·6	5·0	8·8	20·8
1936—41	1,114,481	4·5	31·6	7·2	5·0	18·3	5·2	7·9	20·3
1941—46	1,124,364	3·9	29·1	7·6	4·1	22·3	4·7	9·1	19·2
1946—51	1,159,137	5·3	27·5	7·1	4·1	20·3	3·8	11·0	20·9

Indigo has gone out of cultivation. In 1901—02 the area under indigo was 818 acres ; in 1950—51 it was only 2 acres. Cotton, opium and tobacco are other nonfood crops which have declined. In 1901—02 the area under cotton was 42,066 acres, and under opium 24,266 acres and under tobacco 3,237 acres. It declined to 1,623 acres, 3 acres and 1,120 acres respectively in 1950—51. The area under sugarcane has increased considerably since 1932—33 which is partly due to the establishment of Sugar factories and partly to construction of tube-wells in the district.

Live-stock, ploughs and carts

9. Live-stock in this country live for a large part of the year on by-products of agriculture supplemented by green fodder crops. They have, therefore, to be co-related not only with the grazing available but also with the total area under cultivation which carries a major portion of the burden of supporting the cattle population.

As will appear from table 3 of part III the total number of cattle and buffaloes which had been decreasing from 1935 up to 1944 has during 1944—51 increased from 616 thousands to 661 thousands.

The number of working cattle and buffaloes in the district had been increasing since 1935. It was 224 thousands in 1935, 241 thousands in 1944 and 260 thousands in 1951. This number of working cattle appears to be governed by the number of ploughs and carts. The number of ploughs has gone up from 107 thousands in 1935 to 134 thousands in 1951 due apparently to progressive fractionalisation of holdings. The number of carts also started rising since 1935. Their number rose from 35 thousands in 1935 to 58 thousands in 1951. The average net cultivated area per plough works out to 7·6 acres in 1951 as against 10·1 acres in 1920 and the average net cultivated area per pair of working cattle works out to 7·8 acres in 1951 as compared with 8·6 acres in 1935.

Breeding cows and she-buffaloes which fell from 208 thousands to 192 thousands during 1935—44 have gone upto 214 thousands in 1951. The cows and female buffaloes in milk per 1,000 of human population were 28 and 54 respectively. Owing to the poor milk yield the share of milk per head is a few ounces only.

The number of sheep has been continuously decreasing since 1930. The number was 22,302 in 1930. It fell to 12,550 in 1951 due apparently to shortage of pasture. Goats have also been going down in number since 1935 when they were over 152 thousands. Their number in 1951 was about 72 thousands only.

Horses and ponies also are declining in number. Their number was 10,211 in 1935. It went down to 7,141 in 1951. Donkeys during the same time fell from 4,315 to 3,058 only.

Poultry has increased from about 22,000 to 30,000 during 1944—51.

Distributed on 1,000 of human population the figures of the main categories of live-stock in 1951 are as follows :

Cattle	Buffaloes	Sheep	Goats	Poultry	Others
310	219	10	57	24	19

10. To sum up, the population of the district is growing up at the biological natural rate since 1921 but on the other hand the land area *per capita*, the double crop area *per capita* and the irrigated area *per capita* are steadily declining. There is, at the same time, no evidence that crop yield per acre has increased. The cultivated area *per capita* in the district has grown too small. In such circumstances, any increase in the absolute numbers will be a strain on the present economy of the district.

Villages and towns

11. The district has 1,822 villages and 13 towns. Out of about 12·5 lakhs of people who were counted at the census of 1951, 11·1 lakhs were found in the villages and 1·4 lakhs in the towns, i.e., there are as many as 884 people per 1,000 of the population who live in the rural areas and only 116 of them live in towns. The corresponding figures for the State as a whole are : rural 864, urban 136.

The rural population per inhabited village works out to 607. But the villages do not necessarily comprise of a single compact site. There are 2,582 hamlets in the district. The population per hamlet is only 428. The mediumsized villages with population numbering between 500—2,000, is the dominant type in the district. Of the rural population 63·9 per cent. live in such villages; 25·0 per cent. in small villages of population under 500 ; and 10·4 per cent. in large villages of a population between 2,000—5,000 ; and only 0.7 per cent. in villages of population over 5,000.

Towns vary in number of inhabitants even more widely than villages. Budaun city has a population of 53,521 or 36·8 per cent. of the urban population of the district.

Only 7·6 per cent. of the urban population lives in towns of population under 5,000 (viz., Dataganj, Gawan, Mundia and Usehat), 31·3 per cent. in towns of population between 5,000-10,000 (Kakrala, Islamnagar, Bisauli, Gunnaur, Alapur and Bilsi), 9·7 per cent. in towns of population between 10,000-20,000 (viz., Ujhani), and the remaining 51·4 per cent. in towns of population of 20,000 and over (viz., Budaun and Sahaswan). Budaun city has shown an increase of only 36·8 per cent. in its population since 1921. Gunnaur, Alapur, Usehat, Gawan and Mundia appear to be somewhat declining. (*Vide* Tables A-III and A-IV)

Occupations : Livelihood pattern

12. Out of the total population of 1,251,152 (rural 1,105,808, urban 145,344) 1,060,615 (rural 1,015,029, urban 45,586) or 84·8 per cent. depend on agriculture for their means of livelihood and 190,537 (rural 90,779, urban 99,758) or 15·2 per cent. depend on the non-agricultural sources. The following table gives the distribution of 100 persons of the total, rural and urban population of the district and also of Budaun city under the different livelihood classes:

Description	Agricultural classes					Non-agricultural classses				
	Total	I	II	III	IV	Total	V	VI	VII	VIII
Total	84·8	76·3	3·4	3·4	1·7	15·2	5·1	3·4	0·6	6·1
Rural . ..	91·8	83·2	3·5	3·6	1·5	8·2	3·6	1·5	0·2	2·9
Urban . ..	31·4	22·9	3·1	2·3	3·1	68·6	16·6	18·5	3·0	30·5
Budaun city ..	14·3	7·6	2·7	0·5	3·5	85·7	17·4	23·0	4·0	41·3

It is obvious that this district is one of the predominantly agricultural districts of the State. Here as many as 84·8 per cent. of the people depend on agriculture as against 74·2 per cent. in the whole State.

Of the total population of the district, 791,240 persons (males 257,285, females 533,955) or 63·2 per cent. have been classified as non-earning dependants. The percentage of non-earning dependants in the agricultural population works out to 63·0 per cent. and that among non-agricultural classes as 64·4 per cent. It will be observed that in the main they consist of women. The male non-earning dependants are mostly children. 50,757 persons (males 29,561, females 21,196) or 4·1 per cent. are earning dependants. Among the agriculturists their proportion is 4·1 per cent. and among non-agriculturists they form only 3·8 per cent. Agriculture is a family occupation and it provides work to the women and grown-up children in the family. The remaining 409,155 persons (males 391,760, females 17,395) or 32·7 per cent. of the population consist of self-supporting persons. Their proportion among agriculturists is 32·9 per cent. and among non-agriculturists 31·8 per cent. Of the self-supporting persons 348,499 (males 338,058, females 10,441) belong to the agricultural classes and 60,656 (males 53,702, females 6,954) belong to the non-agricultural classes. On an average a self-supporting person maintains two non-earning dependants.

Of the 60,656 self-supporting persons belonging to non-agricultural classes, 1,416 persons (rural 1,086, urban 330) earn their livelihood from non-productive sources. Of the remaining 59,240 persons (rural 31,153, urban 28,087) 2,672 (rural 588, urban 2,084) or 4·5 per cent. are employers, 16,905 (rural 5,648, urban 11,257) or 28·5 per cent. are employees and 39,663 (rural 24,917, urban 14,746) or 67·0 per cent. are independent workers.

The distribution of 10,000 self-supporting persons of non-agricultural occupations classified according to economic divisions is as follows :

Name of division	Self-supporting persons by divisions
All Industries and Services	10,000
0—Primary industries not elsewhere specified	455
1—Mining and quarrying	21
2—Processing and manufacture—foodstuffs, textiles, leather and products thereof ..	1,827
3—Processing and manufacture—metals, chemicals and products thereof	202
4—Processing and manufacture—not elsewhere specified	944
5—Construction and utilities	878
6—Commerce	2,157
7—Transport, storage and communications	428
8—Health, education and public administration	923
9—Services not elsewhere specified	2,165

Among the large scale industries the principal are cotton spinning and oil pressing. Among the cottage industries the principal are cotton cloth weaving, and manufacture of baskets, *moondhas*, *chick* and *moonjban*.

Variation in the livelihood pattern

13. In the district, proportion of population depending on agriculture for their livelihood was 84·3* per cent. in 1951. The unfortunate fact is that the agricultural proportion has been increasing ever since 1901 when the figure stood at 67·1 per cent. It was only 76·2 per cent. in 1911 and 74·1 per cent. in 1921. The actual number of persons who depend on agriculture has increased to 1,054,453 in 1951 from 722,428 in 1921 or by 46 per cent. while the cultivated area has increased simply by 8·4 per cent. This has resulted in the progressive fractionalisation and subdivision of holdings and pressure on impoverished soil. There appears to have been a gradual decline in village arts and handi-crafts. The cumulative result is fall in the proportion of workers and a corresponding rise in the dependency. The proportion of workers in the total population in 1951 was only 36·8 per cent. (agricultural 30·9 per cent., non-agricultural 5·9 per cent.) against 50·6 per cent. (agricultural 37·8 per cent. non-agricultural 12·8 per cent.) in 1921. The proportion of non-earning dependants has consequently increased from 49·4 per cent. (agricultural 36·3 per cent.. non-agricultural 13·1 per cent.,) in 1921 to 63·2 per cent. (agricultural 53·4 per cent., non-agricultural 9·8 per cent.) in 1951. All this is an index of increasing unemployment and underemployment. It is only by the diversion of the population to cottage and other industries and providing subsidiary work to the agricultural population that the present severe disequilibrium in the economy of the district can be redressed. (*Vide* Tables B-I, B-II and B-III)

Houses and households

14. There were 192,091 occupied houses in the district—166,967 in villages and 25,124 in towns. That gives an average of 6,623 persons per 1,000 houses or 6·6 persons per house in the rural areas and 5,785 persons per 1,000 houses or 5·8 persons per house in the urban areas.

There were 264,028 households in the district—235,511 in villages and 28,517 in towns. That gives an average of 4,693 persons per 1,000 households or 4·7 persons per household in rural areas and 5,035 persons per 1,000 households or 5 persons per household in the urban areas. The marginal table shows the developments in the size of the household since 1921. Both the rural and urban household have decrease since 1941. The rural household is somewhat smaller than the average State rural household (5·07).

Census year	Persons per 1,000 households of	
	Rural population	Urban population
1921 ..	5,395	6,870
1931 ..	4,414	4,725
1941 ..	4,709	5,194
1951 ..	4,693	5,035

Out of 4,693 persons in every 1,000 rural households, 2,548 are males and 2,145 are females. There is a female deficit numbering 403 in every 1,000 rural households. Out of 5,035 persons in every 1,000 urban households 2,681 are males and 2,354 are females. There is a female deficit numbering 327 in every 1,000 urban households.

*The figure includes earning dependants according to their secondary means of livelihood while the figure 84·8 in paragraph 12 includes earning dependants according to the principal means of livelihood and hence the difference.

Information regarding types of household and household relationships was also collected at this census with the help of a sample of about 4 per cent. According to this in every 1,000 sample households, there are 4,722 persons (males 2,571, females 2,151) in the district. The corresponding figure for the total count is 4,730.

The table below shows the distribution by size of 1,000 sample households :

Description	Small with 3 members or less	Medium with 4—6 members	Large with 7—9 members	Very large with 10 members or more
Total	347	437	166	50
Rural	347	437	167	49
Urban	345	435	164	56

Medium households are the dominant type in the villages as well as in the towns.

Family composition of 1,000 sample households is as follows :

			Number in 1,000 households
A	Heads of households	Males (married)	682
		Males (Widowers)	289
		Females	29
	Wives of heads of households		682
			1,682
B	Sons of heads of households		1,032
	Daughters of heads of households		670
			1,702
C	Males relations of heads of households (other than sons)		517
	Female relations of heads of households (other than daughters)		702
			1,219
D	Persons unrelated to the heads of households	Males	51
		Females	68
			119
	Grand total		*4,722*

Sons outnumber the daughters of the heads of households. The latter leave the homes of their parents after marriage. Female relatives (other than daughters) out number the male relatives (other than sons). Such females are generally those who become members of these households by marriage. (*Vide* Tables A-1 and C-I.)

15. In the district as a whole the sex-ratio was 844, i.e., there were 844 females to every 1,000 males. It varies among the tehsils. The lowest value was 810 in Dataganj tehsil. The highest value was 870 in Gunnaur tehsil. The ratio was 850 in Sahaswan, 850 in Bisauli and 844 in Budaun. **Sex-ratio**

The sex-ratio is usually smaller in towns than in villages. But in Budaun the reverse is true. For the district as a whole, the sex-ratio in towns was as high as 862 while that in villages was only 841. The sex-ratio in Budaun city was 867.

The corresponding figures of sex-ratio for the district was 848 in 1921, and 1931, 855 in 1941 against 844 in 1951.

Age structure

16. The number in each age-group in the district is shown below as a percentage of the total number of all ages in the total, rural and urban population separately.

Age-group		Total population			Rural population		Urban population	
		Persons	Males	Females	Males	Females	Males	Females
Infants and young childern ..	0—4	13·6	7·0	6·6	7·0	6·6	7·2	6·1
Boys and girls	5—14	20·0	12·4	9·6	12·2	9·4	13·8	10·9
Young men and women ..	15—34	30·6	17·8	12·8	17·8	12·6	17·3	15·0
Middle-aged men and women ..	35—54	20·6	11·4	9·2	11·4	9·3	11·6	8·7
Elderly persons	55 and over	13·2	6·9	6·3	7·1	6·6	5·5	3·9

It will be seen that the population is progressive. 35·6 per cent. of the population is of age under 15 and only 13·2 per cent. of it consists of elderly persons. (*Vide* Table C-II)

Marital status

17. Out of every 10,000 persons in the district, there are 5,552 males and 4,448 females*. Among them 2,553 males and 1,683 females are unmarried. If we reckon males and females together the unmarried people are 42·4 per cent. of the population.

Of the males 46·0 per cent. were unmarried, 46·4 per cent. were married and 7·6 per cent. were widowed or divorced. Among the females 37·8 per cent. were unmarried, 51·4 per cent. were married and 10·8 per cent. were widowed or divorced.

Of the married males 1·4 per cent. were of ages below 15, 46·3 per cent. were of ages 15—34, 35·3 per cent. were of ages 35—54 and 17·0 per cent. were of ages 55 and over. Among the married females 2·8 per cent. were of ages below 15, 48·8 per cent. were of ages 15—34, 32·9 per cent. were of ages 35—54 and 15·5 per cent. were elderly women.

Marriage is universal. Among males and females aged 35 years and over only 5·7 per cent. of the males and 0·5 per cent. of the females were found unmarried. Most of the females are married before they attain the age of 25. Child marriage is still prevalent although it is not very common. Only 1·8 per cent. of the males of ages 0—14 and 3·9 per cent. of the females of ages 0—14 were returned as married. (*Vide* Table C-III)

Languages

18. Over 99·6 per cent. of the people of the district returned Hindi, Hindustani or Urdu as their mother-tongue. Among the other mother-tongues spoken the main is Punjabi (0·27 per cent.). Of the 12·51 lakhs of people in the district only 4,316 or 0·3 per cent. were bilingual (in an Indian language). (Vide Table D-I).

Religion and special groups

19. Out of 10,000 population of the district, the number of people belonging to different religions is; Hindus 8,051, Muslims 1,804, Christians 109, Sikhs 29, Jains 6 and others 1; of 10,000 population in villages the numbers are: Hindus 8,443, Muslims 1,418, Christians 104, Sikhs 29, Jains 5 and others 1; and of 10,000 population in towns the numbers are: Hindus 5,070, Muslims 4,741 Christians 145, Sikhs 29, and Jains 15. Muslims, Sikhs and Christians are generally concentrated in the urban areas of the district as is the case in the other parts of the State.

There were 177 thousand Scheduled castes in the district. Their number per 10,000 of population works out to 1,412. In villages they are 1,506 for every 10,000 and in the towns their number per 10,000 is only 692. In the district there were 47Anglo-Indians. (*Vide* Tables D-II and D-III)

Displaced persons

20. The number of displaced persons in the district at this census was 3,901 (males 2,066, females 1,835) a large majority of whom were concentrated in the urban areas. Among them 99·6 per cent. came from West Pakistan, 0·3 per cent. from East Pakistan and 0·1 per cent. from districts which could not be traced. (*Vide* Table D-V)

Literacy

21. The percentage of male literacy was 10·0 in the district, while that of female literacy was 2·5 only. Compared to this the percentage of literates among males in 1931 was 4·4; Among females, the percentage of literates in 1931, was 0·8† On January 1, 1951 there were 503primary schools in the district with enrolment of 36,991. (*Vide* Table D-VII)

C—Explanatory Note on the Statistics

The statistics in this volume have been presented in three parts:

I—District Census Tables

II—Village, Town, Pargana and Thana Statistics

III—Miscellaneous Statistics

*The corresponding figures for the total count are 5,424 and 4,576.

†The numbers per mille (of the 10 per cent. sample population) of each sex aged 5 years and over who were returned as literate are as below:

Males		Females	
1951	1931	1951	1931
101	52	31	10

Parts I and II contain census data. A brief account of the system of sorting of census slips and preparation of tables and abstract therefrom is given below.

Part III contains statistics throwing light on special aspects of population and its growth. These have been derived from miscellaneous sources. Table I, "Vital Statistics" has been prepared from the published and unpublished records of the Director of Medical and Health Services, Table 2, "Agricultural Statistics", from the Annual Season and Crop Reports, Table 3, "Live-Stock, Agriculture Machinery and Implements", from the published figures of Live-Stock Census and Table 4, "List of Primary Schools", from information specially supplied by district Inspector of Schools.

Processing of census data

2. The census data presented here has been derived from the census slips by a process of sorting compilation and tabulation. In previous censuses the slips were first sorted by religion and this division was maintained throughout so that all data was cross-tabulated by religion. This procedure has been abandoned at this census and substituted by a division based on economic characteristics of the population. The whole population has been divided into eight livelihood classes, four of which are of the argricultural category and four of non-agricultural category as follows :

Agricultural Classes—

I—Cultivators of land wholly or mainly owned; and their dependants
II—Cultivators of land wholly or mainly unowned ; and their dependants.
III—Cultivating labourers ; and their dependants
IV—Non-cultivating owners of land ; agricultural rent receivers; and their dependants

Non-agricultural Classes—

V—Production (other than cultivation)
VI—Commerce
VII—Transport
VIII—Other services and miscellaneous sources

Another special feature of the sorting of this census was the separation, from the very start, of slips of displaced persons and of a 10 per cent. random sample from the remainder. This has enabled the data of displaced persons to be presented separately while the 10 per cent. sample has been utilized for the preparation of Age Tables.

The slips of this census have been copied by Households into a National Register of Citizens, which has been prepared village-wise for rural areas and mohalla/ward-wise for urban areas. Table C-I is based on a 4 per cent. sample extracted from this register.

Tracts

3. The slips were first sorted by villages for the preparation of the Primary Census Abstract. For the purpose of further sorting the State was divided into tracts consisting of (*a*) *rural tracts*, comprising the rural population of each tehsil, (*b*) *urban city tracts*, comprising the population of areas which had been declared as cities, (*c*) *urban non-city tracts*, comprising the population of urban areas of a district excluding areas declared as cities. Each tract was treated as a unit for sorting of slips. All data were compiled first by tracts and then by districts. This volume presents the tract-wise data for one district (with the exception of A and E Tables, which have been presented tehsil-wise) while the district-wise data for the whole State is contained in the following State volumes :

Part I-B—Subsidiary Tables.
Part II-A—General Population Tables
Part II-B—Economic Tables
Part II-C—Age and Social Tables

Explanatory notes

4. Detailed explanatory notes are appended to each State table in the printed volumes of State tables. They apply to the tables in this volume also and should be referred to when necessary. A few notes of some of the tables are reproduced below :

Table A-I—Column 5 relating to "hamlets" has been introduced for the first time. Any distinctive cluster or agglomeration of houses has been treated as a "hamlet".

A clear distinction has been made in this census between a "House" and a "Household". A house is any human dwelling having a separate main entrance while a household is any commensal unit living in a census house. In previous censuses the figures under "Occupied Houses" used to be that of households, while the figures under columns 7—9 of the present tables refer to occupied census houses as distinct from households.

The Economic Tables—The Indian Census Economic Classification Scheme, 1951, together with the occupational division and sub-division adopted for this census are given in Part II-B of the Report.

Table B-I—Each of the eight livelihood classes mentioned above has been divided into three sub-classes, with reference to the economic status, as follows ;

(i) Self-supporting persons ;
(ii) Non-earning dependants ; and
(iii) Earning dependants

These were defined in the Instructions to Enumerators as follows :

> "A 'self-supporting person' is one who is in receipt of an income and that income is sufficient at least for his own maintenance. To be 'self-supporting' a person need not be able to support his family. All that is necessary is that he should be earning sufficient for his personal needs. For purposes of this question the person enumerated is the unit and not the family or household. Any one who is not a 'self-supporting' person in this sense is a 'dependant'. A 'dependant' may

be either an 'earning dependant' or a 'non-earning dependant'. The test is whether he secures a regular (and not casual) income, even though it may be small. Such income may be in cash or kind; it may be continuous or seasonal employment. When the income which he secures is not sufficient to support him that person is 'an earning dependant'. A person who does not earn any income either in cash or kind is a 'non-earning dependant'. Where two or more members of a family household jointly cultivate land and secure an income therefrom, each of them should be regarded as earning part of the income. None of them is therefore, a non-earning dependant. Each of them should be classed either a 'self-supporting person' or an 'earning dependant' according to the share of income attributable to each. The same applies to any other business carried on jointly. The share of the income is what the head of household deems it to be. This does not mean that every one who works is necessarily a self-supporting person or an earning dependant. Thus, for instance, a housewife who cooks for the family, brings up the children or manages the household is doing very valuable work. Nevertheless, her Economic Status is that of a non-earning dependant, if she does not also earn an income, and should be recorded as such".

Economically active, Semi-active and Passive persons—All non-earning dependants are economically passive. They include persons performing house-work or other domestic or personal services for other members of the same family household. But they do not include "unpaid family workers" or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise.

All earning dependants are economically semi-active only. Though they contribute to the carrying of economic activities, the magnitude of their individual contribution is deemed to be too small to justify their description as economically active. (Their contribution to economic activity is, however, taken into account in the tabulation of data based on secondary means of livelihood.)

All self-supporting persons are, ordinarily economically active with the exception of the following classes and groups:

(*a*) All self-supporting persons of agricultural Class IV.

(*b*) The following groups of self-supporting persons who are included in non-agricultural Class VIII and derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity):

(i) Persons living principally on income from non-agricultural property:
(ii) Persons living principally on pensions, remittances, scholarships and funds;
(iii) Inmates of alms-houses and recipients of doles;
(iv) Beggars and vagrants; and
(v) All other persons living principally on income derived from non-productive activities.

Table B-II—For a self-supporting person who has more than one means of livelihood the *secondary means* of livelihood is the livelihood next in importance to his principal means of livelihood. For an earning dependant it is the source from which he secures his own income, where there are more than one subsidiary occupations only the one providing the largest income has been taken into account.

Table B-III—"Employers", "Employees" and "Independent Workers" have been defined as fallows in the Instructions to Enumerators;

An "employer" is only that person who has necessarily to employ other person in order to carry on the business from which he secures his livelihood. Thus if a person employs a cook or any other person for domestic services, he should not be recorded as an "employer" merely for that reason.

An "employee" is a person who ordinarily works under some other person for a salary or a wage in cash or kind as the means of earning his livelihood. There may be persons who are employed as managers, superintendents, agents etc., and in that capacity control other workers. Such persons are also employees only and should not be regarded as employers.

An "independent worker" means a person who is not employed by any one else and who also does not employ anybody else in order to earn his livelihood (Sweepers, *dhobies*, *kahars* etc., who work for several masters are independent workers. If, however, any of them accepts whole-time employment under one master he becomes "employee". Daily wage-earners who work for different masters are likewise independent workers. But if they accept employment under one master, e.g. under a factory, they become "employees".)

Tables C-II, C-III, C-IV and C-V—The figures presented in these tables are based on single year age returns and have not been smoothed.

Tables D-V (i) *and* (ii)—For the purpose of these tables a "displaced person" has been defined as follows:

"A displaced person means any person who has entered India having left or being compelled to leave his home in Western Pakistan on or after the 1st March, 1947, or his home in Eastern Pakistan on or after the 15th October, 1946, on account of civil disturbances or on account of the setting up of the two Dominions of India and Pakistan."
