DISTRICT CENSUS HANDBOOK
1951

BIJNOR DISTRICT

FOREWORD

Several States, including Uttar Pradesh, have been publishing village statistics by districts at each census. In 1941 they were published in U. P. under the title "District Census Statistics" with a separate volume for each district. In the 1951 census, when the tabulation has been more elaborate than ever in view of the requirements of the country, the district-wise volume has been expanded into a "District Census Handbook", which now contains the District Census Tables (furnishing data with break-up for census tracts within the district), the District Index of Non-agricultural Occupations, agricultural statistics from 1901-02 to 1950-51 and other miscellaneous statistics in addition to the usual village population statistics. The village population statistics also are given in an elaborate form giving the division of the population among eight livelihood classes and other details.

2. It may be added here that a separate set of district-wise volumes giving only population figures of rural areas by villages and of urban areas by wards and mohallas and entitled "District Population Statistics" has already been published. This separate series was necessitated by the urgent requirements of the U. P. Government for elections to local bodies.

3. The number of District Census Handbooks printed so far is thirty. Special arrangements for speeding up the printing have now been made and it is hoped that the remaining Handbooks will be printed before the end of 1955.

RAJESHWARI PRASAD, I.A.S.,
Superintendent, Census Operations,
Uttar Pradesh.

RAMPUR:
August 5, 1955.

INTRODUCTION

A—The District

1. Bijnor is one of the districts occupying the north-west corner of the State. In shape it is roughly triangular with its apex in the north. Its western boundary is formed by the river Ganga which separates it from the districts of Dehra Dun, Saharanpur, Muzaffarnagar and Meerut. To the north and north-east is the hill country of Garhwal. On the south-east it is bounded for a short distance, along the Phika river, by part of Naini Tal district, while Moradabad district forms the remainder of the boundary on the south-east and south. The district has a total area of 1,867 square miles and its population in 1951 was 9·8 lakhs. It has four tahsils—its northern part is divided into two, Nagina and Najibabad, and the southern part also into two, Bijnor and Dhampur. There are 14 parganas and 17 thanas in the district.

Topography

2. In its physical aspects, the district possesses many diverse characteristics. The extreme northern corner of the district is occupied by an outlying spur of the Siwaliks, known as the Chandi hills. This area comprises some 25 square miles and is mainly Government reserved forest. Below this region a broad belt of forests, varying from 2 to 10 miles in width, extends along the whole of the north-eastern border from the Chandi hills to the Naini Tal district on the south-east. This belt of land shows considerable slope to the south and south-west and is traversed by the numerous rivers and streams which flow from the Garhwal hills and follow the slope of the land. The surface of this tract is considerably broken up by ravines and erosion generally, but the soil is on the whole good.

All the remaining portion of the district consists of an open plain comprising the valleys of the Ganga, Malin, Khoh and Ramganga rivers, the uplands between the Ganga on the west and the Khoh and Ramganga on the east, and the quasi-alluvial tract of Afzalgarh in the south-east corner. The surface is gently undulating and rises from the valleys to the sandy ridges which mark the water partings. The two divisions of this area are, therefore, the uplands and the lowlands.

The lowlands comprise the valleys of the four main rivers which vary in fertility but have very much the same features : a sandy bed with some cultivation at the dry season level, and varying from year to year with the action of the rivers, followed by a high bank, inland of which is a fairly level stretch of alluvial loam and clay, which in its turn is separated from the higher ground of the uplands and the series of marshes. This upper *khadar* is on the whole rich and well cultivated throughout except in parts on the banks of the Ganga in tehsil Bijnor, and in pargana Afzalgarh (tehsil Nagina) on both sides of the Ramganga, where the course of the stream is extremely erratic.

The uplands lie between the valleys of the Ganga and those of the Khoh and Ramganga and consist of three parallel belts running north and south. They may be described as the western, central and eastern uplands. The western uplands make a water-shed between the Ganga valley and the central drainage lines of the district and form a broad undulating stretch of sandy soil cut by the channels of the Malin and Chhoiya streams. These water courses divide the tract into three portions consisting of low sandy ridges separated by level plains. The soil on and near these ridges is sandy and poor, while the rest is loam with a considerable admixture of sand and occasional patches of clay. The tract is sparsely populated ; water is at low level and cultivation mainly dependent on rainfall alone. To the east of this tract the land slopes downwards to a broad belt traversing the whole central portion of the district, an area drained by the rivers Ban, Gangan and Karula, flowing in a southerly direction. This is the most fertile part of the district as the soil is mostly a soft, friable loam without much sand, while irrigation facilities abound, both from the Khoh and Gangan canals and from earthen and some masonry wells, as the water level is close to the surface. The strip of land on both banks of Ban is the only exception to the general excellence of the tract ; here the river exercises a deteriorating effect on most neighbouring villages and damage is sometimes caused by floods. Eastward of the Karula stream the country rises towards the water-shed between Khoh and Ramganga valleys, forming a narrow belt which extends from Nagina tehsil to the southern edge of the district. The soil here is mainly a good loam with fairly stiff clay in the depression.

The Afzalgarh tract lies to the east of Ramganga and is almost alluvial in character, rather resembling the neighbouring *tarai* of Naini Tal district. The climate of this tract is unhealthy.

Another natural division is of the *khadars* of the Ganga, Khoh and Ramganga rivers. The Ganga *khadar* is a belt of varying width and of purely alluvial character nearest to the bed of the river ; above this portion rises a bank of higher ground extending inland to the chain of swamps which lie immediately below the *bangar* (upland cliff). This is easily the most riverain tract in the district. The Khoh *khadar* is a tract of no great width lying on both banks of the river. Fluctuations in the course of the river are not common and most of the *khadar* area is free from fluvial action. The river deposit is sandy and lacking in fertility. The Ramganga *khadar* is considerably wider than the Khoh *khadar* and though superior to the latter in quality of soils, due to a good culturable deposit, suffers from the

wide fluctuations to which the course of the river is subject. For this reason cultivation tends to be somewhat unstable in this area. There are traces here and there of a former higher level but not so pronounced as those in the Khoh *khadar*.

On the whole the natural lines of drainage serve their purpose admirably and the rapid slope of the country from north to south effectually prevents any serious interference. The series of small swamps and marshes are to be found where the Ganga, Khoh and Ramganga have abandoned their old channels. In the low central uplands there is some danger of flooding along the Ban and its channels in years of heavy rainfall.

Soils

3. As the whole country to the south of the hills and the low *bhabar* at their base consists of riverain alluvium of varying age, it necessarily follows that the composition of the soil is more or less uniform. On the higher ground the soil is light and sandy, often pure sandy; on the level stretches it is a mixture of sand and clay in varying proportions, classified generally as loam ; and in the low country and the depressions of the uplands the sand disappears, leaving nothing but a stiff argillaceous clay. The more recent deposits left behind them by the rivers when the waters recede after the annual floods differ with the nature of the inundation ; a strong current will carry away all but the heavier particles of sand, while a stream of less violence is beneficial in its action, as the mud settles gently, with the result that the flooded ground is covered with a fertile layer of the richest loam.

Classification of area

4. The figures of the classification of area during the last fifty years are given in Table 2 of part III of this volume. The proportion of area under the various categories works out as follows for 1950-51 :

Particulars	Actual figures (in acres)	Percentage
Cultivated area	705,204	58·9
Culturable waste (excluding current fallow)	231,990	19·4
Current fallow	67,820	5·7
Forest	57,015	4·7
Area not available for cultivation of which—	134,910	11·3
(a) *Covered with water*	*57,467*	*4·8*
(b) *Under sites, roads and buildings*	*42,337*	*3·6*
(c) *Barren*	*35,106*	*2·9*

The figure in the above table regarding culturable waste taken from the Season and Crop Report is, however, misleading. The State Agriculture Department conducted in 1949-50 a detailed inquiry through the District Officers regarding the nature of this area in each district. The following analysis of the area resulted from this inquiry :

Particulars	Area (in acres)	Percentage
Total culturable waste (A+B+C)	**235,300**	**100**
A—Area under culturable waste land not available for immediate cultivation ..	138,981	59·06
(i) Forest under any legal enactment	..	..
(ii) Groves	13,474	5·73
(iii) Forests of timber trees	16,618	7·06
(iv) Thatching grasses, shrubs and bushes	97,988	41·64
(v) Land kept for grazing	10,901	4·63
B—Area under culturable waste land available for immediate cultivation but which could not be cultivated	77,549	32·96
Of which due to—		
(i) *Kans* growth	13,969	5·94
(ii) Threshing floors	1,174	0·50
(iii) Malaria	3,445	1·46
(iv) Floods	7,024	2·98
(v) Lack of drains	5,224	2·22
(vi) Lack of water	1,256	0·53
(vii) Distance from *abadi*	2,748	1·17
(viii) Damage from wild animals	21,967	9·34
(ix) Other causes	20,742	8·82
C—Area under culturable waste land that can be brought under immediate cultivation after some improvements besides the area given against 'B' ..	18,770	7·98

From the above it will appear that of the total area recorded as culturable waste, only 7·98 per cent. was really capable of being brought under immediate cultivation after some improvements.

Thus the land area cultivated and cultivable *per capita* works out to 102·1 cents of which 78·5* cents have already been brought under cultivation and only 1·9 cents can be further brought under the plough after some improvements.

Climate and rainfall

5. The rainfall is normally ample. The average for the last quinquennium was about 45 inches. During the last fifty years the rainfall has been less than 24 inches in only one year and has been usually over 40 inches. The abundance of the rainfall taken in combination with the presence of large forest areas, has a marked effect on the salubrity of the climate, for in the north and east both during and for some time after the rains, the country is most unhealthy and in the centre of the district and in the numerous river valleys, malarial fevers are extremely prevalent. Otherwise the district is a healthy one. The comparatively high altitude, combined with the proximity of the Himalyas and the presence of many hill streams, render the district at the same time moist and cool, while the general prevalence of sand in soil, the slope of the country and an adequate drainage system preserve it from that excessive dampness which usually characterises the sub-montane tracts As a rule, the district is beyond the influence of the east winds, and in the hot weather the west winds seldom blow with any violence. The period of high temperature, is much shorter than in the districts to the south. Frosts are not uncommon but they are rarely of any severity. Winter rains are a regular feature in this district.

Irrigation

6. Irrigation is derived from canals, wells, reservoirs and other sources. In 1950-51 the irrigated area from canals covered 25·5 per cent. from wells 66·6 per cent. and from other sources 7·9 per cent.

Crops

7. More acreage is sown under *kharif* crops than under *rabi* crops. The area under *kharif* crops in 1950-51 was 476,986 acres, that under *rabi* 351,933 acres and that under *zaid* crops 2,844 acres. The principal *rabi* crop is wheat followed by gram while the principal *kharif* crop is rice.

B—Analysis of the Statistics

Population : General distribution and density

1. The table below shows the two basic figures—land area and population—and the derived figures of land area *per capita* :

Tehsil	Population (in lakhs)	Density (number per square mile)	Land area (in lakhs of acres)	Land area *per capita*
Bijnor	2·74	567	3·09	1·13
Dhampur	3·41	745	2·93	0·86
Nagina	1·67	366	2·92	1·75
Najibabad	2·02	461	2·80	1·39
Bijnor district	*9·84*	536†	*11·74*	*1·19*

This district though twenty-seventh in order of area is thirty-seventh in the State in respect of population. It is one of the less densely populated districts of the State with density of 536 persons per square mile while the average density of the State is 557. The density of the district has been to some extent inflated by the presence of large number of towns. Its rural density is only 414, the density of the rural parts of the tehsils being : Bijnor 431, Dhampur 600, Nagina 282, Najibabad 342. It is evident that people are not uniformly distributed throughout the district. The density is lower in tehsils Nagina and Najibabad because of the large forest areas. Nagina Tehsil is agriculturally precarious also. (*Vide* Tables A-I and E.)

Growth of population

2. The population of the district during the last fifty years has recorded an increase of 26·2 per cent. Compared to this the increase in the population of the State during the corresponding period has been 30 per cent. The table below exhibits the variation in the total, rural and urban population for the last five decades :

Census year	Population			Variation		
	Total	Rural	Urban	Total	Rural	Urban
1901	**780,105**	610,380	169,725			
1911	**806,089**	643,029	163,060	**+25,984** (+3·3)	+32,649 (+5·3)	—6,665 (—3·9)
1921	**740,368**	589,151	151,217	**—65,721** (—8·2)	—53,878 (—8·4)	—11,843 (—7·3)
1931	**835,469**	646,827	188,642	**+95,101** (+12·8)	+57,676 (+9·8)	+37,425 (+24·7)
1941	**910,223**	701,427	208,796	**+74,754** (+8·9)	+54,600 (+8·4)	+20,154 (+10·7)
1951	**984,196**	747,535	236,661	**+73,973** (+8·1)	+46,108 (+6·6)	+27,865 (+13·3)

*The figure also includes the area classed as current fallow.

†According to the area given by the Surveyor General, it is 527.

Between 1901 and 1921 the population of the district recorded a decrease of 5·1 per cent. when that of the State decreased by 4·0 per cent. only. Due to the heavy mortality from the influenza epidemic in 1918-19, a decrease of 8·2 per cent. was recorded during the decade 1911-21. The urban population has suffered a loss during 1901—11 due to abnormal deaths from plague. Abnormal deaths did not occur or were prevented from occurring in the post-1921 period. In spite of this the population of the district recorded an increase of only 32·9 per cent. since 1921 against an increase of 35·5 per cent. in the population of the State during the same period.

The population of the district increased by 8·1 per cent. in the last decade, which is well below the average of the State (11·8 per cent.). Nagina tehsil recorded a very low increase during this period (3·3 per cent.). The percentage increases in other tehsils have been : Bijnor 9·4, Dhampur 9·9 and Najibabad 7·8.

Vital Statistics

3. Births and deaths mainly account for the trends in the population growth. Migration also is a factor though of lesser importance. The following table gives the mean decennial registered birth and death-rates and the natural rates of increase and population growth-rates of the last three decades for the district as a whole and for its rural and urban areas :

	Total	Rural	Urban
Mean decennial birth-rate			
1941-50	**32·4**	31·6	35·1
1931-40	**41·3**	42·6	36·9
1921-30	**43·3**	48·0	26·4
Mean decennial death-rate			
1941-50	**22·7**	22·1	24·1
1931-40	**30·7**	31·7	27·0
1921-30	**32·9**	36·3	20·4
Mean decennial rate of natural increase			
1941-50	**9·7**	9·5	11·0
1931-40	**10·6**	10·9	9·9
1921-30	**10·4**	11·7	6·0
Mean decennial growth-rate			
1941-50	**7·8**	6·4	12·5
1931-40	**8·6**	8·1	10·1
1921-30	**12·1**	9·3	22·0

There are large omissions in the registration of births and deaths and so the above rates do not represent the true picture at all. They may, however, be taken to be roughly indicative of trends. Both birth and death-rates have fallen during the last decade.

The figures of natural increase and growth-rates suggest considerable loss of population by migration during 1931-40 and 1941-50 while during 1921-30, it appears to have gained somewhat on the balance of migration.

The average yearly mortality from various causes in the district during 1941-50 was as follows :

Causes	Number of deaths	Percentage of total deaths
Fever	17,729	82·3
Dysentery and diarrhoea	483	2·2
Respiratory diseases	721	3·4
Plague, cholera and small-pox	782	3·6
Others	1,831	8·5

As in the rest of State 'fever' is responsible for a majority of the deaths. But ' fever ' covers a number of ailments which the reporters are unable to identify. (*Vide* Table I, Part III of this volume.)

Migration

4. About 95·6 per cent. of the people enumerated in the district at the census of 1951 were born there, 3·4 per cent were born in the other districts of the State, 0·3 per cent. were born in other parts of India, and only 0·7 per cent. were born in other countries. Of the immigrants from the districts of the State as many as 27,268 (males 6,609, females 20,659) are from other districts of the same natural division and only 5,886 (males 2,779, females 3,107) are from other parts of the State. The sex proportion suggests that most of the migration from the neighbouring districts is marriage migration. Of 2,398 immigrants from adjacent States 994 (males 540, females 454) are from Punjab and 369 (males 170, females 199) are from Delhi State.

Of the immigrants who have come from territories beyond India 6,076 (males 3,364, females 2,712) are Pakistan-born and 1,330 (males 1,144, females 186) had their birth-place in other territories. The Pakistan-born are the displaced persons who numbered 5,593 (males 3,032, females 2,561) in the district. Of the immigrants born in other territories 1,313 are Nepal-born.

The number of non-Indian nationals in the district was 944, of them 928 were Nepalese, 2 Dutch, 2 Americans, 1 Arab, 1 German and 10 Pakistanis.

Unfortunately, the figures of emigration are not available. On the balance of migration according to vital statistics, however, the district appears to have gained about 13,000 persons during 1921-30, while it lost about 18,000 persons during 1931-40 and 17,000 persons during 1941-50. But it should be kept in mind that the figures contain an element of registration error and are only indicative of trends.

Decline of cultivation *per capita*

5. We may now analyse the growth of population in the district during the last thirty years in relation to the growth of cultivation during the same period. The marginal table shows the figures. (Figures of area shown under census years are quinquennial averages for the five years ending with the crop year immediately preceding the census year). It is obvious that cultivation has failed to keep pace with population. The cultivated area *per capita* has gone down to 69·2 cents in 1951 from 88·6 cents in 1921. The magnitude of this drop is about one-fourth of the 1921 level. It means that (other things being equal) every man, woman and child must expect to get less food and other agricultural produce from the land in 1951 than in 1921.

Census year	Population*	Net area sown (in acres)	Area of cultivation *per capita* (in cents)
1921	740,182	656,124	88·6
1931	835,469	646,109	77·3
1941	910,223	657,227	72·2
1951	984,196	681,197	69·2

Double crop cultivation *per capita*

6. It may be examined whether this shortage has been compensated by an increase in the yield per acre. Increase in yield can be brought about by more double-cropping, more irrigation, better fertilisation and better culture. The average (quinquennial) area sown more than once was 97,278 acres in 1921, 70,770 acres in 1931, 89,933 acres in 1941 and 115,915 acres in 1951. The figures of double-crop cultivation *per capita* in cents are as follows :

Particulars	Quinquennial average for the year preceding			
	1951	1941	1931	1921
Double crop cultivation *per capita* in cents	11·8	9·9	8·5	13·1
Unirrigated double crop cultivation *per capita* in cents ..	11·5	9·6	8·2	12·5
Irrigated double crop cultivation *per capita* in cents	0·3	0·3	0·3	0·6

It is satisfactory to note that the double cropped area *per capita* has been increasing since 1931.

Irrigated area *per capita*

7. The average area irrigated in the district was 54,074 acres in 1921. The figures were 45,278 acres in 1931, 71,788 acres in 1941 and 90,785 acres in 1951. The average area irrigated more than once was 4,747 acres in 1921, 2,324 acres in 1931, 2,648 in 1941 and 3,108 in 1951. The figures of irrigation *per capita* are shown below :

Particulars	Years			
	1951	1941	1931	1921
Irrigated single crop cultivation *per capita* in cents	8·9	7·6	5·1	6·7
Irrigated double crop cultivation *per capita* in cents	0·3	0·3	0·3	0·6

*The figures of population of the various censuses relate to the then layout of the district.

The trend is towards a rise since 1931.

Cropped area

8. During the quinquennium 1916—21, 78·1 per cent. of the cropped area was under food crops and only 21·9 per cent. of it was under non-food crops. Thirty years after during 1946—51, the cropped area under food crops was only 76·0 per cent. and that under non-food crops was 24·0 per cent. The proportionate area under different crops between 1911 and 1951 was as below :

Quinquennial average of	Total cropped area	Percentage of cropped area under						
		Rice	Wheat	Barley	Bajra	Maize	Gram	Others
1911—16	**760,876**	17·9	22·9	11·3	6·7	1·2	7·8	32·2
1916—21	**737,957**	21·4	23·3	9·8	5·8	1·1	5·3	33·3
1921—26	**730,854**	20·5	22·4	10·4	6·1	0·5	8·2	31·9
1926—31	**717,477**	23·0	22·9	10·2	4·6	0·6	5·5	33·2
1931—36	**738,332**	21·2	22·7	9·0	5·3	0·7	8·9	32·2
1936—41	**747,754**	22·2	21·9	7·5	4·8	0·7	9·7	33·2
1941—46	**776,540**	19·6	24·1	7·4	6·1	0·4	10·2	32·2
1946—51	**801,033**	22·6	21·8	6·3	5·0	0·2	11·9	32·2

In 1901-02 the area under cotton crop was 35,774 acres ; in 1950-51 it was 11,855 acres only. The area of sugarcane has increased considerably to 108,726 acres in 1950-51 from 63,095 acres in 1901-02.

Live-stock, ploughs and carts

9. Live-stock in this country live for a large part of the year on by-products of agriculture supplemented by green fodder crops. They have, therefore, to be co-related not only with the grazing available but also with the total area under cultivation which carries a major portion of the burden of supporting the cattle population.

As will appear from table 3 of part III the total number of cattle and buffaloes which increased and decreased alternately during 1930—35 and 1935—44 has increased from about 5·5 lakhs in 1944 to about 6·0 lakhs in 1951.

The number of working cattle and buffaloes has been increasing since 1935. It was 2·4 lakhs in 1951. This number of working cattle appears to be governed by the number of ploughs and carts. The number of ploughs has gone up from 92 thousands in 1944 to 1·0 lakhs in 1951 due apparently to progressive fractionalisation of holdings. The number of carts started rising since 1930 as a result of the establishment of sugar factories and stands now at over 65,000.

The average net cultivated area per plough works out to 7·0 acres in 1951 as against 7·7 acres in 1920 and the average net cultivated area per pair of working cattle was 5·9 acres in 1951 as against 6·0 acres in 1935.

Breeding cows and she-buffaloes which remained stationary at about 1·57 lakhs during 1935—44 have gone up to 1·78 lakhs in 1951. The cows and female buffaloes in milk per 1,000 of human population are 52 and 30 respectively. Owing to the poor milk yield the share of milk per head is only a few ounces per day.

The number of sheep which has been decreasing during 1920—44 has further gone down to 17 thousands in 1951 due apparently to the shortage of pasture. Goats have been going down in number since 1944 when they were over 40 thousands. Their number in 1951 was about 32 thousands, the reduction during 1944—51 alone being 21·8 per cent.

Horses and ponies are increasing in number. There was a slight rise during 1944—51 from about 7 thousands to about 7·1 thousands. Donkeys during the same period increased from about 4 thousands to 5 thousands.

Poultry increased to about 71 thousands in 1951.

Distributed on 1,000 of human population the figures of the main categories of live-stock in 1950-51 are as follows :

Cattle	Buffaloes	Sheep	Goats	Poultry	Others
487	125	17	32	72	29

10. To sum up, the population of the district is growing up at the biological natural rate since 1921 but, on the other hand, the land area *per capita*, has been steadily declining. The magnitude of the absolute numercial increase in relation to practically stationary acreage under cultivation is a great strain on the economy of the district.

Villages and towns

11. The district has 2,044 villages and 17 towns. Out of 984 thousands people who were counted at the census of 1951, 747 thousands were found in villages and 237 thousands in towns, i.e., there were 760 people per 1,000 of population who live in rural areas and only 240 of them live in towns. The corresponding figures for the State as a whole are: rural 864, urban 136.

The rural population per inhabited village works out to 366. Most of the villages comprise of a single compact site. There are only 2,207 hamlets in the district. The population per hamlet is 339. The medium-sized village with population between 500—2,000 is the dominant type in the district. Of the rural population 47·1 per cent. live in such villages 45·8 per cent. in small villages of population under 500, and 7·1 per cent. in large villages of a population between 2,000 and 5,000.

Towns also vary in number of inhabitants. 41·4 per cent. of the urban population lives in towns of population between 10,000—20,000 (viz., Kiratpur, Sherkot, Chandpur, Seohara, Dhampur Nihtaur) ; 21·4 per cent. in towns of population between 5,000—10,000 (viz., Mandawar, Jhalu, Sahaspur; Haldaur, Sahanpur, Budhpura, Afzalgarh and Tajpur) ; and 37·2 per cent. in towns of population of 20,000 and over (viz., Bijnor, Najibabad and Nagina). Bijnor Municipality has shown small increase of about 3,000 persons only since 1941. The population of Kiratpur has gone down since 1941. Similar is the case of Mandawar, Sahaspur and Afzalgarh which appear to be declining towns. (*Vide* Tables A-III and A-IV).

Occupations : Livelihood pattern

12. Out of the total population of 984,196 (rural 747,535, urban 236,661) 563,493 (rural 513,738, urban 49,755) or 57·3 per cent. depend on agriculture for their means of livelihood and 420,703 (rural 233,797, urban 186,906) or 42·7 per cent. depend on non-agricultural sources. The following table gives the distribution of 100 persons of total, rural and urban population of the district :

Description	Agricultural classes					Non-agricultural classes				
	Total	I	II	III	IV	Total	V	VI	VII	VIII
Total	**57·3**	**45·4**	**2·3**	**8·7**	**0·9**	**42·7**	**18·0**	**5·9**	**1·2**	**17·6**
Rural	**68·7**	55·5	2·0	10·7	0·5	**31·3**	15·0	2·7	0·6	13·0
Urban	**21·0**	13·3	3·1	2·7	1·9	**79·0**	27·5	16·3	3·2	32·0

It is obvious that this district is one of the less predominantly agricultural districts of the State. Here only 57·3 per cent. of the people are engaged in agriculture as against 74·2 per cent, in the State.

Of the total population of the district 643,208 (males 214,986, females 428,222) or 65·3 per cent. have been classified as non-earning dependants. The percentage of non-earning dependants in the agricultural population works out to 65·3 and that among the non-agricultural population to 65·4. It will be observed that in the main they consist of women. The male non-earning dependants are mostly children. 37,044 persons (males 19,804, females 17,240) or 3·8 per cent. of the population are earning dependants. Among the agriculturists, their proportion is 3·5 per cent. and among non-agriculturists they form 4·1 per cent. The remaining 303,944 persons (males 287,182, females 16,762) or 30·9 per cent. are self-supporting persons. Their proportion among agriculturists is 31·2 per cent. and among non-agriculturists 30·5 per cent. Of the self-supporting persons 175,609 (males 169,797, females 5,812) belong to agricultural classes and 128,335 (males 117,385, females 10,950) to the non-agricultural classes. On an average a self-supporting person maintains two non-earning dependants.

Of the 128,335 self-supporting persons of non-agricultural population, 3,210 persons (rural 1,999, urban 1,211) earn their livelihood from non-productive sources. Of the remaining 125,125 self-supporiting persons (rural 73,107, urban 52,018) 1,697 (rural 229, urban 1,468) or 1·4 per cent. are employers, 19,956 (rural 7,861, urban 12,095) or 15·9 per cent. are employees and 103,472 (rural 65,017, urban 38,455) or 82·7 per cent. are independent workers.

The distribution of 10,000 self-supporting persons of non-agricultural occupations classified according to Economic Divisions is as follows :

Name of division	Self-supporting persons by divisions
All Industries and Services	**10,000**
0—Primary industries not elsewhere specified	538
1—Mining and quarrying	2
2—Processing and manufacture—foodstuffs, textiles, leather and products thereof	2,776
3—Processing and manufacture—metals, chemicals and products thereof ..	129
4—Processing and manufacture not elsewhere specified	993
5—Construction and utilities	1,134
6—Commerce	1,234
7—Transport, storage and communications	299
8—Health, education and public administration	669
9—Services not elsewhere specified	2,226

There is no large scale industry in the district worth the name. Among cottage and small-scale industries, the principal are handloom cloth weaving, woollen blankets, calico printing, leather tanning, leather working (boots, shoes, harness and sadlery, suit and attache cases), brass and copper wares, iron utensils, *khandsari* sugar and ebony carving.

Variation in the livelihood pattern

13. In the district of Bijnor, the proportion of population depending on agriculture for their livelihood was 57·0* per cent. in 1951. The unfortunate fact is that the agricultural proportion had been increasing ever since 1901, when the figure stood at 45·7 per cent. It was 55·2 per cent. in 1911 and 54·8 in 1921. The actual number of persons who depend on agriculture has increased to 561,077 in 1951 from 356,097 in 1921, i.e., by 57·6 per cent. while the cultivated area has increased by 3·8 per cent. only. This has resulted in progressive fragmentation and sub-division of holdings and pressure on impoverished soil. There appears to be a gradual decline in village arts and crafts. The cumulative result is a fall in the proportion of workers and a corresponding rise in the dependency. The proportion of workers in the total population in 1951 was only 34·6 per cent. (agricultural 19·6 per cent., non-agricultural 15·0 per cent.) against 44·4 per cent. (agricultural 22·5 per cent., non-agricultural 21·9 per cent.) in 1921. The proportion of non-earning dependants has consequently increased from 55·6 per cent. (agricultural 32·3 per cent., non-agricultural 23·3 per cent.) in 1921 to 65·4 per cent. (agricultural 37·4 per cent., non-agricultural 28·0 per cent.) in 1951. All this is an index of the increasing unemployment and under-employment. It is only by a greater diversion of the population to cottage and other industries and by supplying subsidiary occupations to agriculturists that the present economy of the district can be improved. (*Vide* Tables B-I, B-II and B-III).

Houses and households

14. There were 159,857 occupied houses in the district—118,726 in villages and 41,131 in towns. That gives an average of 6,296 persons per 1,000 houses or 6·3 persons per house in rural areas and 5,754 persons per 1,000 houses or 5·8 persons per house in the urban areas.

There were 209,348 households in the district—159,705 in villages and 49,643 in towns. That gives an average of 4,675 persons per 1,000 households or 4·7 persons per household in the rural areas and 4,741 persons per 1,000 households or 4·7 persons per household in the urban areas. The marginal table shows the developments in the size of the household since 1921. The rural household has been more or less stationary in size since 1941 and is smaller than the average State rural household (5·07). The urban household has registered a decrease since 1941.

Census Year	Persons per 1,000 households of	
	Rural Population	Urban Population
1921	4,107	4,381
1931	4,410	4,779
1941	4,690	5,276
1951	4,675	4,741

Out of 4,675 persons in every 1,000 rural households 2,484 are males and 2,191 females. There is a male excess numbering 293 in every 1,000 households. Out of 4,741 persons in every 1,000 urban households 2,489 are males and 2,252 are females. There is again a male excess numbering 237 in every 1,000 households.

Information regarding types of household and household relationships was also collected at this census with the help of a sample of about 4 per cent. According to this in every 1,000 sample households there are 4,644 persons (males 2,512, females 2,132) in the district. The corresponding figures for the total count is 4,691.

The table below shows the distribution by size of 1,000 sample households.

Description	Small with 3 members or less	Medium with 4—6 members	Large with 7—9 members	Very large with 10 members or more
Total	**354**	**453**	**149**	**44**
Rural	345	465	144	46
Urban	380	412	168	40

Medium households are the dominant type in the villages as well as in the towns. Quite a large number of migrants live in the towns without families.

*The figure includes earning dependants according to their secondary means of livelihood, while the figure 57·3 in paragraph 12 includes earning dependants according to their principal means of livelihood and hence the difference.

Family composition of 1,000 sample households is as follows :

			Number in 1,000 households
A	Heads of households	Males (Married)	723
		Males (Widowers)	235
		Females	42
	Wives of heads of households		723
			1,723
B	Sons of heads of households		1,056
	Daughters of heads of households		717
			1,773
C	Male relations of heads of households (other than sons)		415
	Female relations of heads of households (other than daughters)		609
			1,024
D	Persons unrelated to the heads of the households	Males	83
		Females	41
			124
	Grand Total		*4,644*

Sons outnumber the daughters of heads of households. The latter leave the homes of their parents after marriage. Female relatives (other than daughters) outnumber the male relatives (other than sons). Such females are generally those who become members of these households by marriage. (*Vide* Table A-I and C-I)

Sex-ratio

15. In the district as a whole the sex-ratio was 886, i.e., there were 886 females to every 1,000 males. It varies among the tehsils. The highest value was 897 in Dhampur tehsil and the lowest value was 866 in Bijnor tehsil. The sex-ratio was 893 in Nagina and 886 in Najibabad.

Contrary to the general trend, the sex ratio is higher in towns than in villages. For the district as a whole the sex-ratio in villages is only 881 while that in towns is 900.

The corresponding figure of sex-ratio for the district was 900 in 1921, 883 in 1931 and 890 in 1941.

Age-structure

16. The number in each age-group in the district is shown below as a percentage of the total number of all ages in the total, rural and urban population separately:

Age-group		Total population			Rural population		Urban population	
		Persons	Males	Females	Males	Females	Males	Females
Infants and young children	0—4	14·7	7·6	7·1	7·7	7·3	7·1	6·8
Boys and girls	5—14	23·3	12·8	10·5	12·7	10·3	13·1	11·1
Youngmen and women	15—34	32·6	17·3	15·3	17·5	15·2	16·8	15·5
Middle-aged men and women	35—54	20·9	11·6	9·3	11·7	9·4	11·2	9·2
Elderly persons	55 and over	8·5	4·7	3·8	4·5	3·7	5·3	3·9

It will be seen that the population is progressive. 38·0 per cent. of the population is of age under 15 and only 8·5 per cent. of it consists of elderly persons. (*Vide* Table C-II)

Marital status

17. Out of every 10,000 persons in the district, there are 5,399 males and 4,601 females.* Among them 2,684 males and 1,825 females are unmarried. If we reckon males and females together the unmarried people are 45·1 per cent. of the total population.

Of the males 49·7 per cent. were unmarried, 42·8 per cent. were married and 7·5 per cent. were widowed or divorced. Among the females 39·7 per cent. were unmarried, 48·8 per cent. were married and 11·5 per cent. were widowed or divorced.

Of the married males 0·6 per cent. were below 15, 47·3 per cent. were of age 15—34, 40·1 per cent. were of ages 35—54 and 12·0 per cent. were of ages 55 and over. Among females 2·7 per cent. were of age below 15, 60·7 per cent. were of ages 15—34, 31·6 per cent. were of ages 35—54 and 5·0 per cent. were of ages 55 and over, i.e., elderly women.

Marriage is universal. Among males and females aged 35 years and over only 4·4 per cent. of the males and 0·2 per cent. of the females were found unmarried. Most of the females are married before they attain the age of 25. Child marriage is not very common. Only 0·7 per cent. of the males of ages 0—14 and 3·4 per cent. of the females of ages 0—14 were returned as married. (*Vide* Table C-III)

*The corresponding figures for the total count are 5,304 and 4, 696.

Languages

18. Over 99·4 per cent. of the people of the district returned Hindi, Hindustani or Urdu as their mother-tongue. Among the other mother-tongues spoken, the main are Punjabi (0·4 per cent.) and Nepali (0·1 per cent.) of the 9·84 lakhs of people in the district only 5,744 or 0·6 per cent. were bilingual (in an Indian language). Those whose mother-tongue is other than Hindi, Hindustani or Urdu, are generally the migrants who are able to speak any of these as subsidiary language. Persons returning Hindi, Hindustani or Urdu as secondary language were 4,030 or 70·2 per cent. of those who were bilingual in some Indian language. (*Vide* Table D-I).

Religion and special groups

19. Out of 10,000 population of the district the number of people belonging to different religions is : Hindus 6,207, Muslims 3,650, Sikhs 98, Jains 37 and Christians 8. Of 10,000 population in villages the numbers are : Hindus 7,021, Muslims 2,867, Sikhs 108, Jain 1 and Christians 3. Among 10,000 population in towns the numbers are : Hindus 3,634, Muslims 6,122, Sikhs 67, Jains 153 and Christians 24. Muslims, Sikhs, Christians and Jains are generally concentrated in the urban areas of the district as is the case in the other parts of the State.

There were 188 thousands persons belonging to the Scheduled Castes in the district. Their number per 10,000 of population works out to 1,905. In villages they are 2,280 for every 10,000 and in the towns their number per 10,000 is only 722. In this district there was only 1 Anglo-Indian. (*Vide* Table D-II and D-III)

Displaced persons

20. The number of displaced persons in the district at the census was 5,593 (males 3,032, females 2,561) a large majority of whom are concentrated in urban areas. 89·6 per cent. of the displaced persons are from West Pakistan, 0·1 per cent. from East Pakistan and 10·3 per cent. from districts which could not be traced. (*Vide* Table D-V)

Literacy

21. The percentage of male literacy in 1951 was 15·4 per cent. in the district while that of female literacy was 4·0 per cent. In 1931, the literacy was 6·8 per cent. for males and 1·3 per cent. for females*. On January 1, 1951, there were 530 primary schools in the district with enrolment of 37,425. (*Vide* Table D-VII)

C—Explanatory Note on the Statistics

The statistics in this volume have been presented in three parts :

I—District Census Tables

II—Village, Town, Pargana and Thana Statistics

III—Miscellaneous Statistics

Parts I and II contain census data. A brief account of the system of sorting of census slips and preparation of tables and abstract therefrom is given below.

Part III contains statistics throwing light on special aspects of population and its growth. These have been derived from miscellaneous sources. Table 1, "Vital Statistics", has been prepared from the published and unpublished records of the Director of Medical and Health Services, Table 2, "Agricultural Statistics", from the Annual Season and Crop Reports, Table 3, "Live-Stock, Agricultural Machinery and Implements", from the published figures of Live-Stock Census and Table 4, "List of Primary Schools" from information specially supplied by District Inspector of Schools.

Processing of census data

2. The census data presented here has been derived from the census slips by a process of sorting, compilation and tabulation. In previous censuses the slips were first sorted by religion and this division was maintained throughout so that all data was cross-tabulated by religion. This procedure has been abandoned at this census and substituted by a division based on economic characteristics of the population. The whole population has been divided into eight livelihood classes, four of which are of the agricultural category and four of non-agricultural category as follows :

Agricultural Classes—

I—Cultivators of land wholly or mainly owned ; and their dependants.

II—Cultivators of land wholly or mainly unowned ; and their dependants.

III—Cultivating labourers ; and their dependants.

IV—Non-cultivating owners of land ; agricultural rent receivers ; and their dependants.

Non-agricultural Classes—

V—Production (other than cutivation).

VI—Commerce.

VII—Transport.

VIII—Other services and miscellaneous sources.

---

*The numbers per mille (of the 10 per cent. sample population) of each sex aged 5 years and over who were return as literate are as below :

Males		Females	
1951	1931	1951	1931
205	80	50	16

Another special feature of the sorting of this census was the separation, from the very start, of slips of displaced persons and of a 10 per cent. random sample from the remainder. This has enabled the data of displaced persons to be presented separately while the 10 per cent. sample has been utilized for the preparation of Age Tables.

The slips of this census have been copied by Households into a National Register of Citizens, which has been prepared village-wise for rural areas and mohalla/ward-wise for urban areas. Table C-I is based on a 4 per cent. sample extracted from this Register.

Tracts

3. The slips were first sorted by villages for the preparation of the Primary Census Abstract. For the purpose of further sorting the State was divided into tracts consisting of (*a*) *rural tracts*, comprising the rural population of each tehsil, (*b*) *urban city tracts*, comprising the population of areas which had been declared as cities, (*c*) *urban non-city tracts*, comprising the population of urban areas of a district excluding areas declared as cities. Each tract was treated as a unit for sorting of slips. All data were compiled first by tracts and then by districts. This volume presents the tract-wise data for one district (with the exception of A and E Tables, which have been presented tehsil-wise); while the district-wise data for the whole State is contained in the following State volumes :

Part I-B—Subsidiary Tables.

Part II-A—General Population Tables.

Part II-B—Economic Tables.

Part II-C—Age and Social Tables.

Explanatory notes

4. Detailed explanatory notes are appended to each State table in the printed volumes of State tables. They apply to the tables in this volume also and should be referred to when necessary. A few notes of some of the tables are reproduced below :

Table A-I—Column 5 relating to "hamlets" has been introduced for the first time. Any distinctive cluster or agglomeration of houses has been treated as a "hamlet".

A clear distinction has been made in this census between a "House" and a "Household". A house is any human dwelling having a separate main entrance while a household is any commensal unit living in a census house. In previous censuses the figures under "Occupied Houses" used to be that of households, while the figures under columns 7—9 of the present table refer to occupied census houses as distinct from households.

The Economic Tables—The Indian Census Economic Classification Scheme, 1951, together with the occupational division and sub-division adopted for this census are given in Part II-B of the Report.

Table B-I—Each of the eight livelihood classes mentioned above has been divided into three sub-classes, with refe ence to the economic status, as follows :

(i) Self-supporting persons ;

(ii) Non-earning dependants ; and

(iii) Earning dependants.

These were defined in the Instructior to Enumerators as follows :

> "A 'self-supporting person' is one who is in receipt of an income and that income is sufficient at least for his own maintenance. To be 'self-supporting' a person need not be able to support his family. All that is necessary is that he should be earning sufficient for his personal needs. For purposes of this question the person enumerated is the unit and not the family of household. Any one who is not a 'self-supporting' person in this sense is a 'dependant'. A 'dependant' may be either an 'earning dependant' or a 'non-earning dependant'. The test is whether he secures a regular (and not casual) income, even though it may be small. Such income may be in cash or kind ; it may be continuous or seasonal employment. When the income which he secures is not sufficient to support him that person is an 'earning dependant'. A person who does not earn any income either in cash or kind is a 'non-earning dependant'. Where two or more members of a family household jointly cultivate land and secure an income therefrom, each of them should be regarded as earning part of the income. None of them is, therefore, a 'non-earning dependant.' Each of them should be classed either a 'self-supporting person' or 'an earning dependant' according to the share of income attributable to each. The same applies to any other business carried on jointly. The share of the income is what the head of household deems it to be. This does not mean that every one who works is necessarily a self-supporting person or an earning dependant. Thus, for instance, a housewife who cooks for the family, brings up the children or manages the household is doing very valuable work. Nevertheless, her Economic Status is that of a 'non-earning dependant,' if she does not also earn an income, and should be recorded as such."

Economically active, Semi-active and Passive persons—All non-earning dependants are economically passive. They include persons performing house-work or other domestic or personal services for other members of the same family household. But they do not include "unpaid family workers" or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise.

All earning dependants are economically semi-active only. Though they contribute to the carrying on of economic activities, the magnitude of their individual contribution is deemed to be too small to justify their description as economically active. (Their contribution to economic activity is, however, taken into account in the tabulation of data based on secondary means of livelihood.)

All self-supporting persons are, ordinarily economically active with the exception of the following classes and groups :

(*a*) All self-supporting persons of Agricultural Class IV.

(*b*) The following groups of self-supporting persons who are included in Non-agricultural Class VIII and derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activitiy) :

(i) Persons living principally on income from non-agricultural property ;
(ii) Persons living principally on pensions, remittances, scholarships and funds ;
(iii) Inmates of alms-houses and recipients of doles ;
(iv) Beggars and vagrants ; and
(v) All other persons living principally on income derived from non-productive activities.

Table B-II—For a self-supporting person who has more than one means of livelihood the *secondary means* of livelihood is the livelihood next in importance to his principal means of livelihood. For an earning dependant it is the source from which he secures his own income, where there are more than one subsidiary occupations only the one providing the largest income has been taken into account.

Table B-III—"Employers", " Employees " and " Independent Workers " have been defined as follows in the Instructions to Enumerators :

An " employer " is only that person who has necessarily to employ other person in order to carry on the business from which he secures his livelihood. Thus if a person employs a cook or any other person for domestic services, he should not be recorded as an " employer " merely for that reason.

An " employee " is a person who ordinarily works under some other person for a salary or a wage in cash or kind as the means of earning his livelihood. There may be persons who are employed as managers, superintendents, agents, etc., and in that capacity control other workers. Such persons are also employees only and should not be regarded as employers.

An " independent worker " means a person who is not employed by any one else and who also does not employ anybody else in order to earn his livelihood. (Sweepers, *dhobies*, *kahars*, etc., who work for several masters are independent workers. If, however, any of them accepts whole-time employment under one master he becomes " employee ". Daily wage-earners who work for different masters are likewise independent workers. But if they accept employment under one master, e.g., under a factory, they become " employees ".)

Tables C-II, C-III, C-IV and C-V—The figures presented in these tables are based on single year age returns and have not been smoothed.

Tables D-V(*i*) *and* (*ii*)—For the purpose of these tables a "displaced person" has been defined as follows :

" A displaced person means any person who has entered India having left or being compelled to leave his home in Western Paskistan on or after the 1st March, 1947, or his home in Eastern Pakistan on or after the 15th October, 1946, on account of civil disturbances or on account of the setting up of the two Dominions of India and Pakistan ".

PART I

DISTRICT CENSUS TABLES
