DISTRICT CENSUS HANDBOOK
1951

ETAH DISTRICT

FOREWORD

Several States, including Uttar Pradesh, have been publishing village statistics by districts at each census. In 1941 they were published in U. P. under the title "District Census Statistics" with a separate volume for each district. In the 1951 census, when the tabulation has been more elaborate than ever in view of the requirements of the country, the district-wise volume has been expanded into a "District Census Handbook", which now contains the District Census Tables (furnishing data with break-up for census tracts within the district), the District Index of Non-agricultural Occupations, agricultural statistics from 1901-02 to 1950-51 and other miscellaneous statistics in addition to the usual village population statistics. The village population statistics also are given in an elaborate form giving the division of the population among eight livelihood classes and other details.

2. It may be added here that a separate set of district-wise volumes giving only population figures of rural areas by villages and of urban areas by wards and mohallas and entitled "District Population Statistics" has already been published. This separate series was necessitated by the urgent requirements of the U. P. Government for elections to local bodies.

3. The number of District Census Handbooks printed so far is twenty-nine. Special arrangements for speeding up the printing have now been made and it is hoped that the remaining Handbooks will be printed before the end of 1955.

RAJESHWARI PRASAD, I.A.S.,
Superintendent, Census Operations,
Uttar Pradesh.

RAMPUR:
July 15, 1955.

INTRODUCTION

A—THE DISTRICT

The district of Etah lies in the central portion of the Ganga and Yamuna *doab* and is bounded on the north by the Ganga, which separates it from the Budaun district; on the west by the districts of Aligarh, Mathura and Agra; on the south by Agra and Mainpuri and on the east by Farrukhabad. The Ganga forms its entire northern face, while the Kali *Nadi* separates it from Mainpuri over about one-third of its southern border. The rest of its boundaries are artificial. The district has an area of 1,715 square miles and its population in 1951 was 11·24 lakhs. It has 4 tehsils, 15 parganas and 15 thanas.

Topography.

2. The physical features of the district are to a very considerable extent controlled by the rivers which flow through it and of which the important ones, are, from north to south, the Ganga, the Burhganga, the Kali *Nadi* and the Isan. These rivers divide the district into three distinct and almost parallel tracts. The first is the *tarai* tract, a long strip of lowlying alluvial deposit formed by the gradual recession of the Ganga, lying between its present main stream and the old high bank, below which the Burhganga winds its serpentive course. The second tract is situated between the high bank and the Kali *Nadi*, and the third tract is to the south of the Kali *Nadi*. These three tracts differ considerably in their characteristics and merit separate description.

The *tarai* tract (the Ganga *khadar*) consists of an alluvial deposit of sand covered principally with a layer of mould of varying depth. In places it is a thin crest which is only surface deep, in others it is a thick stratum, rich in hollows which were the first to catch the alluvial deposits, but poorer in the highlying areas. The edges of this tract immediately bordering the Ganga and the Burhganga constitute the *tarai* proper, most of which is of particular fertility. The *tarai* along the Ganga is more valuable than the *tarai* on the banks of the Burhganga, for besides receiving fresh deposits of mould year after year it is more open and there is a greater outlet for water in case of an overflow, while along the Burhganga the passage of water is liable to be stopped and there is always a risk of waterlogging. In the Burhganga *tarai* three divisions are recognised, the *katra*, which grows sugarcane without irrigation, the *adhkachara* which can grow all superior crops with the help of shallow percolation wells and the *phatka*, which consists of a thin stratum of *reh*-infected loam over sand.

In between the two *tarai* areas lies the *danda* or upper lands, comprising the bulk of the area of the tract. It is worst immediately above the Burhganga whose top is marked by undulating ridges of sand which considerably effect the area further inland. Away from those ridges, however, the soil improves as the distance to the Ganga shortens, but it always consists of a thin crest of loam over the pure white sand typical of the Ganga bed.

The dividing line between the *tarai* tract and the tract between the old high bank and the Kali *Nadi* described as the central *doab* is the old high bank of the Ganga which runs throuhout from west to east as a well-marked cliff. The summit of the high bank is marked by a vast belt of uneven sand which, however, levels up further south where it has been very much consolidated by irrigation. It has its counterpart in the sandy crest of the Kali *Nadi* at the southern end of the tract. This ridge is more level. In between lies the upland, an uneven plain of highlying sandy soil much disfigured by *usar*. The valley of Kali *Nadi* on its left bank forms the southern fringe of this tract. Floods are common in the valley but it dries up in time to permit the sowing of *rabi*, and the crops do well without irrigation.

The tract lying to the south of the Kali *Nadi* comprises about one-third of pargana Bilram and the whole of tehsils Etah and Jalesar. Immediately to the south of the Kali *Nadi* lies the portion of its valley on the right bank. It resembles in general characteristics the portion on the opposite bank, except that it is here throughout broad and the decent to the lowlands is mostly gradual. It is flanked as in the north by the crest of the river which consists of a belt of undulating sand followed by a fairly wide belt of country where the soil is predominantly sandy loam of a reddish brown colour. From this point southwards the level begins to drop and the topography completely changes. The light sandy soils suddenly vanish, and their place is taken by a vast tract of lowlying *usar*. The surface is pitted with a continuous series of large saucer-like depressions which import to the landscope a decidedly undulating appearance. Conditions, however, improve on nearing Jalesar. This tehsil consists of a level expanse of country through the centre of which, from north-west to south-east runs a rolling chain of sand hills. To the east and west of the sand hills are large tracts of country with very firm soil, the prevailing characteristic of which is as in tehsil Etah, the presence of large featureless *usar* plains. Towards the east the drainage is faulty and surface uneven. Towards the west the lowlying villages are liable to inundation by the Isan. Cultivation throughout this tract suffer from a lack of continuity.

Soils.

3. The natural soils recognised in the district are *dumat*, *bhur*, *tarai* and *matiyar*. *Dumat* represented the laom, *bhur* the sandy soil, *tarai* the soil along the larger rivers and *matiyar* the clayey soil. The prevailing soil throughout the tract lying to the south of the Kali *Nadi* consists of a dark coloured heavy loam which when properly worked produces splendid crops. In the central *doab* the natural soil consists of light loam which was originally sand but had now considerably improved under the stress of intensive cultivation and irrigation. The soils throughout the *tarai* are of an alluvial character, differing from the soils of the upland in that they apparently contain a larger admixture of vegetable matter. The most valuable of the *tarai* soils is the rich soft loam found along the edge of the Ganga, commonly known as the *Katra*.

Classification of area.

4. The figures of the classification of area during the last fifty years are given in Table 2 of Part III of this volume. The proportion of area under the various categories works out as follows :

Particulars	Actual figures (in acres)	Percentage
Cultivated area	771,198	70·2
Culturable waste (excluding current fallow)	188,182	17·1
Current fallow	36,977	3·4
Forest	..	..
Area not available for cultivation of which—	101,627	9·3
(*a*) *Covered with water*	*31,460*	*2·9*
(*b*) *Under sites, roads and buildings*	*29,386*	*2·7*
(c) *Barren*	*40,781*	*3·7*

The figures in the above table regarding culturable waste taken from the Season and Crop Report is, however, misleading. The State Agriculture Department conducted in 1949-50, a detailed enquiry through the District Officers regarding the nature of this area in each district. The following analysis of the area resulted from the enquiry:

Particulars	Area (in acres)	Percentage
Total culturable waste (A+B+C)	**188,761**	**100**
A—Area under culturable waste land not availabe for immediate cultivation	30,592	16·2
(i) Forest under any legal enactment	..	..
(ii) Groves	13,882	7·4
(iii) Forests of timber trees	107	..
(iv) Thatching grasses, shrubs and bushes	16,265	8·6
(v) Land kept for grazing	338	0·2
B—Area under culturable waste land available for immediate cultivation but which could not be cultivated	6,892	3·7
Of which due to—		
(i) *Kans* growth	1,484	0·8
(ii) Threshing floors	71	..
(iii) Malaria	..	..
(iv) Floods	1,035	0·6
(v) Lack of drains	265	0·1
(vi) Lack of water	3,551	1·9
(vii) Distance from *abadi*	119	0·1
(viii) Damage from wild animals	367	0·2
(ix) Other causes	..	..
C—Area under culturable waste land that can be brought under immediate cultivation after some improvements besides the area given against B.	151,277	80·1

From the above it will appear that of the total area recorded as culturable waste, 80·1 per cent was really capable of being brought under immediate cultivation after some improvements.

Thus the land area cultivated and cultivable *per capita* in the district works out to 88·6 cents of which 71·9* cents have already been brought under cultivation and 13·5 cents can further be brought under the plough after some improvements.

Climate and rainfall.

5. The climate of Etah varies between remarkable extremes. The hot weather is characterized by an intense dry heat, while sand and dust storms are of almost daily occurrence. In the cold weather on the other hand there is generally a piercing wind which renders the air exceedingly cool. It is, however, a healthy district on the whole. The rainfall is normally ample. The average for the last quinquennium was 28·06 inches. During the last forty-five years the rainfall has been less than 15 inches in only 4 years and has been usually over 20 inches.

Irrigation.

6. Irrigation is derived from canals and wells. In 1950-51 the canals covered 53·9 per cent of the irrigated area, wells 42·1 per cent and other sources 4·0 per cent.

Crops.

7. More acreage is sown under *kharif* than under *rabi* crops. In 1950-51 the area under *kharif* crops was 476,412 acres, that under *rabi* crops 463,918 acres and that under *zaid* crops 6,793 acres. The principal *kharif* crop is *bajra* while the principal *rabi* crop is wheat.

*The figure also includes the area classed as current fallow.

B—Analysis of the Statistics

Population : General distribution and density

1. The table below shows the two basic figures—land area and population—and the derived figures of land area per *capita:*

Tehsil	Population (in lakhs)	Density (number per square mile)	Land area (in lakhs of acres)	Land area *per capita*
Aliganj	2·99	578	3·31	1·11
Etah	3·10	643	3·08	1·00
Jalesar	1·45	638	1·45	1·00
Kasganj	3·70	761	3·12	0·84
Etah district	*11·24*	*656*	*10·96*	*0·98*

This district though thirty-third in order of area is twenty-ninth in the State in respect of population. The district density (656) is above the State average (557). It has not been greatly inflected by the presence of large towns and even the rural density is as high as 586, the density of the rural parts of the tehsils being: Aliganj 547, Etah 579, Jalesar 568 and Kasganj 642.

Growth of population.

2. The population of the district during the last fifty years has recorded an increase of 30·2 per cent. It has been almost equal to the increase in the population of the State (30 per cent) during the corresponding period. The table below exhibits the variation in the total rural and urban population for the last five decades:

Census year	Population			Variation		
	Total	Rural	Urban	Total	Rural	Urban
1901	**863,796**	751,138	112,658			
1911	**871,319**	764,432	106,887	+7,523 (+0·9)	13,294 (+1·8)	—5,771 (—5·1)
1921	**829,710**	727,621	102,089	—41,609 (—4·8)	—36,811 (—4·8)	—4,798 (—4·5)
1931	**860,478**	746,362	114,116	+30,768 (+3·7)	+18,741 (+2·6)	+12,027 (+11·8)
1941	**984,760**	860,494	124,266	124,282 (+14·4)	+114,132 (+15·3)	+10,150 (+8·9)
1951	**1,124,351**	986,006	138,345	+139,591 (+14·2)	+125,512 (+14·6)	+14,079 (+11·3)

Between 1901 and 1921 the population of the district recorded a decrease of 3·9 per cent when that of the State decreased by 4·0 per cent. Due to the heavy mortality from influenza epidemic in 1918-19, a decrease of 4·8 per cent was recorded during the decade 1911—21. The population of the district recorded an increase of 35·5 per cent, the percentage increase in the State population also being the same during the corresponding period.

The population of the district increased by 14·2 per cent in the last decade which is somewhat above the State average (11·8 per cent.). During this decade Etah tahsil has recorded the highest increase of 15·8 per cent, the percentage increases in other tehsils being : Aliganj 15·4 Kasganj 13·0 and Jalesar 11·4.

Vital statistics.

3. Births and deaths mainly account for the trends in the population growth. Migration is also a factor though of lesser importance. The following table gives the mean decennial registered birth and death-rates and the natural rate of increase and population growth-rates of the last three decades for the district as a whole and for its rural and urban areas:

	Total	Rural	Urban
Mean decennial birth-rate			
1941—50	**26·2**	24·7	36·9
1931—40	**34·7**	34·7	34·7
1921—30	**31·9**	34·6	13 6
Mean decennial death-rate			
1941—50	**15·5**	14·4	23·4
1931—40	**20·3**	19·9	22·9
1921—30	**23·6**	25·6	9·8
Mean decennial rate of natural increase ..			
1941—50	**10·7**	10·3	13·5
1931—40	**14·4**	14·8	11·8
1921—30	**8·3**	9·0	3·8
Mean decennial growth-rate ..			
1941—50	**13·2**	13·6	10·7
1931—40	**13·5**	14·2	8·5
1921—30	**3·6**	2·5	11·1

There are large omissions in the registration of births and deaths and so the above rates do not represent the true picture at all. They may, however, be taken to be roughly indicative of trends. Both birth and death-rates have fallen during the last decade.

The figures of natural increase and growth-rates suggest loss of population during 1921—30 and 1931—40 and a gain during 1941—50 on account of migration.

The average yearly mortality from various causes in the district during 1941—50 was as follows:

Causes	Number of deaths	Percentage of total deaths
Fever	14,770	90·3
Dysentory and diarrhoea	263	1·6
Respiratory diseases	225	1·4
Plague, cholera and small-pox	376	2·3
Others	717	4·4

As in the rest of the State, "fever" is responsible for a majority of the deaths. But "fever" covers a number of ailments which the reporters are unable to identify (*vide* Table I, Part III of this volume).

Migration.

4. About 87·7 per cent of the people enumerated in the district at the Census of 1951 were born there, 11·8 per cent were born in the other districts of the State, 0·3 per cent were born in other parts of India and 0·2 per cent were born in other countries. Of the immigrants from the districts of the State as many as 129,137 (males 21,281, females 107,856) are from other districts of the same natural division and only 3,195 persons (males 1,184, females 2,011) are from other parts of the State. The sex proportion suggests that most of the migration from the neighbouring districts is marriage migration. Of 3,216 immigrants from adjacent States, 1,624 (males 765, females 859) are from Rajasthan and 458 (males 204, females 254) are from Punjab.

Of the immigrants who had come from territories beyond India 2,003 (males 1,068, females 935) were Pakistan-born and 33 (males 16, females 17) had their birth place in other territories. Of the immigrants born in other territories 21 persons were Nepal-born. There was no non-Indian national in the district.

Unfortunately the figures of emigration are not available. On the balance of migration according to vital statistics, however, the district appears to have lost about 40 thousands in 1921—30, 9 thousands in 1931—40 and to have gained about 26 thousands in 1941—50. But it should be kept in mind that the figures contain an element of registration error and are only indicative of trends.

Decline of cultivation *per capita*.

5. We may now analyse the growth of population in the district during the last thirty years in relation to the growth of cultivation during the same period. The marginal table shows the figures. (Figures of area shown under census years are quinquennial averages for the five years ending with the crop year immediately preceding the census year). It is obvious that cultivation has failed to keep pace with population. The cultivated area *per capita* has gone down to 67·1 cents in 1951 from 83·6 cents in 1921. The magnitude of this drop is about one-fifth of the 1921 level. It means that (other things being equal) every man, woman and child must expect to get less food and other agricultural produce from the land in 1951 than in 1921.

Census year	Population	Net area sown (in acres)	Area of cultivation *per capita* (in cents)
1921	829,710	693,481	83·6
1931	860,478	654,170	76·1
1941	984,760	712,776	72·3
1951	1,124,351	755,303	67·1

Double cropped area *per capita*.

6. It may be examined whether this shortage has been compensated by an increase in the yield per acre. Increase in yield can be brought about by more double cropping, more irrigation, better fertilization and better culture. The average (quinquennial) area sown more than once was 318,169 acres in 1921, 294,751 acres in 1931, 314,305 acres in 1941 and 331,290 acres in 1951. The figures of double crop cultivation *per capita* are as follows:

Particulars	Quinquennial averages for the year preceding			
	1951	1941	1931	1921
Double crop cultivation *per capita* in cents	15·6	15·1	16·7	20·4
Unirrigated double crop cultivation *per capita* in cents ..	12·2	9·4	11·0	12·9
Irrigated double crop cultivation *per capita* in cents	3·4	5·7	5·7	7·5

It may be noted that double crop cultivation *per capita* in cents has slightly increased since 1941 but is still much below the 1921 level.

Irrigation area *per capita*.

7. The average area irrigated in the district was 318,169 acres in 1921, 294,751 acres in 1931, 314,305 acres in 1941 and 331,290 acres in 1951. The average area irrigated more than once was 62,581 acres in 1921, 48,754 acres in 1931, 56,510 acres in 1941 and 38,720 acres in 1951. The figures of irrigation *per capita* are shown below :

Particulars	year			
	1951	1941	1931	1921
Irrigated single crop cultivation *per capita* in cents	26·0	26·2	28·6	30·8
Irrigated double crop cultivation *per capita* in cents	3·4	5·7	5·7	7·5

The irrigated area *per capita* has also declined since 1921.

Cropped area.

8. During the quinquennium 1916—21 86·0 per cent of the cropped area was under food crops and 14·0 per cent of it was under non-food crops. Thirty years after during 1946—51 the cropped area under food crops was 92·1 per cent and that under non-food crops was only 7·9 per cent. The proportionate area under different crops between 1911 and 1951 was as below :

Quinquennial average of	Total cropped area	Percentage of cropped area under							
		Rice	Wheat	Barley	Juar	Bajra	Maize	Gram	Others
1911—16 ..	845,830	1·3	22·9	15·1	5·6	17·6	7·7	6·9	22·9
1916—21 ..	846,032	2·0	20·0	14·5	4·9	17·9	8·9	6·9	24·9
1921—26 ..	807,814	1·9	23·0	12·2	5·8	14·2	8·0	11·1	23·8
1926—31 ..	806,525	2·1	24·4	12·5	6·4	13·0	8·7	8·1	24·8
1931—36 ..	829,056	1·7	25·2	10·6	7·5	14·5	8·2	8·2	24·1
1936—41 ..	868,653	1·7	25·7	10·5	6·2	15·6	8·4	8·1	23 8
1941—46 ..	889,313	1·6	24·7	10·8	4·5	21·7	8·5	7·9	20·3
1946—51 ..	936,227	2·9	22·6	10·8	4·3	21·5	7·6	8·5	21·8

In 1901-02 the area under cotton crop was 30,482 acres while in 1950-51 it was only 2,181 acres. In 1901-02 the area under indigo was 14,956 acres but in 1950-51 it was only 22 acres. The area under opium in 1901-02 was 7,786 acres whereas in 1950-51 there was no cultivation of opium. The area under sugarcane has been increasing. In 1901-02 the area under sugarcane was 17,036 acres while in 1950-51 it was 33,358 acres.

Live-stock, plough and cattles

9. Live-stock in this country live for a large part of the year on the by-products of agriculture supplemented by green fodder crops. They have, therefore, to be co-related not only with the grazing available but also with the total area under cultivation which carries a major portion of the burden of supporting the cattle population.

As will appear from Table 3 of Part III the total number of cattle and buffaloes has during 1944—51 increased from about 5·7 lakhs to about 6·1 lakhs in the district.

The number of working cattle and buffaloes in the district was 1·68 lakhs in 1935, 1·80 lakhs in 1944 and 2·00 lakhs in 1951. The number of ploughs had gone up from 81·2 thousands in 1935 to 89·1 thousands in 1944 and again it has increased to 94·3 thousands in 1951. This is, apparently due to progressive fractionalization of holdings. The number of carts started rising since 1930 and now stands at about 26·5 thousands. The average net cultivated area per plough works out to 8·2 acres in 1951 as against 9·0 acres in 1920 and the average net cultivated area per pair of working cattle works out to 7·7 acres in 1951 as compared with 8·3 acres in 1935.

Breeding cows and she-buffaloes which fell from 212·2 thousands to 209·2 thousands during 1935—44 have gone up to 225·0 thousands in 1951. The cows and she buffaloes in milk per 1,000 of human population were 22 and 67 respectively in 1951. Owing to the poor milk yield the share of milk per head is only a few ounces per day.

The number of sheep which had been slightly decreasing during 1930—44 has further gone down to 13 thousands in 1951 due apparently to shortage of pasture. Goats have also decreased in number since 1935 when they were 92·5 thousands. Their number in 1951 was about 48·1 thousands, the reduction during 1944—51 alone being about 33·5 per cent.

Horses and ponies have also been declining in number. They were about 12,000 in 1935, 8,200 in 1944 and 8,100 in 1951. Donkeys have slightly increased during 1944—51.

Poultry has increased since last census from about 20,400 to 25,000.

Distribution on 1,000 of human population the figures of the main categories of live-stock in 1951 are as below:

Cattle	Buffaloes	Sheep	Goats	Poultry	Others
262	276	11	43	22	26

10. To sum up, the population of the district is growing up at the biological natural rate since 1921 but on the other hand the land area *per capita* is declining. The magnitude of the absolute numerical increase in relation to the practically stationary acreage under cultivation is a great strain on the economy of the district.

lages and towns.

11. The district has 1,528 villages and 16 towns out of 1,124 thousands people 986 thousands were found living in villages and 138 thousands in towns (i.e. there were 877 persons per 1,000 population who lived in rural areas and only 123 of them lived in towns). The corresponding figures for the State as a whole were : rural 864, urban 136.

The rural population per inhabited village works out to 645. The villages do not comprise of a single compact site. There are 3,947 hamlets in the district. The population per hamlet is 250. The medium-sized village with population between 500—2,000 is the dominant type in the district. Of the rural population 64·0 per cent live in such villages, 22·1 per cent live in small villages with population less than 500, 12·3 per cent live in villages of population between 2,000 and 5,000 and 1·6 per cent live in villages of population over 5,000.

Towns also vary greatly in number of inhabitants. Kasganj (M.B.) comprises 22·8 per cent of the urban population of the district. 40·5 per cent of the urban population lives in towns of population between 10,000 and 20,000 (viz. Etah M. B., Jalesar, Soron and Ganj Dundwara); 20·2 per cent live in towns of population between 5,000 and 10,000 (viz., Marehra, Sahawar, Aliganj and Bilram); and 6·5 per cent live in towns of population under 5,000 (viz. Patiali, Rampur, Amanpur, Nidhauli, Mohanpur, Awagarh and Sakit). Etah has recorded an increase of 29·0 per cent in population since 1941, the increases during the corresponding period in other towns being Kasganj 10·9 per cent, Ganj Dundwara 31·5 per cent and Amanpur 101·3 per cent. The two towns of Aliganj and Rampur appear to be declining and their population has decreased since 1941 by 8·5 per cent and 12·4 per cent respectively (*vide* Tables A-III and A-IV).

upations: elihood ern.

12. Out of the total population of 1,124,351 (rural 986,006, urban 138,345) 879,556 persons (rural 852,951, urban 26,605) or 78·2 per cent depend on agriculture for their means of livelihood and 244,795 persons (rural 133,055, urban 111,740) or 21·8 per cent depend on non-agricultural sources. The following table gives the distribution of 100 persons of total, rural and urban population of the district:

Description	Agricultural classes					Non-agricultural classes				
	Total	I	II	III	IV	Total	V	VI	VII	VIII
Total ..	78·2	66·7	3·7	5·9	1·9	21·8	8·1	4·9	1·0	7·8
Rural ..	86·5	74·1	4·0	6·5	1·9	13·5	5·8	2·5	0·4	4·8
Urban ..	19·2	14·2	1·5	1·3	2·2	80·8	24·0	22·1	5·7	29·0

It is one of the predominantly agricultural districts of the State. Here as many as 78·2 per cent of the people are engaged in agriculture as against 74·2 per cent in the State.

Of the total population of the district 738,948 persons (males 241,735, females 497,213) or 65·7 per cent have been classified as non-earning dependants. The percentage of non-earning dependants in the agricultural population works out to 65·9 and that among non-agriculturists to 64·9. It will be observed that in the main they consist of women. The male non-earning dependants are mostly children. 29,736 persons (males 20,817, females 8,919) or 2·7 per cent are earning dependants. Among the agriculturists their proportion is 2·6 per cent and among non-agriculturists they form 2·9 per cent. The remaining 355,667 persons (males 338,819, females 16,848) or 31·6 per cent are self-supporting persons. Their proportion among agriculturists is 31·5 per cent and among non-agriculturists 32·2 per cent. Of the self-supporting persons 276,796 persons (males 267,075; females 9,721) belong to agricultural classes and 78,871 persons (males 71,744, females 7,127) belong to non-agricultural classes. On an average a self-supporting person maintains two non-earning dependants.

Of the 78,871 self-supporting persons of non-agricultural population 1,501 (rural 646, urban 855) earn their livelihood from non-productive sources. Of the remaining 77,370 self-supporting persons (rural 44,770, urban 32,600) 5,034 (rural 146, urban 4,888) or 6·5 per cent are employers, 14,092(rural 5,507, urban 8,585) or 18·2 per cent are employees and 58,244 (rural 39,117, urban 19,127) or 75·3 per centare independent workers.

The distribution of 10,000 self-supporting persons of non-agricultural occupations classified according to Economic Divisions is as follows:

Name of division	Self-supporting persons by divisions
All Industries and Services	**10,000**
0—Primary industries—not elsewhere specified	303
1—Mining and quarrying	2
2—Processing and manufacture—foodstuffs, textiles, leather and products thereof ..	2,158
3—Processing and manufacture—metals, chemicals and products thereof	313
4—Processing and manufacture —not elsewhere specified	950
5—Construction and utilities	569
6—Commerce	2,196
7—Transport, storage and communications	450
8—Health, education and public administration	920
9—Services—not elsewhere specified	2,139

There is no large scale industry in the district worth the name. Among cottage and small scale industries the important are *tat-patti*, brass and copperwares, iron utensil, baskets making, *moondhas*, ropes and *ban* of *moonj* and *bhabar*.

Variation in the livelihood pattern.

13. In the district, the proportion of population depending on agriculture for their livelihood was 77·9* per cent in 1951. The unfortunate fact is that the agricultural proportion had been increasing ever since 1901. The figure stood at 67·8 per cent in 1901, 68·0 per cent in 1911 and 72·5 per cent in 1921. The actual number of persons who depend on agriculture has increased to 876,256 in 1951 from 592,914 in 1921 i.e. by 47·8 per cent while the cultivated area has increased by 8·9 per cent only. This has resulted in progressive fragmentation and subdivision of holdings and increased pressure on impoverished soil. There appears to be a gradual decline in village arts and crafts. The cumulative result is fall in the proportion of workers and a corresponding rise in dependency. The proportion of workers in the total population in 1951 was 34·3 per cent. (agricultural 26·3 per cent, non-agricultural 8·0 per cent.) against 41·6 per cent (agricultural 28·2 per cent., non-agricultural 13·4 per cent) in 1921. The proportion of non-earning dependants has consequently increased from 58·4 per cent (agricultural 44·3 per cent. non-agricultural 14·1 per cent.) in 1921 to 65·7 per cent (agricultural 51·6 per cent, non-agricultural 14·1 per cent) in 1951. All this is an index of increasing unemployment and under-employment. It is only by the diversion of the population to cottage and other industries and by providing subsidiary occupations to the agriculturists that the present severe disequilibrium in the economy of the district can be redressed. (*Vide* TablesB-I, B-II and B-III).

Houses and households.

14. There are 155,281 occupied houses in the district—132,158 in villages and 23,123 in towns. That gives an average of 7,461 persons per 1,000 houses or 7·5 persons per house in the rural areas and 5,983 persons per 1,000 houses or 6·0 persons per house in the urban areas.

There were 215,284 households in the district 187,438 in the rural areas and 27,846 in urban areas. That gives an average of 5,256 persons per 1,000 households or 5·3 persons per household in rural areas and 5,170 persons per 1,000 households or 5·2 persons per household in urban areas. The marginal table shows the developments in the size of households since 1921. The rural household has been increasing since 1921 and is larger than the average State rural household (5·07). The urban household has registered a decrease since 1941.

Census year	Persons per 1,000 households	
	Rural population	Urban population
1921 ..	4,617	4,140
1931 ..	4,652	4,584
1941 ..	4,855	5,436
1951 ..	5,256	4,949

Out of 5,256 persons in every 1,000 rural households 2,810 are males and 2,446 are females. There is a male excess numbering 364 in every 1,000 rural households. Out of 4,949 persons in the every 1,000 urban households there are 2,642 males and 2,307 females. There is again a male excess of 335 in evrery 1,000 urban households.

Information regarding type of household and household relationships was also collected at this census with the help of a sample of about 4 per cent. According to this in every 1,000 sample households there are 5,172 persons (males 2,819, females 2,353) in the district. The corresponding figure for the total count is 5,216.

* The figure includes earning dependants according to their secondary means of livelihood while the figure 78·2 in paragraph 12 includes earning dependants according to their principal means of livelihood and hence the difference.

The table below shows the distribution by size of 1,000 sample households :

Description	Small with 3 members or less	Medium with 4—6 members	Large with 7—9 members	Very large with 10 members or more
Total ..	**319**	**417**	**199**	**65**
Rural ..	313	422	200	65
Urban ..	377	366	191	66

Medium households are the dominant type in the villages whereas small types are dominant in urban areas.

Family composition of 1,000 sample households is as follows:

			Number in 1,000 households
A—	Heads of Households	Males (married) ..	640
		Males (widowers) ..	279
		Females	81
	Wives of the heads of households		640
			1,640
B—	Sons of heads of households		1,151
	Daughters of heads of households		718
			1,869
C—	Male relations of heads of households (other than sons)		616
	Female relations of heads of households (other than daughters) ..		835
			1,451
D—Persons unrelated to the heads of households		Males	133
		Females	79
			212
		Grand Total	*5,172*

Sons outnumber the daughters of the heads of households. The latter leave the houses of their parents after marriage. Female relatives (other than daughters) outnumber the male relatives (other than sons). Such females are generally those who become members of these households by marriage (*vide* Tables A-I and C-I).

Sex-ratio.

15. In the district as a whole the sex-ratio was 870, i.e., there were 870 females for every 1,000 males. It varies among the tehsils. The highest value was 874 in Etah and the lowest was 861 in Jalesar. The sex-ratio in other tehsils was 870 in Aliganj and 869 in Kasganj.

The sex-ratio was 870 both for the rural and the urban areas. The corresponding figures of sex-ratio in the district was 847 in 1921, 845 in 1931, 847 in 1941 and 870 in 1951.

Age structure.

16. The number in each age-group in the district is shown below as a percentage of the total number of all ages in the total, rural and urban population.

Age-group		Total population			Rural population		Urban population	
		Persons	Males	Females	Males	Females	Males	Females
Infants and young children	0—4	**13·9**	**6·9**	**7·0**	6·8	6·9	7·7	7·2
Boys and girls	5—14	**23·0**	**12·5**	**10·5**	12·6	10·3	12·3	11·3
Young men and women	15—34	**31·2**	**16·4**	**14·8**	16·3	14·7	17·4	15·3
Middle-aged men and women	35—54	**20·8**	11·5	**9·3**	11·4	9·4	12·3	8·6
Elderly persons	55 and over	**11·1**	**6·6**	**4·5**	7·0	4·6	4·3	3·6

It will be seen that the population is progressive. 36·9 per cent of the population is of age under 15 and only 11·1 per cent of it comprises of elderly persons (55 and over) (*vide* Table C-II).

Marital Status.

17. Out of every 10,000 persons in the district there are 5,398 males and 4,602 females. Among them 2,339 males and 1,625 females are unmarried. If we reckon males and females together the unmarried people are 39·6 per cent of the population.

Of the males 43·3 per cent were unmarried, 48·3 per cent were married and 8·4 per cent were widowed or divorced. Of the females 35·3 per cent were unmarried, 53·6 per cent were married and 11·1 per cent were widowed or divorced.

Of the married males 5·7 per cent were below 15, 44·6 per cent were of ages 15—34, 34·7 per cent were of ages 35—54 and 15·0 per cent were of ages 55 and over. Among married females

7·2 per cent were of ages below 15, 56·0 per cent were of ages 15—34, 30·0 per cent were of ages 35—54 and 6·8 per cent were of ages 55 and over.

Marriage is universal. Among males and females ages 35 years and over only 6·1 per cent of the males and 0·6 per cent of the females were found unmarried. Most of the females are married before they attain the age of 25. Child marriage appears to be still prevalent. 7·7 per cent of the males of ages 0—14, and 10·1 per cent of the females of ages 0—14 were returned as married (*vide* Table C-III).

Languages.

18. Over 99·8 per cent of the people of the district returned Hindi, Hindustani or Urdu as their monther-tongue. Of the 1·1 lakhs of people in the district only 1,628 or 0·1 per cent were bilingual (in an Indian language). Those whose mother-tongue is other than Hindi, Hindustani or Urdu are generally the migrants who are able to speak any of these as a subsidiary language. Persons returning Hindi, Hindustani or Urdu as secondary language were 1,239 or 76·1 per cent of those who were bilingual in an Indian language.

Religion and special groups.

19. Out of 10,000 population of the district the number of people belonging to different religions is: Hindus 8,786, Muslims 1,057, Sikhs 35, Jains 31, Christians 89 and others 2; of 10,000 population in villages the numbers are : Hindus 9,123, Muslims 735, Sikhs 34, Jains 17 and Christians 91; and of the 10,000 population in towns the numbers are : Hindus 6,383, Muslims 3,350, Sikhs 41, Jains 135, Christians 75 and others 16. Muslims, Sikhs, Jains and Christians are generally concentrated in the urban areas of the district as is the case in the other parts of the State.

There were 178 thousands Scheduled Castes in the district. Their number per 10,000 of population works out to 1,586. In villages they are 1,643 for every 10,000 and in the towns their number per 10,000 is only 1,178. In the district there are 37 Anglo-Indians (*vide* Tables D-II and D-III).

Displaced persons.

20. The number of displaced persons in the district at the census was 1,837 (males 980, females 857), a large majority of whom were concentrated in urban areas. 99·2 per cent of the displaced persons were from West Pakistan, 0·5 per cent were from East Pakistan and 0·3 per cent were from district which could not be traced (*vide* Table D-V).

Literacy.

21. The percentage of male literacy was 15·1 in the district while that of female literacy was 3·2. In 1921 the literacy was 6·6 per cent for males and 0·9 per cent for females*. On January 1, 1951, there were 575 primary schools with enrolment of 48,973. (*vide* Table D-VII).

C—Explanatory Note on the Statistics

1. The statistics in this volume have been presented in three parts:

I—District Census Tables ;

II—Village, Town, Pargana and Thana Statistics ;

III—Miscellaneous Statistics.

Parts I and II contain census data. A brief account of the system of sorting of census slips and preparation of tables and abstract therefrom is given below.

Part III contains statistics throwing light on special aspects of population and its growth. These have been derived from miscellaneous sources. Table 1, "Vital Statistics" has been prepared from the published and unpublished records of the Director of Medical and Health Services, Table 2, "Agricultural Statistics", from the Annual Season and Crop Reports, Table 3, "Live-stock, Agricultural Machinery and Implements", from the published figures of Live-stock Census and Table 4, "List of Primary Schools", from information specially supplied by District Inspector of Schools.

Processing of census data.

2. The census data presented here has been derived from the census slips by a process of sorting compilation and tabulation. In previous censuses the slips were first sorted by religion and this division was maintained throughout so that all data was cross-tabulated by religion. This procedure has been abandoned at this census and substituted by a division based on economic characteristics of the population. The whole population has been divided into eight livelihood classes, four of which are of the agricultural category and four of non-agricultural category as follows:

Agricultural Classes—

I—Cultivators of land wholly or mainly owned ; and their dependants.

II—Cultivators of land wholly or mainly unowned and their dependants.

III—Cultivating labourers ; and their dependants.

IV—Non-cultivating owners of land; agricultural rent receivers ; and their dependants

Non-agricultural Classes—

V—Production (other than cultivation).

VI—Commerce.

VII—Transport.

VIII—Other services and miscellaneous sources.

*The number per mile (of the 10 per cent sample population) of each sex aged 5 years and over who were returned as literates are as below:

Males		Females	
1951	1931	1951	1931
159	77	36	11

Another special feature of the sorting of this census was the separation, from the very start, of slips of displaced persons and of a 10 per cent random sample from the remainder. This has enabled the data of displaced persons to be presented separately while the 10 per cent sample has been utilized for the preparation of Age Tables.

The slips of this census have been copied by Households into a National Register of Citizens, which has been prepared village-wise for rural areas and mohalla/ward-wise for urban areas. Table C-I is based on a 4 per cent sample extracted from this Register.

Tracts.

3. The slips were first sorted by villages for the preparation of the Primary Census Abstract. For the purpose of further sorting the State was divided into tracts consisting of (*a*) *rural tracts*, comprising the rural population of each tehsil, (*b*) *urban city tracts*, comprising the population of areas which had been declared as cities, (*c*) *urban non-city tracts*, comprising the population of urban areas of a district excluding areas declared as cities. Each tract was treated as a unit for sorting of slips. All data were compiled first by tracts and then by districts. This volume presents the tract-wise data for one district (with the exception of A and E Tables, which have been presented tehsil-wise), while the district-wise data for the whole State is contained in the following State volumes :

Part I-B—Subsidiary Tables.

Part II-A—General Population Tables.

Part II-B—Economic Tables.

Part II-C—Age and Social Tables.

Explanatory notes.

4. Detailed explanatory notes are appended to each State table in the printed volumes of State tables. They apply to the tables in this volume also and should be referred to when necessary. A few notes of some of the tables are reproduced below:

Table A-I—Column 5 relating to "hamlets" has been introduced for the first time. Any distinctive cluster or agglomeration of houses has been treated as a "hamlet".

A clear distinction has been made in this census between a "House" and a "Household". A house is any human dwelling having a separate main entrance while a household is any commensal unit living in a census house. In previous censuses the figures under "Occupied Houses" used to be that of households, while the figures under columns 7—9 of the present tables refer to occupied census houses as distinct from households.

The Econoimic Tables—The Indian Census Economic Classification Scheme, 1951, together with the occupational division and sub-division adopted for this census are given in Part II-B of the Report.

Table B-I—Each of the eight livelihood classes mentioned above has been divided into three sub-classes, with reference to the economic status, as follows :

Sex-ratio.

(i) Self-supporting persons;

(ii) Non-earning dependants; and

(iii) Earning dependants.

These were defined in the Instructions to Enumerators as follows :

Age structu

"A 'self-supporting person' is one who is in receipt of an income and that income is sufficient at least for his own maintenance. To be 'self-supporting' a person need not be able to support his family. All that is necessary is that he should be earning sufficient for his personal needs. For purposes of this question the person enumerated is the unit and not the family or household. Any one who is not a 'self-supporting person' in this sense is a 'dependant'. A 'dependant' may be either an 'earning dependant' or a 'non-earning dependant'. The test is whether he secures a regular (and not casual) income, even though it may be small. Such income may be in cash or kind; it may be continuous or seasonal employment. When the income which he secures is not sufficient to support him that person is an 'earning dependant'. A person who does not earn any income either in cash or kind is a 'non-erarning dependant'. Where two or more members of a family household jointly cultivate land and secure an income therefrom, each of them should be regarded as earning part of the income. None of them is, therefore, a non-earning dependant. Each of them should be classed either a 'self-supporting person' or an 'earning dependant' according to the share of income attributable to each. The same applies to any other business carried on jointly. The share of the income is what the head of household deems it to be. This does not mean that every one who works is necessarily a self-supporting person or an earning dependant. Thus, for instance, a housewife who cooks for the family,

Marital Sta

brings up the children or manages the household is doing very valuable work. Nevertheless, her economic status is that of a non-earning dependant, if she does not also earn an income, and should be recorded as such."

Economically active, Semi-active and Passive persons—All non-earning dependants are economically passive. They include persons performing house-work or other domestic or personal services for other members of the same family household. But they do not include "unpaid family workers" or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise.

All earning dependants are economically semi-active only. Though they contribute to the carrying of economic activities, the magnitude of their individual contribution is deemed to be too small to justify their description as economically active. (Their contribution to economic activity is, however, taken into account in the tabulation of data based on secondary means of livelihood.)

All self-supporting persons are, ordinarily economically active with the exception of the following classes and groups:

(*a*) All self-supporting persons of Agricultural Class IV.

(*b*) The following groups of self-supporting persons who are included in Non-agricultural Class VIII and derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity):

(i) Persons living principally on income from non-agricultural property ;

(ii) Persons living principally on pensions, remittances, scholarships and funds ;

(iii) Inmates of alms-houses and recipients of doles ;

(iv) Beggars and vagrants ; and

(v) All other persons living principally on income derived from non-productive activities.

Table B-II—For a self-supporting person who has more than one means of livelihood the *secondary means* of livelihood is the livelihood next in importance to his principal means of livelihood. For an earning dependant it is the source from which he secures his own income, where there are more than one subsidiary occupations only the one providing the largest income has been taken into account.

Table B-III—"Employers", "Employees" and "Independent Workers" have been defined as follows in the Instructions to Enumerators:

> An "employer" is only that person who has necessarily to employ other person in order to carry on the business from which he secures his livelihood. Thus if a person employs a cook or any other person for domestic services, he should not be recorded as an "employer" merely for that reason.
>
> An "employee" is a person who ordinarily works under some other person for a salary or a wage in cash or kind as the means of earning his livelihood. There may be persons who are employed as managers, superintendents, agents, etc., and in that capacity control other workers. Such persons are also employees only and should not be regarded as 'employers'.
>
> An "independent worker" means a person who is not employed by any one else and who also does not employ anybody else in order to earn his livelihood (Sweepers, *dhobis*, *kahars* etc., who work for several masters are independent workers. If, however, any of them accepts whole-time employment under one master he becomes "employee". Daily wage-earners who work for different masters are likewise independent workers. But if they accept employment under one master, e.g. under a factory, they become "employees".)

Tables C-II, C-III, C-IV and C-V—The figures presented in these tables are based on single year age returns and have not been smoothed.

Tables D-V (i) *and* (ii)—For the purpose of these tables a "displaced person" has been defined as follows :

> "A displaced person means any person who has entered India having left or being compelled to leave his home in Western Pakistan or on or after the 1st March, 1947, or his home in Eastern Pakistan on or after the 15th October, 1946, on account of civil disturbances or on account of the setting up of the two Dominions of India and Pakistan."

PART I

DISTRICT CENSUS TABLES

A –GENERAL POPULATION TABLES

A-I— Area, Houses and Population

Serial number	Tehsil	Area in square miles	Villages	Hamlets	Towns	Occupied houses		
						Total	Rural	Urban
1	2	3	4	5	6	7	8	9
	District Total	***1,713***	***1,528***	***3,947***	***16***	***155,281***	***132,158***	***23,123***
1	Aliganj	517	403	1,205	4	**41,699**	37,301	**4,398**

given, (i) mohalla/ward-wise for urban areas and (ii) village-wise for rural areas in the District Population Statistics. The figures arrived are as below:

Serial no.	Tract	Population
1	2	3
3	Tehsil Jalesar (Rural)	26,703
4	Tehsil Kasganj (Rural)	52,939
	Urban Total	***16,700***
1	Urban Non-city	16,700

the original table has now been *substituted* by the table derived from the second count.
number of persons who returned themselves as Anglo-Indians.
Males 23 Females 14
