PREFACE

We have begun the 1971 series of District Census Handbooks with the district of Anantnag since it happens to be the first in alphabetical order and we propose to follow this arrangement in the case of rest of the nine districts of the State as well. We will do our utmost to complete the whole series within a reasonably short time and in any case before the data collected at the present Census loses its topicality or becomes stale. We only hope that these will be read avidly and serve the purpose for which they are intended; apprising our administrators and planners of the needs of the people at the grassroots level, namely the village, ward or mohalla in a town. If as a result of the diverse statistical information provided in the Handbooks, the task of drawing up of future development schemes is facilitated in any manner, we will consider that the effort put in by us in compiling and publishing this data has been amply rewarded.

The district of Anantnag to which the present volume pertains is the most populous among all the districts of State. The principal river of the Kashmir region, Vitasta or Jhelum rises at the southern end of the district. Situated immediately below the Jawahar Tunnel on the north giving access to the Kashmir valley and with the Srinagar-Rawalpindi road closed, it is the first point of physical contact with Kashmir for the in-coming traffic from other parts of the country including the Jammu region. By a happy coincidence, the district abounds in spots of great natural beauty and a tourist making a detour to Verinag or Acchabal on his way to Srinagar and spending a little time there, feels already sold on the infinite charms of Kashmir.

One of the holiest Indian shrines-the Cave of Amar Nath-is situated in this district. In consequence, the fame of the district has spread to all parts of the country. Thousands of devout worshippers pass through it every year on the eve of Sravana Purnima. It is on this auspicious day that a miracle occurs. The ice lingam in the Cave after attaining its full and imposing stature gives an appearance of standing in the air without any support. This is the time when pilgrims coming from far and near enter it for receiving the holy *darshan*. In this connexion it may interest the reader to know that the exact site of the Cave is reported to have been located by a Muslim shepherd many centuries ago. Ever since, according to recognised custom, part of the offerings made at shrine are allotted to the Maliks of Pahalgam, the discoverer of the Cave having been born in their family.

Indeed consistent with the long-established secular traditions of Kashmir the Anantnag district offers many notable examples of secular living. The annual pilgrimage to Amar Nath, dependent as it is on the cooperation and toil of Muslims in their role as pony-wallas, dandi-wallas, load carriers or care takers of infants, the aged or infirm, by itself, provides a unique spectacle of communal concord and cooperation. On entering the Anantnag town, one comes across the shrine of Rishi Sahib which is venerated by both Muslims and Hindus. For certain days of the annual urs, people of all faiths going to the shrine may not touch meat, fish or eggs. The communities observe many common customs on the occasion of birth, death and marriage. The people of the district have stood solidly by their secular beliefs throughout the many crises experienced by the State. Appropriately this predominantly Muslim district of Kashmir is the only place in India which produces saffron, an important ingredient of daily

Hindu worship. The Kashmir saffron finds its way into the *sanctum sanctoria* of the holiest of temples throughout the country and is much praised for its fragrance and purity.

Apart from its other distinguishing features, Anantnag can claim the additional distinction of having provided the present Chief Minister of Jammu and Kashmir, Syed Mir Qasim, who hails from Duru, a village adjacent Verinag, the source of Jhelum. It is for the first time that a person not belonging to an urban area has been elected to this high office. This is a significant change justifying the hope that lot more will be done now for the betterment of rural areas where bulk of our population is eking out its existence.

I would like to conclude these remarks by expressing my thanks to Shri Abdul Gani, Deputy Director, who took lot of pains in obtaining non-Census information from various Departments for inclusion in this Handbook. It is my regret that despite best efforts on our part, the data relating to administrative matters is not as uptodate as one might have wished them to be. Even so they will help the reader in assessing the progress made by District in such important fields as education, public health, water supply, electricity etc.

I feel specially indebted to Shri Ali Mohd. Kalloo, Tabulation Officer, Social Studies, who prepared the first draft, besides scrutinizing and analysing the tables. The names of my other collegues who rendered valuable assistance in compiling and bringing out this publication are mentioned separately in this book.

Srinagar,
the 15th July, 1972.

J. N. ZUTSHI

PART X—A

TOWN AND VILLAGE DIRECTORY

DISTRICT CENSUS HANDBOOK—ANANTNAG

Introduction

The practice of publishing District Census Handbooks was brought into vogue for the first time at the 1951 Census. These were meant essentially to provide statistical information from the grass-roots level namely the village or urban block for being put to various uses by the State administrations. In this regard, Jammu and Kashmir came into the picture only at 1961 Census since due to unsettled conditions prevailing in the wake of Pakistan invasion of 1947-48, no Census could be taken in 1951 and consequently no such information was collected for publication. The work of bringing out District Census Handbooks in our State was taken up in right earnest only at the 1961 Census. Because they made available not only the primary census data in respect of each village/town block but gave a succinct account of the general stage of development of the rural and urban areas of each individual district they were found highly useful. The data compiled facilitated formulation of development schemes besides helping in the important task of demarcation of electoral constituencies. By spelling out the existing facilities available in spheres of education, public health, drinking water and other public utility services like power, transport and communications etc. in each district, the Handbooks gave a clear idea about the shortcomings in such facilities at the village/urban block level thereby making the administration aware of their pressing needs.

Unfortunately due to certain unavoidable reasons, the Handbooks of some districts taken up at 1961 Census could not appear in time and be put to use immediately. For instance, the Handbooks of Kathua and Punch districts were brought out only in 1970 with a time-lag of about 9 years. Lest this observation be construed as casting a reflection on the ability of my predecessor-in office to deliver the goods in time, I feel it necessary to mention that among other factors contributing to the delay, the following were some :-

1. Initial delay in the communication of the formal approval of the State Government for publishing the District Census Handbooks at their expense,
2. Delay in obtaining and compiling of administrative statistics from various Departments,
3. The non-availability of the Village Primary Census data till the main census tabulation programme was completed, and
4. Delay in printing.

Profiting by the experience of the 1961 Census and realizing that District Census Handbooks are the only publications which incorporate data down to a village and mohalla or ward of a town, it was decided at this Census not only to enlarge and improve their scope but to phase out their Publication in such a manner that part of the useful information to be carried in the District Census Handbooks becomes available to the data users with minimum delay. Consequently at this Census it has been envisaged that a District Census Handbook should consist of three parts :-

Part A : Village and Town Directory

Part B : Village and Town Primary Census Abstract

Part C : Analytical Report, Administrative Statistics and District Census Tables.

Under this arrangement, Parts A & B have been fuscd together to form the present volume. Part C which must await collection of further details is bound to take time, hence it has been decided not to allow it to delay the publication of readily available information and instead bring it out in separate volume.

For the time being, it suffices our purpose to examine the contents of Parts A & B of the District Census Handbooks constituting this volume.

Part A gives for each village of the district the particulars of amenities available in the matter of educational and medical institutions ; power supply ; drinking water ; post and telegraph facilities ; communication ; particulars of land use and places of religious, historical or archaeological importance. It also gives for each town in the district, in the form of suitable statements, the status of the town administration, its origin ; growth of population ; functional category ; physical and locational aspects ; latest municipal finances ; civic and other amenities ; medical, educational and cultural facilities ; trade, industry and banking facilities and population returns by religion.

Part B highlights for each village and for each block and ward/mohalla of a town, the primary census data incorporating area ; occupied residential houses ; number of households ; total population and its break-up by sex ; scheduled caste population ; literate population; working population by nine industrial categories and non-working population.

Anantnag District

Anantnag in one of the three districts of Kashmir valley situated in its south and south-western direction. Geographically the district lies between 33°-25′ to 34°-15′ North latitude and 74°-30′ to75°-35′ East longitude, bounded in the north and north-east by Srinagar and Ganderbal tehsils of Srinagar district and in the east and south-east partly by Kargil tehsil of Ladakh district and partly by tehsils of Kishtwar, Doda and Ramban of Doda district. In the west, the district is bordered by tehsil Reasi of Udhampur district and tehsil Rajauri of newly carved district of Rajauri. The entire southern sector of the district which is contiguous with the tehsils of Reasi and Ramban consists of thick forests and nude mountains and likewise the major part of eastern region is also strewn with forests and mountains. The height of these mountains in the east, south and west of the district ranges between 2,438 to 3,048^{m} and in some cases, the peaks even soar to a height of 4,267-4,572^{m}.

The district lies at the basin of drainage system of the eastern and southern ranges of the Kashmir valley and receives many rivers, chief amongst which is river Jhelum which originates from the spring Verinag in the South-east of the district. The river, after traversing in a zig-zag fashion through the district and irrigating thousands of acres of its rich fertile land, in transit, finally deposits the drainage in the great Wular Lake off Sopore in the district of Baramula. The other mentionable rivulets which take off from the foot of one or the other mountain contributing in no less measure to the fertility of the district are the Lidder, Rambi-Ara, Arapat, Veshow and nallah Romshi.

Anantnag is the most populous of all the districts of the State and as per 1971 Census, it has returned a population of 832,280 persons which is a little more than 18% of the population of the entire State.

Early History

The early history of the district and how the district came to be known as Anantnag, has already been explained, in extenso, in the 1961 District Census Handbook of Anantnag. However, for those who may not have had the occasion to go through this publication, it would be of some interest to know that the name Anantnag according to the well-known archaeologist, Sir Auriel Stein, has been derived from the great spring - Ananta Naga issuing at the southern end of the town. This is also corroborated by almost all local historians including Kalhana according to whom the town has taken the name of this great spring of Cesha or Ananta Naga.

The district as well as its headquarter town are also called Islamabad. Regarding this second name, no mention is to be found in the old chronicles of Kashmir. It can, however, be said that the name Islamabad was assigned to the town by Islam Khan, who was the Governor of Kashmir in 1663 A.D. but the change in its nomenclature proved temporary and in course of time the principal town as well as the district assumed once again its old name of Anantnag.

It may be mentioned that before the advent of Muslim rule in 1320 A.D. Kashmir was divided into three divisions viz., Maraj in the

south, Yamraj in the centre, and Kamraj in north of the valley. Old records reveal that the division was the culmination of the rift between Marhan and Kaman, the two brothers, which they had for the crown of their father. The part of the valley which lies between Pir Panjal and Srinagar was given to Marhan and named after him as Maraj now called the district Anantnag. The part below Srinagar fell to Kaman and was known as Kamraj. While Srinagar is no longer known as Yamraj, the areas to its north and south are still called Kamraj and Maraj respectively. Lawrence, in his book 'Valley of Kashmir' states that these divisions were later on divided into 34 sub-divisions which after 1871 were again reduced to five Zilas or Districts.

Anantnag like the rest of the Kashmir valley has witnessed many vicissitudes and received its full share of upheavals experienced by the State from time to time. What must have once been magnificent architectural show-pieces like the Martand complex of temples situated at a distance of 9 kms. from the District Headquarter or the palaces of Laltaditya and Awantivarman at Avantipora lying midway between Srinagar and Anantnag town are now grand ruins. The Mughal emperors specially Jehangir developed many beauty spots of the district but of their noble edifices also only faint traces survive. All the same, even in their present ruinous condition these monuments do not fail to impress the eye or excite the imagination of the beholders. As a matter of fact, thousands of tourists are attracted to these sites regularly every year.

The district can rightly boast of possessing the largest number of health resorts in the whole State. Of them, particular mention may be made of Verinag, Kukernag, Achabal and Pahalgam. During the summer months these are usually filled to the brim by tourists coming from all parts of the country and even a sizeable number of foreigners. Thanks to the sustained effort by the Government in putting the tourist industry of the State on a sound footing, not only have these resorts been given a face-lift in physical appearance in recent years but a large number of huts, dak bungalows and rest houses constructed at each place for accommodating the visitors in all possible comfort. The fame of the district is also derived from the fact that at a distance of 46 kms. from Pahalgam is situated the holy cave of Amar Nath which from time immemorial has attracted pilgrims from every part of India. The annual Amar Nath pilgrimage which passes through this district is a most impressive spectacle with the mace of Lord Shiva carried at the head of a long colourful and devout procession.

Jurisdiction

During the inter-Census period 1961-71, the district has undergone notable jurisdictional changes. The area of the district which as per 1961 Census stood at 5,430.9 Km^2. is reduced now to 5,382 0 km^2. This decrease has been caused by transfer of 15 villages from tehsil Pulwama to the newly constituted tehsil of Chadura of Srinagar district. The district which earlier comprised 1,220* villages, after inter-district change, now consists of only 1,202* villages. Despite the loss of this territory, a significant development deserving mention here is that the district which at the time of 1961 Census was composed of three tehsils viz ; Anantnag, Kulgam and Pulwama and six towns namely Anantnag, Bijbehara, Kulgam, Pahalgam, Pampore and Shupiyan only has improved its position in respect of administrative divisions with the carving out of three more tehsils namely Pahalgam, Shupiyan and Tral and addition of three more towns viz ; Mattan, Kukernag and Tral during this period.

* Forest/Boat blocks not treated as villages.

Town Directory

This portion of the District Census Handbook is intended to provide a glimpse into the socio-economic, cultural and demographic life of each town of the district. As the reader will notice, this portion of the volume consisting of 7 statements besides Village Directory data, appears in part A of the publication.

Definition of Town

A standard definition as to what constituted an urban unit was evolved for the first time at the 1961 Census. Under this definition, the following were to be recognised as urban units :-

a) all places with a Municipality, Corporation or Cantonment Board or a Notified Area irrespective of their population or other characteristics ;

b) all other places satisfying the following tests :-

1. an area/village whose population is not below 5,000,
2. an area/village whose $\frac{3}{4}$th of working population consists of non-agriculturists, and
3. an area which has a density of not less than 1,000 persons per sq. mile (390 persons per sq. km.)

The same definition was adopted at the 1971 Census also except for the following modification in respect of test 2 of criterion (b) :-

> *"An area/village whose $\frac{3}{4}$th of the male working population consists of non-agriculturists".*

According to the above definition, the following places were treated as urban at the 1971 Census :-

S. No.	Name of Town
1.	Anantnag
2.	Bijbehara
3.	Kukernag
4.	Kulgam
5.	Mattan
6.	Pahalgam
7.	Pampore
8.	Shupiyan
9	Tral

While all the nine of them satisfy criterion (a) of the standard definition of a town, it is only Anantnag and Bijbehara which fulfil the tests as laid down in criterion (b) of the definition adopted in 1971.

Of all the towns as existed at the 1961 Census it is only Kulgam which has been able to improve its class from VI to V during the last decade. This is reflected in the following inset table :-

INSET TABLE NO. 1

S. No.	Name of Town	Class of Town in 1961 Census	Class of Town in 1971 Census
1	2	3	4
1.	Anantnag	III	III
2.	Bijbehara	V	V
3.	Kukernag	...	VI
4.	Kulgam	VI	V
5.	Mattan	...	VI
6.	Pahalgam	VI	VI
7.	Pampore	V	V
8.	Shupiyan	V	V
9.	Tral	...	V

However, with the emergence of 3 new towns during the intercensal period Anantnag has acquired the distinction of having the largest number of urban areas amongst all the districts of the State. It may be stated, however, that out of the newly added urban units, Tral declared as notified area under Notification No. SRO-90 of 1969 has not uptil now set up a Local Body and consequently the requisite information incorporated about the place in the statements of this Handbook has been obtained from the Tehsildar of Pulwama Tehsil of which it formerly formed a part.

Standard Urban Area

The concept of Town Group as was adopted at the 1961 Census was found to be of limited use. This was so because the Town Group constituted of towns falling within a radius of 2 to 4 miles of the principal central town, omitting intervening rural areas. Thus, the Town Group did not bring out spatially contiguous territory of urban-rural settlements. Further, this concept did not help in effectively tackling the problem

of furnishing statistical data in respect of urbanised or urbanisable areas in the near future outside the jurisdiction of the existing towns. Since the administrative boundaries of statutory towns changed from time to time, the data thrown up by the successive censuses of the individual towns for the Town Groups were not strictly comparable. It was, therefore, decided to modify the Town Group concept further so as to necessitate the compilation of comparable data for at least two decades for a fixed area covering a large core town as well as the adjoining areas to facilitate the formulation of urban development plans. The Town Group concept was accordingly replaced by the concept of Standard Urban Area. The modified concept envisages the delineation of contiguous rural and urban areas as are at present under intensive influence or which are likely to be under intensive influence of such cities/big towns as have a population of 50,000 and above. In the light of this definition, in our State only two cities viz; Srinagar and Jammu, qualify to be considered for the demarcation of standard urban areas. Further details as also the criteria adopted for delineating the boundaries of these two standard urban areas of the State have been fully discussed in the State Town Directory which has come out as a separate publication as also in the Handbooks of concerned districts. Since none of the towns of the Anantnag district falls in the category of a large core town bearing an intensive influence on contiguous rural and urban areas, no necessity has been felt for delineation of the standard urban area in respect of any town of the district. We have also avoided going into the concept of Urban Agglomeration as an improvement over the earlier definition of Town Group because it is not applicable to any urban unit of the district. However, a definite trend has been noticed in the case of the Anantnag town of its moderate expansion towards rural areas situated in its immediate vicinity. This is bound to grow in future years.

Statements

We may now discuss the scope of the seven *statements forming part of the Town Directory* of the district and see what they have to reveal about each town.

STATEMENT I

This statement, which is mainly based on census data, consists of 15 columns incorporating statistics on civic administration status as in 1970, population growth during the decades of 1901 to 1971 and functional category based on 1961 and 1971 Censuses.

In column 5, which indicates the latest administrative status of *each urban unit of the* district, the following abbreviations have been used to denote the status :-

T. A.	:	Town Area
N. A.	:	Notified Area

It will be seen from the statement that from out of the 9 towns, the earliest to acquire urban status are only four viz; Anantnag, Bijbehara, Pampore and Shupiyan. Having been declared urban in 1911, they have continued to enjoy this status uninterruptedly for the last sixty years. In fact since 1961 Anantnag has meanwhile been able to qualify itself as a class III town. Kulgam had also been declared as urban in 1911 along with the four towns mentioned above. Subsequently, however, it was declassified and continued in that status until 1961 when it was again classified as a town along with Pahalgam. The other three towns namely Mattan, Kukernag and Tral, as already mentioned are only recent additions having been notified as such as late as in 1970. Of course, Mattan had been notified as a town in 1931 in the name of Mach Bhawn but had ceased to hold that status in 1951 when it was finally declassified.

The columns 6–13 under the caption "population of the towns" provide information with regard to the decadal growth of population of each town in the district. As can be seen from the statement, Pampore has registered an increase of more than 54% in the population growth during the decade 1961-71 which is the highest among all the towns of the district. The increase is due largely to this town being located in close vicinity to the city of Srinagar which has *enabled it to gradually put up an industrial complex*, opening more opportunities of employment and settlement. The other towns having recorded a

sharp rise in the growth of population during the past decade are Kulgam 38.49%, Bijbehara 33.09% and Anantnag 31.09%.

It may not be out of place to mention here that the population figures for 1951 recorded in column 11 have been computed as a mean of 1941 and 1961 population figures. This is so because, as already indicated, no Census was conducted in the State in 1951 owing to the unsettled conditions prevailing then.

Functional Category

The information incorporated in columns 14 and 15 of the statement highlights the functional characteristics of each town of the district. This information which has a special significance for researchers and administrative agencies, patently portrays the role that the town plays in such activities as commerce, industry, transport, communication, administration, construction, education etc. and also the functional change the town has undergone over the last 10 years as a result of urban development.

Functional characteristics of a town as indicated in the statement have been assessed by taking into account participation rates of total working force in the nine recognised industrial categories as given below :-

I — Cultivation
II — Agricultural labour
III — Live-stock, Forestry, Fishing, Hunting and Orchards, and allied activities
IV — Mining and Quarrying
V — Manufacturing, Processing, Servicing or Repairs
a — Household Industry
b — Other than Household Industry
VI — Construction
VII — Trade and Commerce
VIII — Transport, Storage and Communications
IX — Other services

For convenience, these categories have been re-grouped into the following five broad classifications :-

Group	Constituent Industrial Categories
1. Primary Activities	I + II + III + IV
2. Industry	Va + Vb + VI
3. Trade & Commerce	VII
4. Transport	VIII
5. Services	IX

If the proportion of workers in a town under any of the above five categories forms or exceeds 40% of the total working force, it has been treated as mono-functional. If, on the other hand, the proportion under any of the categories is less than 40%, but when the two predominant categories, combined together, form 60% or more of the total working force, the town has been classified as bi-functional e. g. primary activities-cum-services etc. Like-wise, when three predominant categories on adding up form 60% or more of the total working population, the town has been designated as tri-functional.

The 1971 functional data as it works out within the above frame work, reveals that of the 9 towns in the district, 4 are mono-functional, 2 bi-functional and 3 tri-functional. How far these reflect a change over the position obtaining at the 1961 Census would better be appreciated with the help of the following inset table in respect of the 6 towns which existed as such in 1961 also :-

INSET TABLE NO. 2

Functional Categories-1961-71

Functional category	No. of towns in 1961 Census	No of towns in 1971 Census
(1)	(2)	(3)
Mono-functional	3	2
Bi-functional	2	1
Tri-functional	1	3

The table reveals a greater diversification in the functional status of the towns during the past ten years. One of the mono-functional towns has become bi-functional and both the towns which were bi-functional in 1961 have

become tri-functional now. A glance into columns 14 and 15 of the statement will show that unlike at the 1961 Census when no town in the district had returned trade or commerce as a functional characteristic, at the present Census two towns have shown it as one of their functional traits.

Let us now see, with the help of the following inset table, how far functionl characteristics is exhibited in different size-class of towns :-

INSET TABLE NO. 3

Functional categories by size class of towns-1971 Census

Functional category	No. of towns in size class			
	III	IV	V	VI
1	2	3	4	5
Mono-functional	...	...	2	2
Bi-functional	...	...	1	1
Tri-functional	1	...	2	...

It will be seen from the table that diversification of occupations is discernible in the comparatively bigger towns of the district.

STATEMENT II

The statement consisting of 14 columns gives the physical and locational aspects of each town relevent to the year 1969. The information incorporated in column 3 of the statement has been furnished by the Director, Survey of India, North Western Circle, Chandigarh.

There is no observatory in the district for recording rainfall or maximum and minimum temperature and, therefore, the information in columns 4-6 has been left blank except in respect of Bijbehara, Pahalgam and Pampore about which the requisite data relating to maximum and minimum temperature was supplied by the Chairman of the respective Local Bodies. The climate of the district is by and large similar to that of other two districts of the valley. However, towns like Pahalgam, Kukernag and Shupiyan which are located at comparatively higher altitudes experience severe cold for major part of the year and experience heavy snow-falls during winter months. As a matter of fact due to the closer proximity of Pir Punjal Range which extends to its south and south-eastern side, the district as a whole has a more salubrious climate in summer and correspondingly colder climate in winter than Srinagar. Moreover, since the district does not fall in Moderate Rainfall Division, the rains are either excessive in spring or deficient in summer or vice versa.

The portion of the statement pertaining to the locational aspect of the towns, clearly brings out the fact that all the towns of the district enjoy easy communication facilities, three of them viz; Anantnag, Bijbehara and Pampore being situated on the National Highway. However, the only navigable river in the district is the river Jhelum which contributes in a large measure to the trade and transit activities of Anantnag, Bijbehara and Pompore lying close to its banks. Paddy, timber, fuel, bricks etc, are some of the major items carried by river transport which is relatively cheaper than surface transport.

The implications of the various symbols used in the statement are :-

NA : Not Available
R : River

STATEMENT III

The statement presents the budgetary picture as in 1968-69 of the towns which existed in the district in that year and, therefore, excludes the two towns viz; Kukernag and Tral which came into being subsequently. The statement has two distinct parts, part first extending over columns 3-9, highlights the sources of revenue and part second, extending over columns 10 to 16, brings out the total outlay by main heads of allocations.

For purposes of convenient study, the figures incorporated in the statement have been rounded off and expressed in terms of hundreds.

The inset table below brings out the per capita receipt and expenditure of all the Town Area/Notified Area Committees of the district classified by population size of the district :-

INSET TABLE NO. 4

Class of Town	No. of Towns	Per Capita Receipt and Expenditure by Size Class of Towns						
		Receipt (Rs.)			Expenditure (Rs.)			
		Total Receipts	Receipts through taxes etc.	Receipts from all other sources	Total expenditure	Expenditure on public health conveniences	Expenditure on public institutions	Expenditure on other items
1	2	3	4	5	6	7	8	9
Class III (20,000—49,999)	1	19.1	18.5	0.6	12.7	...	...	12.7
Class IV (10,000—19,999)	...	...	...	...	...	..	...	...
Class V (5,000—9,999)	4	10.1	8.8	1.3	8.9	2.7	0.1	6.1
Class VI (Below 5,000)	2	12.1	9.3	2.8	8.6		...	8.6

The table reveals that Anantnag, the only Class III town in the district, ranks highest in the per capita receipt and expenditure as compared with other towns falling in V and VI, there being no Class IV town in the district. It is interesting to note that despite this position, Anantnag town shows no expenditure on public health conveniences. On the other hand, Class V towns, which constitute 57.14% of the total number of towns which existed in the district in the year 1968-69 claim the highest per capita expenditure on public health convenience at Rs. 2.7.

Class VI towns, constituting 28.57% of the total number of towns existed in the district then, rank second in the per capita receipt and third in the per capita expenditure, the figures being Rs. 12.1 and Rs. 8.6 respectively. The corresponding figure in respect of Class V towns is : receipt per capita Rs. 10.1 and expenditure Rs. 8.9.

It is distressing to note that the expenditure on public institutions is conspicuous by its absence in all the towns of the district which is a glaring indication of too much dependence on Government financial assistance.

STATEMENT IV

The main significance of the statement lies in the fact that it provides in respect of each town of the district a picture of civic and other amenities; system of sewerage; number and type of latrines; method of disposal of night soil; source of water and capacity of Water Reservoir and electric connections, as in 1969.

Since the statement extends to over 16 columns, liberal use of abbreviations has been made in columns other than those incorporating figures so as to save space. These are amplified below ;-

Column : 4

PD : Pacca Drainage
KD : Kacha Drainage

Column : 8

DS : Dumping System
WB : Wheel Barrows
TS : Trench System
H : Hand-carts

Cloumn : 9

TW : Tube Well
S : Spring
R : River
N : Nallah

Roads

The statement discloses that Pahalgam town maintains a road length of 15 kms , the highest among other towns, constituting 36.5% of the aggregate road length in all the towns of the district. Anantnag which ranks second, maintains a road length of 9.60 kms. The road length in the other towns varies between 1 to 4 kms. except Kulgam town which has a road length of only 0.50 kms., the lowest among all the towns of the district. It may be pointed out that the figures of road lengths incorporated in the statement are in respect of those roads as are exclusively maintained by the Local Bodies. However, it has not been possible to indicate in the statement information about different classifications of roads like kacha, pucca etc. because of non-availability of such data.

Drainage System

As is evident from the statement, the system of sewerage in the district is crude and disappointing. There are practically no underground sewers anywhere in the district including Anantnag town. The entire waste water including even the faecal matter is drained into the rivulets, nallahs, cesspools, puddles etc. through kacha and pucca surface drains.

Sanitation

Water-borne latrines are conspicuous by their absence in all the urban units of the district. The most common latrines are the service and dry type latrines, the arrangement being that the human excreta is removed by scavengers and dumped in the nearby vegetable gardens. After decomposition, it serves as a manure for the growth of vegetables.

The most prevalent means used in the disposal of night soil are the handcarts and the wheel barrows. The method of dumping is also practised. The arrangement is that the garbage etc. is removed to reception centres and from thence it is carried and dumped in outside urban limits, in deep dug trenches. The whole method is crude and speaks of the state of abject backwardness of sanitation and public health facilities still prevalent in the urban areas of the district.

Water Supply

It is heartening to note that almost all the towns of the district enjoy drinking water facilities through taps fed from reservoirs with varying capacities which have been constructed by the Public Health Engineering Division for storage and treatment of water. The only exception where no reservoir has been constructed for storage and treatment of water is the Pahalgam town. But nature has been lavish in blessing this town with abundant supply of spring water emanating from Aru.

Fire Fighting Facilities

As the statement reveals only 5 out of the 9 towns in the district are provided with fire fighting services. In the event of a conflagration in any of the towns presently not provided with fire-fighting facilities, the fire brigades are called from the nearby towns possessing such stations. Considering the fact that most of the areas in the district experience ravages of fire almost as a regular phenomenon causing damage to movable and immovable property worth lakhs of rupees, the existing facilities for protection against fire can by no means be considered as adequate. The need for provision of fire-fighting stations in the towns of Kukernag, Mattan, Pampore and Tral is too apparent to be over-emphasised.

Electricity

Except for a small sized Thermal Station installed at Pahalgam for the convenience of tourists and commercial establishments, no electricity is produced within the district even though nature has blessed it with a net-work of perennial rivers, nallahs, streams, water-falls etc. All other towns of the district are provided with power from the Hydro-generation stations of Ganderbal, Mohora and Thermal Station at Bemina. The existing supply which is meagre does not adequately meet the power requirements of these towns

It will be seen from the statement that the electric connections as available in the towns at present have been categorised into domestic, industrial, commercial, road lighting and others. The information about industrial connections is particularly interesting. While the number of such connections

in Anantnag, Bijbehara and Pampore are 45, 34 and 28 respectively, providing evidence of some light industries having come up in these towns, no such connections stand issued in the case of Kukernag, and Pahalgam.

It will be interesting to see that all the towns of the district enjoy road lighting facilities. With 638 such connections, Anantnag ranks first, followed by Pahalgam with 168 connections.

STATEMENT V

The statement holds out a picture of the medical, educational, recreational and cultural facilities as available in 1969 in the various towns of the district. Abbreviations used in columns 3 and 5 of the statement are amplified below :-

Column 3 :

H	:	Hospital
HC	:	Health Centre
TBC	:	T. B. Clinic
FC	:	Family Planning Centre
D	:	Dispensary

Column 5 :

Asc	:	Arts, Science and Commerce College

Medical Facilities

As can be noticed from the statement, all the urban units in the district have been provided with medical institutions. In seven out of the nine towns, the medical institutions have been provided with beds to cater to in-patients. In the matter of bed strength, Anantnag with 50 beds ranks first and Pahalgam with 8 stands lowest amongst all the towns of the district. In the case of Bijbehara, Kulgam, Pampore, Shupiyan and Tral, the bed strength is 10 each. The following inset table gives the number of beds available per 1,000 population in each town of the district :-

INSET TABLE NO. 5

Sl. No.	Name of Town	Total No. of beds	No of beds per 1,000 population
1	2	3	4
1.	Anantnag	50	1.8
2.	Bijbehara	10	1.2
3.	Kukernag	...	...
4.	Kulgam	10	1.6
5.	Mattan	...	...
6.	Pahalgam	8	3.4
7.	Pampore	10	1.2
8.	Shupiyan	10	1.3
9.	Tral	10	1.5

It will be seen that even with 8 beds, Pahalgam has the highest bed-strength in relation to its population. This is partly due to its importance as a tourist centre. Anantnag is also better placed as compared to other towns of the district with a strength of 1.8 beds per 1,000 of population. Kukernag and Mattan, however, are the two towns, where no beds have been provided in the medical institutions to cater to in-patients.

Educational Facilities

As will be noticed from the statement, the position of educational institutions in the urban areas of the district has appreciably improved during the last eight years. As against 47 schools, made up of 1 Higher Secondary, 12 High, 28 Primary/Basic Activity and 6 Central/Middle schools in 1961, the number of such institutions has now risen to 85, consisting of 17 Higher Secondary/Secondary schools,' 15 Junior Secondary or Middle schools, 48 Primary schools and 5 others which makes an overall increase of 80.85%. This is indeed encouraging and speaks eloquently of the attention and urgency being imparted to general expansion of educational facilities by the State Government. It does not, however, mean that there is any occasion for complacency. The district has still to go a long way to come up to a satisfactory level in this field. This is evident from the fact that there is a single college located in Anantnag

town with facilities for education in Arts, Science and Commerce upto the degree level. This institution has to cater to the post-matric educational requirements not only of all other towns but also the entire rural part of the district. The lone Industrial Training Institute, with facilities for vocational guidance in various trades and with seating capacity of 124 is also located at the headquarter town. The institute was set up in 1962, and has since been turning out every year a good number of lower level technicians and craftsmen.

The following inset table gives the number of Higher Secondary/Secondary schools; Middle/ Junior Secondary and Primary schools per 1,000 of population in each town of the district :-

INSET TABLE NO. 6

Sl. No.	Name of Town	No. of schools per 1,000 population			
		All Educational Institutions	Higher Secondary/ Secondary Schools	Middle/ Junior Secondary Schools	Primary Schools
1	2	3	4	5	6
1.	Anantnag	0.98	0.11	0.22	0.65
2.	Bijbehara	0.94	0.12	0.35	0.47
3.	Kukernag	3.48	0.58	...	2.90
4.	Kulgam	0.94	0.47	0.31	0.16
5.	Mattan	1.05	0.42	0.21	0.42
6.	Pahalgam	0.86	0.43	...	0.43
7.	Pampore	1.04	0.23	...	0.81
8.	Shupiyan	1.65	0.25	0.25	1.15
9.	Tral	0.61	0.31	0.15	0.15

It would appear from the table that Kukernag which is the smallest town in the district with a population of 1,723 is relatively better placed than any other town of the district in the matter of provision of schooling facilities, although the total number of educational institutions in the town does not exceed 1 higher secondary school and 5 primary schools. Tral with only 2 secondary, 1 junior secondary and 1 primary school for a population of 6,465 comes at the bottom.

The data given in the inset table above is not, however, sufficient to provide any conclusive evidence as to the relative impact of the available schooling facilities in the various towns of the district. This could better be discerned with the help of additional information such as the number of students on roll in various schools in the town, the ratio it bears to the total number of school-going children in the town, the teacher-pupil ratio in respect of each school and the period for which the school has been existing in the town etc. Were it not so, Kukernag should have returned a literacy level higher than for any other town of the district, with Tral placed at the bottom. This is not, however, borne out by the 1971 Census literacy data which is reproduced below :-

INSET TABLE NO. 7

S. No.	Name of Town	Literacy Percentage
1	2	3
1.	Anantnag	34.66
2.	Bijbehara	30.11
3.	Kukernag	20.02
4.	Kulgam	25.65
5.	Mattan	34.75
6.	Pahalgam	9.63
7.	Pampore	19.42
8.	Shupiyan	28.80
9.	Tral	24.03

The table shows that Anantnag town, though placed 5th in the matter of provision of various categories of schools, practically tops all the towns excepting Mattan in so far as the level of literacy is concerned, and Kukernag is placed in a relatively much lower position. On the other hand, Pahalgam which appears to be relatively well up in the provision of schooling facilities, is placed last in its literacy level.

Recreational and Cultural Facilities

The recreational facilities are conspicuous by their absence practically in all the towns of the district, the only exception being the headquarter town of Anantnag with just one stadium, one

cinema and one public library, all of medium standard. The presence of reading rooms, one each in Kulgam, Pahalgam and Shupiyan does not very much distinguish them from the other towns in the total lack of recreational facilities for healthy social growth. This also shows that most towns of the district continue to be predominantly rural in character, devoid of the minimum urban amenities.

STATEMENT VI

This statement highlights the extent of facilities of Trade, Commerce, Industry and Banking as are available in the 9 towns of the district.

The statement consists of 14 columus. Columns 3-11 give the names of three most important commodities imported, exported and manufactured. Column 12 gives the number of banks, if any, located in the town. Columns 13 and 14 reveal the scope of agricultural and non-agricultural credit societies in each urban unit.

In indicating the three main commodities, note has been taken of only such commodities as have any bearing on the reputation of the particular town. The consideration whether such commodities are of great value or volume has been put aside for this purpose. However, in cases where these commodities either imported, exported or manufactured, have not added to the reputational importance of the town, these have been indicated by taking into consideration their money value and quantity involved in transaction.

The Anantnag district is known for some of its unique handicrafts like gabbas, wooden products, wicker work etc. We may discuss these item by item.

Gabbas:

Gabba manufacturing is an old industry of the district and still largely confined to households as a domestic industry. Though much is not known about origin of this industry, it is believed that an Afghan refugee prepared an embroidered saddlepiece for his local host-Kamal Butt of Ratsun village near Tral. It was copied by others as it was simple to make and yet attractive to look at. So gabbas started to be manufactured. The industry appears to have benefitted by the Franco-German war (1870-71) which badly hit the more expensive shawl and carpet manufacturing industry in the State. In recent years, as carpet floor coverings have become more costly, gabbas have been put to increasing use as a relatively cheaper article for furnishing the room. There are various varieties of gabba designs, the most reputed being Dal Guldar, with a circular star in the middle or Dal Guldar combined with embroidered floral designs, or gabbas which are printed. The main raw materials used for manufacturing of gabbas consist of wool and rough blankets which usually come from the surrounding areas.

The export potential of gabbas is likely to multiply manifold in consequence of these being light in weight and comparatively moderate in price. Some new gabba designs introduced by the School of Designs have already started becoming popular in outside markets. Exploration and introduction of further refinements in designs in keeping with modern tastes and introduction of quality control may further enhance the demand for this product. Amongst all the towns in the district the most reputed for gabba manufactures are the towns of Anantnag and Mattan.

Among the wooden products toys made of wood and reproduced in the district are more durable than ordinary toys. They include a wide range of items such as balls, tops, hobby horses, baby walkers, spinning wheels, whistles, rattlers, etc. The price of these articles in-spite of their durability is moderate and suits lower-middle class pockets. Among the wooden cooking implements manufactured are ladles, bowls and cups. The raw materials for the goods are obtainable locally but the different paints with which the toys are made attractive are imported.

The town of Pampore is famous throughout the country because of its saffron fields. Saffron which has a roaring domestic as well as foreign market is not produced in any other State of India. According to Kalhana, the saffron flower dates from the time of King Lalitaditya (725-753 A. C). It may interest the reader to know that the saffron is underground tuberous corm resembling

garlic. It has to be planted once for 5 years. The flowers which are highly fragrant generally appear between middle of October and end of November and consist of six petals and six stamines.

Saffron is put to many uses, the chief amongst which are as colouring agent for pastry and confectionery, as condiments, as a medicine and for worship. The saffron paste is used as 'Tilak'.

When the fields are in bloom, they provide a magnificent sight with wave upon wave of violet flowers being generally blown by the breeze-a bewitching sight that must be seen to be believed.

In the recent decades, Pampore lying in suburbs of Srinagar M. C. has attracted considerable industrial activity. Among the factories set up, mention may be made of Government Joinery Mill which manufactures doors and windows, furniture and other fixtures, of which large quantities are exported to other parts of the country. It is the largest wood-based industry of its kind in the State. Another factory to have come up recently is Brick and Tile Factory. The products of the factory are in great demand due to their relatively moderate price. Nearby is the Wuyan Cement Factory, the only one of its kind so far in Jammu and Kashmir. The raw materials for the Joinery Mill are obtained from the forests in the shape of logs which are floated to the site by the river Jhelum which lies closeby. The Brick and Tile Factory has abundant clay available at site. The Cement Factory similarly consumes lime stone stocks which are available in large quantities at the short distance.

Anantnag town has also a good reputation for 'kangris' as indispensable companion of Kashmiris in cold season. The 'kangri' has become popular outside the State as well, due to large number of Kashmiris having got settled in other parts of the country in recent years. Dr. W. E. Elimslie, MD, a well known missionery of Srinagar, has observed that Kashmiris learnt the use of kangri from the Italians who were in the retinue of visiting Mughal emperors.

The raw materials needed for manufacture of 'kangri' consist of willow wickers and earthen pots, the former mostly imported from nearby forests.

The cost of an average 'kangri' ranges from Rs. 2/- to Rs. 4/- and that of ornamented ranges from Rs. 5/- to Rs. 15/-. The latter are given as presents to newly married girls on festive occasions.

The towns of Kulgam and Shupiyan manufacture woollen blankets, locally called 'chadri'. The manufacture of the blankets constitutes an important household industry of the district. The raw material used is indigenous wool obtained from suburbs. It may be mentioned that this industry is showing signs of decline due to high cost of production and stiff competition offered by machine-made woollen blankets.

Fruit of all kinds but especially apples and walnuts is the principal commodity of export of Kulgam, Mattan, Shupiyan and Tral. The town of Pahalgam, enjoying unique reputation as a health resort, manufactures milk-breads which are consumed by tourists.

Banking Facilities

Only 5 of the 9 towns enjoy banking facilities. Anantnag and Shupiyan lead other towns by having 3 banks each. Kulgam with 2 banks ranks second followed by Pahalgam and Tral with one bank each. No banking facilities are available in rest of the 4 towns comprising Bijbehara, Kukernag, Mattan and Pampore.

Agricultural Credit Societies

The State Town Directory has brought out the important role of agricultural and non-agricultural credit societies in achieving better socio-economic conditions of the people. Column 13 of the statement shows that 8 of the 9 towns of the district avail of the benefits of these credit societies with one such society functioning in each town. Anantnag is the only exception where no such society exists.

Non-Agricultural Credit Societies

As can be discerned from column 14 of the statement, four out of nine towns are equipped with non-agricultural credit societies. Of these, Anantnag with five such societies ranks first

followed by Pahalgam with two societies. Five towns viz ; Bijbehara, Kukernag, Mattan, Pampore and Tral have no non-agricultural credit societies. The data incorporated in columns 13 and 14 of the statement is based on the information furnished by the Registrar of Co-operatives, J & K, Srinagar.

STATEMENT VII

This statement highlights the distribution of the population of each Town/Notified Area of the district as returned in 1971 Census on the basis of religion for males and females separately.

The statement reveals that all the urban units of the district are multi-religious ; viewed in the aggregate, the distribution of various religions in the urban sector of the district emerges as under :-

INSET TABLE NO. 8

Religion	Urban Population	
	Total	Percentage
1	2	3
All Religions	74,234	100.00
Buddhist	8	0.01
Christian	37	0.05
Hindu	7,756	10.45
Jain	...	...
Muslim	66,041	88.96
Sikh	391	0.53
Religion not stated	1	...

The table reflects that as for the whole district in the urban areas also, Muslims claim the lion's share of the population, constituting a proportion of about 89%. The next numerically important community is that of Hindus claiming a proportion of 10.45% of the total urban population. The other communities are insignificant from the point of numerical strength, claiming an over-all proportion of less than one percent or 0.59% to be exact, of the total urban population.

It would be interesting to see how each religion is represented in each town of the district.

Buddhists :

Of the total number of 57,956 Buddhists in the State, 263 or 0.45% are found in this district, 8 of whom belong to its urban areas. There are 3 in Anantnag and one each in the 5 towns of the district namely, Bijbehara, Kulgam, Pampore, Shupiyan and Tral. This clearly shows that they are not normal residents living in normal households in these towns and have apparently come there in pursuit of livelihood.

Christians :

The urban areas of the district account for only 37 Christians, constituting an insignificant proportion of the urban sector of the State which stands at 4,140. They are scattered in 6 out of 9 towns, Anantnag claiming a proportion of 35.14% followed by Mattan at 27%. In the rest of the 4 towns viz ; Bijbehara, Kulgam, Pampore and Shupiyan, their number ranges between 2 to 4.

The sex-ratio of this community for all the urban areas of the district put together is highly unfavourable to females and works out at 321 females per 1,000 males.

Hindus :

The total number of Hindus in the district is 33,753 out of whom 7,756 are concentrated in its urban part. They constitute the second largest community and are found in varying proportions in all the towns of the district, Anantnag claiming 42% of the total Hindu urban population of the district. The rest are distributed in the 8 towns which together account for 58% of the Hindu urban population. Taking the percentage of Hindus to total population of each town, it will be seen that Mattan, the seat of the holy Martand spring, stands out from all other towns in claiming the largest proportion of Hindu population viz ; 28.90%. The second position goes to Kulgam with 14.48%. Pahalgam with only 36 Hindus stands at the bottom.

The over-all urban sex-ratio of this community in the district works out at 763 females per 1,000 males which is less than the district average of 848 females per 1,000 males. The Anantnag town alone shows a sex-ratio conforming to the over-all urban sex-ratio of this community in the district. The unfavourable sex-ratio of the Hindus seems to be the result of migration

on the part of Hindu males from these towns in pursuit of employment, trade, business etc. during the enumeration period.

Jains :

There are no Jains living in any urban area of the district. The 3 Jains who are living in the district come from its rural sector.

Muslims :

The Muslims constitute the predominant population of the urban areas of the district. Out of their total number standing at 789,224 for the district, 66,041 or 8.37% are found in its urban sector. Anantnag town claims 36.80% of the total Muslim urban population. The remaining 63.20% is found in the other 8 towns, their percentage to total population in all cases exceeding 90% except in the case of Anantnag, Kulgam and Mattan where their proportion stands at 87.92%, 85.32% and 66.74% respectively.

The sex–ratio of Muslim urban population in the district works out at 875 females per 1,000 males which almost conforms to the over-all sex-ratio of the females viz ; 878 females per 1,000 males at the State level. Taking the towns individually, it will be seen that Anantnag which claims the largest bulk of urban Muslims shows sex-ratio of 870 females per 1,000 males which is somewhat unfavourable to females but much higher than what it is for other communities in the district. The sex–ratio of Muslims in Kulgam, Pampore and Tral towns stands at 899,901 and 894 females per 1,000 males respectively.

Sikhs :

With their number standing at 8,910, the Sikhs constitute the 3rd largest community in the district. But of these, only 391 persons or 4.39% hail from its urban sector. They are found in varying proportions in almost all the towns of the district but the main concentration of the Sikh population is noticed in Mattan which accounts for more than 50% of the total urban Sikh population of the district. Their number in other towns is rather insignificant except for Anantnag where the Sikhs constitute 20.97% of the total urban Sikh population of the district.

The urban sex–ratio of this community works out at 475 females per 1,000 males, which is almost half of the corresponding sex–ratio returned for the Sikhs at the State level at 835 females per 1,000 males.

VILLAGE DIRECTORY

The Village Directory forming an essential part of this publication provides us with a rapid survey of the socio-economic, recreational and demographic life in respect of each village of the district. Like the Town Directory it is also divided into two parts; Part A portrays non-census information covering such topics as area; educational and medical amenities; power supply; drinking water; communications; post and telegraph facilities; staple food; particulars of land use; nearest town with distance therefrom and day or days of market, if any, held in the village. All this useful information has been encompassed in a suitably designed statement extending over 18 columns. Part B highlights for each village, the primary census data giving the number of occupied residential houses; number of households; total population and its break-up by sex; schedule caste population; literate and educated persons; working population by industrial categories and non-working population.

The Village Directory was first brought out as part of the Census Handbook for each district at the 1961 Census. We have generally followed the same pattern but more information has been added in the directory this time. The object of including data on staple food, land use, amenities, distance from nearest town, market days etc. is to facilitate the study of what socio-economic changes have taken place in the villages of the district during the previous decade.

Appendices :

The Village Directory carries the following appendices :-

Appendix—I — gives the list of villages of each tehsil arranged in an alphabetical order along with location code number allotted to each such village at the 1971 Census.

Appendix—II — gives a tehsil wise abstract of educational, medical, and other amenities.

Maps :

The publication has been supplemented with the following detailed maps :-

1) District map showing the tehsil boundaries and location of towns, communications, rivers, hills, forests etc. (with an inset map showing the location of the District in the State. This map appears as a frontis piece)
2) Tehsil map indicating boundaries of each village and town within the tehsil illustrating by suitable symbols population and various amenities available in the villages and towns.

Abbreviations :

Due to limitations of printing space, abbreviations have been used freely in the Directory. These are explained as under :-

Column No. 4 = Education :

HS/Hr. Sec	:	High School/Higher Secondary School

Definition of Village :

Before proceeding to highlight the main characteristies of the amenities available in the rural sector of the district, it would be worthwhile to know what a village is. According to 1961 Census definition, adopted for 1971 also, a village was defined as an area with well-defined boundaries for revenue assessment having residential houses densely or sparsely populated irrespective of the number of hamlets flanked to it. In accordance with this definition, every revenue mauza was treated as a Census Village in all the areas of the State territory for purposes of the 1971 Census.

It is pertinent to note here that while it became possible at the 1961 Census to achieve a measure of uniformity in the definition of a town, the evolving of a uniform definition of a village has eluded successive censuses since 1872. This was mainly due to varying pattern of village settlements obtaining in different parts of the country. In 1901, an area whose residential houses were clustered together or if sparsely located were separated from other similar areas by natural barriers, such as rivulets, khuls, hillocks, fields etc. was treated a village. In 1911, a village was defined as an area already settled or under settlement, a territorial or revenue village which had been duly surveyed, demarcated and treated as a unit for purposes of assessment. In forest areas, the smallest forest division was treated as a village. In 1921, a village was defined as the smallest unit of administration which was separately assessed to land revenue. The definition was not however strictly adhered to in 1931 and it was allowed to vary according to local conditions. Broadly speaking, a well organised unit with definite boundaries which had been surveyed in the recent past was treated as a village for purposes of Census. The same definition was applied in 1941. There was no Census in 1951 owing to unsettled conditions. The definition of a village adopted at the 1961 Census and repeated in 1971 is mentioned in the above paragraph.

Jurisdiction :

The area of the district as per 1961 Census stood at 5,430.9 km^2., of which 5,366.7 km^2. were in the rural sector and the rest i. e. 64.2 km^2 in the urban sector. Further, the district was composed of 1,220* villages and 6 towns/notified areas which together returned a population of 6,54,368 persons made up of 6,08,795 persons living in the rural sector and 45,573 persons in the urban sector. But during the inter-censal period 1961-71, the area of the district shrunk by the loss of 15 villages which were detached from Pulwama tehsil and merged with Chadura tehsil of Srinagar district. Further, intra-district changes culminated in the creation of 3 more tehsils viz; Pahalgam, Shupiyan and Tral. Thus at the 1971 Census, while the area of the district had reduced to 5,382.0 km^2., thenumber of tehsils rose from 3 to 6. The position in the individual tehsils with reference to the number of villages emerged as under :—

Sl. No.	Name of Tehsil	No. of villages	Remarks
1	2	3	4
1.	Pahalgam	65	65 villages plus one town transferred from Anantnag tehsil.
2.	Anantnag	270	...
3.	Kulgam	311	...
4.	Shupiyan	228	171 villages and one town transferred from Kulgam tehsil and remaining 57 from Pulwama tehsil.
5.	Pulwama	248	...
6.	Tral	80	80 villages and one town transferred from Pulwama tehsil.
	Total	1202*	

*Forest/Boat blocks have not been treated as villages.

Number & Size of Villages :

The total number of villages in the District at the 1971 Census was 1,202*. Of these 35 are uninhabited and 1,167 inhabited. The inhabited villages have returned an aggregate population of 7,58,046 persons which gives an average population of 650 persons per village. Let us now examine the following inset table to study the distribution of villages in the district by reference to their area :—

INSET TABLE NO. 9

Distribution of villages with reference to their area (in acres)

Sl. No.	Name of Tehsil	50 or less	51–100	101–200	201–500	501–1,000	1,001–2,000	2,001–5,000	5,001 & above	Total No. of villages
1	2	3	4	5	6	7	8	9	10	11
1.	Pahalgam	1	4	11	35	13	—	1	—	65
2.	Anantnag	6	17	38	115	65	27	1	1	270
3.	Kulgam	12	32	58	127	63	16	3	—	311
4.	Shupiyan	7	18	61	106	26	8	2	—	228
5.	Pulwama	7	21	37	106	50	22	4	1	248
6.	Tral	4	7	10	32	19	7	1	—	80
Total for District :		37	99	215	521	236	80	12	2	1,202

The table discloses that in the district as a whole, 521 villages or more than 43% fall in the size category 201–500 acres. The remaining 56.66% villages are distributed amongst the other size categories, villages in the 501–1,000 category take the second position claiming 236 villages or 19.63% of the total number of villages. Only two villages qualify for inclusion in the size category 5,001 and above. 12 villages fall in the group 2,001-5,000 acres. The same position obtains generally in the tehsils individually. It is, however, interesting to note that while villages falling in 501-1,001 acre-group claim second rank in the district as a whole this does not hold good in respect of Shupiyan tehsil where villages of the category of 101-200 acres take the second position. Except for Anantnag and Pulwama, having one village each in the category of 5,001 acres and above there is none in others to qualify for the same category. It is interesting to note that the proportion of smaller villages with areas between 50 acres or less is insignificant as compared with the corresponding number in other categories.

*Forest/boat blocks have not been treated as villages.

AMENITIES :

Education : Before highlighting the extent of educational facilities with reference to the distance of the village from the nearest town, it will be of interest to outline the overall progress made in the rural sector of the district in the field of education since 1941. In 1941, the number of primary schools for both the sexes in the tehsils of Anantnag, Kulgam and Pulwama, which the district was then composed of, stood at 46, 47 and 42 respectively or 135 in all. In other words, only 11.6% of villages had till then been provided with primary schools. The number of villages being 1,161. In the post-independence decades, education received a great fillip in all parts of the State. It was made free in 1953 from the primary to the university level. This brought about a further expansion of the educational set-up so much so that by 1961 the number of educational institutions had risen to 509, uplifting the percentage of villages with schooling facilities to 41.72%. In the later years the pace of educational

expansion has been even speedier. This is evident from the fact that in 1968-69, (the latest year for which information is available) the number of educational institutions was 1,004 consisting of 729 Primary/Basic activity schools, 206 Central/Middle Schools and 69 High/Higher Secondary schools. They covered 866 of the 1,202 villages of the district. In other words schooling facilities had been extended to 72.05% villages till 1968-69, which proportion is bound to have further gone up in the subsequent years.

The following inset table brings out the availability of educational amenities with reference to the distance of villages from the nearest town as in 1968-69.

INSET TABLE NO. 10

Distance from the nearest town (in kms.)	Total No. of villages	No. of villages having: All types of educational institutions		Primary Schools/ B. A. S/Makt/PS		Middle/Central Schools		L.H.S/H.S./Hr. Sec. Schools	
		No.	% age	No.	% age	No.	% age	No.	% age
1	2	3	4	5	6	7	8	9	10
5 or less	274	197	71.89	144	52.55	45	16.42	8	2.92
6—10	491	336	68.43	243	49.49	66	13.44	27	5.50
11—15	218	151	69.27	107	49.08	34	15.60	10	4.59
16—25	160	136	85.00	87	54.38	36	22.50	13	8.12
26—50	59	46	77.97	36	61.02	8	13.56	2	3.39

The table shows that generally a higher incidence of educational institutions obtains in the case of villages which are located farther away from a town than those lying in its close vicinity.

A deviation from this pattern is discernible in the case of villages which are 5 or less than 5 kms. away from a town and those which are as far as 26 to 50 kms. away from a town. This becomes clear when notice is taken of the fact that only 77.97 % of villages located 26 to 50 kms. away from a town are provided with educational institutions as against a corresponding proportion of 85 per cent in the case of villages located 16 to 25 kms. away from a town. Similarly, the proportion of villages provided with educational institutions is higher in the case of villages which are 5 or less than 5 kms. away from a town than those located farther away.

The break-up of total number of educational institutions by different types of schools given in the above inset table shows that villages which are farthest away (26 to 50 kms.) from the town, reflect the highest incidence of primary schools. However, in the provision of Middle and Higher Secondary Schools, villages which are 16 to 25 kms. away from a town are relatively better placed. Here also the factors contributing to this position are the average population size of the villages and the location of the feeder schools.

Medical Facilities :

According to the available information, there are 97 medical institutions in rural areas of Anantnag district, comprising of 80 Dispensaries, 10 Health Centres and 7 Family Planning Centres. The number of medical institutions at the time of 1961 stood at 57 only. In other words there is one medical institution for 7,815 persons in the district now as against one institution for 10,589 persons in 1961, notwithstanding a growth of 25.60% in the rural population of the district during the intervening period. This speaks eloquently of the progress made in the extension of medical facilities in the district during the last decade. Besides the ratio of population to medical institutions, a factor which is of relevance is the accessibility or dispersal of such institutions. For this, it is necessary to

know the area-medical institution ratio. These ratios for different tehsils of the district will be found in the following inset table :-

INSET TABLE NO. 11

Sl. No.	Name of Tehsil	Total village paper area (in sq. kms.)	No. of medical institutions of any kind per 100 sq. kms.
1	2	3	4
1.	Pahalgam	101.06	6
2.	Anantnag	558.49	5
3.	Kulgam	501.61	6
4.	Shupiyan	306.27	5
5.	Pulwama	492.88	4
6.	Tral	153.46	3
	Total	2,113.77	5

It will be seen that there are only 3 medical institutions per 100 sq. kms. in Tral as against 6 in Kulgam or Pahalgam. Similarly, a ratio of 5 and 4 medical institutions per 100 sq. kms. returned for Anantnag and Pulwama tehsils respectively compares unfavourably with 6 for Pahalgam. Thus in spite of the progress made in the expansion of medical facilities during the last decade, a lot more needs to be done to reduce the inter-tehsil imbalances, besides making these facilities available within an easy reach of common man.

Power Supply :

The following table gives the position of power supply in the villages by reference to their distance from the nearest town:—

INSET TABLE NO. 12

Distance from the nearest town (in kms.)	Total No. of villages	No. of villages with electric power supply	
		No.	Percentage
1	2	3	4
5 or less	274	42	15.33
6—10	491	41	8.35
11—15	218	15	6.88
16—25	160	23	14.37
26—50	59	3	5.09
Total for District	1,202	124	10.32

It will be seen that only 124 of the 1,202 villages of the district have been electrified so far. 83 of these fall within a distance of 10 kms. from a town. This shows that electricity which is an important indicator of modernisation and progress, is still a wishful amenity for as many as 90% villages of Anantnag district. However, the fact that the number of electrified villages has gone up from a bare 24 in 1961 to 124 during the last eight years is by itself an impressive achievement. There is no doubt that as various power generation projects, under different stages of implementation at present, are finally commissioned, the villages of Anantnag will benefit in no small measure.

Communication :

The following table gives the channels of communication available to various villages of the district by the range of distance from the nearest town :—

INSET TABLE NO. 13

Distance from the nearest town (in kms.)	Total No. of villages	No. of villages connected by					
		Pucca road	Kutcha road	Pucca road and river	Pucca road and rail	Kucha road and rail	Others
1	2	3	4	5	6	7	8
5 kms. or less	274	103	128	8	.	...	5
6–10	491	192	243	4	...	...	1
11–15	218	70	88	1	...	...	...
16–25	160	74	55	1	...	...	...
26–50	59	11	15	...	...	...	...
Total for District	1,202	450	529	14		...	6

It will be seen that 83% of the villages of the district are connected by a communication link either in the form of a pucca or kutcha road or river. Of these villages those connected by a pucca road form 38% of the total number of villages in the district. The villages not provided with a communication link mostly fall in the distance range of 11–50 kms. from the nearest town. With larger outlays being provided for road building for the State as a whole, it can reasonably be expected that the remaining 17% villages may also be linked up in non-too distant a future. As regards a rail link, it is conspicuous by its total absence as much in Anantnag district as in other parts of the valley. The position may, however, altogether take a happy turn when the proposed programme of construction of an in-valley railway line becomes a reality.

Post & Telegraph Facilities :

According to the available information, there are 140 villages having post offices, 5 villages having telegraph offices and 7 villages having Telephone facilities in the district. Of this number, 70 post offices, 35 in each, are located in Anantnag and Kulgam tehsils.

The following inset table indicates the availability of post offices in terms of area :—

INSET TABLE NO. 14

Sl. No.	Name of Tehsil	Total village paper area (in sq. kms.)	Total No. of Post Offices	No. of Post Offices per 100 km²
1	2	3	4	5
1.	Pahalgam	101.06	9	9
2.	Anantnag	558.49	35	6
3	Kulgam	501.61	35	7
4.	Shupiyan	306.27	18	6
5.	Pulwama	492.88	31	6
6.	Tral	153.46	12	8
Total		2113.77	140	7

It will be seen that Pahalgam tehsil, because of tourist influx, takes the lead with a ratio of 9 post offices per 100 km².

In the case of other tehsils, Kulgam and Tral have returned a ratio of 7 and 8, respectively, while the remaining three tehsils viz ; Anantnag, Shupiyan and Pulwama have only 6 post offices each per 100 km².

Staple Food :

With its abundant water supply and fertile cultivable land, Anantnag district constitutes a virtual granary of Kashmir, the chief item of production being rice. It is only in villages located at higher altitudes that maize or wheat is grown in preference to rice. Consequently rice is the predominant staple food in all the tehsils of the district. Maize or wheat serves as the staple food mostly in kandi villages. It is for this reason that in Pahalgam tehsil maize constitutes a staple and co-staple food for its villages.

Land Use Pattern :

In the village papers maintained by the Revenue Organisation of the State, the land use pattern has been classified into the following 9 categories :

I. *Forests :* This includes all actually forested land (other than maintained by Forest Department) classified or administered as forests under any legal enactment dealing with forests whether State owned or private.

II. *Land Put to Non-Agricultural Uses :* This includes all lands occupied by buildings, roads, railways or under-water including rivers and canals.

III. *Barren and Unculturable Land :* This includes all barren and unculturable land, like mountains, deserts etc. and lands which cannot be brought under cultivation except at an exorbitant cost.

IV. *Permanent Pastures and Other Grazing Lands :* This includes all grazing lands whether they are permanent pastures and meadows or not, covering also village commons and grazing lands within forest area.

V. *Land Under Miscellaneous Tree Crops :* This includes all cultivable land which is not included in net area sown but is put to some agricultural use. It also includes lands used for thrashing grasses, bamboo bushes and other groves for fuel etc.

VI. *Culturable Waste :* It includes all such lands as are available for cultivation but not taken up for cultivation continuously for more than 5 years.

VII. *Fallow Land Other than Current fallows :* It includes all lands which were taken up for cultivation but have been temporarily out of cultivation for a period of not less than one year and not more than 5 years.

VIII. *Current fallows :* This represents cropped area which is kept fallow during the current year.

IX. *Net Area Sown :* This represents net area sown with crops and orchards, the areas sown more than once during the year being counted once only.

For consideration of economy in space, the nine fold classification of land use as defined above has been reduced into the following four categories for purposes of this publication :-

I. Forest
II. Cultivated Land
   a) Irrigated
   b) Un-irrigated
III. Cultivable Waste
IV. Area not available for Cultivation

The broad picture of land use pattern as it emerges at the Tehsil level on the basis of the above categorisation is reproduced in the following table :—

INSET TABLE NO. 15

Tehsil-wise land use pattern (in acres)

Sl. No.	Name of Tehsil	Forest	Cultivated land	Irrigated	Un-irrigated	Cultivable Waste	Area not available for cultivation
1	2	3	4	5	6	7	8
1.	Pahalgam	21	14,097	9,980	4,117	4,674	6,180
2.	Anantnag	274	90,345	54,060	36,285	21,434	26,182
3.	Kulgam	1,166	81,253	50,120	31,133	19,517	22,012
4.	Shupiyan	722	47,892	31,793	16,099	12,694	14,372
5.	Pulwama	2,784	81,536	42,030	39,506	18,709	18,764
6.	Tral	248	23,880	11,507	12,373	6,218	7,574

As the above table will show the total village paper area of the rural part of the district, adds upto 5,22,548 acres (including 230 acres of Bidder Hayat Pora merged with Kukernag notified area) which makes a proportion of 39.71% to the corresponding geographical area. The cultivated land claimes 64.87% of this area, the weightage of use of other categories being as under:—

1. Forest =1.00%
2. Cultivable waste =15.93%
3. Area not available for cultivation =18.20%

If we relate the total cultivated land at the district level with the population, it works out at 0.45 acres per capita. 58.85% of the cultivated land is irrigated which by itself provides an evidence of the richness of the soil. Coming down to tehsil level we find that while in terms of absolute acreage, Anantnag is on top of other tehsils, it is Pulwama followed by Shupiyan which is ahead of other

tehsils in its per capita availability, the figures being 0.55 and 0.53 acres respectively in the case of these two tehsils as against 0.39 acres in the case of Anantnag. Shupiyan appears to be placed in a better position in another respect also and that is that 66.38% of its cultivated land is irrigated as against 59.84% in the case of Anantnag and 51.55% in case of Pulwama. Kulgam is also relatively better placed than Anantnag with 65.55% of its village paper area being cultivated, of which 61.68% is irrigated. Even on per capita basis, the cultivated land available in this tehsil works out to be slightly higher, being 0.41 acres. Pahalgam which is the smallest tehsil of the district is also the smallest in area. The per capita cultivated land available in this tehsil also works out to be the smallest at 0.37 acres, though it has the distinction of 70.80% of this land being irrigated which is the highest proportion of irrigated land among all the tehsils of this district.

It would be interesting to see how far the hypothesis that nearer a village to an urban centre, lesser the proportion of cultivable waste holds good in the district. This is attempted in the following inset table :—

INSET TABLE NO. 16

Distance from the nearest town (in kms.)	Total No. of villages	Total cultivated land	Average cultivated land per village	Total cultivable waste	Average cultivable waste per village	Percentage of cultivable waste per village to average cultivated land per village
1	2	3	4	5	6	7
5 or less	274	77,636	283	16,052	59	20.84
6—10	491	127,583	260	32,580	66	25.38
11—15	218	57,105	262	14,142	65	24.80
16—25	160	56,967	356	15,694	98	27.52
26—50	59	19,712	334	4,778	81	24.25

As the table will show, the hypothesis by and large appears to be valid, though not consistently so. This is partly for the reason that as mentioned earlier also, all the urban centres recognised as such in the district have not developed their urban character to an extent where they could become an influencing factor for the land use pattern for the neighbouring rural areas in a significant way. In the case of villages falling at a distance of more than 26-50 kms. away from the nearest town, if the percentage of culturable waste is lower than in the villages located at a lower range of distance, it is primarily because practically most of them are hilly with meagre irrigational facilities open to them. Consequently, the cultivated land in these villages is less fertile and less productive which makes it imperative for the cultivators to resort to extensive cultivation to the extent it is economically feasible for them, thereby reducing the acreage under cultivable waste to the minimum.

PART X-B

VILLAGE AND TOWNWISE PRIMARY CENSUS ABSTRACT

Household Size :

The average size of household in the district stands at 6.5 as against 6.0 for the State as a whole. The position is more or less the same at the tehsil level except in the case of Pahalgam where the average size of the household is 5.9. There is no significant variation between the rural and the urban household size either at the district or at the tehsil level.

It is of significance to note that practically the whole population of the district has some shelter to live in, the number of houseless being a mere 400 and odd from out of a population of more than eight lakhs. The number of persons living in institutional households is equally negligible.

Population and its Growth :

With a population of 832,280 made up of 450,353 males and 381,927 females as returned at the 1971 Census, Anantnag claims to be the most populous district of the State. The corresponding population in 1961 was 649,120 persons (349,070 males and 300,050 females). The district has thus registered a growth of 28.22% in its population during the last decade.

Going down to the tehsil level, Kulgam which contributes 24.39% of the population of the district has recorded the highest growth rate of 32.16% during the decade followed by Pulwama tehsil which constitutes 18.67% of the total population of the district and has recorded a growth rate of 30.29%. Anantnag tehsil which is the largest amongst all the tehsils of the district accounting for 32.98% of the district population has recorded a growth rate of 26.86% since 1961. Pahalgam which is the smallest tehsil of the district claiming only 4.89% of the district population has recorded the lowest growth rate of 21.36% during the decade. Shupiyan and Tral tehsils which contribute 11.81% and 7.26% of the population of the district respectively have returned a growth rate of 26.63% and 23.97% during the last 10 years.

The district continues to be predominantly rural with 91.08% of its population still immersed in its villages. The low proportion of 8.92% of the population living in the urban sector of the district pales into insignificance even when compared with the proportion of urban population at the State level which is 18.59% of the total population. At the tehsil level, Kulgam, Pulwama and Pahalgam have registered the lowest urbanisation with the proportion of their urban population standing at 3.14%, 5.52% and 5.74% respectively. The only tehsils where the proportion of urban population is significantly higher than for the district as a whole are Anantnag and Tral where it constitutes 15.54% and 10.70% of the tehsil population respectively.

Sex Ratio :

The sex - ratio of the population shows that there are 848 females per 1,000 males in the district. The corresponding ratio according to the 1961 Census was 860 females per 1,000 males. This shows that sex ratio is even more unfavourable to females in the district when compared to the ratio at the State level which stands at 878 females per 1,000 males. No specific explanation can be given to justify this unusually masculine composition of the population of the district. Broadly, however, it may be attributed largely to the usual observation that females generally suffer extra risks of mortality right from birth to old age which leads to higher death rate in their case than those experienced by males. Relative social neglect and high incidence of maternity deaths are two of the factors contributing to this phenomenon.

At the tehsil level, the lowest sex-ratio has been returned in the case of Pahalgam and Shupiyan with 820 and 832 females per 1,000 males respectively. This is perhaps due to large proportion of population of these tehsils living in hilly areas with little facilities available to people in the field of medical care and maternity welfare.

Literacy Level :

As against a literacy level of 18.58% for the State as a whole which by itself is low compared to any other State of the country, the proportion of literate population in Anantnag district is even lower standing at 14.98%. For the two sexes separately, the literacy level works out to be 23.60% for males and 4.81% for females. However, compared to the position obtaining in 1961 when

the literate proportion of the population of the district constituted only 8.04% (13.69% for males and 1.47% for females), the progress achieved during the decade is by no means insignificant.

At the tehsil level, Pahalgam ranks lowest with a literacy level of 10.6% (17.36% for males and 2.28% for females). On the other hand, Anantnag tehsil ranks at the top with a literacy level of 17.14% (26.03% for males and 6.65% for females). Tral with a ratio of 16.77% (26.77% for males and 5.12% for females) follows. The position in respect of other tehsils is more or less the same as at the district level.

It is pertinent to note here that all the literacy figures indicated above are inclusive of the population in (0-4) age-group.

Work Participation :

The 1971 Census has returned the number of workers for the district as a whole at 258,922. This makes a proportion of 31.11% of the total population of the district. Sex-wise the proportion works out to be 54.87% for males and 3.10% for females. The 1961 Census proportion of workers to the total population of the district was 43.84%—58.95% for males and 26.25% for females. This apparent drop in the work participation ratio in 1971 as compared to 1961 is due mainly to the two different definitions of work adopted at the two respective censuses. For convenience of reference, these are reproduced below :

Definition of Worker–1971 Census :

Every person was asked what his main activity is, that is, how he engages himself, mostly. For the purpose of this question, all persons got themselves divided into two broad streams of main activity, namely (1) workers and (2) non-workers according to the type of main activity that the person returned himself or herself engaged in mostly.

A 'worker' was a person whose main activity was participation in any economically productive work by his physical or mental activity. 'Work' involved not only actual work but effective supervision and direction of work.

The reference period was one week prior to the date of enumeration in the case of regular work in trade, profession, service or business. If a person had participated in any such regular work on any one of the days during this reference period and this had been returned as his or her main activity, the person was categorised accordingly. A person who normally worked but had been absent from work during this reference period on account of illness or travel, holiday, temporary breakdown, strike etc. the person was treated as engaged in regular work in which he or she would have otherwise been employed but for his or her temporary absence. Persons under training such as apprentices with or without stipends or wages were considered as economically active and recorded as working. A person who had been merely offered work but had not actually joined it, was not to be treated as engaged in work.

There are certain types of work which are not carried on throughout the year such as cultivation, livestock keeping, plantation, some types of household industry etc. A person's main activity was ascertained with reference to such work in the last one year even if he or she was not economically active in the week prior to enumeration. It was likely that even when a person otherwise engaged in some other work during the period of one week prior to the date of enumeration, had, as his or her main activity, cultivation, agricultural labour or some other work attended to normally by him or her in the course of the year. Care was taken to see that the main activity was properly ascertained in such cases. For example, a person's main activity may have been agricultural labour and in the week prior to enumeration he or she may have been engaged as a sugarcane factory labourer or as a road coolie. He or she was categorised for his or her main activity as agricultural labourer only as he or she engaged himself or herself mostly in that work and the other work was treated as his or her subsidiary work.

A man or woman who was engaged primarily in household duties such as cooking for own household or performing own household duties or a boy or a girl who was primarily a student attending an educational institution, though at the same time helping in the family economic activity but not as a full-time worker, was not

treated as a worker for the main activity. On the other hand, if a person was primarily engaged in some economic activity but at the same time attended to some household chores or attended a night school etc., he or she was treated basically as a worker for the main activity and categorised accordingly.

A person who merely received an income such as a rent receiver or a pensioner who had not to work for receiving the income, was not treated as economically active unless the person was also engaged in some economic activity and only if that activity was returned as the main activity of the individual.

Definition of Worker–1961 Census :

The basic qualifications of the definition of 'work' was satisfied at the 1961 Census in the case of seasonal work like cultivation, livestock, dairying, household industry etc., if the person had some regular work of more than one hour a day throughout the greater part of the working season. In the case of regular employment in any trade, profession, service, business or commerce, the basis was satisfied if the person was employed during any of the fifteen days preceding the day on which the household was enumerated. If on the check of revisional round such a person was found to be unemployed, no change in the original entry was to be made. A person who was working but was absent from his or her work during the fifteen days preceding the day on which enumerated or even exceeding the period of fifteen days due to illness or other causes was treated as worker. A person who had been offered work but had not actually joined was treated as non-worker. However, as in the case of 1971 Census, 'work' included not only actual work but effective supervision and direction of work.

Persons under training as apprentices with or without stipend or wages were regarded as working. An adult woman who was engaged in household duties but doing no other productive work to augment the family's resources was not considered as working for purpose of this question. If, however, in addition to her household work such as rice pounding for sale or wages, or in domestic service for wages for others or minding cattle or selling firewood or making and selling cowdung cakes or grass etc. or any such work she was to be treated as worker.

A public or social service worker who was actively engaged in public service activity or a political worker who was also actively engaged in furthering the political activity of his or her party was regarded as a worker and entered accordingly.

It is evident that the 1961 definition of work was on the liberal side and was bound to have exaggerated the position of work participation rates of the population. As already explained, under this definition a person was categorised basically as an economically active worker even if such a person's contribution to work was extremely marginal. In respect of seasonal work, if a person had put in an hour's work a day during the major part of a working season, such a person was treated basically as an economically active worker. So much so, if a woman who was basically engaged in attending to household duties or assisting her husband even for about an hour in tending cattle, in any process of cultivation, in household industry or any other economic activity, she was unambiguously returned as a worker. Similarly a full-time student, if he or she sat for a little time, however, brief, in his or her father's shop even on a single day in a fortnight preceding the enumeration, he or she was treated as an economically active worker.

At the 1971 Census every individual was required to declare himself or herself what according to him or her was his or her main activity. If his or her answer indicated that he or she was economically active worker, he or she was classified as working as a cultivator, or as an agricultural labourer or engaged in household industry or in other work such as, forestry, mining, manufacture, trade, transport, services etc. If a person returned himself or herself basically as not engaged in any economic activity, such a person was required to state if he or she was engaged in household duties, or was a student, a retired person or a rentier, a dependant, a beggar or a vagrant, inmate of a charitable or penal institution or other non-worker such as being mostly an un-

employed person he or she was returned as a non-worker. In addition, at this Census everyone was also asked to state if he or she attended to any secondary work for the purpose of finding out his or her marginal contribution to work in the case of those who had declared themselves basically as a housewife or a full-time student.

The work participation figures as presented in the P. C. A. by the nine Standard Industrial categories relate to only those who were returned as workers according to their main activity, excluding such persons who were returned only as secondary workers. For this reason, the 1971 Census figures of workers are not strictly comparable with those of 1961 Census.

Rural-Urban Ratio :

A comparison of the rural and urban participation rates of the district shows that the proportion of workers to the total population is lesser in urban areas than in the rural areas, the two proportions being 27.12% and 31.50% respectively. The predominance of primary activities like cultivation and agricultural labour gives an edge to the rural areas over urban areas in the matter of work participation, though the workers mainly engaged in these activities may not generally be fully employed. For this very reason, the work participation rates of females is also higher in the case of rural areas than urban areas, the two ratios being 3.20% and 2.02% respectively. It would be pertinent to note here that from out of 11,133 females returned as workers in the rural areas of the district, 8,484 or 76.21% have returned cultivation as their main activity. The position in the urban areas of the district, on the other hand, is that out of a total of 694 female workers, 214 or 30.84% alone have been returned as engaged in cultivation. The same picture is more or less discernible at the tehsil level also.

A comparison of the sectoral distribution of workers between rural and urban areas either at the district or at the tehsil level will show that even though almost all the towns of the district still retain much of their rural character, there is a definite shift in favour of secondary and tertiary sectors of employment in these areas as compared to the rural areas where agriculture continues to be the primary economic pursuit. In this context it is significant to note that while in the rural areas of the district, 81.71% of the workers are absorbed in the primary sector of economic activities like cultivation and agricultural labour etc. these activities claim only 28.32% of workers in the urban part of the district. On the contrary, 71.68% of the urban working force is engaged in secondary and tertiary sectors as against 18.29% of the rural working force. At the tehsil level, this type of trend in the pursuit of economic activity is more pronounced in the tehsils of Anantnag, Shupiyan and Pulwama where the urban units are relatively more developed with better facilities of urban infrastructure.

*Represents Provisional "geographical area" figures supplied by the Surveyor General, India. Figures for urban areas are those supplied by the local bodies. Area figures for Rural areas are derived by subtracting the Urban area from the total area of District. The total of the area figures of the Tehsils will not tally with the District figures because the former represent "Land use" area and are derived from the figures supplied by the Revenue Department.

Conversion factor 1 Acre=0.40,469 Hectares and 100 Hectares=1Km^2.
