DISTRICT CENSUS HANDBOOK
1951

AGRA DISTRICT

FOREWORD

Several States, including Uttar Pradesh, have been publishing village statistics by districts at each census. In 1941 they were published in U. P. under the title "District Census Statistics" with a separate volume for each district. In the 1951 census, when the tabulation has been more elaborate than ever in view of the requirements of the country, the district-wise volume has been expanded into a "District Census Handbook", which now contains the District Census Tables (furnishing data with break-up for census tracts within the district), the District Index of Non-agricultural Occupations, agricultural statistics from 1901-02 to 1950-51 and other miscellaneous statistics in addition to the usual village population statistics. The village population statistics also are given in an elaborate form giving the division of the population among eight livelihood classes and other details.

2. It may be added here that a separate set of district-wise volumes giving only population figures of rural areas by villages and of urban areas by wards and mohallas and entitled "District Population Statistics" has already been published. This separate series was necessitated by the urgent requirements of the U. P. Government for elections to local bodies.

3. The number of District Census Handbooks printed so far is thirty seven. Special arrangements for speeding up the printing have now been made and it is hoped that the remaining Handbooks will be printed before the end of 1955.

RAJESHWARI PRASAD, I.A.S.,
Superintendent, Census Operations,
Uttar Pradesh.

RAMPUR:
September 30, 1955.

INTRODUCTION

A—The District

1. The district of Agra occupies the south-west corner of Uttar Pradesh. Two of its tehsils, Etmadpur and Firozabad lie north of the Yamuna and the remaining five, Agra, Fatehabad, Bah, Kheragarh and Kiraoli, south of it. To the north lie the districts of Mathura and Etah , on the east Mainpuri and Etawah, on the south Gwalior, Dholpur and Bharatpur and on the west Bharatpur and Mathura. In 1951 it had a total area of 1,860 sqaure miles which is less than that of the average district area of the State. Its population was 15.01 lakhs. It has 7 parganas and 26 thanas.

Topography

2. The various rivers divide the district into natural divisions. Tehsils Etmadpur and Firozabad lie in the Ganga-Yamuna *Doab*; Bah in the Yamuna-Chambal *Doab*; Fatehabad, Agra and north-east Kiraoli in Yamuna-Khari *Nadi Doab* and northern Kheragarh in the Khari *Nadi*: Gambhir-Banganga *Doab*. The latter two form the central tract. To these must be added southern Kheragarh which is the valley of Kawar *Nadi*, and south-western Kiraoli, the area in which the Khari *Nadi* rises. The Ganga-Yamuna *Doab* is a level expanse of upland. Here and there may be seen narrow ridges of sandy hillocks, but the soil is for the most part a light yellow loam or *piliya*. Towards the Yamuna there are extensive ravines. The central tract comprises a uniform upland country, only broken by the Khari *nadi* and an ill-defined drainage channel known as the *Dahar* or *Nahra* and generally termed the western depression. The latter lies between the Khari *Nadi* and Yamuna and is the old course of the Son *Nadi*. A few ranges of low rocky hills crop up out of the level alluvium in the west from Kiraoli to Fatehpur Sikri. As in the Ganga-Yamuna *Doab*, the edges of this tract are marked by ravines. Along the banks of Yamuna and Utangan there is the usual strip or *Khadir* or *Kachhar*. In the *Dahar* there is a good deal of *kans* growing sand and some *kankar*. In northern Kheragarh the soil is more bitter and there are large areas of sand (*kansreta*) which grows *kans*. In the north-west corner of Kheragarh drainage is poor, the soil is infertile and mixed with *kankar*. The tract comprising of the Bah tehsil is a long and narrow strip in the south-east between the Yamuna and Chambal. Half the areas is occupied by the deep and far-spreading ravines of these two rivers and the uplands which form the watershed are a mere ridge. The chambal lowlands are enriched with silt and are productive. In southern Kheragarh the country is affected by hills and isolated eminences scattered over the whole area, as well as the several water courses by which the tract is traversed. Most of it consists of a heavy, generally bitter, soil known locally as *khorili*. South-west Kiraoli is also slightly undulating. Like Southern Kheragarh, the chief feature of landscape in this tract is a succession of parallel ridges of red sandstone hills rising two or three hundred feet above the plain. These hills in Southern Kheragarh and south-west Kiraoli are in many places worked for stone, best being obtained from the quarries of Tantpur in Kheragarh. Both of these tracts are extremly precarious.

The bulk of the district does not suffer in any way from defective drainage, and the only portion at all liable to drainage from floods is the upper valley of the Khari *Nadi*, where the spills of Banganga are apt to cause considerable injury to the *kharif* crop. But they enable a large area to be sown in *rabi*. *Jhils* are extremely rare and the only true *Jhil* in the district is at Sarendha in Kheragarh.

Soils

3. The most prevalent soil of the district is the ordinary *dumat* or loam. The soil in the Ganga-Yamuna *Doab* consists of a light loam known as *piliya* from its colour which is reddish yellow. In the north, however, there is a good deal of high *bhur* with clay or *chiknot* in the intervening depressions. In Agra-Fatehabad there is hardly any clay and the soil generally resembles that of the *Doab*. In the *Dahar* there is sand and *kankar*. In the south-west of Agra and in the north-east of Kiraoli the soil is in some places whitish in colour and slightly bitter. In northern Kheragarh the soil resembles that in Agra but is lighter in colour and more bitter. There are large areas of sand (*kansreta*). In the north-west corner the soil degenerates due to poor drainage and consists of bitter whitish clay or *potni* which is often mixed with *kankars* and is infertile. In tehsil Bah the soil in the north is similar to *piliya*, but in the east it degenerates into a redder and less fertile soil, *lalmata*. South of the loam (*piliya*) is a belt of clay or *chokta* or *chiknot* which is sticky when wet and which splits into large holes when dry. This is overlaid in places with sand or *kansreta*, presumably wind borne from the Yamuna sand hills. It grows *kans* and is very infertile. The south-west of Bah consists almost entirely of a black, generally sticky, soil known as *mar or karmata*. This grows wheat, juar and gram. It required strong bullocks and its cultivation depends on timeliness of rains. Southern Kheragarh comprises of a heavy bitter soil known as *khorib*. Near the hills there is red soil. The higher ground in south-west Kiraoli is composed of *kansreta* and the depressions of *chiknot*. The intermediate soil is inferior loam of the *khorili* type. Black soil is also occasionally found.

Classification of area

4. The figures of the classification of area for the last fifty years are given in Table 2 of Part III of this volume. The proportion of area under the various categories works out as follows for 1950-51:

Particulars	Actual figures (in acres)	Percentage
Cultivated area	863,133	72·5
Culturable waste (excluding current fallow)	89,721	7·5
Current fallow	28,084	2·4
Forest	12,452	1·1
Area not available for cultivation of which—	196,836	16·5
(*a*) *Covered with water*	28,432	2·4
(*b*) *Under sites, roads and buildings*	38,341	3·2
(*c*) *Barren*	130,063	10·9

The figure in the above table regarding culturable waste taken from the Season and Crop Report is, however, misleading. The State Agriculture Department conducted in 1949-50 a detailed enquiry through the District Officers regarding the nature of this area in each district. The following analysis of the area resulted from this enquiry :

Particulars	Area (in acres)	Percentage
Total culturable waste (A + B + C)	**99,032**	**100**
A—Area under culturable waste land not avilable for immediate cultivation	17,238	17·41
(i) Forest under any legal enactment	4,453	4·50
(ii) Groves	4,952	5·00
(iii) Forest of timber trees	28	0·03
(iv) Thatching grasses, shrubs and bushes	7,774	7·85
(v) Land kept for grazing	31	0·03
B—Area under culturable waste land available for immediate cultivation but which could not be cultivated	75,427	76·16
Of which due to—		
(i) *Kans* growth	..	..
(ii) Threshing floors	871	0·88
(iii) Malaria	..	..
(iv) Floods	..	..
(v) Lack of drains	234	0·24
(vi) Lack of water	9,543	9·63
(vii) Distance from *abadi*	340	0·34
(viii) Damage from wild animals	860	0·87
(ix) Other causes	63,579	64·20
C—Area under culturable waste land that can be brought under immediate cultivation after some improvements besides the area given against 'B'	6,367	6·43

From the above it will appear that of the total area recorded as cultivable waste, only 6·4 percent was really capable of being brought under immediate cultivation after some improvements.

Thus the land area cultivated and cultivable including current fallow *per capita* works out to 65·3 cents of which 59.4* cents have already been brought under cultivation and only about 0·4 cents can be further brought under the plough after some improvements. It is obvious that the saturation point for cultivation has already been reached in the district.

Climate and rainfall

5. The climate is reported to be healthy. It is drier and hotter than that of any neighbouring district. The hot weather lasts longer than in the north of the State and the rainfall is decidedly less. Agra may claim to be the warmest station in the State. In January frosts are common.

The district receives a scanty and capricious rainfall. The average annual rainfall for the last quinquennium was 32 inches. For the last fortyfive years the average rainfall has been 26·37 inches. Variations in rainfall from year to year have been very striking. The wettest years since 1901 are 1917-18 (41·1 inches), 1933-34 (39·5 inches), 1936-37 (39·0 inches) and 1949-50 (40·6 inches). The rainfall was the lowest in 1913-14 (9·1 inches). In about half the number of years there is no rain in October or November. The average winter rainfall is very low. If the monsoon is light, the *rabi* area contracts heavily; the *rabi* outturn depends on the *rabi* rains and these fail in one year out of five. The small rainfall would suffice for the district if it came when it was wanted, but the distribution is as faulty as the volume.

Irrigation

6. In the better portions of the district the dificiency in rain can be supplemented to some extent by irrigation. Out of the upland loam more than half is irrigated regularly or can be irrigated at need; but over the whole area of holdings in 1950-51, 620,779 acres or 71·9 per cent. are classed as unirrigated and 242,354 acres or 28·1 per cent. as irrigated. The chief source of irrigation is by canals and wells. Of the wet area in 1950-51, 59·7 per cent. was irrigated by canals, 39·1 per cent. by wells and 1·2 per cent. by other sources. Wells are poor and easily fail. In Bah water level is very low; in south-west Kiraoli and Southern Kheragarh water is close to the surface, but the sub-soil is peculiar. It consists of sand. The district does not get sufficient water from tne canals also. It comes at the tail end of the canal irrigation system.

*This figure also includes the area classed as current fallow.

7. More acreage is sown under *kharif* crops than in *rabi* crops. The area under *kharif* in 1950-51 was 488,151 acres, that under *rabi* 475,270 acres; and that under *zaid* crops 3,857 acres. The chief *kharif* staples are the millets, bajra and juar and cotton. The important *rabi* crops are wheat, gram or mixed crops. Oil seeds are also important. The area under sugar-cane in the last quinquennium (average) was 13,601 acres and that under cotton 3,121 acres. The latter is on the decline. **Crops**

B—Analysis of the Statistics

1. The table below shows the two basic figures—land area and population—and the derive figures of land area *per capita*: **Population : General distribution and density**

Tehsil	Population (in lakhs)	Density (number per square mile)	Land area (in lakhs of acres)	Land area *per capita*
Agra	5·12	2,339	1·40	0·27
Bah	1·52	449	2·16	1·42
Etmadpur	2·05	738	1·78	0·87
Fatehabad	1·39	579	1·54	1·11
Firozabad	1·99	981	1·30	0·65
Kheragarh	1·45	470	1·97	1·36
Kiraoli	1·49	547	1·75	1·17
Agra district	*15·01*	*807*	*11·90*	*0·79*

This district though twenty-eighth in order of area stands thirteenth in the State in respect of population. It is one of the thirteen districts with a density of over 800 persons per square mile while the average density of the State is 557 only. The density of the district is to a great extent inflated by the presence of large towns as the rural density of the district is only 554 persons per square mile, the density of the rural parts of the tehsils being: Agra 697, Bah 433, Etmadpur 679, Fatehabad 538, Firozabad 666, Kheragarh 465 and Kiraoli 499. It is, however, clear from the above table that, the people in the district are not distributed among the different tehsils in any kind of orderly proportion to the land area. Tehsils Bah and Kheragarh belong to the trans-Yamuna tract. Kheragarh is one of the least fertile tehsils and has got hilly tract. Bah is in many parts very similar to the Hills and Plateau division of the State. It has numerous ravines. Tehsil Kiraoli is one of the fertile tehsils but in its south-western portion some low hills crop up. These factors account for the low densities in Bah, Kheragarh and Kiraoli. (*vide* Tables A-I and E).

2. The population of the district in 1951 was 41·7 per cent. higher than what it was fifty years ago. Compared to this the increase in the population of the State during the corresponding period has been only 30 per cent. The table below exhibits the variation in the total, rural and urban population for the last five decades : **Growth of population**

Census year	Population			Variation		
	Total	Rural	Urban	Total	Rural	Urban
1901	1,059,654	824,348	235,306			
1911	1,020,879	791,329	229,550	—38,775 (—3·7)	—33,019 (—4 0)	—5,756 (—2·4)
1921	923,264	682,665	240,599	—97,615 (—9·6)	—108,664 (—13·7)	+11,049 (+4·8)
1931	1,047,389	756,797	290,592	+124,125 (+13 4)	+74,132 (+10 9)	+49,993 (+20·8)
1941	1,288,478	911,846	376,632	+241,089 (+23·0)	+155,049 (+20 5)	+86,040 (+29·6)
1951	1,501,391	1,003,529	497,862	+212,913 (+16·5)	+91,683 (+10·1)	+121,230 (+32 2)

Between 1901 and 1921 the population of the district recorded a decrease of 12·9 per cent. when that of the State decreased by 4·0 per cent. During 1901—1911 the district suffered considerably from plague and epidemic malaria. The decrease for the decade 1911—21 is due to the heavy mortality from influenza epidemic of 1918-19. Abnormal deaths did not occur or were prevented from occuring in the post-1921 period and the population of the district recorded a phenomena

increase of 62·6 per cent. since 1921 against an increase of 35·5 per cent. in the population of the State during the same period.

The variation in the population of tehsils during 1941—51 is shown in the marginal table. In the Agra and Firozabad tehsils the larger increase is due chiefly to the growth of Agra and Firozabad cities. These tehsils are also comparatively healthier than others and comprise of a level and well-cultivated plains.

Tehsil	Percentage variation 1941-51
Agra district	*+16·5*
Agra	+21·6
Bah	+11·8
Etmadpur	+13·3
Fatehabad	+ 8·9
Firozabad	+27·6
Kheragarh	+ 8·2
Kiraoli	+12·4

The Vital Statistics

3. Births and deaths mainly account for the trends in population growth. Migration also is a factor though of lesser importance. The following table gives the mean decennial registered birth and death-rates and the calculated natural increase rates and population growth-rates of the last three decades for the district as a whole and for its rural and urban areas:

	Total	Rural	Urban
Mean decennial birth-rate			
1941—50	31·6	26·4	43·2
1931—40	39·9	37·5	45·7
1921—30	39·9	39·3	41·7
Mean decennial death-rate			
1941—50	18·6	15·6	25·2
1931—40	21·8	19·0	28·8
1921—30	26·4	25·1	29·8
Mean decennial rate of natural increase			
1941—50	13·0	10·8	18·0
1931—40	18·1	18·5	16·9
1921—30	13·5	14·2	11·9
Mean decennial growth-rate			
1941—50	15·3	9·6	27·7
1931—40	20·7	18·6	25·8
1921—30	12·6	10·3	18·8

There are ommissions in the registration of births as well as deaths and so the above rates do not represent the true picture. They may, however, be taken to be roughly indicative of trends. They indicate that both birth and death-rates have fallen during the last decade.

The figures of natural increase and growth-rate suggest loss of population by migration during 1921—30 and gain during 1931—40 and 1941—50.

The average yearly mortality from various causes in the district during 1941—50 was as follows :

Causes	Number of deaths	Percentage of total deaths
Fever	15,149	58·4
Dysentery and diarrhoea	1,177	4·5
Respiratory diseases	4,453	17·2
Plague, cholera and small-pox	384	1·5
Others	4,758	18·4

As in the rest of the State 'fever' is responsible for a majority of deaths. But fever covers a number of ailments which the reporters are unable to identify. Deaths from respiratory diseases are also high. (*Vide* Table I, Part III of this Volume).

Migration

4. About 84·1 per cent. of the people enumerated in the district at the census of 1951 were born there, 7·8 per cent. were born in the other districts of the State, 5·1 per cent. were born in other parts of India and only 3·0 per cent. came from other countries. Of the immigrants from the districts of the State as many as 104,244 (males 33,672, females 70,572) are from the other districts of the same natural division and only 12,627 (males 8,025, females 4,602) are from other parts of the State. Most of the migration from neighbouring districts is marriage migration. Of 72,093 immigrants from adjacent States 48,119 (males 11,297, females 36,822) are from

Rajasthan; 11,355 (males 2,374, females 8,981) are from Madhya Bharat; 6,979 (males 2,926, females 4,053) are from Punjab and 2,335 (males 1,558, females 777) are from Delhi. The movement to the city of Agra from Rajasthan 7,998 (males 4,086, females 3,912) and Madhya Bharat 2,166 (males 1,205, females 961) appears to be of semi-permanent type, usually by families and sometimes by males alone. The migration from Punjab 5,747 (males 2,325, females 3,422) is also mostly labour migration and is of semi-permanent type. The remainder of the migration is mostly marriage migration. **Migration—(*contd.*)**

Of the immigrants who have come from territories beyond India 44,791 (males 25,351, females 19,440) were born in Pakistan and 488 (males 305, females 183) had their birth place in other territories. The Pakistan-born are the displaced persons who number 44,695. Of the immigrants born in other territories 339 (males 189, females 150) are Nepal-born.

Of the 26 non-Indian nationals 16 are British and 7 are Italian.

Unfortunately the figures of emigration from Agra are not available. According to the vital statistics there was a loss of about 9,500 during 1901—10 and a gain of about 30,000 during 1931—40 and of about 31,000 during 1941—50. (*Vide* Tables D-IV and D-VI).

Decline of cultivation *per capita*

5. We may now analyse the growth of population in the district during the last thirty years in relation to the growth of cultivation during the same period. (Figures of area sown under census years are quinquennial averages for the five years ending with the crop year immediately preceding the census year). It is obvious that cultivation has failed to keep pace with the population. The cultivated area *per capita* has gone down to 55·9 cents in 1951 from 80·4 cents in 1921. The magnitude of this drop is about one-third of the 1921 level. It means that (other things being equal) every man, woman and child must expect to get less food and other agricultural produce from the land in 1951 than in 1921.

Census year	Population*	Net area sown (in acres)	Area of cultivation *per capita* (in cents)
1921 ..	924,155	743,144	80·4
1931 ..	1,048,316	750.255	71·6
1941 ..	1,289,774	779,459	60·5
1951 ..	1,501,391	839,528	55·9

Double cropped area *per capita*

6. It may be examined whether this shortage has been compensated by an increase in yield per acre. Increase in yield can be brought about by more double cropping, more irrigation, better fertilisation and better culture. The average (quinquennial) area sown more than once was 105,170 acres in 1921. It slightly decreased to 102,291 acres in 1931. It had further fallen down to 92,392 acres in 1941 but there was a substantial increase to 113,459 acres in 1951. The figures of double crop area *per capita* in cents are as below:

Particulars	Quinquennial average for the year preceding			
	1951	1941	1931	1921
Double crop cultivation *per capita* in cents	7·6	7·2	9·8	11·3
Unirrigated double crop cultivation *per capita* in cents ..	6·4	5·3	8·3	9·6
Irrigated double crop cultivation *per capita* in cents	1·2	1·9	1·5	1·7

It is evident that double cropped area has not kept pace with the rate of growth of population though it has slightly increased from 7·2 in 1941 to 7·6 in 1951.

Irrigated area *per capita*

7. The average area irrigated was 215,445 acres in 1921. The figures were 218,630 acres in 1931, 238,288 acres in 1941 and 226,498 acres in 1951. The average area irrigated more than once was 16,095 acres in 1921, 15,508 acres in 1931, 24,645 acres in 1941 and 17,534 acres in 1951.

The figures of irrigation *per capita* are shown in the table below:

Particulars	Quinquennial average for the year preceding			
	1951	1941	1931	1921
Irrigated single crop cultivation *per capita* in cents	13·9	16·6	19·4	21·6
Irrigated double crop cultivation *per capita* in cents	1·2	1·9	1·5	1·7

The trend is distinctly towards a decline.

Cropped area

8. There has been an increase in the area under food crops. During the quinquennium 1916—21 84·3 per cent. of the cropped area was under food crops and only 15·7 per cent. under non-food crops. Thirty years after during 1946—51 the cropped area under food crops was 89·3 per cent. and that under non-food crops 10·7 per cent.

* The figures of population of the various censuses relate to the then lay-out of the district.

The proportionate area under different crops between 1911—16 and 1946—51 was as below:

Quinquennial average of	Total cropped area	Percentage of cropped area under						
		Wheat	Barley	Maize	Gram	Juar	Bajra	Others
1911—16 ..	850,616	10·5	13·1	0·7	18·3	9·2	20·9	27·3
1916—21 ..	823,028	9·3	11·5	0·9	16·0	9·7	23·7	28·9
1921—26 ..	861,225	11·2	10·3	0·5	25·1	10·3	18·9	23·7
1926—31 ..	864,154	11·3	10·4	0·8	22·1	10·0	21·5	23·9
1931—36 ..	871,432	10·7	9·7	0·7	22·2	9·6	22·9	24·2
1936—41 ..	874,982	13·0	9·8	0·5	19·7	7·5	25·7	23·8
1941—46 ..	897,898	11·6	8·4	0·8	19·5	6·2	30·7	22·8
1946—51 .	957,697	12·6	10·4	0·4	22·7	5·8	26·4	21·7

In 1901-02 the area under cotton was 103,897 acres while in 1950-51 it was only 2,154 acres. Indigo has gone out of cultivation. The area under it was 1,832 acres in 1901-02 while in 1950-51 there was no cultivation of Indigo at all. The area under sugarcane has increased from 3,872 acres in 1901-02 to 15,630 acres in 1950-51.

Live-stock, Ploughs and carts

9. Live-stock in this country live for a large part of the year on by-products of agriculture supplemented by green fodder crops. They have, therefore, to be co-related not only with the grazing available but also with the total area under cultivation which carries a major portion of the burden of supporting the cattle population.

As will appear from Table 3 of Part III the total number of cattle and buffaloes which had decreased from 1935 to 1944 has during 1944—51 increased from about 4·78 lakhs to 5·27 lakhs. The number of working cattle and buffaloes was 1·42 lakhs in 1935, 1·40 lakhs in 1944 and 1·48 lakhs in 1951. The number of working cattle appears to be governed by the number of ploughs and carts. The number of ploughs have gone up from 78·3 thousands in 1944 to 97·2 thousands in 1951 due apparently to progressive fractionalization of holdings. The number of carts also started rising since 1935. They were 8·4 thousands in 1935 and the figure now stands at 10·6 thousands. The average net cultivated area per plough works out to 8·9 acres in 1951 as against 11·8 acres in 1920, and the average net cultivated area per pair of working cattle works out to 11·6 acres in 1951 as compared with about 10·7 acres in 1935.

Breeding cows and she-buffaloes which fell from 1·88 lakhs to 1·80 lakhs during 1935—44 have gone up to 2·07 lakhs in 1951. The cows and female buffaloes in milk per 1,000 of human population were 23 and 40 respectively. Owing to the poor milk yield the share of milk per head is only a few ounces per day.

The number of sheep which was nearly stationary at about 60,000 for 1920—44 has suddenly gone down to 27,000 due apparently to shortage of pasture. Goats have been going down in number since 1935 when they were about 1·93 lakhs. Their number in 1951 was about 70,000, the reduction during 1944—51 alone being about 56 per cent.

Horses and ponies also are declining in number. During 1944—51 their number has been almost stationary. The number of donkeys had also been stationary during 1944—51 at about 12,000.

Poultry decreased from about 23 thousands in 1944 to about 19 thousands in 1951.

Distributed on 1,000 of human population the figures of the main categories of live-stock in 1951 are as follows:

Cattle	Buffaloes	Sheep	Goats	Poultry	Others
173	178	18	47	13	30

10. To sum up, the population of the district is growing up at the biological natural rate since 1931. But on the other hand, the land area *per capita* and the irrigated area *per capita* are steadily declining. The double crop area *per capita* has slightly increased between 1941—51 but as compared to quinquennial averages for 1921 or 1931 it has declined. There is at the same time no evidence that crop yield per acre has increased. The cultivated area *per capita* in the district is small and conditions in large portions of the district make it precarious. There is also a liability to repeated crop failures when the rainfall is irregular. A slight disturbance by drought is likely to cause serious scarcity conditions. Besides, the marching desert is a great menace to the stability of cultivation in the district.

Villages and towns

11. The district has 1,188 villages and 13 towns. Out of about 15.0 lakhs people who were counted at the census of 1951, 10.0 lakhs were found in villages and 5.0 lakhs in towns, i.e., there are as many as 668 people per 1,000 of the population who live in the rural areas and 332 of them live in the towns. The corresponding figures for the State as a whole are : rural 864, urban 136.

The rural population per inhabited village works out to 845. In most parts of the district the villages resemble those to be seen throughout the west of the State; they generally consist of a single compact site. But all of them do not necessarily comprise of a single population agglomeration. There are 3,152 hamlets in the district. The population per hamlet is only 318. The medium-sized village—with inhabitants numbering between 500—2,000—is the dominant type in the district. Of the rural population 56·3 per cent. live in such villages; 14·2 per cent. live in small villages of population under 500; 27·0 per cent. live in larger villages of population between 2,000—5,000; and only 2·5 per cent. live in villages of population over 5,000.

Towns vary in number of inhabitants even more widely than villages. Agra city has a population of 375,665, i.e., 75·5 per cent. of the urban population. Only 2·5 per cent. of the urban population lives in towns of population under 5,000 (viz., Bah, Pinhat, Jagner); 8·9 per cent. of the urban population lives in towns of population between 5,000—10,000 (viz., Tundla Railway Colony, Fatehabad, Shamsabad, Tundla, Etmadpur, Achnera, Fatehpur Sikri); and 13.1 per cent. of the population lies in Firozabad city which had a population of 65,438 in 1951.

It is significant to note that Firozabad city and Agra city have recorded an increase of 61.3 per cent. and 32·2 per cent. in population respectively since 1941. Fatehpur Sikri, Etmadpur, Shamsabad, Fatehabad and Jagner have also recorded increases in population since 1941. But Achnera, Bah and Pinhat appear to be declining towns. Since 1941 their population have decreased by 6·9 per cent., 4·1 per cent. and 11·7 per cent. respectively. (*Vide* Tables A-III and A-IV).

Occupations : Livelihood pattern

12. Out of the total population of 1,501,391 (1,003,529 rural, 497,862 urban) 807,805 (786,772 rural, 21,033 urban) or 53·8 per cent. depend on agriculture for their means of livelihood and 693,586 (216,757 rural, 476,829 urban) or 46·2 per cent. depend on the non-agricultural sources. The following table gives the ditsribution of 100 persons of the total, rural and urban population of the district and also of Agra city and Firozabad city under the different livelihood classes :

Description	Agricultural classes					Non-agricultural classes				
	Total	I	II	III	IV	Total	V	VI	VII	VIII
Total	**53·8**	**43·7**	**3·6**	**5·7**	**0·8**	**46·2**	**15·7**	**10·8**	**3·6**	**16·1**
Rural	**78·4**	64·0	5·2	8·3	0·9	**21·6**	9·0	4·1	1·8	6·7
Urban	**4·2**	2·8	0·5	0·3	0·6	**95·8**	29·1	24·5	7·3	34·9
Agra city	**2·1**	1·1	0·3	0·2	0·5	**97·9**	26·5	24·5	6·9	40·0
Firozabad city ..	3·4	2·3	0·3	0·0	0·8	**96·6**	49·9	25·8	3·5	17·4

It is gratifying to note that this district has relatively a large population engaged in non-agricultural pursuits as compared to most of the districts of the State. Here as many as 46.2 per cent. of the people depend on non-agricultural occupations as against 25·8 per cent. in the whole State.

Of the total population of the district 1,006,044 persons (350,334 males, 655,710 females) or 67·0 per cent. have been classified as non-earning dependants. The percentage of non-earning dependants in agriculture works out to 65·7 per cent. and that among non-agricultural classes 68·6 per cent. It will be observed that in the main they consist of women. The male non-earning dependants are mostly children. 46,517 persons (32,975 males, 13,542 females) or 3·1 per cent. of the population are earning dependants. Among the agriculturists thier proportion is 2·8 per cent. and among non-agriculturists they form 3·4 per cent. The remaining 448,830 persons (430,980 males, 17,850 females) or 29.9 per cent. of the population consists of self-supporting persons. Their proportion among agriculturists is 31·5 per cent. and among non-agriculturists 28·0 per cent. Of the self-supporting persons 194,304 (183,619 males, 10,685 females) belong to the non-agricultural classes and 254,526 (247,361 males, 7,165 females) to the agricultural classes. On an average a self-supporting person maintains more than two non-earning dependants.

Of the 194,304 self-supporting persons belonging to the non-agricultural classes 4,847 persons (1,707 rural, 3,140 urban) earn their livelihood from non-productive sources. Of the remaining, 189,457 self-supporting persons (69,838 rural, 119,619 urban), 5,947 (774 rural, 5,173 urban) or 3·1 per cent. are employers, 62,613 (11,898 rural, 50,715 urban) or 33.1 per cent. are employees and 120,897 (57,166 rural, 63,731 urban) or 63·8 per cent. are independent workers.

The distribution of 10,000 self-supporting persons of non-agricultural occupations, classified according to the Economic Divisions is as follows:

Name of division	Self-supporting persons by divisions
All Industries and Services	**10,000**
0—Primary industries not elsewhere specified	203
1—Mining and quarrying	85
2—Processing and manufacture—foodstuffs, textiles, leather and products thereof ..	1,621
3—Processing and manufacture—metals, chemicals and products thereof	250
4—Processing and manufacture—not elsewhere specified	1,418
5—Construction and utilities	628
6—Commerce	2,001
7—Transport, storage and communications	906
8—Health, education and public administration	1,388
9—Services not elsewhere specified	1,500

Among the large scale industries the principal are—cotton mills, leather tanning, leather working, oil mills, glass ceramics and pottery, engineering, distilleries and cold storage. Among the cottage industries the principal are woolen carpets, durries (of Fatehpur Sikri), hosiery, lether tannig, leather working (boots, shoes, harness and saddlery, suit and attache cases), iron utensils, agricultural implements, iron-castings, weights, balances and cane crushers, steel trunks, iron safes, cycle parts, glass bangles (Firozabad), decorated bangles (Firozabad), block glass (Firozabad), scientific glassware, phials, bottles, soap, *gur*, wooden lacquered articles, unlacquered wooden articles, e.g., *dholak*, bed post, wooden troughs etc., basket, chick, ropes, and *ban* of *moonj*, sports goods, ivory work, gold thread, *lachka*, *gota* and embroidery, brush making, marble and stone carving, *biri* making, water colour, pastles and ink tablets and scientific balances.

Variation in the livelihood pattern

13. The proportion of population depend on agriculture for their livelihood was 53·7* per cent. in 1951. In 1901 the proportion was 47·6 per cent., in 1911 60·4 per cent. and in 1921 55·6 per cent. The actual number of persons who depend on agriculture has increased to 806, 180 in 1951 from 513,817 in 1921 or by 56·9 per cent. while the cultivated land has remained almost unchanged. This has resulted in progressive fragmentation and sub-division of holdings and pressure on impoverished soil of the district. There also appears to have been a gradual decline in village arts and handicrafts. The cumulative effect is a fall in the proportion of workers and a corresponding rise in the dependency. The proportion of workers in the total population in 1951 was only 33·0 per cent., (agricultural 18·4 per cent. non-agricultural 14·6 per cent.) against 44.6 per cent. (agricultural 24·8 per cent., non-agricultural 19·8 per cent.) in 1921. The proportion of non-earning dependants has consequently increased from 55·4 per cent., (agricultural 30·8 per cent., non-agricultural 24·6 per cent.) in 1921 to 67·0 per cent. (agricultural 35·3 per cent., non-agricultural 31·7 per cent.) in 1951. All this is an index of the increasing unemployment and under employment. It is only to a greater diversion of the population to cottage and other industries and by providing secondary occupations to agriculturists that the present economy of the district can be improved. (*Vide* Tables B-I, B-II and B-III).

Houses and households

14. There were 203,023 occupied houses in the district—147,133 in villages and 55,890 in towns. That gives an average of 6,821 persons per 1,000 houses or 6·8 persons per house in the rural areas and 8,908 persons per 1,000 houses or 8·9 persons per house in the urban areas.

There were 282,283 households in the district—188,552 in villages and 93,731 in towns. That gives an average of 5,312 persons per 1,000 households or 5·3 persons per household in rural areas and 5,193 persons per 1,000 households or 5·2 persons per household in the urban areas. The marginal table shows the developments in the size of the households since 1921. Neither the rural nor the urban households are stationary in size. Rural household has shown a marked increase since 1941. It is now bigger than the average State rural household (5·07). The urban household has registered a marked decrease since 1941 apparently due to a large number of immigrants who may be without families.

Census year	Persons per 1,000 households of	
	Rural	Urban
1921	4,415	5,604
1931	5,076	4,403
1941	4,950	7,028
1951	5,312	5,193

Out of 5,312 persons in every 1,000 rural households, 2,856 are males and 2,456 are females. There is a male excess numbering 400 in every 1,000 households. Out of 5,193 persons in every 1,000 urban households 2,838 are males and 2,355 are females. There is a male excess of 483 in every 1,000 households. The type of migration will account for this difference.

*The figure includes earning dependants according to their secondary means of livelihood while the figure 53·8 in paragraph 12 includes earning dependants according to their principal means of livelihood and hence the difference

Information regarding types of household and household relationships was also collected at this census with the help of a sample of about 4 per cent. According to this in every 1,000 sample households there are 5,038 persons (males 2,726, females 2,312) in the district. The corresponding figure for the total account is 5,272.

The table below shows the distribution by size of 1,000 sample households:

Description	Small with 3 members or less	Medium with 4—6 members	Large with 7—9 members	Very large with 10 members or more
Total	**319**	**433**	**181**	**67**
Rural	302	444	186	68
Urban	352	414	170	64

Medium households are the dominant type both in villages and the towns. In towns the number of small households is comparatively larger than in the villages as quite a large number or migrants live in the towns without families.

Family composition of 1,000 sample households is as follows :

		Number in 1,000 households
A	Heads of households — Males (married)	613
	Heads of households — males (widowers)	305
	Heads of households — Females	82
	Wives of heads of households	613
		1,613
B	Sons of heads of households	1,117
	Daughters of heads of households	709
		1,826
C	Male relations of heads of households (other than sons)	559
	Female relationsof heads of households (other than daughters)	793
		1,352
D	Persons unrelated to the heads of the households — Males	132
	Persons unrelated to the heads of the households — Females	115
		247
	Grant Total	*5,038*

Sons outnumber the daughters of the heads of households. The latter leave the homes of their parents after marriage. Female relations (others than daughters) outnumber the male relations (other than sons). Such females are generally those who become members of these households by marriage. (*Vide* Tables A-I and C-I).

Sex-ratio

15. In the district as a whole the sex-ratio was 844, i.e., there were 844 females to every 1,000 males. It varies among the tehsils. The lowest value was 824 in Firozabad tehsil. The highest value was 865 in Bah tehsil. The wide difference in the former is caused by Firozabad city where males largely exceed the females. The difference in the latter is the result of male migration. The ratio was 832 in Agra, 855 in Etmadpur, 852 in Fatehabad, 848 in Kheragarh and 863 in Kiraoli.

This sex-ratio is smaller in towns than in villages. For the district as a whole the sex-ratio in villages is 859 while that in towns is 814. The sex-ratio for Agra city was 820 and that for Firozabad city 762.

The corresponding figure of this sex-ratio for the district was 818 in 1921, 830 in 1931 and 848 in 1941 against 844 in 1951.

Age-structure

16. The number in each age-group in the district is shown below as a percentage of total number of all ages in the total, rural and urban population separately:

Age-group		Total population			Rural population		Urban population	
		Persons	Males	Females	Males	Females	Males	Females
Infants and young children	0—4 ..	14·7	7·5	7·2	7·4	7·2	7·8	7·3
Boys and girls ..	5—14 ..	25·0	13·4	11·6	13·6	11·7	13·0	11·3
Young men and women	15—34 ..	33·5	18·3	15·2	17·5	14·9	20·2	15·9
Middle-aged men and women	35—54 ..	19·7	11·4	8·3	11·6	8·7	10·9	7·4
Elderly persons	55 and over ..	7·1	4·2	2·9	4·5	2·9	3·5	2·7

It will be seen that the population is progressive. 39·7 per cent. of the population is of age under 15 and only 7·1 per cent. of it consists of elderly persons. Again, it may be noted that proportionately larger numbers in the working ages (15—54) are found in the uran areas. This is the effect of migration of workers to the towns from the villages, many of whom are unaccompanied by their families. (*Vide* Table C-III).

Marital status

17. Out of every 10,000 persons in the district there are 5,480 males and 4,520 females.* Among them 2,723 males and 1,919 females are unmarried. If we reckon males and females together, the unmarried people are 46.4 per cent. of the population.

Of the males 49.7 per cent. were unmarried, 42.7 per cent. were married and 7·6 per cent. were widowed or divorced. Among the females 42.5 per cent. were unmarried, 47·1 per cent. were married and 10·4 per cent. were widowed or divorced.

Of the married males 1·2 per cent. were of ages below 15, 52·9 per cent. were of ages 15—34. 36·6 per cent. were of ages 35—54 and 9·3 per cent. were of ages 55 and over. Among the married females 4·0 per cent. were of ages below 15, 63·1 per cent. were of ages 15—34, 28·8 per cent. were of ages 35—54 and 4·1 per cent. were of ages 55 and over.

Marriage is universal. Among males and females aged 35 years and over only 8.4 per cent. of males and 0·5 per cent. of females were found unmarried. Most of the females are married before they attain the age of 25. Child marriage is not very common. Only 1·4 per cent. of the males of ages 0—14 and 4·5 per cent. of the females of ages 0—14 were returned as married. (*Vide* Table C-III).

Languages

18. Over 96·9 per cent. of the people of the district returned Hindi, Hindustani or Urdu as their mother-tongue. Among the other mother-tongues spoken the main are Punjabi (1·60 per cent.), Sindhi (0·97 per cent.), Bengali (0·21 per cent.), English (0·09 per cent.), Rajasthani-cum-Marwari (0·07 per cent.) and Gujarati (0·06 per cent.) Of the 15·01 lakhs of people in the district only 31,934 or 2·1 per cent. were bilingual (in an Indian language). Those whose mother-tongue is other than Hindi, Hindustani or Urdu are generally the migrants who are able to speak any of these as a subsidiary language. Persons returning Hindi, Hindustani or Urdu as secondary language were 28,724 or 89·9 per cent. of those who were bilingual in some Indian language. (*Vide* Table D-I).

Religion and special groups.

19. Out of 10,000 population of the district the number of people belonging to different religions is: Hindus 8,862, Muslims 918 , Sikhs 76, Jains109 and Christians 35; of 10,000 population in villages the numbers are Hindus 9,500, Muslims 424, Sikhs 14, Jains 51 and Christians 11; and of 10,000 population in towns the numbers are : Hindus 7,575, Muslims 1,915, Sikhs 200, Jains 227, Christians 81 and others 2. Muslims, Sikhs, Jains and Christians are generally concentrated in the urban areas of the district as is the case in the other units of the State.

There are 282,198 Scheduled Castes in the district. Their number per 10,000 of population works out to 1,880. In villages they are 1,978 for every 10,000 and in the towns their number per 10,000 is only 1,682. In the district there are 507 Anglo-Indians. (*Vide* Tables D-II and D-III).

Displaced persons

20. The number of displaced persons in the district at the census was 44,695 (males 24,041, females 20,654) or 9·3 per cent. of the total displaced persons in the State. Of them 43,617 or 97·6 per cent. are concentrated in the urban areas of the district, mainly in Agra city. 93·0 per cent. of the displaced persons in the district have come from West Pakistan, 1·3 per cent. from East Pakistan and 5.7 per cent. from districts which could not be traced. Of them 54·6 per cent. came in 1947 alone. 99.5 per cent. of them follow non-agricultural occupations and only 0·5 per cent. have taken to agricultural pursuits. (*Vide* Table D-V).

Literacy

21. The percentage of male literacy was 23.4 in the district while that of female literacy was 6.4 only, The percentage of literates among males in 1951 wss 23·4 as against 12·2 in 1931; among females the petcentage of literates in 1951 was 23.4 as against 2.2† in 1931. On January 1, 1951 there were 637 primary schools in the district with enrolment of 64,602 pupils. (*Vide* Table D-VII).

C—Explanatory Note on the Statistics

The statistics in this volume have been presented in three parts :

I—District Census Tables

II—Village, Town, Pargana and Thana Statistics

III—Miscellaneous Statistics

---

*The corresponding figures for the total count are 5,424 and 4,576.

†The number per mille (of the 10 per cent. sample population) of each sex, aged 5 years and over who were returned as literates are as below :

Males		Females	
1951	1931	1951	1931
264	143	70	26

Parts I and II contain census data. A brief account of the system of sorting of census slips and preparation of tables and abstract therefrom is given below.

Part III contains statistics throwing light on special aspects of population and its growth. These have been derived from miscellaneous sources. Table I, "Vital Statistics", has been prepared from the published and unpublished records of the Director of Medical and Health Services, Table 2, "Agricultural Statistics", from the Annual Season and Crop Reports, Table 3, "Live-Stock, Agricultural Machinery and Implements", from the published figures of Live-Stock Census and Table 4, "List of Primary Schools", from information specially supplied by District Inspector of Schools.

Processing of census data

2. The census data presented here has been derived from the census slips by a process of sorting, compilation and tabulation. In previous censuses the slips were first sorted by religion and this division was maintained throughout so that all data was cross-tabulated by religion. This procedure has been abandoned at this census and substituted by a division based on economic characteristics of the population. The whole population has been divided into eight livelihood classes, four of which are of the agricultural category and four of non-agricultural category as follows :

Agricultual Classes —

I—Cultivators of land wholly or mainly owned; and their dependants

II—Cultivators of land wholly or mainly unowned ; and their dependants

III—Cultivating labourers ; and their dependants

IV—Non-cultivating owners of land; agricultural rent receivers; and their dependants

Non-agricultural Classes —

V—Production (other than cutivation)

VI—Commerce

VII—Transport

VIII—Other services and miscellaneous sources.

Another special feature of the sorting of this census was the separation, from the very start, of slips of displaced persons and of a 10 per cent. random sample from the remainder. This has enabled the data of displaced persons to be presented separately while the 10 per cent. sample has been utilized for the preparation of Age Tables.

The slips of this census have been copied by households into a National Register of Citizens, which has been prepared village-wise for rural areas and mohalla/ward-wise for urban areas. Taoles C-I is based on a 4 per cent. sample extracted from this register.

Tracts

3. The slips were first sorted by villages for the preparation of the Primary Census Abstract. For the purpose of further sorting the State was divided into tracts consisting of (*a*) *rural tracts*, comprising the rural population of each tehsil, (*b*) *urban city tracts*, comprising the population of areas which had been declared as cities, (*c*) *urban non-city tracts*, comprising the population of urban areas of a district excluding areas declared as cities. Each tract was treated as a unit for sorting of slips. All data were compiled first by tracts and then by districts. This volume presents the tract-wise data for one district (with the exception of A and E tables, which have been presented tehsil-wise) while the district-wise data for the whole State is contained in the following State volumes :

Part I-B—Subsidiary Tables

Part II-A—General Population Tables

Part II-B—Economic Tables

Part II-C—Age and Social Tables

Explanatory notes

4. Detailed explanatory notes are appended to each State table in the printed volumes of State tables. They apply to the tables in this volume also and should be referred to when necessary. A few notes of some of the tables are reproduced below :

Table A-I—Column 5 relating to "hamlets" has been introduced for the first time. Any distinctive cluster or agglomeration of houses has been treated as a "hamlet".

A clear distinction has been made in this census between a "House" and a "Household". A house is any human dwelling having a separate main entrance while a household is any commensal unit living in a census house. In previous censuses the figures under "Occupied Houses" used to be that of households, while the figures under columns 7—9 of the present tables refer to occupied census houses as distinct from households.

The Economic Tables—The Indian Census Economic Classification Scheme, 1951, together with the occupational division and sub-division adopted for this census are given in Part II-B of the Report.

Table B-I—Each of the eight livelihood classes mentioned above has been divided into three sub-classes, with reference to the economic status, as follows:

(i) Self-supporting persons ;

(ii) Non-earning dependants ; and

(iii) Earning dependants.

These were defined in the Instructions to Enumerators as follows :

> "A 'Self-supporting person' is one who is in receipt of an income and that income is sufficient at least for his own maintenance. To be 'self-supporting' a person need not be able to support his family. All that is necessary is that he should be earning sufficient for his personal needs. For purposes of this question the person enumerated is the unit and not the family or household. Any one who is not a 'self-supporting" person in this sense is a 'dependant'. A 'dependant' may be either an 'earning dependant' or a 'non-earning dependant'. The test is whether he secures a regular (and not casual) income, even though it may be small. Such income may be in cash or kind ; it may be continuous or seasonal employment. When the income which he secures is not sufficient to support him that person is an 'earning dependant'. A person who does not earn any income either in cash or kind is a 'non-earning dependant'. Where two or more members of a family household jointly cultivate land and secure an income therefrom, each of them should be regarded as earning part of the income. None of them is, therefore, a non-earning dependant. Each of them should be classed either a 'self-supporting person' or an 'earning dependant' according to the share of income attributable to each. The same applies to any other business carried on jointly. The share of the income is what the head of household deems it to be. This does not mean that every one who works is necessarily a self-supporting person or an earning dependant. Thus, for instance, a housewife who cooks for the family, brings up the children or manages the household is doing very valuable work. Nevertheless, her Economic Status is that of a non-earning dependant, if she does not also earn an income, and should be recorded as such."

Economically active, Semi-active and Passive persons—All non-earning dependants are economically passive. They include persons performing house-work or other domestic or personal services for other members of the same family household. But they do not include "unpaid family workers" or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise. All earning dependats are economically semi-active only. Though they contribute to the carrying of economic activities, the magnitude of their individual contribution is deemed to be too small to justify their description as economically active. (Their contribution to economic activity is, however, taken into account in the tabulation of data based on secondary means of livelihood.)

All self-supporing persons are, ordinarily economically active with the exception of the following classes and groups :

(*a*) All self-supporting persons of agricultural Class IV.

(*b*) The following groups of self-supporting persons who are included in non-agricultural Class VIII and derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity):

(i) Persons living principally on income from non-agricultural property ;
(ii) persons living principally on pensions, remittances, scholarships and funds ,
(iii) inmates of alms-houses and recipients of doles ;
(iv) beggars and vagrants ; and
(v) all other persons living principally on income derived from non-productive activities.

Table B-II—For a self-supporting person who has more than one means of livelihood the *secondary means* of livelihood is the livelihood next in importance to his principal means of livelihood. For an earning dependant it is the source from which he secures his own income, where there are more than one subsidiary occupations only the one providing the largest income has been taken into account.

Table B-III—"Employers", "Employees" and "Independent Workers" have been defined as follows in the Instructions to Enumerators :

> An "employer" is only that person who has necessarily to employ other person in order to carry on the business from which he secures his livelihood. Thus if a person employes a cook or any other person for domestic services, he should not be recorded as an "employer" merely for that reason.
>
> An "employee" is a person who ordinarily works under some other person for a salary or a wage in cash or kind as the means of earning his livelihood. There may be persons who are employed as manager, superintendents, agents, etc., and in that capacity control other workers. Such persons are also employees only and should not be regarded as employers.
>
> An "independent worker" means a person who is not employed by any one else and who also does not employ anybody else in order to earn his livelihood. (Sweepers, *dhobies*, *kahars*, etc., who work for several masters are independent workers. If, however, any of them accepts whole-time employment under one master he becomes "employee". Daily wage-earners who work for different masters are likewise independent workers. But if they accept employment under one master, e.g., under a factory, they become "employees").

Tables C-II, C-III, C-IV and C-V—The figures presented in these tables are based on single year age-returns and have not been smoothed.

Tables D-V (i) *and* (ii)—For the purpose of this table a "displaced person" has been defined as follows :

> "A displaced person means any person who has entered India having left or being compelled to leave his home in Western Pakistan on or after the 1st March, 1947, or his home in Eastern Pakistan on or after the 15th October, 1946, on account of civil disturbances or on account of the setting up of the two Dominions of India and Pakistan."

PART I

DISTRICT CENSUS TABLES
