DISTRICT CENSUS HANDBOOK
1951

MATHURA DISTRICT

FOREWORD

Several States, including Uttar Pradesh, have been publishing village statistics by districts at each census. In 1941 they were published in U. P. under the title "District Census Statistics" with a separate volume for each district. In the 1951 census, when the tabulation has been more elaborate than ever in view of the requirements of the country, the district-wise volume has been expanded into a "District Census Handbook", which now contains the District Census Tables (furnishing data with break-up for census tracts within the district), the District Index of Non-agricultural Occupations, agricultural statistics from 1901-02 to 1950-51 and other miscellaneous statistics in addition to the usual village population statistics. The village population statistics also are given in an elaborate form giving the division of the population among eight livelihood classes and other details.

2. It may be added here that a separate set of district-wise volumes giving only population figures of rural areas by villages and of urban areas by wards and mohallas and entitled "District Population Statistics" has already been published. This separate series was necessitated by the urgent requirements of the U. P. Government for elections to local bodies. The printing of the District Census Handbooks involves colossal work and is bound to take some time.

RAJESHWARI PRASAD, I.A.S.,
Superintendent, Census Operations,
Uttar Pradesh.

RAMPUR:
December 31, 1954.

INTRODUCTION

A—The District

1. The district of Mathura is bounded on the north-west by the Gurgaon district of the Punjab; on the north-east and east by Aligarh, except for some eight miles where the borders of the Sadabad tehsil march with those of Etah district; on the south by Agra ; and on the west by Bharatpur (Rajasthan). Formerly the district had some enclaves of the erstwhile Bharatpur State consisting of seven villages—Nagla Borha, Nagori, Umri, Shamspur, Bad, Bhainsa and Dharampura—of an area of 7·4 square miles. In the recent transfer of enclaves under "The Provinces and States (Absorption of Enclaves) Order, 1950", these villages have been absorbed in this district, while the village Phulwara of an area of 1·2 square miles, which was completely isolated in the midst of land belonging to the former Bharatpur State, has now been transferred to Rajasthan. The district as now constituted has a total area of 1,467 square miles which is less than the average district area of the State. Its population in 1951 was 9·1 lakhs. For administrative purposes it has 4 tehsils namely Chhata, Mat, Mathura and Sadabad, 4 parganas of the same name and 16 thanas. Tehsil Chhata is in the north-west and to its south is tehsil Mathura. Mat is the north-eastern tehsil of the district, while to its south is tehsil Sadabad.

Topography

2. The district lies in the basin of the Yamuna which flows through the centre of it and divides it into two tracts of somewhat dissimilar characteristics. The eastern tract comprising the tehsil of Mat and Sadabad is of a type fairly common in the Ganga Yamuna doab. For the agriculturists this is the most important tract in the district ; it is carefully cultivated and is irrigated from both canal and wells. Two intermittent streams, the Pathwaha and the Jhirna, carry towards the Yamuna the drainage of northern Mat and the central Sadabad respectively. In tehsil Mat several old beds of Yamuna form lagoons. The undulating ridges of sand which flank the stream stretch further inland than on the opposite side of the river ; and isolated dunes may be seen several miles eastward on the uplands. Towards the south there are ravines. The western part of the district which forms the other tract includes the Chhata and Mathura tehsils. The surface is perhaps less uneven than that of the eastern part, but it is slightly hog-backed. Except for the boundary river Yamuna the tract can boast no stream. It has no marshy spots ; and the only line of natural drainage in it is the ill defined channel called the "western depression". In the two western tehsils lie the only hills of the district which are outlying spurs of the Aravalli system. Apart from the hills and the valley of the Yamuna the district has a gentle slope from north to south.

Soils

3. For purposes of soil classification the district can be divided into two portion—the *bangar* or uplands and the *khadar* or Yamuna valley. The soils of the uplands do not differ from those found in other doab districts, and vary from *dumat* or rich loam to *bhur* or sand. *Dumat* is not plentiful in the district and is found for the most part in Mat, Sadabad and the northern tract of Chhata. The most prevalent soil is *piliya* or light loam which has a large admixture of sand. Pure clay is only found in the *tarai* or the lowlands which are known as *dahar*.. The pure sand found in the undulating hillock is known as *puth*. In the ravines of the Yamuna, generally known as *behar*, cultivation is not extensive, the soil which is largely mixed with *kankar* and divided by drainage, being very poor while in the actual valley of the river the characteristics are generally similar to those in the uplands. The ground work of all the former soils is clay : in the bed of Nohjhil and in other places where the soil is subject to the influence of stagnant water, the clay remains and is known as *chiknot* or slippery earth, but where the action of the stream is felt, it becomes mixed with other matter and produces a rich steel gray loam which is found at its best in the *katris* or fertile deposits along the edges of the river. In the recent years there has been reported march of Rajputana desert towards the district.

Classification of area

4. The figures of the classification of area during the last fifty years are given in Table 2 of the Part III of this volume. The proportion of area under the various categories works out as follows for 1950-51 :

Particulars	Actual figures (in acres)	Percentage
Cultivated area	767,468	82·3
Culturable waste (excluding current fallow)	71,561	7·7
Current fallow	23,936	2·6
Forest	751	0·1
Area not available for cultivation of which—	68,456	7·3
(*a*) *Covered with water*	13,524	1·4
(*b*) *Under sites, roads and buildings*	33,619	3·6
(*c*) *Barren*	21,313	2·3

The figure in the above table regarding culturable waste taken from the Season and Crop Report is, however, misleading. The State Agriculture Department conducted in 1949-50 a

detailed enquiry through the District Officers regarding the nature of this area in each district. The following analysis of the area resulted from this enquiry :

Particulars	Area (in acres)	Percentage
Total culturable waste (A+B+C)	**71,299**	**100**
A—Area under culturable waste land not available for immediate cultivation ...	24,247	34·01
(i) Forest under any legal enactment	...	...
(ii) Groves	2,534	3·56
(iii) Forests of timber trees	7	0·01
(iv) Thatching grasses, shrubs and bushes	14,880	20·87
(v) Land kept for grazing	6,826	9·57
B—Area under culturable waste land available for immediate cultivation but which could not be cultivated–	7,809	10·95
Of which due to—		
(i) Kans growth	32	0·04
(ii) Threshing floors	66	0·09
(iii) Malaria	...	...
(iv) Floods	2,551	3·58
(v) Lack of drains	75	0·10
(vi) Lack of water	1,352	1·90
(vii) Distance from *abadi*	...	...
(viii) Damage from wild animals	2,566	3·60
(ix) Other causes	1,167	1·64
C—Area under culturable waste land that can be brought under immediate cultivation after some improvements besides the area given against 'B.'	39,243	55·04

From the above it will appear that of the total area recorded as cultivable waste, only 55·0 per cent. was really capable of being brought under immediate cultivation after some improvements.

Thus the land area cultivated and cultivable including current fallow *per capita* works out to 94·6 cents of which 86·8* cents have already been brought under cultivation and only about 4·3 cents can be further brought under the plough after some improvements. It is obvious that the saturation point for cultivation has already been reached in the district.

Climate and rainfall

5. The climate of Mathura district is as a rule drier and hotter than that of most districts of the doab. The hot weather lasts somewhat longer than in the north of the State and the rainfall is decidedly less. As early as March the approach of the hot weather—is signalized by a marked rise in the temperature and the beginning of the hot west wind. The average rainfall during the last quinquennium was 25·47 inches. The wettest year for the district has been 1933—34 in which the rainfall was 41·88 inches and the driest year with a rainfall of 7·75 inches was the year 1918—19. Taken as a whole the district may be regarded as a healthy one.

Irrigation

6. Irrigation is derived from canals, wells, rivers, tanks and lakes. There is very little irrigation by tube wells. In 1950-51 the irrigated area from Government Canals covered 81·6 per cent., by wells 18·2 per cent. and by other sources 0·2 per cent.

Crops

7. More acreage is sown under *rabi* crops than under *kharif* crops. The area under *rabi* in 1950-51 was 475,442 acres, that under *kharif* 406,794 acres and that under *zaid* crops 2,231 acres. The principal *rabi* crop is gram followed by wheat while the principal *kharif* crop is bajra.

B—Analysis of the Statistics

Population : General distribution and density

1. The table below shows the two basic figures—land area and population—and the derived figures of land area *per capita* :

Tehsil	Population (in lakhs)	Density (number per square mile)	Land area (in lakhs of acres)	Land area *per capita*
Chhata	1·78	438	2·61	1·46
Mat	2·01	606	2·12	1·05
Mathura	3·15	768	2·62	0·83
Sadabad	2·18	708	1·97	0·90
District Mathura	***9·12***	***626†***	***9·32***	***1·02***

*The figures also includes the area classed as current fallow.

†According to the area given by the Surveyor General, it is 622.

This district though 44th in area stands 39th in population in the State. The average density of the district is 622 while the average density of the State is 557 only. The density of the district has been affected by the presence of the large city of Mathura and of other towns. That of tehsil Mathura is very high due to the presence of Mathura city. The rural density of the district is 514 only, the density of the rural parts of the tehsils being : Chhata 400, Mathura 447, Mat 595 and Sadabad 659. It is, therefore, clear that rural parts of Mat and Sadabad are a bit more densely populated than those of the other two tehsils. Tehsil Chhata is the least fertile tehsil of the district having some very precarious tracts. (*Vide* Tables A-I and E).

Growth of population

2. The growth of population in the district during the last fifty years has been much less than that of the State. The population of the district increased by 18·9 per cent. only while the population of the State showed an increase of 30 per cent. The table below exhibits the variation in the total, rural and urban population for the last five decades.

Census year	Population			Variation		
	Total	Rural	Urban	Total	Rural	Urban
1901	**767,459**	624,804	142,655			
1911	**660,283**	538,085	122,198	**—107,176** (—14·0)	—86,719 (—13·9)	—20,457 (—14·3)
1921	**622,662**	508,972	113,690	**—37,621** (—5·7)	—29,113 (—5·4)	—8,508 (—7·0)
1931	**671,579**	540,632	130,947	**+48,917** (+7·9)	+31,660 (+6·2)	+17,257 (+15·2)
1941	**811,251**	655,216	156,035	**+139,672** (+20·8)	+114,584 (+21·2)	+25,088 (+19·2)
1951	**912,264**	727,592	184,672	**+101,013** (+12·5)	+72,376 (+11·0)	+28,637 (+18·4)

It will be observed that between 1901 and 1921 the population of the district recorded a decrease of 18·9 per cent. when that of the State decreased by 4·0 per cent. only. During 1901—21 the population of the district suffered heavily from abnormal deaths caused by plague and influenza. Abnormal deaths did not occur or were prevented from occurring in the post 1921 period and the population of the district recorded an increase of 46·5 per cent. since 1921 against an increase of only 35·5 per cent. in the population of the State during the same period.

The variation in the population of the tehsils during 1941—51 is shown in the marginal table. In Mathura tehsil, the larger increase is due chiefly to the growth of Mathura city and tehsil Sadabad is more fertile and prosperous than the other tehsils and hence the greater increases in its population than that in Chhata or Mat which include some precarious tracts.

Tehsil	Percentage variation 1941—51
Mathura district ...	+12·5
Chhata ...	+ 8·7
Mat ...	+ 9·2
Mathura ...	+18·0
Sadabad ...	+11·1

The Vital Statistics

3. Births and deaths mainly account for the trends in population growth. Migration also is a factor though of lesser importance. The following table gives the mean decennial registered birth and death-rates and the calculated natural increase rates and population growth of the last three decades for the district as a whole and for its rural and urban areas :

	Total	Rural	Urban
Mean decennial birth-rate			
1941—50	**26·1**	22·5	40·4
1931—40	**35·3**	34·5	38·6
1921—30	**32·4**	34·0	25·4
Mean decennial death-rate			
1941—50	**16·6**	13·5	29·5
1931—40	**19·6**	17·5	28·4
1921—30	**22·7**	22·2	25·2
Mean decennial rate of natural increase			
1941—50	**9·5**	9·0	10·9
1931—40	**15·7**	17·0	10·2
1921—30	**9·7**	11·8	0·2
Mean decennial growth-rate			
1941—50	**11·7**	10·5	16·8
1931—40	**18·8**	19·2	17·5
1921—30	**7·6**	6·1	14·1

There are large omissions in the registration of births as well as deaths and so the above rates do not represent the true picture at all. They may, however, be taken to be roughly indicative of trends. Both birth and death rates have fallen during the last decade.

The figures of natural increase and growth-rate suggest loss of population by migration during 1921—30 and gain during 1931—40 and 1941—50.

The average yearly mortality from various causes in the district during 1941—50 was as follows :

Causes	Number of deaths	Percentage of total deaths
Fever	11,499	80·3
Dysentery and diarrhoea	378	2·6
Respiratory diseases	1,048	7·3
Plague, cholera and small-pox	165	1·2
Others	1,237	8·6

As in the rest of the State 'fever' is responsible for a majority of the deaths. But fever covers a number of ailments which the reporters are unable to identify.

Migration

4. About 81·6 per cent. of the people enumerated in the district at the census of 1951 were born there, 10·3 per cent. were born in other districts of the State, 6·6 were born in other parts of India and only 1·5 per cent. came from other countries. Of the immigrants from the districts of the State as many as 89,105 (males 12,793, females 71,812) are from the other districts of the same natural division and only 4,403 (males 2,546, females 1,857) are from other parts of the State. It is obvious from the sex proportion that most of the migration from the neighbouring districts is marriage migration. Of 54,810 immigrants from the adjacent States 37,166 (males 11,980, females 25,186) are from Rajasthan and 14,270 (males 5,162, females 9,108) are from Punjab. Most of the migration from these two States is marriage migration. Migration from more distant parts of India, excluding that which is for religious purposes, consists of semi-parmanent migrants who are in service or business. Owing to its being the centre of pilgrimage, the district usually has quite a large number of temporary immigrants.

Of the immigrants who have come from territories beyond India 13,254 (males 6,963, females 6,291) were born in Pakistan and 257 (males 176, females 81) had their birth-place in other territories. The Pakistan-born are mostly the displaced persons who numbered 12,299. Of the 257 immigrants born in other territories as many as 179 (males 138 and females 41) are Nepal-born and 40 (males 19 and females 21) are Burma-born.

Of the 13 non-Indian nationals 5 are Americans, 3 French, 2 Germans, 2 Italians and 1 Norwegian.

Unfortunately the figures of emigration are not available. According to the *Vital Statistics* the district appears to have lost about 13,200 persons during 1921—30, and to have gained 23,300 during 1931—40 and 19,600 persons during 1941—50.

Decline of cultivation *per capita*

5. We may now analyse the growth of population in the district during the last thirty years in relation to the growth of cultivation during the same period. The figures of population and net area sown are exhibited in the marginal table. (Figures of area shown under census year are quinquennial averages for the five years preceding the census year and population figures have been taken from the census table relating to that year.) It is obvious that cultivation has failed to keep pace with population. The cultivated area *per capita* has gone down to 81·2 cents in 1951 from 104·3 cents in 1921. The magnitude of this drop is about one fifth of the 1921 level. It means that (other things being equal) every man, woman and child must expect to get less food and other agricultural produce from the land in 1951 than in 1921.

Census year	Population[a]	Net area sown (in acres)	Area of cultivation *per capita* (in cents)
1921	619,138	645,460	104.3
1331	668,074	640,540	95.9
1941	806,992	654,836	81.1
1951	912,264	740,721	81.2

Double cropped area *per capita*

6. It may be examined whether this shortage had been compensated by an increase in the yield per acre. Increase in yield can be brought about by more double cropping, more irrigation, better fertilization and better culture. The average (quinquennial) area sown more than once was 99,130 acres in 1921. It slightly increased to 108,163 acres in 1931 and to 109,706 in 1941 but in 1951 the increase to 123,072 acres was substantial. Inspite of this it will be seen from the figures of double crop cultivation in the table below that the increase in the double cropped area has not kept pace with the rate of growth of population.

Particulars	Quinquennial averages for the year preceding			
	1951	1941	1931	1921
Double crop cultivation *per capita* in cents	13·5	13·6	16·1	16·0
Unirrigated double crop cultivation *per capita* in cents ...	9·9	8·0	11·8	11·6
Irrigated double crop cultivation *per capita* in cents ...	3·6	5·6	4·3	4·4

Irrigated area *per capita*

7. The average area irrigated in the district was 257,033 acres in 1921. The figures were 242,306 in 1931, 276,906 in 1941 and 267,433 in 1951. The average area irrigated more than once was 27,246 acres in 1921, 28,631 acres in 1931, 45,240 acres in 1941 and 32,592 acres in 1951.

[a]The figures of population of the various censuses relate to the then lay-out of the district.

The figures of irrigation *per capita* are shown in the table below :

Particulars	Year			
	1951	1941	1931	1921
Irrigated single crop cultivation *per capita* in cents ...	25·7	28·7	32·0	37·1
Irrigated double crop cultivation *per capita* in cents ...	3·6	5·6	4·3	4·4

The trend is distinctly towards a decline.

Cropped area

8. A change in the cropping pattern is visible in case of this district though it is not very large. The food crops are increasing at the cost of non-food crops since the quinquennium ending 1910-11. The percentage of non-food crops stood at 26·9 in the quinquennium 1906—11 while that for 1946—51 was only 18·5.

The proportionate area under different crops in the district between 1911 and 1951 was as below : -

Quinquennial average of	Total cropped area	Percentage of cropped area under							
		Rice	Wheat	Barley	Juar	Bajra	Maize	Gram	Others
1911—16	706,517	...	10·1	15·9	15·4	6·7	1·2	17·7	33·0
1916—21	730,381	...	9·3	14·6	16·2	8·5	2.4	15·7	33·3
1921—26	735,764	...	11·8	14·1	18·2	8·4	0·9	20·0	26·6
1926—31	769,046	...	10·6	12·1	16·2	7·2	1·7	20·3	31·9
1931—36	763,115	...	11·3	10·8	15·4	7·6	1·9	21·6	31·4
1936—41	770,736	...	14·1	11·9	15·1	8·2	1·6	18·2	30·9
1941—46	824,636	...	14·1	11·7	12·5	13·4	2·4	17·1	28·8
1946—51	869,026	0·1	14·0	12·0	11·2	14·4	1·4	20·2	26·7

Cotton, indigo and tobacco are three non-food crops which have been declining. Indigo is now out of cultivation. The average area under it was 1,655 acres during the quinquennium ending 1905-06 against 2 acres during the quinquennium ending 1950-51. In the corresponding period the average area under cotton fell from 125,754 acres to 12,578 acres—and that under tabacco declined from 1,419 acres to 806 acres. The area of sugar-cane has risen since 1930-31 with the establishment of sugar-cane factories in the State and protection granted to sugar industry.

Live Stock, ploughs and carts

9. Live-stock in this country live for a large part of the year on by-products of agriculture supplemented by green fooder crops. They have, therefore, to be co-related not only with the grazing available but also with the total area under cultivation which carries a major portion of the burden of supporting the cattle population.

As will appear from the tables of Part III the total number of cattle and buffaloes which had been decreasing from 1935 to 1944 has during 1944—51 increased from 417 thousands to 499 thousands in the district.

The number of working cattle and buffaloes in the district has increased from 95 thousands in 1935 to 128 thousands in 1951. The number of working cattle appears to be governed by the number of ploughs and carts. The number of ploughs has gone up from 47,197 in 1935 to 61,638 in 1951 due apparently to progressive fractionalization of holdings. The number of carts started rising since 1935. The number increased from 9,239 in 1935 to 17,930 in 1951. The average net cultivated area per plough works out to 12·5 acres in 1951 as well as in 1921 and the average net cultivated area per pair of working cattle works out to 11·8 acres in 1951 as compared with 13·5 acres in 1935.

Breeding cows and she-buffaloes which rose from 157 thousands to 164 thousands during 1935—44 have gone up to 207 thousands in 1951. The cows and female buffaloes in milk per 1,000 of human population were 38 and 62 respectively. Owing to the poor milk yield the share of milk per head is only a few ounces per day.

The number of sheep which was 68,000 in 1935 and 53,000 in 1944 has suddenly gone down to 29,000 in 1951 due apparently to pressure of agriculture and consequently to less availability of pasture lands. Goats have been going down in number since 1935 when they were 95 thousands. Their number in 1951 was 45 thousands, the reduction during 1944—51 alone being about 50 per cent.

Horses and ponies also are declining in number. There was a steep fall during 1935—44 from about 12,000 to 8,000. Donkeys during the same period were reduced from 15,000 to 12,000. Both, however, have increased during 1944—51. The number of horses and ponies increased from 8,000 to 10,000 and that of donkeys from 12,000 to 14,000.

Poultry has slightly increased from 15,000 to 17,000 during 1944—51.

Distributed on 1,000 of human population the figures of the main categories of live-stock in 1951 are as follows :

Cattle	Buffaloes	Sheep	Goats	Poultry	Others
286	262	31	49	19	41

10. To sum up, the population of the district is growing up at the biological natural rate since 1921. But on the other hand, the land area *per capita*, the double crop area *per capita* and the irrigated area *per capita* are steadily declining. There is, at the same time, no evidence that crop yield per acre has increased. Moreover the fast approaching desert is a menace to the district. Under such circumstances unless science comes to the help of the district and increases its production, the rapidly increasing population is a serious threat to the economic life of the people.

Villages and towns

11. The district has 845 villages and 15 towns. Out of about 9·1 lakhs of people who were counted at the census of 1951, 7·3 lakhs were found in the villages and 1·8 lakhs in the towns i.e., there are as many as 798 people per 1,000 of the population who live in the rural areas and only 202 of them live in towns. The corresponding figures for the State as a whole are, rural 864, urban 136.

The rural population per inhabited village works out to 861. But the villages do not necessarily comprise of a single compact size. There are 1,842 hamlets in the district. The population per hamlet is 395. The medium-sized village with inhabitants numbering between 500—2,000 is the dominant type in the district. Of the rural population 52·8 per cent. of the people live in such villages; 29·9 per cent. of them live in big villages of population between 2,000—5,000; 14·0 per cent. live in small villages of population under 500 ; and only 3·3 per cent. live in villages of population over 5,000.

Towns vary in number of inhabitants even more widely than villages. Mathura city including Mathura Cantonment (which has been treated as a separate town) has a population of 105,773 i.e., 57·3 per cent. of the urban population of the district. Of the urban population of the district 14·0 per cent. of the people live in towns of population under 5,000 (viz., Sahpau, Mahaban, Raya, Baldeo, Sonkh, Farah, Gokul and Radhakund) 14·2 per cent. in towns of population between 5,000—10,000 (viz., Chhata, Mathura Cantonment, Gobardhan and Sadabad), 6·4 per cent. in towns of population between 10,000—20,000 (viz., Kosi) and remaining 65·4 per cent. in towns of population of 20,000 and over, (viz., Mathura Municipal Board and Vrindaban). It is significant to note that Mathura city has recorded 31·3 per cent. increase in population since 1941. Its population has doubled itself since 1921, Mahaban, Sonkh, Gokul and Radhakund appear to be declining towns. Their population has come down from 4,104, 4,084, 2,700 and 2,947 in 1941 to 3,879, 3,429, 2,343 and 2,102 in 1951 respectively. The other towns need no special comment. (*Vide* Tables A-III and A-IV)

Occupations : Livelihood pattern

12. Out of the total population of 912,264 (rural 727,592, urban 184,672) 534,196 (rural 517,024, urban 17,172) or 58·6 per cent. depend on agriculture for their means of livelihood and 378,068 (rural 210,568, urban 167,500) or 41·4 per cent. depend on the non-agricultural sources. The following table gives the distribution of 100 persons of the total, rural and urban population of the district and also of Mathura city under the different livelihood classes.

Description	Agricultural classes					Non-agricultural classes				
	Total	I	II	III	IV	Total	V	VI	VII	VIII
Total	**58·6**	**50·4**	**5·5**	**2·0**	**0·7**	**41·4**	**10·2**	**8·0**	**2·6**	**20·6**
Rural	**71·1**	61·5	6·6	2·4	0·6	**28·9**	8·5	3·8	1·4	15·2
Urban	**9·3**	6·8	1·4	0·3	0·8	**90·7**	17·2	24·5	7·0	42·0
Mathura city	**3·4**	1·7	0·9	0·2	0·6	**96·6**	20·3	23·5	8·8	43·8

It is obvious that this district is one of the less predominantly agricultural districts of the State. Here only 58·6 per cent. of the people depend on agriculture as against 74·2 per cent. in the whole State.

Of the total population of the district 586,898 persons (males 201,795, females 385,103) or 64·3 per cent. have been classified as non-earning dependants. The percentage of non-earning dependants in the agricultural population works out to 64·7 per cent. and that among non-agricultural classes as 63·8 per cent. It will be observed that in the main they consist of women. The male non-earning dependants are mostly children. 22,768 persons (males 10,147, females 12,621) or 2·5 per cent. of the population are earning dependants. Among the agriculturists their proportion is 2·8 per cent. and among non-agriculturists they form only 2·1 per cent. Agriculture is a family occupation and it provides work to the women and grown up children in the family. The remaining 302,598 persons (males 281,988, females 20,610) or 33·2 per cent. of the population consists of self-supporting persons. Their proportion among agriculturists is 32·5 per cent. and among non-agriculturists 34·1 per cent. Of the self-supporting persons, 173,691 (males 168,037, females 5,654) belong to the agricultural classes and 128,907 (males 113,951, females 14,956) to the non-agricultural classes. On an average a self-supporting person maintains two non-earning dependants.

Of the 128,907 self-supporting persons belonging to the non-agricultural classes 3,930 persons (rural 2,097 urban 1,833) earn their livelihood from non-productive sources. Of the remaining 124,977 self-supporting persons (rural 72,385, urban 52,592) 2,998 (rural 261, urban 2,737) or 2·4 per cent. are employers, 29,942 (rural 10,787, urban 19,155) or 24·0 per cent. are employees and 92,037 (rural 61,337 urban 30,700) or 73·6 per cent. are independent workers.

The distribution of 10,000 self-supporting persons of non-agricultural occupations, classified according to the economic divisions is as follows :

Name of division	Self-supporting persons by divisions
All Industries and Services	**10,000**
0—Primary industries not elsewhere specified	326
1—Mining and quarrying	1
2—Processing and manufacture—foodstuffs, textile, leather and products thereof	1,152
3—Processing and manufacture—metals, chemicals and products thereof	211
4—Processing and manufacture not elsewhere specified	703
5—Construction and utilities	884
6—Commerce	1,673
7—Transport, storage and communications	625
8—Health, education and public administration	931
9—Services not elsewhere specified	3,494

The district has got no important large scale industry. Among the cottage industries the principal are calico-printing, tape and *niwar* making, leather tanning, basket making, making of *moondhas* and *chicks*, ropes and *ban*.

Variation in the livelihood pattern

13. The proportion of population depending on agriculture for their livelihood was 58·6* per cent. in 1951. The unfortunate fact is that the agricultural proportion in the district has been increasing ever since 1901 when the figure stood at 52·5 per cent. It was 56·8 per cent. in 1911 and 58·9 per cent. in 1921. Only in this census the speed of the process seems to have been arrested. The actual number of persons who depend on agriculture has increased to 534,330 in 1951 from 364,578 in 1921 or by 46·6 per cent., while the cultivated area remained almost constant upto 1941 and has since increased by 13·1 per cent. only. This has resulted in the progressive fragmentation and sub-division of holdings and pressure on impoverished soil. There appears to have been a gradual decline in village arts and handicrafts. The cumulative result is a fall in the proportion of workers in the total population and a corresponding rise in dependency. The proportion of workers in the total population in 1951 was 35·7 per cent. (agricultural 20·7 per cent., non-agricultural 15·0 per cent.) against 44·9 per cent. (agricultural 25·2, non-agricultural 19·7) in 1921. The proportion of non-earning dependants has consequently increased from 55·1 per cent. (agricultural 33·7 per cent., non-agricultural 21·4 per cent.) in 1921 to 64·3 per cent. (agricultural 37·9 per cent., non-agricultural 26·4 per cent.) in 1951. All this is an index of increasing unemployment and under-employment. It is only by diversion of the population to cottage and other industries that the present severe disequilibrium in the economy of the district can be redressed. (*Vide* Tables B-I, B-II and B-III)

Houses and households

14. There were 134,627 occupied houses in the district, 107,766 in villages and 26,861 in towns. That gives an average of 6·8 persons per house in the rural areas and 6·9 persons per house in the urban areas.

There were 177,295 households in the district—137,138 in the villages and 40,157 in towns. That gives an average of 5·3 persons per household in rural areas and 4·5 persons per household in the urban areas. The marginal table shows the developments in the size of the household since 1921. The rural houeshold has been generally bigger than the urban household and is considerably bigger than the average State rural household (5·07). The urban household has registered a marked decrease since 1941 apparently due to large gains by migration.

Census year	Persons per 1,000 households of	
	Rural population	Urban population
1921	4,480	4,015
1931	4,788	4,305
1941 ...	5,216	4,863
1951 ...	5,290	4,480

Out of 5,290 persons in every 1,000 rural households 2,856 are males and 2,434 females. There is a male excess numbering 422 in every 1,000 rural households. Out of 4,480 persons in every 1,000 urban households 2,403 are males and 2,077 are females. There is a male excess numbering 326 in every 1,000 urban households. The type of migration will account for the difference.

Information regarding types of household and household relationships was also collected at this census with the help of a sample of about 4 per cent. According to this in every 1,000 sample households there were 4,957 persons (males 2,716, females 2,241) in the district. The corresponding figure for the total count is 5,107.

The table below shows the distribution by size of 1,000 sample households :

Description	Small with 3 members or less	Medium with 4—6 members	Large with 7—9 members	Very large with 10 members or more
Total	328	421	190	61
Rural	295	441	201	63
Urban	443	353	149	55

*The figure includes earning dependants according to their secondary means of livelihood, while the figure of 58·6 in paragraph 12 includes earning dependants according to their principal means of livelihood and hence the difference.

Medium households are dominant type in the villages while small households are more numerous in the towns. Quite a large number of migrants live in the towns without families.

Family composition of 1,000 sample households is as follows :

			Number in 1,000 households
A	Heads of households	Males (married)	650
		Males (widowers)	290
		Females	60
	Wives of heads of households		650
			1,650
B	Sons of heads of households		1,141
	Daughters of heads of households		679
			1,820
C	Male relations of heads of households (other than sons)		578
	Females relations of heads of households (other than daughters)		779
			1,357
D	Persons unrelated to the head of the household	(Males)	57
		(Females)	73
			130
		Grand Total	*4,957*

Sons outnumber the daughters of the heads of households. The latter leave the homes of their parents after marriage. Female relations (other than daughters) outnumber the male relations (other than sons). Such females are generally those who become members of these households by marriage. (*Vide* Tables A-I and C-I)

Sex-ratio

15. In the district as a whole the sex-ratio was 847 i.e., there were 847 females to every 1,000 males. It varied among the tehsils. The lowest value was 842 in Mathura tehsil. The highest value was 850 in both Chhata and Sadabad. A little difference in the former is caused by Mathura city where the males largely exceed the females. The ratio was 848 in Mat.

The sex-ratio is lower in towns than in villages. For the district as a whole the sex-ratio in villages is as high as 850 while that in towns is only 834 (mainly due to male migration). The sex-ratio for Mathura city was only 813.

The corresponding figure of sex-ratio for the district was 815 in 1921, 834 in 1931 and 836 in 1941 aginst 847 in 1951. The sex-ratio has been rising steadily since 1921.

Age-structure

16. The number in each age group is shown below as a percentage of the total number of all ages in the total, rural and urban population separately :

Age-group		Total population			Rural population		Urban population	
		Persons	Males	Females	Males	Females	Males	Females
Infants and young children	0—4 ...	14·5	7·4	7·1	7·2	7·1	7·9	7·2
Boys and girls	5—14 ...	24·5	13·0	11·5	13·2	11·7	12·2	10·6
Young men and women	15—34 ...	33·8	18·3	15·5	18·0	15·8	19·9	14·9
Middle-aged men and women	35—54 ...	19·3	11·0	8·3	10·9	8·3	11·1	8·3
Elderly persons	55 and over ...	7·9	4·9	3·0	4·9	2·9	4·5	3·4

It will be seen that the population is progressive. 39 per cent. of the population is of age under 15 and only 7·9 per cent. of it consists of elderly persons. Again, it may be noted that proportionately larger numbers in the working ages (15—54) are found in the urban areas. This is the effect of migration of workers to the towns from the villages, many of whom are unaccompanied by their families. (*Vide* Table C-III)

Marital status

17. Out of every 10,000 persons in the district there are 5,454 males and 4,546 females*. Among them 2,767 males and 1,871 females are unmarried. If we reckon males and females together, the unmarried people are 46·4 per cent. of the population.

Of the males 50·7 per cent. were unmarried, 41·3 per cent. married and 8 per cent. widowed or divorced. Among the females 41·1 per cent. were unmarried 47·9 per cent. married and 11·0 per cent. widowed or divorced.

Of the married males 0·9 per cent. were of ages below 15, 53·7 per cent. were of ages 15—34, 34·6 per cent. of ages 35—54 and only 10·8 per cent. of ages 55 and over. Among the married females 4·0 per cent. were of ages below 15, 64·4 per cent. of ages 15—34, 27·7 per cent. of ages 35—54 and only 3·9 per cent. elderly women.

*The corresponding figures for the total count are 5,414 and 4,586.

Marriage is universal. Among males and females aged 35 years and over only 11·9 per cent. of the males and 0·3 per cent. of the females were found unmarried. Most of the females were found married before they attain the age of 25. Child marriage is still prevalent in this district though it is not so common as in some of the eastern districts of the State. Only 1·0 per cent. of the males of ages 0—14 and 4·7 per cent. of the females of ages 0—14 were returned as married. (*Vide* Table C-III)

Languages

18. About 99 per cent. of the people of the district returned Hindi, Hindustani or Urdu as their mother-tongue. Among the other mother-tongues spoken the main are Bengali (0·36 per cent.), Punjabi (0·28 per cent.) and Sindhi (0·15 per cent.). Of the 9·1 lakhs people of the district only 4,077 or 0·4 per cent. were found bilingual (in an Indian language). Those whose mother-tongue is other than Hindi, Hindustani or Urdu are generally the migrants who are able to speak any of these as a subsidiary language. Persons returning Hindi, Hindustani or Urdu as secondary language were 3,069 or 75·3 per cent. of those who were bilingual in some Indian language. (*Vide* Table D-I)

Religion and special groups

19. Out of 10,000 population of the district the number of people belonging to different religions is : Hindus 9,230, Muslims 696, Sikhs 27, Christians 22 and others 25 ; of 10,000 population in villages the numbers are : Hindus 9,398, Muslims 565, Sikhs 11 Christians 11 and others 15 ; and of 10,000 population in towns the numbers are : Hindus 8,569, Muslims 1,208, Sikhs 93, Christians 66 and others 64. Muslims, Sikhs and Christians are generally concentrated in the urban areas of the district as is the case in the other units of the State.

There are 166 thousands Scheduled castes in the district. Their number per 10,000 of population works out to 1,815. In villages they are 2,032 for every 10,000 and in the towns their number per 10,000 is only 961. In the district there are 15 Anglo-Indians of whom six are males and nine females. (*Vide* Tables D-II and D-III)

Displaced persons

20. The number of displaced persons in the district at the census was 12,299 (males 6,333, females 5,966), a large majority of whom were concentrated in Mathura city. Of them 96 per cent. have come from West Pakistan and 4 per cent. from East Pakistan. (*Vide* Table D-V)

Literacy

21. The percentage of male literacy was 24·9 in the district while that of female literacy was 4·0 only. As compared to this the percentage of literates among males in 1931 was 12·5 and among females 1·4.* On January 1, 1951 there were 477 primary schools in the district with enrolment of 39,925 . (*Vide* Table D-VII)

C—Explanatory Note on the Statistics

The statistics in this volume have been presented in three parts :

I—District Census Tables

II—Village, Town, Pargana and Thana Statistics

III—Miscellaneous Statistics

Parts I and II contain census data. A brief account of the system of sorting of census slips and preparation of tables and abstract therefrom is given below.

Part III contains statistics throwing light on special aspects of population and its growth. These have been derived from miscellaneous sources. Table 1, "Vital Statistics" has been prepared from the published and unpublished records of the Director of Medical and Health Services, Table 2, "Agricultural Statistics", from the Annual Season and Crop Reports, Table 3, "Live-Stock, Agricultural Machinery and Implements", from the published figures of Live-Stock Census and Table 4, "List of Primary Schools", from information specially supplied by District Inspector of Schools.

Processing of census data

2. The census data presented here has been derived from the census slips by a process of sorting, compilation and tabulation. In previous censuses the slips were first sorted by religion and this division was maintained throughout so that all data was cross-tabulated by religion. This procedure has been abandoned at this census and substituted by a division based on economic characteristics of the population. The whole population has been divided into eight livelihood classes, four of which are of the agricultural category and four of non-agricultural category as follows :

Agricultural Classes—

I—Cultivators of land wholly or mainly owned ; and their dependants

II—Cultivators of land wholly or mainly unowned ; and their dependants

III—Cultivating labourers ; and their dependants

IV—Non-cultivating owners of land ; agricultural rent receivers ; and their dependants.

Non-agricultural Classes—

V—Production (other than cultivation)

VI—Commerce

VII—Transport

VIII—Other services and miscellaneous sources.

---

*The number per mille (of the 10 per cent. sample population) of each sex aged 5 years and over who were returned as literates are as below :

Males		Females	
1951	1931	1951	1931
286	145	54	17

Another special feature of the sorting of this census was the separation, from the very start, of slips of displaced persons and of a 10 per cent. random sample from the remainder. This has enabled the data of displaced persons to be presented separately, while the 10 per cent. sample has been utilized for the preparation of Age Tables.

The slips of this census have been copied by Households into a National Register of Citizens, which has been prepared village-wise for rural areas and mohalla-ward-wise for urban areas. Table C-I is based on a 4 per cent. sample extracted from this register.

Tracts

3. The slips were first sorted by villages for the preparation of the Primary Census Abstract. For the purpose of further sorting the State was divided into tracts consisting of (*a*) *rural tracts*, comprising the rural population of each tehsil, (*b*) *urban city tracts*, comprising the population of areas which had been declared as cities, (*c*) *urban non-city tracts*, comprising the population of urban areas of a district excluding areas declared as cities. Each tract was treated as a unit for sorting of slips. All data were compiled first by tracts and then by districts. This volume presents the tract-wise data for one district (with the exception of A and E Tables, which have been presented tehsil-wise), while the district-wise data for the whole State is contained in the following State valumes :

Part I-B—Subsidiary Tables

Part II-A—General Population Tables

Part II-B—Economic Tables

Part II-C—Age and Social Tables

Explanatory notes

4. Detailed explanatory notes are appended to each State table in the printed volumes of State tables. They apply to the tables in this volume also and should be referred to when necessary. A few notes of some of the tables are reproduced below :

Table A-I—Column 5 relating to "hamlets" has been introduced for the first time. Any distinctive cluster or agglomeration of houses has been treated as a "hamlet".

A clear distinction has been made in this census between a "House" and a "House-hold". A house is any human dwelling having a separate main entrance while a household is any commensal unit living in a census house. In previous censuses the figures under "Occupied Houses" use to be that of households, while the figures under columns 7—9 of the present table refer to occupied census houses as distinct from households.

The Economic Tables—The Indian Census Economic Classification Scheme, 1951, together with the occupational division and sub-division adopted for the census are given in Part II-B of the Report.

Table B-I—Each of the eight livelihood classes mentioned above has been divided into three sub-classes, with reference to the economic status, as follows :

(i) Self-supporting persons ;

(ii) Non-earning dependants ; and

(iii) Earning dependants.

These were defined in the Instructions to Enumerators as follows :

"A 'self-supporting person' is one who is in receipt of an income and that income is sufficient at least for his own maintenance. To be 'self-supporting' a person need not be able to support his family. All that is necessary is that he should be earning sufficient for his personal needs. For purposes of this question the person enumerated is the unit and not the family or household. Any one who is not a 'self-supporting' person in this sense is a 'dependant'. A 'dependant' may be either an 'earning dependant' or a 'non-earning dependant'. The test is whether he secures a regular (and not casual) income, even though it may be small. Such income may be in cash or kind ; it may be continuous or seasonal employment When the income which he secures is not sufficient to support him that person is an 'earning dependant'. A person who does not earn any income either in cash or kinds is a 'non-earning dependant'. Where two or more members of a family household jointly cultivate land and secure an income therefrom, each of them should be regarded as earning part of the income. None of them is, therefore, a non-earning dependant. Each of them should be classed either a 'self-supporting person' or an 'earing dependant' according to the share of income attributable to each. The same applies to any other business carried on jointly. The share of the income is what the head of household deems it to be. This does not mean that every one who works is necessarily a self-supporting person or an earning dependant. Thus, for instance, a housewife who cooks for the family, brings up the children or manages the household is doing very valuable work. Nevertheless, her Economic Status is that of a non-earning dependant, if she does not also earn an income, and should be recorded as such."

Economically active, Semi-active and Passive persons—All non-earning dependants are economically passive. They include persons performing house-work or other domestic or personal services for other members of the same family household. But they do not include "unpaid family workers" or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise.

All earning depandants are economically semi-active only. Though they contribute to the carrying on of economic activities, the magnitude of their individual contribution is deemed to be to small to justify their description as economically active. (Their contribution to economic activity is, however, taken into account in the tabulation of data based on secondary means of livelihood.)

All self-supporting persons are, ordinarily economically active with the exception of the following classes and groups :

(*a*) All self-supporting persons of Agricultural Class IV.

(*b*) The following groups of self-supporting persons who are included in Non-agricultural Class VIII and drive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity) :

(i) Persons living principally on income from non-agricultural property ;

(ii) Persons living principally on pensions, remittances, scholarships and funds ;

(iii) Inmates of alms-houses and receipients of doles ;

(iv) Beggars and vagrants ; and

(v) All other persons living principally on income derived from non-productive activities.

Table B-II—For a self-supporting person who has more than one means of livelihood the *secondary means* of livelihood is the livelihood next in importance to his principal means of livelihood. For an earning dependant it is the source from which he secures his own income where there are more than one subsidiary occupations only the one providing the largest income has been taken into account.

Table B-III—"Employers" "Employees" and "Independent Workers" have been defined, as follows in the Instructions to Enumerators :

An "employer" is only that person who has necessarily to employ other person in order to carry on the business from which he secures his livelihood. Thus if a person who employs a cook or any other person for demestic services, he should not be recorded as an "employer" merely for that reason.

An "employee" is a person who ordinarily works under some other person for a salary or a wage in cash or kind as the means of earning his livelihood. There may be persons who are employed as managers, superintendents, agents, etc. and in that capacity control other workers. Such persons are also employees only and should not be regarded as employers.

An "independent worker" means a person who is not employed by any one else and who also does not employ anybody else in order to earn his livelihood. (Sweepers. *dhobis, kahars* etc., who work for several masters are independent workers. If, however, any of them accepts whole-time employment under one master he becomes "employee" Daily wage-earners who work for different masters are likewise independent workers. But if they accept employment under one master, e.g. under a factory, they become "employees".)

Tables C-II, C-III, C-IV and C-V—The figures presented in these tables are based on single year age-returns and have not been smoothed.

Tables D-V (i) *and* (ii)—For the purpose of these tables a "displaced person" has been defined as follows :

"A displaced person means any person who has entered India having left or being compelled to leave his home in Western Pakistan on or after the 1st March, 1947, or his home in Eastern Pakistan on or after the 15th October, 1946, on account of civil disturbances or on account of the setting up of the two Dominions of India and Pakistan."

PART I

DISTRICT CENSUS TABLES

A —GENERAL POPULATION TABLES
