DISTRICT CENSUS HANDBOOK
1951

ALMORA DISTRICT

FOREWORD

Several States, including Uttar Pradesh, have been publishing village statistics by districts at each census. In 1941 they were published in U. P. under the title "District Census Statistics" with a separate volume for each district. In the 1951 census, when the tabulation has been more elaborate than ever in view of the requirements of the country, the district-wise volume has been expanded into a "District Census Handbook", which now contains the District Census Tables (furnishing data with break-up for census tracts within the district), the District Index of Non-agricultural Occupations, agricultural statistics from 1901-02 to 1950-51 and other miscellaneous statistics in addition to the usual village population statistics. The village population statistics also are given in an elaborate form giving the division of the population among eight livelihood classes and other details.

2. It may be added here that a separate set of district-wise volumes giving only population figures of rural areas by villages and of urban areas by wards and mohallas and entitled "District Population Statistics" has already been published. This separate series was necessitated by the urgent requirements of the U. P. Government for elections to local bodies.

3. The number of District Census Handbooks printed so far is thirty seven. Special arrangements for speeding up the printing have now been made and it is hoped that the remaining Handbooks will be printed before the end of 1955.

RAJESHWARI PRASAD, I.A.S.,
Superintendent, Census Operations,
Uttar Pradesh.

RAMPUR:
September 30, 1955.

INTRODUCTION

A—The District

1. The district of Almora extends from Tibet on the north to the Naini Tal district on the south and from Garhwal district on the west to Nepal on the east. The district has a total area of 5,495 square miles and its population in 1951 was 7·7 lakhs. It has 4 tehsils, 11 parganas and 111* thanas.

Topography

2. The entire district lies within the Himalayan system and fully one-third of it lies beyond the outermost great snowy barrier which here exhibits among its more notable summits the peaks of Nandakot and the Pancha-chuli group. The country consists of a succession of ridges derived from the snowy range from which they trend in a general southerly direction. Snowfields, glaciers and forest-clad mountains and precipitous ravines characterise the configuration of the district.

In the district the loftiest snowy peaks do not lie along the course of the Tibetah watershed. They are situated at the southern extremity of snow-clad spurs extending south from the water parting ridge, and at a distance of 20 to 30 miles from it. The watershed is throughout the greater part of its length a simple longitudinal range and at no point it is possible to enter Tibet from the south without rising to nearly 16,800 feet. The highest peak is that of Nanda Devi. Its highest summit which attains an elevation of 25,645 feet, belongs to the Garhwal district, but an eastern buttress (24,379 feet) is situated on the border between that district and Almora. Trisul (23,360 feet) is another peak which lies on the boundary and it is connected with Nanda Devi by a ridge exceeding 21,000 feet in height. From this ridge a spur diverges towards the south-west, rising above the Pindari glacier to 20,740 feet and in Nandakot to 22,510 feet. The Nanda Devi group is continued northwards to Unta-Dhura ridge by a chain of peaks. There are some other minor groups of snowy peaks. East of Nanda Devi stands the Pancha-chuli. The highest peak of the group has an altitude of 22,661 feet. The great clusters of snowy peaks devide the great river basins from each other and the smaller groups separate sections of those basins from each other : thus Nanda Devi separates the Kali from the Ganga system, and the Yirgnajung and Panchi-chuli minor group separate affluents of the Kali from each other.

Soils

3. As the district contains very little level ground the best cultivation is carried on terraced fields. The soil is very thin on most hill sides and is alluvial. The northern slopes of the hill are usually less abrupt and less denuded by the action of the rain than the southern slopes. Fields with a northern aspect, therefore, contain thicker and richer soil. Of the *talaon* (irrigated) lands the *sera* lands, which occur generally low down near the irrigating stream, grow fine rice and are the richest. The other class of *talaon* land is *panchar*. These are usually situated in the uplands and they are frequently not well levelled. The other classification is of *uproan*. It is not irrigated.

Classification of area

4. The figures of the classification of area during the last fifty years are given in Table 2 of Part III of this Volume. The proportion of area under the various categories works out as follows for 1950-51 :

Particulars	Actual figures (in acres)	Percentage
Cultivated area	505,026	14·8
Culturable waste (excluding current fallow)	21,961	0·7
Current fallow	43,922	1·3
Forest	690,101	20·2
Area not available for cultivation	2,150,746	63·0

The total land area cultivated and cultivable (including current fallow) in the district is about 571 thousand acres. It works out to 73·9 cents *per capita* of which 71·0† cents have already been brought under cultivation. It may be noted, however, that the figures are only conventional estimates.

Climate and rainfall

5. The order of the three seasons in the tract between the snowy range and the plains is the same as in upper India : a well marked winter, almost entirely without snow, is followed by a summer of nearly tropical heat which is again succeeded by a season of rains. Some rain falls in the winter, which above an altitude of 5,000 feet appears in the form of snow. The winter is extremely rigorous on the summit of the

*The revenue and police administration in the district is of different pattern from the rest of the State.

†The figure also includes the area classed as current fallow.

table land. The temperature decreases as the height increases. Places which lie behind the outermost high ridge are subject to a much smaller rainfall than stations situated on the ridge or in valleys opening to the south. In the river valleys the heat is always excessive and cold fogs often follow the winter showers. The average rainfall of the district for the last quinquennium was about 61·6 inches. During the last forty-five years the rainfall has been less than 41 inches in only one year and has usually been more than 54 inches. There are greater variations between different places. The rainfall depends upon the surroundings. The maximum falls occur at the foot of the outermost range of hills and at the foot of the snows.

Irrigation

6. Irrigation is the most important factor in determining the system of agriculture and the crop rotation. Water is brought into the fields from rivers or rivulets by means of channels called *guls* cut along the contour line of the hills.

Crops

7. Throughout the greater part of the district there are, as in the plains, two harvests, the *kharif* and the *rabi*. Rice and *mandua* are the chief *kharif* crops. The principal *rabi* corps are wheat, barley and mustard.

B—Analysis of the Statistics

Population: General distribution and density

1. The table below shows the two basic figures—land area and population—and the derived figures of land area *per capita* :

Tehsil	Population (in lakhs)	Density (number per square mile)	Land area (in lakhs of acres)	Land area *per capita*
Almora	2·81	122	26·47	5·26
Ranikhet	2·22			
Champawat	0·65	108	3·84	5·93
Pithoragarh	2·05	314	4·18	2·04
Almora district	*7·73*	*143**	*34·49*	*4·46*

The district though second in respect of area stands forty-third in respect of population. Its density is only 143 which is far below the average for the State (which is 557 persons per square mile). The rural density of Almora is 139, the density of rural parts of tehsils being : Almora-cum-Ranikhet 117, Champawat 108 and Pithoragarh 311. The densities are low on account of the mountainous nature of the whole district. (*Vide* Tables A-I and E)

Growth of population

2. During the last fifty years the population of the district has recorded an increase of 70·4 per cent. Compared to this the increase in the population of the State during the corresponding period has been only 30 per cent. The table below exhibits the variation in the total, rural and urban population for the last five decades :

Census year	Population			Variation		
	Total	Rural	Urban	Total	Rural	Urban
1901	**453,581**	441,739	11,842			
1911	**525,630**	509,289	16,341	**+72,049** (+15·9)	+67,550 (+15·3)	+4,499 (+38·0)
1921	**530,338**	518,347	11,991	**+4,708** (+0·9)	+9,058 (+1·8)	—4,350 (—26·6)
1931	**583,302**	569,842	13,460	**+52,964** (+10·0)	+51,495 (+9·9)	+1,469 (+12·3)
1941	**687,286**	669,878	17,408	**+103,984** (+17·8)	+100,036 (+17·6)	+3,948 (+29·3)
1951	**772,896**	749,358	23,538	**+85,610** (+12·5)	+79,480 (+11·9)	+6,130 (+35·2)

Population in this district has increased steadily at all enumerations except that of 1921. Between 1901 and 1921, the population of the district recorded an increase of 16·9 per cent. when that of the State decreased by 4·0 per cent. During 1911—21 the population increased only slightly : The district undoubtedly suffered much less from the influenza epidemic than did the State generally. The steady increase was again resumed in 1931 and the population of the district recorded an increase of 45·7 per cent. since 1921 against an increase of 35·5 per cent. in the population of the State during the same period.

The population of the district increased by 12·5 per cent. in the last decade, which is somewhat above the State figure (11·8 per cent.). Pithoragarh (30·6 per cent.) and Almora (27·3 per cent.) tehsils show substantial increases during this period but the increase in tehsil Ranikhet (6·9 per cent.) is far below the average while the population of tehsil Champawat has decreased by 36·4 per cent. It appears that at the time of enumeration the summer immigration in tehsil Ranikhet had not commenced and the emigrants to the *Bhabar* had not commenced to return to tehsil Champawat, whence most of them come.

Vital Statistics

3. The steady increase in population of this district is entirely due to natural causes. The survival rate during the last three decades has been high. The following table gives the mean decennial registered *birth* and *death-rates* and the natural rate of increase and population growth-rates of the last three decades for the district as a whole.

	Total
Mean decennial birth-rate—	
1941—50	33·2
1931—40	39·7
1921—30	38·2
Mean decennial death-rate—	
1941—50	18·3
1931—40	21·2
1921—30	26·1
Mean decennial rate of natural increase—	
1941—50	14·9
1931—40	18·5
1921—30	12·1
Mean decennial growth-rate—	
1941—50	11·7
1931—40	16·4
1921—30	9·5

There are large omissions in the registration of births and deaths and so the above rates do not represent the true picture at all. They may, however, be taken to be roughly indicative of trends. The district has a high birth-rate and a moderate death-rate. Both birth and death-rates have fallen during the last decade.

The figures of natural increase and growth-rates suggest considerable loss of population by migration during the last three decades ; otherwise the growth would have been still higher.

The average yearly mortality from various causes in the district during 1941—50 was as follows :

Causes	Number of deaths	Percentage of total deaths
Fever	11,018	82·6
Dysentery and diarrhoea	602	4·5
Respiratory diseases	616	4·6
Plague, cholera and small-pox	144	1·1
Others	961	7·2

As in the rest of the State 'fever' is responsible for a majority of the deaths. But 'fever' covers a number of ailments which the reporters are unable to identify. (*Vide* Table I, Part III of this Volume)

Migration

4. Immigration to the district is relatively unimportant. As many as 98·1 per cent. of the people enumerated in the district at the census of 1951 were born there, and only 1·0 per cent. were born in other districts of the State, 0·3 per cent. were born in other parts of India and 0·6 per cent. were born in the other countries. Of the immigrants from the districts of the State as many as 6,116 (males 2,283, females 3,833) were from other districts of the same natural division and only 1,757 persons (males 1,092, females 665) were from other parts of the State. The sex proportion suggests that quite a large proportion of the migration from the neighbouring districts is marriage migration. Of 1,514 immigrants from adjacent States 780 (males 567, females 213) were from Punjab and 396 (males 385, females 11) were from Himachal Pradesh.

Of the immigrants who have come from territories beyond India 886 (males 664, females 222) were Pakistan-born and 3,856 (males 2,043, females 1,813) had their birth place in other territories. The Pakistan-born are the displaced persons who numbered 439 (males 217, females 222) in the district. Of the immigrants born in other territories as many as 3,229 persons were Nepal-born.

The number of non-Indian nationals in the district was 1,137. Of them 932 were Nepalis, 148 Tibetans, 14 Pakistanis, 3 Chinese, 7 British, 2 Italians, 3 Swiss, 1 Swedish, 16 Americans, 5 Canadians, 2 Argentinians and 4 Australians.

The periodic migration from this district to the *Bhabar* is important. The figures of emigration are not available. On the balance of migration according to vital statistics, however, the district appears to have lost about 14,000 persons in 1921—30, 14,000 persons in 1931—40 and 23,000 persons in 1941—50. But it should be kept in mind that the figures contain an element of registration error and are only indicative of trends.

Growth of population and expansion of agriculture

5. Unfortunately an analysis of the growth of population in the district during the last thirty years in relation to the growth of cultivation during the same period is not possible. The figures for cultivated area, double-cropped area and irrigated area are only conventional estimates and incomplete and, therefore, any comparison is not feasible. It appears, however, that the extra population has been provided for chiefly by an increased cultivated area* but at the same time owing to the limited expansion of cultivation emigration has also increased. The likelihood is that owing to the limited possibilities of expansion of agriculture the future increases in population will prove to be a strain on the economy of the district and as a consequence emigration will further increase.

Villages and towns

6. The district has 5,294 villages and 4 towns. Out of 7·7 lakhs of people 7·5 lakhs were found in the villages and 0·2 lakhs in the towns, i.e., there were 970 persons per 1,000 population who lived in the rural areas and only 30 of them lived in the urban areas. The corresponding figures for the State as a whole are: rural 864, urban 136.

The villages are small and have compact site. The rural population per inhabited village works out to 142. Of the rural population 87·2 per cent. live in villages of population under 500, 12·1 per cent. live in villages of population between 500—2,000 and only 0·7 per cent. live in villages of population between 2,000 and 5,000.

Towns also vary in number of inhabitants. 51·5 per cent. of the urban population lives in a town of population between 10,000 and 20,000 (viz., Almora M. B.), 38·0 per cent. in a town of population between 5,000 and 10,000 (viz., Ranikhet), 10·5 per cent. in towns of population under 5,000 (viz., Pithoragarh and Almora Cantonment). It is significant that Ranikhet has recorded an increase of 82·6 per cent. in population since 1941. The increases in Pithoragarh and Almora (M. B.) during this period have been 21·4 per cent. and 18·4 per cent. respectively. Between 1921 and 1951 Almora recorded an increase of 44·9 per cent. and Ranikhet of 146·1 per cent.

Occupations: livelihood pattern

7. Out of the total population of 772,896 (rural 749,358, urban 23,538) 691,317 persons (rural 690,251, urban 1,066) or 89·4 per cent. depend on agriculture for their means of livelihood and 81,579 persons (rural 59,107, urban 22,472) or 10·6 per cent. depend on non-agricultural sources. The following table gives the distribution of 100 persons of total, rural and urban population of the district under the different livelihood classes:

Description	Agricultural classes					Non-agricultural classes				
	Total	I	II	III	IV	Total	V	VI	VII	VIII
Total	**89·4**	**78·7**	**9·9**	**0·6**	**0·2**	**10·6**	**2·5**	**1·8**	**0·2**	**6·1**
Rural	**92·1**	81·1	10·2	0·6	0·2	**7·9**	2·1	1·2	0·2	4·4
Urban	**4·5**	3·4	0·4	..	0·7	**95·5**	13·9	18·5	2·7	60·4

*The cultivated area (quinquennial average) remained stationary at 295,000 acres between 1921 and 1931; it increased to 295,098 acres in 1941 and to 463,063 acres in 1951.

It is obvious that the district is one of the predominantly agricultural districts of the State. Here as many as 89·4 per cent. of the people depend on agriculture as against 74·2 per cent. in the whole State.

Of the total population of the district 339,704 persons (males 173,180, females 166,524) or 44·0 per cent. have been classified as non-earning dependants. The percentage of non-earning dependants in the agricultural population works out to 43·5 per cent. and that among the non-agricultural population to 47·6 per cent. It will be observed that in the main they consist of women. The male non-earning dependants are mostly children. 228,386 persons (males 32,305, females 196,081) or 29·5 per cent. of the population are earning dependants. Among the agriculturists their proportion is 30·8 per cent. and among non-agriculturists they form 19·1 per cent. Agriculture is a family occupation and it provides work to the women and grown up children in the family. The remaining 204,806 persons (males 174,186, females 30,620) or 26·5 per cent. are self-supporting persons. Their proportion among agriculturists is 25·7 per cent. and among non-agriculturists 33·3 per cent. Of the self-supporting persons 177,639 (males 149,018, females 28,621) belong to agricultural classes and 27,167 (males 25,168, females 1,999) to non-agricultural classes. On an average a self-supporiting person maintains two non-earning dependants.

Of the 27,167 self-supporting persons belonging to the non-agricultural classes 1,630 persons (rural 1,575, urban 55)earn their livelihood from non-productive sources. Of the remaining 25,537 self-supporting persons (rural 16,706, urban 8,831) 252 persons (rural 142, urban 110) or 1·0 per cent. are employers, 14,879 persons (rural 8,356, urban 6,523) or 58·3 per cent. are employees and 10,406 persons (rural 8,208, urban 2,198) or 40·7 per cent. are independent workers.

The distribution of 10,000 self-supporting persons of non-agricultural occupations classified according to economic divisions is as follows :

Name of division	Self-supporting persons by divisions
All Industries and Services	**10,000**
0—Primary industries not elsewhere specified	498
1—Mining and quarrying	15
2—Processing and manufacture—foodstuffs, textiles, leather and products thereof	882
3—Processing and manufacture—metals, chemicals and products thereof	401
4—Processing and manufacture—not elsewhere specified	497
5—Construction and utilities	389
6—Commerce	1,483
7—Transport, storage and communications	503
8—Health, education and public administration	3,376
9—Services not elsewhere specified	1,956

Among the large scale industries, the principal are turpentine, rosin and tea. Among the small scale industries the principal are woollen tweeds, *pankhies*, *thulmas* blankets, *chulkas* etc., leather tanning, brass and copper wares and mat-weaving.

Variation in the livelihood pattern

8. In this district, the proportion of population depending on agriculture for their livelihood was 90·5* per cent. in 1951. The unfortunate fact is that agricultural population had been increasing ever since 1901 and only in this census the process appears to have been arrested. The figure stood at 91·1 per cent. in 1901, 91·6 per cent. in 1911 and 92·4 per cent. in 1921. The actual number of persons who depend on agriculture has increased from 489,669 in 1921 to 698,875 in 1951, i.e., by 42·7 per cent. This has resulted in progressive fragmentation and subdivision of holdings and pressure on impoverished soil. The proportion of workers in the total population in 1951 was 56·0 per cent. (agricultural 51·5 per cent., non-agricultural 4·5 per cent.) against. 67·7 per cent. (agricultural 62·7 per cent., non-agricultural 5·0 per cent.) in 1921. The proportion of non-earning dependants has consequently increased from 32·3 per cent. (agricultural 29·7 per cent., non-agricultural 2·6 per cent.) in 1921 to 44·0 per cent. (agricultural 39·0 per cent., non-agricultural 5·0 per cent.) in 1951. All this is an index of the increasing unemployment and under-employment. It is only by the diversion of the population to cottage and other industries and by supplying subsidiary occupations to the agriculturists that the present disequilibrium in the economy of the district can be redressed. (*Vide* Tables B-I, B-II and B-III).

*The figure includes earning dependants according to their secondary means of livelihood while the figure of 89·4 in paragraph 7 includes earning dependants according to their principal means of livelihood and hence the difference.

Houses and households

9. There were 157,581 occupied houses in this district—154,383 in villages and 3,198 in towns. That gives an average of 4,854 persons per 1,000 houses or 4·9 persons per house in the rural areas and 7,360 persons per 1,000 houses or 7·4 persons per house in the urban areas.

There were 163,360 households in the district—159,183 in rural areas and 4,177 in urban areas. That gives an average of 4,700 persons per 1,000 households or 4·7 persons per household in rural areas and 5,635 persons per 1,000 households or 5·6 persons per household in urban areas. The marginal table shows the developments in the size of household since 1921. The rural household which had been increasing between 1921 and 1941 has shown a decrease in 1951. It is smaller than the average State rural household (5·07). The urban household has registered an increase since 1921.

Census year	Persons per 1,000 households of	
	Rural Population	Urban Population
1921 ..	4,566	3,843
1931 ..	4,587	4,036
1941 ..	4,761	4,351
1951 ..	4,700	5,635

Out of 4,700 persons in every 1,000 rural households, 2,284 are males and 2,416 are females. There is female excess numbering 132 in every 1,000 rural households. Out of 5,635 persons in every 1,000 urban households, 3,612 are males and 2,023 are females. There is a male excess numbering 1,589 in every 1,000 urban households. The type of migration will account for the difference.

Information regarding types of household and household relationships was also collected at this census with the help of a sample of about 4 per cent. According to this in every 1,000 sample households there are 4,607 persons (males 2,283, females 2,324) in the district. The corresponding figure for the total count is 4,724.

The table below shows the distribution by size of 1,000 sample households :

Description	Small with 3 members or less	Medium with 4—6 members	Large with 7—9 members	Very large with 10 members or more
Total	**346**	**476**	**145**	**33**
Rural	339	484	145	32
Urban	549	263	137	51

Medium households are the dominant type in villages where as the small households are more numerous in the towns.

Family composition of 1,000 sample households is as follows :

			Number in 1,000 households
A	Heads of households	Males (married)	749
		Males (widowers)	153
		Females	98
	Wives of heads of households		749
			1,749
B	Sons of heads of households		1,073
	Daughters of heads of households		746
			1,819
C	Male relations of heads of households (other than sons)		302
	Female relations of heads of households (other than daughters)		722
			1,024
D	Persons unrelated to the heads of the households	Males	6
		Females	9
			15
	Grand Total	..	*4,607*

Sons outnumber the daughters of the heads of households. The latter leave the homes of their parents after marriage. Female relatives (other than daughters) outnumber the male relatives (other than sons). Such females are generally those who become members of these households by marriage. (*Vide* Tables A-I and C-I)

Sex-ratio

10. In the district as a whole, the sex-ratio was 1,036, i.e., there were 1,036 females to every 1,000 males. It varied among the tehsils. The highest value was 1,103 in Ranikhet tehsil and the lowest value was 979 in Champawat tehsil. The sex-ratio was 1,004 in Almora tehsil and 1,028 in Pithoragarh tehsil.

The sex-ratio was higher in rural areas than in urban areas. For the district as a whole the sex-ratio in villages was as high as 1,055 (mainly due to male migration) while that in towns was only 560.

The corresponding figure of sex-ratio in the district was 999 in 1921, 998 in 1931 and 1,010 in 1941.

Age structure

11. The number in each age-group in the district is shown below as a percentage of the total number of all ages in the total, rural and urban population.

Age-group		Total population			Rural population		Urban population	
		Persons	Males	Females	Males	Females	Males	Females
Infants and young children	0—4	13·8	7·0	6·8	7·0	6·9	6·5	4·3
Boys and girls ..	5—14	25·8	13·7	12·1	13·7	12·2	12·8	10·1
Young men and women ..	15—34	31·4	13·7	17·7	13·2	17·8	30·9	12·1
Middle-aged men and women	35—54	20·0	10·5	9·5	10·5	9·6	12·0	5·8
Elderly persons	55 and over	9·0	5·0	4·0	5·1	4·0	3·0	2·5

It will be seen that the population is progressive. 39·6 per cent. of the population is of age under 15 and only 7·0 per cent. of it consists of elderly persons (55 and over). Again it may be noted that a larger proportion of persons in working ages (15—54) are found in the urban areas. This is the effect of migration of workers to the towns from the villages many of whom are unaccompanied by their families. (*Vide* Table C-II)

Marital status

12. Out of every 10,000 persons in the district, there were 5,000 males and 5,000 females.* Among them 2,533 males and 2,004 females were unmarried. If we reckon males and females together, the unmarried people were 45·4 per cent. of the population.

Of the males 50·7 per cent. were unmarried, 45·5 per cent. were married, and 3·8 per cent. were widowed or divorced. Of the females 40·1 per cent. were unmarried, 48·2 per cent. were married and 11·7 per cent. were widowed or divorced.

Of the married males 1·8 per cent. were below 15, 38·2 per cent. were of ages 15—34, 43·0 per cent. were of ages 35—54 and 17·0 per cent. were of ages 55 and over. Among the married females 6·5 per cent. were of ages below 15, 59·5 per cent. were of ages 15—34, 29·3 per cent. were of ages 35—54 and 4·7 per cent. were of ages 55 and over.

Marriage is universal. Among males and females aged 35 years and over only 1·1 per cent. of the males and 0·2 per cent. of the females were found unmarried. Most of the females are married before they attain the age of 25. Child marriage is still prevalent though it is not very common. Only 2·0 per cent. of the males aged 0—14 and 8·3 per cent. of the females of ages 0—14 were returned as married. (*Vide* Table C-III)

Languages

13. Over 63·1 per cent. of the people of the district returned Pahari (Kumaoni) and 36·3 per cent. returned Hindi, Hindustani or Urdu as their mother-tongue. Among the other mother-tongues the main was Nepali (0·4 per cent.). Of the 7·7 lakhs of people in the district only 146,253 or 18·9 per cent. were bilingual (in an Indian language). Those whose mother-tongue is other than Hindi, Hindustani or Urdu are generally able to speak any of these as subsidiary language. Persons returning Hindi, Hindustani or Urdu as secondary language were 146,180 or 99·9 per cent. of those who were bilingual in some Indian language. (*Vide* Table D-I)

Religion and special groups

14. Out of 10,000 population of the district, the number of people belonging to different religions is : Hindus 9,932, Muslims 37, Sikhs 2, Christians 24 and others 5; of 10,000 population in villages the numbers are : Hindus 9,963, Muslims 14, Christians 18 and others 5; of 10,000 population in towns the numbers are : Hindus 8,957, Muslims 742, Sikhs 68, Christians 231 and others 2.

There were 102 thousands persons belonging to the Scheduled Castes in the district. Their number per 10,000 of population works out to 1,325. In villages they are 1,341 for every 10,000 and in the towns their number per 10,000 is only 805. In the district there were 30 Anglo-Indians. (*Vide* Table D-II and D-III)

*The corresponding figures for the total count are 4,912 and 5,088.

Displaced persons

15. The number of displaced persons in the district at the census was 439 (males 217, females 222). Of them 93·4 per cent. were from West Pakistan, 3·4 per cent. from East Pakistan and 3·2 per cent. from districts which could not be traced. (*Vide* Table D-V)

Literacy

16. In 1951 the percentage of male literacy was 29·1 in the district while that of females literacy was 2·9. In 1931 the literacy was 14·1 per cent. for males and 0·8 per cent. for females.† On January 1, 1951 there were 680 primary schools with an enrolment of 43,260. (*Vide* Table D-VII)

C—Explanatory Note on the Statistics

The statistics in this volume have been presented in three parts :

I—District Census Tables

II—Village, Town, Pargana and Thana Statistics

III—Miscellaneous Statistics

Parts I and II contain census data. A brief account of the system of sorting of census slips and preparation of tables and abstract therefrom is given below.

Part III contains statistics throwing light on special aspects of population and its growth. These have been derived from miscellaneous sources. Table 1, "Vital Statistics", has been prepared from the published and unpublished records of the Director of Medical and Health Services, Table 2, "Agricultural Statistics", from the Annual Season and Crop Reports, Table 3, "Live-Stock, Agricultural Machinery and Implements", from the published figures of Live-Stock Census and Table 4, "List of Primary Schools", from information specially supplied by District Inspector of Schools.

Processing of census data

2. The census data presented here has been derived from the census slips by a process of sorting, compilation and tabulation. In previous censuses the slips were first sorted by religion and this division was maintained throughout so that all data were cross-tabulated by religion. This procedure has been abandoned at this census and substituted by a division based on economic characteristics of the population. The whole population has been divided into eight livelihood classes, four of which are of the agricultural category and four of non-agricultural category as follows :

Agricultural Classes—

I—Cultivators of land wholly or mainly owned ; and their dependants

II—Cultivators of land wholly or mainly unowned ; and their dependants

III—Cultivating labourers ; and their dependants

IV—Non-cultivating owners of land ; agricultural rent receivers ; and their dependants

Non-agricultural Classes—

V—Production (other than cultivation)

VI—Commerce

VII—Transport

VIII—Other services and miscellaneous sources.

Another special feature of the sorting of this census was the separation, from the very start, of slips of displaced persons and of a 10 per cent. random sample from the remainder. This has enabled the data of displaced persons to be presented separately while the 10 per cent. sample has been utilized for the preparation of Age Tables.

The slips of this census have been copied by Households into a National Register of Citizens, which has been prepared village-wise for rural areas and mohalla/ward-wise for urban areas. Table C-I is based on a 4 per cent. sample extracted from this Register.

Tracts

3. The slips were first sorted by villages for the preparation of the Primary Census Abstract. For the purpose of further sorting the State was divided into tracts consisting of (*a*) *rural tracts*, comprising the rural population of each tehsil, (*b*) *urban city tracts*, comprising the population of areas which had been declared as cities, (*c*) *urban non-city tracts*, comprising the population of urban areas of a district excluding areas declared as cities. Each tract was treated as a unit for sorting of slips. All data were compiled first by tracts and then by districts. This volume presents the tract-

†The number per mille (of the 10 per cent. sample population) of each sex aged 5 years and over who were returned as literate are as below:

Males		Females	
1951	1931	1951	1931
349	167	35	10

wise data for one district (with the exception of A and E Tables, which have been presented tehsil-wise), while the district-wise data for the whole State is contained in the following State volumes :

Part I-B—Subsidiary Tables

Part II-A—General Population Tables

Part II-B—Economic Tables

Part II-C—Age and Social Tables

Explanatory notes

4. Detailed explanatory notes are appended to each State table in the printed volumes of State tables. They apply to the tables in this volume also and should be referred to when necessary. A few notes of some of the tables are reproduced below :

Table A-I—Column 5 relating to "hamlets" has been introduced for the first time. Any distinctive cluster or agglomeration of houses has been treated as a "hamlet".

A clear distinction has been made in this census between a "House" and a "Household". A house is any human dwelling having a separate main entrance while a household is any commensal unit living in a census house. In previous censuses the figures under "Occupied Houses" used to be that of households, while the figures under columns 7—9 of the present tables refer to occupied census houses as distinct from households.

The Economic Tables—The Indian Census Economic Classification Scheme, 1951 together with the occupational division and sub-division adopted for this census are given in Part II-B of the Report.

Table B-I—Each of the eight livelihood classes mentioned above has been divided into three sub-classes, with reference to the economic status, as follows :

(*i*) Self-supporting persons ;

(*ii*) Non-earning dependants ; and

(*iii*) Earning dependants.

These were defined in the Instructions to Enumerators as follows :

> "A 'self-supporting person' is one who is in receipt of an income and that income is sufficient at least for his own maintenance. To be 'self-supporting' a person need not be able to support his family. All that is necessary is that he should be earning sufficient for his personal needs. For purposes of this question the person enumerated is the unit and not the family or household. Any one who is not a 'self-supporting' person in this sense is a 'dependant'. A 'dependant' may be either an 'earning dependant' or a 'non-earning dependant'. The test is whether he secures a regular (and not casual) income, even though it may be small. Such income may be in cash or kind ; it may be continuous or seasonal employment. When the income which he secures is not sufficient to support him that person is an 'earning dependant'. A person who does not earn any income either in cash or kind is a 'non-earning dependant'. Where two or more members of a family household jointly cultivate land and secure an income therefrom, each of them should be regarded as earning part of the income. None of them is, therefore, a non-earning dependant. Each of them should be classed either a 'self-supporting person' or 'an earning dependant' according to the share of income attributable to each. The same applies to any other business carried on jointly. The share of the income is what the head of household deems it to be. This does not mean that every one who works is necessarily a self-supporting person or an earning dependant. Thus, for instance, a housewife who cooks for the family, brings up the children or manages the household is doing very valuable work. Nevertheless, her Economic Status is that of a non-earning dependant, if she does not also earn an income, and should be recorded as such."

Economically active, Semi-active and Passive persons—All non-earning dependants are economically passive. They include persons performing house-work or other domestic or personal services for other members of the same family household. But they do not include "unpaid family workers" or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise.

All earning dependants are economically semi-active only. Though they contribute to the carrying of economic activities, the magnitude of their individual contribution is deemed to be too small to justify their description as economically active. (Their contribution to economic activity is, however, taken into account in the tabulation of data based on secondary means of livelihood.)

All self-supporting persons are ordinarily economically active with the exception of the following classes and groups :

(*a*) All self-supporting persons of Agricultural Class IV.

(*b*) The following groups of self-supporting persons who are included in Non-agricultural Class VIII and derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity) :

(i) Persons living principally on income from non-agricultural property ;

(ii) Persons living principally on pensions, remittances, scholarships and funds ;

(iii) Inmates of alms-houses and recipients of doles ;

(iv) Beggars and vagrants ; and

(v) All other persons living principally on income derived from non-productive activities.

Table B-II—For a self-supporting person who has more than one means of livelihood the *secondary means* of livelihood is the livelihood next in importance to his principal means of livelihood. For an earning dependant it is the source from which he secures his own income, where there are more than one subsidiary occupations only the one providing the largest income has been taken into account.

Table B-III—"Employers", "Employees" and "Independent Workers" have been defined as follows in the Instructions to Enumerators :

An "employer" is only that person who has necessarily to employ other person in order to carry on the business from which he secures his livelihood. Thus if a person employs a cook or any other person for domestic services, he should not be recorded as an "employer" merely for that reason.

An "employee" is a person who ordinarily works under some other person for a salary or a wage in cash or kind as the means of earning his livelihood. There may be persons who are employed as managers, superintendents, agents etc., and in that capacity control other workers. Such persons are also employees only and should not be regarded as employers.

An "independent worker" means a person who is not employed by any one else and who also does not employ anybody else in order to earn his livelihood. (Sweepers, *dhobies*, *kahars* etc., who work for several masters are independent workers. If, however, any of them accepts whole-time employment under one master he becomes "employee". Daily wage-earners who work for different masters are likewise independent workers. But if they accept employment under one master, e.g., under a factory, they become "employees".)

Tables C-II, C-III, C-IV and C-V—The figures presented in these tables are based on single year age returns and have not been smoothed.

Tables D-V (i) and(ii)—For the purpose of these tables a "displaced person" has been defined as follows :

"A displaced person means any person who has entered India having left or being compelled to leave his home in Western Pakistan on or after the 1st March, 1947, or his home in Eastern Pakistan on or after the 15th October 1946, on account of civil disturbances or on account of the setting up of the two Dominions of India and Pakistan."
