2	Pargana and Thana-wise Population	192–193
PART III—MISCELLANEOUS STATISTICS		
1	Vital Statistics	196–199
2	Agricultural Statistics—(i) Rainfall	200–201
	(ii) Area as classified with details of area under cultivation	202–205
	(iii) Cropped Area	206–221
	(iv) Irrigated Area	222–225
3	Live-Stock, Agricultural Machinery and Implements	226–229
4	List of Primary Schools	230–235

FOREWORD

Several States, including Uttar Pradesh, have been publishing village statistics by districts at each census. In 1941 they were published in U. P. under the title "District Census Statistics" with a separate volume for each district. In the 1951 census, when the tabulation has been more elaborate than ever in view of the requirements of the country, the district-wise volume has been expanded into a "District Census Handbook", which now contains the District Census Tables (furnishing data with break-up for census tracts within the district), the District Index of Non-agricultural Occupations, agricultural statistics from 1901-02 to 1950-51 and other miscellaneous statistics in addition to the usual village population statistics. The village population statistics also are given in an elaborate form giving the division of the population among eight livelihood classes and other details.

2. It may be added here that a separate set of district-wise volumes giving only population figures of rural areas by villages and of urban areas by wards and mohallas and entitled "District Population Statistics" has already been published. This separate series was necessitated by the urgent requirements of the U. P. Government for elections to local bodies. The printing of the District Census Handbooks involves colossal work and is bound to take some time.

RAJESHWARI PRASAD, I.A.S.,
Superintendent, Census Operations,
Uttar Pradesh.

RAMPUR:
September 1, 1954.

INTRODUCTION

A—The District

1. Meerut is situated in the upper *Doab* of the rivers Ganga and Yamuna. It is bounded on the north by the district of Muzaffarnagar and on the south by Bulandshahr. On the east the boundary throughout is formed by the Ganga which separates it from the districts of Bijnor and Moradabad. All along the western boundary flows the Yamuna, which separates this district from Delhi and East Punjab. The district has a total area, according to the figures of 1951, of 2,323 square miles. Its population in 1951 was 22·81 lakhs, the second biggest among the districts of the State. It has 6 tehsils, 17 parganas and 23 thanas.

Topography

2. In its general aspect the district presents the appearance of a level alluvial plain without any hills or eminences of any magnitude. The general direction of the drainage is from north to south, and the slope is very gradual throughout. There is no uneven ground save in the ravines or *khadars* that are generally found on the edge of the river valleys.

It may be divided into several distinct tracts, each with well-marked physical characteristics of its own. These are the north-western tract, the central depression, the eastern tract and the *khadar* lands of the Ganga and Yamuna. The first of these, the north-western tract, embraces the whole of the Baghpat tehsil, the greater part of Sardhana and portions of Meerut and Ghaziabad. This tract is the most fertile portion of the entire area of Meerut, and consists of a fine black loamy soil. This level plain is only broken by the valleys of the Hindan and its tributaries. Towards the west it sinks into the *khadar* of the Yamuna, while on the south the good soil of the upland narrows to a point and terminates in the wide expanse of low-lying land or *khadar* between the Hindan and the Yamuna. Between the Yamuna and the Hindan there are two small streams which drain the north central portion of the upland tract known as the Krishani and Banganga. Their banks are broken by several small ravines and these rivers are quite useless except drainage channels. The river Yamuna exercises a large influence on the Baghpat tehsil and all the land west of the Hindan. The bed of the river lies very low and irrigation from it is impracticable. Only in the south the absence of the high bank results in floods which saturate a great portion of pargana Loni in Ghaziabad tehsil. Its *khadar* is much wider in the south than in the north. Here the uplands terminate in a sandy fringe of ravines and undulating soil in which nothing will grow except an inferior kind of thatching grass. In the south the *khadar* sinks into a low-lying tract with a number of depressions which are nearly always covered with water. This lower *khadar* is also subject to floods. The Hindan flows through the eastern half of the north-western tract. Its waters are used for irrigating the *rabi* crops and melons. Its *khadar* which joins the *khadar* of the Yamuna in the south is affected by the saline efflorescence or *reh*.

East of the Hindan watershed is the central depression which runs from north to south. It includes a part of tehsil Sardhana, the centre of tehsil Meerut and the east of pargana Jalalabad and the greater portion of pargana Dasna of tehsil Ghaziabad. The distinguishing feature of this tract is the want of proper drainage. There are artificial drains but even then water does not escape rapidly and though the soil is generally good, there is a tendency to saturation and damage in unusually wet years. In places there is a tendency to the formation of *reh*.

The eastern uplands extend from the central depression to the ravines above the Ganga *khadar*. This tract mainly comprises of greater portions of tehsils Mawana and Hapur. It is drained by the Kali *nadi* and its affluents. Its chief characteristic is the existence of lines of *bhur* or sand. The soil is not so rich as in the north-western tract.

The eastern most tract is the low *khadar* land of the Ganga valley in tehsils Mawana and Hapur. Many parts of it are capable of cultivation, but it is chiefly covered with grass jungle. Some of it has been reclaimed for colonization. This *khadar* has many wandering depressions and water-courses generally connecting with the main stream the chief of these being the Burh Ganga which is an old bed of the Ganga. But it is fairly raised on the whole, with soils that are poor and light. The only parts of the district which are liable to flood are the Ganga *khadar*, besides the villages in the low-lying tracts of pargana Loni in tehsil Ghaziabad and the south of Baghpat near the Yamuna.

Soils

3. As regards the soils, the district is one of the best in the State. On the whole it is a tract of extraordinarily rich and uniform soil, fully irrigated and splendidly cultivated. It has been seen in the previous paragraph that the district is, for the most part, a level upland loam, ending in sandy ridges or ravines above the Ganga lowland on the east and the Yamuna lowland on the west, but with *bhur* ridges flanking the Kali *nadi* and the Hindan and with a large strip of low-lying hard soil running through the centre. But for such small areas which are affected by natural defects and fall below the general high level of excellence, the average main soil is of the very higest quality, and is not surpassed in natural fertility by that of any district in the State (*Vide* Final Settlement Report

of the Meerut district, 1940). Another noteworthy feature is that there are few districts with so much "made" soil, in fields redeemed from sand by manuring and irrigation or redeemed by draining and levelling from stiff, infertile clay.

Classification of area

4. The figures of the classification of area for the last fifty years are given in Table 2 of Part III of this Volume. The proportion of area under the various categories works out as follows for 1950-51 :

Particulars	Actual figures (in acres)	Percentage
Cultivated area	1,148,194	78·3
Culturable waste (excluding current fallow)	115,513	7·9
Current fallow	36,166	2·4
Forest	..	..
Area not available for cultivation of which—	167,150	11·4
(a) *Covered with water*	44,861	3·1
(b) *Under sites, roads and buildings*	55,965	3·8
(c) *Barren*	66,324	4·5

The figure in the above table regarding culturable waste taken from the Season and Crop Report is, however, misleading. The State Agriculture Department conducted in 1949-50 a detailed enquiry through the District Officers regarding the nature of this area in each district. The following analysis of the area resulted from this enquiry :

Particulars	Area (in acres)	Percentage
Total culturable waste (A+B+C)	**117,231**	**100**
A—Area under culturable waste land not available for immediate cultivation ..	20,002	17·06
(i) Forest under any legal enactment	...	..
(ii) Groves	11,269	9·61
(iii) Forests of timber trees	96	0·08
(iv) Thatching grasses, shrubs and bushes	2,742	2·34
(v) Land kept for grazing	5,895	5·03
B—Area under culturable waste land available for immediate cultivation but could not be cultivated—	59,148	50·46
Of which due to—		
(i) *Kans* growth	1,642	1·40
(ii) Threshing floors	2,982	2·54
(iii) Malaria	22	0·02
(iv) Floods	4,471	3·81
(v) Lack of drains	1,132	0·97
(vi) Lack of water	5,660	4·83
(vii) Distance from *abadi*	919	0·79
(viii) Damage from wild animals	..	..
(ix) Other causes	42,320	36·10
C—Area under culturable waste land that can be brought under immediate cultivation after some improvements besides the area given against 'B'.	38,081	32·48

From the above it will appear that of the total area recorded as cultivable waste, only 32·5 per cent. was really capable of being brought under immediate cultivation after some improvements.

Thus the land area cultivated and cultivable including current fallow *per capita* works out to 57·0 cents of which 51·0* cents have already been brought under cultivation and only about 1·7 cents can be further brought under the plough after some improvements. It is obvious that the saturation point for cultivation has already been reached in the district.

Climate and rainfall

5. It is one of the healthiest [illegible] of the plains. The weather from November to March is delightfully cool and invig[illegible]. The prevailing winds are westerly and northerly. In April the hot westerly wi[illegible] commence. They generally cease in June.

*The figure also includes the area classed [illegible]t fallow.

They make the atmosphere sultry, but are not at all injurious to health. Towards the end of June, the winds become variable and the weather close and cloudy with occasional showers in the intervals, between which it is hot and damp. When the regular rains set in, it continues fairly cool till the end of September. In October though the days are hot, the nights gradually become cool and pleasant. The latter part of the rains is the most unhealthy season of the year when the district is not immune from malarial fever.

The average rainfall of the district for the last 45 years is 28·54 inches. But there are considerable variations from year to year. The average rainfall varies between 12·71 inches in 1907-08 and 47.93 inches in 1933-34. During the last quinquennium the variation was between 22·99 inches in 1947-48 and 35·26 inches in 1948-49. There are considerable local variations also. The east of the district gets more rain than the west. Mawana tehsil in the north-east gets nearly 50 per cent. more rain than Ghaziabad tehsil in the south-west, and in the south and west of the district the rainfall is not only lighter but more intermittent. The district is practically the meeting place of the Bengal and Bombay monsoon currents. Of the total average rainfall, about 85 per cent. occurs between June and September, and about 10 per cent. between December and February. Winter rainfall is generally regular and adequate, though it is often deficient in October and November when it is most needed for sowing and germination of the *rabi*. On the whole the rainfall of the district is sufficiently precarious to make it largely dependent on artificial irrigation for its prosperity.

Irrigation

6. The irrigated area in 1950-51 was 684,239 acres which constitutes 59·6 per cent. of the cultivated area. The chief sources of irrigation are canals and wells. Of the wet area in 1950-51, 59·0 per cent. was irrigated by canals, 40·4 per cent. by wells and 0·6 per cent. by other sources. Three large canals traverse the district, the Eastern Yamuna in the Yamuna-Hindan *Doab*, the main Ganga canal between the Hindan and the Kali *nadi*, and Anupshahr Branch in the eastern tract between the Ganga and the Kali *nadi*. Well irrigation is found in combination with canals in every part of the district, but apart from the *bhur* areas, the tracts where it is the main source are the north-west of tehsil Sardhana, western borders of tehsils Meerut and Ghaziabad and the eastern borders of tehsil Mawana. In these tracts a new development is a net-work of State tube-wells repalcing the more costly and less effective masonry wells.

Crops

7. More acreage is sown under *kharif* crops than under *rabi* crops. The area under *kharif* in 1950-51 was 807,039 acres, that under *rabi* 740,949 acres and that under *zaid* crops 8,377 acres. The principal *kharif* crop is maize followed by *juar* and *bajra* and the principal *rabi* crop is wheat followed by gram. Sugarcane has recently become a very important crop of the district and 269,244 acres were under this crop in 1950-51, which averages 23·4 per cent. of the cultivated area.

B—Analysis of the Statistics

Population: General distribution and density

1. The table below shows the two basic figures—land area and population—and the derived figures of land area *per capita* :

Tehsil	Population (in lakhs)	Density (number per square mile)	Land area (in lakhs of acres)	Land area *per capita*
Baghpat	4·17	1,043	2·56	0·61
Ghaziabad	4·25	955	2·85	0·67
Hapur	3·71	911	2·61	0·70
Mawana	2·78	661	2·69	0·97
Meerut	4·85	1,697	1·83	0·38
Sardhana	3·05	893	2·18	0·72
Meerut district	*22·81*	*992**	*14·72*	*0·65*

This district though seventeenth in order of area, stands second in the State in respect of population. The density (both including and excluding the urban areas) stands higher than that of any western district, and is about 78 per cent. higher than the State average (which is 557 only) on account of the agricultural prosperity of the district and the large urban population. That of Meerut tehsil is very high on account of the presence of Meerut City. Baghpat tehsil's figure is also above the district average. Mawana has a low density on account of the large area of Ganga *khadar* included therein. The rural density of the district is 811 persons per square mile, the density of the rural parts of the tehsils being : Baghpat 983, Ghaziabad 796, Hapur 777, Mawana 611, Meerut 916 and Sardhana 833. It may be noted that the district as a whole has got one of the lowest figures of land area *per capita*. (*Vide* Tables A-I and E).

*According to the area given by the Surveyor General it is 982.

Growth of population

2. The population of the district in 1951 was 49·7 per cent. higher than what it was fifty years ago. Compared to this, the increase in the population of the State during the corresponding period has been only 30 per cent. The table below exhibits the variation in the total, rural and urban population for the last five decades :

Census year	Population			Variation		
	Total	Rural	Urban	Total	Rural	Urban
1901	1,523,984	1,249,009	274,975			
1911	1,503,389	1,249,711	253,678	—20,595 (—1·4)	+702 (+0·1)	—21,297 (—7·7)
1921	1,498,724	1,241,598	257,126	—4,665 (—0·3)	—8,113 (—0·6)	+3,448 (+1·4)
1931	1,601,918	1,313,325	288,593	+103,194 (+6·9)	+71,727 (+5·8)	+31,467 (+12·2)
1941	1,896,582	1,535,217	361,365	+294,664 (+18·4)	+221,892 (+16·9)	+72,772 (+25·2)
1951	2,281,217	1,781,541	499,676	+384,635 (+20·3)	+246,324 (+16·0)	+138,311 (+38·3)

A noteworthy feature is that between 1901 and 1921, the population of the district recorded a decline of 1·7 per cent. when that of the State decreased by 4·0 per cent. (Plague during 1901—11 and influenza of 1918-19 were responsible for the decline in the population of the district during this period). 1921 was the great divide. Abnormal deaths did not occur or were prevented from occurring in the post-1921 period and the population of the district recorded a phenomenal increase of 52·2 (rural 43·5, urban 94·3) per cent. since 1921 against an increase of 35·5 per cent. in the population of the State during the same period.

The variation in the population of the tehsils during 1941—51 is shown in the marginal table. The increase in the population of the district as a whole since 1941 has been very high, nearly 72 per cent. higher than that of the State average (11·8). The increase is spread evenly over most of the tehsils. Meerut and Ghaziabad tehsils show an increase above the district average owing to the large increases in Meerut and Ghaziabad cities.

Tehsil	Percentage variation 1941—51
Meerut district	*+20.3*
Baghpat	+15.3
Ghaziabad	+25·7
Hapur	+19.1
Mawana	+18.9
Meerut	+26.4
Sardhana	+13.9

The Vital Statistics

3. Births and deaths mainly account for the trends in population growth. Migration also is a factor though of lesser importance. The following table gives the mean decennial registered birth and death-rates and the calculated natural increase rates and population growth-rates of the last three decades for the district as a whole and for its rural and urban areas :

	Total	Rural	Urban
Mean decennial birth-rate			
1941—50	29·9	29·7	30.9
1931—40	38·0	40·3	28.2
1921—30	38·8	43·6	16·5
Mean decennial death-rate			
1941—50	16·9	16·8	17.2
1931—40	21·9	23·2	16.2
1921—30	27·2	30·4	12.0
Mean decennial rate of natural increase			
1941—50	13·0	12·9	13.7
1931—40	16·1	17·1	12.0
1921—30	11·6	13·2	4.5
Mean decennial growth-rate			
1941—50	18·4	14·9	32.1
1931—40	16·8	15·6	22.4
1921—30	6·7	5·6	11.5

There are large omissions in the registration of births as well as deaths and so the above rates do not represent the true picture at all. They may, however, be taken to be roughly indicative of trends. In the district as a whole both birth and death-rates have fallen during the last decade.

The figures of natural increase and growth-rate suggest considerable loss of population by migration during 1921—30. There was increased emigration into Delhi and the towns of the Punjab, especially from tehsil Baghpat. This was mainly due to the depression. The pressure of the population on the soil demanded an outlet. As conditions improved, trend was reversed during 1931—40. The district had a small gain on the balance of migration. This gain appears to have been substantial during 1941—50. It should, however, be borne in mind that the data are not very accurate and are to be read only as indicative of trends.

The average yearly mortality from various causes in the district during 1941—50 was as follows :

Causes	Number of deaths	Percentage of total deaths
Fever	30,667	88·1
Dysentery or diarrhoea	498	1·4
Respiratory diseases	1,398	4·0
Plague, cholera and small-pox	912	2·6
Others	1,339	3·9

As in the rest of the State ' fever ' is responsible for a majority of the deaths. But fever covers a number of ailments which the reporters are unable to identify. During recent years there have been no epidemics of any note. (*Vide* Table I, Part III of this Volume).

Migration

4. About 87 per cent. of the people enumerated in the district at the census of 1951 were born there, 7·3 per cent. were born in the other districts of the State, 2·3 per cent. were born in other parts of India and only 2·9 per cent. came from other countries. Of the immigrants from the districts of the State, as many as 145,383 (males 38,412, females 106,971) are from the other districts of the same natural division and only 22,064 (males 14,633, females 7,431) are from other parts of the State. Most of the migration from the neighbouring districts is marriage migration. Of 44,670 immigrants from the adjacent States 25,814 (males 15,190, females 10,624) are from Punjab and 10,376 (males 2,924, females 7,452) are from Delhi. The movement to the city of Meerut from Punjab (males 7,984, females 3,061) appears to be of the semi-permanent type and in more than half the number of cases men are unaccompanied by their families. The remainder of the migration from Punjab is mostly marriage migration. 898 males and 1,144 females have moved to Meerut City from the Delhi State.

Of the immigrants who have come from territories beyond India, 65,862 (males 37,219, females 28,643) were born in Pakistan and 1,097 (males 944, females 153) had their birth-place in other territories. The Pakistan-born are generally the displaced persons who numbered 68,113. Of the 1,097 (males 944, females 153) immigrants born in other territories 927 (males 809, females 118) are Nepal-born. The sex proportion suggests that this migration is semi-permanent labour migration.

Of the 184 non-Indian nationals 100 belong to Nepal, 37 are British and 47 are of other nationalities.

Unfortunately, the figures of emigration are not available. According to the recorded vital statistics, the district lost about 77,000 persons on the balance of migration during 1921—30, while it gained about 13,000 during 1931—40 and 112,000 during 1941—50 by migration. During 1921—30 there was emigration to Delhi and the towns of Punjab due to the depression.

Decline of cultivation *per capita*

5. We may now analyse the growth of population in the district during the last thirty years in relation to the growth of cultivation during the same period. The figures for the district are exhibited in the marginal table. (Figures of area shown under census years are quinquennial averages for the five years ending with the crop year immediately preceding the census year.) It is obvious that though the area under cultivation has increased, it has failed to keep pace with the growth of population. The cultivated area *per capita* has gone down to 49·2 cents in 1951 from 69·5 cents in 1921. It means that (other things being equal) every man, woman and child must expect to get less food and other agricultural produce from the land in 1951 than in 1921.

Census year	Population*	Net area sown (in acres)	Area of cultivation *per capita* (in cents)
1921 ..	1,499,074	1,040,927	69·5
1931 ..	1,601,918	1,066,646	66·6
1941 ..	1,896,582	1,079,646	57·0
1951 ..	2,281,217	1,120,955	49·2

Double crop area *per capita*

6. It may be examined whether this shortage has been compensated by an increase in the yield per acre. Increase in yield can be brought about by more double cropping, more irrigation, better fertilisation and better culture. The average (quinquennial) area

* The figures of population of the various censuses relate to the then lay-out of the district.

sown more than once was 319,030 acres in 1921 for the district. It decreased to 286,102 acres in 1931 due probably to the depression. There was a substantial increase to 331,861 acres in 1941 and there was again a marked increase to 394,655 acres in 1951. The figures of double crop cultivation *per capita* in cents are as below :

Particulars	Quinquennial averages for the year preceding			
	1951	1941	1931	1921
Double crop cultivation *per capita* in cents	17·3	17·5	17·9	21·3
Unirrigated double crop cultivation *per capita* in cents	11·1	8·9	11·2	14·9
Irrigated double crop cultivation *per capita* in cents ..	6·2	8·6	6·7	6·4

It is evident that the increase in the double crop area also did not keep pace with the rate of growth of population.

Irrigated area *per capita*

7. The average (quinquennial) area irrigated in the district was 513,246 acres in 1921. The figures were 544,471 acres for 1931, 584,217 acres for 1941 and 642,956 acres for 1951. The average area irrigated more than once was 95,407 acres in 1921, 106,920 acres for 1931, 163,681 acres for 1941 and 141,749 for 1951.

The figures of irrigation *per capita* are shown in the table below :

Particulars	Years			
	1951	1941	1931	1921
Irrigated single crop cultivation *per capita* in cents	22·0	22·2	27·3	27·9
Irrigated double crop cultivation *per capita* in cents	6·2	8·6	6·7	6·4

The trend is distinctly towards a decline.

Cropped area

8. It is also significant that in spite of the rapid growth of population, the area under food crops has declined in this district. During the quinquennium 1916—21, 69·1 per cent. of the cropped area was under food crops and only 30·9 per cent. of it was under non-food crops. Thirty years after, during 1946—51, the cropped area under food crops was 66·8 per cent. and that under non-food crops was 33·2 per cent.

The proportionate area under different crops between 1911 and 1951 was as below :

Quinquennial average of	Total cropped area	Percentage of cropped area under							
		Rice	Wheat	Barley	Juar	Bajra	Maize	Gram	Others
1911—16	1,399,833	0·8	26·5	5·2	6·4	2·5	7·0	13·0	38·6
1916—21	1,325,664	1·1	25·5	5·5	6·0	2·7	9·0	8·5	41·7
1921—26	1,406,572	0·9	27·3	4·4	7·4	3·0	6·2	12·7	38·1
1926—31	1,345,755	1·3	26·9	4·3	8·0	3·3	6·7	7·9	41·6
1931—36	1,403,128	1·3	25·8	3·3	7·9	3·3	7·3	13·3	37·8
1936—41	1,406,320	1·2	26·1	3·2	7·0	3·8	8·3	8·6	41·8
1941—46	1,473,546	1·1	26·0	3·3	5·8	5·1	8·4	10·0	40·3
1946—51	1,521,412	2·1	23·1	3·1	5·4	4·9	7·3	11·4	42·7

On the whole, since 1911—16, the area under rice, *bajra* and maize has increased, while that under wheat, barley, *juar* and gram has declined. Of the other crops, sugarcane has gained increasing importance with the establishment of sugar factories. The area under sugarcane has increased to 269,244 acres during 1950-51 from 115,411 acres during 1901-02. Cotton and indigo are on the decline. The area under cotton declined to 14,769 acres during 1950-51 from 60,940 acres during 1901-02 ; and that under indigo declined from 6,743 acres during 1901-02 to 29 acres during 1950-51.

Live-Stock, ploughs and carts

9. Live-Stock in this country live for a large part of the year on by-products of agriculture supplemented by green-fooder crops. They have, therefore, to be co-related not only with the grazing available but also with the total area under cultivation which carries a major portion of the burden of supporting the cattle population.

As will appear from Table 3 of Part III, the total number of cattle and buffaloes has been increasing since 1930. The figure stood at 864,794 in 1951, while it was only 744,935 in 1930.

The number of working cattle and buffaloes in the district was about 2·3 lakhs in 1935, 2·5 lakhs in 1944 and 2·9 lakhs in 1951. This number of working cattle appears to be governed by the number of ploughs and carts. The number of ploughs has gone up from about 1 lakh in 1920 to a little over 1·1 lakhs in 1925. It declined to about 1 lakh in 1930. Since then the number has been increasing. It was 1·3 lakhs in 1951. Apparently this increase was due to increase in the area of cultivation and also to progressive fractionalization of holdings. The stock generally is of a good type and sufficient for agricultural purposes. The number of carts started rising since 1930 as a result of the establishment of sugar factories and stands now at over 67,000.

Breeding cows and she-buffaloes which were 2·63 lakhs in 1935 and 2·79 lakhs in 1944 have gone up to 3·08 lakhs in 1951. This works out to 2 cows per 15 inhabitants. Cattle and buffaloes in this State are among the best in the State with good milk yield.

The number of sheep declined to 56,972 in 1930 from 72,587 in 1920. Since then it has been declining and has suddenly gone down to 16,305 in 1951 due apparently to shortage of pasture. Goats have been going down in number since 1925 when they were about 75,000. Their number in 1951 was about 37,000, the reduction during 1944—51 alone being about 40 per cent.

Horses and ponies also are steadily declining in number. Their number has come down to 9,579 in 1951 from 13,987 in 1930 and 17,072 in 1920. Donkeys during the same period have increased from 21,324 in 1920 to about 24,000 in 1951.

Poultry has increased from 78,812 in 1944 to 81,648 in 1951.

Distributed on 1,000 of human population the figures of the main categories of livestock in 1951 are as follows :

Cattle	Buffaloes	Sheep	Goats	Poultry	Others
223	156	7	16	36	35

10. To sum up, the population of the district is growing up almost at the biological natural rate since 1921. But on the other hand, the land area *per capita*, the double crop area *per capita* and the irrigated area *per capita* are steadily declining. The area under food crops has also slightly declined. Under such circumstances, the district would have been a danger spot from the point of view of the food situation, but fortunately the relieving feature is that the pressure of agricultural population on cultivated area is not so heavy in this district as in case of most of the districts of Gorakhpur and Banaras divisions. This district as will be seen later on, has got a high proportion of urban population and also a high proportion of non-agricultural population in the rural areas. Moreover, the skill and industry of its cultivators is unsurpassed so far as this State goes.

Villages and towns

11. The district has 1,467 villages and 28 towns. Out of about 22·8 lakhs of people who were counted at the census of 1951, 17·8 lakhs were found in the villages and 5 lakhs in the towns, i.e., there are as many as 781 people per 1,000 of the population who live in the rural areas and 219 of them live in the towns. The corresponding figures for the State as a whole are : rural 864, urban 136.

The rural population per inhabited village works out to 1,214. The corresponding figure for the State is only 489 and that for the natural division, to which this district belongs, is 632. The villages are generally of a single compact site. There are only 1,607 hamlets in the district. The rural population per hamlet is about 1,109. Though the medium-sized village—with inhabitants numbering between 500—2,000—is the dominant type in the district, quite a large proportion of population lives in large villages. Of the rural population 49·6 per cent. of the people live in the medium-sized villages ; 37·6 per cent. of them live in large villages of population between 2,000—5,000 ; 6·7 per cent. live in very large villages of a population over 5,000 ; and only 6·1 per cent. of them live in villages of a population below 500.

Towns vary in number of inhabitants even more widely than villages. Meerut city, including the cantonment (which has been treated as a separate town) has a population 233,183, i.e., 46·7 per cent. of the urban population of the district. Of the urban population only 4·6 per cent. of the people live in towns of population under 5,000 (viz., Tatiri, Kharkhauda, Aminnagar Sarai, Abdullahpur, Dasna, Baksar Khera and Babugarh); 13·6 per cent. of the people live in towns of a population between 5,000—10,000 (viz., Chhapraudi, Kithore, Garhmuktesar, Kankar Khera, Muradnagar, Lawar, Faridnagar, Baghpat, Phalauda, Parichhatgarh, and Daurala) ; 16·5 per cent. of the people live in towns of a population between 10,000—20,000 (viz., Baraut, Mawana, Khekra, Sardhana, Modinagar and Pilkhuwa) ; and 18·6 of them live in Hapur (M.B.) and Ghaziabad city which have a population of 49,260 and 43,745 respectively. It is significant to note that Meerut city has recorded 37·7 per cent. increase in population since 1941. The increase in its population since 1901 is of 96·7 per cent. Ghaziabad and Hapur are rapidly growing towns of the district. During the last decade they recorded increases of 83·5 per cent. and 45·9 per cent. in the population, while the increase in their population since 1901 is of

288 per cent. and 176·8 per cent. respectively. Baraut (47·7 per cent.), Pilkhuwa (34·9 per cent.), Mawana (28·4 per cent.), Aminnagar Sarai (21·9 per cent.), Khekra (20·7 per cent.) and Baksar Khera (19·3 per cent.) recorded significant increases since 1941. Dasna (–39·8 per cent.), Kankar Khera (–36·8 per cent.), Abdullahpur (–19·6 per cent.), Parichhatgarh (—13·8) per cent.), Babugarh (–6·2 per cent.) and Sardhana (–0·4 per cent.) appear to be declining and have recorded decreases in their population since 1941. The remaining other towns of the district have recorded small increases in the corresponding period. (*Vide* Tables A-III and A-IV).

Occupations : Livelihood pattern

12. Out of the total population of 2,281, 217 (rural 1,781,541, urban 499,676) 1,089,745 (rural 1,031,598, urban 58,147) or 47·8 per cent. depend on agriculture for their means of livelihood and 1,191,472 (rural 749, 943, urban 441,529) or 52·2 per cent. depend on the non-agricultural sources. The following table gives the distribution of 100 persons of the total, rural and urban population of the district and also of Meerut and Ghaziabad cities under the different livelihood classes.

Description	Agricultural classes					Non-agricultural classes				
	Total	I	II	III	IV	Total	V	VI	VII	VIII
Total	47·8	41·3	1·9	4·0	0·6	52·2	16·8	8·3	2·3	24·8
Rural	57·9	50·7	2·0	4·7	0·5	42·1	15·4	4·4	1·0	21·3
Urban	11·6	8·0	1·6	1·1	0·9	88·4	22·0	22·2	6·7	37·5
Meerut City	4·1	1·5	0·9	0·9	0·8	95·9	19·8	21·5	6·5	48·1
Ghaziabad City ..	2·7	0·9	0·9	0·3	0·6	97·3	20·0	28·2	19·8	29·3

It is gratifying to note that this district is one of the predominantly non-agricultural districts of the State. Here as many as 52·2 per cent. of the people depend on non-agricultural occupations as against 25·8 per cent. in the whole State. So far as agriculture is concerned, the figures show that it is outstanding as a district of owner cultivators, a factor contributing to better agriculture in the district.

Of the total population of the district 1,493,024 persons (males 547,945, females 945,079) or 65·5 per cent. have been classified as non-earning dependants. The percentage of non-earning dependants in the agricultural population works out to 65·7 and that among the non-agricultural classes as 65·2. It will be observed that in the main they consist of women. The male non-earning dependants are mostly children. 95,952 persons (males 42,204, females 53,748) or 4·2 per cent. of the population are earning dependants. Among the agriculturists their proportion is 4·9 per cent. and among non-agriculturists they form only 3·6 per cent. Agriculture is a family occupation and it provides work to the women and grown-up children in the family. The remaining 692,241 persons (males 651,352, females 40,889) or 30·3 per cent. of the population consists of self-supporting persons. Their proportion among agriculturists is 29·4 per cent. and among non-agriculturists 31·2 per cent. of the self-supporting persons 320,056 (males 310,323, females 9,733) belong to the agricultural classes and 372,185 (males 341,029, females 31,156) to the non-agricultural classes. On an average a self-supporting person maintains two non-earning dependants.

Of the 372,185 self-supporting persons belonging to the non-agricultural classes, 6,112 persons (rural 4,017, urban 2,095) earn their livelihood from non-productive sources. Of the remaining 366,073 self-supporting persons (rural 228,738, urban 137,335) 8,689 (rural 5,355, urban 3,334) or 2·4 per cent. are employers, 107,288 (rural 44,485, urban 62,803) or 29·3, per cent. are employees and 250,096 (rural 178,898, urban 71,198), or 68·3 per cent. are independent workers.

The distribution of 10,000 self-supporting persons of non-agricultural occupations, classified according to the Economic Divisions is as follows :

Name of division	Self-supporting persons by divisions
All Industries and Services	**10,000**
0—Primary industries not elsewhere specified	362
1—Mining and quarrying	3
2—Processing and manufacture—foodstuffs, textile, leather and products thereof	1,586
3—Processing and manufacture—metals, chemicals and products thereof	399
4—Processing and manufacture not elsewhere specified..	999
5—Construction and utilities	721
6—Commerce	1,390
7—Transport, storage and communications	455
8—Health, education and public administration	947
9—Services not elsewhere specified	3,138

The figures under Division 9 are noteworthy.

Among the large-scale industries, the principal are the sugar factories, the glass and ceramics works of Ghaziabad, the oil mills of Hapur, vegetable oil mills of Modinagar and Ghaziabad, soap works of Modinagar and strawboard mills of Meerut. Among the cottage industries the principal are handloom cloth weaving, woollen blankets and carpets, *durries*, hosiery, calico printing, tape, net and *newar*, leather tanning and leather working boots, shoes, harness and sadlery, suit and attache cases, scissors and razors, spoons, forks and knives, iron utensils, agricultural implements, iron castings, weights, balances and cane crushers, tin cannisters and cans, glazed pottery, clay modelling, soap, unlaequered wooden articles, i.e., *dholaks* and bed posts, basket, *moondhas*, *chik*, ropes and *ban* of *moonj*, mat weaving, sports goods, brush making and bands and musical instruments.

Variations in the livelihood pattern

13. In this district the proportion of population depending on agriculture for their livelihood was 48·0* per cent. in 1951. The satisfactory fact is that the agricultural proportion has slightly declined since 1901 when the figure stood at 48·6 per cent. It was 55·5 per cent. in 1911 and 57·2 per cent. in 1921. But the actual number of persons who depend on agriculture has increased to 1,095,170 in 1951 from 857,182 in 1921 or by 27·8 per cent., while the cultivated area has increased by less than 8 per cent. This has, to some extent, resulted in sub-division of holdings.

A significant feature of the livelihood pattern of the district is a gradual fall in the proportion of workers, both in the agricultural and non-agricultural occupations, and a corresponding rise in the dependency. The proportion of workers in the total population in 1951 was only 34·6 per cent. (agricultural 16·6 per cent., non-agricultural 18·0 per cent.) against 48·8 per cent. (agricultural 27·1 per cent., non-agricultural 21·7 per cent.) in 1921. The proportion of non-earning dependants has consequently increased from 51·2 per cent. (agricultural 30·1 per cent., non-agricultural 21·1 per cent.) in 1921 to 65·4 per cent. (agricultural 31·4, non-agricultural 34·0) in 1951. This change in the proportion of workers and non-earning dependants is apparently the result of decline of cultivated land *per capita* and the decline in village arts and handicrafts. This is a clear index of growing unemployment and under-employment in the district. It is only by a still greater diversion of the population to cottage and other industries and by providing secondary occupations to the agriculturists that the present economy of the district can be improved. (*Vide* Tables B-I, B-II and B-III)

Houses and households

14. There were 361,678 occupied houses in the district—287,335 in villages and 74,343 in towns. That gives an average of 6,206 persons per 1,000 houses or 6·2 persons per house in the rural areas and 6,721 persons per 1,000 houses or 6·7 persons per house in the urban areas.

There were 425,579† households in the district —331,121 in villages and 94,458† in towns. That gives an average of 5,362 persons per 1,000 households or 5·4 persons per household in rural areas and 5,195 persons per 1,000 households or 5·2 persons per household in the urban areas. The marginal table shows the development in the size of the household since 1921. The rural household has been increasing in size and is slightly bigger than the average State rural household (5·07). The urban household has registered a decrease since 1941.

Census years	Persons per 1,000 households of	
	Rural population	Urban population
1921 ..	4,578	5,185
1931 ..	4,968	4,988
1941 ..	5,199	5,617
1951 ..	5,362	5,195

Out of 5,362 persons in every 1,000 rural households, 2,890 are males and 2,472 are females. There is a male excess numbering 418 in every 1,000 households. Out of 5,195 persons in every 1,000 urban households 2,882 are males and 2,313 are females. There is a male excess numbering 569 in every 1,000 households. Migration to towns without families will account for the difference.

Information regarding types of household and household relationships was also collected at this census with the help of a sample of about 4 per cent. According to this, in every 1,000 sample households there are 5,024 persons (males 2,776, females 2,248) in the district. The corresponding figure for the total count is 5,325.

The table below shows the distribution by size of 1,000 sample households:

Description	Small with 3 members or less	Medium with 4—6 members	Large with 7—9 members	Very large with 10 members or more
Total	**320**	**433**	**178**	**69**
Rural	311	435	183	71
Urban	360	424	156	60

*The figure includes earning dependants according to their secondary means of livelihood; while the figure 47·8 in paragraph 12 includes earning dependants according to their principal means of livelihood and hence the difference.

†See foot note to Table C-I.

Medium households are the dominant type both in the villages and the towns. Family composition of 1,000 sample households is as follows :

			Number in 1,000 households
A	Heads of households	Males (married)	717
		Males (widowers)	253
		Females	30
	Wives of heads of households		717
			1,717
B	Sons of heads of households		1,233
	Daughters of heads of households		756
			1,989
C	Male relations of heads of households (other than sons)		570
	Female relations of heads of households (other than daughters)		721
			1,291
D	Persons unrelated to the heads of the households	Males	3
		Females	24
			27
		Grand Total	***5,024***

Sons outnumber the daughters of the heads of household. The latter leave the homes of their parents after marriage. Female relations (other than daughters) outnumber the male relations (other than sons). Such females are generally those who become members of these households by marriage. (*Vide* Tables A-I and C-I)

Sex-ratio

15. In the district as a whole the sex-ratio was 837, i.e., there were 837 females to every 1,000 males. It varied among the tehsils. The lowest value was 801 in Meerut tehsil. The highest value was 873 in Hapur tehsil. The difference in the former is mainly due to Meerut city where the males largely exceed the females. The ratio was 852 in Mawana, 840 in Ghaziabad, 838 in Sardhana and 836 in Baghpat.

The sex-ratio is smaller in towns than in villages. For the district as a whole the sex-ratio in villages is as high as 853 (mainly due to male migration), while that in towns is only 783. The sex-ratio for Meerut city was only 752 and that for Ghaziabad city was 833.

The corresponding figure of sex-ratio for the district was 851 in 1921, 839 in 1931 and 848 in 1941 against 837 in 1951.

Age-structure

16. The number in each age-group in the district is shown below as a percentage of the total number of all ages in the total, rural and urban population separately:

Age-group		Total population			Rural population		Urban population	
		Persons	Males	Females	Males	Females	Males	Females
Infants and young children	0—4 ..	13·5	7·0	6·5	7·6	6·7	4·9	5·4
Boys and girls	5—14 ..	21·5	11·6	9·9	12·3	10·1	9·1	9·0
Young men and women	15—34 ..	33·3	18·2	15·1	16·8	15·1	23·5	15·0
Middle-aged men and women	35—54 ..	21·7	12·5	9·2	12·2	9·1	13·8	9·6
Elderly persons	55 and over ..	10·0	5·5	4·5	5·6	4·5	5·0	4·7

It will be seen that the population is progressive. 35 per cent. of the population is of age under 15 and only 10·0 per cent. of it consists of elderly persons. Again, it may be noted that proportionately larger numbers in the working ages (15—54) are found in the urban areas. This is the effect of migration of workers to the towns from the villages, many of whom are unaccompained by their families. (*Vide* Table C-II)

Marital status

17. Out of every 10,000 persons in the district, there are 5,478 males and 4,522 females*. Among them 2,410 males and 1,771 females are unmarried. If we reckon males and females together, the unmarried people are 41·8 per cent. of the population.

*The corresponding figures for the total count are 5,442 and 4,558.

Of the males 44·0 per cent. were unmarried, 49·7 per cent. were married and 6·3 per cent. were widowed or divorced. Among the females 39·2 per cent. were unmarried, 52·2 per cent. were married and 8·6 per cent. were widowed or divorced.

Of the married males 2·0 per cent. were of ages below 15, 46·8 per cent. were of ages 15—34, 38·7 per cent. were of ages 35—54 and 12·5 per cent. were of ages 55 and over. Among the married females 4·3 per cent. were of ages below 15, 53·8 per cent. were of ages 15—34, 33·3 per cent. were of ages 35—54 and 8·6 per cent. were elderly women.

Marriage is universal. Among males and females aged 35 years and over only 5·3 per cent. of the males and 2·0 per cent. of the females were found unmarried. Most of the females are married before they attain the age of 25. Child marriage is not very common. Only 2·9 per cent. of the males of ages 0—14 and 6·3 per cent. of the females of ages 0—14 were returned as married. (*Vide* Table C-III)

Languages

18. Over 96·7 per cent. of the people of the district returned Hindi, Hindustani or Urdu as their mother-tongue. Among the other mother-tongues spoken the main is Punjabi (2·7 per cent.). Of the 22·81 lakhs of people in the district only 30,964 or 1·4 per cent. were bilingual (in an Indian language). Those whose mother-tongue is other than Hindi, Hindustani or Urdu are generally the migrants who are able to speak any of these as a subsidiary language. Persons returning Hindi, Hindustani or Urdu as secondary language were 24,289 or 78·4 per cent. of those who were bilingual in some Indian language. (*Vide* Table D-I)

Religion and special groups

19. Out of 10,000 population of the district the number of people belonging to different religions is : Hindus 7,788, Muslims 2,003, Sikhs 90, Jains 93, Christians 25 and others 1; of 10,000 population in villages the numbers are : Hindus 8,089, Muslims 1,799, Sikhs 47, Jains 53, Christians 11 and others 1 ; and of 10,000 population in towns the numbers are : Hindus 6,717, Muslims 2,728, Sikhs 245, Jains 234, Christians 75 and others 1. Proportionately the Muslims, Sikhs and Christians are found in larger numbers in the urban areas of the district as is the case in the other parts of the State.

There are 308 thousand persons belonging to the Scheduled Castes in the district. Their number of 10,000 of population works out to 1,350. In villages they are 1,519 for every 10,000 and in the towns their number per 10,000 is only 749. In the district there are 265 Anglo-Indians. (*Vide* Tables D-II and D-III)

Displaced persons

20. The number of displaced persons in the district at the census was 68,113 (males 37,343, females 30,770) or 14·2 per cent. of the total displaced persons in the State. It being one of the western districts of the State, being nearer to the abandoned areas and having a somewhat similar climate, attracted the displaced persons most. Of them 57,851 or 84·9 per cent. are concentrated in the urban areas of the district, mainly in Meerut City 98 per cent. of them have come from West Pakistan, 0·9 per cent. from East Pakistan and 1·1 per cent. from districts which could not be traced. Of them 76·6 per cent. came in 1947 alone. 93·3 per cent. of the displaced, follow non-agricultural occupations and only 6·7 per cent. have taken to agricultural pursuits. (*Vide* Table D-V)

Literacy

21. The percentage of male literacy was 19·4 in the district while that of female literacy was 4·7 only. The percentage of literates in the district among males in 1951 was 19·4 as compared to 9·4 in 1931 ; among females the percentage of literates in 1951 was 4·7 as against 1·6* in 1931. On January 1, 1951, there were 979 primary schools in the district with an enrolment of 89,834. (*Vide* Table D-VII)

C—Explanatory Note on the Statistics

The statistics in this volume have been presented in three parts :

I—District Census Tables

II—Village, Town, Pargana and Thana Statistics

III—Miscellaneous Statistics

Parts I and II contain census data. A brief account of the system of sorting of census slips and preparation of tables and abstract therefrom is given below.

Part III contains statistics throwing light on special aspects of population and its growth. These have been derived from miscellaneous sources. Table 1, "Vital Statistics", has been prepared from the published and unpublished records of the Director of Medical

*The numbers per mille (of the 10 per cent. sample population) of each sex aged 5 years and over who were returned as literates are as below :

Males		Females	
1951	1931	1951	1931
234	109	45	19

and Health Services, Table 2, "Agricultural S tatistics", from the Annual Season and Crop Reports , Table 3, "Live-Stock, Agricultural Machinery and Implements", from the published figures of Live-Stock Census and Table 4, "List of Primary Schools", from information specially supplied by District Inspector of Schools.

Processing of census data

2. The census data presented here has been derived from the census slips by a process of sorting, compilation and tabulation. In previous censuses the slips were first sorted by religion and this division was maintained throughout so that all data was cross-tabulated by religion. This procedure has been abandoned at this census and substituted by a division based on economic characteristics of the population. The whole population has been divided into eight livelihood classes, four of which are of the agricultural category and four of non-agricultural category as follows :

Agricultural Classes—

I—Cultivators of land wholly or mainly owned, and their dependants
II—Cultivators of land wholly or mainly unowned ; and their dependants ;
III—Cultivating labourers ; and their dependants
IV—Non-cultivating owners of land ; agricultural rent receivers ; and their dependants

Non-agricultural Classes—

V—Production (other than cutivation)
VI—Commerce
VII—Transport
VIII—Other services and miscellaneous sources

Another special feature of the sorting of this census was the separation, from the very start, of slips of displaced persons and of a 10 per cent. random sample from the remainder. This has enabled the data of displaced persons to be presented separately while the 10 per cent. sample has been utilized for the preparation of Age Tables.

The slips of this census have been copied by Households into a National Register of Citizens, which has been prepared village-wise for rural areas and mohalla/ward-wise for urban areas. Table C-I is based on a 4 per cent. sample extracted from this register.

Tracts

3. The slips were first sorted by villages for the preparation of the Primary Census Abstract. For the purpose of further sorting the State was divided into tracts consisting of (*a*) *rural tracts*, comprising the rural population of each tehsil, (*b*) *urban city tracts*, comprising the population of areas which had been declared as cities, (*c*) *urban non-city tracts*, comprising the population of urban areas of a district excluding areas declared as cities. Each tract was treated as a unit for sorting of slips. All data were compiled first by tracts and then by districts. This volume presents the tract-wise data for one district (with the exception of A and E Tables, which have been presented tehsil-wise) ; while the district-wise data for the whole State is contained in the following State volumes :

Part I-B—Subsidiary Tables
Part II-A—General Population Tables
Part II-B—Economic Tables
Part II-C—Age and Social Tables

Explanatory notes

4. Detailed explanatory notes are appended to each State table in the printed volumes of State tables. They apply to the tables in this volume also and should be referred to when necessary. A few notes of some of the tables are reproduced below :

Table A-I—Column 5 relating to "hamlets" has been introduced for the first time. Any distinctive cluster or agglomeration of houses has been treated as a "hamlet".

A clear distinction has been made in this census between a "House" and a "Household". A house is any human dwelling having a separate main entrance while a household is any commensal unit living in a census house. In previous censuses the figures under "Occupied Houses " used to be that of households, while the figures under columns 7—9 of the present table refer to occupied census houses as distinct from households.

The Economic Tables—The Indian Census Economic Classification Scheme, 1951, together with the occupational division and sub-division adopted for this census are given in Part II-B of the Report.

Table B-I—Each of the eight livelihood classes mentioned above has been divided into three sub-classes, with reference to the economic status, as follows :

(i) Self-supporting persons ;
(ii) Non-earning dependants ; and
(iii) Earning dependants.

These were defined in the Instructions to Enumerators as follows :

> A 'self-supporting person' is one who is in receipt of an income and that income is sufficient at least for his own maintenance. To be 'self-supporting' a person need not be able to support his family. All that is necessary is that he should be earning sufficient for his personal needs. For purposes of this question the person enumerated is the unit and not the family or household. Any one who is not a 'self-supporting ' person in this sense is a 'dependant'. A 'dependant' may

be either an 'earning dependant' or a 'non-earning dependant'. The test is whether he secures a regular (and not casual) income, even though it may be small. Such income may be in cash or kind ; it may be continuous or seasonal employment. When the income which he secures is not sufficient to support him that person is an 'earning dependant'. A person who does not earn any income either in cash or kind is a 'non-earning dependant'. Where two or more members of a family household jointly cultivate land and secure an income therefrom, each of them should be regarded as earning part of the income. None of them is, therefore, a non-earning dependant. Each of them should be classed either a 'self-supporting person' or 'an 'earning dependant' according to the share of income attributable to each. The same applies to any other business carried on jointly. The share of the income is what the head of household deems it to be. This does not mean that every one who works is necessarily a self-supporting person or an earning dependant. Thus, for instance, a housewife who cooks for the family, brings up the children or manages the household is doing very valuable work. Nevertheless, her Economic Status is that of a non-earning dependant, if she does not also earn an income, and should be recorded as such."

Economically active, Semi-active and Passive persons—All non-earning dependants are economically passive. They include persons performing house-work or other domestic or personal services for other members of the same family household. But they do not include "unpaid family workers" or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise.

All earning dependants are economically semi-active only. Though they contribute to the carrying of economic activities, the magnitude of their individual contribution is deemed to be too small to justify their description as economically active. (Their contribution to economic activity is, however, taken into account in the tabulation of data based on secondary means of livelihood.)

All self-supporting persons are, ordinarily economically active with the exception of the following classes and groups :

(*a*) All self-supporting persons of agricultural Class IV

(*b*) The following groups of self-supporting persons who are included in non-agricultural Class VIII and derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity) :

(i) Persons living principally on income from non-agricultural property ;
(ii) Persons living principally on pensions, remittances, scholarships and funds ;
(iii) Inmates of alms-houses and recipients of doles ;
(iv) Beggars and vagrants ; and
(v) All other persons living principally on income derived from non-productive activities.

Table B-II—For a self-supporting person who has more than one means of livelihood the *secondary means* of livelihood is the livelihood next in importance to his principal means of livelihood. For an earning dependant it is the source from which he secures his own income, where there are more than one subsidiary occupations only the one providing the largest income has been taken into account.

Table B-III—"Employers", "Employees" and "Independent Workers" have been defined as follows in the Instructions to Enumerators :

An "employer" is only that person who has necessarily to employ other person in order to carry on the business from which he secures his livelihood. Thus if a person employs a cook or any other person for domestic services, he should not be recorded as an "employer" merely for that reason.

An "employee" is a person who ordinarily works under some other person for a salary or a wage in cash or kind as the means of earning his livelihood. There may be persons who are employed as managers, superintendents, agents etc., and in that capacity control other workers. Such persons are also employees only and should not be regarded as employers.

An "independent worker" means a person who is not employed by any one else and who also does not employ anybody else in order to earn his livelihood (Sweepers, *dhobies*, *kahars* etc., who work for several masters are independent workers. If, however, any of them accepts whole-time employment under one master he becomes "employee". Daily wage-earners who work for different masters are likewise inpdependent workers. But if they accept employment under one master, e.g. under a factory, they become "employees".)

Tables C-II, C-III, C-IV and C-V—The figures presented in these tables are based on single year age returns and have not been smoothed.

Tables D-V (i) *and* (ii)—For the purpose of this table a "displaced person" has been defined as follows :

"A displaced person means any person who has entered India having left or being compelled to leave his home in Western Pakistan on or after the 1st March, 1947, or his home in Eastern Pakistan on or after the 15th October, 1946, on account of civil disturbances or on account of the setting up of the two Dominions of India and Pakistan."
