DISTRICT CENSUS HANDBOOK
1951

NAINI TAL DISTRICT

FOREWORD

Several States, including Uttar Pradesh, have been publishing village statistics by districts at each census. In 1941 they were published in U. P. under the title "District Census Statistics" with a separate volume for each district. In the 1951 census, when the tabulation has been more elaborate than ever in view of the requirements of the country, the district-wise volume has been expanded into a "District Census Handbook", which now contains the District Census Tables (furnishing data with break-up for census tracts within the district), the District Index of Non-agricultural Occupations, agricultural statistics from 1901-02 to 1950-51 and other miscellaneous statistics in addition to the usual village population statistics. The village population statistics also are given in an elaborate form giving the division of the population among eight livelihood classes and other details.

2. It may be added here that a separate set of district-wise volumes giving only population figures of rural areas by villages and of urban areas by wards and mohallas and entitled "District Population Statistics" has already been published. This separate series was necessitated by the urgent requirements of the U. P. Government for elections to local bodies. The printing of the District Census Handbooks involves colossal work and is bound to take some time.

RAJESHWARI PRASAD, I.A.S.,
Superintendent, Census Operations,
Uttar Pradesh.

RAMPUR:
November 30, 1954.

INTRODUCTION

A—The District

1. The district of Naini Tal is bounded on the north by Almora and a portion of Garhwal, on the east by a portion of the Almora district and Nepal, on the west by the Garhwal and Bijnor districts and on the south by Pilibhit, Bareilly, Rampur and Moradabad. The total area of the district is 2,632 square miles. Its population in 1951 was 3·35 lakhs. There are 4 tehsils, 25 thanas and 19 parganas in the district.

Topography

2. The district is of a most heterogeneous description. The northern portion consists of hills, the outer ranges of the Himalayas, which in many places rise up steep from the gentle slopes at their feet, while elsewhere there are several series of low forest-clad hills which form, as it were, the outworks of the main range of mountains. From the hills we pass with rapid transitions through the curious phenomena of the *Tarai* and *Bhabar* to the ordinary alluvial plain that characterises the north of India. The Naini Tal tehsil comprises the mountainous tract. The mountains of the outer Himalayas in this district have a general elevation of about 6,500 feet above the level of the sea while the highest summits attain to a height of over 8,000 feet. The outermost range is of a considerably greater elevation than the intermediate chains lying between it and the outlying spurs of the great snow-clad peaks of Almora and Garhwal. The chief mountain range of the district is the Gagar. East of Ramgarh the Gagar range merges in that known as Lohukot, uniting at the Mukteshwar peak. Below the main outworks of the Himalaya, there frequently occurs a lower line of hills known as the Siwalik or sub-Himalayan chain.

Immediately below the foot of the hills there lies a narrow belt of country, usually covered with forest and remarkable for an entire absence of water. It is called *Bhabar*. Tehsil Haldwani comprises this belt of waterless forest land. There is a thin covering of alluvial soil on a vast dry bed of boulders and shingle through which all rain that falls sinks rapidly. It absorbs in the same way all the minor streams of the outer ranges. Instead of reeds and grasses, gigantic *haldus* and *khairs* rear their heads above a tangled undergrowth of creepers and thorns. Cultivation is not possible in this tract without irrigation.

To the south of the *Bhabar* lies the *Tarai*, which extends southwards to the cultivated plains of the Rohilkhand division. It consists of the Kichha tehsil of this district. Its general appearance is that of a plain sloping gently towards the south-east. The country in general is a tract of forest and swamps, with scattered patches of cultivation. The northern half chiefly consists of jungle of savannahs of grass and reeds. The hill torrents which sink and are lost below the mass of boulders and gravel in the *Bhabar* reappear in this damp and marshy tract. The soil is everywhere a moist alluvial deposit, without any sign of the rock formations of the *Bhabar*. Large areas of this tract have recently been brought under cultivation and are being colonized.

Lastly, there is the level country in the south-west corner which comprises the tehsil of Kashipur. It resembles the plains of Rohilkhand, save that it is less highly cultivated and contains more open grass jungles than the southern districts. Large areas in this tract have also been reclaimed under the colonization scheme.

The main drainage lines of the hill country of this district are the water-sheds of the Kosi, Gola and Nandhaur rivers. None of the rivers in this district have their origin in the snowy heights of the upper Himalaya. The hill country contains several lakes of great size and beauty. Every one of the rivers and the smaller streams are utilized for irrigation purposes in the *Bhabar*. In the *Tarai* there are not only these rivers, but a vast number of others which originate in the swamps along the northern border. The drainage system of the *Tarai* as a whole resembles the reticulations of a leaf, the streamlets on the edge of the moist country uniting to form larger channels which again feed the arterial lines of drainage and all eventually join the great midrib stream, the Ramganga. Most of these rivers are subject during the rains to heavy floods.

Soils

3. In the hill *pattis* the soil-classification resembles that of Almora. It is very thin on hill sides and is alluvial. The best irrigated land is known as *talaon*, while other irrigated soils, which are imperfectly watered, are generally called *panchar*. The uplands, when not watered artificially are designated as *uparaon*. The unterraced fields are known as *katil* or *ijran*. The *Bhabar* consists of new deposits of alluvium on a mass of boulders and gravel. The soils in the *Tarai* and in Kashipur resemble that of the plains in the south. That in the upper portion of the *Tarai* is a light sandy loam. Further south, however, the soil contains more alum and less silica, and lower down a stiff clay is found. Clay occurs everywhere in the depressions. It becomes lighter on the higher ground between the lines of drainage. In the west the soil is a fairly dark consistent loam, but to the east there is a light friable soil.

Classification of area

4. The figures of the classification of area during the last fifty years are given in Table 2 of the Part III of this volume. The proportion of area in the district (including the hill *pattis*) under the various categories works out as follows for 1950-51*.

	Actual figures (in acres)	Percentage
Cultivated area	269,775	15·0
Culturable waste (excluding current fallow)	288,814	16·1
Current fallow	34,527	1·9
Forest	1,147,976	64·0
Area not available for cultivation	52,868	3·0

The figure in the above table regarding culturable waste taken from the *Season and Crop Reports* is, however, misleading. The State Agriculture Department conducted in 1949-50 a detailed enquiry through the District Officers regarding the nature of this area in each district. The following analysis of the area resulted from the enquiry :

Particulars	Area (in acres)	Percentage
Total culturable waste (A+B+C)	**293,543**	**100**
A—Area under culturable waste land not available for immediate cultivation ..	68,082	23·19
(i) Forest under any legal enactment	27,451	9·35
(ii) Groves	3,396	1·16
(iii) Forests of timber trees	4,890	1·66
(iv) Thatching grasses, shrubs and bushes	32,345	11·02
(v) Land kept for grazing	..	..
B—Area under culturable waste land available for immediate cultivation but could not be cultivated	..	..
Of which due to—		
(i) *Kans* growth	..	..
(ii) Threshing floors	..	..
(iii) Malaria	..	..
(iv) Floods	..	..
(v) Lack of drains	..	..
(vi) Lack of water	..	..
(vii) Distance from *abadi*	..	.
(viii) Damage from wild animals	..	..
(ix) Other causes	..	..
C—Area under culturable waste land that can be brought under immediate cultivation after some improvements besides the area given against B	225,461	76·81

From the above it will appear that of the total area recorded as culturable waste 76·8 per cent. was really capable of being brought under immediate cultivation after some improvements.

*The figures for the plain portion of the district are as below:

	Actual figures (in acres)	Percentage
Cultivated area	193,015	12·7
Culturable waste (excluding current fallow)	256,409	16·9
Current fallow	34,527	2·3
Forest	984,187	64·9
Area not available for cultivation of which—	48,822	3·2
(*a*) *Covered with water*	27,335	1·8
(*b*) *Under sites, roads and buildings*	14,774	1·0
(*c*) *Barren*	6,713	0·4

Thus the land area cultivated and cultivable including current fallow *per capita* works out to 176·8 cents of which 90·7* cents have already been brought under cultivation and 67·2 cents can further be brought under the plough after some improvements.

Climate and rainfall

5. The climate of the district shows endless variety in different parts of the district owing to extraordinary range of elevation in the district. In the *Tarai* to the south the climate differs from that of the adjoining plains chiefly in the variations of temperature between the day and night which are due to the nature of the soil and are the proximate cause of the sickness which attacks the inhabitants of the tract at the time of the commencement of hot weather and towards the end of the rains. The excessive moisture, combined with great heat is always productive of malaria and kindred sicknesses. The high water level renders the tract most unhealthy.

The rainfall is normally ample. The average for the last quinquennium was about 68·2 inches. During the last forty-five years the rainfall has been less than 43·5 inches in only one year and has been usually over 60 inches. In the *Bhabar* the rainfall is decidedly heavy and further south in the *Tarai* the average is much greater than in the southern districts of Rohilkhand. In the hills, seldom a month passes without rain in some part of the district. Snow generally falls every year in almost all the hill *pattis* but it is seldom of long duration.

Irrigation

6. Irrigation is mainly done by the canals. Out of the total irrigated area in 1950-51, 92·3 per cent. was irrigated by canals, 0·1 per cent. by wells and 7·6 per cent. by other sources.

Crops

7. In the plain portion of the district more acreage is sown under *kharif* crops than under *rabi* crops. The area under *kharif* in 1950-51 was 140,201 acres, that under *rabi* 111,005 acres and that under *zaid* crops 5,582 acres. The principal *kharif* crop is paddy while the principal *rabi* crop is wheat followed by barley.

B—Analysis of the Statistics

Population: General distribution and density

1. The table below shows the two basic figures—land area and population—and the derived figures of land area *per capita* :

Tehsil	Population (in lakhs)	Density (number per square mile)	Land area (in lakhs of acres)	Land area *per capita*
Haldwani	0·97	76	8·18	8·39
Kashipur	0·51	271	1·21	2·36
Kichha	0·92	112	5·25	5·71
Naini Tal	0·95	219	2·77	2·93
Naini Tal district	*3·35*	*123*†	*17·41*	*5·19*

The district though thirteenth in order of area stands last (fifty-first) in the State in respect of population. Its density is only 123 while that of the State is 557. The rural density of the district is only 96, the density of the rural parts of the tehsils being : Haldwani 49, Kashipur 143, Kichha 112 and Naini Tal 187. The greater part of this district—the *Tarai* (Kichha) and the *Bhabar* (Haldwani), and in a lesser degree Kashipur—is extremely unhealthy and the whole is largely under forest. Naini Tal tehsil is mountainous. The *Bhabar* with a very low water level, can be cultivated only where served by canals which depend entirely on small streams, and is consequently inhabited mainly by migratory graziers and wood-cutters. For this reason Haldwani has a very low density. (*Vide* Tables A-I and E)

Growth of population

2. The population of the district was only 3·5 per cent. higher in 1951 than what it was fifty years ago. Compared to this the increase in the population of the State during the corresponding period has been 30 per cent. The table below exhibits the variation in the total, rural and urban population for the last five decades.

Census year	Population			Variation		
	Total	Rural	Urban	Total	Rural	Urban
1901	**324,019**	284,953	39,066			
1911	**323,519**	282,336	41,183	—500 (—0·2)	-2,617 (—0·9)	+2,117 (+5·4)
1921	**276,875**	232,099	44,776	—46,644 (—14·4)	—50,237 (—17·8)	+3,593 (+8·7)
1931	**277,286**	229,822	47,464	+411 (+0·1)	—2,277 (—1·0)	+2,688 (+6·0)
1941	**291,861**	225,060	66,801	+14,575 (+5·3)	—4,762 (—2·1)	+19,337 (+40·7)
1951	**335,414**	261,415	73,999	+43,553 (+14·9)	+36,355 (+16·2)	+7,198 (+10·8)

* The figure also includes the area classed as current fallow.
† According to the area given by the Surveyor General it is 127.

A noteworthy feature is that between 1901 and 1921 the population of the district recorded a decrease of about 14·6 per cent., whereas the State as a whole registered a decrease of 4 per cent. only. Between 1921 and 1951 it recorded an increase of 21·1 per cent. against an increase of 35·5 per cent. in the population of the State during the same period. The migratory population in the district is quite large. Hillmen come down to the *Bhabar* for the cold weather and plain's men come into the *Tarai*, both returning to their homes for the hot weather so that the date on which the census is taken is a very important factor in determining the population of this district. In 1921 the large decreases were ascribed to the fact that the migratory population had left the district by the time the census was taken. The population of the district as a whole remained stationary at the 1931 census. The increase continued during the decade 1931—41. The population increased by 14·9 per cent. in the last decade and this was the only decade in the census history of the district in which the increase was well above the State average (11·8 per cent.). The large increase was due to the colonization schemes, and perhaps also the migratory population was enumerated at the place of its temporary stay in the district at this census. The highest increase was recorded by tehsil Kichha (24·7 per cent.), the increases in other tehsils being : Naini Tal 22·4 per cent., Kashipur 8·0 per cent. and Haldwani 4·5 per cent. During this decade the *Tarai* colonization has been in operation in the district and rigorous anti-malarial measures have been taken.

The Vital Statistics

3. Births and deaths and migration account for the trends in population growth. The following table gives the mean decennial registered birth and death-rates and the rates of natural increase and population growth of the last three decades for the district as a whole and for its rural and urban areas :

	Total	Rural	Urban
Mean decennial birth-rate			
1941—50	**19·2**	15·4	32·1
1931—40	**29·5**	29·6	29·1
1921—30	**29·0**	31·3	17·1
Mean decennial death-rate			
1941—50	**15·7**	14·4	20·1
1931—40	**27·8**	29·6	20·8
1921—30	**33·6**	37·4	14·4
Mean decennial natural increase			
1941—50	**3·5**	1·0	12·0
1931—40	**1·7**	..	8·3
1921—30	**—4·6**	—6·1	2·7
Mean decennial growth-rate			
1941—50	**13·9**	14·9	10·2
1931—40	**5·1**	—2·1	33·8
1921—30	**0·1**	—1·0	5·8

There are large omissions in the registration of births as well as deaths and so the above rates do not represent the true picture at all. They may however be taken to be roughly indicative of trends. The birth-rate is fictitiously low in this district for two reasons. The large body of immigrants, both seasonal and semi-permanent, includes a high proportion of men without their wives and secondly the wives of seasonal immigrants would not as a rule accompany their husbands if they were about to bear children. The births among immigrants are, therefore, low and this brings down the district figures. For a somewhat similar reason the death rate is fictitiously high due to the deaths among the large body of immigrants, though it is also naturally high on account of the unhealthy areas. The result is a very low survival rate.

The average yearly mortality from various causes in this district during 1941—50 was as follows :

Causes	Number of deaths	Percentage of total deaths
Fever	3,746	76·1
Dysentery or diarrhoea	146	3·0
Respiratory diseases	355	7·2
Plague, cholera and small-pox	62	1·2
Others	615	12·5

As in the rest of State, ' fever ' is responsible for a majority of the deaths. But ' fever ' covers a number of ailments which the reporters are unable to identify. Deaths from plague, cholera and small-pox are very low in this district.

Migration

4. Immigrants to the district as a whole formed a large proportion of the total population. The home-born were only 60·4 per cent. of the people enumerated in this district at the census of 1951. Of the out-born 28·2 per cent. were born in the other districts of the State, 2·4 per cent. were born in other parts of India and 9·0 per cent. had their birth place in other countries. Of the immigrants from the districts of the State as many as 61,293 (males 35,214, females 26,079) were from the other districts of the same natural division and 33,294 (males 22,087, females 11,207) were from the other parts of the State. The sex proportion suggests that most of this migration is either seasonal or semi-permanent. This district gets a large population from Almora (males 32,134, females 23,485) which comes to the *Bhabar* during the winter. The others are semi-permanent settlers and periodic migrants to the *Tarai* from Moradabad (males 5,496, females 3,826), Rampur (males 3,156, females 2,647) and Bareilly (males 2,768, females 1,451).

Of 6,650 immigrants from the adjacent States, 4,946 (males 2,938, females 2,008) are from Punjab and 720 (males 690, females 30) are from Bihar.

Of the 30,341 immigrants from territories beyond India 15,552 (males 9,848, females 5,704) were born in Pakistan, and 14,647 (males 11,383, females 3,264) were Nepal-born. The Pakistan-born are mostly the displaced persons who numbered 13,688 in the district.

Of the 6,321 non-Indian Nationals in the district 6,193 were Nepalese, 40 British, 28 Pakistanis and the rest belonged to many other nationalities.

Emigration from this district is not important. The figures for it are also not available. On the basis of vital statistics, however, the district appears to have gained about 13,200 persons during 1921—30, 9,800 persons during 1931—40 and 32,700 persons during 1941—50. But it should be borne in mind that these figures have a large element of registration error. (*Vide* Tables D-IV and D-VI)

Decline of cultivation *per capita*

5. We may now analyse the growth of population in the district during the last thirty years in relation to the growth of cultivation. The figures for the district are exhibited in the marginal table (Figures of area shown under census years are quinquennial averages for the five years ending with the crop year immediately preceding the census year.) It is obvious that the cultivation has failed to keep pace with population. The cultivated area *per capita* has gone down to 66·2 cents in 1951 from 90·0 cents in 1921. The magnitude of this drop is slightly less than one-fourth of the 1921 level. It means that (other things being equal) every man, woman and child must expect to get less food and other agricultural produce from the land in 1951 than in 1921.

Census year	Population	Net area sown (in acres)	Area of cultivation *per capita* (in cents)
1921 ..	276,875	249,004	90·0
1931 ..	277,286	225,727	81·4
1941 ..	291,861	233,690	80·1
1951 ..	335,414	222,364	66·2

Double cropped area *per capita*

6. It may be examined whether this shortage has been compensated by an increase in the yield per acre. Increase in yield can be brought about by more double cropping, more irrigation, better fertilization and better culture. The average (quinquennial) area sown more than once was 75,093 acres in 1921, 65,711 acres in 1931, 50,884 acres in 1941 and 48,951 acres in 1951. The figures of double crop cultivation *per capita* in cents are as below :

Particulars	Quinquennial average for the year preceding			
	1951	1941	1931	1921
Double crop cultivation *per capita* in cents ..	14·5	17·5	23·7	27·1
Unirrigated double crop cultivation *per capita* in cents	9·3	11·4	14·1	17·0
Irrigated double crop cultivation *per capita* in cents ..	5.2	6·1	9·6	10·1

It is evident that the double cropped area has not kept pace with the rate of growth of population.

Irrigated area *per capita*

7. The average area irrigated in the district was 86,080 acres in 1921. The figures were 77,626 acres in 1931, 74,316 acres in 1941 and 59,423 acres in 1951. The average area irrigated more than once was 28,073 acres in 1921, 26,676 acres in 1931, 17,738 acres in 1941 and 17,597 acres in 1951. The figures of irrigation *per capita* are given in the table below :

Particulars	Years			
	1951	1941	1931	1921
Irrigated single crop cultivation *per capita* in cents	12·5	19·4	18·4	21·0
Irrigated double crop cultivation *per capita* in cents	5·2	6·1	9·6	10·1

The trend is distinctly towards a decline.

Cropped area

8. During the quinquennium 1931—36, 87·6 per cent. of the cropped area was under food crops and only 12·4 per cent. was under non-food crops. Fifteen years after, during 1946—51, the cropped area under food crops was 88·7 per cent. and that under non-food crops was 11·3 per cent. The proportionate area* under different crops between 1931 and 1951 was as below :

Quinquennial average of	Total cropped area	Percentage of cropped area under						
		Rice	Wheat	Barley	Juar	Maize	Gram	Others
1931—36	288,832	31·4	23·5	5·1	0·2	4·2	6·0	29·6
1936—41	285,900	33·6	21·4	4·9	0·1	3·7	5·6	30·7
1941—46	276,696	30·4	23·9	5·2	0·2	4·1	6·4	29·8
1946—51	284,469	34·0	21·3	5·2	0·1	3·0	7·1	29·3

In the plain portion of the district the area under cotton was 5,776 acres in 1901-02 while in 1950-51 it was only 571 acres. The area under sugarcane was 3,050 acres in 1901-02 ; it was 13,370 acres in 1950-51.

Live-stock, ploughs and carts

9. Live-stock live in this country for a large part of the year on by-products of agriculture supplemented by green fodder crops. They have, therefore, to be co-related not only with the grazing available but also with the total area under cultivation which carries a major portion of the burden of supporting the cattle population.

As will appear from Table 3† of Part III the total number of cattle and buffaloes, which decreased between 1930 and 1944 has further decreased from 3·5 lakhs to 3·3 lakhs during 1944—51.

The number of working cattle and buffaloes in the district had decreased from 0·96 lakhs in 1935 to 0·91 lakhs in 1944. It increased to about 0·94 lakhs between 1944 and 1951. The number of working cattle appears to be governed by the number of ploughs and carts. The number of ploughs has increased from 35 thousands in 1944 to 41 thousands in 1951, due apparently to fractionalization of holdings.

Breeding cows and she-buffaloes have decreased since 1944 when the figure stood at 148 thousands. It was 138 thousands in 1951. Owing to the poor milk yields the share of milk per head is only a few ounces per day.

The number of sheep has been decreasing since 1930 when the figure stood at 19 thousands. It has now decreased to about 1·3 thousands in 1951 apparently due to shortage of pasture. Goats which increased during 1935—44 from about 22 thousands to 23 thousands have gone down during 1944—51 to 22 thousands.

Horses and ponies have declined from about 6 thousands in 1935 to 4·7 thousands in 1951. Donkeys have increased during the same period from 191 to 308.

*It includes the estimated figures for the hill *pattis* of Naini Tal.

†The table is only for the plain's portion of the district.

Poultry has slightly declined from 22 thousands in 1944 to 21 thousands in 1951.

10. To sum up, the population of the district has been increasing since 1921 but on the other hand, the land area *per capita*, the double crop area *per capita* and the irrigated area *per capita* have declined. The magnitude of the absolute numerical increase in relation to the almost stationary acreage under cultivation is a great strain on the economy of the district.

Villages and towns

11. The district has 1,629 villages and 7 towns. Out of about 3·35 lakhs of people who were counted at the census of 1951, 2·61 lakhs were found in the rural areas and 0·74 lakhs in the urban areas, i.e., there were 779 people per 1,000 population who lived in the rural areas and only 221 lived in the towns. The corresponding figures for the State as a whole are : rural 864, urban 136.

The rural population per inhabited village works out to 160. But all the villages do not comprise of a single compact site. There are 1,894 hamlets in the district. The population per hamlet is only 138. The small village of population under 500 is the dominant type in the district. Of the rural population 72·6 per cent. live in such villages, 25·0 per cent. of the rural population live in medium-sized villages of population between 500 and 2,000 and 2·4 per cent. live in large villages of population between 2,000 to 5,000.

Towns vary in number of inhabitants even more widely than villages. Of the urban population 3·6 per cent. live in towns of population under 5,000 (viz., Bhowali and Naini Tal Cantonment) ; 23·4 per cent. live in towns of population between 5,000 and 10,000 (viz., Ramnagar and Jaspur) ; 39·1 per cent. live in towns of population between 10,000 and 20,000 (viz., Kashipur and Naini Tal) ; and 33·9 per cent. live in a town of population over 20,000 (viz., Haldwani-*cum*-Kathgodam). Among the towns of the district Bhowali has recorded the largest percentage increase of 86·1 since 1941, the percentage increase in the other towns being : Ramnagar 54·3, Haldwani-*cum*-Kathgodam 39·4, Naini Tal 29·5 and Kashipur 25·5. Jaspur has registered a decrease of 57·5 per cent.

Occupations : Livelihood pattern

12. Out of the total population of 335,414 (rural 261,415, urban 73,999), 218,839 persons (rural 213,701, urban 5,138) or 65·2 per cent. depend on agriculture for their means of livelihood and 34·8 per cent. depend on non-agricultural sources. The following table gives the distribution of 100 persons of the total, rural and urban population of the district under different livelihood classes :

Description	Agricultural classes					Non-agricultural classes				
	Total	I	II	III	IV	Total	V	VI	VII	VIII
Total	**65·2**	**58·1**	**2·8**	**3·9**	**0·4**	**34·8**	**8·7**	**7·1**	**2·3**	**16·7**
Rural	**81·7**	73·2	3·2	4·9	0·4	**18·3**	5·1	2·2	1·0	10·0
Urban	**6·9**	5·0	1·3	0·2	0·4	**93·1**	21·3	24·2	7·2	40·4

It is one of the less predominantly agricultural districts of the State. Here only 65·2 per cent. of the people depend on agriculture as against 74·2 per cent. in the whole State.

Of the total population of the district, 164,415 persons (males 66,768, females 97,647) or 49·0 per cent. are non-earning dependants. The percentage of non-earning dependants in the agricultural population works out to 48·0 and that among the non-agricultural classes to 50·9. It will be observed that in the main they consist of women. The male non-earning dependants are mostly children. 48,071 persons (males 14,702, females 33,369) or 14·3 per cent. of the population are earning dependants. Among the agriculturists their proportion is 19·5 per cent. and among non-agriculturists they are 4·6 per cent. Agriculture is a family occupation and it provides work to women and grown up children in the family. The remaining 122,928 persons (males 114,017, females 8,911) or 36·7 per cent. of the population are self-supporting. Their proportion among agriculturists is 32·5 per cent. and among non-agriculturists 44·5 per cent. Of the self-supporting persons 71,075 (males 64,716, females 6,359) belong to the agricultural classes and 51,853 (males 49,301, females 2,552) to the non-agricultural classes. On an average 3 self-supporting persons support 4 non-earning dependants.

Of the 51,853 self-supporting persons belonging to the non-agricultural classes, 1,799 persons earn their livelihood from non-productive sources. Of the remaining 50,054 self-supporting persons (rural 26,162, urban 23,892) 1,675 persons or 3·3 per cent. are employers, 19,613 persons or 39·2 per cent. are employees and 28,766 persons or 57·5 per cent. are independent workers.

The distribution of 10,000 self-supporting persons of non-agricultural occupations classified into economic divisions is as follows :

Name of division	Persons per 10,000 self-supporting persons
All Industries and Services	**10,000**
0—Primary industries not elsewhere specified	987
1—Mining and quarrying	39
2—Processing and manufacture—foodstuffs, textiles, leather and products thereof	642
3—Processing and manufacture—metals, chemicals and products thereof	172
4—Processing and manufacture—not elsewhere specified	739
5—Construction and utilities	826
6—Commerce	1,561
7—Transport, storage and communications	750
8—Health, education and public administration	1,266
9—Services not elsewhere specified	3,018

There is no large scale industry in the district. The principal cottage and small scale industries are calico printing, leather tanning and stick making.

Variations in the livelihood pattern

13. In the district the population dependent on agriculture for their livelihood was 65·2* per cent. in 1951. The unfortunate fact is that the agricultural proportion had been increasing ever since 1901 and only at this census, the process seems to have been arrested. It was 66·1 per cent. in 1901, 70·2 per cent. in 1911 and 72·3 per cent. in 1921. The actual number of persons who depend on agriculture has increased to 218,541 in 1951 from 200,259 in 1921 or by 9·1 per cent. while the area under cultivation has actually declined. This has resulted in progressive fragmentation of holdings and pressure on impoverished soil. There appears to be a gradual decline in village arts and crafts. The cumulative result is a fall in the proportion of workers and a corresponding rise in the dependency. The proportion of workers in the total population in 1951 was only 51·0 per cent. (agricultural 33·9 per cent., non-agricultural 17·1 per cent.) against 62·6 per cent. (agricultural 45·6 per cent., non-agricultural 17·0 per cent.) in 1921. The proportion of non-earning dependants has increased to 49·0 per cent. (agricultural 31·3 per cent., non-agricultural 17·7 per cent.) in 1951 from 37·4 per cent. (agricultural 26·7 per cent., non-agricultural 10·7 per cent.) in 1921. All this is an index of increasing unemployment and under-employment. It is only by the diversion of the population to cottage and other industries and by providing subsidiary occupations to the agriculturists that the present severe disequilibrium in the economy of the district can be redressed. (*Vide* Tables B-I, B-II and B-III)

Houses and households

14. There were 66,260 occupied houses in the district—52,864 in the villages and 13,396 in the towns. That gives an average of 4,945 persons per 1,000 houses or 4·9 persons per house in the rural areas and 5,524 persons per 1,000 houses or 5·5 persons per house in the urban areas.

There were 76,043 households in the district—58,627 in the villages and 17,416 in the towns. That gives an average of 4,440 persons per 1,000 households or 4·4 persons per household in the rural areas and 4,113 persons per 1,000 households or 4·1 persons per household in the urban areas. The marginal table shows the developments in the size of the households since 1921. The rural household has increased since 1941 but is smaller than the average State rural household (5·07). The urban households have considerably decreased since 1941.

Census years	Persons per 1,000 households of	
	Rural population	Urban population
1921 ..	4,265	4,194
1931 ..	4,497	4,310
1941 ..	4,342	5,063
1951 ..	4,440	4,113

Out of 4,440 persons in every 1,000 rural households, 2,570 are males and 1,870 are females. There is a male excess numbering 700 in every 1,000 rural households. Out of 4,113 persons in every 1,000 urban households 2,415 are males and 1,698 are females. There is a male excess numbering 717 in every 1,000 urban households.

Information regarding types of household and household relationships was also collected at this census with the help of a sample of about 4 per cent. According to this in every 1,000 sample households there are 4,018 persons (males 2,293, females 1,725) in the district. The corresponding figure for the total count is 4,365.

The table below shows the distribution by size of 1,000 sample households :

Description	Small with 3 members or less	Medium with 4—6 members	Large with 7—9 members	Very large with 10 members or more
Total	**493**	**356**	**114**	**37**
Rural	488	368	107	37
Urban	508	320	133	39

Small households are the dominant type both in the rural and in the urban areas.

* This figure includes earning dependants according to their secondary means of livelihood while the figures (65·2) in paragraph 12 includes earning dependants according to their principal means of livelihood.

Family composition of 1,000 sample households is as follows :

			Number in 1,000 households
A	Heads of households	Males (married)	592
		Males (widowers)	346
		Females	62
	Wives of heads of households		592
			1,592
B	Sons of heads of households		871
	Daughters of heads of households		554
			1,425
C	Male relations of heads of households (other than sons)		445
	Female relations of heads of households (other than daughters)		511
			956
D	Persons unrelated to the heads of the households	Males	39
		Females	6
			45
		Grand Total	***4,018***

Sons outnumber the daughters of the heads of the households. The latter leave the homes of their parents after marriage. Female relations (other than daughters) outnumber the male relations (other than sons). Such females are generally those who become members of these households by marriage.

Sex-ratio

15. In the district as a whole the sex-ratio was 716, i.e., there were 716 females to every 1,000 males. It varied among the tehsils. The highest value was 790 in Naini Tal and the lowest value was 667 in Kichha tehsil. The ratio was 671 in Haldwani and 764 in Kashipur. The sex-ratio is smaller in towns than in villages. For the district as a whole it was 726 in villages and 682 in towns.

The corresponding figure of sex-ratio for the district was 722 in 1921, 708 in 1931 and 705 in 1941.

Age-structure

16. The number in each age group in the district is shown below as a percentage of the total number of all ages in the total, rural and urban population separately :

Age-group		Total population			Rural population		Urban population	
		Persons	Males	Females	Males	Females	Males	Females
Infants and young children	0—4 ..	**12·6**	**6·3**	**6·3**	6·3	6·2	6·3	6·6
Boys and girls	5—14 ..	**22·5**	**12·3**	**10·2**	12·0	10·4	13·5	9·7
Young men and women	15—34 ..	**37·6**	**22·5**	**15·1**	22·4	15·3	22·9	14·2
Middle-aged men and women	35—54 ..	**21·3**	**13·6**	**7·7**	13·5	7·9	13·7	7·2
Elderly persons	55 and over ..	**6·0**	**3·4**	**2·6**	3·4	2·6	3·5	2·4

It will be seen that the population is progressive. 35·1 per cent. of the population is of age under 15 and only 6 per cent. consists of elderly persons. Again it may be noted that proportionately larger numbers in the working ages (15—54) are found in the urban areas than in the rural area. This is due to migration of workers from the villages to the towns. (*Vide* Table C-II)

Marital Status

17. Out of every 10,000 persons in the district, there are 5,812 males and 4,188 females.* Among them 2,784 males and 1,647 females are unmarried. If we reckon males and females together, the unmarried people are 44·3 per cent. of the total population.

Of the males 47·9 per cent. were unmarried, 46·5 per cent. were married and 5·6 per cent. were widowed or divorced. Among females 39·3 per cent. were unmarried, 48·5 per cent. were married and 12·2 per cent. were widowed or divorced.

Of the married males 0·5 per cent. were of ages below 15, 49·0 per cent. were of ages 15—34, 42·5 per cent. were of ages 35—54 and 8·0 per cent. were of ages 55 and over. Among the married females 4·0 per cent. were of ages below 15, 67·3 per cent. were of ages 15—34, 25·9 per cent. were of ages 35—54 and 2·8 per cent. were of ages 55 and over.

* The corresponding figures of the total count are 5,828 and 4,172.

Marriage is universal. Among males and females aged 35 years and over only 3·8 per cent. of males and 0·6 per cent. of females were found unmarried. Most of the females are married before attaining the age of 25. Child marriage is still prevalent though it is not very common. 0·6 per cent. of the males of ages 0—14 and 5·0 per cent. of the females of ages 0—14 were returned as married. (*Vide* Table C-III)

Languages

18. Over 61·0 per cent. of the people of the district returned Hindi, Hindustani or Urdu as their mother-tongue. Among other mother-tongues spoken the main are Pahari including Kumaoni and Garhwali (30·9 per cent.), Punjabi (3·8 per cent.) and Nepali (3·6 per cent.). Of the 3·4 lakhs of people in the district 50,917 or 15·2 per cent. were bilingual (in an Indian language). Those whose mother-tongue is other than Hindi, Hindustani or Urdu are generally able to speak any of these as subsidiary language. Persons returning Hindi, Hindustani or Urdu as secondary language were 49,833 or 97·9 per cent. of those who were bilingual in some Indian language. (*Vide* Table D-I)

Religion and special groups

19. Out of 10,000 population of the district the number of people belonging to different religions is : Hindus 8,403, Muslims 1,318, Sikhs 216, Jain 1, Christians 56 and others 6. Of the 10,000 population in villages the numbers are : Hindus 8,870, Muslims 875, Sikhs 203, Christians 45 and others 7. Of 10,000 people in towns the numbers are : Hindus 6,752, Muslims 2,883, Sikhs 264, Jains 2, Christians 96 and others 3. Muslims, Sikhs and Christians are generally concentrated in the urban areas of the district as is the case in the other parts of the State.

There were 48 thousand people belonging to the Scheduled Castes in the district. Their number per 10,000 of population works out to 1,432. In villages they are 1,621 for every 10,000 people and in the towns their number per 10,000 is only 764. The district had 109 Anglo-Indians. (*Vide* Tables D-II and D-III)

Displaced persons

20. The number of displaced persons in the district at the census of 1951 was 13,688 (males 7,743, females 5,945). 97·0 per cent. of the displaced persons were from West Pakistan, 0·3 per cent. from East Pakistan and 2·7 per cent. from districts which could not be traced. (*Vide* Table D-V)

Literacy

21. In 1951 the percentage of male literacy was 31·3 in the district while that of female literacy was 9·6. In 1931 the literacy was 14·2 per cent. for males and 2·2 per cent. for females.* On January 1, 1951, there were 427 primary schools in the district with an enrolment of 18,629. (*Vide* Table D-VII)

C—Explanatory note on the Statistics

1. The statistics in this volume have been presented in three parts :

I—District Census Tables
II—Village, Town, Pargana and Thana Statistics
III—Miscellaneous Statistics

Parts I and II contain census data. A brief account of the system of sorting of census slips and preparation of tables and abstract therefrom is given below.

Part III contains statistics throwing light on special aspects of population and its growth. These have been derived from miscellaneous sources. Table 1, "Vital Statistics", has been prepared from the published and unpublished records of the Director of Medical and Health Services, Table 2, "Agricultural Statistics", from the Annual Season and Crop Reports, Table 3, "Live-Stock, Agricultural Machinery and Implements", from the published figures of Live-Stock Census and Table 4, "List of Primary Schools" from information specially supplied by District Inspector of Schools.

There are certain limitations in the Agricultural Statistics relating to cropped area (Table III). As figures for the hill portion of the district for the years 1901-02 to 1906-07 are not available, the details in the table are only for the plain portion. Furthermore, the totals for *kharif*, *rabi* and *zaid* for the years 1907-08 to 1950-51 are also only for the plain portion of the district ; the totals for cropped area (column 61) and net cropped area (column 63) are for the whole district ; and the figures for individual crops are only for the plain portion for years 1907-08 to 1930-31, while for the years 1931-32 to 1950-51, they are for the whole district.

Processing of census data

2. The census data presented here has been derived from the census slips by a process of sorting, compilation and tabulation. In previous censuses the slips were first sorted by religion and this division was maintained throughout so that all data was cross-tabulated by religion. This procedure has been abandoned at this census and substituted by a division based on economic characteristics of the population. The whole population has been divided

* The numbers per mille (of the 10 per cent. sample population) of each sex aged 5 years and over who were returned as literates are as below :

Males		Females	
1951	1931	1951	1931
343	159	111	26

into eight livelihood classes, four of which are of the agricultural category and four of non-agricultural category as follows :

Agricultural Classes—

I—Cultivators of land wholly or mainly owned ; and their dependants
II—Cultivators of land wholly or mainly unowned ; and their dependants
III—Cultivating labourers ; and their dependants
IV—Non-cultivating owners of land ; agricultural rent receivers ; and their dependants

Non-agricultural Classes—

V—Production (other than cultivation)
VI—Commerce
VII—Transport
VIII—Other services and miscellaneous sources

Another special feature of the sorting of this census was the separation, from the very start, of slips of displaced persons and of a 10 per cent. random sample from the remainder. This has enabled the data of displaced persons to be presented separately while the 10 per cent. sample has been utilized for the preparation of Age Tables.

The slips of this census have been copied by Households into a National Register of Citizens, which has been prepared village-wise for rural areas and mohalla/ward-wise for urban areas. Table C-I is based on a 4 per cent. sample extracted from this Register.

Tracts

3. The slips were first sorted by villages for the preparation of the Primary Census Abstract. For the purpose of further sorting the State was divided into tracts consisting of (*a*) *rural tracts*, comprising the rural population of each tehsil, (*b*) *urban city tracts*, comprising the population of areas which had been declared as cities, (*c*) *urban non-city tracts*, comprising the population of urban areas of a district excluding areas declared as cities. Each tract was treated as a unit for sorting of slips. All data were compiled first by tracts and then by districts. This volume presents the tract-wise data for one district (with the exception of A and E Tables, which have been presented tehsil-wise) ; while the district-wise data for the whole State is contained in the following State volumes :

Part I-B—Subsidiary Tables
Part II-A—General Population Tables
Part II-B—Economic Tables
Part II-C—Age and Social Tables.

Explanatory notes

4. Detailed explanatory notes are appended to each State table in the printed volumes of State tables. They apply to the tables in this volume also and should be referred to when necessary. A few notes of some of the tables are reproduced below :

Table A-I—Column 5 relating to "hamlets" has been introduced for the first time. Any distinctive cluster or agglomeration of houses has been treated as a "hamlet".

A clear distinction has been made in this census between a "House" and a "Household". A house is any human dwelling having a separate main entrance while a household is any commensal unit living in a census house. In previous censuses the figures under "Occupied Houses " used to be that of households, while the figures under columns 7—9 of the present table refer to occupied census houses as distinct from households.

The Economic Tables—The Indian Census Economic Classification Scheme, 1951, together with the occupational division and sub-division adopted for this census are given in Part II-B of the Report.

Table B-I—Each of the eight livelihood classes mentioned above has been divided into three sub-classes, with reference to the economic status, as follows :

(i) Self-supporting persons ;
(ii) Non-earning dependants ; and
(iii) Earning dependants.

These were defined in the Instructions to Enumerators as follows :

> "A 'self-supporting person' is one who is in receipt of an income and that income is sufficient at least for his own maintenance. To be 'self-supporting' a person need not be able to support his family. All that is necessary is that he should be earning sufficient for his personal needs. For purposes of this question the person enumerated is the unit and not the family or household. Any one who is not a 'self-supporting ' person in this sense is a 'dependant'. A 'dependant' may be either an 'earning dependant' or a 'non-earning dependant'. The test is whether he secures a regular (and not casual) income, even though it may be small. Such income may be in cash or kind ; it may be continuous or seasonal employment. When the income which he secures is not sufficient to support him that person is an 'earning dependant'. A person who does not earn any income either in cash or kind is a 'non-earning dependant'. Where two or more members of a family household jointly cultivate land and secure an income therefrom, each of them should be regarded as earning part of the income. None of them is, therefore, a

'non-earning dependant'. Each of them should be classed either a 'self-supporting person' or an 'earning dependant' according to the share of income attributable to each. The same applies to any other business carried on jointly. The share of the income is what the head of household deems it to be. This does not mean that every one who works is necessarily a self-supporting person or an earning dependant. Thus, for instance, a housewife who cooks for the family, brings up the children or manages the household is doing very valuable work. Nevertheless, her economic status is that of a 'non-earning dependant', if she does not also earn an income, and should be recorded as such."

Economically active, Semi-active and Passive persons—All non-earning dependants are economically passive. They include persons performing house-work or other domestic or personal services for other members of the same family household. But they do not include "unpaid family workers" or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise.

All earning dependants are economically semi-active only. Though they contribute to the carrying on of economic activities, the magnitude of their individual contribution is deemed to be too small to justify their description as economically active. (Their contribution to economic activity is, however, taken into account in the tabulation of data based on secondary means of livelihood.)

All self-supporting persons are, ordinarily economically active with the exception of the following classes and groups :

(*a*) All self-supporting persons of agricultural Class IV

(*b*) The following groups of self-supporting persons who are included in non-agricultural Class VIII and derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity) :

(i) Persons living principally on income from non-agricultural property ;

(ii) Persons living principally on pensions, remittances, scholarships and funds ;

(iii) Inmates of alms-houses and recipients of doles ;

(iv) Beggars and vagrants ; and

(v) All other persons living principally on income derived from non-productive activities.

Table B-II—For a self-supporting person who has more than one means of livelihood the *secondary means* of livelihood is the livelihood next in importance to his principal means of livelihood. For an earning dependant it is the source from which he secures his own income, where there are more than one subsidiary occupations only the one providing the largest income has been taken into account.

Table B-III—"Employers", "Employees" and "Independent Workers" have been defined as follows in the Instructions to Enumerators :

An 'employer' is only that person who has necessarily to employ other person in order to carry on the business from which he secures his livelihood. Thus if a person employs a cook or any other person for domestic services, he should not be recorded as an 'employer' merely for that reason.

An 'employee' is a person who ordinarily works under some other person for a salary or a wage in cash or kind as the means of earning his livelihood. There may be persons who are employed as managers, superintendents, agents etc., and in that capacity control other workers. Such persons are also employees only and should not be regarded as 'employers.'

An 'independent worker' means a person who is not employed by any one else and who also does not employ anybody else in order to earn his livelihood. (Sweepers, *dhobies*, *kahars*, etc., who work for several masters are independent workers. If, however, any of them accepts whole-time employment under one master he becomes 'employee'. Daily wage-earners who work for different masters are likewise independent workers. But if they accept employment under one master, e.g. under a factory, they become 'employees'.)

Tables C-II, C-III, C-IV and C-V—The figures presented in these tables are based on single year age returns and have not been smoothed.

Tables D-V (i) *and* (ii)—For the purpose of this table a "displaced person" has been defined as follows :

"A displaced person means any person who has entered India having left or being compelled to leave his home in Western Pakistan on or after the 1st March, 1947, or his home in Eastern Pakistan on or after the 15th October, 1946, on account of civil disturbances or on account of the setting up of the two Dominions of India and Pakistan."

PART I

DISTRICT CENSUS TABLES

A—GENERAL POPULATION TABLES

A-I—Area, Houses and Population

Serial number	Tehsil	Area in square miles	Occupied houses					
			Villages	Hamlets	Towns	Total	Rural	Urban
