AZAMGARH DISTRICT

Studies & Research
Section.

FOREWORD

Several States, including Uttar Pradesh, have been publishing village statistics by districts at each census. In 1941 they were published in U. P. under the title "District Census Statistics" with a separate volume for each district. In the 1951 census, when the tabulation has been more elaborate than ever in view of the requirements of the country, the district-wise volume has been expanded into a "District Census Handbook", which now contains the District Census Tables (furnishing data with break-up for census tracts within the district), the District Index of Non-agricultural Occupations, agricultural statistics from 1901-02 to 1950-51 and other miscellaneous statistics in addition to the usual village population statistics. The village population statistics also are given in an elaborate form giving the division of the population among eight livelihood classes and other details.

2. It may be added here that a separate set of district-wise volumes giving only population figures of rural areas by villages and of urban areas by wards and mohallas and entitled "District Population Statistics" has already been published. This separate series was necessitated by the urgent requirements of the U. P. Government for elections to local bodies.

3. The number of District Census Handbooks printed so far is thirty seven. Special arrangements for speeding up the printing have now been made and it is hoped that the remaining Handbooks will be printed before the end of 1955.

RAJESHWARI PRASAD, I.A.S.,
Superintendent, Census Operations,
Uttar Pradesh.

RAMPUR:
September 30, 1955.

INTRODUCTION

A—The District

1. The district of Azamgarh comprises a somewhat irregularly shaped tract of country lying south of Ghagra river. It is bounded on the east by the Ballia district, on the south by the districts of Jaunpur and Ghazipur and on the west by those of Jaunpur and Sultanpur, the boundaries in each case being purely artificial. On the north lie the districts of Faizabad and Gorakhpur ; but whereas there is no natural frontier between Azamgarh and Faizabad, the Ghagra river separates this district from Gorakhpur for the whole length of their common boundary. The district has a total area of 2,217 square miles which is almost equal to the average district area of the State (2,224 square miles). Its population in 1951 was about 21·0 lakhs. It has 6 tehsils, 15 parganas and 21 thanas.

Topography

2. The district is a level plain without any hills or natural eminence, the only variations in the surface being caused by the banks of the small streams that drain it. Except in the proximity of the Ghagra, the country slopes very gently towards the south-east. Here and there will be found depressions of varying depth and extent, in which the surface drainage of the interior collects. On the other hand, there are some high-lying *usar* plains. Neither in the hollows nor in the *usar* do trees grow, and the landscape of the southern half of the district, where they are few, for the greater part of the year is dreary in the extreme. There are only two natural divisions—the southern low-lying tract and the northern high-lying tract. They differ markedly from one another, and in the latter a distinction may be drawn between the interior uplands which consist of comparatively old formations of alluvial deposit, and the reverine alluvium which lies in the valleys of the rivers and is liable to change. The dividing line of the two tracts lies roughly along the metalled road which runs from Shahganj through Azamgarh to Mau.

The soil of the southern tract of the district is, for the most part clay ; much of the land lies low and marshes and lake abound. It is drained by Gangi, Udanti, Besu, Mangai and Bhainsahi rivers. The beds of these streams are but little below the level of the surrounding country and they are dammed at frequent intervals for irrigation ; it is only on the eastern confines of the district that their channels are deeply cut and well-defined. In this direction also the soil is lighter and the villages more resemble those in the northern half of the district. Throughout the remainder the country consists of alternate elevations and depressions, the latter containing marshes and rice land, the former, where the soil is good and not infected with *usar*, being occupied by hamlets which are surrounded by every variety of crop.

The northern tract is divisible into two portions, the uplands known as *bangar* and the low lands in the vicinity of the Ghagra called the *kachhar*. The *bangar* is the most fertile and most stable portion of the district. A portion of it is cut off from the rest in the north-east by the Chhoti Sarju. This is drained partly by that river and partly by some minor channels. The rest of the *bangar* is drained by the Tons river and its affluents. The soil of the *bangar* tract is a good firm loam which, in the neighbourhood of the rivers, becomes light and in a few cases even sandy. Clay is found in the narrow depressions in which the various drainage channels originate, and there are isolated patches of clay and *usar* resembling those found in the southern tract.

The portion of the northern tract which is included in the *kachhar* area consists of the present and the old bed of the Ghagra. The soil of the *kachhar* is, for the most part, sand covered in the depressions with deposits of clay silt of varying thickness.

The drainage of the southern portion of the district is defective. It is full of swamps and the country during the rainy season is little better than a large shallow lake. Its eastern part is more effectively and rapidly drained than the western, but extensive marshy tracts are not wanting there also. The northern tract is much more effectively drained than the southern and generally speaking its drainage is sufficient.

Soils

3. Nearly all the varieties of clay are found in the district. It is the predominent soil in the southern portion of the district. It can be divided into three classes. The clear grey clay which contains little organic matter is the prevalent variety and is known as *matiara* ; while that which lies in the depressed rice-lands and assumes a blackish colour from the admixture of organic matter is known to the people as *karail*. In the vicinity of the raised waste tracts, the soil is lighter both in texture and in colour and is called *kabsa* ; it appears to have in it a larger amount of saline matter than either *matiara* or *karail* and it is a less fertile soil. It also dries soon and cracks but little, whereas *karail* shrinks greatly under the influence of drought. *Matiara*, on the other hand, is a fertile, plastic clay which grows all varieties of crops. In the northern portion of the district, the proportion of sand in the soil is greater than in the south, and the prevailing earth becomes a loam, known as *balsundar* ; while a very sandy variety is called *balui*. Clay soils and rice-lands, however, are also met with, generally, in or near the swamps or lakes.

Classification of area

4. The figures of the classification of area during the last fifty years are shown in Table 2 of Part III of this volume. The proportion of the area under the various categories works out as follows for 1950-51 :

Particulars	Actual figures (in acres)	Percentage
Cultivated area	1,044,297	73·8
Culturable waste (excluding current fallow)	130,822	9·2
Current fallow	38,548	2·7
Forest	..	..
Area not available for cultivation of which—	202,053	14·3
(*a*) *Covered with water*	*79,876*	*5·6*
(*b*) *Under sites, roads and buildings*	*44,692*	*3·2*
(*c*) *Barren*	*77,485*	*5·5*

The figure in the above table regarding culturable waste taken from the Season and Crop Report is, however, misleading. The State Agriculture Department conducted in 1949-50 a detailed enquiry through the district officers regarding the nature of this area in each district. The following analysis of the area resulted from this enquiry :

Particulars	Area (in acres)	Percentage
Total culturable waste (A+B+C)	**127,545**	**100**
A—Area under culturable waste land not available for immediate cultivation ..	41,526	32·56
(i) Forest under any legal enactment	236	0·19
(ii) Groves	28,235	22·14
(iii) Forests of timber trees	31	0·02
(iv) Thatching grasses, shrubs and bushes	11,258	8 83
(v) Land kept for grazing	1,766	1·38
B—Area under culturable waste land available for immediate cultivation but which could not be cultivated	21,700	17 01
Of which due to—		
(i) *Kans* growth	101	0 03
(ii) Threshing floors	611	0·48
(iii) Malaria	..	..
(iv) Floods	273	0·21
(v) Lack of drains	16	0·01
(vi) Lack of water	8,297	6·51
(vii) Distance from *abadi*	612	0·48
(viii) Damage from wild animals	..	.
(ix) Other causes	11,790	9·24
C—Area under culturable waste land that can be brought under immediate cultivation after some improvements besides the area given against 'B' ..	64,319	50·43

From the above it will appear that of the total area recorded as cultivable waste, only 50·4 per cent. was really capable of being brought under immediate cultivation after some improvements.

Thus the land area cultivated and cultivable including current fallow *per capita* works out to 57·7 cents of which 51·5* cents have already been brought under cultivation and only about 3·1 cents can be further brought under the plough after some improvements. It is obvious that the saturation point for cultivation has already been reached in the district.

Climate and rainfall

5. The rainy season begins in the second or third week of June and lasts till the beginning of October. The first burst of the rains comes from the east or north-east and consists of heavy intermittent falls rather than of continuous soaking wet. Winter commences from the middle of October and lasts till the middle of March. During this period the prevailing wind is westerly and ground frosts are of occasional occurance, which injure the field crops, especially peas and *arhar*. April, May and first half of June are the hot day months. The climate on the whole is relaxing but not unhealthy. The health of the people is generally good throughout the year, though fever is very common towards the end of the rainy season, especially in the southern tract.

The average rainfall for the last quinquennium was about 42·0 inches. During the last forty-five years the rainfall has been less than 25 inches in only 1 year and is usually over 35 inches. The wettest tehsil of the district is Azamgarh.

Irrigation

6. Irrigation is derived from wells and other sources. In 1950-51 the area irrigated from wells covered 64·9 per cent. while that from other sources covered 35·1 per cent.

Crops

7. The acreage under the *kharif* crops is more than that under the *rabi* crops. The area under *kharif* in 1950-51 was 738,258 acres, that under *rabi* 543,844 acres and that under *zaid* crops 3,322 acres. The principal *kharif* crop is rice while the principal *rabi* crop is barley followed by wheat. Sugarcane is also one of the important crops of the district.

* This figure also includes the area classed as current fallow.

B—Analysis of the Statistics

Population: General distribution and density

1. The table below shows the two basic figures—land area and population—and the derived figures of land area *per capita* :

Tehsil	Population (in lakhs)	Density (number per square mile)	Land area (in lakhs of acres)	Land area *per capita*
Azamgarh	3·48	1,111	2·00	0·58
Mohammadabad	3·69	1,031	2·29	0·62
Sagri	3·11	890	2·24	0·72
Ghosi	3·59	986	2·33	0·65
Phulpur	4·00	907	2·82	0·71
Lalganj	3·15	820	2·46	0·78
Azamgarh district	*21·02*	*951**	*14·14*	*0·67*

This district though nineteenth in order of area stands fifth in the State in respect of population. Its density is 951 while that of the State is only 557. It has not been inflated by the presence of large towns and even the rural density of the district is as high as 906, the density of the rural parts of the tehsils being : Azamgarh 1,014, Mohammadabad 881, Sagri 890, Ghosi 956, Phulpur 896 and Lalganj 820. The population is spread fairly evenly over the tehsils. It is also to be noted that the district has got one of the lowest figures of land area *per capita*. (*Vide* Tables A-I and E)

Growth of population

2. The population of the district in 1951 was 35·8 per cent. higher than what it was fifty years ago. Compared to this the increase in the population of the State during the corresponding period has been only 30 per cent. The table below exhibits the variation in the total rural and urban population for the last five decades :

Census year	Population			Variation		
	Total	Rural	Urban	Total	Rural	Urban
1901 ..	**1,548,174**	1,456,547	91,627			
1911 ..	**1,492,818**	1,427,313	65,505	**−55,356**	−29,234	−26,122
				(−3·6)	(−2·0)	(−28·5)
1921 ..	**1,528,657**	1,454,844	73,813	**+35,839**	+27,531	+8,308
				(+2·4)	(+1·9)	(+12·7)
1931 ..	**1,571,577**	1,486,177	85,400	**+42,920**	+31,333	+11,587
				(+2·8)	(+2·2)	(+15·7)
1941 ..	**1,822,893**	1,724,342	98,551	**+251,316**	+238,165	+13,151
				(+16·0)	(+16·0)	(+15·4)
1951 ..	**2,102,423**	1,994,291	108,132	**+279,530**	+269,949	+9,581
				(+15·3)	(+15·7)	(+9·7)

Between 1901 and 1921 the population of the district recorded a decrease of 1·3 per cent. when that of the State decreased by 4·0 per cent. The small increase during 1911—21 (on account of influenza epidemic) followed a considerable loss during the decade prior to it when plague mortality had been very high in the district. Since 1921 it recorded an increase of 37·5 per cent. against an increase of only 35·5 per cent. in the population of the State during the same period. This increase would have been larger but for the small increase during 1921—31.

The variation in the population of the tehsils during 1941—51 is shown in the marginal table. The increase in the population of the district is well above the State average (11·8 per cent.) and is spread unevenly throughout the tehsils. The differences are probably due to the relative effects of emigration.

Tehsil	Percentage variation 1941—51
Azamgarh district	*+15·3*
Azamgarh	+13·3
Mohammadabad	+17·8
Sagri	+15·8
Ghosi	+15·5
Phulpur	+13·4
Lalganj	+16·6

*According to the area given by the Surveyor General it is 948.

Vital statistics

3. Births and deaths mainly account for the trend in population growth. Migration also is a factor though of lesser importance. The following table gives the mean decennial birth and death rates and the calculated natural increase and the population growth rates of the last three decades for the district as a whole and for its rural and urban areas :

	Total	Rural	Urban
Mean decennial birth-rate			
1941—50	21·6	21·3	27·6
1931—40	31·0	31·4	24·5
1921—30	31·2	31·9	19·6
Mean decennial death-rate			
1941—50	13·9	13·8	16·5
1931—40	19·4	19·8	13·3
1921—30	28·6	29·2	16·4
Mean decennial rate of natural increase			
1941—50	7·7	7·5	11·1
1931—40	11·6	11·6	11·2
1921—30	2·6	2·7	3·2
Mean decennial growth-rate			
1941—50	14·2	14·5	9·3
1931—40	14·8	14·8	14·3
1921—30	2·8	2·1	14·6

There are large omissions in the registration of births as well as deaths and so the above rates do not represent the true picture at all. They may, however, be taken to be roughly indicative of trends. Both birth and death rates have fallen during the last decade.

The figures of natural increase and growth-rate suggest a gain on the balance of migration during 1921—30, 1931—40 and 1941—50, but the record especially in respect of births is very incomplete, and the district which is one of the known emigrating districts must have been losing heavily on this account.

The average yearly mortality from various causes in the district during 1941—50 was as follows :

Causes	Number of deaths	Percentage of total deaths
Fever	21,036	77·0
Dysentery and diarrhoea	203	0·8
Respiratory diseases	174	0·6
Plague, cholera and small-pox	3,153	11·5
Others	2,760	10·1

As in the rest of the State 'fever' is responsible for the majority of deaths. But fever covers a large number of ailments which the reporters are unable to identify. (*Vide* Table I, Part III of this volume)

Migration

4. About 95·1 per cent. of people enumerated in the district at the census of 1951 were born there, 4·6 per cent. were born in the other districts of the State, 0·2 per cent. were born in other parts of India and 0·1 per cent. came from other countries. Of the immigrants from the districts of the State as many as 77,483 (males 12,064, females 65,419) were from the other districts of the same natural division and 20,031 (males 3,048, females 16,983) were from other parts of the State. The sex proportion suggests that most of the immigration from the neighbouring districts is marriage migration. Of the 2,022 immigrants from the adjacent States 1,669 (males 499, females 1,170) were from Bihar, 141 (males 114, females 27) were from Punjab and 98 (males 80, females 18) were from Rajasthan. Most of the migration from Bihar is also marriage migration.

Of the immigrants who have come from territories beyond India 499 (males 244, females 255) were born in Pakistan and 567 (males 280, females 287) had their birth-place in other territories. The Pakistan-born are the displaced persons who numbered 530 in the district. Of the immigrants born in other territories 344 (males 177, females 167) were Burma-born, 71 (males 30, females 41) were Malaya-born and 48 (males 19, females 29) were Nepal-born.

Of the 23 non-Indian nationals 4 were Pakistanis, 6 Malayans, 3 Indonesians, 2 British, 2 Canadians and the rest belonged to other nationalities.

Unfortunately the figures of emigration are not available but it is a known fact that the district is an emigrating one. On the basis of the vital statistics, however, the district appears to have gained about 1,000 persons during 1921—30, 55,000 persons during 1931—40 and 128,000 persons during 1941—50. But it should be borne in mind that these figures include a very large element of registration error. The emigration is mostly to Bihar, Orissa, Assam and Bhopal. (*Vide* Tables D-IV and D-VI)

Decline of cultivation *per capita*

5. We may now analyse the growth of population in the district during the last thirty years in relation to the growth of cultivation during the same period. The figures for the district are exhibited in the marginal table. (Figures of area shown under census years are quinquennial averages for the five years ending with the crop year immediately preceding the census year.) It is obvious that cultivation has failed to keep pace with population. The cultivated area *per capita* has gone down from 58·3 cents in 1921 to 48·0 cents in 1951. The magnitude of this drop is about one-sixth of the 1921 level. It means that (other things being equal) every man, woman and child must expect to get less food and other agricultural produce from the land in 1951 than in 1921.

Census year	Population	Net area sown (in acres)	Area of cultivation *per capita* (in cents)
1921 ..	1,528,657	892,868	58·3
1931 ..	1,571,577	909,350	57·8
1941 ..	1,822,893	951,694	52·4
1951 ..	2,102,423	1,008,693	48·0

Double cropped area *per capita*

6. It may be examined whether this shortage has been compensated by an increase in the yield per acre. Increase in yield can be brought about by more double cropping more irrigation, better fertilization and better culture. The average (quinquennial) area sown more than once was 238,222 acres in 1921. It decreased to 222,716 acres in 1931. There was an increase to 258,247 acres in 1941 but again this area decreased to 245,465 acres in 1951. The figures of double crop cultivation *per capita* in cents are as below :

Particulars	Quinquennial averages for the year preceding			
	1951	1941	1931	1921
Double crop cultivation *per capita* in cents	11·7	14·2	14·2	15·5
Unirrigated double crop cultivation *per capita* in cents ..	11·3	13·9	13·9	15·2
Irrigated double crop cultivation *per capita* in cents ..	0·4	0·3	0·3	0·3

The double cropped are *per capita* has declined since 1921.

Irrigated area *per capita*

7. The average area irrigated in the district was 497,809 acres in 1921. The figures were 405,936 acres in 1931, 510,912 acres in 1941 and 514,471 acres in 1951. The average area irrigated more than once was 5,175 acres in 1921, 4,399 acres in 1931, 4,753 acres in 1941 and 8,589 acres in 1951.

The figures of irrigation *per capita* are shown in the table below :

Particulars	Years			
	1951	1941	1931	1921
Irrigated single crop cultivation *per capita* in cents ..	24·1	27·8	25·5	32·2
Irrigated double crop cultivation *per capita* in cents ..	0·4	0·3	0·3	0·3

The irrigated area *per capita* has been declining since 1921 except for the quinquennium preceding the year 1941 when there was an increase over the area of the corresponding period preceding the year 1931.

Cropped area

8. It is also significant that inspite of the rapid growth of population there has been almost no change in the cropping pattern of the district. During the quinquennium 1916—21, 91·9 per cent. of the cropped area was under food crops and only 8·1 per cent. of it was under food crops and only 8·1 per cent. of it was under non-food crops. Thirty years after during 1946—51 the cropped area under food crops was 91·3 per cent. and that under non-food crops 8·7 per cent.

The proportionate area under different crops between 1911 and 1951 was as below :

Quinquennial average of	Total cropped area	Percentage of cropped area under							
		Rice	Wheat	Barley	Juar	Bajra	Maize	Gram	Others
1911—16	1,102,608	29·4	5·5	21·4	0·1	0·2	3·1	4·2	36·1
1916—21	1,121,578	31·9	5·0	20·4	0·2	0·2	3·0	3·9	35·4
1921—26	1,145,248	31·6	5·0	20·1	0·2	0·2	2·5	5·0	35·4
1926—31	1,135,549	31·1	6·0	20·4	0·2	0·2	2·9	4·2	35·0
1931—36	1,142,840	29·2	6·3	20·9	0·3	0·2	2·9	3·8	36·4
1936—41	1,218,766	31·3	6·1	18·6	0·3	0·1	2·7	5·1	35·8
1941—46	1,212,277	31·5	5·6	19·9	0·3	0·1	3·1	5·2	34·3
1946—51	1,263,060	32·9	4·8	20·8	0·2	0·1	3·0	4·7	33·5

Linseed, opium and indigo are the three non-food crops the cultivation of which has been declining. In 1901-02 the area under opium was 6,393 acres ; in 1950-51 it was only 529 acres. In 1901-02 the area under linseed was 5,613 acres ; in 1950-51 it was only 1,142 acres. In 1901-02 the area under indigo was 18,682 acres ; and in 1950-51 it was *nil*. Sugarcane is an important crop of the district. The area under it has increased from 64,864 acres in 1901-02 to 76,596 acres in 1950-51.

Live-stock, ploughs and carts

9. Live-stock in this country live for a large part of the year on the by-products of agriculture supplemented by green fodder crops. They have, therefore, to be co-related not only with the grazing available but also with the total area under cultivation which carries a major portion of the burden of supporting the cattle population.

As will appear from Table 3 of Part III the total number of cattle and buffaloes which had decreased between 1935—44 has recorded an increase during 1944—51 from 8·3 lakhs to 9·3 lakhs.

The number of working cattle and buffaloes in the district was 3·80 lakhs in 1935, 3·42 lakhs in 1944 and 4·11 lakhs in 1951. The number of ploughs is steadily increasing since 1920 except for a fall between 1935 and 1944 and it now stands at 2·57 lakhs. This is apparently due to the progressive fractionalization of holdings. The number of carts is also steadily increasing since 1920 and now stands at 6·6 thousand. The average net cultivated area per plough works out to 4·1 acres in 1951 as against 4·4 acres in 1920, and the average net cultivated area per pair of working cattle works out to 5·1 acres in 1951 as against 4·9 acres in 1935.

Breeeding cows and she-buffaloes which fell from 2·74 lakhs to 2·59 lakhs during 1935—44 have gone upto 2·90 lakhs in 1951. The cows and female buffaloes in milk per 1,000 of human population were about 31 and 22 respectively. Owing to the poor milk yield the share of milk per head is only a few ounces per day.

The number of sheep which was steadily declining during 1930—44 has increased in 1951. It now stands at 55·3 thousands. Goats have increased from 1·24 lakhs in 1944 to 1·97 lakhs in 1951.

The number of horses and ponies has been stationary at 4·8 thousand during 1944—51. The donkeys have, however, increased from 5·7 thousand to 5·8 thousand during 1944—51. Poultry have also increased from 63,000 to 112,000 during 1944—51. Distributed on 1,000 of human population the figures of the main categories of live-stock in 1951 are as follows :

Cattle	Buffaloes	Sheep	Goats	Poultry	Others
348	94	26	94	53	18

10. To sum up, the population of the district is growing at the biological natural rate since 1921, but on the other hand, the land area *per capita*, the double crop area *per capita* and the irrigated area *per capita* are steadily declining. There is, at the same time, no evidence that crop yield per acre has increased nor has there been a change in the cropping pattern. The cultivated area *per capita* in the district has now grown so small that even a slight disturbance by drought or flood is likely to cause serious scarcity conditions. In fact the district is marked out as a danger-spot from the point of view of food situation in the State.

Villages and towns

11. The district has 4,889 villages and 11 towns. Of the 21·0 lakhs of people who were counted at the census of 1951, 19·9 lakhs were found in villages and 1·1 lakhs in towns, i.e., there are as many as 949 people per 1,000 population who live in the rural areas and only 51 of them live in towns. The corresponding figures for the State as a whole are : rural 864, urban 136.

The rural population per inhabited village works out to 408. But the villages do not necessarily comprise of a single compact site. There are 12,809 hamlets in the district. The population per hamlet is only 156. The medium-sized village—with inhabitants numbering between and 500 and 2,000—is the dominant type in the district. Of the rural population 54·2 per cent. live in such villages ; 37·1 per cent. live in villages of population under 500 ; 7·7 per cent. live in villages of population between 2,000 and 5,000 and 1·0 per cent. live in villages of population of 5,000 and over.

Towns vary in number of inhabitants even more widely than villages. Of the urban population 56·8 per cent. live in towns of population of 20,000 and over (Azamgarh and Maunath Bhanjan) ; 13·3 per cent. live in a town of population between 10,000 and 20,000 (Mubarakpur) ; 12·4 per cent. live in towns of population between 5,000 and 10,000 (Mohammadabad and Kopaganj) ; and 17·5 per cent. live in towns of population under 5,000 (Sarai Mir, Nizamabad, Dohri Ghat, Phulpur, Atraulia and Amila).

It is significant to note that Mubarakpur has registered an increase of 23·8 per cent. in population since 1941 while the percentage increasee since 1941 in other towns has been : Maunath Bhanjan 18·6, Azamgarh 9·6, Mohammadabad 4·4, Sarai Mir 7·4, Dohri Ghat 16·5, Phulpur 10·0 and Atraulia 10·0. Kopaganj, Nizamabad and Amila are declining towns. Their popuation has decreased by 7·2 per cent., 1·9 per cent. and 44·2 per cent. respectively sine 1941. (*Vide* Tables A-III and A-IV)

Occupations: Livelihood pattern

12. Out of the total population of 2,102,423 (rural 1,994,291, urban 108,132) 1,751,368 (rural 1,739,129, urban 12,239) or 83·3 per cent. depend on agriculture for their means of livelihood and 351,055 (rural 255,162, urban 95,893) or 16·7 per cent. depend on non-agricultural sources. The following table shows the distribution of 100 persons of the total, rural and urban population of the district under different livelihood classes :

Description	Agricultural classes					Non-agricultural classes				
	Total	I	II	III	IV	Total	V	VI	VII	VIII
Total	**83·3**	**72·5**	**3·8**	**6·5**	**0·5**	**16·7**	**7·2**	**3·1**	**0·5**	**5·9**
Rural	87·2	76·0	3·9	6·8	0·5	12·8	5·3	2·1	0·3	5·1
Urban	11·3	8·2	1·1	1·0	1·0	88·7	41·7	21·0	3·7	22·3

It is obvious that the district is one of the predominently agricultural districts of the State. Here as many as 83·3 per cent. of the people depend on agriculturel as against 74·2 per cent. in the whole State.

Of the total population of the district 1,177,265 persons (males 466,486, females 710,779) or 56·0 per cent. have been classified as non-earning dependants. The percentage of non-earning dependants in the agricultural population works out to 55·5 per cent. and that among the non-agricultural classes to 58·3 per cent. It will be observed that in the main they consist of the women. The male non-earning dependants are mostly children. 361,870 persons (males 84,288, females 277,582) or 17·2 per cent. of the population are earning dependants. Among the agriculturists their proportion is 18·4 per cent. and among the non-agriculturists 11·2 per cent. The remaining 563,288 persons (males 491,868, females 71,420) or 26·8 per cent. are self-supporting persons. Their proportion among the agriculturists works out to 26·1 per cent. and among the non-agriculturists to 30·5 per cent. Of the self-supporting persons 456,223 (males 404,993, females 51,230) belong to agricultural classes and 107,065 (males 86,875, females 20,190) to non-agricultural classes. On the average a self-supporting person maintains two non-earning dependants.

Of the 107,065 self-supporting persons belonging to the non-agricultural calsses 3,933 persons (rural 3,744, urban 189) earn their livelihood from non-productive sources. Of the remaining 103,132 self-supporting persons (rural 72,776, urban 30,356) 3,338 (rural 2,616, urban 722) or 3·2 per cent. are employers, 25,519 (rural 18,386, urban 7,133) or 24·8 per cent. are employees and 74,275 (rural 51,774, urban 22,501) or 72·0 per cent. are indepedent workers.

The distribution of 10,000 self-supporting persons of non-agricultural occupations classified according to the economic divisions is as follows :

Name of division	Self-supporting persons by divisions
All Industries and Services	**10,000**
0—Primary industries not elsewhere specified	185
1—Mining and quarrying	34
2—Processing and manufacture—foodstuffs, textiles, leather and products thereof ..	3,191
3—Proeessing and manufacture—metals, chemicals and products thereof	175
4—Processing and manufacture—not elsewhere specified	807
5—Construction and utilities	259
6—Commerce	1,713
7—Transport, storage and communications	303
8—Health education and public administration	830
9—Services not elsewhere specified	2,503

There is no large scale industry worth mentioning in the district. Among the cottage industries the principal are cloth weaving, silk weaving, agricultural implements, iron castings, weights, balances etc., and hemp ropes and *sutli* making.

Viariation in the livelihood pattern

13. In this district the population dependant on agriculture was 81·7* per cent. in 1951. The unfortunate fact is that the agricultural proportion has been increasing ever since 1901 and only in this census the speed of the process seems to have been arrested. The corresponding proportions were 59·4 per cent. in 1901, 78·6 per cent. in 1911 and 84·8 per cent. in 1921. The actual number of persons who depend on agriculture has increased to 1,717,804 in 1951 from 1,296,997 in 1921 or by 32·4 per cent. while the cultivated area has increased by 13·0 per cent. only. This has resulted in progressive fragmentation and sub-division of holdings and pressure on impoverished soil. There is a fall in the proportion of workers and corresponding rise in dependency. The proportion of workers in total population in 1951 was only 44·0 per cent. (agricultural 35·4 per cent., non-agricultural 8·6 per cent.) against 56·1 per cent. (agricultural 46·8 per cent., non-agricultural 9·3 per cent.) in 1921. The proportion of non-earning dependants has consequently increased from 43·9 per cent. (agricultural 38·0 per cent., non-agricultural 5·9 per cent.) in 1921 to 56·0 per cent. (agricultural 46·3 per cent., non-agricultural 9·7 per cent.) in 1951. All this is an index of the increasing unemployment and under-employment. It is only by the diversion of population to the cottage and other industries and by providing subsidiary occupations to the agriculturists that the present severe disquilibrium in the economy of the district can be redressed. (*Vide* Tables B-I, B-II and B-III)

Houses and households

14. There were 339,263 occupied houses in the district—321,714 in villages and 17,549 in towns. That gives an average of 6,199 persons per 1,000 houses or 6·2 persons per house in the rural areas and 6,162 persons per 1,000 houses or 6·2 persons per house in the urban areas.

There were 370,812 households in the district—350,292 in villages and 20,520 in towns. That gives an average of 5,688 persons per 1,000 households or 5·7 persons per household in the rural areas and 5,186 persons per 1,000 households or 5·2 persons per household in the urban areas. The marginal table shows the developments in the size of the household since 1921. The rural household has been increasing ever since 1931 and is much bigger than the average State rural household (5·07). The urban household has registered a decrease since 1941.

Census year	Persons per 1,000 households of	
	Rural population	Urban population
1921	5,001	4,880
1931	4,999	5,217
1941	5,525	6,238
1951	5,688	5,186

Out of 5,688 persons in every 1,000 rural households 2,808 are males and 2,880 females. There is a female excess numbering +72 in every 1,000 rural households. Out of 5,186 persons in every 1,000 urban households 2,719 are males and 2,467 females. There is a male excess numbering 252 in every 1,000 urban households. The migration of male labour from the rural areas to the towns will account for the difference.

Information regarding types of household and household relationships was also collected at this census with the help of a sample of about 4 per cent. According to this in every 1,000 sample households there are 5,580 persons (males 2,778, females 2,802) in the district. The corresponding figure for the total count is 5,660.

The table below shows the distribution by size of 1,000 sample households :

Description	Small with 3 members or less	Medium with 4—6 members	Large with 7—9 members	Very large with 10 members or more
Total	**267**	**425**	**216**	**92**
Rural	264	427	217	92
Urban	305	381	210	104

*The figure includes earning dependants according to their secondary means of livelihood while the figure of 83·3 in paragraph 12 includes earning dependants according to their principal means of livelihood and hence the difference.

Medium households are the dominant type in the villages as well as in the towns.

Family composition of 1,000 sample households is as follows:

			Number in 1,000 households
A	Heads of households	Males (married)	605
		Males (widowers)	288
		Females	107
	Wives of heads of households		605
			1,605
B	Sons of heads of households		1,152
	Daughters of heads of households		838
			1,990
C	Male relations of heads of households (other than sons)		720
	Female relations of heads of households (other than daughters)		1,225
			1,945
D	Persons unrelated to the heads of households	Males	13
		Females	27
			40
		Grand Total	*5,580*

Sons outnumber the daughters of the heads of households. The latter leave the homes of their parents after marriage. Female relations (other than daughters) outnumber the male relations (other than sons). Such females are generally those who become members of these households by marriage. (*Vide* Tables A-I and C-I)

Sex-ratio

15. In the district as a whole the sex-ratio was 1,016, i.e., there were 1,016 females to every 1,000 males. It varied among the tehsils. The lowest value was 993 in Mohammadabad tehsil. The highest value was 1,047 in Lalganj tehsil. The ratio was 1,014 in Azamgarh, 1,013 in Sagri, 1,013 in Ghosi and 1,023 in Phulpur.

The sex-ratio is smaller in towns than in villages. For the district as a whole the sex-ratio in the villages is 1,024 while that in towns is only 887.

The corresponding figure of sex-ratio for the district was 969 in 1921, 970 in 1931, 989 in 1941 and 1,016 in 1951.

Age-structure

16. The number in each age group in the district is shown below as a percentage of the total number of all ages in the total, rural and urban population separately:

Age-group		Total population			Rural population		Urban population	
		Persons	Males	Females	Males	Females	Males	Females
Infants and young children	0—4	13·1	6·8	6·3	6·7	6·3	7·1	6·3
Boys and girls	5—14	28·2	15·0	13·2	15·1	13·3	14·5	10·9
Young men and women	15—34	28·4	13·9	14·5	13·7	14·6	17·9	11·9
Middle-aged men and women	35—54	20·8	9·8	11·0	9·8	11·0	10·0	11·5
Elderly persons	55 and over	9·5	4·2	5·3	4·2	5·3	3·5	6·4

It will be seen that the population is progressive. 41·3 per cent. of the population is of age under 15 and only 9·5 per cent. of it consists of elderly persons. Again, it may be noted that proportionately larger numbers in the working ages (15—54) are found in the urban areas. This is the effect of migration of male workers to the towns from the villages many of whom are unaccompanied by their families. (*Vide* Table C-II)

Marital status

17. Out of every 10,000 persons in the district there are 4,970 males and 5,030 females.* Among them 2,307 males and 1,602 females are unmarried. If we reckon males and females together, the unmarried people are 39·1 per cent. of the population.

Of the males 46·4 per cent. were unmarried, 46·7 per cent. were married and 6·9 per cent. were widowed or divorced. Among females 31·8 per cent. were unmarried, 54·9 per cent. were married and 13·3 per cent. were widowed or divorced.

Of the married males 18·9 per cent. were of ages below 15, 42·0 per cent. were of ages 15—34, 30·0 per cent. were of ages 35—54 and 9·1 per cent. were of ages 55 and over. Among the married females 18·5 per cent. were of ages below 15, 45·4 per cent. were of ages 15—34, 29·4 per cent. were of ages 35—54 and 6·7 per cent. were elderly women.

*The corresponding figures for the total count are 4,959 and 5,041.

Marriage is universal. Among males and females aged 35 years and over only 14·3 per cent. of the males and 3·2 per cent. of the females were found unmarried. Most of the females are married before they attain the age of 25. Child marriage is still prevalent. 20·1 per cent. of the males of ages 0—14 and 26·2 per cent. of the females of ages 0—14 were returned as married. (*Vide* Table C-III)

Languages

18. About 99·99 per cent. of the people of the district returned Hindi, Hindustani or Urdu as their mother-tongue. Among the other mother-tongues spoken the main is Punjabi (0·01 per cent.). Of the 21·0 lakhs of the people in the district only 395 or 0·02 per cent. were bilingual (in an Indian language). (*Vide* Table D-I)

Religion and special groups

19. Of the 10,000 population of the district the number of people belonging to different religions is: Hindus 8,796, Muslims 1,202, Sikhs 1, and Christian 1; of the 10,000 population in the villages the numbers are: Hindus 8,996 and Muslims 1,004; and of the 10,000 population in the towns the numbers are: Hindus 5,094, Muslims 4,868, Sikhs 27, Jain 1 and Christians 10. Muslims, Sikhs, Jains and Christians are generally concentrated in the urban areas of the district as is the case in the other parts of the State.

There are 490 thousand persons belonging to the Scheduled Castes in the district. Their number per 10,000 of population works out to 2,332. In villages they are 2,424 for every 10,000 and in towns their number per 10,000 is only 646. In the district there are 21 Anglo-Indians. (*Vide* Tables D-II and D-III)

Displaced persons

20. The number of displaced persons in the district at the census was 530 (males 268, females 262). Most of them were concentrated in the urban areas of the district. Of their total population in the district 91·5 per cent. came from West Pakistan and 8·5 per cent. from East Pakistan. (*Vide* Table D-V).

Literacy

21. The percentage of male literacy in 1951 was 15·8 while that of female literacy was 2·1. As compared to this the percentage of male literacy in 1931 was 8·1 and that of female literacy 0·6.* On January 1, 1951 there were 708 primary schools in the district with an enrolment of 80,145. (*Vide* Table D-VII)

C—Explanatory Note on the Statistics

The statistics in this volume have been presented in three parts:

I—District Census Tables

II—Village, Town, Pargana and Thana Statistics

III—Miscellaneous Statistics

Parts I and II contain census data. A brief account of the system of sorting of census slips and preparation of tables and abstract therefrom is given below.

Part III contains statistics throwing light on special aspects of population and its growth. These have been derived from miscellaneous sources. Table 1, "Vital Statistics", has been prepared from the published and unpublished records of the Director of Medical and Health Services, Table 2, "Agricultural Statistics", from the Annual Season and Crop Reports, Table 3, "Live-Stock, Agricultural Machinery and Implements", from the published figures of Live-Stock Census and Table 4, "List of Primary Schools", from information specially supplied by District Inspector of Schools.

Processing of census data

2. The census data presented here has been derived from the census slips by a process of sorting, compilation and tabulation. In previous censuses the slips were first sorted by religion and this division was maintained throughout so that all data was cross-tabulated by religion. This procedure has been abandoned at this census and substituted by a division based on economic characteristics of the population. The whole population has been divided into eight livelihood classes, four of which are of the agricultural category and four of non-agricultural category as follows:

Agricultural Classes—

I—Cultivators of land wholly or mainly owned; and their dependants

II—Cultivators of land wholly or mainly unowned; and their dependants

III—Cultivating labourers; and their dependants

IV—Non-cultivating owners of land; agricultural rent receivers, and their dependants

*The numbers per mille (of the 10 per cent. sample population) of each sex aged 5 years and over who were returned as literate are as below:

Males		Females	
1951	1931	1951	1931
201	96	25	8

Non-agricultural Classes—

V—Production (other than cultivation)

VI—Commerce

VII—Transport

VIII—Other services and miscellaneous sources

Another special feature of the sorting of this census was the separation, from the very start, of slips of displaced persons and of a 10 per cent. random sample from the remainder. This has enabled the data of displaced persons to be presented separately, while the 10 per cent. sample has been utilized for the preparation of Age Tables.

The slips of this census have been copied by Households into a National Register of Citizens, which has been prepared village-wise for rural areas and mohalla/ward-wise for urban areas. Table C-I is based on a 4 per cent. sample extracted from this Register.

Tracts

3. The slips were first sorted by villages for the preparation of the Primary Census Abstract. For the purpose of further sorting the State was divided into tracts consisting of (*a*) *rural tracts*, comprising the rural population of each tehsil, (*b*) *urban city tracts*, comprising the population of areas which had been declared as cities, (*c*) *urban non-city tracts*, comprising the population of urban areas of a district excluding areas declared as cities. Each tract was treated as a unit for sorting of slips. All data were compiled first by tracts and then by districts. This volume presents the tract-wise data for one district (with the exception of A and E Tables, which have been presented tehsil-wise), while the district-wise data for the whole State is contained in the following State volumes :

Part I-B—Subsidiary Tables

Part II-A—General Population Tables

Part II-B—Economic Tables

Part II-C—Age and Social Tables

Explanatory note

4. Detailed explanatory notes are appended to each State table in the printed volumes of State tables. They apply to the tables in this volume also and should be referred to when necessary. A few notes of some of the tables are reproduced below :

Table A-I—Column 5 relating to "hamlets" has been introduced for the first time. Any distinctive cluster or agglomeration of houses has been treated as a "hamlet".

A clear distinction has been made in this census between a "House" and a "Household". A house is any human dwelling having a separate main entrance while a household is any commensal unit living in a census house. In previous censuses the figures under "Occupied Houses" used to be that of households, while the figures under columns 7—9 of the present table refer to occupied census houses as distinct from households.

The Economic Tables—The Indian Census Economic Classification Scheme, 1951, together with the occupational division and sub-division adopted for this census are given in Part II-B of the Report.

Table B-I—Each of the eight livelihood classes mentioned above has been divided into three sub-classes, with reference to the economic status, as follows :

(i) Self-supporting persons ;

(ii) Non-earning dependants ; and

(iii) Earning dependants

These were defined in the Instructions to Enumerators as follows :

> "A 'self-supporting person' is one who is in receipt of an income and that income is sufficient at least for his own maintenance. To be 'self-supporting' a person need not be able to support his family. All that is necessary is that he should be earning sufficient for his personal needs. For purposes of this question the person enumerated is the unit and not the family or household. Any one who is not a 'self-supporting' person in this sense is a 'dependant'. A 'dependant' may be either an 'earning dependant' or a 'non-earning dependant'. The test is whether he secures a regular (and not casual) income, even though it may be small. Such income may be in cash or kind ; it may be continuous or seasonal employment. When the income which he secures is not sufficient to support him that person is an 'earning dependant'. A person who does not earn any income either in cash or kind is a 'non-earning dependant'. Where two or more members of a family household jointly cultivate land and secure an income therefrom, each of them should be regarded as earning part of the income. None of them is, therefore, a 'non-earning dependant'. Each of them should be classed either a 'self-supporting person' or an 'earning dependant' according to the share of income attributable to each. The same applies to any other business carried on jointly. The share of the income is what the head of household deems it to be. This does not mean that every one who works is necessarily a self-supporting person or an earning dependant. Thus, for instance, a housewife who cooks for the family, brings up the children or manages the household is doing very valuable work. Nevertheless, her economic status is that of a non-earning dependant, if she does not also earn an income, and should be recorded as such."

Economically active, Semi-active and Passive persons—All non-earning dependants are economically passive. They include persons performing house-work or other domestic or personal services for other members of the same family household. But they do not include "unpaid family workers" or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise.

All earning dependants are economically semi-active only. Though they contribute to the carrying on of economic activities, the magnitude of their individual contribution is deemed to be too small to justify their description as economically active. (Their contribution to economic activity is, however, taken into account in the tabulation of data based on secondary means of levihood.)

All self-supporting persons are, ordinarily economically active with the exception of the following classes and groups :

(*a*) All self-supporting persons of Agricultural Class IV.

(*b*) The following groups of self-supporting persons who are included in Non-agricultural Class VIII and derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity) :

(i) Persons living principally on income from non-agricultural property ;

(ii) Persons living principally on pensions, remittances, scholarships and funds ;

(iii) Inmates of alms-houses and recipients of doles;

(iv) Beggars and vagrants ; and

(v) All other persons living principally on income derived from non-productive activities.

Table B-II—For a self-supporting person who has more than one means of livelihood the *secondary means* of livelihood is the livelihood next in importance to his principal means of livelihood. For an earning dependant it is the source from which he secures his own income, where there are more than one subsidiary occupations only the one providing the largest income has been taken into account.

Table B-III—"Employers", "Employees" and "Independent Workers" have been defined as follows in the Instructions to Enumerators :

An "employer" is only that person who has necessarily to employ other person in order to carry on the business from which he secures his livelihood. Thus if a person employs a cook or any other person for domestic services, he should not be recorded as an "employer" merely for that reason.

An "employee" is a person who ordinarily works under some other person for a salary or a wage in cash or kind as the means of earning his livelihood. There may be persons who are employed as managers, superintendents, agents etc., and in that capacity control other workers. Such persons are also employees only and should not be regarded as 'employers'.

An "independent worker" means a person who is not employed by any one else and who also does not employ anybody else in order to earn his livelihood. (Sweepers, *dhobies*, *kahars* etc., who work for several masters are independent workers. If, however, any of them accepts whole-time employment under one master he becomes "employee". Daily wage-earners who work for different masters are likewise independent workers. But if they accept employment under one master, e.g., under a factory, they become "employees".)

Tables C-II, C-III, C-IV and C-V—The figures presented in these tables are based on single year age-return and have not been smoothed.

Tables D-V (i) *and* (ii)—For the purpose of these tables a "displaced person" has been defined as follows :

"A displaced person means any person who has entered India having left or being compelled to leave his home in Western Pakistan on or after the 1st March, 1947, or his home in Eastern Pakistan on or after the 15th October, 1946, on account of civil disturbances or on account of the setting up of the two Dominions of India and Pakistan."
