DISTRICT CENSUS HANDBOOK
1951

GORAKHPUR DISTRICT

FOREWORD

Several States, including Uttar Pradesh, have been publishing village statistics by districts at each census. In 1941 they were published in U. P. under the title "District Census Statistics" with a separate volume for each district. In the 1951 census, when the tabulation has been more elaborate than ever in view of the requirements of the country, the district-wise volume has been expanded into a "District Census Handbook", which now contains the District Census Tables (furnishing data with break-up for census tracts within the district), the District Index of Non-agricultural Occupations, agricultural statistics from 1901-02 to 1950-51 and other miscellaneous statistics in addition to the usual village population statistics. The village population statistics also are given in an elaborate form giving the division of the population among eight livelihood classes and other details.

2. It may be added here that a separate set of district-wise volumes giving only population figures of rural areas by villages and of urban areas by wards and mohallas and entitled "District Population Statistics" has already been published. This separate series was necessitated by the urgent requirements of the U. P. Government for elections to local bodies. The printing of the District Census Handbooks involves colossal work and is bound to take some time.

RAJESHWARI PRASAD, I.A.S.,
Superintendent, Census Operations,
Uttar Pradesh.

INTRODUCTION

A—The District

1. The present district of Gorakhpur has been carved out of the old district of the same name which was split up in 1946 into the districts of Deoria and Gorakhpur. The district, as now constituted, has a total area of 2,437 square miles, which is still more than the average district area of the State. Its population in 1951 was 22·39 lakhs, the third biggest among the districts of the State. It has now 4 tehsils. 10 parganas and 19 thanas.

Topography

2. In the north, tehsils Maharajganj and Pharenda stretch right across the district along Nepal frontier from the Naraini or Great Gandak in the east to the Basti border in the west. In several respects, these tehsils differ markedly from the rest of the district. The outermost foot hills of the Himalayas are but a few miles from the northern border. Below the outer hills is a dry, boulder-strewn tract, corresponding to the *Bhabar* of Kumaon. Then comes the *tarai* area which comprises a belt of some ten miles in width. It is extensively cultivated, but the climate is malarious and in most places the tillage is poor and precarious. South of this belt the conditions approximate more closely to those prevailing in the rest of the district, though the distinguishing feature is the large extent of forest. With the exception of a relatively small area in the Gorakhpur tehsil, practically the whole of the forest area is situated in these tehsils. The bulk of the area of Maharajganj and Pharenda is included in the ordinary upland *bangar*, but there is also some *kachhar* along the Rapti and a belt of *bhat* country. These differences of topography account for the relatively low density of the two tehsils. To the south of these tehsils lies Gorakhpur tehsil, a considerable portion of which was formerly a jungle tract. Further south lies the Bansgaon tehsil. The bulk of the Gorakhpur tehsil is included in the *bangar* or uplands, though a very considerable strip on either side of the Rapti falls within the *kachhar* tract, the whole of this being liable to inundation in years of heavy rainfall. The whole of the Bansgaon tehsil is a fertile plain, sloping gently in a south-easterly direction, with a few undulations. A large part of the area must be reckoned precarious owing to the damage done by inundations in years of heavy rainfall. Moderate floods in the *kachhar* of the Rapti are matters of almost annual occurrence. The bulk of the tehsil, however, lies in the *bangar* or upland tract. On the whole, the district is a part of the Great Northern Plain. In contradistinction to the *bangar* or uplands are the low and often broad valleys of the rivers i.e., the *kachhar*. The valleys of the larger rivers are not only depressed well below the general level of the country but are of considerable breadth. There is thus a wide area of lowland which is apt to be inundated in years of heavy rainfall—a factor of high importance in the economic conditions of the district.

Soils

3 A noteworthy feature throughout the whole of Gorakhpur is the almost entire absence of sterile *usar* plain, so common in Avadh (Lucknow and Faizabad divisions) and in the Banaras division to the south. The *bhat* tract consists of the alluvium brought down by the Great Gandak, the distinguishing feature being its remarkable whiteness, which is due to the unusual proportion of lime in the soil. The soil is retentive of moisture, so that artificial irrigation is practically unknown. Its friable nature renders the construction of unprotected wells extremely difficult and the walls built of this also do not stand the effects of the climate. The soils of the *bangar* are *balua*, *matiar* and *doras*. The *kachhar* along the course of the Rapti and its affluents, the Rohin and Ami, is made-up of either rich silt or sand which weathers rapidly into culturable and productive soil; that along the Gandak and Ghagra contains an undue proportion of sand and is consequently endowed with inferior fertility.

Drainage

4. River Ghagra forms the southern boundary of the district and the drainage of the entire district ultimately discharges itself into it, excepting that carried off by the Great Gandak. River Rapti which joins Ghagra at the end of the district passes through the district from the north-west to south-east and cuts off the whole of Bansgaon tehsil and part of Gorakhpur tehsil from the rest of the district. River Rapti is a powerful stream and has a very wide bed in the district. It frequently changes its course and its deserted channels are often marked by *tals* or *naukhans*. River Rohin joins the Rapti near Gorakhpur. Around the junction the valley is exceptionally wide and during the rains appears as an immense lake. This is mainly due to the rising of Ghagra which holds back the water in Rapti which in turn holds back the Rohin and another smaller river Ami. There are many other small tributaries of the Rapti as well as of the Ghagra and Gandak. The district is also remarkable for the number of its large perennial lakes and *jhils*, formed in most cases in the abandoned channels of rivers or else merely consisting in deep natural depressions without an outlet.

Climate and rainfall

5. The rainfall is normally ample. The average for the last quinquennium was about 50 inches. During the last 50 years the rainfall has been less than 30 inches in only one year and has been usually over 40 inches. The rainfall in combination with the effect of numerous rivers and remarkably high water level renders the soil damp and the climate moist. Luxuriant vegetation and general greenness of the landscape are a special feature of the district. But in the abnormally wet years floods in the lowlands become the main problem of the district.

The climate of the district is far more equable than that of the western districts of the State. Extremes of heat and cold are rarely experienced. In former days, Gorakhpur had an evil reputation for malaria but with the reclamation of large areas of the forests and the extension of cultivation, the position has entirely changed. But the northern portion of the district, specially the *tarai tract*, is still unhealthy.

Classification of area

6. The figures of the classification of area during the last fifty years are given in Table 2 of Part III of this Volume. The proportion of area under the various categories works out as follows for 1950-51 :

	Actual figures (in acres)	Percentage
Cultivated area	1,143,407	68·7
Culturable waste (excluding current fallow)	125,445	7·5
Current fallow	47,901	2·9
Forest	221,117	13·3
Area not available for cultivation of which—	127,047	7·6
(a) *Covered with water*	66,445	4·0
(b) *Under sites, roads and buildings*	49,997	3·0
(c) *Barren*	10,605	0·6

The total land area cultivated and cultivable (including current fallow) in the district is about 1,317 thousand acres. The land area cultivated and cultivable *per capita* works out to only 58·8 cents of which 50·3 cents have already been brought under cultivation. The soils are, undoubtedly, amongst the best in India, but the pressure over land is also excessive. In fact saturation point has been reached in respect of utilization of land for cultivation.

Irrigation

7. Irrigation is derived from wells, rivers, tanks, lakes and other natural reservoirs. There is very little irrigation by canals. In 1950-51, the irrigated area from wells covered 47·0 per cent., by other sources 52·3 per cent. and by canals only 0·7 per cent. In large tracts comprising the *bhat* and *kachhar* irrigation is either unnecessary or not feasible.

Crops

8. More acreage is sown under *kharif* crops than in *rabi* crops. The area under *kharif* in 1950-51 was 825,446 acres ; that under *rabi* 633,051 acres and that under *zaid* crops 8,773 acres. The principal *kharif* crop is paddy, while the principal *rabi* crop is barley followed by wheat, oilseeds and grains. Area under sugarcane has increased since 1930 as a result of the establishment of vacuum-pan sugar factories.

B—Analysis of the Statistics

Population : General distribution and density

1. The table below shows the two basic figures—land area and population— and the derived figures of land area *per capita* :

Tehsil	Population (in lakhs)	Density (number per square mile)	Land area (in lakhs of acres)	Land area *per capita*
Bansgaon	5·52	1,040	3·40	0·62
Gorakhpur	8·24	1,258	4·19	0·51
Maharajganj	4·82	706	4·37	0·91
Pharenda	3·81	670	3·64	0·96
Gorakhpur district	*22·39*	*919*	*15·60*	*0·74*

This district though fourteenth in order of area stands third in the State in respect of population. It is one of the eight districts with a density of over 900 while the average density of the State is 557 only. The density of the district has not been to a very great extent inflated by the presence of large towns. Even the rural density of the district is as high as 858 persons per square mile, the density of the rural parts of the tehsils being : Bansgaon 1,017, Gorakhpur 1,072, Maharajganj 697 and Pharenda 659. It is, however, clear from the above table that people in the district are not distributed among the different tehsils in any kind of orderly proportion to the land area. It is also to be noted that the district as a whole has got one of the lowest figures of land area *per capita*. (*vide* Tables A-I and E)

Growth of population

2. The growth of population in the district during the last fifty years has been phenomenal. The population of the district in 1951 was 54·3 per cent. higher than what it was fifty years ago. Compared to this the increase in the population of the State during the corresponding period has been only 30 per cent. The table below exhibits the variation in the total, rural and urban population for the last five decades :

Census Year	Population			Variation		
	Total	Rural	Urban	Total	Rural	Urban
1901	1,450,884	1,328,737	122,147			
1911	1,580,966	1,486,232	94,734	130,082 (+9·0)	157,495 (+11·9)	−27,413 (−22·4)
1921	1,612,851	1,522,177	90,674	31,885 (+2·0)	35,945 (+2·4)	−4,060 (−4·3)
1931	1,801,373	1,693,885	107,488	188,522 (+11·7)	171,708 (+11·3)	16,814 (+18·5)
1941	1,993,661	1,860,078	133,583	192,288 (+10·7)	166,193 (+9·8)	26,095 (+24·3)
1951	2,238,588	2,071,960	166,628	244,927 (+12·3)	211,882 (+11·4)	33,045 (+24·7)

A noteworthy feature is that between 1901 and 1921 the population of the district recorded an increase of 11·2 per cent. when that of the State decreased by 4·0 per cent. In spite of the heavy mortality from the influenza epidemic in 1918-19, an increase (though small) was recorded for the decade 1911—21. The urban population suffered a loss due to "abnormal deaths" from plague. Abnormal deaths did not occur or were prevented from occurring in the post-1921 period and the population of the district recorded an increase of 38·8 per cent. since 1921 against an increase of 35·5 per cent. in the population of the State during the same period.

The variation in the population of the tehsils, during 1941—51 is shown in the marginal table. In Gorakhpur tehsil the larger increase is due chiefly to the growth of Gorakhpur city. Gorakhpur and Bansgaon tehsils are comparatively healthier than the other two tehsils.

Tehsil	Percentage variation 1941—51
Gorakhpur district	−12·3
Bansgaon .. .	+10·5
Gorakhpur ..	+17·0
Maharajganj	+9·3
Phariinda	+9·1

The Vital Statistics

3. Births and deaths mainly account for the trends in population growth. Migration also is a factor though of lesser importance. The following table gives the mean decennial registered birth and death-rates and the calculated natural increase rates and population growth rates of the last three decades for the district as a whole and for its rural and urban areas :

	Total	Rural	Urban
Mean decennial birth-rate—			
1941—50	20·3	20·1	24·1
1931—40	30·5	30·7	25·9
1921—30	30·0	30·6	17·9
Mean decennial death-rate—			
1941—50	14·2	14·0	17·1
1931—40	18·8	18·7	19·9
1921—30	18·4	18·6	13·4
Mean decennial natural increase—			
1941—50	6·1	6·1	7·0
1931—40	11·7	12·0	6·0
1921—30	11·6	12·0	4·5
Mean decennial growth-rate—			
1941—50	9·1	8·5	20·0
1931—40	10·5	10·1	19·5
1921—30	8·8	8·9	6·1

There are large omissions in the registration of births as well as deaths and so the above rates do no represent the true picture at all. They may, however, be taken to be roughly indicative of trends. Both birth and death-rates have fallen during the last decade.

The figures of natural increase and growth-rate suggest considerable loss of population by migration during 1921—30 and 1931—40 and a gain during 1941—50. Owing to the very high density of population the district has been always sending out emigrants. The reverse trend during 1941—50 appears to be the result of inaccurate data.

The average yearly mortality from various causes in Gorakhpur-*cum*-Deoria during 1941—50 was as follows :

Causes	Number of deaths	Percentage of total deaths
Fever	45,085	76·6
Dysentery and Diarrhoea	435	0·7
Respiratory diseases	407	0·7
Plague, Cholera and Small-pox	8,915	15·1
Others	4,052	6·9

As in the rest of the State "fever" is responsible for a majority of the deaths. But fever covers a number of ailments which the reporters are unable to indenify. Deaths from plague, cholera and small-pox are among the highest in the State. This area has been always most susceptible to epidemics. (*Vide* Table I, Part III of this Volume)

Migration

4. Migration does not appear to have contributed to the growth of population of the the district at *any time* ; it has probably always reduced it. About 95 per cent. of the people enumerated in the district at the census of 1951 were born there, 3·9 per cent. were born in the other districts of the State, 0·6 per cent. were born in other parts of India and only 0·5 per cent. came from other countries. Of the immigrants from the districts of the State as *many as* 79,232 (males 22,081, females 57,151) are from the other districts of the *same natural division and only* 6,971 (males 3,195, females 3,776) are from other parts of the State. Most of the migration from the neighbouring districts is marriage migration. Of 10,350 immigrants from the adjacent States 7,207 (males 4,275, females 2,932) are from Bihar and 1,608 (males 991, females 617) are from Punjab. The movement to the city of Gorakhpur from Bihar (males 3,359, females 1,617) appears to be of the semi-permanent type and nearly in half the number of cases men are unaccompanied by their families. The remainder of the migration from Bihar is mostly marriage migration.

Of the immigrants who have come from territories beyond India, 3,911 (males 1,668, females 1,343) were born in Pakistan and 8,463 (*males* 3,280, *females* 5,183) had their birthplace in other territories. The Pakistan-born are the displaced persons who numbered 3,461. Of them 82·1 per cent. have come from West Pakistan, 6·8 from East Pakistan and 11·1 per cent. from districts which could not be traced. Of the immigrants born in other territories 7,973 (males 3,053, females 4,920) are Nepal-born. The sex proportion suggests that people of the border villages take Nepali brides.

Of the 2,028 non-Indian nationals 1,968 belong to Nepal and the rest are British.

Emigration from Gorakhpur is more important than imigration to it, but unfortunately the figures of emigration are not available. It is an established fact that a large number of businessmen and labourers earn *their livelihood in Nepal. People from Gorakhpur go to Nepal as priests, palmists and gurus* also. From the figures in the previous census Reports, we also know that losses by emigration to distant States and to territories beyond India are mainly borne by the districts of the East Plain division and certain districts of the Central Plain division. Gorakhpur *is one of these emigrating districts.* (*Vide* Tables D-IV and D-VI)

Decline of cultivation *per capita*

5. We may now analyse the growth of population in the district during the last *thirty years in relation to the* growth of cultivation during the same period. The combined figures for Gorakhpur-*cum*-Deoria districts are exhibited in the marginal table. (Figures of area shown under census years are quinquennial averages for the five years ending with the crop year immediately preceding the census year.) It is obvious that cultivation has failed to keep pace with population. The cultivated area *per capita* has gone down to 50·1 cents in 1951 from 73·7 cents in 1921. The magnitude of this drop is about one-third of the 1921 level. *It means that (other things being equal)* every man, woman and child must expect to get less food and other agricultural produce from the land in 1951 than in 1921.

Census Year	Population	Net area sown (in acres)	Area of cultivation *per capita* (in cents)
1921 ..	3,266,830	2,115,003	73·7
1931 ..	3,567,561	2,158,474	60·5
1941 ..	3,963,574	2,172,662	54·8
1951 ..	4,341,215	2,170,334	50·1

6. It may be examined whether this shortage has been compensated by an increase in the yield per acre. Increase in yield can be brought about by more double cropping, more irrigation, better fertilization and better culture. The average (quinquennial) area sown more than once was 625,472 acres in 1921 for the district Gorakhpur-*cum*-Deoria. It slightly increased to 652,880 acres in 1931. There was a substanital increase to 724,440 acres in 1941. But in 1951 there was a drop to 549,152 acres due to drought conditions. The figures of double crop cultivation *per capita* in cents are as below : **Double crop area *per capita***

Particulars	Quinquennial averages for the year preceding			
	1951	1941	1931	1921
Double crop cultivation *per capita* in cents	12·7	18·3	18·3	19·1
Unirrigated double crop cultivation *per capita* in cents	12·5	18·2	18·2	18·0
Irrigated double crop cultivation *per capita* in cents	0·2	0·1	0·1	1·1

It is evident that the double cropped area has not kept pace with the rate of growth of population.

7. The average area irrigated in Gorakhpur-*cum*-Deoria districts was 719,468 acres in 1921. The figures were 654,042 acres for 1931, 835,620 acres for 1941 and 784,466 acres for 1951. The average area irrigated more than once was 36,084 acres in 1921, 3,401 acres for 1931, 2,235 acres for 1941 and 8,025 acres for 1951. **Irrigated area *per capita***

The figures of irrigation *per capita* are shown in the table below :

Particulars	Years			
	1951	1941	1931	1921
Irrigated single crop cultivation *per capita* in cents	17·9	21·0	18·2	20·9
Irrigated double crop cultivation *per capita* in cents	0·2	0·1	0·1	1·1

The trend is distinctly towards a decline.

8. It is also significant that in spite of the rapid growth of population there has been almost no change in the cropping pattern of the district. During the quinquennium 1916—21, 90·8 per cent. of the cropped area was under food crops and only 9·2 per cent. of it was under non-food crops. Thirty years after, during 1946—51, the cropped area under food crops was 90·9 per cent. and that under non-food crops was 9·1 per cent. **Cropped area**

The proportionate area under different crops in Gorakhpur-*cum*-Deoria districts between 1921 and 1951 was as below :

Quinquennial average	Total cultivated area	Percentage of cultivated area under					
		Rice	Wheat	Barley	Maize	Gram	Others
1911—16	2,808,497	34·6	11·6	12·2	3·8	5·8	32·6
1916—21	2,715,803	34·5	11·5	12·2	3·5	5·1	33·2
1921—26	2,834,628	34·6	12·1	11·6	3·0	6·5	32·2
1926—31	2,805,891	33·0	14·4	10·9	3·2	4·7	33·8
1931—36	2,810,426	31·3	15·0	11·4	3·2	4·1	35·0
1936—41	2,378,486	33·1	12·5	10·8	2·3	3·4	37·9
1941—46	2,794,458	30·2	12·9	12·8	2·8	4·2	37·1
1946—51	2,860,165	31·7	12·0	13·7	2·7	3·1	36·8

Cotton and Indigo are two non-food crops which have gone out of cultivation. In 1901-02 the area under cotton crop was 761 acres ; in 1950-51 it was only 17 acres. In 1901-02 the area under Indigo was 14,753 acres, while in 1950-51 it was nil. Sugarcane is the most important non-food crop of the district and its area has risen considerably since 1930, with the establishment of sugar factories.

9. Live-stock in this country live for a large part of the year on bye-products of agriculture supplemented by green-fodder crops. They have, therefore, to be co-related not only with the grazing available but also with the total area under cultivation which carries a major portion of the burden of supporting the cattle population. **Live-stock, ploughs and carts**

As will appear from Table 3 of Part III the total number of cattle and buffaloes, which had been decreasing from 1930 up to 1944 has during 1944—51 increased from about 13 lakhs to about 15 lakhs in the districts of Gorakhpur-*cum*-Deoria.

The number of working cattle and buffaloes in the two districts had been steady at about 7 lakhs from 1920 till 1944. But it has increased to about 8 lakhs between 1944–51. This number of working cattle appears to be governed by the number of ploughs and carts. The number of ploughs has gone up from 3·18 lakhs in 1944 to a little over 4 lakhs in 1951 due apparently to progressive fractionalization of holdings. The number of carts started rising since 1930 as a result of the establishment of sugar factories and stands now at over 88,000. The average net cultivated area per plough works out to 5·31 acres in 1951 as against 6·36 acres in 1920, and the average net cultivated area per pair of working cattle works out to 5·45 acres in 1951 as comapared with 5·87 in 1920.

Breeding cows and she-buffaloes which fell from 4·77 lakhs to 4·40 lakhs during 1935–44 have gone up to 5·22 lakhs in 1951. The cows and female buffaloes in milk per 1,000 of human population were 30 and 16 respectively. Owing to the poor milk yield the share of milk per head is only a few ounces per day.

The number of sheep which had been almost stationary at about 60,000 for 1920–44 has suddenly gone down to about 53,000 due apparently to shortage of pasture. Goats have been going down in number since 1930 when they were over 6 lakhs. Their number in 1951 was under 2 lakhs, the reduction during 1944–51 alone being about 30 per cent.

Horses and ponies also are declining in number. There was a steep fall during 1944—51 from about 9,000 to under 5,000. Donkeys during the same period were reduced from over 13,000 to about half the number.

Poultry continues to be steady at about 40,000.

Distributed on 1,000 of human population the figures of the main categories of live-stock in 1951 are as follows :

Cattle	Buffaloes	Sheep	Goats	Poultry	Others
367	61	10	84	19	23

10. To sum up, the population of the district is growing up at the biological natural rate since 1921. But on the other hand, the land area *per capita*, the double crop area *per capita* and the irrigated area *per capita* are steadily declining. There is, at the same time, no evidence that crop yield per acre has increased nor has there been a change in the cropping pattern. The cultivated area *per capita* in the district has now grown so small that even a slight disturbance by drought or flood is likely to cause serious scarcity conditions. In fact, the district is marked out as a danger spot from the point of view of the food situation of the State.

Villages and towns

11. The district has 4,107 villages and 8 towns. Out of about 22·4 lakhs of people who were counted at the census of 1951, 20·7 lakhs were found in the villages and 1·7 lakhs in the towns, i.e. there are as many as 926 people per 1,000 of the population who live in the rural areas and only 74 of them live in the towns. The corresponding figures for the State as a whole are : rural 864, urban 136.

The rural population per inhabited village works out to 504. But the villages do not necessarily comprise of a single compact size. There are 9,932 hamlets in the district. The population per hamlet is only 209. The medium-sized village—with inhabitants numbering between 500—2,000—is the dominant type in the district. Of the rural population 57·7 per cent. live in such villages ; 28·1 per cent. in small villages of population under 500, 13·9 per cent. in large villages of a population between 2,000—5,000 ; and only 0·3 per cent. in villages of population over 5,000.

Towns vary in number of inhabitants even more widely than villages. Gorakhpur city, including the railway colony (which has been treated as a separate town) has a population of 132,436, i.e. 79·5 per cent. of the urban population of the district. Only 7·7 per cent. of the urban population lives in towns of population under 5,000 (viz., Pipraich, Gola and Bansgaon) and the remaining 12·8 per cent. of the population lives in towns of population between 5,000 and 20,000 (viz., Nautanwa, Siswa Bazar and Barhalganj).

It is significant to note that Gorakhpur city has recorded 33·8 per cent. increase in population since 1941. The increase in its population since 1921 is of 128·4 per cent. Bansgaon and Gola appear to be declining towns. Since 1941 the population of the former has decreased by 54·2 per cent. and that of the latter by 9·5 per cent. (*Vide* Tables A-III and A-IV).

Occupations : livelihood pattern

12. Out of the total population of 2,238,588 (2,071,960 rural, 166,628 urban) 1,918,066 (1,898,598 rural, 19,468 urban) or 85·7 per cent. depend on agriculture for their means of livelihood and 320,522 (173,362 rural, 147,160 urban) or 14·3 per cent. depend on the

non-agricultural sources. The following table gives the *distribution* of 100 persons of the total rural and urban population of the district and also of Gorakhpur city under the different livelihood classes :

Description	Agricultural classes					Non-agricultural classes				
	Total	I	II	III	IV	Total	V	VI	VII	VIII
Total	85·7	76·7	1·3	7·5	0·2	14·3	4·2	2·8	1·3	6·0
Rural	91·6	32·1	1·4	5·0	0·1	8·4	2·6	1·5	0·4	3·9
Urban	11·7	8·4	0·6	1·5	1·2	88·3	24·1	20·0	12·4	31·8
Gorakhpur City	6·4	4·6	0·4	0·1	1·3	93·6	25·2	18·2	14·8	35·4

It is obvious that this district is one of the predominantly agricultural districts of the State. Here as many as 85·7 per cent. of the people depend on agriculture as against 74·2 per cent. in the whole State.

Of the total population of the district 1,129,330 persons (466,555 males, 662,775 females) or 50·4 per cent. have been classified as non-earning dependants. The percentage of non-earning dependants in the agricultural population works out to 49·3 and that among the non-agricultural classes as 57·4. It will be observed that in the main they consist of *women*. The male non-earning dependants are *mostly children*. 474,767 persons (113,195 males, 361,572 females) or 21·2 per cent. of the population are earning dependants. Among the agriculturists their proportion is 23·4 per cent. and among non-agriculturists they form only 8·0 per cent. Agriculture is a family occupation and it provides work to the women and grown up children in the family. The remaining 634,491 persons (348,250 males, 86,241 females) or 28·4 per cent. of the *population* consists of self-supporting persons. Their proportion among agriculturists is 27·3 per cent. and among non-agriculturists 34·6 per cent. Of the self-supporting persons 523,550 (455,050 males, 68,500 females) belong to the agricultural classes and 110,941 (93,200 males, 17,741 females) to the non-agricultural classes. On an average a self-supporting person maintains two *non-earning* dependants.

Of the 110,941 self-supporting persons belonging to the non-agricultural classes 3,123 persons (2,064 rural, 1,059 urban) earn their livelihood from non-productive sources. Of the remaining 107,818 self-supporting persons (59,655 rural, 48,163 urban). 3,659 (1,466 rural, 2,193 urban) or 3·4 per cent. are employers, 43,376 (17,453 rural, 25,917 urban) or 40·2 per cent. are employees and 60,783 (40,736 rural, 20,053 urban) or 56·4 per cent. are independent workers.

The distribution of 10,000 self-supporting persons of non-agricultural occupations, classified according to the Economic Divisions is as follows :

Name of division	Self-supporting persons by divisions
All industries and services	**10,000**
0 -Primary industries not elsewhere specified	173
1 —Mining and quarrying	15
2 -Processing and manufacture—foodstuffs, textile, leather and products thereof	1,227
3 -Processing and manufacture - metals, chemicals and products thereof	593
4 -Processing and manufacture not elsewhere specified	725
5 -Construction and utilities	207
6 -Commerce	1,718
7 —Transport, storage and communications	919
8 — Health, education and public administration	938
9 -Services not elsewhere specified	3,485

Under Division 7 the district has the second highest proportion in the State (Lucknow being the first). This is due to the large number of railway employees. Gorakhpur is the headquarter of the North-Eastern Railway.

Among the large scale industries the principal is the sugar industry. Among the cottage industries the principal are handloom cloth weaving (cotton), leather working boots, shoes, harness and saddlery, suit and attache cases, brass and copper wares, steel trunks, *gur*, cane furniture, basket and *chik*, hemp, ropes and *sutli* and smoking tobacco.

Variation in the livelihood pattern

13. In the districts of Gorakhpur-*cum*-Deoria the proportion of population depending on agriculture for their livelihood was 88·5 per cent. in 1951. The unfortunate fact is that the agricultural proportion has been increasing ever since 1901 when the figure stood at 71·6 per cent. It was 88·1 per cent. in 1911 and 91·8 per cent. in 1921. Only in this census the speed of the process seems to have been arrested. The actual number of persons who depend on agriculture has increased to 3,841,275 in 1951 from 2,997,997 in 1921 or by 28·1 per cent., while the cultivated area has remained almost unchanged. This has resulted in the progressive fragmentation and sub-division of holdings and pressure on impoverished soil. There appears to have been a gradual decline in village arts and handicrafts. The

cumulative result is a fall in the proportion of workers and a corresponding rise in the dependency. The proportion of workers in the total population in 1951 was only 49·68 per cent. (agricultural 44·13 per cent., non-agricultural 5·55 per cent.) against 62·28 per cent. (agricultural 57·20 per cent., non-agricultural 5·08 per cent.) in 1921. The proportion of non-earning dependants has consequently increased from 37·72 per cent. (agricultural 34·57 per cent., non-agricultural 3·15 per cent.) in 1921 to 50·32 per cent. (agricultural 44·35 per cent., non-agricultural 5·97 per cent.) in 1951. All this is an index of the increasing unemployment and under-employment. It is only by diversion of the population to cottage and other industries that the present severe disequilibrium in the economy of the district can be redressed. (*Vide Tables B-I, B-II and B-III*)

Houses and households

14. There were 385,045 occupied houses in the district—355,033 in villages and 30,012 in towns. That gives an average of 5,836 persons per 1,000 houses or 5·8 persons per house in the rural areas and 5,552 persons per 1,000 houses or 5·6 persons per house in the urban areas.

There were 414,432 households in the district—384,113 in villages and 30,319 in towns. That gives an average of 5,389 persons per 1,000 households or 5·4 persons per household in rural areas and, 5,450 persons per 1,000 households or 5·5 persons per household in the urban areas. The marginal table shows the developments in the size of the household since 1921. The rural household has been, more or less, stationary in size and is considerably bigger than the average State rural household (5·07). The urban household has registered a marked decrease since 1941, apparently due to large gains by migration.

Census Year	Persons per 1,000 households of	
	Rural population	Urban population
1921 ..	5,298	5,863
1931 ..	5,369	6,176
1941 ..	5,460	6,491
1951 ..	5,389	5,496

Out of 5,389 persons in every 1,000 rural households, 2,691 are males and 2,698 are females. There is a female excess numbering 7 in every 1,000 households. Out of 5,450 persons in every 1,000 urban households 3,016 are males and 2,434 are females. There is a male excess numbering 582 in every 1,000 households. The type of migration will account for the difference.

Information regarding types of household and household relationships was also collected at this census with the help of a sample of about 4 per cent. According to this, in every 1,000 sample households there are 5,163 persons (males 2,642, females 2,521) in the district. The corresponding figure for the total count is 5,394.

The table below shows the distribution by size of 1,000 sample households.

Description	Small with 3 members or less	Medium with 4—6 members	Large with 7—9 members	Very large with 10 members or more
Total	311	437	175	77
Rural	300	443	178	79
Urban	427	365	150	58

Medium households are the dominant type in the villages, while small households are more numerous in the towns. Quite a large number of migrants live in the towns without families.

Family composition of 1,000 sample households is as follows :

			Number in 1,000 households
A	Heads of households ..	Male (married)	674
		Male (widowers)	273
		Females	53
	Wives of heads of households		674
			1,674
B	Sons of heads of households		1,069
	Daughters of heads of households		818
			1,887
C	Male relations of heads of households (other than sons) ..		620
	Female relations of heads of households (other than daughters) ..		971
			1,591
D	Persons unrelated to the head of the household :		
	Males		6
	Females		5
			11
	Grand total ..		5,163

Sons outnumber the daughters of the heads of households. The latter leave the homes of their parents after marriage. Female relatives (other than daughters) outnumber the male relatives (other than sons). Such females are generally those who become members of these households by marriage. (*Vide* Tables A-I and C-I)

Sex-ratio

15. In the district as a whole the sex-ratio was 985, i.e. there were 985 females to every 1,000 males. It varied among the tehsils. The lowest value was 949 in Gorakhpur tehsil. The highest value was 1,076 in Bansgaon tehsil. The wide difference in the former is caused by Gorakhpur city where the males largely exceed the females. The difference in the latter is the result of male migration. Bansgaon is one of the densely populated tehsils of the district. The ratio was 971 in Maharajganj and 953 in Pharenda.

The sex-ratio is smaller in towns than in villages. For the district as a whole the sex-ratio in villages is as high as 1,001 (mainly due to male migration), while that in towns is only 798. The sex-ratio for Gorakhpur city was only 777.

The corresponding figure of sex-ratio for the district was 974 in 1921, 955 in 1931 and 981 in 1941 against 985 in 1951. The sex-ratio has been rising steadily since 1931.

Age structure

16. The number in each age-group in the district is shown below as a percentage of the total number of all ages in the total, rural and urban population separately.

Age-group		Total population			Rural population		Urban population	
		Persons	Males	Females	Males	Females	Males	Females
Infants and young children	0—4 ..	12·6	6·3	6·3	6·3	6·3	6·4	6·1
Boys and girls	5—14 ..	27·4	14·4	13·0	14·5	13·1	13·0	11·0
Young men and women	15—34 ..	32·6	16·1	16·5	15·7	15·5	21·0	18·9
Middle-aged men and women	35—54 ..	20·0	10·2	9·8	10·1	10·0	11·5	8·1
Elderly persons	55 and over ..	7·4	3·4	4·0	3·5	4·0	2·9	5·1

It will be seen that the population is progressive. 40 per cent. of the population is of age under 15 and only 7·4 per cent. of it consists of elderly persons. Again, it may be noted that proportionately larger numbers in the working ages (15—54) are found in the urban areas. This is the effect of migration of workers to the towns from the villages many of whom are unaccompanied by their families. (*Vide* Table C-III)

Marital status

17. Out of every 10,000 persons in the district there are 5,047 males and 4,953 females. Among them 2,260 males and 1,692 females are unmarried. If we reckon males and females together, the unmarried people are 39·5 per cent. of the population.

Of the males 44·8 per cent. were unmarried 48·8 per cent. were married and 6·4 per cent. were widowed or divorced. Among the females 34·1 per cent. were unmarried, 52·8 per cent. were married and 13·1 per cent. were widowed or divorced.

Of the married males 8·8 per cent. were of ages below 15, 49·8 per cent. were of ages 15—34, 34·7 per cent. were of ages 35—54 and 8·8 per cent. were of ages 55 and over. Among the married females 11·1 per cent. were of ages below 15, 57·7 per cent. were of ages 15—34, 26·8 per cent. were of ages 35—54 and 4·4 per cent. were elderly women.

Marriage is universal. Among males and females aged 35 years and over only 3·2 per cent. of the males and 0·4 per cent. of the females were found unmarried. Most of the females are married before they attain the age of 25. Child marriage is still prevalent. 8·1 per cent. of the males of ages 0—14 and 15·1 per cent. of the females of ages 0—14 were returned as married. (*Vide* Table C-III)

Languages

18. Over 99·5 per cent. of the people of the district returned Hindi, Hindustani or Urdu as their mother-tongue. Among the other mother-tongues spoken the main are Nepali (0·12 per cent.), Punjabi (0·11 per cent.), Bengali (0·11 per cent.) and Sindhi (0·04 per cent.). Of the 22·39 lakhs of people in the district only 4,745 or 0·2 per cent. were bilingual (in an Indian language). Those whose mother-tongue is other than Hindi, Hindustani or Urdu are generally the migrants who are able to speak any of these as a subsidiary language. Persons returning Hindi, Hindustani or Urdu as secondary language were 3,832 or 80·8 per cent. of those who were bilingual in some Indian language. (*Vide* Table D-I)

Religion and special groups

19. Out of 10,000 population of the district the number of people belonging to different religions is : Hindus 9,054, Muslims 928, Sikhs 7 and Christians 11; of 10,000 population in villages the numbers are : Hindus 9,181, Muslims 811, Sikh 1 and Christians 7; and of 10,000 population in towns the numbers are ; Hindus 7,471, Muslims 2,381, Sikhs 86, Christians 57 and others 5. Muslims, Sikhs and Christians are generally concentrated in the urban areas of the district as is the case in the other units of the State.

There are 461 thousand scheduled castes in the district. Their number per 10,000 of population works out to 2,059. In villages they are 2,151 for every 10,000 and in the

towns their number per 10,000 is only 913. In the district there are 273 Anglo-Indians of whom only 101 are in the rural areas and 172 in the towns of the district. (*Vide* Tables D-II and D-III)

Displaced persons

20. The number of displaced persons in the district at the census was 3,461 (males 1,811, females 1,650), a large majority of whom were concentrated in Gorakhpur city. (*Vide* Table D-V)

Literacy

21. The percentage of male literacy was 15·4 in the district while that of female literacy was 2·2 only. In Gorakhpur-*cum*-Deoria the percentage of literates among males in 1951 was 14·3 as compared to 5·5 in 1931 ; among females the percentage of literates in 1951 was 1·9 as against 0·4 in 1931. On January 1, 1951, there were 855 primary schools in the district with enrolment of 69,097. (*Vide* Table D-VII)

C—Explanatory note on the Statistics

The statistics in this volume have been presented in three parts:

I—*District Census Tables*

II—Village, Town, Pargana and Thana Statistics

III—*Miscellaneous Statistics*

Parts I and II contain census data. A brief account of the system of sorting of census slips and preparation of tables and abstract therefrom is given below.

Part III contains statistics throwing light on special aspects of population and its growth. These have been derived from miscellaneous sources. Table 1, " Vital Statistics ", has been prepared from the published and unpublished records of the Director of Medical and Health Services ; Table 2, " Agricultural Statistics ", from the Annual Season and Crop Reports ; Table 3, " Live-Stock, Agricultural Machinery and Implements ", from the published figures of Live-Stock Census and Table 4, " List of Primary Schools ", from information specially supplied by District Inspector of Schools.

Processing of census data

2. The census data presented here has been derived from the census slips by a process of sorting, compilation and tabulation. In previous censuses the slips were first sorted by religion and this division was maintained throughout so that all data was cross-tabulated by religion. This procedure has been abandoned at this census and substituted by a division based on economic characteristics of the population. The whole population has been divided into eight livelihood classes, four of which are of the agricultural category and four of non-agricultural category as follows :

Agricultural Classes—

I—Cultivators of land wholly or mainly owned ; and their dependants

II—Cultivators of land wholly or mainly unowned ; and their dependants

III—Cultivating labourers ; and their dependants

IV—Non-cultivating owners of land ; agricultural rent receivers ; and their dependants

Non-agricultural Classes—

V—Production (other than cultivation)

VI—Commerce

VII—Transport

VIII—Other services and miscellaneous sources

Another special feature of the sorting of this census was the separation, from the very start, of slips of displaced persons and of a 10 per cent. *random* sample from the remainder. This has enabled the data of displaced persons to be presented separately while the 10 per cent. sample has been utilized for the preparation of Age Tables.

The slips of this census have been copied by Households into a National Register of Citizens, which has been prepared village-wise for rural areas and mohalla/ward-wise for urban areas. Table C-I is based on a 4 per cent. sample extracted from this register.

Tracts

3. The slips were first sorted by villages for the preparation of the Primary Census Abstract. For the purpose of further sorting the State was divided into tracts consisting of (*a*) *rural tracts*, comprising the rural population of each tehsil, (*b*) *urban city tracts*, comprising the population of areas which had been declared as cities, (*c*) *urban non-city tracts*, comprising the population of urban areas of a district excluding areas declared as cities. Each tract was treated as a unit for sorting of slips. All data were compiled first by tracts and then by districts. This volume presents the tract-wise data for one district (with the exception of A and E Tables, which have been presented tehsil-wise) while the district-wise data for the whole State is contained in the following State volumes :

Part I-B—Subsidiary Tables

Part II-A—General Population Tables

Part II-B—Economic Tables

Part II-C—Age and Social Tables

Explanatory notes

4. Detailed explanatory notes are appended to each State table in the printed volumes of State tables. They apply to the tables in this volume also and should be referred to when necessary. A few notes of some of the tables are reproduced below :

Table A-I -Column 5 relating to " hamlets " has been introduced for the first time. Any distinctive cluster or agglomeration of houses has been treated as a " hamlet ".

A clear distinction has been made in this census between a " House " and a " Household ". A house is any human dwelling having a separate main entrance while a household is any commensal unit living in a census house. In previous censuses the figures under " Occupied Houses " used to be that of households, while the figures under columns 7—9 of the present tables refer to occupied census houses as distinct from households.

The Economic Tables—The Indian Census Economic Classification Scheme 1951, together with the occupational division and sub-division adopted for this census are given in Part II-B of the Report.

Table B-I—Each of the eight livelihood classes mentioned above has been divided into three sub-classes, with reference to the economic status, as follows :

(i) Self-supporting persons ;

(ii) Non-earning dependants; and

(iii) Earning dependants.

These were defined in the Instructions to Enumerators as follows :

> " A ' self-supporting person ' is one who is in receipt of an income and that income is sufficient at least for his own maintenance. To be 'self-supporting' a person need not be able to support his family. All that is necessary is that he should be earning sufficient for his personal needs. For purposes of this question the person enumerated is the unit and not the family or household. Any one who is not a 'self-supporting' person in this sense is a 'dependant'. A 'dependant' may be either an 'earning dependant' or a 'non-earning dependant'. The test is whether he secures a regular (and not casual) income, even though it may be small. Such income may be in cash or kind; it may be continuous or seasonal employment. When the income which he secures is not sufficient to support him that person is an 'earning dependant'. A person who does not earn any income either in cash or kind is a 'non-earning dependant'. Where two or more members of a family household jointly cultivate land and secure an income therefrom, each of them should be regarded as earning part of the income. None of them is, therefore, a non-earning dependant. Each of them should be classed either a 'self-supporting person' or an 'earning dependant' according to the share of income attributable to each. The same applies to any other business carried on jointly. The share of the income is what the head of household deems it to be. This does not mean that every one who works is necessarily a self-supporting person or an earning dependant. Thus, for instance, a housewife who cooks for the family, brings up the children or manages the household is doing very valuable work. Nevertheless, her Economic Status is that of a non-earning dependant, if she does not also earn an income, and should be recorded as such."

Economically active, Semi-active and Passive persons—All non-earning dependants are economically passive. They include persons performing house-work or other domestic or personal services for other members of the same family household. But they do not include " unpaid family workers " or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise.

All earning dependants are economically semi-active only. Though they contribute to the carrying on of economic activities, the magnitude of their individual contribution is deemed to be too small to justify their description as economically active. (Their contribution to economic activity is, however, taken into account in the tabulation of data based on secondary means of livelihood.)

All self-supporting persons are ordinarily economically active with the exception of the following classes and groups :

(*a*) All self supporting persons of agricultural Class IV.

(*b*) The following groups of self-supporting persons who are included in non-agricultural Class VIII and derive their principal means of livelihood from miscellaneous sources (*otherwise than through economic activity*):

(i) Persons living principally on income from non-agricultural property ;

(ii) Persons living principally on pensions, remittances, scholarships and funds;

(iii) Inmates of alms-houses and recipients of doles ;

(iv) Beggars and vagrants : and

(v) All other persons living principally on income derived from non-productive activities.

Table B-II—For a self-supporting person who has more than one means of livelihood the *secondary means* of livelihood is the livelihood next in importance to his principal means of livelihood. For an earning dependant it is the source from which he secures his own income, where there are more than one subsidiary occupations only the one providing the largest income has been taken into account.

Table B-III—"Employers" "Employees" and "Independent Workers" have been defined as follows in the Instructions to Enumerators :

> An "employer" is only that person who has necessarily to employ other person in order to carry on the business from which he secures his livelihood. Thus if a person employs a cook or any other person for domestic services, he should not be recorded as an "employer" merely for that reason.
>
> An "employee" is a person who ordinarily works under some other person for a salary or a wage in cash or kind as the means of earning his livelihood. There may be persons who are employed as manager, superintendents, agents etc., and in that capacity control other workers. Such persons are also employees only and should not be regarded as employers.
>
> An "independent worker" means a person who is not employed by any one else and who also does not employ anybody else in order to earn his livelihood. (Sweepers, *dhobies*, *kahars* etc., who work for several masters are independent workers. If, however, any of them accepts whole-time employment under one master he becomes "employee". Daily wage-earners who work for different masters are likewise independent workers. But if they accept employment under one master, e. g. under a factory, they become "employees").

Tables C-II, C-III, C-IV, and C-V—The figures presented in these tables are based on single year age returns and have not been smoothed.

Tables D-V (i) *and* (ii)—For the purpose of this table a "displaced person" has been defined as follows :

> "A displaced person means any person who has entered India having left or being compelled to leave his home in Western Pakistan on or after the 1st March, 1947, or his home in Eastern Pakistan on or after the 15th October, 1946, on account of civil disturbances or on account of the setting up of the two Dominions of India and Pakistan."

PART I

DISTRICT CENSUS TABLES

A—GENERAL POPULATION TABLES

A-I—Area Houses and Population
