DISTRICT CENSUS HANDBOOK
1951

JAUNPUR DISTRICT

FOREWORD

Several States, including Uttar Pradesh, have been publishing village statistics by districts at each census. In 1941 they were published in U. P. under the title "District Census Statistics" with a separate volume for each district. In the 1951 census, when the tabulation has been more elaborate than ever in view of the requirements of the country, the district-wise volume has been expanded into a "District Census Handbook", which now contains the District Census Tables (furnishing data with break-up for census tracts within the district), the District Index of Non-agricultural Occupations, agricultural statistics from 1901-02 to 1950-51 and other miscellaneous statistics in addition to the usual village population statistics. The village population statistics also are given in an elaborate form giving the division of the population among eight livelihood classes and other details.

2. It may be added here that a separate set of district-wise volumes giving only population figures of rural areas by villages and of urban areas by wards and mohallas and entitled "District Population Statistics" has already been published. This separate series was necessitated by the urgent requirements of the U. P. Government for elections to local bodies.

3. The number of District Census Handbooks printed so far is twenty-nine. Special arrangements for speeding up the printing have now been made and it is hoped that the remaining Handbooks will be printed before the end of 1955.

RAJESHWARI PRASAD, I.A.S.,
Superintendent, Census Operations,
Uttar Pradesh.

RAMPUR:
July 15, 1955.

INTRODUCTION

A—The District

1. The district of Jaunpur is bounded on the west by the districts of Pratapgarh and Allahabad ; on the south by Banaras ; on the east by Ghazipur and Azamgarh ; and on the north by Sultanpur. It has a total area of 1,555 square miles and its population in 1951 was 15·17 lakhs. It has 5 tehsils, 20 parganas and 15 thanas.

Topography

2. In its general aspect the district may be described as a level plain, with slight undulations caused by the valleys of the rivers. These all flow roughly from north-west to south-east, and the slope of the country follows the same direction. Apart from such variations, the only irregularities of surface consist in the numerous mounds, often of considerable height and covered with trees, which mark the sites of ancient and deserted villages, or of the demolished forts. With few exceptions, the country is closely cultivated and richly wooded with groves of mango and other trees, although the wood-land area is comparatively small in the lowlying clay tracts both in the north and south. The villages and inhabited sites are extremely numerous, but, unlike those in the eastern parts of Ghazipur and Ballia, they are very small and almost every *mauza* contains a number of scattered hamlets. This results in a high standard of cultivation, in which also the extreme density of the population is a factor of great importance.

The Gomti, the Sai and the Bisuhi divide the district into four almost parallel strips of the country, each with fairly distinct physical characteristics. From the deep river bed the bank rises sharply, and from its summit a gentle slope extends inland to a varying distance till it reaches the crest of the watershed. Beyond the latter the surface again sinks gradually towards a depression of no great depth, and beyond this a similar rise is again experienced to the main watershed of the next river. The difference between the various tracts lies principally in the depth and nature of the central depression.

The first and the largest tract, the north eastern tract, lies to the north of Gomti extending from Sultanpur border on the north to that of Ghazipur to the south-east. This tract may be sub-divided into two portions of which the northern and larger comprises the area lying within the Shahganj and Jaunpur tehsils. It has large tracts of *usar* land. The southern portion, comprising the greater part of the Kirakat tehsil, is of a different character, since the Gangi Nadi provides a northern watershed which in the former tract was absent. This tract is adequately drained.

The second tract is that lying between the Gomti and the Sai and this comprises the most fertile and populous part of the district. Most of it stands high, the central area being drained by the Pili and its affluents. The slope of the country from west to east is fairly rapid. There is no waterlogged area and very little *usar* is to be seen.

The tract between Sai and Bisuhi presents a great change in the appearance of the country. From the high banks of the former river the surface drops rapidly to a wide plain in which the soil is mainly clay. There is considerable amount of *usar* which is a sure indication of saturation and rice is the main staple of the country.

The last tract, the south-western tract, is the long and narrow strip between the Bisuhi and the Barua from their sources to their confluence. Here the level is again high, but along the upper reaches of these streams a clay soil preponderates and *usar* is fairly prevalent in the south of Machhlishahr tehsil. The level is highest in the extreme west but here much of the country is waterlogged resembling that in pargana Mariahu to the north of Bisuhi.

Soils

3. The soils of the district consist mainly of loam and clay, the former prevailing on the higher levels, especially in the Jaunpur and Kirakat tehsils as well as the portion of Shahganj lying to the south of the Gomti ; while clay is confined to the depressions and lowlying tracts, notably in some parts of tehsils Shahganj and Jaunpur, the Machhlishahr tehsil and the greater part of Kirakat. Sand by itself is not common and is found only near the channels of the two principal rivers, the Gomti and the Sai, though on the high bank the soil is invariably light and can at the best be described merely as a sandy loam. On the whole, about one fourth of the cultivated area is true clay, a soil that with sufficient moisture produces excellent crops but otherwise is almost worthless. As in almost every part of Uttar Pradesh it is generally known as *matiyar*. There are two recognised varieties. One is called *bijar* or *chachar*. It is of a greyish colour and is a stiff lowlying clay with an admixture of gravel. It is used for early rice. Another is *karail*, a black soil with a large amount of organic matter, found in the beds of *jhils* and dried-up tanks used for coarser variety of late rice. Sandy soils are usually termed *balua* and are reserved for the cultivation of *bajra*, *arhar* and *moth* and other inferior crops. *Dumat* comprises about half the area and is excellent soil when irrigated. The lighter loams are called *sigon*, which is about two-thirds sand ; such soils together with *balua* and the poorer clays constitute the remaining quarter of the district.

Classification of area

4. The figures of the classification of area during the last fifty years are given in Table 2 of Part III of this volume. The proportion of area under the various categories works out as follows for 1950-51 :

Particulars	Actual figures (in acres)	Percentage
Cultivated area	716,673	72·3
Culturable waste (excluding current fallow)	117,242	11·8
Current fallow	33,689	3·4
Forest	..	..
Area not available for cultivation of which—	124,262	12·5
(a) *Covered with water*	*37,981*	*3·8*
(b) *Under sites, roads and buildings*	*38,916*	*3·9*
(c) *Barren*	*47,365*	*4·8*

The figure in the above table regarding culturable waste taken from the Season and Crop Report is, however, misleading. The State Agriculture Department conducted in 1949-50 a detailed enquiry through the District Officers regarding the nature of this area in each district. The following analysis of the area resulted from this enquiry :

Particulars	Area (in acres)	Percentage
Total culturable waste (A+B+C)	**114,268**	**100**
A—Area under culturable waste land not available for immediate cultivation ..	38,002	33·26
(i) Forest under any legal enactment	..	..
(ii) Groves	31,987	27·99
(iii) Forests of timber trees	321	0·28
(iv) Thatching grasses, shrubs and bushes	4,621	4·05
(v) Land kept for grazing	1,073	0·94
B—Area under culturable waste land available for immediate cultivation but which could not be cultivated	37,770	33·05
Of which due to—		
(i) *Kans* growth	54	0·05
(ii) Threshing floors	800	0·70
(iii) Malaria	..	..
(iv) Floods	531	0·46
(v) Lack of drains	313	0·27
(vi) Lack of water	12,414	10·86
(vii) Distance from *abadi*	3,688	3·23
(viii) Damage from wild animals	154	0·14
(ix) Other causes	19,816	17·34
C—Area under culturable waste land that can be brought under immediate cultivation after some improvements besides the area given against 'B'	38,496	33·69

From the above it will appear that of the total area recorded as waste only 33·7 per cent. was really capable of being brought under immediate cultivation after some improvements.

Thus the land area cultivated and cultivable (including current fallow) *per capita* in the district works out to only 57·2 cents of which 49·5* cents have already been brought under cultivation and only about 2·5 cents can be further brought under the

*This figure also includes the area classed as current fallow.

plough after some improvements. In fact saturation point appears to have been reached in respect of utilisation of land for cultivation.

Climate and rainfall

5. The rainfall is normally ample. The average for the last quinquennium was about 46·46 inches. During the last forty-five years the rainfall has been less than 25 inches in only one year and has usually been more than 36 inches. In the matter of climate Jaunpur resembles the eastern districts generally being more moist and possessing a more equable temperature than the north and west. Slight frosts occur almost every cold weather and do some damage to gram and peas, particularly in the poorer lands along the rivers.

Irrigation

6. Irrigation is derived from wells, tanks, lakes and other natural reservoirs. In 1950-51, the irrigated area from wells covered 92·0 per cent. and by other sources 8·0 per cent.

Crops

7. More acreage is sown under *kharif* crops than under *rabi* crops. The area under *kharif* in 1950-51 was 555,252 acres, that under *rabi* 385,136 acres and that under *zaid* crops 2,584 acres. The principal *kharif* crop is rice while the principal *rabi* crop is barley followed by wheat.

B—Analysis of the Statistics

Population: General distribution and density

1. The table below shows the two basic figures—land area and population—and the derived figures of land area *per capita* :

Tehsil	Population (in lakhs)	Density (number per square mile)	Land area (in lakhs of acres)	Land area *per capita*
Jaunpur	3·43	1,192	1·84	0·54
Kirakat	2·58	1,050	1·58	0·61
Machhlishahr	2·80	814	2·20	0·79
Mariahu	3·07	960	2·05	0·67
Shahganj	3·29	910	2·31	0·70
Jaunpur district	*15·17*	*973**	*9·98*	*0·66*

The district though 43rd in order of area stands 12th in the State in respect of population. It is one of the eight districts of the State with a density of over 900 while the average density of the State is 557 only. The density of the district has not been to a very great extent inflated by the presence of towns. Even the rural density of the district is as high as 927 persons per square mile, the density of the rural parts of the tehsils being : Jaunpur 1,028, Kirakat 1,047, Machhlishahr 777, Mariahu 949, and Shahganj 892. It is clear from the above table that people in the district are not distributed among the different tehsils in any kind of orderly proportion to the land area. The density is lower in Machhlishahr tehsil mainly on account of the extensive barren area, which includes large *usar* plains and numerous swamps and *jhils*. It is also to be noted that the district as a whole has got one of the lowest figures of land area *per capita*. (*Vide* Tables A-I and E)

Growth of population

2. The population of the district in 1951 was 26·1 per cent. higher than what it was fifty years ago. Compared to this the increase in the population of the State during the corresponding period has been only 30 per cent. The table below exhibits the variation in total, rural and urban population for the last five decades :

Census year	Population			Variation		
	Total	Rural	Urban	Total	Rural	Urban
1901	**1,202,920**	1,128,715	74,205			
1911	**1,156,254**	1,103,365	52,889	**—46,666** (**—3·9**)	—25,350 (—2·2)	—21,316 (—28·7)
1921	**1,155,105**	1,097,856	57,249	**—1,149** (**—0·1**)	—5,509 (—0·5)	+4,360 (+8·2)
1931	**1,236,071**	1,171,184	64,887	**+80,966** (**+7·0**)	+73,328 (+6·7)	+7,638 (+13·3)
1941	**1,387,439**	1,312,915	74,524	**+151,368** (**+12·2**)	+141,731 (+12·1)	+9,637 (+14·9)
1951	**1,517,173**	1,432,982	84,191	**+129,734** (**+9·4**)	+120,067 (+9·1)	+9,667 (+13·0)

*According to the area given by the Surveyor General, it is 976.

A noteworthy feature is that between 1901 and 1921 the population of the district recorded a decrease of 4·0 per cent., the decrease being at par with that of the State. The population decreased due to losses having resulted from plague and influenza. Abnormal deaths did not occur or were prevented from occurring in the post-1921 period and the population of the district recorded an increase of 31·3 per cent. since 1921 as against an increase of 35·5 per cent. in the population of the State during the same period.

The increase in the population of this district (9·4 per cent.) during the past decade has been below the average of the State (11·8 per cent.), the percentage increases in the tehsils being : Jaunpur 10·7, Kirakat 11·9, Machhlishahr 7·3, Mariahu 7·4 and Shahganj 9·7.

Vital Statistics

3. Births and deaths mainly account for the trends in population growth. Migration also is a factor though of lesser importance. The following table gives the mean decennial registered birth and death-rates and the calculated natural increase rates and population growth-rates of the last three decades for the district as a whole and for its rural and urban areas :

	Total	Rural	Urban
Mean decennial birth-rate			
1941—50	19·1	18·9	22·3
1931—40	28·1	28·2	26·4
1921—30	27·2	27·7	18·4
Mean decennial death-rate			
1941—50	14·9	14·8	16·4
1931—40	17·7	17·6	18·2
1921—30	21·1	21·5	14·0
Mean decennial rate of natural increase			
1941—50	4·2	4·1	5·9
1931—40	10·4	10·6	8·2
1921—30	6·1	6·2	4·4
Mean decennial growth-rate			
1941—50	8·9	8·7	12·2
1931—40	11·5	11·4	13·8
1921—30	6·8	6·5	12·5

There are large omissions in the registration of births as well as deaths and so the above rates do not represent the true picture at all. They may, however, be taken to be roughly indicative of trends. In the district as a whole both birth and death-rates have fallen during the last decade.

The figures of natural increase and growth-rate suggest considerable gain by migration during 1941—50, and a small gain during 1931—40 and 1921—30.

The average yearly mortality from various causes in the district during 1941—50 was as follows :

Causes	Number of deaths	Percentage of total deaths
Fever	14,746	68·3
Dysentery and diarrhoea	65	0·3
Respiratory diseases	249	1·2
Plague, cholera and small-pox	4,126	19·1
Others	2,390	11·1

As in the State 'fever' is responsible for a majority of deaths. But fever covers a number of ailments which the reporters are unable to identify. Deaths from plague, cholera and small-pox are among the highest in the State. (*Vide* Table I, Part III of this Volume)

Migration

4. About 93·3 per cent. of the people enumerated in the district at the census of 1951 were born there, 6·4 per cent. were born in other districts of the State, 0·2 per cent. were born in other parts of India and only 0·1 per cent. came from other countries. Of the immigrants from the district of the State as many as 67,412 (males 8,105, females 59,307) are from other districts of the same natural division and 30,014

(males 4,742, females 25,272) are from other parts of the State. The sex proportion suggests that most of the migration from the neighbouring districts is marriage migration. Of 1,803 immigrants from the adjacent States 1,434 (males 228, females 1,206) are from Bihar and 164 (males 48, females 116) are from Madhya Pradesh. Most of this migration is also marriage migration.

Of the immigrants who have come from territories beyond India 665 (males 379, females 286) were born in Pakistan and 170 (males 90, females 80) had their birth place in other territories. The Pakistan-born are generally the displaced persons who numbered 391 in the district. Of the immigrants born in other territories 41 (males 24, females 17) were Nepal-born.

Of the 9 non-Indian nationals, 1 belonged to Nepal and 8 were British.

Unfortunately the figures of emigration are not available. According to recorded Vital Statistics, however, the district appears to have gained about 8,400 persons during 1921—30, 15,000 persons during 1931—40 and 69,000 persons during 1941—50 on the balance of migration. But it should be borne in mind that the figures contain large element of registration error and are only indicative of trends.

Decline of cultivation *per capita*

5. We may now analyse the growth of population in the district during the last thirty years in relation to the growth of cultivation during the same period. The figures for the district are exhibited in the marginal table. (Figures of area shown under census years are quinquennial averages for the five years preceding the census year). It is obvious that though the area under cultivation has increased it has failed to keep pace with the growth of population. The cultivated area *per capita* has gone down to 45·9 cents in 1951 from 55·5 cents in 1921. It means that (other things being equal) every man, woman and child must expect to get less food and other agricultural produce from the land in 1951 than in 1921.

Census year	Population	Net area sown (in acres)	Area of cultivation *per capita* (in cents)
1921 ..	1,155,105	641,087	55·5
1931 ..	1,236,071	652,361	52·8
1941 ..	1,387,439	665,900	48·1
1951 ..	1,517,173	695,389	45·9

Double cropped area *per capita*

6. It may be examined whether this shortage has been compensated by an increase in the yield per acre. Increase in yield can be brought about by more double cropping, more irrigation, better fertilisation and better culture. The average (quinquennial) area sown more than once was 186,467 acres in 1921. It decreased to 163,899 acres in 1931, The double crop cultivation has shown an increase since then. The area under it was 185,595 acres in 1941 and 201,838 acres in 1951. The figures of double crop cultivation *per capita* in cents are as below :

Particulars	Quinquennial averages for the year preceding			
	1951	1941	1931	1921
Double crop cultivation *per capita* in cents	13·3	13·4	13·3	16·2
Unirrigated double crop cultivation *per capita* in cents ..	12·9	13·1	12·9	15·7
Irrigated double crop cultivation *per capita* in cents	0·4	0·3	0·4	0·5

It is evident that the increase in the double crop area has also not kept pace with the rate of growth of population.

Irrigated area *per capita*

7. The average (quinquennial) area irrigated in the district was 361,683 acres in 1921. The figures were 261,765 acres for 1931, 364,154 acres for 1941 and 370,272 acres for 1951. The average area irrigated more than once was 5,566 acres for 1921, 4,952 acres for 1931, 3,996 acres for 1941 and 6,742 acres for 1951. The figures of irrigation *per capita* are shown in the table below :

Particulars	Years			
	1951	1941	1931	1921
Irrigated single crop cultivation *per capita* in cents	24·0	26·0	20·8	30·8
Irrigated double crop cultivation *per capita* in cents	0·4	0·3	0·4	0·5

The irrigated area *per capita* has declined since 1941.

Cropped area

8. It is also significant that inspite of the rapid growth of population the area under food crops has declined in this district. During the quinquennium 1916—21, 91·2 per cent. of the cropped area was under food crops and only 8·8 per cent of it was under non-food crops. Thirty years after during 1946—51, the cropped area under food crops was 90·2 per cent. and that under non-food crops was 9·8 per cent.

The proportionate area under different crops between 1911 and 1951 was as below :

Quinquennial average of	Total cropped area	Percentage of cropped area under							
		Rice	Wheat	Barley	Juar	Bajra	Maize	Gram	Others
1911—16	**817,230**	17·9	6·3	24·4	4·1	2·0	11·5	5·5	28·3
1916—21	**817,871**	19·4	6·1	22·5	3·8	2·2	11·6	5·5	28·9
1921—26	**818,636**	19·9	6·6	22·0	3·9	1·9	10·4	6·4	28·9
1926—31	**821,817**	20·5	6·7	22·7	3·7	1·5	10 3	6·1	28·5
1931—36	**815,755**	18·5	7·2	24·2	3·9	1·9	11·3	5·2	27·8
1936—41	**857,893**	19·4	7·2	21·7	3·2	1·9	11·8	4·6	30·2
1941—46	**875,120**	19·7	6·2	23·4	2·9	2·1	12·7	4·2	28·8
1946—51	**908,021**	22·5	6·4	22·7	2·7	1·8	12·5	3·8	27·6

Cotton and Indigo are two non-food crops which have gone out of cultivation. Cotton was never an important crop of the district but the area under Indigo was 4,165 acres in 1901—02. It was not sown at all during 1950—51. At present sugarcane is the most important non-food crop of the district and its area has risen considerably since 1930 with the establishment of sugar factories.

Live-stock, ploughs and carts

9. Live-stock in this country live for a large part of the year on by-products of agriculture supplemented by green fodder crops. They have, therefore, to be correlated not only with the grazing available but also with the total area under cultivation which carries a major portion of the burden of supporting the cattle population.

As will appear from Table 3 of Part III the total number of cattle and buffaloes which had been decreasing between 1930 and 1944 has during 1944—51 increased from about 6·2 lakhs to about 6·8 lakhs in the district.

The number of working cattle and buffaloes which had gone down during 1935—44, has increased in 1951 to about 3·0 lakhs. This number of working cattle appears to be governed by the number of ploughs and carts. The number of ploughs has gone up from 1·42 lakhs in 1944 to 1·59 lakhs in 1951, due apparently to progressive fractionalisation of holdings. The number of carts has increased during 1944—51 and now the figure stands at about 3,000. The average net cultivated area per plough works out to 4·5 acres in 1951 as against 4·6 acres in 1920, and the average net cultivated area per pair of working cattle works out to 4·6 acres in 1951 as compared with 4·5 acres in 1935.

Breeding cows and she-buffaloes which were 2·18 lakhs in 1935 and 2·06 lakhs in 1944 have gone up to 2·22 lakhs in 1951. The cows and female buffaloes in milk per 1,000 of human population are 31 and 26 respectively. Owing to the poor milk yield, the share of milk per head is only a few ounces per day.

The number of sheep which had been decreasing during 1920—44 has suddenly gone up to about 116 thousands. Goats have also increased in number. They were 1·14 lakhs in 1951.

Horses and ponies have increased since 1944 from about 4 thousands to about 7 thousands. Donkeys have also increased during this period.

Poultry has also increased from about 35 thousands in 1944 to about 59 thousands in 1951.

Distributed on 1,000 of human population the figures of the main categories of live-stock in 1951 are as follows :

Cattle	Buffaloes	Sheep	Goats	Poultry	Others
338	111	76	75	39	23

10. To sum up, the population of the district is growing up at the biological natural rate since 1921 but on the other hand the land area *per capita* has decreased. The magnitude of the absolute numerical increase in relation to the practically stationary acreage under cultivation is a great strain on the economy of the district.

Villages and towns

11. The district has 3,188 villages and 7 towns. Out of 15·2 lakhs of people who were counted at the census of 1951, 14·3 lakhs were found in villages and 0·9 lakhs were found in urban areas, i.e., there are as many as 945 people per 1,000 of general population who live in rural areas and only 55 of them live in towns. The corresponding figures for the State as a whole are : rural 864 and urban 136.

The rural population per inhabited village works out to 449. Quite a large number of villages do not comprise of a single compact site. There are 7,900 hamlets in the district and the population per hamlet is only 181. The medium-sized village—with inhabitants numbering between 500—2,000—is the dominant type in the district. Of the rural population 58·4 per cent. live in such villages ; 34·5 per cent. live in villages with population under 500 ; and 7·1 per cent. live in villages with population between 2,000 and 5,000.

Towns vary in number of inhabitants even more widely than villages. 52,351 persons or 62·2 per cent. of total urban population of the district live in Jaunpur city. 24·4 per cent. of them live in towns of population between 5,000 and 10,000 (viz., Machhlishahr, Shahganj, Badshahpur) and 13·4 per cent. of them live in towns of population under 5,000 (viz., Mariahu, Kirakat and Zafarabad). It is worth noting that since 1941 the population of Jaunpur city has increased by 16·8 per cent. only. It is the 28th city of the State. Machhlishahr and Zafarabad appear to be declining towns. Their population has decreased since 1901. (*Vide* Tables A-III and A-IV)

Occupations: Livelihood pattern

12. Out of the total population of 1,517,173 (rural 1,432,982, urban 84,191) 1,223,767 (rural 1,209,866, urban 13,901) or 80·7 per cent. depend on agriculture for their means of livelihood, and 293,406 (rural 223,116, urban 70,290) or 19·3 per cent. depend on non-agricultural sources. The following table gives the distribution of 100 persons of the total, rural and urban population of the district and of Jaunpur city under different livelihood classes :

Description	Agricultural classes					Non-agricultural classes				
	Total	I	II	III	IV	Total	V	VI	VII	VIII
Total	**80·7**	**64·8**	**9·7**	**5·3**	**0·9**	**19·3**	**6·9**	**4·1**	**1·0**	**7·3**
Rural	84·4	68·0	10·1	5·5	0·8	15·6	6·1	2·8	0·9	5·8
Urban	16·5	11·2	2·1	0·8	2·4	83·5	20·3	26·1	3·9	33·2
Jaunpur city	14·1	10·5	1·0	0·5	2·1	85·9	20·1	23·0	3·6	39·2

It is obvious that this district is one of the predominantly agricultural districts of the State. Here as many as 80·7 per cent. of the people depend on agriculture as against 74·2 per cent. in the whole State.

Of the total population of the district 807,256 persons (males 325,041, females 482,215) or 53·2 per cent. have been classified as non-earning dependants. The percentage of non-earning dependants in agriculture works out to 51·3 and that in non-agriculture works out to 61·2 per cent. It will be observed that in the main they consist of women. The male non-earning dependants are mostly children. 235,988 persons (males 46,994, females 188,994) or 15·6 per cent. of the population are earning dependants. Among the agriculturists their proportion is 17·0 per cent. and among non-agriculturists they form 9·7 per cent. Agriculture is a family occupation and it provides work to the women and grown up children in the family. The remaining 473,929 persons (males 377,944, females 95,985) or 31·2 per cent. of the population consist of self-supporting persons. Their proportion among agriculturists is 31·7 per cent. and among the non-agriculturists 29·1 per cent. Of the self-supporting persons 388,510 (males, 309,596, females 78,914) belong to agricultural classes and 85,419 (males 68,348, females 17,071) to the non-agricultural classes. On an average one self-supporting person maintains two non-earning dependants.

Of the 85,419 self-supporting persons belonging to non-agricultural classes 2,424 (rural 1,479, urban 945) earn their livelihood from non-productive sources.

Of the remaining 82,995 self-supporting persons (rural 63,300, urban 19,695) 1,974 (rural 893, urban 1,081) or 2·4 per cent. are employers, 16,868 (rural 11,975, urban 4,893) or 20·3 per cent. are employees and 64,153 (rural 50,432, urban 13,721) or 77·3 per cent. are independent workers.

The distribution of 10,000 self-supporting persons of non-agricultural occupations, classified according to the Economic Divisions, is as follows :

Name of division	Self-supporting persons by divisions
All Industries and Services	**10,000**
0—Primary industries not elsewhere specified	319
1—Mining and quarrying	6
2—Processing and manufacture—foodstuffs, textiles, leather and products thereof	2, 099
3—Processing and manufacture—metals, chemicals and products thereof	301
4—Processing and manufacture—not elsewhere specified	992
5—Construction and utilities	354
6—Commerce	2,128
7—Transport, storage and communications	465
8—Health, education and public administration	1,003
9—Services not elsewhere specified	2,333

There is no large scale industry worth the name in the district. Among the cottage industries the principal are woollen blankets, woollen carpets, *tat patti*, leather tanning, agricultural implements, iron castings, weights, balances and cane crushers.

Variation in the livelihood pattern

13. The proportion of population depending on agriculture for their livelihood was 80·2* per cent. in 1951. The agricultural proportion has only slightly changed since 1911—when the figure stood at 81·3 per cent. The actual number of persons who depend on agriculture was 1,216,271 in 1951 against 872,181 in 1921. This number has increased by 39·5 per cent. There is a fall in the proportion of workers and a corresponding rise in dependency. The proportion of workers in total population in 1951 was 46·8 per cent. (agricultural 38·8, non-agricultural 8·0) against 52·2 per cent. (agricultural 39·9 per cent., non-agricultural 12·3) in 1921. The proportion of non-earning dependants consequently increased from 47·8 (agricultural 35·6 per cent., non-agricultural 12·2 per cent.) in 1921 to 53·2 per cent. (agricultural 41·4 per cent., non-agricultural 11·8 per cent.) in 1951. All this is an index of the increasing unemployment and under-employment. It is only by the diversion of the population to cottage and other industries and by providing secondary occupations to the agriculturists that the present severe disequilibrium in the economy of the district can be redressed. (*Vide* Tables B-I, B-II and B-III.)

Houses and households

14. There were 234,752 occupied houses in the district—223,204 in villages and 11,548 in towns. That gives an average of 6,420 persons per 1,000 houses or 6·4 persons per house in the rural areas and 7,291 persons per 1,000 houses or 7·3 persons per house in the urban areas.

There were 274,563 households in the district—261,399 in villages and 13,164 in the towns. That gives an average of 5,480 persons per 1,000 households or 5·5 persons per household in the rural areas and 6,378 persons per 1,000 households or 6·4 persons per household in the urban areas. The marginal table shows the developments in the size of household since 1921. The rural household has registered a marked increase since 1921 and is considerably bigger than the average State rural household (5·07). The urban household has also registered a marked increase since 1921.

Census year	Persons per 1,000 households of	
	Rural Population	Urban Population
1921 ..	4,692	4,270
1931 ..	5,032	4,704
1941 ..	5,337	5,309
1951 ..	5,480	6,378

Out of 5,480 persons in every 1,000 rural households, 2,697 are males and 2,783 are females. There is a female excess numbering 86 in every 1,000 households. Out of 6,378 persons in every 1,000 urban households 3,377 are males and 3,001 are females.

*The figure includes earning dependants according to their secondary means of livelihood while the figure of 80·7 in paragraph 12 includes earning dependants according to their principal means of livelihood and hence the difference.

There is a male excess numbering 376 in every 1,000 households. The type of migration will account for the difference.

Information regarding types of household and household relationships was also collected at this census with the help of a sample of about 4 per cent. According to this in every 1,000 sample households, there are 5,443 persons (males 2,752, females 2,691) in the district. The corresponding figure for the total count is 5,523.

The table below shows the distribution by size of 1,000 sample households :

Description	Small with 3 members or less	Medium with 4—6 members	Large with 7—9 members	Very large with 10 members or more
Total	**290**	**429**	**190**	**91**
Rural	286	431	191	92
Urban	375	391	165	69

The medium households are the dominant type in villages as well as in towns.

Family composition of 1,000 sample households is as follows :

			Number in 1,000 households
A	Heads of households	Males (married)	717
		Males (widowers)	214
		Females	69
	Wives of heads of households		717
			1,717
B	Sons of heads of households		1,108
	Daughters of heads of households		846
			1,954
C	Male relations of heads of households (other than sons)		667
	Female relations of heads of households (other than daughters)		1,015
			1,682
D	Persons unrelated to the heads of the households	Males	46
		Females	44
			90
	Grand total	..	*5,443*

Sons outnumber the daughters of the heads of households. The latter leave the houses of their parents after marriage. Female relatives (other than daughters) outnumber the male relatives (other than sons). Such females are generally those who become members of these households by marriage. (*Vide* Tables A-I and C-I)

Sex-ratio

15. In the district as a whole the sex-ratio was 1,023, i.e., there were 1,023 females to every 1,000 males. It varies among the tehsils. The lowest value was 991 in Jaunpur tehsil. The highest value was 1,053 in Kirakat tehsil. The ratio was 1,009 in Macchlishahr, 1,048 in Mariahu and 1,022 in Shahganj. The wide difference in Jaunpur tehsil is caused by Jaunpur city where the males largely exceed the females.

The sex-ratio is smaller in towns than in villages. For the district as a whole the sex-ratio in villages is as high as 1,032 while that in towns is 885.

The corresponding figure of sex-ratio for the district was 1,011 in 1921, 1,017 in 1931, 1,034 in 1941 and 1,023 in 1951.

Age-structure

16. The number in each age-group in the district is shown below as a percentage of the total number of all ages in the total, rural and urban population separately :

Age-group		Total population			Rural population		Urban population	
		Persons	Males	Females	Males	Females	Males	Females
Infants and young children	0—4	**14·7**	**7·8**	**6·9**	7·8	7·0	7·2	6·5
Boys and girls ..	5—14	**28·4**	**14·4**	**14·0**	14·4	14·1	14·1	12·7
Young men and women ..	15—34	**28·3**	**13·7**	**14·6**	13·4	14·5	17·8	16·1
Middle-aged men and women	35—54	**19·9**	**9·9**	**10·0**	9·9	10·1	10·2	8·3
Elderly persons	55 and over	**8·7**	**4·3**	**4·4**	4·3	4·5	3·8	3·3

It will be seen that the population is progressive. 43·1 per cent. of the population is of age under 15 and only 8·7 per cent. of it consists of elderly persons. Again it may be noted that proportionately larger numbers in the working ages (15—54) are found in the urban areas. This is the effect of migration of the workers to the towns from the villages many of whom are unaccompanied by their families. (*Vide* Table C-II)

Marital status

17. Out of every 10,000 persons in the district there are 5,004 males and 4,996 females.* Among them 2,310 males and 1,710 females are unmarried. If we reckon males and females together, the unmarried people are 40·2 per cent. of the population.

Of the males 46·2 per cent. were unmarried, 46·7 per cent. were married, and 7·1 per cent. were widowed or divorced. Among the females 34·2 per cent. were unmarried, 53·3 per cent. were married and 12·5 per cent. were widowed or divorced.

Of the married males 14·5 per cent. were below 15 years of age, 41·2 per cent. were of ages 15—34, 32·7 per cent. were of ages 35—54 and 11·6 per cent. were of ages 55 and over. Among females 18·4 per cent. were under 15 years of age, 49·7 per cent. were of ages 15—34, 26·3 per cent. were of ages 35—54 and 5·6 per cent. were of ages 55 and over.

Marriage is universal. Among males and females aged 35 years and over only 7·0 per cent. of the males and 3·2 per cent. of the females were found unmarried. Most of the females are married before they attain the age of 25. Child marriage is still prevalent. 15·3 per cent. of the males aged 0—14 and 23·3 per cent. of the females of ages 0—14 were returned as married. (*Vide* Table C-III)

Languages

18. Over 99·97 per cent. of the people of the district returned Hindi, Hindustani or Urdu as their mother-tongue. Among the other mother-tongues spoken the main are Punjabi (0·02 per cent.) and Bengali (0·01 per cent.). Of the 15 lakhs of population in the district only 568 or ·04 per cent. were bilingual (in an Indian language). Those whose mother-tongue is other than Hindi, Hindustani or Urdu are generally the migrants who are able to speak any of these as subsidiary languages. Persons returning Hindi, Hindustani or Urdu as secondary language were 415 or 73·1 per cent. of those who were bilingual in some Indian language. (*Vide* Table D-I)

Religion and special groups

19. Out of 10,000 population of the district, the number of people belonging to different religions is : Hindus 9,208, Muslims 787, Sikhs 4 and others 1 ; of 10,000 population in villages the numbers are : Hindus 9,375, Muslims 624 and others 1; of 10,000 urban population the numbers are : Hindus 6,370, Muslims 3,556, Sikhs 65, Christians 3 and others 6. Sikhs and Christians are generally concentrated in the urban areas of the district, as is the case in other parts of the State.

There were 258 thousands persons belonging to the Scheduled Castes in the district. Their number per 10,000 of population works out to 1,701. In villages they are 1,765 for every 10,000 and in the towns their number per 10,000 is only 614. There were 49 Anglo-Indians in this district. (*Vide* Table D-II and D-III)

Displaced persons

20. The number of displaced persons in the district at the census was 391 (males 204, females 187). Of them 81·6 per cent. have come from West Pakistan, 4·6 per cent. from East Pakistan and 13·8 per cent. from districts which could not be traced. (*Vide* Table D-V.)

Literacy

21. The percentage of male literacy was 18·3 in the district while that of female literacy was 2·0 only. In 1931, the male literacy was 9·6 per cent. only ; among females the percentage of literates in 1931 was only 0·6.† On January 1, 1951 there were 570 primary schools in the district with enrolment of 71,727 pupils. (*Vide* Table D-VII)

C—Explanatory Note on the Statistics

The statistics in this volume have been presented in three parts :

I—District Census Tables

II—Village, Town, Pargana and Thana Statistics

III—Miscellaneous Statistics

Parts I and II contain census data. A brief account of the system of sorting of census slips and preparation of tables and abstract therefrom is given below.

Part III contains statistics throwing light on special aspects of population and its growth. These have been derived from miscellaneous sources. Table 1, "Vital Statistics", has been prepared from the published and unpublished records of the Director of Medical and Health Services, Table 2, "Agricultural Statistics", from the

---

*The corresponding figures for the total count are 4,943 and 5,057.

†The number per mille (of the 10 per cent. sample population) of each sex aged 5 years and over who were returned as literates are as below:

Males		Females	
1951	1931	1951	1931
211	113	25	7

Annual Season and Crop Reports, Table 3, "Live-Stock, Agricultural Machinery and Implements", from the published figures of Live-Stock Census and Table 4, "List of Primary Schools", from information specially supplied by District Inspector of Schools.

Processing of census data

2. The census data presented here has been derived from the census slips by a process of sorting, compilation and tabulation. In previous censuses the slips were first sorted by religion and this division was maintained throughout so that all data were cross-tabulated by religion. This procedure has been abandoned at this census and substituted by a division based on economic characteristics of the population. The whole population has been divided into eight livelihood classes, four of which are of the agricultural category and four of non-agricultural category as follows :

Agricultural Classes—

I—Cultivators of land wholly or mainly owned ; and their dependants

II—Cultivators of land wholly or mainly unowned ; and their dependants

III—Cultivating labourers ; and their dependants

IV—Non-cultivating owners of land ; agricultural rent receivers ; and their dependants

Non-agricultural Classes—

V—Production (other than cultivation)

VI—Commerce

VII—Transport

VIII—Other services and miscellaneous sources.

Another special feature of the sorting of this census was the separation, from the very start, of slips of displaced persons and of a 10 per cent. random sample from the remainder. This has enabled the data of displaced persons to be presented separately while the 10 per cent. sample has been utilized for the preparation of Age Tables.

The slips of this census have been copied by Households into a National Register of Citizens, which has been prepared village-wise for rural areas and mohalla/ward-wise for urban areas. Table C-I is based on a 4 per cent. sample extracted from this Register.

Tracts

3. The slips were first sorted by villages for the preparation of the Primary Census Abstract. For the purpose of further sorting the State was divided into tracts consisting of (*a*) *rural tracts*, comprising the rural population of each tehsil, (*b*) *urban city tracts*, comprising the population of areas which had been declared as cities, (*c*) *urban non-city tracts*, comprising the population of urban areas of a district excluding areas declared as cities. Each tract was treated as a unit for sorting of slips. All data were compiled first by tracts and then by districts. This volume presents the tract-wise data for one district (with the exception of A and E Tables, which have been presented tehsil-wise), while the district-wise data for the whole State is contained in the following State volumes :

Part I-B—Subsidiary Tables

Part II-A—General Population Tables

Part II-B—Economic Tables

Part II-C—Age and Social Tables

Explanatory notes

4. Detailed explanatory notes are appended to each State table in the printed volumes of State tables. They apply to the tables in this volume also and should be referred to when necessary. A few notes of some of the tables are reproduced below :

Table A-I—Column 5 relating to "hamlets" has been introduced for the first time. Any distinctive cluster or agglomeration of houses has been treated as a "hamlet".

A clear distinction has been made in this census between a "House" and a "Household". A house is any human dwelling having a separate main entrance while a household is any commensal unit living in a census house. In previous censuses the figures under "Occupied Houses" used to be that of households, while the figures under columns 7—9 of the present tables refer to occupied census houses as distinct from households.

The Economic Tables—The Indian Census Economic Classification Scheme, 1951 together with the occupational division and sub-division adopted for this census are given in Part II-B of the Report.

Table B-I—Each of the eight livelihood classes mentioned above has been divided into three sub-classes, with reference to the economic status, as follows :

(*i*) Self-supporting persons ;

(*ii*) Non-earning dependants ; and

(*iii*) Earning dependants.

These were defined in the Instructions to Enumerators as follows :

> "A 'self-supporting person' is one who is in receipt of an income and that income is sufficient at least for his own maintenance. To be 'self-supporting' a person need not be able to support his family. All that is necessary is that he should be earning sufficient for his personal needs. For purposes of this question the person enumerated is the unit and not the family or household. Any one who is not a 'self-supporting' person in this sense is a 'dependant'. A 'dependant' may be either an 'earning dependant' or a 'non-earning dependant'. The test is whether he secures a regular (and not casual) income, even though it may be small. Such income may be in cash or kind ; it may be continuous or seasonal employment. When the income which he secures is not sufficient to support him that person is an 'earning dependant'. A person who does not earn any income either in cash or kind is a 'non-earning dependant'. Where two or more members of a family household jointly cultivate land and secure an income therefrom, each of them should be regarded as earning part of the income. None of them is, therefore, a non-earning dependant. Each of them should be classed either a 'self-supporting person' or an earning dependant' according to the share of income attributable to each. The same applies to any other business carried on jointly. The share of the income is what the head of household deems it to be. This does not mean that every one who works is necessarily a self-supporting person or an earning dependant. Thus, for instance, a housewife who cooks for the family, brings up the children or manages the household is doing very valuable work. Nevertheless, her Economic Status is that of a non-earning dependant, if she does not also earn an income, and should be recorded as such."

Economically active, Semi-active and Passive persons—All non-earning dependants are economically passive. They include persons performing house-work or other domestic or personal services for other members of the same family household. But they do not include "unpaid family workers" or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise.

All earning dependants are economically semi-active only. Though they contribute to the carrying of economic activities, the magnitude of their individual contribution is deemed to be too small to justify their description as economically active. (Their contribution to economic activity is, however, taken into account in the tabulation of data based on secondary means of livelihood.)

All self-supporting persons are ordinarily economically active with the exception of the following classes and groups :

(*a*) All self-supporting persons of Agricultural Class IV.

(*b*) The following groups of self-supporting persons who are included in Non-agricultural Class VIII and derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity) :

(i) Persons living principally on income from non-agricultural property ;

(ii) Persons living principally on pensions, remittances, scholarships and funds ;

(iii) Inmates of alms-houses and recipients of doles ;

(iv) Beggars and vagrants ; and

(v) All other persons living principally on income derived from non-productive activities.

Table B-II—For a self-supporting person who has more than one means of livelihood the *secondary means* of livelihood is the livelihood next in importance to his principal means of livelihood. For an earning dependant it is the source from which he secures his own income, where there are more than one subsidiary occupations only the one providing the largest income has been taken into account.

Table B-III—"Employers", "Employees" and "Independent Workers" have been defined as follows in the Instructions to Enumerators :

> An "employer" is only that person who has necessarily to employ other person in order to carry on the business from which he secures his livelihood. Thus if a person employs a cook or any other person for domestic services, he should not be recorded as an "employer" merely for that reason.
>
> An "employee" is a person who ordinarily works under some other person for a salary or a wage in cash or kind as the means of earning his livelihood. There may be persons who are employed as managers, superintendents, agents etc., and

in that capacity control other workers. Such persons are also employees only and should not be regarded as employers.

An "independent worker" means a person who is not employed by any one else and who also does not employ anybody else in order to earn his livelihood. (Sweepers, *dhobies, kahars* etc., who work for several masters are independent workers. If, however, any of them accepts whole-time employment under one master he becomes "employee". Daily wage-earners who work for different masters are likewise independent workers. But if they accept employment under one master, e.g., under a factory, they become "employees".)

Tables C-II, C-III, C-IV and C-V—The figures presented in these tables are based on single year age returns and have not been smoothed.

Tables D-V (i) and(ii)—For the purpose of these tables a "displaced person" has been defined as follows :

"A displaced person means any person who has entered India having left or being compelled to leave his home in Western Pakistan on or after the 1st March, 1947, or his home in Eastern Pakistan on or after the 15th October, 1946, on account of civil disturbances or on account of the setting up of the two Dominions of India and Pakistan."

PART I

DISTRICT CENSUS TABLES

A—GENERAL POPULATION TABLES

A-I—Area, Houses and Population

Serial number	Tehsil	Area in square miles	Villages	Hamlets	Towns	Occupied houses		
						Total	Rural	Urban
1	2	3	4	5	6	7	8	9
	District Total	***1,559***	***3,188***	***7,900***	***7***	***234,752***	***223,204***	***11,548***
1	Jaunpur	288	728	1,178	2	**51,662**	44,352	7,310
2	Kirakat	246	465	855	1	**38,621**	38,299	322
