DISTRICT CENSUS HANDBOOK

1951

BANDA DISTRICT

FOREWORD

Several States, including Uttar Pradesh, have been publishing village statistics by districts at each census. In 1941 they were published in U. P. under the title "District Census Statistics" with a separate volume for each district. In the 1951 census, when the tabulation has been more elaborate than ever in view of the requirements of the country, the district-wise volume has been expanded into a "District Census Handbook", which now contains the District Census Tables (furnishing data with break-up for census tracts within the district), the District Index of Non-agricultural Occupations, agricultural statistics from 1901-02 to 1950-51 and other miscellaneous statistics in addition to the usual village population statistics. The village population statistics also are given in an elaborate form giving the division of the population among eight livelihood classes and other details.

2. It may be added here that a separate set of district-wise volumes giving only population figures of rural areas by villages and of urban areas by wards and mohallas and entitled "District Population Statistics" has already been published. This separate series was necessitated by the urgent requirements of the U. P. Government for elections to local bodies.

3. The number of District Census Handbooks printed so far is twenty-five. Special arrangements for speeding up the printing have now been made and it is hoped that the remaining Handbooks will be printed before the end of 1955.

RAJESHWARI PRASAD, I.A.S.,
Superintendent, Census Operations,
Uttar Pradesh.

RAMPUR:
April 30, 1955.

INTRODUCTION

A—THE DISTRICT

1. The district of Banda forms the most easterly district of Bundelkhand. The Yamuna forms the northern boundary and separates it from Fatehpur and Allahabad. On the east it joins the Allahabad district and to its south, south-west and south-east lies the State of Vindhya Pradesh. On the west the boundary is generally formed by the Ken river which separates it from the district of Hamirpur; but tehsil Banda extends beyond the river. By the recent transfers of enclaves on account of "The Provinces and States (Absorption of Enclaves) Order 1950" it lost 34·2 square miles to Vindhya Pradesh; it gained 66 square miles from the former States of Ajaigarh, Baraundha, Bhainsaunda, Taraon, Pahra and Paldeo. The district as now constituted has a total area of 2,965 square miles and its population in 1951 was 7·9 lakhs. It has 5 tehsils, 5 parganas and 18 thanas.

Topography

2. The district falls into two sharply defined portions. One of these consists of the elevated plateau called *patha*, situated in the Vindhyan plateau in the south of Mau and Karwi tehsils. A considerable portion of the plateau or the *patha* is included in tehsil Karwi and a smaller portion in Mau. This tract is largely covered with jungle and there is scarcity of water in it. Outside the forest and scrub jungle, there is a considerable area covered with grass. The soil is entirely disintegrated sandstone overlying substratum of rock and is never very deep. It is incapable of continuous tillage, and the crops consist mainly of the hardiest and most inferior classes. This tract is generally pastoral rather than agricultural. The other tract comprising the lowland of alluvium which reaches to the foot of the flat-topped range of hills, where usually a short steep slope, strewn with massive boulders of rock, leads up to a sheer escarpment of sandstone, locally known as the *ari* and only accessible by well-defined passes known as *ghatis*. The alluvium is Gangetic and overlies in varying degrees of thickness, at any rate over a large part of the district. It increases in thickness as Yamuna is approached. This lowland is again divisible in two parts. The first consisting of the country lying along the foot of the hills and stretching from the Mau tehsil in the east to the Girwan tehsil in the west, forms a rough triangle bounded by the Yamuna and Bagain rivers on two sides and the first Vindhyan scarp on the third. The second tract lying between the Bagain, Ken and the Yamuna comprises, with the exception of the trans-Ken portion, the reminder of the district. The general feature of the first division is a succession of narrow *doabs* formed by the numerous deep channeled streams that carry off the drainage of the hills to the Yamuna and further west to the Bagain. Each *doab* generally contains a complete section of the Bundelkhand soils. Between the streams lies a central plateau of *mar* and *kabar*; as this slopes down on either side, it changes to *parua* or *sigaun* and ultimately to *rakar* or gravelly soil along the banks of the streams. The second lowland tract is roughly triangular in shape and is a gentle sloping plain fringed along the river banks by ravines. The best soil is found in a level expanse of *mar* lying to the north of Banda town. The whole of this portion of the lowland is the most valuable part of the district.

The plain portion of the district is threaded by a number of rivers and streams carrying off the drainage from the higher ground, whose course, as is usually the case in this part of the country, is marked by belts of varying width of broken raviny land the predominating soil in which is "*rakar*" or diluviated stony soil. The course taken by the Bagain is of vital importance in determining the physical characteristics of this part of the district. By flowing in a direction roughly parallel to that of the higher ground, it has to a large extent preserved from erosion the central plain of the district. The area of the plain lying between the Ken and the Yamuna and bordered on the south by the Bagain is broken only by sluggish streams. On the other hand the land lying between the Bagain and the low hills is cut into a series of *doabs* by a succession of mountain streams which have deeply eroded the surrounding country. The distance between these streams is frequently so small that there is little level ground or of the better classes of soils. There are no lakes or *jhils* but there are numerous *talaos* in the district some of which are of considerable size.

Soils

3. The soils of the lowland consist partly of Gangetic alluvium and partly of the detritus of Deccan trap. They are the well known soils *mar* and *kabar* and *parua* and *rakar* much of the last named being only deteriorated black soil. *Mar* is a rich dark coloured friable soil easily recognisable from the large number of minute *kankar* nodules in its texture. It contains a high proportion of organic matter, which enables it to be cropped continuously without manure. It is extraordinarily retentive of moisture. While it is able to produce good crop with moderate rain, in seasons of heavy rainfall it becomes water-logged and most difficult to work. *Kabar* is a stiff tenacious soil, with a large percentage of clay and deficiency of sand. It presents extremely hard surface to plough, drying very quickly and caking into hard blocks, and being in periods of heavy rainfall too tenacious and miry to be worked at all. *Parua* is a light sandy soil, at its best a fair kind of loam and at its worst extremely dry and sandy and in every case depending more on the care and labour with which it is worked than on any natural fertility. *Rakar* is usually found on the edge of ravines or where there is a slope in the ground. It is commonly divided into *moti* and *patli*, the former being deteriorated *mar* or *kabar*, and the latter deteriorated lighter soil. Of the alluvial soils, the two recognised varieties are *kachhar* and *tari*. The latter practically means all land that is liable to fertilising deposits from the river, however small, and not only the pure alluvium which is deposited along the river's edge. *kachhar*, on the other hand, is land lying higher up the shelving banks which slope down to the water, and while it does not receive so much silt is less liable to be cut away by the river.

Classification of area

4. The figures of classification of area during the last fifty years are given in Table 2 of Part III of this volume. The proportion of area under the various categories works out as follows for 1950-51 :

Particulars	Actual figures (in acres)	Percentage
Cultivated area	936,777	49·1
Cultivable waste (excluding current fallow)	502,779	26·3
Current fallow	132,736	7·0
Forest	76,778	4·0
Area not available for cultivation of which—	259,616	13·6
(*a*) *Covered with water*	*57,304*	*3·0*
(*b*) *Under sites, roads and buildings*	*31,167*	*1·6*
(*c*) *Barren*	*171,145*	*9·0*

The figure in the above table regarding culturable waste taken from the Season and Crop Report is, however, misleading. The State Agriculturel Department conducted in 1949-50 a detailed enquiry through the District Officers regarding the nature of this area in each district. The following analysis of the area resulted from this enquiry :

Particulars	Area (in acres)	Percentage
Total culturable waste (A+B+C)	**458,431**	**100**
A—Area under culturable waste land not available for immediate cultivation ..	293,554	64·04
(i) Forest under any legal enactment	20,134	4·39
(ii) Groves	20,982	4·58
(iii) Forests of timber trees	..	..
(iv) Thatching of grasses, shrubs and bushes	85,360	18·62
(v) Land kept for grazing	167,078	36·45
B—Area under culturable waste land available for immediate cultivation but which could not be cultivated	105,034	22·91
Of which due to—		
(i) *Kans* growth	8,603	1·88
(ii) Threshing floors	3,194	0·70
(iii) Malaria	..	..
(iv) Floods	227	0·05
(v) Lack of drains	50	0·01
(vi) Lack of water	19,436	4·24
(vii) Distance from *abadi*	21,060	4·59
(viii) Damage from wild animals	32,512	7·09
(ix) Other causes	19,952	4·35
C—Area under culturable waste land that can be brought under immediate cultivation after some improvements besides the area given against "B" ..	59,843	13·05

From the above it will appear that of the total area recorded as culturable waste, only 13·1 per cent. was really capable of being brought under immediate cultivation after some improvements.

Thus the land area cultivated and culturable including current fallow *per capita* works out to 199·0 cents of which 135·3* cents have already been brought under cultivation and only 7·6 cents can be further brought under the plough after some improvements.

Climate and rainfall

5. The climate on the whole is not unhealthy. The cold weather is restricted and the direct rays of the sun are felt throughout the year to an extent unknown in *Doab*. The cold is less intense and frost is rare. Though the heat in the day is often excessive, the nights are cooler than elsewhere and in the rains the climate is pleasant and moderately healthy. These remarks, however, refer only to those parts of the district which are elevated and well drained. In the black soil plains the water accumulates in the rains and the atmosphere is damp and unhealthy.

The rainfall is exceedingly capricious both in its total amount and its distribution over the year and over the district. The average for the last quinquennium was about 37 inches. During the last forty-five years the rainfall has been less than 25 inches in only five years and

* This figure also includes the area classed as current fallow.

has been usually over 30 inches. The easterly portions of the district suffer less than the westerly. Girwan receives most rain and Banda receives the smallest rainfall of all the tehsils. An excessive rainfall renders it impossible to plough the black soils, or, if the excessive fall occurs later in the season it destroys the crops which have been sown. In these circumstances "*kans*" gets a hold on the soil which it usually does not relax for a long series of years. In such seasons the mortality both among men and cattle increases to an alarming extent and the village communities are left with broken and enfeebled resources to contend against a scourge which their unexhausted energies could hardly hope to combat successfully. On the other hand deficiency results in drought. If the monsoon rain comes in light, but regular, bursts and lasts till September the effect is at once apparent in the rapid extension of the area under the plough.

Irrigation

6. Irrigation is derived from canals, reservoirs, wells and other sources. In 1950-51 the irrigated area from canals covered 94·1 per cent., from wells 1·7 per cent., from reservoirs 3·6 per cent. and from other sources 0·6 per cent.

Crops

7. More acreage is sown under *rabi* crops than under *kharif* crops. The area under *kharif* in 1950-51 was 434,873 acres, that under *rabi* 615,905 acres and that under *zaid* 464 acres. *Juar* is the main crop of *kharif* followed by *arhar*. The principal *rabi* crop is gram.

B—Analysis of the Statistics

Population: General distribution and density

1. The table below shows the two basic figures– land area and population—and the derived figures of land area *per capita* :

Tehsil	Population (in lakhs)	Density (number per square mile)	Land area (in lakhs of acres)	Land area *per capita*
Banda	1·89	308	3·93	2·08
Baberu	1·86	304	3·90	2·10
Naraini (Girwan)	1·56	298	3·35	2·15
Karwi	1·82	222	5·26	2·89
Mau	0·77	244	2·03	2·62
Banda district	*7·90*	*274**	*18·47*	*2·34*

Growth of population

2. The population of the district in 1951 was 27·6 per cent. higher than what it was fifty years ago. Compared to this the increase in population of the State during the corresponding period has been 30 per cent. The table below exhibits the variation in the total, rural and urban population for the last five decades:

Census year	Population			Variation		
	Total	Rural	Urban	Total	Rural	Urban
1901 ..	**619,186**	578,534	40,652			
1911 ..	**645,222**	609,199	36,023	**+26,036** (+4·2)	+30,665 (+5·3)	—4,629 (—11·4)
1921 ..	**602,828**	562,498	40,330	**—42,394** (—6·6)	—46,701 (—7·7)	+4,307 (+12·0)
1931 ..	**640,848**	597,258	43,590	**+38,020** (+6·3)	+34,760 (+6·2)	+3,260 (+8·1)
1941 ..	**740,219**	686,931	53,288	**+99,371** (+15·5)	+89,673 (+15·0)	+9,698 (+22·2)
1951 ..	**790,247**	731,445	58,802	**+50,028** (+6·8)	+44,514 (+6·5)	+5,514 (+10·3)

This district though seventh in order of area stands forty-second in the State in respect of population. The density of the district is much below the average density of the State which is 557. It is one of the districts of the tract known as Bundelkhand which is broken up by low rocky hills covered with stunted trees and jungle. This accounts for its low density. The rural density of the district is 254 per square mile, density of the rural parts of the tehsils are : Banda 260, Baberu 304, Naraini 278, Karwi 207 and Mau 230. Karwi tehsil has a lower density owing to its large forest areas. (*Vide* Tables A-I and E).

A noteworthy feature is that between 1901 and 1921 the population of the district recorded a decrease of only 2·6 per cent. when that of the State decreased by 4·0 per cent. Due to the heavy mortality from influenza epidemic in 1918-19 the population decreased heavily during 1911—21. But during the decade prior to it the district had escaped the epidemics of malaria and plague and there was an increase in its population when the State had suffered a decrease. Abnormal deaths did not occur or were prevented from occurring in the post-1921 period and the population of the district recorded an increase of 31·1 per cent. since 1921 against an increase of 35·5 per cent. in the population of the State during the same period.

*According to the area supplied by the Surveyor General of India the density is 267.

The variation in the population of the tehsils during 1941—51 is shown in the marginal table. Baberu has the larger increase. Naraini and Banda have also shown large increases. The increases in tehsils Karwi and Mau are below the district average.

Tehsil	Percentage variation 1941—51
Banda district	+6·8
Banda	+8·0
Baberu	+9·7
Naraini (Girwan)	+8·9
Karwi	+2·5
Mau	+3·2

Vital statistics

3. Births and deaths mainly account for the trends in population growth. Migration is also a factor though of lessor importance. The following table gives the mean decennial registered birth and death-rates and the calculated natural increase rates and population growth-rates of the last three decades for the district as a whole and for its rural and urban areas :

	Total	Rural	Urban
Mean decennial birth-rate			
1941—50	23·8	24·1	19·6
1931—40	32·3	33·3	19·9
1921—30	31·4	32·7	14·0
Mean decennial death rate			
1941—50	17·3	17·4	17·1
1931—40	19·0	19·6	12·1
1921—30	25·8	26·7	13·8
Mean decennial rate of natural increase			
1941—50	6·5	6·7	2·5
1931—40	13·3	13·7	7·8
1921—30	5·6	6·0	0·2
Mean decennial growth-rate			
1941—50	6·5	6·3	9·8
1931—40	14·4	13·9	20·0
1921—30	6·2	6·1	7·8

There are large omissions in the registration of births as well as deaths and so the above rates do not represent the true picture at all. They may, however, be taken to be roughly indicative of the trends. Both birth and death-rates have fallen during the last decade.

The figures of natural increase and growth-rate suggest that the district did not suffer any loss of population on balance of migration during the last three decades.

The average yearly mortality from various causes in the district during 1941—50 was as follows :

Causes	Number of deaths	Percentage of total deaths
Fever	9,758	73·5
Dysentery and diarrhoea	63	0·5
Respiratory diseases	91	0·7
Plague, cholera and small-pox	1,387	10·5
Others	1,969	14·8

As in the rest of the State 'fever' is responsible for a majority of the deaths. But fever covers a number of ailments which the reporters are unable to identify. Deaths from plague, cholera and small-pox have been quite high. (*Vide* Table 1, Part III of this volume)

Migration

4. About 94·3 per cent. of the people enumerated in the district at the census of 1951 were born there, 3·1 per cent. were born in the other districts of the State, 2·5 per cent. were born in other parts of India and only 0·1 per cent. came from other countries. Of the immigrants from the districts of the State as many as 9,045 (males 2,334, females 6,711) are from the other district of the same natural division and 15,217 (males 5,490, females 9,727) are from other parts of the State. Most of the migration from the neighbouring districts is marriage migration. Of 19,270 immigrants from the adjacent States 16,650 (males 4,252, females 12,398) are from Vindhya Pradesh and 1,330 (males 416, females 914) are from Madhya Pradesh. The sex proportion suggests that most of this migration is also marriage migration.

Of the immigrants who have come from territories beyond India 719 (males 568, females 151) were born in Pakistan and only 27 (males 9, females 18) had their birth place in other territories. The Pakistan-born are the displaced persons who numbered 900 in the district. Of the immigrants born in other territories 9 (males 6, females 3) were Nepal-born, 9 females were Americans, 5 (male 1, females 4) were Burmese and the rest were of other nationalities.

Of the 21 non-Indian nationals 8 were Afghans, 11 were Newzealanders and 2 were Americans.

Unfortunately the figures of emigration are not available. According to the vital statistics, however, the district appears to have gained about 3,600 persons during 1921—30, 7,100 persons during 1931—40 and 800 persons during 1941—50 on the balance of migration. But it should be borne in mind that there is an element of registration error in the figures and they are only indicative of trends. (*Vide* Tables D-IV and D-VI)

Decline of cultivation *per capita*

5. We may now analyse the growth of population in the district during the last thirty years in relation to the growth of cultivation during the same period. The figures are shown in the marginal table. (Figures of area sown under census years are quinquennial averages for the five years ending with the crop year immediately preceding the census year). It is obvious that cultivated area *per capita* has gone down from 138·5 cents in 1921 to 118·4 cents in 1951. The magnitude of this drop is one-seventh of the 1921 level. It seems that (other things being equal) every man, woman and child must expect to get less food and agricultural produce from the land in 1951 than in 1921.

Census year	Population*	Net area sown (in acres)	Area of cultivation *per capita* (in cents)
1921 ..	613,114	848,599	138·5
1931 ..	625,771	816,142	130·5
1941 ..	722,568	895,090	123·9
1951 ..	790,247	935,594	118·4

Double cropped area *per capita*

6. It may be examined whether this shortage has been compensated by an increase in the yield per acre. Increase in yield can be brought about by more double cropping, more irrigation, better fertilisation and better culture. The average (quinquennial) area sown more than once was 105,952 acres in 1921 ; it slightly decreased to 102,302 acres in 1931 ; it again increased to 98,990 acres in 1941 and further increased to 136,198 acres in 1951. The figures of double crop cultivation *per capita* in cents are as below :

Particulars	Quinquennial averages for the year preceding 1951	1941	1931	1921
Double crop cultivation *per capita* in cents	17·2	13·7	16·4	17·3
Unirrigated double crop cultivation *per capita* in cents ..	13·3	12·3	15·4	16·6
Irrigated double crop cultivation *per capita* in cents ..	3·9	1·4	1·0	0·7

The double crop cultivation decreased from 1921—41. It recorded an increase during 1941—51, but has only touched the 1921 level.

Irrigated area *per capita*

7. The average area irrigated in the district was 45,214 acres in 1921. The figures were 54,408 acres in 1931, 93,514 acres in 1941 and 122,413 acres in 1951. The average area irrigated more than once was 4,376 acres in 1921, 6,124 acres in 1931, 9,993 acres in 1941 and 31,021 acres in 1951.

The figures of irrigation *per capita* are shown in the table below :

Particulars	Years 1951	1941	1931	1921
Irrigated single crop cultivation *per capita* in cents ..	11·6	11·6	7·7	6·7
Irrigated double crop cultivation *per capita* in cents ..	3·9	1·4	1·0	0·7

The irrigated double crop area has been increasing but that under single crop cultivation is stationary since 1941.

Cropped area

8. During the quinquennium 1916—21, 91·3 per cent. of the cropped area was under food crops and only 8·7 per cent. under non-food crops. Thirty years later, during 1946—51 the cropped area under food crops was 95·5 per cent. and that under non-food crops only 4·5 per cent.

The proportionate area under different crops in the district between 1911 and 1951 was as below :

Quinquennial average of	Total cropped area	Percentage of cropped area under Rice	Wheat	Barley	Juar	Bajra	Gram	Others
1911—16	913,114	5·9	7·4	2·7	16·5	4·7	38·8	24·0
1916—21	919,877	8·4	9·7	2·5	16·8	4·1	37·3	21·2
1921—26	955,303	8·8	13·0	2·1	15·7	3·8	38·7	17·9
1926—31	931,318	8·8	14·0	2·8	15·9	3·2	39·0	16·3
1931—36	952,703	6·3	13·9	2·7	17·3	3·6	38·5	17·7
1936—41	1,004,035	9·5	15·4	2·8	15·6	3·9	35·7	17·1
1941—46	1,064,653	10·1	14·5	2·6	17·3	4·2	35·6	15·7
1946—51	1,066,354	12·9	17·0	3·4	14·8	2·9	36·2	12·8

*The figures of population of the various censuses relate to the then lay-out of the district.

Til, cotton and opium are the three non-food crops which have gone out of cultivation. In 1901-02 the area under cotton crop was 67,378 acres ; in 1950-51 it was only 512 acres. In 1901-02 the area under *til* was 42,620 acres ; in 1950-51 it was only 19,832 acres. In 1901-02 the area under opium was 1,089 acres ; in 1950-51 the area under it was *nil*. The area under sugar-cane has, however, increased. It was only 1 acre in 1901-02 and in 1950-51 it was 2,661 acres.

Live-stock, ploughs and carts

9. Live-stock in this country live for a large part of the year on by-products of agriculture supplemented by green fodder crops. They have, therefore, to be correlated not only with the grazing available but also with the total area under cultivation which carries a major portion of the burden of supporting the cattle population.

As will appear from Table 3 of Part III the total number of cattle and buffaloes, which had been decreasing between 1935 and 1944 has during 1944—51 increased from about 6·7 lakhs to about 8·3 lakhs.

The number of working cattle and buffaloes in the district which had decreased from 1935 to 1944 has again increased during 1944—51. It is now 214 thousands in 1951. This number of working cattle appears to be governed by the number of ploughs and carts. The number of ploughs has gone up from 78 thousands in 1944 to 94 thousands in 1951 apparently due to the progressive fractionalisation of holdings. The number of carts started rising since 1920 and now stands at about 35,000. The average net cultivated area per plough works out to 9·95 acres in 1951 as against 11·97 acres in 1920 and the average net cultivated area per pair of working cattle works out to 8·76 acres in 1951 as compared with 9·85 acres in 1935.

Breeding cows and she-buffaloes are also increasing since 1935 and they were 341·7 thousands in 1951. The cows and female buffaloes in milk per 1,000 of human population were 119 and 59 respectively. Owing to the poor milk yield the share of milk per head is only a few ounces per day.

The number of sheep is nearly stationary at about 27,000. Goats are decreasing since 1935. They were 247 thousands in 1935, 166 thousands in 1944 and 138 thousands in 1951. The reduction during 1944—51 alone has been about 17·1 per cent.

Horses and ponies had decreased between 1935 and 1944 but were stationary at about 11,000 since then. The number of donkeys has increased from 1,454 in 1944 to 1,858 in 1951.

Poultry continues to be steady at 11,000.

Distributed on 1,000 of human population the figures of the main categories of live-stock in 1951 are as follows :

Cattle	Buffaloes	Sheep	Goats	Poultry	Others
796	260	36	174	13	33

10. To sum up, the population of the district is growing up at the biological natural rate since 1921 but on the other hand, the land area *per capita* has decreased. The magnitude of the absolute numerical increase in relation to the practically stationary acreage under cultivation is, therefore, a great strain on the economy of the district. Unfortunately the district has also got large precarious areas.

Villages and towns

11. The district has 1,187 villages and 6 towns. Out of the 7·9 lakhs of people who were counted at the census of 1951, 7·3 lakhs were found in villages and only 0·6 lakhs in towns, i.e., there are as many as 926 people per 1,000 of population who live in the rural areas and only 74 of them live in towns. The corresponding figures for the State as a whole are : rural 864, urban 136.

The rural population per inhabited village is 616. But the villages do not necessarily comprise of a single compact size. There are 2,976 hamlets in the district. The population per hamlet is only 246. The medium-sized village—with inhabitants numbering between 500—2,000—is the dominant type in the district. 59·7 per cent. of people live in such villages ; 21·4 per cent. live in villages of population under 500 ; 18·2 per cent. live in villages of population between 2,000—5,000 ; and only 0·7 per cent. live in villages of population above 5,000.

Towns vary in number of inhabitants even more widely than villages. 51·6 per cent. of the urban population live in the town of population above 20,000 (Banda M. B.) ; 18·3 per cent. live in the town of population between 10,000—20,000 (Karwi) ; 13·5 per cent. live in the town of population between 5,000—10,000 (Atarra); and 16·6 per cent. live in towns of population under 5,000 (Rajapur, Naraini and Chitrakut). The population of Atarra increased by 33·7 per cent. since 1941 and that of Banda (M. B.) by 12 per cent. Karwi, Rajapur and Naraini are declining towns. (*Vide* Tables A-III and A-IV)

12. Out of the total population of 790,247 (rural 731,445, urban 58,802) 670,036 (rural 658,548, urban 11,488) or 84·8 per cent. depend on agriculture for their means of livelihood and 120,211 (rural 72,897, urban 47,314) or 15·2 per cent. depend on non-agricultural sources. The following table gives the distribution of 100 persons of the total, rural and urban population of the district under the different livelihood classes: **Occupations: Livelihood pattern**

Description	Agricultural classes					Non-agricultural classes				
	Total	I	II	III	IV	Total	V	VI	VII	VIII
Total	**84·8**	**59·2**	**9·9**	**14·4**	**1·3**	**15·2**	**5·5**	**3·5**	**0·8**	**5·4**
Rural	90·0	63·0	10·4	15·4	1·2	10·0	4·4	2·0	0·5	3·1
Urban	19·5	11·8	3·4	3·0	1·3	80·5	18·4	22·6	5·6	33·9

It is obvious that this district is one of the predominantly agricultural districts of the State. Here as many as 84·8 per cent. of the people depend on agriculture as against 74·2 per cent. in the whole State.

Of the total population of the district 393,549 persons (males 164,372, females 229,177) or 49·8 per cent. have been classified as non-earning dependants. The percentage of non-earning dependants in the agricultural population works out to 48·8 and that among the non-agricultural classes to 55·5. It will be observed that in the main they consist of women. The male non-earning dependants are mostly children. 161,798 persons (males 37,259, females 124,539) or 20·5 per cent. of the population are earning dependants. Among agriculturists their proportion is 22·3 per cent. and among non-agriculturists they form only 10·2 per cent. Agriculture is a family occupation and it provides work to women and grown up children in the family. The remaining 234,900 persons (males 209,170, females 25,730) or 29·7 per cent. of the population consists of self-supporting persons. Their proportion among agriculturists is 28·9 per cent. and among non-agriculturists 34·3 per cent. Of the self-supporting persons 193,613 males 173,325, females 20,288) belong to agricultural classes and 41,287 (males 35,845, females 5,442) to non-agricultural classes. On an average a self-supporting person maintains two non-earning dependants.

Of the 41,287 self-supporting persons belonging to the non-agricultural classes 1,571 persons (rural 1,171, urban 400) earn their livelihood from non-productive sources. Of the remaining 39,716 self-supporting persons (rural 23,851, urban 15,865), 776 (rural 407, urban 369) or 2·0 per cent. are employers, 7,704 (rural 4,417, urban 3,287) or 19·4 per cent. are employees and 31,236 (rural 19,027, urban 12,209) or 78·6 per cent. are independent workers.

The distribution of 10,000 self-supporting persons of non-agricultural occupations, classified according to the Economic Divisions is as follows :

Name of division	Self-supporting persons by divisions
All Industries and Services	**10,000**
0—Primary industries not elsewhere specified	238
1—Mining and quarrying	101
2—Processing and manufacture—foodstuffs, textiles, leather and products thereof	1,500
3—Processing and manufacture—metals, chemicals and products thereof	243
4—Processing and manufacture—not elsewhere specified	1,439
5—Construction and utilities	489
6—Commerce	2,068
7—Transport, storage and communications	552
8—Health ,education and public administration	1,136
9—Services not elsewhere specfied	2,234

There is no important large scale industry in the district. Among the cottage industries the principal are *tatpa tti*, basket making and *chick*.

Variation in the livelihood pattern

13. In the district the proportion of population depending on agriculture for their livelihood was 84·2* per cent. in 1951. Unfortunately the agricultural proportion has been increasing ever since 1901 when the figure stood at 69·8 per cent. It was 74·5 per cent. in 1911 and 77·9 per cent. in 1921. The actual number of persons who depend on agriculture has increased from 477,805 in 1921 to 665,136 in 1951 or by 39·2 per cent. while the cultivated area has remained almost unchanged. This has resulted in the progressive fragmentation and sub-division of holdings and pressure on impoverished soil. There appears to have been a gradual decline in village arts and handicrafts. The cumulative result is a fall in the proportion of workers and a corresponding rise in the dependency. The proportion of workers in the total population in 1951 was only 50·2 per cent. (agricultural 42·8 per cent., non-agricultural 7·4 per cent.) against 66·6 per cent. (agricultural 52·5 per cent., non-agricultural 14·1 per cent.) in 1921. The proportion of non-earning dependants has consequently increased from 33·4 per cent. (agricultural 25·4 per cent., non-agricultural 8·0 per cent.) in 1921 to 49·8 per cent. (agricultural 41·4 per cent., non-agricultural 8·4 per cent.) in 1951. All this is an index of increasing unemployment and under-employment. It is only by the diversion of the population to cottage and other industries that the present severe disequilibrium in the economy of the district can be redressed. (*Vide* Tables B-I, B-II and B-III)

Houses and households

14. There were 135,599 occupied houses in the district—123,225 in villages and 12,374 in towns. That gives an average of 5,936 persons per 1,000 houses or 5·9 persons per house in the rural areas and 4,752 persons per 1,000 houses or 4·8 persons per house in the urban areas.

There were 162,188 households in the district—148,188 in villages and 14,000 in towns. That gives an average of 4·925 persons per 1,000 households or 4·9 persons per household in rural areas and 4,189 persons per 1,000 households or 4·2 persons per household in the urban areas. The marginal table shows the developments in the size of the household since 1921. The rural household has registered a marked increase since 1921 but it is still less than the average State rural household (5·07). The urban household had also registered an increase till 1941 but shows a considerable decrease since then.

Census year	Persons per 1,000 households of	
	Rural population	Urban population
1921	4,250	4,309
1931	4,505	4,415
1941	4,847	4,739
1951	4,925	4,189

Out of 4,925 person in every 1,000 rural households 2,551 are males and 2,374 are females. There is a male excess numbering 177 in every 1,000 households. Out of 4,189 persons in every 1,000 urban households 2,240 are males and 1,949 are females. There is a male excess numbering 291 in every 1,000 households. The type of migration will account for the difference.

Information regarding types of household and household relationships was also collected at this census with the help of a sample of about 4 per cent. According to this, in every 1,000 sample households there are 4,793 persons (males 2,564, females 2,229) in the district. The corresponding figure for the total count is 4,862.

The table below shows the distribution by size of 1,000 sample households :

Description	Small with 3 members or less	Medium with 4—6 members	Large with 7—9 members	Very large with 10 members or more
Total	**352**	**430**	**165**	**53**
Rural	351	431	165	53
Urban	379	397	161	63

Medium type households are the dominant type in the villages as well as in the towns.

*The figure includes earning dependants according to their secondary means of livelihood while the figure of 84·8 in paragraph 12 includes earning dependants according to the principal means of livelihood and hence the difference.

Family composition of 1,000 sample households is as follows:

			Number in 1,000 households
A	Heads of households	Males (married)	641
		Males (widowers)	298
		Females	61
	Wives of heads of households		641
			1,641
B	Sons of heads of households		1,020
	Daughters of heads of households		723
			1,743
C	Male relations of heads of households (other than sons)		536
	Female relations of heads of households (other than daughters)		764
			1,300
D	Persons unrelated to the heads of the households	Males	69
		Females	40
			109
	Grand Total		4,793

Sons outnumber the daughters of the heads of households. The latter leave the homes of their parents after marriage. Female relatives (other than daughters) outnumber the male relatives (other than sons). Such females are generally those who become members of these households by marriage. (*Vide* Tables A-I and C-I)

Sex-ratio

15. In the district as a whole the sex-ratio was 924, i.e., there were 924 females to every 1,000 males. It varied among the tehsils. The lowest value was 909 in Karwi tehsil. The highest value was 953 in Baberu tehsil. The ratio was 913 in Banda, 925 in Naraini and 914 in Mau.

The sex-ratio is smaller in towns than in villages. For the district as a whole the sex-ratio in villages is as high as 928 (mainly due to male migration), while that in towns is only 867.

The corresponding figure of sex-ratio for the district was 950 in 1921, 934 in 1931, 934 in 1941 and 924 in 1951. The sex-ratio is decreasing steadily since 1921.

Age-structure

16. The number in each age-group in the district is shown below as a percentage of the total number of all ages in the total, rural and urban population respectively:

Age-group		Total population			Rural population		Urban population	
		Persons	Males	Females	Males	Females	Males	Females
Infants and young children	0—4	13·3	6·8	6·5	6·8	6·6	6·8	5·7
Boys and girls	5—14	27·8	14·7	13·1	14·8	13·2	13·4	11·3
Young men and women	15—34	32·3	17·0	15·3	16·9	15·3	18·5	15·0
Middle-aged men and women	35—54	20·2	10·9	9·3	10·8	9·3	12·6	9·1
Elderly persons	55 and over	6·4	3·1	3·3	3·0	3·3	4·0	3·6

It will be seen that the population is progressive. 41·1 per cent. of the population is of age under 15 and only 6·4 per cent. of it consists of elderly persons. Again, it may be noted that proportionately large numbers in working ages (15—54) are found in the urban areas. This is the effect of migration of male workers to the towns from the villages many of whom are unaccompanied by their families. (*Vide* Table C-II)

Marital status

17. Out of every 1,0000 persons in the district there are 5,255 males and 4,745 females*. Among them 2,409 males and 1,573 females are unmarried. If we reckon males and females together, the unmarried people are 39·8 per cent. of the population.

Of the males 45·8 per cent. were unmarried, 47·4 per cent were married and 6·8 per cent. were widowed or divorced. Among the females 33·1 per cent. were unmarried, 52·3 per cent. were married and 14·6 per cent. were widowed or divorced.

Of the married males 10·3 per cent. were of ages below 15, 50·6 per cent. of ages 15—34, 32·6 per cent. of ages 35—54 and 6·5 per cent. of ages 55 and over. Among the married females 17·4 per cent. were of ages below 15, 55·1 per cent. of ages 15—34, 24·8 per cent. of ages 35—54 and only 2·7 per cent. elderly women.

*The corresponding figures for the total count are 5,198 and 4,802.

Marriage is universal. Among males and females aged 35 years and over 10·7 per cent. of the males and 0·4 per cent. of the females were found unmarried. Most of the females are married before they attain the age of 25. Child marriage is still prevalent. 11·9 per cent. of the males of ages 0—14 and 22·0 per cent. of the females of ages 0—14 were returned as married. (*Vide* Table C-III)

Languages

18. Over 99·9 per cent. of the people of the district returned Hindi, Hindustani or Urdu as their mother-tongue. Among the other mother-tongues the main are Sindhi (0·06 per cent.) and Punjabi (0·03 per cent.). Of the 7·9 lakhs of people of the district only 861 or 0·1 per cent. were bilingual (in an Indian language). Those whose mother-tongue is other than Hindi, Hindustani or Urdu are generally the migrants who are able to speak any of these as subsidiary language. Persons returning Hindi, Hindustani or Urdu as secondary language were 666 or 77·4 per cent. of those who were bilingual in some Indian language. (*Vide* Table D-I)

Religion and special groups

19. Out of 10,000 population of the district the number of people belonging to different religions is : Hindus 9,444, Muslims 543, Sikhs 2, Christians 6 and Jains 5 ; of 10,000 population in villages the numbers are : Hindus 9,540, Sikh 1, Jain 1, Muslims 454 and Christians 4 ; and of 10,000 population in towns the numbers are : Hindus 8,246, Sikhs 14, Jains 59, Muslims 1;657, Christians 22 and others 2. Muslims, Sikhs and Christians are generally concentrated in the urban areas of the district as is the case in other parts of the State.

There are 160 thousands persons belonging to the Scheduled Castes in the districts. Their number per 10,000 of population works out to 2,026. In villages they are 2,115 for every 10,000 and in the towns their number per 10,000 is only 924. In the district there are 15 Anglo-Indians. (*Vide* Tables D-II and D-III)

Displaced persons

20. The number of displaced persons in the district at the census was 900 (males 540, females 360). Of them 95·5 per cent. have come from West Pakistan, 0·4 per cent. from East Pakistan and 4·1 per cent. from districts that could not be traced. (*Vide* Table D-V)

Literacy

21. The percentage of male literacy was 17·3 in 1951 against 9·2 in 1931. The percentage of female literacy was 1·7 in 1951 as against 0·7* in 1931. On January 1, 1951, there were 561 primary schools in the district with enrolment of 32,390. (*Vide* Table D-VII).

C—Explanatory Note on the Statistics

1. The statistics in this volume have been presented in three parts :

I—District Census Tables

II—Village, Town, Pargana and Thana Statistics

III—Miscellaneous Statistics

Parts I and II contain census data. A brief account of the system of sorting of census slips and preparation of tables and abstract therefrom is given below.

Part III contains statistics throwing light on special aspects of population and its growth. These have been derived from miscellaneous sources. Table 1, "Vital Statistics", has been prepared from the published and unpublished records of the Director of Medical and Health Services, Table 2, "Agricultural Statistics", from the Annual Season and Crop Reports, Table 3, "Live-Stock, Agricultural Machinery and Implements", from the published figures of Live-Stock Census and Table 4, "List of Primary Schools", from information specially supplied by District Inspector of School.

Processing of census data

2. The census data presented here has been derived from the census slips by a process of sorting, compilation and tabulation. In previous censuses the slips were first sorted by religion and this division was maintained throughout so that all data was cross-tabulated by religion. This procedure has been abandoned at this census and substituted by a division based on economic characteristics of the population. The whole population has been divided into eight livelihood classes, four of which are of the agricultural category and four of non-agricultural category as follows :

Agricultural Classes—

I—Cultivators of land wholly or mainly owned ; and their dependants

II—Cultivators of land wholly or mainly unowned ; and their dependants

III—Cultivating labourers ; and their dependants

IV—Non-cultivating owners of land ; agricultural rent receivers, and their dependants

*The numbers per mille (of the 10 per cent. sample population) of each sex aged 5 years and over who were returned as literates are as below :

Males		Females	
1951	1931	1951	1931
202	107	23	8

Non-agricultural Classes—

V—Production (other than cultivation)

VI—Commerce

VII—Transport

VIII—Other services and miscellaneous sources

Another special feature of the sorting of this census was the separation, from the very start, of slips of displaced persons and of a 10 per cent. random sample from the remainder. This has enabled the data of displaced persons to be presented separately, while the 10 per cent. sample has been utilized for the preparation of Age Tables.

The slips of this census have been copied by Households into a National Register of Citizens, which has been prepared village-wise for rural areas and mohalla/ward-wise for urban areas. Table C-I is based on a 4 per cent. sample extracted from this Register.

Tracts

3. The slips were first sorted by villages for the preparation of the Primary Census Abstract. For the purpose of further sorting the State was divided into tracts consisting of (*a*) *rural tracts*, comprising the rural population of each tehsil, (*b*) *urban city tracts*, comprising the population of areas which had been declared as cities, (*c*) *urban non-city tracts*, comprising the population of urban areas of a district excluding areas declared as cities. Each tract was treated as a unit for sorting of slips. All data were compiled first by tracts and then by districts. This volume presents the tract-wise data for one district (with the exception of A and E Tables, which have been presented tehsil-wise), while the district-wise data for the whole State is contained in the following State volumes :

Part I-B—Subsidiary Tables

Part II-A—General Population Tables

Part II-B—Economic Tables

Part II-C—Age and Social Tables

Explanatory notes

4. Detailed explanatory notes are appended to each State table in the printed volumes of State tables. They apply to the tables in this volume also and should be referred to when necessary. A few notes of some of the tables are reproduced below :

Table A-I—Column 5 relating to "hamlets" has been introduced for the first time. Any distinctive cluster or agglomeration of houses has been treated as a "hamlet".

A clear distinction has been made in this census between a "House" and a "Household". A house is any human dwelling having a separate main entrance while a household is any commensal unit living in a census house. In previous censuses the figures under "Occupied Houses" used to be that of households, while the figures under columns 7—9 of the present table refer to occupied census houses as distinct from households.

The Economic Tables—The Indian Census Economic Classification Scheme, 1951, together with the occupational division and sub-division adopted for this census are given in Part II-B of the Report.

Table B-I—Each of the eight livelihood classes mentioned above has been divided into three sub-classes, with reference to the economic status, as follows :

(i) Self-supporting persons ;

(ii) Non-earning dependants ; and

(iii) Earning dependants

These were defined in the Instructions to Enumerators as follows :

> "A 'self-supporting person' is one who is in receipt of an income and that income is sufficient at least for his own maintenance. To be 'self-supporting' a person need not be able to support his family. All that is necessary is that he should be earning sufficient for his personal needs. For purposes of this question the person enumerated is the unit and not the family or household. Any one who is not a 'self-supporting' person in this sense is a 'dependant'. A 'dependant' may be either an 'earning dependant' or a 'non-earning dependant'. The test is whether he secures a regular (and not casual) income, even though it may be small. Such income may be in cash or kind ; it may be continuous or seasonal employment. When the income which he secures is not sufficient to support him that person is an 'earning dependant'. A person who does not earn any income either in cash or kind is a 'non-earning dependant'. Where two or more members of a family household jointly cultivate land and secure an income therefrom, each of them should be regarded as earning part of the income. None of them is, therefore, a 'non-earning dependant'. Each of them should be classed either a 'self-supporting person' or an 'earning dependant' according to the share of income attributable to each. The same applies to any other business carried on jointly. The share of the income is what the head of household deems it to be. This does not mean that every one who works is necessarily a self-supporting person or an earning dependant. Thus, for instance, a housewife who cooks for the family, brings up the children or manages the household is doing very valuable work. Nevertheless, her economic status is that of a non-earning dependant, if she does not also earn an income, and should be recorded as such."

Economically active, Semi-active and Passive persons—All non-earning dependants are economically passive. They include persons performing house-work or other domestic or personal services for other members of the same family household. But they do not include "unpaid family workers" or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise.

All earning dependants are economically semi-active only. Though they contribute to the carrying on of economic activities, the magnitude of their individual contribution is deemed to be too small to justify their description as economically active. (Their contribution to economic activity is, however, taken into account in the tabulation of data based on secondary means of levihood.)

All self-supporting persons are, ordinarily economically active with the exception of the following classes and groups :

(*a*) All self-supporting persons of Agricultural Class IV.

(*b*) The following groups of self-supporting persons who are included in Non-agricultural Class VIII and derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity) :

(i) Persons living principally on income from non-agricultural property ;

(ii) Persons living principally on pensions, remittances, scholarships and funds ;

(iii) Inmates of alms-houses and recipients of doles;

(iv) Beggars and vagrants ; and

(v) All other persons living principally on income derived from non-productive activities.

Table B-II—For a self-supporting person who has more than one means of livelihood the *secondary means* of livelihood is the livelihood next in importance to his principal means of livelihood. For an earning dependant it is the source from which he secures his own income, where there are more than one subsidiary occupations only the one providing the largest income has been taken into account.

Table B-III—"Employers", "Employees" and "Independent Workers" have been defined as follows in the Instructions to Enumerators :

An "employer" is only that person who has necessarily to employ other person in order to carry on the business from which he secures his livelihood. Thus if a person employs a cook or any other person for domestic services, he should not be recorded as an "employer" merely for that reason.

An "employee" is a person who ordinarily works under some other person for a salary or a wage in cash or kind as the means of earning his livelihood. There may be persons who are employed as managers, superintendents, agents etc., and in that capacity control other workers. Such persons are also employees only and should not be regarded as 'employers'.

An "independent worker" means a person who is not employed by any one else and who also does not employ anybody else in order to earn his livelihood. (Sweepers, *dhobies*, *kahars* etc., who work for several masters are independent workers. If, however, any of them accepts whole-time employment under one master he becomes "employee". Daily wage-earners who work for different masters are likewise independent workers. But if they accept employment under one master, e.g., under a factory, they become "employees".)

Tables C-II, C-III, C-IV and C-V—The figures presented in these tables are based on single year age-return and have not been smoothed.

Tables D-V (i) *and* (ii)—For the purpose of these tables a "displaced person" has been defined as follows :

"A displaced person means any person who has entered India having left or being compelled to leave his home in Western Pakistan on or after the 1st March, 1947, or his home in Eastern Pakistan on or after the 15th October, 1946, on account of civil disturbances or on account of the setting up of the two Dominions of India and Pakistan."
