DISTRICT CENSUS HANDBOOK
1951

HAMIRPUR DISTRICT

FOREWORD

Several States, including Uttar Pradesh, have been publishing village statistics by districts at each census. In 1941 they were published in U. P. under the title "District Census Statistics" with a separate volume for each district. In the 1951 census, when the tabulation has been more elaborate than ever in view of the requirements of the country, the district-wise volume has been expanded into a "District Census Handbook", which now contains the District Census Tables (furnishing data with break-up for census tracts within the district), the District Index of Non-agricultural Occupations, agricultural statistics from 1901-02 to 1950-51 and other miscellaneous statistics in addition to the usual village population statistics. The village population statistics also are given in an elaborate form giving the division of the population among eight livelihood classes and other details.

2. It may be added here that a separate set of district-wise volumes giving only population figures of rural areas by villages and of urban areas by wards and mohallas and entitled "District Population Statistics" has already been published. This separate series was necessitated by the urgent requirements of the U. P. Government for elections to local bodies.

3. The number of District Census Handbooks printed so far is forty-two Special arrangements for speeding up the printing have now been made and it is hoped that the remaining Handbooks will be printed before the end of 1955.

RAJESHWARI PRASAD, I.A.S.,
Superintendent, Census Operations,
Uttar Pradesh

	(ii) Bilingualism	85
D-II	Religion	86–87
D-III	Scheduled Castes	86–87
D-IV	Migrants	88–91
D-V	(i) Displaced persons by year of arrival in India	92–93
	(ii) Displaced persons by Livelihood Classes	92–93
D-VI	Non-Indian Nationals	...
D-VII	Livelihood Classes by Educational Standards	94–99

PART II—VILLAGE, TOWN, PARGANA AND THANA STATISTICS

1	Primary Census Abstract	101–137
2	Pargana and Thana-wise Population	138

PART III—MISCELLANEOUS STATISTICS

1	Vital Statistics	140–143
2	Agricultural Statistics—(i) Rainfall	144–145
	(ii) Area as classified with details of area under cultivation	146–149
	(iii) Cropped Area	150–165
	(iv) Irrigated Area	166–169
3	Live-Stock, Agricultural Machinery and Implements	170–173
4	List of Primary Schools	174–176

INTRODUCTION

A—THE DISTRICT

1. Hamirpur is the central district of Bundelkhand, lying between Banda on the east and Jhansi on the west. On the north it runs with Jalaun, Kanpur and a corner of Fatehpur. On the south it is bounded by Vindhya Pradesh. In the recent transfer of enclaves under "The Provinces and States (Absorption of Enclaves) Order, 1950", it lost 1·4 square miles to Vindhya Pradesh while it gained 338·8 square miles from the former States of Bihat, Garrauli, Naigawan, Rabai, Jagni, Sarila, Baoni, Beri and Charkhari. The district as now constituted has a total area of 2,744 square miles and its population in 1951 was 6·7 lakhs. There are six tehsils—Hamirpur, Maudaha and Mahoba in the east, Rath and Kulpahar in the west and Charkhari in the centre. Rath is the largest tehsil of the district with an area of 655 square miles and Charkhari is the smallest of them with an area of 159 sqare miles, the area of other tehsils being Maudaha 604 square miles, Kulpahar 591 square miles, Hamirpur 416 square miles and Mahoba 354 square miles. The district has 9 parganas and 19 thanas.

Topography

2. The district falls roughly into two parts. The northern portion is flat plain, consisting mainly of black soils, except where the land has suffered from the erosion of the numerous streams by which it is traversed. Towards the south the surface rises, the soils becoming lighter in character. Numerous out-crops of gneiss rock, tending to cluster into low ranges, surrounded by uneven broken country and over-grown for the most part with stunted jungle, appear. The dividing line between these two tracts of country runs roughly east and west through the town of Rath. A few miles further south the hills become more frequent. North of the town of Rath no hills are found and there is nothing to relieve the monotonous stretch of black cotton soil, which break up into barren ravines as it approaches the banks of the large rivers and into less unfertile though no less unsightly *rakar* hillocks along the smaller streams. The south portion contains a number of lakes of great value for irrigation purposes.

Drainage

3. The rivers of the district comprise the Yamuna, Betwa, Dhasan, Ken, Barma and several minor streams. These rivers and streams constitute the natural drainage lines of the country. Their course, with the exception of the Urmel, is from south to north-east, and as in other portions of Bundelkhand owing to the rapid nature of the slope, they carry off the surplus water quickly and in every case cause considerable scour. The Barma river practically divides the district into two equal portions. The western part is drained by the Parwaha and is much less broken than that to the east. East of the Barma the water shed lies close to that river and there is generally a steeper gradient which is reflected in the more easterly trend of the streams. Though they provide a ready means of escape for rainfall, which is often heavy in the tract, all these channels are destructive and tend to spread. By denuding the surface soil in hilly tracts and by carrying off the organic matter and other soil constituents in the level plains, they are constantly and steadily impoverishing the soil, except where the land is protected by embankments.

Soils

4. The soils consist of the well known Bundelkhand varieties, *mar, kabar, parua* and *rakar*, the two former being commonly known as black and the latter two as light soils. *Mar* is often called "black cotton soil". It varies greatly in colour, consistence and fertility but is marked by the constant characteristics of being highly argillaceous, calcareous and adhesive. It has small lumps of *kankar*. It is friable and retentive of moisture and possesses a high degree of fertility. *Kabar* is much less retentive of moisture, *parua* is a light coloured sandy soil and *rakar* is a refuse soil which occurs on sloping ground where the action of water has tended to denude the earth of all its better qualities. A very small portion of the soil is alluvial and some of it is *kachhwara*. The entire district with the possible exception of southern Rath, is precarious. The soils being either extremely retentive of moisture or extremely porous, for the most part require well distributed and regular rain but the seasons during which conditions are favourable in both localities are extremely few. A season in which the rainfall is seriously deficient, especially if it ceases at the beginning of September, is more disastrous than any other. But while light soils can generally rid themselves of excessive moisture, this brings peculiar soils in its train in black soil tracts in the shape of an extension of the growth of *kans*. This grass is inherent in the soils of Bundelkhand and has a special affinity for *mar* and *kabar*.

Classification of area

5. The figures of the classification of area during the last 50 years are given in Table 2 of Part III of this volume. The proportion of area under the various categories works out as follows for 1950-51 :

Particulars	Actual figures (in acres)	Percentage
Cultivated area	1,012,569	56·9
Culturable waste (excluding current fallow)	385,966	21·7
Current fallow	127,453	7·2
Forest	5,522	0·3
Area not available for cultivation of which—	247,445	13·9
(*a*) *Covered with water*	*58,513*	*3·3*
(*b*) *Under sites, roads and buildings*	*35,961*	*2·0*
(*c*) *Barren*	*152,971*	*8·6*

The figure in the above table regarding culturable waste taken from the Season and Crop Report is, however, misleading. The State Agriculture Department conducted in 1949-50 a detailed enquiry through the District Officers regarding the nature of this area in each district. The following analysis of the area resulted from this enquiry :

Particulars	Area (in acres)	Percentage
Total culturable waste (A+B+C)	313,664	100
A—Area under culturable waste land not available for immediate cultivation ...	171,010	54·52
(i) Forest under any legal enactment	4,791	1·53
(ii) Groves	7,380	2·35
(iii) Forests of timber trees	5,408	1·73
(iv) Thatching grasses, shrubs and bushes	6,439	2·05
(v) Land kept for grazing	146,992	46·86
B—Area under culturable waste land available for immediate cultivation but which could not be cultivated	44,605	14·22
Of which due to—		
(i) *Kans* growth	2,531	0·81
(ii) Threshing floors	8,314	2·65
(iii) Malaria	55	0·02
(iv) Floods	54	0·02
(v) Lack of drains	97	0·03
(vi) Lack of water	1,924	0·61
(vii) Distance from *abadi*	4,556	1·45
(viii) Damage from wild animals	6,373	2·03
(ix) Other causes	20,698	6·60
C—Area under culturable waste land that can be brought under immediate cultivation after some improvements besides the area given against 'B'	98,049	31·26

From the above it will appear that of the total area recorded as culturable waste, only 31·3 per cent. was really capable of being brought under immediate cultivation after some improvements.

Thus the land area cultivated and cultivable *per capita* works out to 229·3 cents of which 171·3 cents have already been brought under cultivation and only 14·7 cents can be further brought under the plough after some improvements.

Climate and rainfall

6. In a country so entirely dependent on the character of the seasons the distribution of the rainfall is much more important than the actual amount. Continuous rain in July and August checks *kharif* sowing and prevents proper weeding. An early cessation of the rains leaves the *kabar* too hard to plough while heavy rain late in the season makes thorough ploughing for the *rabi* impossible. If this goes on for two or three years, *kans* is almost sure to get a hold which it will keep for many years. The average rainfall for the last quinquennium was 35·28 inches. During the last 50 years the highest rainfall of 51·21 inches was recorded in the year 1919-20 and the lowest 14·60 inches in the year 1918-19.

The climate of Hamirpur is characterized by intense heat and dryness especially in the north where the blazing glare of the hot weather day is little relieved by the grateful shade of spacious groves. In the south of the district the heat is accumulated by numerous rocks and rocky hills during the day and radiated at night rendering the heat more severe. On the other hand the atmosphere is generally clear and free from the grosser particles of dust. The rainy season is malarious and has given the climate a notoriety for unhealthiness, though the town of Hamirpur itself is ordinarily considered healthy on account of its good drainage. But people of northern districts generally dislike the district for its greater warmth and the increased liability to fever.

Irrigation

7. Irrigation is derived from canals, wells, reservoirs and other sources. There is practically no irrigation by tube-wells. In 1950-51 the irrigated area from canals covered 86 per cent., from wells 13 per cent. and from other sources only one per cent.

Crops

8. More acreage is sown under *rabi* crops than under *kharif* crops. The area under *rabi* in 1950-51 was 651,949 acres, that under *kharif* 385,245 acres and that under *zaid* crops 356 acres. The principal *rabi* crop is gram followed by wheat while the principal *kharif* crop is *juar*.

B—Analysis of the Statistics

Population: General distribution and density

1. The table below shows the two basic figures—land area and population—and the derived figures of land area *per capita* :

Tehsil	Population (in lakhs)	Density (number per square mile)	Land area (in lakhs of acres)	Land area *per capita*
Hamirpur	1·09	263	2·66	2·44
Kulpahar	1·33	225	3·78	2·84
Mahoba	0·90	254	2·27	2·52
Maudaha	1·45	240	3·87	2·67
Rath	1·55	236	4·19	2·71
Charkhari	0·33	210	1·02	3·04
Hamirpur district	*6·65*	*239*	*17·79*	*2·67*

This district though 11th in order of area is 44th in the State in respect of population. It is one of the less densely populated districts of the State with density of 239* persons per square mile while the average density of the State is 557. The density of the district has not been to a very great extent inflated by the presence of large towns. Its rural density is 219, the density of the rural parts of the tehsils being : Hamirpur 236, Kulpahar 224, Mahoba 206, Maudaha 227, Rath 219 and Charkhari 149. It is evident that except for the Charkhari tehsil the distribution of the population is remarkably uniform throughout the whole district. The hilly nature of the country accounts for its low density. (*Vide* Tables A-I and E)

Growth of population

2. The population of the district during the last fifty years has recorded an increase of 21·9 per cent. Compared to this the increase in the population of the State during the corresponding period has been 30 per cent.

The table below exhibits the variation in the total, rural and urban population for the last five decades :

Census year	Population			Variation		
	Total	Rural	Urban	Total	Rural	Urban
1901	**545,871**	485,778	60,093			
1911	**556,799**	499,115	57,684	**+10,928** (+2·0)	+13,337 (+2·7)	—2,409 (—4·0)
1921	**533,365**	477,011	56,354	**—23,434** (—4·2)	—22,104 (—4·4)	—1,330 (—2·3)
1931	**569,569**	515,517	54,052	**+36,204** (+6·8)	+38,506 (+8·1)	—2,302 (—4·1)
1941	**648,109**	582,396	65,713	**+78,540** (+13·8)	+66,879 (+13·0)	+11,661 (+21·6)
1951	**665,429**	590,731	74,698	**+17,320** (+2·7)	+8,335 (+1·4)	+8,985 (+13·7)

Between 1901 and 1921 the population of the district recorded a decrease of 2·3 per cent. when that of the State decreased by 4·0 per cent. Due to the heavy mortality from the influenza epidemic in 1918-19, a decrease of 4·2 per cent. was recorded for the decade 1911—21. The urban population suffered a loss during 1901—11 due to abnormal deaths from plague. Abnormal deaths did not occur or were prevented from occurring in the post-1921 period but the population of the district recorded an increase of 24·8 per cent. only since 1921 against an increase of 35·5 per cent. since 1921 in the population of the State during the same period. The smaller increase was mainly due to the loss on balance of migration during 1941—50.

Tehsil	Percentage variation 1941—51
Hamirpur district	+2·7
Hamirpur	+5·3
Kulpahar	—2·0
Mahoba	+5·1
Maudaha	+4·2
Rath	+3·8
Charkhari	—3·8

The variation in the population of the tehsils during 1941—51 is shown in the marginal table. Kulpahar and Charkhari have suffered a decrease in population during this decade.

* According to the area given by Surveyor General it is 243.

Vital Statistics

3. Births and deaths mainly account for the trends in the population growth. Migration also is a factor though of lesser importance. The following table gives the mean decennial registered birth and death-rates and the calculated natural increase rates and population growth-rates of the last three decades for the district as a whole and for its rural and urban areas:

	Total	Rural	Urban
Mean decennial birth-rate			
1941—50	26·2	26·4	24·9
1931—40	37·8	38·4	32·0
1921—30	38·7	41·6	10·5
Mean decennial death-rate			
1941—50	19·1	19·9	12·4
1931—40	25·1	25·6	19·8
1921—30	31·7	34·2	7·9
Mean decennial rate of natural increase			
1941—50	7·1	6·5	12·5
1931—40	12·7	12·8	12.2
1921—30	7·0	7·4	2·6
Mean decennial growth-rate			
1941—50	2·6	1·4	12·8
1931—40	13·5	12·8	21·8
1921—30	7·7	9·4	—8·4

There are large omissions in the registration of births as well as deaths and so the above rates do not represent the true picture at all. They may, however, be taken to be roughly indicative of trends. Both birth and death-rates have fallen during the last decade.

The figures of natural increase and growth-rate suggest considerable loss of population by migration during 1941—50. During 1921—30 and 1931—40 it appears to have gained somewhat on the balance of migration.

The average yearly mortality from various causes in the district during 1941—50 was as follows :

Causes	Number of deaths	Percentage of total deaths
Fever	9,489	72·7
Dysentery or diarrhoea	38	0·3
Respiratory diseases	1,723	13·2
Plague, cholera and small-pox	1,062	8·1
Others	741	5·7

As in the rest of the State ' fever ' is responsible for a majority of the deaths. But fever covers a number of ailments which the reporters are unable to identify. (*Vide* Table I, part III of this volume)

Migration

4. About 92 per cent. of the people enumerated in the district at the census of 1951 were born there, 4·6 per cent. were born in the other districts of the State, 3·3 per cent. were born in other parts of India and only 1 per cent. came from other countries. Of the immigrants from the districts of the State as many as 21,033 (males 4,728, females 16,305) are from the other districts of the same natural division and only 9,742 (males 3,858, females 5,884) are from other parts of the State. Most of the migration from the neighbouring districts is marriage migration. Of 21,307 immigrants from the adjacent states 19,045 (males 4,110, females 14,935) are from Vindhya Pradesh, and 679 (males 304, females 375) are from Madhya Pradesh. Most of the migration from Vindhya Pradesh is marriage migration.

Of the immigrants who have come from territories beyond India 327 (males 191, females 136) are Pakistan-born and 24 (males 13, females 11) had their birth place in other territories. The Pakistan-born are the displaced persons who numbered 267 (males 152, females 115) in the district. Of the immigrants born in other territories 10 are Nepal-born.

The number of non-Indian nationals in the district was 7. All of them were Americans.

Unfortunately the figures of emigration are not available. On the balance of migration according to vital statistics, however, the district gained about 3,600 persons in the decade 1921—30 and 4,400 in 1931—40, while during 1941—50 it lost about 29,500. The harvesting season had started earlier in 1951 and this accounts for the loss due to labour migration. But it

should be borne in mind that the figures contain an element of registration error and are only indicative of trends.

Decline of cultivation *per capita*

5. We may now analyse the growth of population in the district during the last thirty years in relation to the growth of cultivation during the same period. The marginal table shows these figures. Figures of area shown under census years are quinquennial averages for the five years ending with the crop year immediately preceding the Census Year. It is obvious that cultivation has failed to keep pace with population. The cultivated area *per capita* has gone down to 138·8 cents in 1951 from 169·9 cents in 1921. Magnitude of this drop is about one-fifth of the 1921 level. It means that (other things being equal) every man, woman and child must expect to get less food and other agricultural produce from the land in 1951 than in 1921.

Census year	Population ◦	Net area sown (in acres)	Area of cultivation *per capita* (in cents)
1921 ...	440,245	739,098	169·9
1931 ...	502,689	758,760	151·0
1941 ...	575,538	883,960	153·7
1951 ...	665,429	923,067	138·8

Double cropped area *per capita*

6. It may be examined whether this shortage has been compensated by an increase in the yield per acre. Increase in yield can be brought about by more double cropping, more irrigation, better fertilisation and better culture. The average (quinquennial) area sown more than once was 44,131 acres in 1921. It is showing a steady decline and has come down to 32,425 acres in 1951. The figures of double crop cultivation *per capita* in cents are as below :

Particulars	Quinquennial average for the year preceding			
	1951	1941	1931	1921
Double crop cultivation *per capita* in cents	4·9	6·3	8·1	10·1
Unirrigated double crop cultivation *per capita* in cents ...	4·8	6·2	8·0	10·0
Irrigated double crop cultivation *per capita* in cents ...	0·1	0·1	0·1	0·1

It is evident that the double cropped area has not kept pace with the rate of growth of population.

Irrigated area *per capita*

7. The average area irrigated in the district was 43,504 acres in 1921. The figures were 42,516 acres for 1931, 69,243 acres for 1941 and 78,091 acres for 1951. The average area irrigated more than once has been practically negligible.

The figures of irrigation *per capita* are shown in the table below :

Particulars	Years			
	1951	1941	1931	1921
Irrigated single crop cultivation *per capita* in cents ...	11·7	12·0	8·4	9·8
Irrigated double crop cultivation *per capita* in cents ...	0·1	0·1	0·1	0·1

The figure for 1941 shows an increase in irrigated crop cultivation *per capita* over that of 1931, but there is a slight decrease in 1951.

Cropped area

8. The percentage of cropped area under food crops began to decline and that under non-food crops began to rise ever since 1916—21. It is only in the last quinquennium (1946—51) that this tendency has been reversed. The percentage of cropped area under food crops was 85 in 1916—21 ; it came to 83 in 1926—31 and again to 82 in 1936—41 but has shot up to 90 in 1946—51.

The proportionate area under different crops in the district between 1911 and 1951 was as below :

Quinquennial average of	Total cropped area	Percentage of cropped area under						
		Rice	Wheat	Barley	Juar	Bajra	Gram	Others
1911—16	739,261	0·2	9·6	2·7	21·0	5·2	29·7	31·6
1916—21	766,831	0·3	11·7	2·8	21·9	5·0	31·8	26·5
1921—26	793,634	0·4	14·8	1·8	20·5	3·5	32·3	26·7
1926—31	810,297	0·4	14·0	2·3	20·8	2·8	32·3	27·4
1931—36	872,228	0·2	18·2	1·6	18·9	2·3	32·0	26·8
1936—41	932,149	0·4	18·9	1·4	17·8	2·8	31·2	27·5
1941—46	969,253	0·6	16·6	1·3	22·0	3·7	31·5	24·3
1946—51	970,517	1·2	21·2	1·9	19·1	1·7	35·9	19·0

◦ The figures of population of the various censuses relate to the then lay-out of the district.

Indigo and opium are two non-food crops which have gone out of cultivation. Cotton too is practically out of cultivation. The area under cotton crop was 64,371 acres in 1902-03 In 1950-51 it was only 332 acres. In 1901-02 the area under indigo and opium was 448 and 780 acres respectively while in 1950-51 it is nil in both cases. Oil seeds are the most important non-food crops. The area under sugarcane and hemp has also risen but their cultivation is limited.

Live-stock, ploughs and carts

9. Live-stock in this country live for a large part of the year on by-product of agriculture supplemented by green-fodder crops. They have, therefore, to be correlated not only with the grazing available but also with the total area under cultivation which carries a major portion of the burden of supporting the cattle population.

As will appear from table 3 of Part III the total number of cattle and buffaloes which had been decreasing between 1935 and 1944 has during 1944—51 increased from 5·0 lakhs to 6·4 lakhs.

The number of working cattle and buffaloes in the district has been steady at about 1·5 lakhs from 1935 till 1944. But it has increased to about 1·9 lakhs between 1944—51. This number of working cattle appears to be governed by the number of ploughs and carts. The number of ploughs has gone up from 68,499 in 1944 to 79,911 in 1951 due apparently to progressive fractionalisation of holdings. The number of carts likewise has continuously been rising. Their number rose from 25,217 in 1920 to 59,718 in 1951. The average net cutivated area per pair of working cattle works out to 10·8 in 1951 compared to 10·9 in 1935.

Breeding cows and she-buffaloes increased from 182,160 in 1935 to 186,310 in 1944 and to 239,437 in 1951. In 1951 the cows and she-buffaloes in milk per 1,000 of human population were 99 and 45 respectively. Owing to the poor milk yield the share of milk per head is only a few ounces per day.

The number of sheep which has gone down from 44,786 in 1930 to about 38,877 in 1944 has risen to 41,347 in 1951. Goats have been going down in number since 1935 when they were 224,959. Their number has been reduced to 171,778 in 1944 and further to 137,903 in 1951.

Horses and ponies also are declining in number. Their number fell from 6,242 in 1935 to 3,576 in 1951. Donkeys during the same period increased from 548 to 724.

Poultry has increased from 18,847 in 1944 to 23,318 in 1951.

Distributed on 1,000 of human population the figures of the main categories of live-stock in 1951 were as follows :

Cattle	Buffaloes	Sheep	Goats	Poultry	Others
766	202	62	207	35	30

10. To sum up, the population of the district is growing up at the biological natural rate since 1921 but, on the other hand, the land area *per capita*, and the double crop area *per capita* are steadily declining. There is, at the same time, no evidence that crop yield per acre has increased. The magnitude of the absolute numerical increase in relation to the practically stationary acreage under cultivation is, therefore, a great strain on the economy of the district.

Villages and towns

11. The district has 911 villages and 7 towns. Out of 665 thousands of people who were counted at the census of 1951, 591 thousands were found in villages and 75 thousands in the towns, i.e., there are 888 people per 1,000 of the population who live in the rural areas and only 112 of them live in towns. The corresponding figures for the State as a whole are : rural 864, urban 136.

The rural population per inhabited village works out to 648. Most of the villages comprise of a single compact size. Still there are 1,091 hamlets in the district. The population per hamlet is 541. The medium-sized village, with population between 500—2,000, is the dominant type in the district. Of the rural population 59·4 per cent. live in such villages ; 19·6 per cent. in small villages of a population under 500 ; 18·0 per cent. in large villages of a population between 2,000—5,000 ; and only 3·0 per cent. in villages of population over 5,000.

Towns vary in number of inhabitants just as the villages. 59·9 per cent. of the urban population lives in towns of population between 10,000—20,000 (viz., Mahoba, Rath and Charkhari) and remaining 40·1 per cent. in towns of population between 5,000—10,000 (viz., Maudaha, Hamirpur, Sumerpur and Kulpahar). Charkhari appears to be a declining town. Since 1941 the population of Charkhari has decreased by 8 per cent. (*Vide* Tables A-III and A-IV)

Occupations & livelihood pattern

12. Out of the total population of 665,429 (rural 590,731, urban 74,698) 532,400 (rural 512,433, urban 19,967) or 80·0 per cent. depend on agriculture for their means of livelihood and 133,029 (rural 78,298, urban 54,731) or 20·0 per cent. depend on

non-agricultural sources. The following table gives the distribution of 100 persons of the total rural and urban population of the district under the different livelihood classes:

Description	Agricultural classes					Non-agricultural classes				
	Total	I	II	III	IV	Total	V	VI	VII	VIII
Total	**80·0**	**56·1**	**6·7**	**14·8**	**2·4**	**20·0**	**8·0**	**3·4**	**0·7**	**7·9**
Rural	86·8	60·6	7·2	16·5	2·5	13·2	7·2	1·8	0·1	4·1
Urban	26·7	20·5	3·1	1·2	1·9	73·3	14·4	15·8	5·4	37·7

It is obvious that the district is one of the more predominantly agricultural districts of the State. Here as many as 80·0 per cent. of the people depend on agriculture as against 74·2 per cent. in the whole State.

Of the total population of the district 324,415 persons (males 133,676, females 190,739) or 48·8 per cent. have been classified as non-earning dependants. The percentage of non-earning dependants in the agricultural population works out to 47·2 and that among non-agricultural population as 54·9. It will be observed that in the main they consist of women. The male non-earning dependants are mostly children. 126,441 persons (males 23,522, females 102,919) or 19·0 per cent. of the population are earning dependants. Among the agriculturists their proportion is 20·9 per cent. and among non-agriculturists they form only 11·4 per cent. Agriculture is a family occupation and it provides work to the women and grown up children in the family. The remaining 214,573 persons (males 184,794, females 29,779) or 32·2 per cent. of the population consists of self-supporting persons. Their proportion among agriculturists is 31·9 per cent. and among non-agriculturists 33·7 per cent. Of the self-supporting persons 169,742 (males 146,560, females 23,182) belong to the agricultural classes and 44,831 persons (males 38,234, females 6,597) to the non-agricultural classes. On an average two self-supporting persons maintain three non-earning dependants.

Of the 44,831 self-supporting persons belonging to the non-agricultural classes 1,441 persons (males 982, females 459) earn their livelihood from non-productive sources. Of the remaining 43,390 self-supporting persons (rural 26,270, urban 17,120) 735 (rural 304, urban 431) or 1·7 per cent. are employers, 10,119 (rural 5,215, urban 4,904 or 23·3 per cent. are employees and 32,536 (rural 20,751, urban 11,785) or 75 per cent. are independent workers. The distribution of 10,000 self-supporting persons of non-agricultural occupations classified according to the economic divisions is as follows :

Name of division	Self-supporting persons by divisions
All Industries and Services	**10,000**
0—Primary industries not elsewhere specified	539
1—Mining and quarrying	55
2—Processing and manufacture—foodstuffs, textiles, leather and products thereof	1,906
3—Processing and manufacture—metals, chemicals and products thereof	362
4—Processing and manufacture—not elsewhere specified	1,151
5—Construction and utilities	651
6—Commerce	1,682
7—Transport, storage and communications	385
8—Health, education and public administration	1,106
9—Services not elsewhere specified	2,163

There is no large scale or small scale industry of any note in the district.

Variation in the livelihood pattern

13. In the district, the proportion of population depending on agriculture for their livelihood was 79·5* per cent. in 1951. The unfortunate fact is that the agricultural proportion has been increasing ever since 1901 when the figure stood at 63·8 per cent. It was 69·6 per cent. in 1911, 73·0 per cent. in 1921 and 79·5 per cent. in 1951. The actual number of persons who depend on agriculture has increased to 528,793 in 1951 from 292,554 in 1901 or by 80·8

*The figure includes earning dependants according to their secondary means of livelihood, while the figure 80·0 in paragraph 12 includes earning dependants according to their principal means of livelihood and hence the difference.

per cent. while the cultivated area has increased only by 45·8 per cent. This has resulted in the progressive fragmentation and sub-division of holdings and pressure on impoverished soil. There appears to have been a gradual decline in village arts and handicrafts. The cumulative result is a fall in the proportion of workers and a corresponding rise in the dependency. The proportion of workers in the total population in 1951 was 51·2 per cent. (agricultural 41·7 per cent. and non-agricultural 9·5 per cent.) against 62·7 per cent. (agricultural 46·4 per cent., non-agricultural 16·3 per cent.) in 1921. The population of non-earning dependants has consequently increased from 37·3 per cent. (agricultural 26·6 per cent., non-agricultural 10·7 per cent.) in 1921 to 48·8 per cent. (agricultural 37·8 per cent., non-agricultural 11·0 per cent.). All this is an index of the increasing unemployment and under-employment. It is only by division of the population to cottage and other industries that the present severe disequilibirium in the economy of the district can be redressed. (*Vide* Tables B-I, B-II and B-III)

Houses and households

14. There were 118,474 occupied houses in the district, 104,709 in villages and 13,765 in towns. That gives an average of 5,642 persons per 1,000 houses or 5·6 persons per house in the rural areas and 5,427 persons per 1,000 houses or 5·4 persons per house in the urban areas.

There were 144,501 households in the district, 128,205 in villages and 16,296 in towns. That gives an average of 4,604 persons per 1,000 households or 4·6 persons per household in the rural areas and 4,568 persons per 1,000 households or 4·6 persons per household in the urban areas. The marginal table shows the developments in the size of the household since 1921.

Census year	Persons per 1,000 households of	
	Rural population	Urban population
1921 ...	4,171	4,284
1931 ...	4,388	4,505
1941 ...	4,691	4,694
1951 ...	4,604	4,568

The rural as well as urban household has been increasing till 1941, but it has shown a slight decrease in 1951. The average rural household size is smaller than the average rural household size of the State which is 5·07.

Out of 4,604 persons in every 1,000 rural households, 2,362 are males and 2,242 are females. There is a male excess numbering 120 in every 1,000 households. Out of 4,568 persons in every 1,000 urban households 2,368 are males and 2,200 are females. There is a male excess numbering 168 in every 1,000 households. The type of migration will account for the difference.

Information regarding types of household and household relationships was also collected at this census with the help of a sample of about 4 per cent. According to this, in every 1,000 sample households there are 4,835 persons (males 2,534, females 2,301) in the district. The corresponding figure for the total count is 4,600.

The table below shows the distribution by size of 1,000 sample households :

Description	Small with 3 members or less	Medium with 4—6 members	Large with 7—9 members	Very large with 10 members or more
Total	375	436	149	40
Rural	372	438	150	40
Urban	397	416	144	43

Medium households are the dominant type both in the villages and in the towns.

Family composition of 1,000 sample households is as follows :

		Number in 1,000 households
A	Heads of households ... Males (married) ...	738
	Heads of households ... Males (widowers) ...	235
	Heads of households ... Females ...	27
	Wives of heads of households	738
		1,738
B	Sons of heads of households	994
	Daughters of heads of households	667
		1,661
C	Male relations of heads of households (other than sons)	508
	Female relations of heads of households (other than daughters)	793
		1,301
D	Persons unrelated to the heads of the households Males	59
	Persons unrelated to the heads of the households Females	76
		135
	Grand Total ...	*4,835*

Sons outnumber the daughters of the heads of households. The latter leave the homes of their parents after marriage. Female relations (other than daughters) outnumber the male relations (other than sons). Such females are generally those who become members of these households by marriage. (*Vide* Tables A-1 and C-I)

Sex-ratio

15. In the district as a whole the sex-ratio was 946, i.e., there were 946 females to every 1,000 males. It varied among the tehsils. The lowest value wae 906 in Hamirpur tehsil. The highest value was 976 in Charkhari tehsil. The ratio was 956 in Kulpahar, 954 in Rath, 952 in Mahoba and 947 in Maudaha. Male migration from Charkhari appears to be the cause of higher sex-ratio of the tehsil.

The Sex-ratio is smaller in towns than in villages. For the district as a whole the sex-ratio in villages is as high as 948 mainly due to migration while that in towns is only 928.

The corresponding figure of sex-ratio for the district was 963 in 1921, 957 in 1931 and 958 in 1941 against 946 in 1951. The sex-ratio has been going down.

Age-structure

16. The number in each age-group in the district is shown below as a percentage of the total number of all ages in the total, rural and urban population separately:

Age-group		Total population			Rural population		Urban population	
		Persons	Males	Females	Males	Females	Males	Females
Infants and young children	0—4	13·9	7·3	6·6	7·2	6·6	8·1	5·7
Boys and girls	5—14	24·7	13·4	11·3	13·4	11·3	13·5	11·3
Young men and women	15—34	32·6	16·9	15·7	17·0	15·8	16·5	14·9
Middle-aged men and women	35—54	21·9	11·5	10·4	11·5	10·5	11·5	9·9
Elderly persons	55 and over	6·9	3·1	3·8	3·0	3·7	4·0	4·6

It will be seen that the population is progressive. 38·6 per cent. of the population is of age under 15 and only 6·9 per cent. of it consists of elderly persons. (*Vide* Table C-II)

Marital status

17. Out of 10,000 persons in the district there are 5,225 males and 4,775 females* Among them 2,289 males and 1,499 females are unmarried. If we reckon males and females together the unmarried people are 37·9 per cent. of the population.

Of the males 43·8 per cent. were unmarried, 49·8 per cent. were married and 6·4 per cent. were widowed or divorced. Among the females 31·4 per cent. were unmarried, 54·1 per cent. were married and 14·5 per cent. were widowed or divorced.

Of the married males 7·9 per cent. were of ages below 15, 51·0 per cent. were of ages 15—34, 34·9 per cent. were of ages 35—54 and 6·2 per cent. were of ages 55 and over. Among the married females 13·0 per cent. were of ages below 15, 56·3 per cent. were of ages 15—34, 26·8 per cent. were of ages 35—54 and 3·9 per cent. were elderly women.

Marriage is universal. Among males and females aged 35 years and over only 8·0 per-cent. of the males and 1·5 per cent. of the females were found unmarried. Most of the females are married before they attain the age of 25. Child marriage is still prevalent. 9·9 per cent. of the males of ages 0—14 and 18·9 per cent. of the females of ages 0—14 were returned as married. (*Vide* Table C-III)

Languages

18. Over 99·9 per cent. of the people of the district returned Hindi, Hindustani or Urdu as their mother-tongue. Among the other mother-tongues spoken the main is Punjabi (0·06 per cent.). Of the 6·65 lakhs of people in the district only 107 or 0·02 per cent. were bilingual (in an Indian language). Those whose mother-tongue is other than Hindi, Hindustani or Urdu are generally the migrants who are able to speak any of these as a subsidiary language. Persons returning Hindi, Hindustani or Urdu as secondary language were 84 or 78·5 per cent. of those who were bilingual in some Indian language. (*Vide* Table D-I)

Religion and special groups

19. Out of 10,000 population of the district the number of people belonging to different religions is : Hindus 9,363, Muslims 624, Sikhs 4, Christians 5 and Jains 4 ; of 10,000 population in villages the numbers are : Hindus 9,617, Muslims 378, Jains 3 and Christians 2 ; and of 10,000 population in towns the numbers are : Hindus 7,354, Muslims 2,574, Sikhs 32, Christians 32, Jains 7 and others 1. Muslims, Sikhs and Christians are generally concentrated in the urban areas of the district as is the case in the other parts of the State.

There were 145 thousand persons belonging to the Scheduled Castes in the district. Their number per 10,000 of population works out to 2,181. In villages they are 2,262 for every 10,000 and in the towns their number per 10,000 is only 1,537. In the district there were 26 Anglo-Indians of whom 12 were males and 14 were females. (*Vide* Tables D-II and D-III)

Displaced persons

20. The number of displaced persons in the district at the Census was only 267 (males 152, females 115). Most of them came to the district in 1947, the year of partition of India. (*Vide* Table D-V)

Literacy

21. The percentage of male literacy was 17·5 in the district while that of female literacy was 2·3 only. As compared to this the percentage of literates among males in 1931 was 10·0 ;

* The corresponding figures for the total count are 5,139 and 4,861.

among females the percentage of literates in 1931 was 0·6 only.* On January 1, 1951 there were 503 primary schools in the district with enrolment of 27,806. (*Vide* Table D-VII)

C—Explanatory Note on the Statistics

The statistics in this volume have been presented in three parts :

I—District Census Tables

II—Village, Town, Pargana and Thana Statistics

III—Miscellaneous Statistics

Parts I and II contain census data. A brief account of the system of sorting of census slips and preparation of tables and abstract therefrom is given below.

Part III contains statistics throwing light on special aspects of population and its growth. These have been derived from miscellaneous sources. Table 1, "Vital Statistics", has been prepared from the published and unpublished records of the Director of Medical and Health Services, Table 2, "Agricultural Statistics", from the Annual Season and Crop Reports, Table 3, "Live-Stock, Agricultural Machinery and Implements", from the published figures of Live-Stock Census and Table 4, "List of Primary Schools", from information specially supplied by District Inspector of Schools.

Processing of census data

2. The census data presented here has been derived from the census slips by a process of sorting, compilation and tabulation. In previous censuses the slips were first sorted by religion and this division was maintained throughout so that all data was cross-tabulated by religion. This procedure has been abandoned at this census and substituted by a division based on economic characteristics of the population. The whole population has been divided into eight livelihood classes, four of which are of the agricultural category and four of non-agricultural category as follows :

Agricultural Classes—

I—Cultivators of land wholly or mainly owned ; and their dependants

II—Cultivators of land wholly or mainly unowned ; and their dependants

III—Cultivating labourers ; and their dependants

IV—Non-cultivating owners of land ; agricultural rent receivers ; and their dependants

Non-agricultural Classes—

V—Production (other than cutivation)

VI—Commerce

VII—Transport

VIII—Other services and miscellaneous sources

Another special feature of the sorting of this census was the separation, from the very start, of slips of displaced persons and of a 10 per cent. random sample from the remainder. This has enabled the data of displaced persons to be presented separately, while the 10 per cent. sample has been utilized for the preparation of Age Tables.

The slips of this census have been copied by Households into a National Register of Citizens, which has been prepared village-wise for rural areas and mohalla/ward-wise for urban areas. Table C-I is based on a 4 per cent. sample extracted from this Register.

Tracts

3. The slips were first sorted by villages for the preparation of the Primary Census Abstract. For the purpose of further sorting the State was divided into tracts consisting of (*a*) *rural tracts*, comprising the rural population of each tehsil, (*b*) *urban city tracts*, comprising the population of areas which had been declared as cities, (*c*) *urban non-city tracts*, comprising the population of urban areas of a district excluding areas declared as cities. Each tract was treated as a unit for sorting of slips. All data were compiled first by tracts and then by districts. This volume presents the tract-wise data for one district (with the exception of A and E Tables, which have been presented tehsil-wise), while the district-wise data for the whole State is contained in the following State volumes :

Part I-B—Subsidiary Tables

Part II-A—General Population Tables

Part II-B—Economic Tables

Part II-C—Age and Social Tables

---

* The numbers per mille (of the 10 per cent. sample population) of each sex aged 5 years and over who were returned as literates are as below :

Males		Females	
1951	1931	1951	1931
207	116	26	7

Explanatory notes

4. Detailed explanatory notes are appended to each State table in the printed volumes of State tables. They apply to the tables in this volume also and should be referred to when necessary. A few notes of some of the tables are reproduced below :

Table A-I—Column 5 relating to "hamlets" has been introduced for the first time. Any distinctive cluster or agglomeration of houses has been treated as a "hamlet".

A clear distinction has been made in this census between a "House" and a "Household". A house is any human dwelling having a separate main entrance while a household is any commensal unit living in a census house. In previous censuses the figures under "Occupied Houses" used to be that of households, while the figures under columns 7—9 of the present table refer to occupied census houses as distinct from households.

The Economic Tables—The Indian Census Economic Classification Scheme, 1951, together with the occupational division and sub-division adopted for the census are given in Part II-B of the Report.

Table B-I—Each of the eight livelihood classes mentioned above has been divided into three sub-classes, with reference to the economic status, as follows :

(i) Self-supporting persons ;

(ii) Non-earning dependants ; and

(iii) Earning dependants

These were defined in the Instructions to Enumerators as follows :

"A 'self-supporting person' is one who is in receipt of an income and that income is sufficient at least for his own maintenance. To be 'self-supporting' a person need not be able to support his family. All that is necessary is that he should be earning sufficient for his personal needs. For purposes of this question the person enumerated is the unit and not the family or household. Any one who is not a 'self-supporting' person in this sense is a 'dependant'. A 'dependant' may be either an 'earning dependent' or a 'non-earning dependant'. The test is whether he secures a regular (and not casual) income, even though it may be small. Such income may be in cash or kind ; it may be continuous or seasonal employment. When the income which he secures is not sufficient to support him that person is an 'earning dependant'. A person who does not earn any income either in cash or kind is a 'non-earning dependant'. Where two or more members of a family household jointly cultivate land and secure an income therefrom, each of them should be regarded as earning part of the income. None of them is, therefore, a non-earning dependant. Each of them should be classed either a 'self-supporting person' or 'an earning dependant' according to the share of income attributable to each. The same applies to any other business carried on jointly. The share of the income is what the head of household deems it to be. This does not mean that every one who works is necessarily a self-supporting person or an earning dependant. Thus, for instance, a housewife who cooks for the family, brings up the children or manages the household is doing very valuable work. Nevertheless, her economic status is that of a non-earning dependant, if she does not also earn an income, and should be recorded as such. "

Economically active, Semi-active and Passive persons—All non-earning dependants are economically passive. They include persons performing house-work or other domestic or personal services for other members of the same family households. But they do not include " unpaid family workers" or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise.

All earning dependants are economically semi-active only. Though they contribute to the carrying on of economic activities, the magnitude of their individual contribution is deemed to be too small to justify their description as economically active. (Their contribution to economic activity is, however, taken into account in the tabulation of data based on secondary means of livelihood.)

All self-supporting persons are, ordinarily economically active with the exception of the following classes and groups :

(*a*) All self-supporting persons of Agricultural Class IV.

(*b*) The following groups of self-supporting persons who are included in Non-agricultural Class VIII and derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity) :

(i) Persons living principally on income from non-agricultural property ;

(ii) Persons living principally on pensions, remittances, scholarships and funds ;

(iii) Inmates of alms-houses and receipients of doles ;

(iv) Beggars and vagrants ; and

(v) All other persons living principally on income derived from non-productive activities.

Table B-II—For a self-supporting person who has more than one means of livelihood the *secondary means* of livelihood is the livelihood next in importance to his principal means of livelihood. For an earning dependant it is the source from which he secures his own income, where there are more than one subsidiary occupations only the one providing the largest income has been taken into account.

Table B-III—"Employers", "Employees" and "Independent Workers" have been defined as follows in the Instructions to Enumerators :

> An "employer" is only that person who has necessarily to employ other person in order to carry on the business from which he secures his livelihood. Thus if a person employs a cook or any other person for domestic services, he should not be recorded as an "employer" merely for that reason.
>
> An "employee" is a person who ordinarily works under some other person for a salary or a wage in cash or kind as the means of earning his livelihood. There may be persons who are employed as managers, superintendents, agents, etc., and in that capacity control other workers. Such persons are also employees only and should not be regarded as ' employers '.
>
> An "independent worker" means a person who is not employed by any one else and who also does not employ any body else in order to earn his livelihood. (Sweepers, *dhobies*, *kahars*, etc., who work for several masters are independent workers. If, however, any of them accepts whole-time employment under one master he becomes " employee ". Daily wage-earners who work for different masters are likewise independent workers. But if they accept employment under one master, e.g., under a factory, they become "employees".)

Tables C-II, C-III, C-IV and C-V—The figures presented in these tables are based on single year age-returns and have not been smoothed.

Tables D-V (i) *and* (ii)—For the purpose of these tables a "displaced person" has been defined as follows :

> "A displaced person means any person who has entered India having left or being compelled to leave his home in Western Pakistan on or after the 1st March, 1947, or his home in Eastern Pakistan on or after the 15th October, 1946, on account of civil disturbances or on account of the setting up of the two Dominions of India and Pakistan."

PART I

DISTRICT CENSUS TABLES

A —GENERAL POPULATION TABLES

A-I —Area, Houses and Population

Serial number	Tehsil	Area in square miles	Villages	Hamlets	Towns	Occupied houses: Total	Occupied houses: Rural	Occupied houses: Urban
1	2	3	4	5	6	7	8	9
