PRIMARY CENSUS ABSTRACT

B. K. DAS
of the Indian Administrative Service
Director of Census Operations, Karnataka

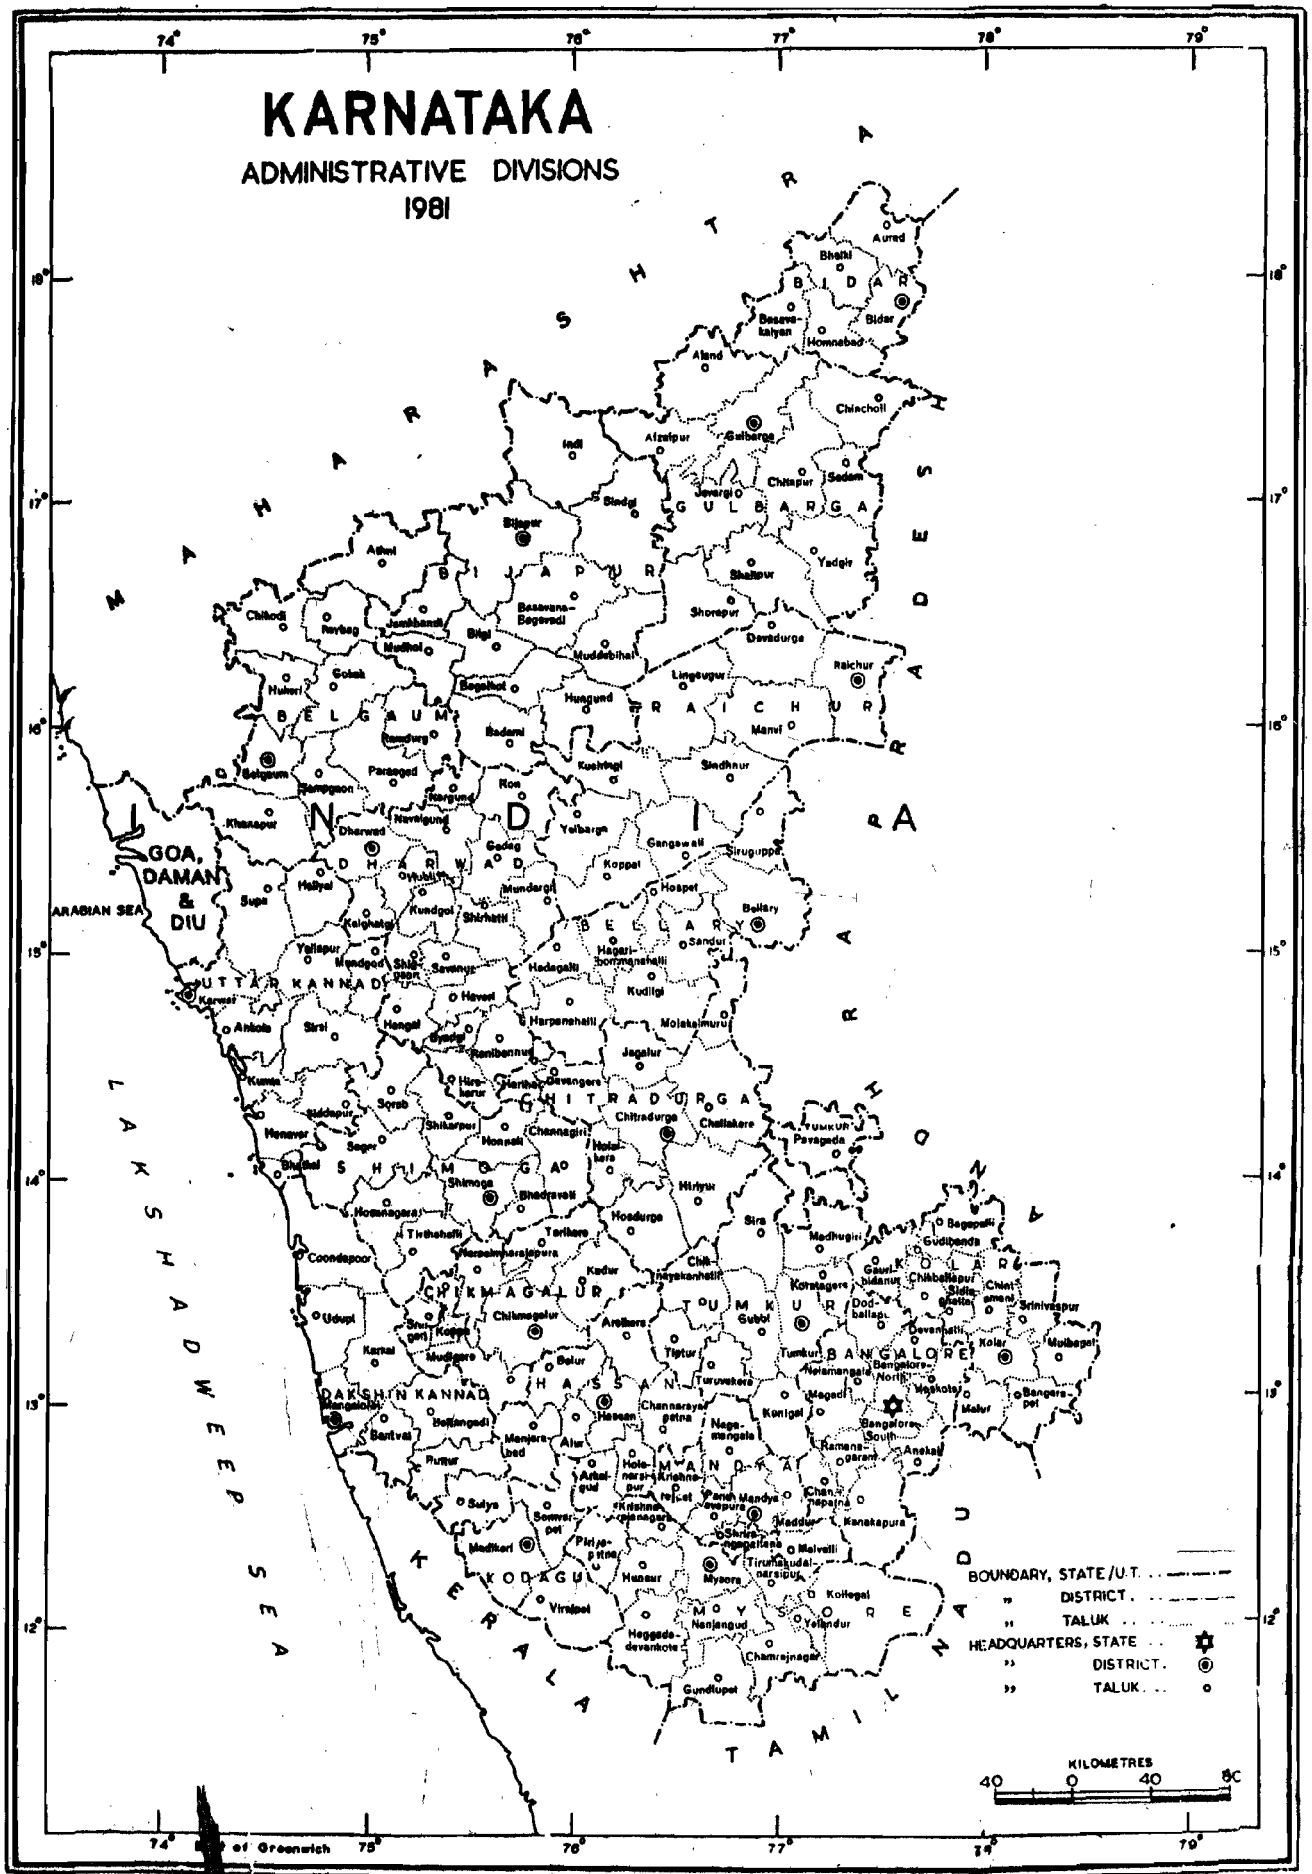

ALUMINIUM FACTORY, BELGAUM

The picture on the cover presents a view of the aluminium factory located at Belgaum City. This factory is run by the Indian Aluminium Company Limited - a firm which was first incorporated in 1938 under the name 'Aluminium Production of India (Private) Limited'. Later, in 1945, its name was changed and the firm was converted into a public limited company with a paid-up share capital of Rs.29.7 crores.

Bauxite which is the main raw material for this industry occurs at several places in the taluks of Belgaum and Khanapur as also at several nearby places belonging to the neighbouring Maharashtra State. This ore is found to be of a medium to high grade. By analysis, the alumina content is found to vary between 47.5 per cent and 59 per cent. The ore occurs in the form of thick cappings on the flat-topped hills and in the form of float ore in the adjacent valleys. The bauxite deposits in the district cover a large area and the reserves are estimated to be of the order of 9.15 million tonnes. It is only after the establishment of the factory at Belgaum that it has been possible to effectively utilise these ore reserves found in the district.

Alumina and Aluminium hydroxide are produced here by the Bayer's Process while aluminium metal itself is produced by the Hall Heroult Electrolytic Process. The factory provides direct employment to about 1500 persons at the plant. During 1979, the factory produced 134,500 tonnes of aluminium hydrate and 46,722 tonnes of aluminium metal. The Belgaum plant went into production in November 1969 and this event marked a major step in the industrial development of the district.

Based upon Survey of India map with the permission of the Surveyor General of India

The territorial waters of India extend into the sea to a distance of twelve nautical miles measured from the appropriate base line.

FOREWORD

The District Census Handbook (DCH), compiled by the Census Organisation on behalf of the State governments, is one of the most valuable products of the Census. The DCH is constantly referred to by planners, administrators, academicians and researchers. It is *inter alia* used for delimitation of constituencies, formulation of local level and regional plans and as an aid to District Administration. The District Census Handbook is the only publication which provides Primary Census Abstract (PCA) data upto village level for the rural areas and ward-wise for each city or town. It also provides data on infrastructure and amenities in villages and towns, etc.

The District Census Handbook series was initiated during the 1951 Census. It contained important census tables and PCA for each village and town of the district. During 1961 Census the scope of the DCH was enlarged and it contained a descriptive account of the district administrative statistics, census tables and a Village and Town Directory, including PCA. The 1971 DCH series was planned in three parts. Part-A related to Village and Town Directory, Part-B to village and town PCA and Part-C comprised analytical report, administrative statistics, district census tables and certain analytical tables based on PCA and amenity data in respect of villages. However, in some States it was confined to district census tables and in a few cases altogether given up due to delay in compilation and printing.

While designing the format of 1981 DCH series some new features along with the restructuring of the formats of Village and Town Directory have been attempted. At the same time, comparability with the 1971 data has also been kept in view. All the amenities except power supply in the village have been brought together in the Village Directory with the instruction that in case an amenity is not available in the referent village the distance in broad ranges from the nearest place where the amenity is available may be given. The restructuring of the format of the Village Directory and incorporating more exhaustive data on infrastructure aspect, particularly in relation to amenities and land-use pattern, is expected to further meet the need of microlevel planning for rural areas. It is expected to help not only in local area planning but regulating the provision of goods and services as well as to minimise the regional imbalances in the process of development. A few new items of information have also been introduced to meet some of the requirements of the Revised Minimum Needs Programme. Such new items of information as adult literacy centres, primary health sub-centres and community health workers in the village have been introduced in the Village Directory with this objective in mind. The new item on approach to the village is to have an idea about the villages in the district which are inaccessible. A new column, "total population and number of households" has been introduced to examine the correlation of the amenities with the population and number of households they serve. Addition of two more appendices listing the villages where no amenities are available and according to the proportion of scheduled caste and scheduled tribe population to the total population has also been made with this view in mind.

The formats of the Town Directory have also been modified to meet the requirements of the Minimum Needs Programme by providing information on a few new items. A new statement on civic and other amenities in slums in Class-I and Class-II towns (Statement IV-A) has been introduced with this objective in mind. It is expected that this will help the planners to chalk out programmes on provision of civic amenities for the improvement of slums. The columns on Scheduled Castes and Scheduled Tribes population in Statement IV relating to civic and other amenities and adult literacy classes/centres under educational facilities in Statement V are also added *inter alia* with this view. A significant addition is class of town in all the seven statements of the town directory. The infrastructure of amenities in urban areas of the country can be best analysed by taking the class of towns into consideration. The addition of the columns on civic administration status and population in a few statements also serves this purpose.

The format of the primary census abstract for the villages and towns has been formulated in the light of changes in the economic and other questions canvassed through the individual slip of 1981 Census.

In order to avoid delay in publication of 1981 DCH series it has been so designed that Part-A of

the volume contains Village and Town Directory and Part-B the PCA of villages and towns including the Scheduled Castes and Scheduled Tribes PCA upto Tahsil/Town levels. At the beginning of the DCH a detailed analytical note supported by a number of inset tables based on PCA and non-census data in relation to the infrastructure has been introduced to enhance its value. The District and Tahsil/Police Station/C.D. Block etc., level maps depicting the boundaries and other important features have been inserted at appropriate places, to further enhance the value of the publication.

This publication is a joint venture of the State Government and the Census Organisation. The data have been collected and compiled in the State under the direction of Shri B. K. Das, the Director of Census Operations, Karnataka, on behalf of the State Government which has borne the cost of printing. The task of planning, designing and co-ordination of this publication was carried out by Shri N. G. Nag, Deputy Registrar General (Social Studies) of my office. Dr. B. K. Roy, Deputy Registrar General (Map) provided the technical guidance in the preparation of the maps. Data received from Census Directorates have been scrutinised in the Social Studies Division at the headquarters under the guidance of Shri M. M. Dua, Senior Research Officer. I am thankful to all who have contributed in this project.

NEW DELHI
26th April, 1982

P. PADMANABHA
Registrar General, India

PREFACE

The Registrar General and Census Commissioner of India has in his foreword to this series of publications, not only provided the reader with the historical background of the District Census Handbooks but has also explained at some length the scope and coverage envisaged for this country-wide project. As uniformity in approach and comprehensiveness of data are distinctive features of this series every attempt has been made to adhere to the concepts and definitions adopted in designing the formats. These volumes contain the salient results based on the data gathered at the actual census count and, in addition contain a wealth of other than Census information in respect of villages and towns of the district. It is hoped that these volumes would go a long way to meet the ever increasing demand for the micro-level data in this era of planned development.

The District Census Handbook is divided into two portions: while Part A contains the Village and Town Directory, Part B confines itself to the Primary Census Abstract. Since combining of these two parts and presenting the same in a single volume enhances the utility of the volume and also because the districts of the State are not so large as to render such single volumes unwieldy in Karnataka, Part A and Part B of each district are being published together in a single volume. But, there is a major point of departure from the All-India pattern in so far as Karnataka is concerned. Owing to certain technical reasons all the particulars on Scheduled Castes and Scheduled Tribes proposed for publication in the DCHB as part of Primary Census Abstract and also the other derived statements have been pooled up separately and presented in the form of a Supplement. While such Supplements have been brought out as separate volumes in the case of Bidar and Mandya, in the case of the other districts this material also forms part of the single volume of the District Census Handbook and appears separately after Part B.

In the preparation of the District Census Handbooks the role played by the census organisation is that of data gatherer and the cost of publication is borne by the State Government. In accomplishing this task we have had the ready and whole-hearted co-operation of the staff at various levels of different departments of the State Government. For operational convenience the village directory was divided into two portions viz., that relating to area and land-use pattern, and that relating to the amenities. The relevant formats were mailed to the Tahsildars and Block Development Officers respectively requesting them to furnish information on land-use pattern and amenities. Much of the data so supplied by these field-level officers have been cross-checked with the data obtained from various departments and an attempt has been made to reconcile the discrepancies as well.

I take this opportunity to offer my grateful thanks to all the officers and officials who have been actively involved in the compilation and preparation of this volume.

I am deeply grateful to Shri P. Padmanabha, I.A.S., the Registrar General, India for the benefit I have derived by way of guidance and advice. I also express my thanks to Dr. N. G. Nag, Deputy Registrar General (Social Studies), Dr. B. K. Roy, Deputy Registrar General (Map) and Shri M. M. Dua, Senior Research Officer.

Lastly, I am thankful to the Government of Karnataka for having agreed readily to bear the cost of publication of the District Census Handbook volumes. The Director, Printing, Stationery and Publications, Karnataka has evinced keen interest in bringing out these volumes.

Bangalore
Date: 9th April, 1984

B. K. DAS
Director of Census Operations
Karnataka

ANALYTICAL NOTE

ANALYTICAL NOTE

BRIEF HISTORY OF THE DISTRICT CENSUS HANDBOOK:

The District Census Handbook was first introduced at the 1951 Census to meet the ever increasing demand for micro-level data by administrators, planners, and other census data users. These series were primarily envisaged to replace the 'Part IV – Taluk Tables' and 'Part V – Village Tables' of the earlier censuses and to present the basic demographic and economic data at village level in the form of primary census abstract. In addition, these volumes were to contain a set of important census tables at taluk, town and district levels.

At the 1961 Census the scope of the volume was greatly enlarged by incorporating into it (i) a descriptive account of the district, (ii) a set of non-census tables dealing with administrative statistics of a decade, (iii) taluk and town level census tables on economic and socio-cultural aspects and (iv) the village and urban block level primary census abstract. In a somewhat general way information on the availability of certain basic amenities like drinking water wells and schools was also furnished.

The 1971 Census witnessed an overall improvement in the matter of data compilation as well as in presentation of the results. A countrywide uniformity in approach and a comprehensive coverage are the hall marks of this series of publications. The District Census Handbook was split up into three parts: i) Part A consisting of land use data on villages and data on amenities and services available in villages and towns compiled in the form of village and town directory, ii) Part B consisting of district, taluk, town, village and urban block level primary census abstract, and iii) Part C consisting of an analytical note based on census as well as the non-census data included in the volume, a set of tables depicting the administrative statistics in greater details, census tables at district, taluk and town levels besides a set of tables generated on the basis of villagewise census data and particulars on amenities. The main objective was to present a comprehensive and intelligible portrait of the district and an overall view of the results of a decade long developmental activities in the district. The publication programme too was phased out: Part A was planned to be released first to be followed by part B and then Part C which could be published only after the finalisation of various census tables that were to be included therein and analysed. In Karnataka, Part A and Part B were combined and published on time as a single volume for each district except in the case of Bangalore. Owing to reasons beyond control there has been an inordinate delay in the publication of Part C volumes.

The current volumes of District Census Handbook are thus the fourth in the series and at every succeeding census there has been an endeavour to enhance the utility of these volumes.

2. SCOPE OF 1981 DISTRICT CENSUS HAND BOOKS:

Regarding uniformity and comprehensiveness, the approach in 1981 is much the same as in 1971. The contents have been slightly enlarged and the formats too are restructured to some extent to meet the requirements of the data users. The District Census Handbook has been divided into two parts: i) Part A consisting of town directory and village directory and, ii) Part B consisting of District, taluk, town, village and ward level primary census abstracts besides the special PCA at taluk and town levels in respect of the Scheduled Castes and Scheduled Tribes. Compilation of administrative statistics has been abandoned altogether. Though divided into two parts, in Karnataka as a matter of fact both the parts are being presented in a single combined volume for each district. There is however a point of departure from the all India pattern: all particulars relating to Scheduled Castes and Scheduled Tribes are excluded from the main volume of the district census handbook and are presented districtwise in the form of a supplement.

i) *Town Directory :* In the town directory section there are 7 statements in all to furnish townwise information on aspects such as: growth history; physical aspects and location; municipal finance; civic and other amenities in towns; civic and other amenities in notified slums; medical, educational, recreational and cultural facilities and trade, commerce, industry and banking. As compared to the 1971 series the statement about religionwise population has been dropped and an additional statement has been introduced in respect of urban areas with a population of 50,000 and more to furnish some basic data on slums. This apart, there are a few more variations mainly by way of inclusion of a few additional columns in each statement to indicate the size class of the town, population and also civic administration status with a view to facilitating an easier grasp of the data. In statement I, provision has been made to indicate the decadal growth rates, area and density of population as in 1981 and the sex ratio observed at the three successive censuses. The introduction of additional columns has resulted in the elimination of 2 columns which in 1971 presented comparative information on functional classification of towns. Statements II and III are very much the same while in statement IV additional information on water storage system with capacity has now been provided. In addition, in case of non-availability of fire-fighting station in the town itself reference to the nearest place with that facility has been given. In statement V too in case of non-availability of medical and educational facilities in the town information on the nearest place with such a facility has been provided. An additional column in this statement presents information on working women's hostel. Statement VI has remained almost unchanged except in the explanation regarding the imports and exports concerning the goods which simply pass through the town.

The towns in the district are arranged serially on the basis of their names in an alphabetical order and assigned location code numbers starting from I. For presentation of data in the town directory statements the same order of the towns has been followed. The concept of urban agglomeration introduced in 1971, has been retained for use at the 1981 Census also. Where an agglomeration includes two or more independent towns, the names of the constituent towns are indicated in the correct sequence as per alphabetical arrangement of their names. But, the details to be furnished in the subsequent columns are skipped with a view to avoiding duplication. Instead, immediately after the name of the town, a cross reference is given by the legend "See.....Urban Agglomeration" printed within brackets. The name of the core town of the urban agglomeration too would appear at its correct sequence with the legend as above and immediately below that the same name with the additional title ".....Urban Agglomeration" appears again without bearing any serial number. Against this line the cumulative total for the urban agglomeration as a statistical unit are presented wherever such a procedure is relevant and meaningful. This line is followed by those relating to the constituent towns of the urban agglomeration starting with the name of the core city and followed by the others arranged in the alphabetical order of their names. This procedure is the same as that followed in 1971 and enables one to have a fairly good assessment of the data in relation to the smaller civic administrative units that form part of the large unit and also of the larger statistical unit itself simultaneously. In case there are outgrowths which are not 'urban' in their own right the particulars relating to such areas are merged with those relating to the concerned town and presented in the statement. Such towns having outgrowths are marked out by an asterisk mark and for all purposes the town includes not only its statutory limits but also all the outgrowths and together constitutes an independent statistical unit. In an appendix, the names of these outgrowths and the population thereof are furnished townwise. These outgrowths appear in the Village Directory also. However, in all such cases merely a legend to the effect that it is an outgrowth of such and such a town is recorded along the line instead of furnishing land use data and information on amenities. In the case of villages certain parts of which are regarded as outgrowth while the other parts are considered as rural the data relating to the outgrowth is included in the town directory statements and the data relating to the rest of the portion appears in the village directory. It may incidentally be mentioned that there are no such cases in Karnataka.

In statements II, III and VI where it is not relevant to combine the data for the urban agglomeration as a whole the legend 'see constituent units' is printed along the line instead of allowing the entire line blank.

ii) *Village Directory :* In the village directory the columns regarding the land use pattern are very much the same while those relating to amenities have been slightly modified. Unlike in 1971, this time if a village is not having a particular amenity then the distance range within which that amenity is available and may be availed of has been indicated. This enquiry is however confined only to the basic level under each category of amenity. In other words, if a village is not having any educational institution at all then the distance that one has to cover to reach the nearest place having a primary school is indicated in ranges of less than 5 Km., 5-10 Km and 10 + Km. If a village is however having a primary school no attempt is made to provide similar information in relation to middle school, high school and college level in a progressive manner. Similar procedure has been followed regarding medical, postal and communication facilities. Regarding weekly markets too, if the village is not the venue of such a market the distance to the nearest weekly market is indicated in ranges.

In the village directory an additional column has been introduced to indicate the population of the village as well as the number of households therein. This juxtapositioning of population and amenities data would help one to assess at a glance the adequacy or otherwise of the amenities available within or in the immediate neighbourhood of the village. Another change with regard to the area and land use data this time is that these figures are furnished not in acres but in hectares upto two places of decimal. One more notable addition is the provision to indicate information about the proximity of the public transport facility such as bus stop and railway station in respect of each village. In 1971 though information on railway station (i.e., if available within one Kilometre from the village) was furnished in addition to the general condition of the road to the village under the column for communication, there was no reference at all to bus transport facility. This time, in column about approach road the condition of the road that leads to or passes through the village is indicated. In the remarks column general information about the number of copies of newspapers circulating in the village as also about the number of different types of automobile vehicles available in the village is furnished.

In the case of uninhabited villages i.e., villages which have returned nil population at the 1981 Census, only the details in respect of land use are furnished and in the columns pertaining to amenities the word uninhabited has been printed. If there are any village that are regarded as outgrowths of an urban agglomeration, then neither the land use data nor the data on amenities is furnished in this statement. After the location code number and name of the village a legend indicates the name of the urban agglomeration of which that village is a part. Practically this administrative unit has lost its independent existence having been merged in another unit for statistical purposes. But if only a portion of a village is so

affected by inclusion in an urban agglomeration then information as may be relevant to the portion that has still remained in the rural fold as a village has been furnished in the village directory.

In order to facilitate easy reference, an alphabetical list of villages showing population figures according to the censuses of 1971 and 1981 is given in respect of each taluk. At the end, the following appendixes have also been included to provide an over all view of the district: talukwise abstract of amenities; list of inhabited villages not having any amenities; and land utilisation data for non-municipal towns if any.

iii) *Primary Census Abstract:* As at the two previous censuses this time also the Primary Census Abstract is presented villagewise in the case of rural areas. But, in so far as the urban areas are concerned the practice of furnishing data upto urban census enumerator's block level has been given up and the particulars are presented upto ward or division level only. Within the district the taluks are arranged in the alphabetical order of their names in English and covered one after the other in that order. For each taluk after furnishing the taluk level data with the rural-urban break up the villagewise details are furnished and this is followed by the data relating to towns in the taluk.

In the Primary Census Abstract format itself there have been certain changes. Though fresh columns have been introduced to cover a new category of workers viz, marginal workers, the total number of columns is reduced in view of the elimination of details regarding workers engaged in activities other than cultivation and household industries. There are now hardly 22 columns in the statement i.e., excluding those related to Scheduled Castes and Scheduled Tribes which however appear separately in the Supplement. The workers are classified into main workers and marginal workers and the main workers are further classified into one of the four categories viz, cultivator, agricultural labourer, worker in household industry and 'other' worker depending on the nature of work done and the sphere of economic activity.

In the case of urban agglomerations the same procedure as has been adopted for presentation of data in town and village directories has been followed. That is to say, the urban agglomeration is regarded as a single statistical unit and the aggregate figures obtained by the addition of details in respect of each constituent town and outgrowth are noted against the name of the urban agglomeration which in itself does not bear a location code number. In the section dealing with the Urban Primary Census Abstract the core town with its location code appears first carrying the legend: 'See.....urban agglomeration'. Immediately below that line the full name of the urban agglomeration appears and the aggregate figures for the urban agglomeration are furnished. This line is then followed by the constituent towns arranged in alphabetical order of their names along with their Location Code number and full details under various columns. If the core town or any other town for that matter were to have any outgrowths then the first line for the town would in fact be a sub-total as it includes data not only of the town but also of the outgrowths. Thereafter, the name of the town and its constituent outgrowths are given along with the relevant data.

In the rural portion of the Primary Census Abstract if an entire village were to form part of any urban agglomeration then only the name of the village is indicated along with the legend that this village is included in such and such urban agglomeration. In the case of villages partly included in an urban agglomeration details relating to only such portion as has remained under the rural category are given.

3. BRIEF NOTE ON CENSUS CONCEPTS:-

Census taking is a massive operation carried out in a short span of time with the active participation of a veritable army of enumerators. The reference moment for the 1981 census is the sunrise of March 1, 1981 i.e., the census provides a snap shot of the population of the country as it existed at the sunrise of March 1, 1981. Actual enumeration was spread over a period of 20 days from 9.2.81 to 28.2.81 followed by a revisional round up to 5.3.81 for updating of the population figures with reference to the sunrise of March 1, 1981. The questionnaire canvassed by the enumerators viz., the household schedule and individual slip are perforce brief in their wordings and this naturally implies the use of abstractions and concepts. With a view to ensuring uniformity in approach in understanding the various concepts and in properly eliciting and recording of the information, the enumerators and supervisory officers were imparted both practical and theoretical training intensively.

As a preliminary to the actual census the urban and rural areas were identified and listed out in respect of each administrative unit and thereafter geographical areas that could be conveniently covered by each census enumerator were carefully carved out to constitute the enumerator's blocks.

The second major step was the houselisting operation which was carried out in the State during May 1980. Thereafter, in order to adhere to the prescribed workload norms the actual census enumerator's blocks were carefully demarcated on the basis of the lay out sketches and notional maps prepared for the houselisting operations. The detailed information on households and population collected at the houselisting operations was also quite useful in this task of formation of census enumerators blocks. Definitions and explanations regarding the important census concepts are given in the following paragraphs.

i) *Urban areas:* The definition adopted in 1961 and adhered to in 1971 has by and large been retained for the 1981 census also. There is however a minor modification regarding the classification of fishing and forestry. These two activities have now been regarded as allied to agriculture unlike in the earlier censuses when these were treated as purely non-agricultural activities for working out the proportion of agricultural and other than agricultural workers. According to definition the urban areas include:

"1) All places with a Municipality, Corporation, Cantonment Board or Notified Town Area Committees etc.,

2) All other places which satisfy the following criteria :-

a) minimum population of 5,000

b) at least 75 per cent of male working population engaged in non-agricultural pursuits;

c) a density of population of at least 400 per sq. km. (1,000 per sq. mile)

d) all places which, though not satisfying the above criteria had pronounced urban characteristics"

Demarcation of urban areas was done at the preliminary stage itself. In the case of non-statutory towns the empirical test was applied on the basis of the population returns of the 1971 census and this was supplemented by consultation with the State Government authorities concerned. The changes such as declassification i.e., abolition of municipalities, constitution of new municipalities and such other civic bodies, coming up of large human settlements at construction sites and other centres, de-population of project areas and former labour camps etc., have all been considered while preparing the lists of urban areas. Urban areas with a population of 100,000 and more are called cities and the others are termed merely as towns.

ii) *Urban agglomeration:* This concept which in 1971 replaced the concept of town group has been retained for the 1981 census also. It has been observed that very often railway colonies, university campuses, port areas, military camps and large residential colonies etc., come up quite adjacent to but situated outside the statutory limits of cities and towns. Such areas may not by themselves qualify to be treated as towns. But, if they form a continuous spread with the town they are outgrowths of the town and deserve to be treated as urban. Such towns together with their outgrowths have been treated as one urban unit called 'urban agglomeration . An urban agglomeration may consist of : a) A city with continuous outgrowth (the part of outgrowth being outside the statutory limits but falling within the boundaries of the adjoining village or villages); b) One town with similar outgrowth or two or more adjoining towns with their outgrowth as in (a); or c) A city and one or more adjoining towns with their outgrowths all of which form a continuous spread. It may further be noted that geographic contiguity with the statutory limits of the core town has been the main factor in determining whether or not a nearby satellite town or an outgrowth is to be included in the agglomeration. This is purely a statistical concept and for carrying out the actual census operations the administrative jurisdictions of the city or the towns concerned as well as the outgrowths situated in villages have been kept quite intact. The data have been pooled together only at the tabulation stage and presented in the combined form for the urban agglomeration as a whole and also severally for each one of the constituent units.

iii) *Rural areas i.e. Villages:* Areas which are not classified as urban according to the definition given above constitute the rural areas. The basic unit for rural areas is the revenue village which has definite surveyed boundaries. In the case of unsurveyed villages the boundaries as determined by the local usage have been adopted. The revenue village may consist of a single nucleated settlement or comprise of several hamlets i.e. human settlements or clusters of houses located at several places within the territorial limits of the village, or may be completely uninhabited. That is to say, the census village and the revenue village are identical in the matter of jurisdiction. However, there are a few exceptions to this general rule. These are for example:

1) When the main settlement of the village with or without the surrounding lands is constituted into an urban area the remaining tracts of the revenue village are collectively treated as a separate unit for purposes of census enumeration, i.e. the truncated portion itself is considered as an independent village in itself.

2) When outlying portions of certain revenue villages are incorporated into the limits of urban areas by notification, such areas, whether populated or not, are excluded from the revenue village concerned and for purposes of census operations the village boundaries are re-defined.

3) Revenue villages which are completely incorporated in the limits of urban areas or else, are submerged under reservoir projects but are still maintained in the jurisdictional lists of the survey and settlement authorities pending resurvey and such other procedures are taken note of as revenue villages but are omitted for census purposes. i.e. these are not treated as census villages The names of such villages if any in a taluk are given at the end without serial number but with due remarks.

4) If there are forest areas that do not form a part of any of the revenue villages then such areas are identified clearly and the smallest administrative unit in vogue such as Forest Beat, has been reckoned as the census village. A forest range may consist of several such census villages.

5) For purposes of local administration such as collection of land revenue a single revenue village may sometimes be found to be sub-divided into two or more units. Instead of ignoring such divisions, occasionally each such unit gets reported as a separate independant

These are called 'Institutional Households'. There may be one member households, two member households or multi-member households. For census purposes, each one of these types is regarded as a 'household'. If a group of persons who are unrelated to each other live in a census house but do not have their meals from the common kitchen, they would not constitute an institutional household. Each such person would be treated as a separate household. The important link in finding out whether there is a household or not is a common kitchen. There may be a household which does not at all have a house to live in and may temporarily dwell on the road-side, pavements, in humepipes, temples, mantaps, platforms etc, or move about from place to place resting underneath shade-bearing trees, pavements and verandahs of public or private buildings. Such households are for purposes of reference termed as Houseless Households.

ix) *Criteria for enumeration of a person in a particular household:*

a) All those who normally stay and are present in that household during the entire period of enumeration i.e., from February 9 to February 28, 1981 (both days inclusive).

b) Also those who are known to be normally residing and had actually stayed during a part of the enumeration period (February 9 to 28, 1981) but are not present at the time of enumerator's visit;

c) Also those who are known to be normally residing and are not present at the time of the enumerator's visit but are expected to return before February 28, 1981 and,

d) Visitors who are present in the household censused and are away from the place(s) of their usual residence during the entire enumeration period. For the purpose of enumeration, such visitors will be treated as normal residents of the household in which they are actually found during the enumeration period provided they have not been enumerated elsewhere.

x) *Literate :* A person who can both read and write with understanding in any language is to be taken as literate. A person who can merely read but cannot write is not literate. It is not necessary that a person who is literate should have received any formal education or should have passed any minimum educational standard.

xi) *Workers and Non-workers :* Depending upon the nature of his or her activity during the reference period every individual enumerated at the census is classified as either a worker or a non-worker. By definition, a worker is one who has worked, that is, 'participated in any economically productive activity'. Such participation may be physical or mental in nature. Further, work involves not only actual work but also effective supervision and direction of work. The reference period for determining whether a person is worker or a non-worker is the full year preceding the date of enumeration. The criterion is somewhat liberal and, even a person who has participated in the production of economic goods and services for a very brief period will be categorised as 'worker'.

Among workers however there are two categories:

a) *Main Workers:* Those who have worked for at least 183 days during the preceding year i.e., the entire reference period. (even though this may be in broken spells and in different occupations),

b) *Marginal Workers:* Those who have worked for less than 183 days during the entire reference period.

For both the categories of workers further details on the sector of economy in which they have worked, their occupation (that is, the actual nature of work done) and employment status (that is whether employer, employee, unpaid family worker or own account worker) have also been ascertained. The industrial classification of workers as adopted at the censuses of 1961 and 1971 has been retained at the 1981 census also. The industrial classification categories are: (I) Cultivators, (II) Agricultural labourers, (III) Workers in livestock, forestry, fishing, hunting, plantations, orchards and allied activities, (IV) Workers in mining and quarrying, (V) Workers in manufacturing, processing, servicing and repairs which are (a) run as household industry, (b) not run as household industry, (VI) Workers in construction, (VII) Workers in trade and commerce, (VIII) Workers in transport, storage and communication, (IX) Workers in other services. For purposes of presentation in the Primary Census Abstract however the details in respect of the main workers alone are considered and the industrial classification categories of III, IV, V(b), VI, VII, VIII, IX are pooled together and shown under the heading 'Other Workers'. The broad classifications therefore are: I–Cultivators, II–Agricultural labourers, V(a)–Workers at house hold industries, manufacturing, processing, servicing and repairs and, III, IV, V(b) and VI to IX–Other Workers. Explanations regarding the broad categories are given below:–

a) *Cultivators:* For purposes of the census a person is working as *Cultivator* if he or she is engaged either as employer, single worker or family worker in cultivation of land owned or held from Government or held from private persons or institutions for payment in money, kind or share. Cultivation includes supervision or direction of cultivation.

A person who has given out his or her land to another person or persons for cultivation for money, kind or share of crop and who does not even supervise or direct the cultivation of land will not be treated as cultivator. Similarly, a person working in another person's land for wages in cash or kind or a combination of both (agricultural labourer) will not be treated as cultivator.

Cultivation involves ploughing, sowing and harvesting and production of cereals and millet crops such as wheat, paddy, jowar, bajra, ragi etc. It is important to note that for certain reasons the growing of certain crops is not considered as agriculture. If a person is engaged in the growing of such crops he or she will not be considered as cultivator or agricultural labourer.

The growing of the following crops is considered as cultivation:

1. *Cereal and millet crops:* Paddy, wheat, jowar, bajra, maize, ragi, barley,gram, etc.

2. *Pulses:* Arhar, moong, masur, urd, kesari etc.

3. *Fibre crops:* Raw cotton, jute, mesta, sunhemp and kendred fibre crops.

4. *Oil seeds:* Sesamum, ground-nut, rape, mustard, linseed, castor, etc.

5. *Cash crops:* Sugar-cane

The growing of the following crops will not be considered as cultivation:

1. *Plantation crops:* Tea, coffee, rubber, tobacco, pepper, cardamom, etc.

2. *Edible nuts (Other than groundnut):* Walnut, almond, cashewnut, etc.

3. *Fruits:* Bananas, apples, grapes, mangoes oranges, etc.

4. Coconut

5. Ganja, Chinchona, opium, and medicinal plants.

6. Arecanuts.

7. Flowers.

8. Roots and tubers, chillies and spices (other than pepper and cardamom)

9. Vegetables.

10. Other crops not specifically included under cultivation.

b) *Agricultural Labourer:* A person who works in another person's land for wages in money, kind or share is regarded as an agricultural labourer. He or she has no risk in the cultivation. The agricultural labourer has no right of lease or contract on land on which he or she works.

c) *Household Industry:* Household Industry is defined as an industry conducted by the head of the household himself or herself and or by the members of the household at home or within the village in rural areas and only within the precincts of the house where the household lives in urban areas. The larger proportion of workers in a household industry would consist of members of the household including the head. The industry should not be run on the scale of a registered factory which would qualify or has to be registered under the Indian Factories Act.

d) *Other Workers:* The type of workers that come under this category include factory workers; plantation workers; those engaged in trade, commerce, business, transport, mining, construction, political or social work; all government servants; municipal employees; teachers; priests; entertainment artists, etc. In effect, all those who work in any field of economic activity other than as cultivators and agricultural labourers or in household industry are categorised as 'Other Workers'.

xii) *Marginal Workers:* Though similar classification is possible in respect of the marginal workers also the Primary Census Abstract does not aim to present these details. The total number of marginal workers alone is indicated sexwise. In respect of such persons answers on how they have engaged themselves mostly during the reference period have also been elicited. That is to say, the concept of main activity as adopted in the 1971 census is kept in view and, as in the case of non-workers, relevant details about their activity have been ascertained.

xiii) *Categories of non-workers:* Depending upon the manner in which the non-workers have engaged themselves for most of the time during the reference period they are classified into one or the other of the six categories, mentioned below, at the time of the enumeration itself. However the Primary Census Abstract does not furnish details according to the categories of non-workers but indicates the total number of non-workers by sex.

a) *Household duties:* This covers all persons who are engaged in unpaid home duties and who do no other work or have not done any work at all during the last one year.

b) *Students:* This will cover all full-time students including children attending school.

c) *Dependents:* This category includes all dependents such as infants, children not attending school, and persons permanently disabled from work because of illness or old age. Dependents will include even able-bodied persons who cannot be categorised in any other category of non-workers but are dependent on others.

d) *Retired persons or Rentiers:* A person who has retired from service and is doing no other work i.e., not employed again in some full time work or not engaged in some other work such as cultivation, business, trade, etc., or a person who is a rentier or living on agricultural or non-agricultural royalty, rent or dividend, or any other persons of independent means for securing which he or she does not have work, will come under this category.

e) *Beggars:* This will cover beggars, vagrants or cases such as persons without indication of source of income and those with unspecified source of subsistence who are not engaged in any economically productive work.

f) *Inmates of Institutions:* This will cover convicts in jails or inmates of a penal, mental or charitable institution even if such persons are compelled to do some work such as carpentry, carpet weaving, vegetable growing, etc., in such institutions. But an undertrial prisoner enumerated in a jail would be recorded for the work he or she was doing before he or she was apprehended. Similarly, a person temporarily in a hospital or similar institution would be recorded for the kind of work he or she was doing before he or she was admitted into the hospital or institution. But, for a long-term undertrial prisoner or convict in a prison or for long-term inmates of penal or charitable or mental institutions, the person's previous work would not be taken into consideration. A person will be considered as 'Long-term' inmate if he or she is in such an institution for 6 months or more.

4. BRIEF HISTORY OF THE DISTRICT :

In accordance with the common practice of naming an administrative unit after the name of its headquarters, this district too is named after Belgaum, the district headquarter-town. The town itself derives its name from Velugrama or Venugrama, the ancient name of the place. The great antiquity of this neighbourhood is testified by a Brahmi inscription, belonging to the first century before Christ, which was found amidst the ruins of the fort at old Belgaum. This inscription, etched on a stone pillar, mentions about several sacrifices performed by a person who belonged to Kashyapa gotra, at Yadugrama which is identified with the Vadgaon suburb of Belgaum city. This apart, Belgaum district has several places of historical importance and a few which are identified with places mentioned in Hindu mythological accounts. Saundatti-Yellamma for example, is one such place which has acquired considerable religious importance. It is located close to the river Malaprabha and is identified as the place where Parashurama, the VI incarnation of Lord Vishnu, beheaded his own mother at the behest of his father. The narrative further states that when his immensely pleased father granted him with a boon, Parashurama asked for and got his mother restored to life at this very spot. The Yellamma hills have a shrine dedicated to Renuka and another to Parashurama and these are noted centres of pilgrimage in the entire northern Karnataka region. The periodical fairs held here, that is the spot which symbolises death and resurrection, attracts a very large number of devotees from distant areas beyond the limits of Karnataka State as well. Local legends associate Yedur, located on the banks of the Krishna, as well as Godchi of Ramdurg taluk with the mythological account of Daksha Yajnya and the exploits of Veerabhadra. A village in Athni taluk is named Saptasagar and local legend has it that the Seven Sages sanctified the Krishna river which flows near this village by pouring into it the waters they had fetched in their water spouts from the Seven Seas. About early historical period it may be mentioned that the village Halashi of Khanapur taluk was the chief capital of the Early Kadambas and that Saundatti, known as Sugandavarti, was the capital of the Rattas for quite a long period. Kakati of Belgaum taluk is identified by some historians as the original abode of the famous Kakatiyas of Warangal.

Belgaum district formed part of the ancient Kuntala Desha which is stated to have covered several regions including Kundi Three Thousand. During the early historical period, from 327 B.C. to 229 A.D., the Satavahanas had firmly established their supremacy over parts of the present Andhra Pradesh and Karnataka including the Kuntala Desha. Though Belgaum district has not yielded any inscriptions and copper plates relating to either the Early Chalukyas or the Western Chalukyas it is clear from the evidence found in the adjacent districts of Bijapur and Dharwad that Kundi 3000 formed part of the Early Chalukyan Kingdom (550-610 A.D.) and then of the Western Chalukyan Kingdom. In 760 A.D., when the Rashtrakutas over-threw the Western Chalukyas, along with the rest of the Chalukyan domains Kundi 3000 also came under the control of the Rashtrakutas. Traces of Rashtrakuta power and domination survived in this region for a long period even after the Rashtrakutas ceased to be a paramount power in 973 A.D. For about 400 years, from 850 A.D., the Ratta Mahamandaleshvaras or Rattas for short, administered large portions of Belgaum district at first as the chief feudatories of the Rashtrakutas, then as the subordinates of the Goa Kadambas and finally, from 1170 A.D., as independent monarchs. The Ratta dynasty was founded by Merada and his son Prathivarma, who were originally teachers or purohits (priests). Rashtrakuta king Krishna II formally invested Prathivarma with the rank and title of Mahamandaleshvara and entrusted him with the administration of a large territory. The capital of the Rattas was located at Sugandavarti (modern Saundatti-Yellamma town) till it was moved to Velugrama (Belgaum). An inscription dated in 1208 A.D., found at Hannikeri near Sampgaon refers to this event and mentions that the Rattas acquired Velugrama 70 from the Kadambas by conquest. Lakshmideva Raya appears to be the last Ratta king. The overthrow of the Rattas by Yadava Singhana's minister and general Vichana is recorded in a grant of VII Yadava king Krishna which is dated in 1253 A.D. and is found at Byahatti in Dharwad district. An inscription dated in 1249 A.D., mentions Mallisetty as governing the Kundi country from Mudgal and yet another found at Manoli and dated in 1253 A.D., mentions Chaundraj, son of Vichana, as in charge of the southern parts. By 1250 A.D., the Yadavas of Devagiri established their sway over entire Belgaum district and their supremacy in this region too lasted till they were finally overthrown by Allauddin Khilji in 1320 A.D. In 1327 A.D., emperor Muhammed-bin-Tughlak subdued Karnatak and appointed two of his noblemen to administer these territories from their respective headquarters at Hukeri and Raybag. This position did not last long. Within a few years of its founding, the Vijayanagar empire extended its sway over Belgaum district as well. According to Ferista, the Belgaum region south of the Ghataprabha river was being administered by the Vijayanagar kings through their subordinates from 1347 A.D. to 1472 A.D. In fact, during this period there was constant rivalry between the Vijayanagar kings and the Bahamani Sultans for possession of these territories. In 1357 A.D. the Bahamani kingdom was organised into four divisions and that which stretched from Gulbarga to Dabhol in Ratnagiri in the west and to Raichur and Mudgal in the south was placed under Malik-Serif-Uddin-Ghore. Southern parts of Belgaum including the Belgaum Fort and Goa however acknowledged the suzerainty of the Vijayanagar kings. This position too changed in 1470 A.D. when Muhammed Gilani, a Governor under the Bahamanis captured Goa. The Bankapur chief tried to recapture Goa with the reinforcements from the Vijayanagar kings and this event led to the Bahamani attack on Belgaum Fort. Karna Raja, who stoutly defended the fort, was finally vanquished and with this the whole of Belgaum district came under Bahamani rule.

In 1478 A.D., the Bahamani kingdom was reorganised into eight tarafs, each with a governor. The western parts including the fort at Belgaum came under the governorship of Fakru-ul-Mulk. About a decade later, the governors of Junnar and Bijapur provinces virtually threw off their allegiance to the Bahamani Sultans. About this time, Bahadur Gilani, the governor of Konkan rebelled against his master and with his headquarters at Sankeshvar, seized Goa and Belgaum. Yusuf Adil Shah, the Bijapur governor sent an army against Gilani and re-established his supremacy. Gilani himself was killed during this campaign and his estate became a part of the possessions of the Bijapur kingdom which soon emerged as an independent power. In 1510 A.D., the Portuguese wrested Goa from the control of Bijapur. In 1511 A.D., the Bijapur king, Ismail Adil Shah appointed Khusru Turk as the governor of Belgaum and, in appreciation of his services to the kingdom, conferred on him the title Asad Khan as well. Asad Khan administered Belgaum for about 38 years and came to be regarded as a saint. Even today his tomb is one of the important objects of worship at Belgaum and is held in high reverence by both Muslims and Hindus. He was succeeded by his son Mohammed Kishwar Khan.

The success of the confederate forces of the Bijapur, Bidar, Golkonda and Ahmednagar against the Vijayanagar at the decisive battle of Rakkasa Tangadgi in 1565 A.D. was followed by a period of general disorder and disruption of authority because of the jealousies that arose amongst conquerers in sharing the spoils. Taking advantage of the chaotic situation, Vitta Gowda, the ancestor of the Sirsingi Desai's family seized a few strategic forts in the Belgaum district and its neighbourhood, established himself at Torgal as a semi-independent ruler and refused to accept the suzerainty of the Bijapur kings. By 1573 A.D. Ali Adil Shah of Bijapur succeeded in establishing friendly relations with Murtaza Nizam Shah, the Sultan of Ahmednagar and was able to come

to an understanding with the latter that he should be left free to conquer the Karnataka while Ahmednagar could likewise spread its powers in the north. Immediately, Ali Adil Shah began his campaign and subdued the rulers at Dharwad and Bankapur who too had assumed an independent posture before establishing his supremacy in the entire Belgaum district. Vitta Gowda was captured and put to death. Thenceforth for about a hundred years, till the entire Bijapur kingdom was conquered by Aurangzeb in 1686, Belgaum district, by and large, remained under Bijapur rule. However, the Maratha inroads into the Bijapur territories began by about 1659 A.D. when Shivaji followed up his success near Pratapgad by seizing the fort of Panpala and with it the Kolhapur district including the Sankeshvar region of Belgaum district. Indurao Ghorpade held Hukeri and Raybag from 1668 A.D. On his way to Hubli, in 1673 A.D., Shivaji plundered Hukeri and Raybag and took into his possession large territories in Belgaum district. In order to strengthen his hold on these acquisitions, he is said to have built about 360 forts in this region. After the fall of Bijapur in 1686, the Marathas were practically driven out of Belgaum district by the Moghuls.

The Moghul rule of this part of the country was of a purely military nature and it did not last long. The emperor appointed Abdul Rahuf Khan as a Mansabdar and granted him administrative powers over 22 mahals including Belgaum and Torgal. Abdul Rahuf Khan who had his headquarters first at Bankapur and then at Savanur was content to entrust the revenue management of his territories to the hereditary officers such as the desais. The death of emperor Aurangzeb in 1707 A.D. led to the establishment of two Maratha principalities under two of Shivaji's grandsons : Satara under Sahu and Kolhapur under Sambhaji. In 1719, Sahu received imperial grants from the emperor which conferred on him the right to collect Chaut or one-fourth and Sardeshmukhi or one-tenth, of the revenues of the six Deccan provinces including Belgaum. In 1723 A.D. Nizam-ul-mulk, the viceroy of the Deccan interfered to suppress the disturbances in the Bijapur province, took Athni and the fort of Belgaum and then appointed the Nawab of Savanur as the governor or Subedar of this region. Though Sahu had received the imperial grant to levy a fourth and a tenth of the revenues of all lands formerly held by the Moghuls the local power of the chiefs of Kolhapur and Savanur was so great that Fatesingh Bhonsle, the Maratha general scarcely ventured to cross the Krishna river. In 1726 A.D. on the pretext of collecting these revenues, Peshva Baji Rao marched into Karnataka and plundered places as far south as Shrirangapattana. In 1730 A.D. under a treaty between the chiefs of Satara and Kolhapur, the country between the Krishna and the Tungabhadra was assigned to Kolhapur. In the meantime, the Savanur Nawab, who was subordinate to the Nizam, gradually acquired a large territory. In 1746 A.D. he ventured to resist the authority of the Marathas to collect their due share on the revenue in this region. This resulted in a Maratha invasion and in 1747 A.D. he had to agree to a treaty by which he yielded large tracts of lands to the Peshva. The Belgaum Fort passed to the Peshvas in 1756 A.D. and in 1763 A.D. Peshva Madhav Rao subdued the Desai of Hukeri. In 1764 A.D., Haidar Ali of Mysore marched against Savanur and reduced the Nawab to submission while his general Fazl Ullah Khan took Dharwad and overran the country as far north as the Krishna. This resulted in a counter-attack by the Peshva and Haidar Ali was compelled to retreat. Once again, during 1776-78, Haidar Ali invaded these territories and in 1779, as the Poona ministers were anxious to secure his aid in their battles against the English, Haidar Ali's right to the Maratha territories south of the Krishna was admitted on payment by him of a yearly sum of Rs.11 lakhs to represent the Maratha share of the revenue. Later, in 1782 A.D. Nana Phadnavis tried to persuade Haidar Ali to restore the territory north of the Tungabhadra. After the death of Haidar Ali in 1782 A.D. Nana Phadnavis called on Tipu to make good the arrears of tribute. Tipu acknowledged that tribute was due but evaded payment. In 1785 A.D. by demanding a higher tribute, Tipu estanged Venkat Rao the chief of Nargund, who had been his tributary since 1778 A.D. Venkat Rao sought for and obtained the help of Nana Phadnavis. On the assurance of Tipu Sultan the Maratha army recrossed the Krishna. Thereafter Tipu pressed the siege of Nargund with redoubled vigour and took the fort. Kittur fort was also seized likewise and both the forts were garrisoned by Mysore troops. Fears of an English invasion led Tipu to leave Kittur in 1787 A.D. even though the balance of advantage was with him in his wars against the Marathas. As soon as the Marathas had recrossed the Krishna, in total disregard to all his promises, Tipu retook Kittur. The Marathas were much annoyed by Tipu's faithlessness and formed an offensive alliance which mounted an attack in 1790 A.D. under Parashuram Bhau and a detachment of the British troops under Captain Little. The whole of Bombay Karnataka region thus passed to the Marathas and remained in their possession till 1818 when General Munro captured Belgaum and ushered in the British era. For a couple of decades to follow, the hereditary chiefs and estate-holders were allowed to administer their respective territories under the suzerainty of the British. In 1824, the Desai of Kittur who did not have a son and was on his death bed, adopted a boy and named him as his successor. The British masters however refused to accept the right of the adopted child to the chieftaincy and in accordance with the doctrine of lapse demanded the surrender of Kittur. This was resented by the widowed queen, Rani Channamma, who raised the banner of revolt against the British policies. She put up a valiant fight against the mighty British who finally succeeded in annexing Kittur. In 1829, there was a second rebellion in Kittur under the leadership of Sangolli Rayanna. This was also put down and Rayanna was captured and put to death at Nandgad of Khanapur taluk. In 1830, the then Government of Bombay brought under the regulations territories of Bombay-Karnataka region which had been acquired either by conquest from the Marathas or by treaty and agreement from other States. These territories were formed into a district and named after Dharwad which was divided into two collectorates in 1836 and the headquarters of the northern collectorate was actually shifted to Belgaum in 1838. About 1831 trouble started in Nipani when the British declared that as the Desai was issueless his estate would lapse to the British on his death. The chief, who adopted Murar Rao as his heir, died in 1840. The Governments' refusal to accept Murar Rao as the genuine heir caused a rebellion at Nipani, which was however quickly put down by the British. Nipani lapsed to the British in 1840 and in 1842 another estate belonging to a representative of the divided family of Miraj Peshvas also lapsed. There were unsuccessful risings in Kolhapur and Savantavadi in 1844 and then again in 1857. Baba Saheb of Nargund who was arrested in the jungles of Torgal in 1858, was tried at Belgaum on the charge of murdering Manson, the political agent, sentenced and hanged to death on the Haystack Hills at the outskirts of the city. The British rule came to an end in August 1947 and, with the merger of the princely States in 1948 and their integration later on, the boundaries of Belgaum district were re-organised. In 1956, as a consequence of the reorganisation of States, the then Belgaum district excluding Chandgad taluk came to be included in the erstwhile Mysore State. This enlarged Mysore State has since been re-named as Karnataka and Belgaum happens to be the headquarters of one of the four administrative divisions of the State. The jurisdiction of this division extends over the districts of Belgaum, Bijapur, Dharwad and Uttar Kannad, i.e. the territories which formerly belonged to Bombay State.

5. LOCATION AND PHYSICAL ASPECTS :

Belgaum district is located in the north-western corner of Karnataka State. It is a frontier district which shares its borders with the Union Territory of Goa, Diu and Daman on the one hand and the Maharashtra State on the other. It is comparatively close to the Arabian Sea and its western fringe touches the Western Ghats. The district is of an irregular shape and, while its maximum length from north to south is 160 km its maximum breadth from east to west is 130 km. Spanning a total geographical area of 13,415 square kilometres,

this district lies between the latitudinal parallels of 15°23'N and 16°58'N and, the longitudinal parallels of 74°05'E and 75°28'E. Belgaum is surrounded by as many as six districts of which three belong to the Maharashtra State while the other three belong to Karnataka State itself. In addition in the south-western corner, for a short stretch the district is bounded by the Union Territory of Goa. The district is bounded on the west, north-west and north by the districts of Ratnagiri, Kolhapur and Sangli; on the east by Bijapur district and on the south by the districts of Dharwad and Uttar Kannad. It may be incidentally noted that the jurisdiction of this district extends over a small piece of land which lies a few km beyond the district borders in the midst of the lands belonging to Kolhapur district of Maharashtra State.

The landscape of Belgaum district mainly consists of vast stretches of plains studded with solitary hills most of which are flat-topped and are adorned with fortifications. The western fringe, particularly in the south, is at a relatively higher elevation. The district may be broadly divided into four natural divisions. The western belt, which is quite narrow and mainly covers the western parts of Khanapur taluk, is characterised by a rugged terrain. The extreme west is in fact a succession of valleys running between the spurs that stretch out at right angles from the Sahyadri range. In this zone the rainfall is moderate to heavy, the climate is damp and cool and vegetation is abundant. The northern belt consists of plateaus of poor soils and is characterised by a dry climate. Amidst the plains there are some low rolling hills which are devoid of tree-growth. The banks of the rivers and streams are, however, flanked by lands with rich black soil. The central belt is separated by the Belgaum hills on the west and, further east, by a succession of low sandstone ranges. The Ghataprabha valley which has its origins in the Western Ghats changes here into a waving plain broken by lines of low hills. Though there is some amount of treegrowth in the west, these plains are generally devoid of trees, especially of the larger species. The southern belt presents a mixed landscape : while the lands west of the Malaprabha valley are covered by rugged hills and forests, the lands in the eastern zone are more open and consist of level ground broken by gentle slopes and an occasional mass of granite. Black soil is the predominant type of soil noticeable in this belt. The banks of the rivers and streams are flanked by a relative abundance of tree growth. Towards the east, the terrain is broken by low hills and beautiful gorges. There are several flat-topped hills on which stand the remnants of old forts. The slopes of most of these hills are covered with brush wood and prickly pear and, at several places, these slopes have been brought under the plough as well.

Two great spurs, which may be identified as the North Ghataprabha and the North Malaprabha, cross Belgaum district from west to east and form the watersheds that divide the Ghataprabha basin from the Krishna basin in the North and the Malaprabha basin in the South. The North Ghataprabha spur rises near Savantvadi in Maharashtra and runs through the district as far as Chikodi. Of the numerous flat-topped hills in this range a mention may be made of the following : Vallabhgad (170 metres), Adigudda (192 metres), Julapengudda (222 metres), Nagarhalgudda (260 metres), Jogigudda (267 metres) and the Nagarpanchamigudda (119 metres). The main spur is crossed by the narrow valley of Tamraparni at Rajgoli to the east of Gandharvagad. The North Malaprabha spur starts from Tolkat pass, 35 km west of Belgaum, and rises into a high ridge near Kasargudda. Besides these two principal ranges, there are three other spurs of some importance. These are Mahipalgad ridge about 16 km north-west of Belgaum, the Bailur ridge about 22 km south-west of Belgaum and the Jamboti ridge about 16 km west of Belgaum. The Mahipalgad ridge is about 915 metres high and the ascent is easy. The hill has been fortified. The Bailur ridge is a table-topped mass and represents the highest point in the distirct (1064 metres MSL). After covering a distance of about 10 km it disappears in the valley of a stream which runs into the Malaprabha and beyond the valley it rises again at Yellurgudda. The Jamboti ridge has the peak of Kiruvalegudda or Gorakhnath hill (640 metres). In addition to these spurs there are several detached hills in different parts of the district. The chief hills in the northern zone around Athni are : Junapala gudda (rugged in terrain and fortified, rises 305 metres above the plains), Bagedgudda (813 metres MSL), Manikere ridge (750 metres MSL) and Kathariguda (867 metres MSL). In the southern tracts, a mention may be made of the following hills : Bhimgad (rugged in terrain and fortified, rises 550 metres above the plains and consists of a double line of broken hills), Dongargavigudda (730 metres high), Samshergudda (about 550 metres high and has gentle slopes covered with rocks) and Bijangigudda (460 metres high and covered with trees). A mention may also be made of the Deshnur hills, Bailhongal hills, Hitalmardi, Ganimardi, Saundatti hills and the Parasgad hills (784 metres MSL). The last mentioned which rises to a height of 183 metres has steep rocky sides which are difficult to climb and has been duly fortified.

The Krishna, the Ghataprabha and the Malaprabha are the principal rivers which flow across the district from west to east and drain the waters in its northern, central and southern tracts respectively. Though perennial, these are not navigable and, during summer, these shrink into small streams. The Krishna river has its fountainhead in the temple of Mahadev at the foot of the steep hills that form the Mahadev range in the western Ghats north of Mahabaleshvar. The river, which has a total length of 1400 km, traverses through the States of Maharashtra, Karnataka and Andhra Pradesh. Within Belgaum district, however the river flows for a distance of about 70 km only. On entering the district near the north-eastern corner of Yedur village (35 km north of Chikodi town), the river flows south west and then takes a U turn, receives the waters of the Dudhganga from the west and flows eastwards along the southern borders of Yedur, Manjari and Ingali villages of Chikodi taluk. Thereafter, the river forms the natural boundary between the taluks of Athni and Raybag, cuts across Athni taluk and then again it forms the natural boundary between Athni taluk and Jamkhandi taluk of Bijapur district. In Raybag taluk it receives the waters of Halhalla from the south and in Athni taluk, the Agrani rivulet flows into it. The Krishna finally leaves the district near Zunzurwad in the south-eastern corner of Athni taluk. The Ghataprabha originates in Sundargad in the Western Ghats, flows east for about 60 km through Maharashtra State before it touches the southern borders of Shettihalli village of Hukeri taluk, and continues its eastward course, forms the natural boundary between the taluks of Hukeri and Belgaum and then proceeds in a north-eastern course across the taluks of Hukeri and Gokak covering a total distance of about 70 km before it leaves the district near Awarwad village. The river receives the waters of the rivers Tamraparni, Markandeya and Hiranyakeshi. Near Gokak town, the Ghataprabha cuts through a range of sandstone hills and cascades down a cliff, about 53 metres high, to form the famous Gokak Falls. The waters of this river have been harnessed for purposes of irrigation by erecting a weir near Dupdhal and a dam near Hidkal. The Malaprabha which is also known as Malapaharini and Malini rises in the Chorla ghats about 16 km west of Jamboti village of Khanapur taluk. The river flows west for about 20 km, turns south-west and, after covering another 13 km, gradually takes an almost north-eastern course and cuts across the taluks of Sampgaon, Parasgad and Ramdurg. About 6 km north of Saundatti-Yellamma town the river passes through a gorge known as "Peacock gorge" or "Navilu tirtha". Near this spot a dam has been built across this river to form a large reservoir for storage of water for purposes of irrigation. At Cholachgudda and Munavalli (Manoli), the river flows from south to north and is therefore known as Uttara vahini. Before it leaves the district near Sangal, the Malaprabha receives the waters of Bennihalla, Tuparinala and a few other streams. In addition to the three major rivers mentioned above there are several smaller rivers and streams which too are of considerable importance. Markandeya river which rises near Bailur in Khanapur taluk is an important tributary of the Ghataprabha. Dudhganga which originates in the western ghats flows for a distance of 109 km. It is joined by the Vedganga near Bhoj and it finally merges with the Krishna near Yedur. Hiranyakeshi and Agrani are also of some importance. The Sogal stream rises near Sogal in Parasgad taluk, passes through a depression in a quartzite ridge and forms what is popularly known as the Sogal Falls, before it flows into the Malaprabha. Mahadayi is the

only west-flowing river of the district. It has its origins near Degaon village of Khanapur taluk, receives the waters of Bhandurnala, turns west and traverses through gorges in rapids for a distance of about 30 km before entering the limits of the Union Territory of Goa. Here the river assumes the name Mandovi and, after covering a further distance of about 45 km, finally flows into the Arabian Sea.

The rock formations of the district chiefly consist of the Dharwars, gneisses, Kaladgi series and the Deccan trap. The Dharwars are mostly seen in the western parts of Khanapur and also in the taluks of Belgaum and Sampgaon. These rocks are represented by schists, phyllites, quartzites and banded ferrugenous quartzites. The schistose rocks are highly foliated and the chief varieties found here include the micaceous, the chlorite and the haematite. Basic intrusions of iron and manganese are also found in the Dharwars. The gneissic system consists of different types of granite and gneisses which ultimately give rise to clay. Rock formations belonging to this system are mainly found in the southern parts of the district in narrow belts which range from 3 km to 10 km in width. A large number of minor intrusions like basic dykes, pegmatites and quartz veins are also found. The Kaladgi series of rock formations are represented by sandstone, quartzite, conglomerates, haematite, dolomite and lime stone. Sandstones and quartzites are particularly noticeable in the taluks of Ramdurg, Parasgad, Gokak and Belgaum in the form of low ridges. The largest exposure of limestone is noticeable near Yadwad. The Deccan Traps occupy a major portion of the district, especially in the northern and eastern parts. The chief varieties found here are the basalt, amygdaloid trap, vesicular trap and clayey trap. The upper layers of the traps are generally capped by beds of laterite and clay. Sedimentary rocks, chiefly sand deposits, conglomerates, grits and clay beds occur between the flows of lava that constitute the Deccan Trap. In some of these formations, as for example those noticed at Mamadapur and Upparhatti about 10 km north of Gokak town fossils have also been discovered. The organic contents of these fossils show them to be of fresh-water origin. Fossil-bearing river rocks have been found on the banks of a stream which flows into the Ghataprabha at Chigadolli, about 5 km north-east of Gokak town. Alluvial basins have been noticed at four places : (i) along the course of the Markandeya river about 3 km north of Belgaum, (ii) along the stream that rises near Yellurgudda, (iii) south of Pachapur village at the place where the river Markandeya meets the Belgaum stream and (iv) below Gokak in stretches about 18 km north-east of Tigdi village. The economic minerals found in the district include iron, manganese, bauxite, limestone and clay besides sand and stone which too are being commercially exploited. Belgaum is noted for its ground water resources as well. Since generations the taluks of Athni, Raybag, Chikodi and Gokak are known for their large number of irrigation wells.

On an average, Belgaum district receives an annual rainfall of 748.7 mm. Within the district, the amount of rainfall decreases as one moves from west to east. At Khanapur in the west the average annual rainfall is of the order of 1683.6 mm. On the other hand, at Raybag in the east, the average annual rainfall is only 509.5 mm. The average number of rainy days too decreases as one moves east. About 68 per cent of the annual rainfall precipitates during the south-west monsoon season which lasts from June to September. Generally, July happens to be the month with the heaviest downpour. In the western portion the rainfall is reliable and annual variations are quite small. As a result, seasonal conditions are comparatively good and helpful to agriculturists. In the eastern belt however, the rainfall is not only scarce but also capricious. A redeeming feature is that these tracts are endowed with black soils which have a high moisture-retentive capacity.

Because of the rugged terrain and somewhat heavy rainfall the western parts of the district are covered with natural forests. A particular mention may be made of the forest zone which covers a broad area including Nagargali, Khanapur, Kakati, Londa, Golihalli, Kanakumbi and Nesargi. In the western fringe there is a narrow belt of evergreen forests and to its east there is the moist deciduous belt. In the eastern and northern tracts of the district where the rainfall is below 600 mm, the forests are of a poor type, called the scrub and thorny forest. The forest flora of the district includes the important species such as ghoting, apta, haldevadar, bipte, mango, eucalyptus, savar, sativa, jack-fruit, jambolana, teak, rosewood, honne, mathi, nandi and a variety of trees which mainly yield firewood besides numerous types of creepers and smaller plants which yield useful products. Belgaum district is not particularly rich in fauna. A mention however be made of the Ghataprabha Bird Sanctuary which was constituted in 1974. This is located on a small island in the heart of the Dupdhal lake near Ghataprabha railway station and is a favourite spot for the spoonbills, white ibis, starks, carmorants, king fishers, ducks, peafowls and a variety of other birds.

The climate of Belgaum district is, by and large, quite healthy and agreeable. Within the district, the eastern zone has dry climate characterised by a hot summer. The Khanapur-Belgaum zone has a more moist climate. The district has two meteorological observatories one at Belgaum city and another at Sambre. But as both are located at a short distance from each other, the readings at the Belgaum station are usually regarded as applicable to the district. The year is usually divided into four seasons. The period from March to May is reckoned as the summer season and usually April happens to be the hottest month. During this month the mean maximum temperature reaches 35.7°C and the mean minimum touches 19.5°C. On individual days the mercury touches the 41°C mark also. During May the oppressive heat is often relieved by sharp showers. The rainy season starts during June with the onset of south-west monsoons and lasts till the end of September. During May and June the nights are warmer than in April. This is a period of high humidities. Generally July happens to be the month with the heaviest amount of rainfall. The months of October and November are regarded as the months constituting the post-monsoon season which is noted for heavy fogs and misty mornings. Winter sets in during early December and lasts till the end of March. December is the coldest month of the year and on individual days the minimum temperature would be as low as 7.0°C. The mean maximum and the mean minimum temperatures during this month would however be 29.3°C and 13.9°C respectively. This period coincides with the driest part of the year and the skies are usually bright and clear.

JURISDICTIONAL CHANGES AND EVENTS IF ANY OF GEOGRAPHICAL OR GEOPHYSICAL IMPORTANCE :

The district has not witnessed any major events of geographical or geophysical significance during the last decade. A mention may however be made of the formation of large lakes due to the construction of dams across the rivers Ghataprabha and Malaprabha at Hidkal and Navil-tirth (near Saundatti-Yellamma town) respectively. The boundaries of the district have remained intact and so also, the boundaries of various taluks within the district have not undergone any changes during the decade. The district has continued to form part of the Belgaum Division which is one of the four administrative divisions into which the State is organised. The headquarters of this division are located in Belgaum city. The district is divided into 10 taluks which are grouped into three revenue sub-divisions with headquarters at Belgaum, Chikodi and Bailhongal. While the Belgaum sub-division has its jurisdiction over the taluks of

Belgaum, Khanapur and Hukeri, the Chikodi sub-division covers the taluks of Chikodi, Athni and Raybag and, the Bailhongal sub-division includes the taluks of Gokak, Parasgad, Ramdurg and Sampgaon. These ten taluks are in turn divided into 1185 revenue villages according to the Directorate of Survey, Settlement and Land Records. During this decade two new villages have been constituted in Gokak taluk by bifurcating two other large-sized villages of the same taluk. This apart there has been no change at the village level. Construction of the dams near Hidkal and Navil-tirth has resulted in the inundation of large tracts of erstwhile agricultural lands belonging to several villages in the taluks of Hukeri and Parasgad. According to the 1981 Census there are 1178 villages and, of these, 36 are uninhabited. In 1971, the number of villages in the district stood at 1164. As compared to 19 towns in 1971, now there are 20 towns. In the following statement a talukwise distribution of the villages is furnished. As noted above there is a difference between the number of revenue villages and census villages and also between the number of villages listed at present and in 1971. The reasons for these variations are also indicated briefly.

Sl. No.	Name of Taluk	Total number of villages according to the			Names of the Revenue Circles or Hoblies and Number of villages in each, shown in brackets (1981 Census)		No. of towns as per Census lists	Reasons for variation in the number of villages as shown in	
		Survey Settlement and Land Records Department	List finalised for census					Columns 3 and 4	Columns 4 and 5
			1981	1971					
1	2	3	4	5	6		7	8	9
1	ATHNI	89	89	89	Athni Kagwad Ananthapur Telsang	(22) (20) (24) (23)	1	-	-
2	BELGAUM	137	131	136	Belgaum Uchagaon Kakati Bagewadi	(12) (42) (38) (39)	3	The following five revenue villages are fully incorporated in the limits of Belgaum city : 1. Yamanapur, 2. Kanabargi, 3. Alarwad, 4. Kudachi, 5. Kasbagh. Revenue village Sambre is fully incorporated in the limits of Sambre, a non-municipal town. Hence, these 6 villages are omitted in the census list of villages.	Sambre, a revenue village in 1971 has now been classified as a non-municipal town. Apart from this, four villages (Yamanapur, Kanabargi, Alarwad and Kudachi) listed in 1971 are now fully incorporated in the limits of Belgaum city. Hence these villages are omitted.
3	CHIKODI	102	102	100	Chikodi Nagarmunoli Nipani Sadalgi	(25) (25) (29) (23)	3	-	In 1971, Chikodi and Sadalgi were non-municipal towns, and their jurisdictions covered the entire area of the respective villages. Now these are municipal towns covering only portions of the respective villages. The areas lying outside the municipal limits of Chikodi and Sadalgi towns have been identified as separate units as Chikodi (Rural)& Sadalgi (Rural) and added to the list of villages.
4	GOKAK	108	108	104	Gokak Arabhavi Koujalgi	(37) (35) (36)	4	-	Two newly constituted villages, Tukanatti & Gujanatti, have now been added. In 1971, Konnur and Mudalgi were non-municipal towns covering entire areas of Konnur and Mudalgi, respectively. But, now these are municipal towns and portions of the respective villages, falling outside the municipal limits have been regarded as separate units as Konnur (Rural) and Mudalgi (Rural) are added to the list of villages.

1	2	3	4	5	6		7	8	9
5	HUKERI	121	121	119	Hukeri Yemakanamardi Sankeshwar	(42) (41) (38)	2	-	In 1971, Hukeri and Sankeshwar were non-municipal towns and therefore did not figure in the list of villages. Now these two are municipal towns and each village has a portion which lies outside the municipal limits. Hence Hukeri (Rural) and Sankeshwar (Rural) are now added.
6	KHANAPUR	222	221	220	Khanapur Bidi Gunji Jamboti	(62) (41) (68) (50)	2 Revenue village Londa is fully included in the limits of Londa non-municipal town. Hence it is omitted in the census list of villages.	-	In 1971 Khanapur was a non-municipal town. Therefore it was not included in the census list of villages. But now it is a municipal town covering only a portion of Khanapur village. Hence the remaining portion of the village is identified as a separate unit, viz. Khanapur (Rural) and added to the list of villages.
7	PARASGAD	123	123	116	Saundatti Murgod Yaragatti Manoli	(31) (33) (28) (31)	1	-	The following seven villages reported in 1971 as amalgamated with adjacent villages were not listed separately : Gundlur, Ganiyal, Dugabal, Basangi, Kodihalli, Ramagundikop and Gujalarkop. In fact it is ascertained that no such amalgamation ever took place. In view of this, these villages are now added.
8	RAYBAG	54	54	52	Raybag Kudachi	(26) (28)	2	-	In 1971, Raybag and Kudachi were non-municipal towns covering the entire revenue areas of the respective villages. But now these two are municipal towns, having jurisdiction over only a portion of Raybag and Kudachi village respectively. Hence the remaining portions of these villages are constituted as separate units and added to the list of villages as Raybag (Rural) and Kudachi (Rural).
9	RAMDURG	103	103	103	Ramdurg Katakol K.Chandargi Mudakavi	(25) (25) (28) (25)	1	-	-
10	SAMPGAON	126	126	125	Bailhongal Kittur Sampgaon	(36) (45) (45)	1	-	In 1971, Bailhongal was presumed to be fully incorporated in town. But now the portion of Bailhongal village which lies out side the municipal limits of Bailhongal town has been identified and included as a separate unit in the list of villages.
	TOTAL	1185	1178	1164	-		20	-	-

6. MAJOR CHARACTERISTICS OF THE DISTRICT WITH REFERENCE TO ECONOMIC RESOURCES :

Belgaum district is endowed with a vast expanse of fertile lands and the perennial rivers of Krishna, Ghataprabha and Malaprabha besides several streams and rivulets and a number of large tanks. The western portion of the district is closer to the Western Ghats and is comparatively rich in forest wealth. Certain minerals of economic value are also found in different parts of the district. Manufacturing industry as well as trade and commerce make a substantial contribution to the overall economy of the district. Belgaum is essentially an agricultural district and cultivable land is the backbone of its economy. The north-eastern parts of the district are renowned for their tobacco crop in particular.

The mineral wealth of the district chiefly consists of the deposits of manganese, bauxite and limestone besides clay. Manganese ore, which occurs here in the form of thin veins, streaks, pebbles and boulders in hard laterite, is found to be of a low to medium grade. These deposits are noticeable mainly in a small tract of land which lies to the west of the Londa-Khanapur railway track. This V shaped zone covers several villages such as Nerase Jamagaon, Degaon, Mendil, Talawade, Gunji and Nagargali. Most of these areas are being regularly mined by the lease-holders. Bauxite ore occurs in several parts, especially in the taluks of Belgaum and Khanapur. This ore is found to be of a medium to high grade and, by analysis, the alumina content is found to vary between 47.5 per cent and 59.9 per cent. The ore occurs in the form of thick cappings on the flat-topped hills and in the form of float ore in the adjacent valleys. The bauxite deposits cover a large area and the reserves are estimated to be of the order of 9.15 million tonnes. This mineral is being extensively mined and is being utilised as a raw material in the aluminium factory which was recently established at Belgaum. Deposits of flux grade limestone which is useful in smelting iron ores, as also deposits of cement grade limestone and dolomitic limestone are found at numerous places, particularly in the western

and southern tracts of the district. In the Nagargali zone the reserves of the flux grade ore is estimated at 6.15 million tonnes. In the case of cement grade and dolomitic limestone the reserves are estimated at 315 million tonnes and 414 million tonnes respectively. Limestone is being regularly exploited to a considerable extent. A number of small deposits of China clay and fire clay are found to occur as isolated patches in the villages of Karalga, Garlagunji, Shedegali, Golihalli, Bastawad etc., all belonging to Khanapur taluk. The clay found near Karalga is supposed to be of a very superior quality and is suitable for manufacturing high class pottery ware and also as a sizing material for cloth and in paper-making. It is rich in alumina. The total clay deposits are estimated at 15,000 tonnes. The easy availability of clay has promoted the growth of ceramic industry in this neighbourhood. There are deposits of Kankar, ochres and quartzites at several places. Though iron ore is found to occur at two places in small deposits, it is not being exploited at present. Likewise, native copper occurs in Raybag taluk in thin foils along joint planes or as vesicular in-fillings and as disseminated grains in basalt. Deposits of moulding sand are noticed at Akrali and several other places and also along the bed of the Malaprabha river. Moulding sand is used by various foundries within the district and it is also exported to several places in Maharashtra State. The following statement gives a fair idea regarding the annual production of important minerals and the estimated value thereof for a period of 4 years.

PRODUCTION AND VALUE OF MINERALS

Sl. No.	Name of Mineral	1976		1977		1978		1979	
		P	V	P	V	P	V	P	V
1	Bauxite	42,067	1,034,864	34,256	860,455	28,545	713,625	24,156	676,368
2	Moulding Sand	18,664	218,593	14,324	89,216	18,323	109,938	22,578	135,468
3	Manganese	9,111	363,816	22,483	926,043	4,663	177,194	11,551	531,346
4	Limestone	23,582	369,891	14,463	144,630	15,514	155,140	19,941	199,410
5	Yellow Clay	7,289	90,283	7,749	61,992	4,336	30,352	3,729	26,103
6	China Clay	2,744	40,458	2,992	44,880	4,803	72,045	6,328	126,560
7	Feldspar	-	-	-	-	460	16,560	522	15,660
8	White Clay	2,744	NA	-	-	2,980	44,700	-	-

P : Production in tonnes ; V : Estimated value in Rupees.

In addition to these minerals, granite is also being quarried in large quantities at several places all over the district. Dressed size stones as well as rough hewn stones are in great demand for use as construction material.

Forests make a significant contribution to the economy of the district. As already mentioned, the western belt, comprising large tracts of lands belonging to Khanapur taluk, is closer to the western ghats and is clothed with semi-evergreen forests containing a variety of trees which yield soft wood and timber of good quality. The moist deciduous forests yield timber and firewood while the scrub and thorny jungles of the eastern zone yield items that are classified as minor forest produce. Bamboo is also one of the important items produced here in relative abundance. The total area covered by forests forms about 14 per cent of the total geographical area of the district. This extent is, however, much below the average of 33.33 per cent prescribed under the National Forest Policy. This figure is also seen to be lower than the State average of 20 per cent. Over the years the forest wealth of the district has gradually declined mainly on account of denudation of forests due to indiscriminate felling of trees, over-grazing and such other forms of over-exploitation. With a view to enriching these forests, development schemes such as soil conservation measures, raising of teak, eucalyptus, cashew and other plantations and rehabilitation of degraded forests have been taken up in the district. Bamboo produced in the forests of the district is being supplied to the West Coast Paper Mills and also the WIMCO. Likewise, eucalyptus is also being supplied to the West Coast Paper Mills and the Harihar Polyfibres. These forests yield small quantities of sandalwood also. The extent of exploitation of forest wealth in monetary terms may be gauged from the following details :

Year	Value of forest produce (in Rs.)			
	Timber	Firewood	Miscellaneous	Total
1977-78	4,762,127	8,047,854	465,837	13,275,818
1978-79	2,777,890	11,445,927	859,084	15,082,901
1979-80	3,825,610	17,971,310	924,629	21,796,920

Belgaum district is fortunate in that it has two important irrigation projects. Rivers play a vital role in the agricultural economy of the district. The Gokak Canal Project was mooted as far back as in 1852 when Mr. Wingate drew the attention of the British Government regarding the irrigation potential that could be created by putting up a barrage across the Ghataprabha. These suggestions were examined in 1854 by Col. Scott who opined that such a project would be beneficial more to the native States than to the British. As a result, the project was shelved. Two decades later, in 1876-77, when this part of the country was hit by a severe drought the government felt compelled to take up this project as a relief measure. The dam site contained large layers of hard rock and the work including the construction of a canal of 4 km length could be completed only by 1885. This project envisaged the construction of a masonry weir across the Ghataprabha river at Dhupdal in Gokak taluk and a canal system to traverse through the taluks of Mudhol, Jamkhandi and Bagalkot. The natural elevation of the canal provided a large command area. The discharge capacity at the head being 33 cm. per second, water was released for irrigation from 1885 itself. The project could however be fully commissioned in the year 1897 only. The Ghataprabha project was taken up soon after independence by the former Bombay Government in the year 1949. This project envisaged the construction of a

54.35 metre high dam across the Ghataprabha at Hidkal in Hukeri taluk. The storage reservoir formed thereof would have a gross capacity of 51 TMC water and the utilisation of water is estimated to be of the order of 78.27 TMC. The construction of this dam is expected to result in the inundation of about 6337 hectares of land and the total cost of the project is estimated at Rs.158 crores. The irrigation network consists of three canals : the first one on the left bank taking off from Dhupdal weir which is about 16 km down stream from the dam; the second on the right bank taking off from the Hidkal dam and the third, a high-level canal, which too takes off from the dam itself. This project is being executed in the following stages : (i) construction of the Ghataprabha Left Bank Canal upto 70th Km and of two branch canals with an ultimate irrigation potential of 86,860 hectares; (ii) construction of the Ghataprabha Left Bank Canal from the 70th Km for a further length of 44 Km to create an irrigation potential of 52,520 hectares and the construction of the dam at Hidkal; (iii) construction of the 192 Km long Ghataprabha Right Bank Canal to provide irrigation facilities to about 177,760 hectares and the construction of the 86 Km long Chikodi branch canal under the lift irrigation scheme and (iv) construction of the Left Bank High Level Canal with an irrigation potential of about 60,000 hectares. During the decade, the work relating to this project was in full swing and this had set in motion a series of concomitant changes. Actual benefits of assured canal irrigation were being gradually extended. At the same time the programmes for the rehabilitation of the affected people too were being implemented in a phased manner. When completed, this project would provide irrigation facilities to large extents of lands belonging to the taluks of Raybag, Athni, Chikodi, Gokak and Hukeri of Belgaum district and the taluks of Bilgi, Jamkhandi and Mudhol of Bijapur district. The Malaprabha Reservoir Project is also a major project which is expected to provide irrigation facilities to 2.14 lakh hectares of lands belonging to the taluks of Ramdurg and Parasgad of Belgaum district, Badami taluk of Bijapur district and the taluks of Nargund, Navalgund, Ron, Hubli and Gadag of Dharwad district. The construction work relating to this project was taken up during 1963 and almost the entire work was completed by 1974. The dam site is located near Navilu-tirtha (better known as the 'Peacock gorge'), a spot of scenic beauty, near Saundatti Yellamma town of Parasgad taluk. The gravity masonry dam with a central spillway, which has been built here, is about 45 metres high and 155 metres long. The reservoir formed thereof has a gross storage capacity of 37.7 TMC and the water utilisation capacity is estimated to be of the order of 46 TMC. The irrigation network consists of two main canals, namely the Left Bank Canal and the Right Bank Canal. The 168 Km long Left Bank Canal, which passes through tunnels at Katkol and Mudkavi and has a branch canal taking off near Manoli (also known as Munoli and Munavalli) besides the Yeragatti Lift Irrigation Scheme, has a total command area of 53,134 hectares. The Right Bank Canal cuts through the Yellamma range of hills by means of a 5 Km long tunnel and has a total length of 138 Km. At its 10th Km reach the Nargund canal branches off and traverses a distance of 42 Km. The total irrigable area under the Right Bank Canal comes to 128,628 hectares Lower down the dam site there is already a canal which takes off from Kolchi weir (in Ramdurg taluk). It is proposed to extend this canal to a length of 61 Km in order to provide irrigation facilities to eight thousand hectares of land. With a view to alleviate the difficulties faced by those who have lost their lands on account of this project, lift irrigation schemes have also been taken up for implementation. In all, about 23,359 hectares of land are likely to be covered under these schemes. Apart from these major irrigation projects there are a few minor projects as well in the district. A mention may be made of the barrages put up at Hippargi, Kaslatti and Sadalgi as well as the Harinala project near Tigadi village of Sampgaon taluk and the Dudganga multipurpose project which are proposed to be taken up shortly. The irrigation projects have provided the much needed stimulus to the agricultural economy of the district which, in turn, has enabled the growth of agro-based industries. For instance, Belgaum district enjoys the unique distinction of supporting as many as six sugar factories. In addition to the recently introduced canal irrigation, the traditional modes of irrigation by utilising tank as well as well water have continued to maintain their importance. Belgaum has numerous irrigation tanks and its north-eastern taluks are particularly well known for their ground water resources and a relative abundance of irrigation wells.

The economy of Belgaum district rests basically on land. Since the district has a population of 2,980,440 and covers an area of 13,415 square kilometres the average extent of land available per capita is 0.45 hectares. This figure is slightly lower than the overall average for the State which is 0.52. If the net area sown alone is considered the average moves down to 0.30 hectare per head. The agricultural lands of the district are of a moderate quality and usually yield one crop every year, either during Khariff season or the rabi season. There are of course patches of lands which are suitable for summer crop as well and lands that yield two crops a year. These lands are usually provided with irrigation facilities. According to the latest land utilisation statistics (1979-80), out of the total geographical area of the district 14.3 per cent is covered by forests and another 8.1 per cent is classified as land not available for cultivation. The latter includes the barren lands (3.2 per cent) and the lands which are put to non-agricultural uses (4.9 per cent). The permanent pastures and other grazing lands as well as the lands under miscellaneous trees account for 2.2 per cent. Another 1.2 per cent of the lands are categorised as cultivable wastes. These apart, about 7.0 per cent of the total area represent the fallow lands. As a result, the extent of land actually under cultivation, that is, the net area sown constitutes only 67.3 per cent. Out of this area, a small portion is sown more than once every year, for the gross area sown works out to 69.4 per cent. The agricultural lands of the district generally consist of shallow black soils except in the western hilly zone comprising Khanapur taluk where laterite soil is more predominant.

Different types of inam tenures which were prevalent in the district during the British period and immediately thereafter, stand abolished and now all lands are held under the raiyatwari tenure according to which the occupant holds the land directly under the government. As a result of the implementation of various tenancy laws, measures regarding consolidation of holdings, ceiling on land holdings and such other land reforms, the agricultural land is now found distributed amongst a large number of land holders. The following statement based on the agricultural census, 1977 gives a distribution of the landholdings by size-group.

LAND HOLDINGS BY SIZE

Sl. No.	Size of holdings (hectares)	No. of holdings	Percentage to total no. of holdings	Area held (hectares)	Percentage to total area held
1	2	3	4	5	6
1	Below 1.0	103558	32.1	49057	5.0
2	1.0- 2.0	71676	22.2	104417	10.7
3	2.0- 4.0	92185	28.5	291719	29.8
4	4.0- 10.0	39519	12.2	272898	27.9
5	10.0 & above	16094	5.0	261588	26.6
	All sizes	323032	100.0	979679	100.0

It is obvious that the distribution of land is quite uneven. The marginal land-holders, who constitute 32.1 per cent of the total, hold just 5.0 per cent of the total land. The average size of a holding for this group is just 0.47 hectares - a figure which is less than even one-sixth the size of an average holding in the district. Small holdings of the size 1-2 hectares are also quite numerous and these form 22.2 per cent. In this case the average size of a holding is 1.46 hectares. Belgaum district, especially its northern and eastern belts, lies in the dry farming zone where holdings of smaller size are quite uneconomical. The holdings in the size-group of 2 to 4 hectares account for 28.5 per cent of the holdings and 29.8 per cent of the total land held. This group also deserves to be categorised as small in view of the conditions prevailing in the district. Thus, 82.8 per cent of the holdings of the district are small holdings. There is however a sprinkling of large holdings also and though these account for just 5.0 per cent of the total holdings the extent of land held by these holdings comes to 26.6 per cent.

About 16.7 per cent of the net area sown is provided with irrigation facilities. Canals, tanks and wells are the chief sources of irrigation and according to the statistics furnished by the Bureau of Economics and Statistics, while canals account for 36.8 per cent, wells and tanks account for 40.3 per cent and 5.0 per cent of the total irrigated area. Other sources such as rivers and streams as well as seepage water provide irrigation to the remaining 17.9 per cent. As has already been mentioned canal irrigation is not new to the district. However it is only during the past 2 decades that this facility has been extended to cover large areas, especially in the eastern and south-eastern belts. The taluks of Athni, Raybag, Chikodi and Hukeri are known for their irrigation wells. In recent years quite a large number of these wells have been energised and this feature has resulted in a more effective use of the available water. Rice, sugarcane, groundnut, maize and vegetables as well as spices are the chief crops which are grown in the irrigated fields. Vegetable growing is of considerable importance in several villages in the neighbourhood of Belgaum city.

While jowar, rice, bajra and wheat are the major cereal crops of the district, groundnut, sugarcane, cotton and tobacco are the main cash crops. An idea about the cropping pattern may be had from the details furnished below :

AREA UNDER MAJOR CROPS (IN HECTARES)

Sl. No.	Crop	1978-79	1979-80
1	Jowar	180,146	187,965
2	Bajra	96,845	86,678
3	Wheat	60,118	65,736
4	Paddy	56,274	57,165
5	Maize	46,220	48,784
6	Ragi	14,635	14,214
7	Groundnut	132,491	120,476
8	Cotton	65,751	61,238
9	Sugarcane	42,378	42,512
10	Tobacco	26,647	26,154

Jowar is grown mainly as a rainfed crop in all the taluks of the district and it is the staple cereal of almost all the sections of the population. Bajra too is a rainfed crop grown in all the taluks. In the western fringe and in the entire Khanapur taluk, where rainfall is moderate to heavy, paddy is grown as the chief crop and sugarcane is also of considerable importance. In the other taluks paddy and sugarcane are grown in areas enjoying assured irrigation facilities. Wheat and maize are also raised as irrigated crops. Among the cash crops groundnut takes the pride of place and is found cultivated in almost all the taluks. Cultivation of tobacco is more or less confined to the western half of Chikodi taluk covering the areas in the neighbourhood of Nipani and Sadalgi. Cotton is important in the central belt covering the taluks of Gokak, Ramdurg, Parasgad and Sampgaon. The farmers of the district are now familiar with the high yielding varieties of crops and also with the use of chemical fertilizers and pesticides. They are also adopting improved agricultural practices and tools. As a result, the agricultural economy of the district has achieved considerable stability. Another recent development is the encouraging response noticed regarding the cultivation of mulberry and rearing of silkworms.

As in other parts of the State, in Belgaum district too animal husbandry is an adjunct to agriculture. Every household of a cultivator usually possesses at least a pair of working bullocks and quite a large number among them have a few cows, one or two buffaloes, a few sheep and goats as well. Poultry keeping is also quite popular in the rural as well as the urban areas. An idea regarding the livestock wealth of the district may be had from the following details.

LIVESTOCK AND POULTRY POPULATION

Category	Number of livestock heads/poultry according to the 1972 Census		the 1977 Census		Percentage variation bet'n 1972 and 1977
1. Cattle	515542	(29.7)	540734	(29.4)	+ 4.89
2. Buffaloes	423793	(24.4)	457210	(24.8)	+ 7.89
3. Sheep	421133	(24.3)	449168	(24.4)	+ 6.66
4. Goats	356935	(20.6)	371332	(20.2)	+ 4.03
5. Pigs	14580	(0.8)	16013	(0.9)	+ 9.83
Total including others	1735982	(100.0)	1841087	(100.0)	+ 6.05
6 Poultry	639440		600673		- 6.06

Belgaum district is fairly rich in cattle wealth and has a considerable wealth of sheep and goats as well. The climate of the district is very well suited for rearing livestock animals. The south-western and the western zone adjoins the forest-clad western ghat region and these tracts have plenty of grazing land. Fodder is available in sufficient quantities all through the year. Those who keep large flocks of sheep usually belong to the traditional shepherd community and are accustomed to a semi-nomadic life in that they take their sheep from area to area depending upon the seasonal conditions. By and large the cattle and sheep found in the district belong to the local breeds. There are of course, a small number of cattle belonging to the Khillari breed, Amrit Mahal breed and the Krishna Valley breed. The Khillari breed is known for hardy and enduring nature and is found most useful for hard work including road-transport. The Amrit Mahal breed is known for its very active nature, endurance and quick transport. The Krishna Valley breed is very powerful and the best suited for the yoke, that is for tilling the hard black soil which is preponderant in the district. The buffaloes are also of the local breed with a sprinkling of buffaloes belonging to the Pandharapuri and Surti breeds. As regards sheep rearing the Deccani and the Marino cross are popular. There are 27 cooperative societies and one Sheep Breeders' Association. A Sheep Breeding Station was established at Suttatti of Athni taluk in 1947 and it has been rendering useful service ever since. In so far as Poultry

keeping is concerned it may be mentioned that a Poultry Extension Centre was established at Belgaum in 1975 and that since 1977 the Intensive Poultry Development Programme is also being implemented in the district. A Government Dairy was established at Belgaum in 1966 with a view to promote dairy-farming activity in the city and the adjacent villages. The capacity of this Dairy is 10,000 litres of milk at present. During the year 1979-80 the Dairy collected 38 lakh litres of milk for further processing. In Belgaum city and also in all the other towns there are several private dairies and the milk supply position is fairly good during the years of normal rainfall. Belgaum is known for its milk-based sweetmeats, especially the preparation called Kunda. In so far, as the veterinary services are concerned, it may be noted that Belgaum is the only place which has been provided with a veterinary hospital. There are dispensaries at 72 places and veterinary aid centres at 31 places. In addition there are two semen banks, 16 artificial insemination centres and two poultry rearing units.

Fishery resources of the district include the three major rivers, several rivulets and streams, four large reservoirs, 54 major tanks and 912 minor tanks. The prospects for development of fisheries are fairly good. At present however this activity is confined to a small section of the traditional fishermen community for most of whom also fishing is a subsidiary occupation. The extent of contribution of fisheries may be gauged when it is noted that the total fish catch during the year 1979-80 amounted to 211 tonnes valued at Rs.6.33 lakhs.

Belgaum ranks amongst the industrially backward districts of the State. The industrial units which may be categorised as large or medium-sized hardly add upto a dozen and a quarter. Non-availability of power was one of the main restraints that deterred the industrial development till about the mid-sixties. Thereafter the situation has considerably improved and there are definite signs of industrial growth. The mineral-based industries of the district consist mainly of an aluminium factory and the ceramic works. The aluminium factory is being run by the Indian Aluminium Company Limited. This company was first incorporated in 1938 under the name Aluminium Production Company of India (Private) Limited with its office at Bombay. The name was changed into the Indian Aluminium Company, Limited, during 1944 and, in 1945, it was converted into a public limited company with a paid up share capital of Rs.29.7 crores. The Belgaum plant, with a capital investment of Rs.53.5 crores, went into production in November 1969. Bauxite is the main raw material for this industry and it is available in large quantities both within Belgaum district and in the south-western parts of the neighbouring Maharashtra State. Alumina and Aluminium Hydroxide are produced here by the Bayer's process while aluminium metal itself is produced by the Hall Heroult Electrolytic process. During the year 1979, the factory produced 134,500 metric tonnes of aluminium hydrate and 46,722 metric tonnes of aluminium metal. The factory provides direct employment to about 1500 workers. The clay available in the district is used mainly for pottery and at Khanapur, in the neighbourhood of which clay deposits of a very fine quality are found, there is an Artisan Training Centre which provides training in ceramics and pottery. A production unit is also attached to it. In addition, at Khanapur there is the Central Village Pottery Institute - a training cum research centre established in 1954 by the All India Khadi and Village Industries Commission. M/s Ceramic Products Limited, Khanapur is a private industrial unit which has been producing ceramic products since several years. The local Vanitha Sahakari Kamagaar Sangha is an ancillary unit which is sustained by the above-mentioned factory.

Amongst the agro-based industries cotton mills, sugar mills and oil mills are important. The Gokak Mills is the earliest industrial unit to come up in the district. It was established in 1919 with a view to convert cotton into yarn. The factory uses coarser varieties of cotton. Cotton is processed through blow room, drawing machines and combers and then spun into yarn on spinning machines. This yarn is then wound in the form of cones and is sold as such or else it is doubled or twisted, bleached, mercerised and then sold. More than 5000 persons are employed here and at present Gokak Mills is the biggest factory with the largest number of workers. The installed capacity of the mill is 90,000 spindles and 87 looms. While yarn and canvas duck are the main products turned out here, hard waste is the important by-product. The mill produced about 12.5 thousand tonnes of yarn and 8.3 lakh metres of canvas during 1980. The Belgaum Cooperative Spinning Mill, Limited and the Gogte Textiles are the important industrial units which use cotton as the main raw material. The later represents the latest addition which, with a capital investment of Rs.11.5 crores and an initial employment potential of 350 started production during 1980.

Belgaum district is in an important sugar zone of the State and, as already mentioned, has as many as six sugar factories of which five are in the cooperative fold. The earliest amongst these is the Ugar Sugar Works which is located at Ugar-Khurd in Raybag taluk and has been producing sugar as well as industrial alcohol since more than 2 decades. The Hiranyakeshi Cooperative Sugar Factory at Sankeshwar was incorporated in 1956 and began producing sugar from the year 1961. This factory provides employment to about 1280 workers and during 1979-80 produced 35,159 tonnes of sugar. The Malaprabha Cooperative Sugar Factory, Mugutkhan Hubli which is located at Kavalgumpi in Sampgaon taluk was registered during 1961 and started production a couple of years later. This factory also provides work to about 1250 persons. But it could produce only 19,118 tonnes of sugar during 1979-80. The Raybag Cooperative Sugar Factory which employs about 576 persons produced 10,154 tonnes of sugar during 1979-80. The Dudhganga Krishna Cooperative Sugar Factory of Nanadi village in Chikodi taluk started production in 1974. This factory produced 25,182 tonnes of sugar during 1980 and provided employment to 700 persons. The Ghataprabha Cooperative Sugar Factory located near Arabhavi village of Gokak taluk was registered in 1970. With a capital investment of Rs.7.28 crores this factory provides employment to 725 persons and has a rated capacity of 250,000 quintals. Production started during 1980 only and the quantity of sugar produced during the year was only 7406 tonnes. About 100 tonnes of boora sugar was also produced here.

Among the other industrial units of the district a specific mention may be made of the following. BEMCO Jacks and Allied Products, Limited, Belgaum is engaged since 1957 in the production of hydraulic presses, hydraulic car hoists and other equipment. This establishment has about 500 persons on its rolls. The Mahant Oil Industries Private, Limited, Belgaum was incorporated during 1975. This provides employment to about 60 persons in its solvent plant and produces oil cake and rice bran besides solvent oil. Arun Engineering Works which has been producing crank shafts, rotars, hydraulic jacks, hydraulic presses and hydraulic arbor presses provides employment to about 600 persons. Apart from these, the district has numerous industrial units of a comparatively small size. The total number of factories and workshops registered under the factories Act stood at 1265 during the year 1979-80 and the total employment was of the order of 35,646. When compared to the position that prevailed during 1977-78, namely when there were 1106 such units with an employment of 25,815, there is a definite indication that the industrial growth has gained considerable momentum. Belgaum city is noted for its automobile industry including bus body building works. It is also known for wooden furniture manufacturing units. Gokak is famous for painted wooden toys. The region around Nipani is noted for tobacco and tobacco based industries. Belgaum district is also a known centre of handloom industry as well as the powerloom industry. Thus, though there are few large scale industries, in

view of the very large number of small and household level manufacturing units it has to be conceded that manufacturing industry makes a significant contribution to the overall economy of the district.

As in most of the other districts of the State, in Belgaum district also trade and commerce have an important place in the economy of the district. Belgaum city is the main centre of all trading and commercial activities. Gokak, Nipani and Athni are the other important centres. As at the end of 1979-80 the district had as many as 197 commercial banks and the Syndicate Bank alone which is the Lead Bank of the district, had as many as 30 branches. Cooperative movement has also achieved considerable success. As on 31st March 1980 the district had 2061 cooperative societies of which 518 belonged to the category of Primary Agricultural Credit Cooperative Society and about 200 belonged to the category of industrial cooperatives. Every taluk of the district has a Primary Land Development Bank which has been set up with a view to promoting agricultural development of the taluk by advancing loans to the needy farme. under various schemes. Urban Cooperative Banks are functioning at 39 places and are providing financial help to petty merchants and small scale industrialists. In addition there is an Industrial Cooperative Bank at Belgaum with branches at Gokak and Ramdurg as well.

In the matter of transport and communication facilities Belgaum district is fairly well placed amongst the 19 districts of the State. The Poona-Bangalore National Highway cuts through the district covering a length of about 200 km. The district had a total road length of 5822 km at the end of 1979 and this figure is more than twice of what it was in 1956, namely 2783 km. Khanapur taluk in the south-western portion as also Raybag and Ramdurg taluks are comparatively backward in the matter of road-development. In Khanapur taluk in particular there are roads maintained by the Forest Department. There are irrigation tracts in the canal irrigation zone. The district is enjoying good road transport facilities and the important towns have direct buses to Bangalore the State capital on the one hand and to certain prominent urban centres in Maharashtra on the other. The metre gauge railway connecting Miraj with Bangalore runs through the district from north to south and traverses a distance of 220 km. Railway facilities are available to some extent in the taluks of Athni, Raybag, Hukeri, Gokak, Belgaum and Khanapur. At Londa, located almost in the south western corner of Khanapur taluk, a railway line branches off westwards and proceeds to Mormagoa. There are no waterways in the district. Belgaum city is on the air map of India and is connected by regular flights with Bombay, Bangalore and Panjim.

In summing up it may be observed that Belgaum is a predominantly agricultural district where forest, mineral and water resources have also been channelised to a considerable extent for achieving its overall economic development. The agricultural economy rests equally on the food crop production and on the cash crops such as cotton, tobacco, groundnut and chillies. In recent years larger and larger areas are being provided with assured irrigation facilities under the canal network as also various lift irrigation projects. In the industrial sphere though the district does not have any claims to be regarded as advanced it has the distinction of having one of the oldest spinning mills of the State as also a large scale aluminium factory and a chain of sugar factories. In the household sector, handloom weaving has an unique place. In the spheres of trade, commerce, transport and communication also the district is fairly well advanced. The overall economy of the district is resting on a sound base and is poised for further growth.

7. MAJOR SOCIAL AND CULTURAL EVENTS, NATURAL AND ADMINISTRATIVE DEVELOPMENTS AND MISCELLANEOUS ACTIVITIES OF NOTE DURING THE DECADE :

Belgaum district has not witnessed any major event of social and or cultural significance during the last decade. As in the past during this decade also fairs and festivals were held in towns and villages with the traditional pomp and gaiety. Saundatti Yellamma is a place of pilgrimage which attracts devotees from the entire Bombay-Karnatak region and also from several places in Maharashtra. Fairs are held here twice every year. By and large the social life of the people has been quite placid and peaceful. As in other parts of the State and the country here too various developmental programmes aimed at achieving the welfare of different sections of the population were initiated and implemented by different departments of the government. A special mention may be made of the efforts put forth by the Command Area Development Agency and the Western Ghats Development Programme (particularly in the Khanapur taluk region) as well as the programmes such as SFDA and IRDP. During the second half of the decade the twenty point economic programme was vigorously implemented and large sections of people belonging to the economically weaker sections were benefitted to a significant extent. In the sphere of administration there have not been any noteworthy developments.

8. BRIEF NOTE ON PLACES OF RELIGIOUS, HISTORICAL OR ARCHAEOLOGICAL INTEREST AND PLACES OF TOURIST INTEREST IN TOWNS :

1. ATHNI TALUK

I. L.C.No.18 : Saptasagar:- Literally 'Saptasagar' means the 'seven seas'. This village is located on the right bank of the Krishna river. Local tradition has it that at this spot, the saptarishis (seven sages) poured the water which they fetched from the Seven Seas into that of the Krishna river and rendered it into one of the holiest spots. A dip in the Krishna river near this village is regarded as highly meritorious.

II L.C.No.23 : Kagwad:- The village is noted for its temples dedicated to Brahmanath and Satvai. Brahmanath is locally called Kaggadaraya and the village is said to derive its name from this local name of the deity. The idol of this god is found installed in an underground cellar and close to the idol there is an inscribed stone slab. Satvai is the goddess who is popularly regarded as the guardian deity of the infants. She is worshipped by women, a week after they undergo the travails of child birth. An annual fair held here in honour of this goddess attracts a large gathering.

III. L.C.No.25 : Mangsuli :- The Mallikarjuna temple of this village has a large number of devotees in this region and under its auspices a fair is held every year during the month of May. The event attracts a large gathering.

IV. L.C.No.30 : Shedbal :- The village has an ancient temple of Basava which enshrines an idol of Basava flanked by two other idols - all in a row and a linga. A lamp pillar of stone set up in front of the shrine is said to have been placed in such a manner that when these lamps are lit the light falls on the linga and the idol of Basava but not on the two other idols. The annual fair held in honour of Basava every February-March is an important event in the neighbourhood.

V. L.C.No. 34 : Ainapur :- The village is noted for its tomb-shrine of Peer Kaji, a Muslim saint held in high esteem by the Muslims of the region.

VI L.C.No. 41 : Jugal :- The village has the tomb-shrine of Masabati, a Muslim saint, in whose honour an annual fair is held.

VII. L.C.No.72 : Kokatnur :- This is a place of some historical importance in that it was the headquarters of a small group of villages (called Kokatnur Paragana) which were granted in 1565 A.D. by Ibrahim Adil Shah as a Jagir to one of the ancestors of the Desai of Sirsingi. The village is noted for its Yellamma temple and the largely attended annual fair in honour of this goddess.

VIII L.C.No.86 : Ramatirth :- A hill situated near this

village is known as Ananda Parvata (Mountain of joy) and it has a cave shrine containing an idol of Anandanayaki. To the east of the cave there is a fine temple dedicated to Rameshvara. The temple has several well carved pillars. An annual fair is held during February in honour of Rameshvara.

2. BELGAUM TALUK

I.L.C.No. 7 : Yellur :- The village has a small square shaped hill-fort consisting of a stone rampart with round towers on each side and commanding a good view of the hill slope as well as the surrounding country side.

II. L.C.No. 55 : Kakati :- This is supposed to be the place of origin of the Kakatiyas of Warangal.

III. L.C.No. 93 : Bagewadi :- This place has yielded a copper plate grant of Krishna VII (1247-60 A.D.) of Devagiri Yadava dynasty. The grant is dated in 1249 A.D. and records the gift of land in the Santheya Bagewadi village in 32 shares to 66 Brahmins attached to the shrine of Madhavadeva.

3. CHIKODI TALUK

I. L.C.No. 3 : Yadur :- This is an important religious centre of the region and is noted for its Veerabhadra temple. It is located on the banks of the Krishna river and is therefore all the more attractive. There are two inscriptions in the temple and these are dated in 1830 A.D. and 1836 A.D. The annual fair held in honour of Veeraphadra during February attracts a very large number of people from far and near. This is a place of some historical importance also. In 1764 A.D. Peshwa Balaji Baji Rao camped here with his troops on his way to Karnataka. Later, in 1790, a British detachment under Captain Little which accompanied Parashuram Bhau to oppose Tipu Sultan also camped here. Later, during their military campaigns Colonel Wellesley and General Munro too are known to have camped here for brief periods.

II. L.C.No. 25 : Nagarmunoli :- This is a place of considerable historical importance in that several wars were fought for its possession between the kings of Kolhapur and the Patvardhans to whom it was assigned by the Peshwas. However, the village does not contain any relics of historical interest.

III. L.C.No. 26 : Kabbur :- The village has an ancient and dilapidated Ishvara temple. A mention may be made of an undeciphered inscription stone and two tombs supposed to belong to the Moghul period.

IV. L.C.No. 46 : Karoshi :- The Ghanti Basavanna temple of this village is an important religious institution of the neighbourhood. The annual fair held here in honour of Basavanna during July-August attracts a large gathering.

V. L.C.No. 55 : Shendur : Close to this village there is a beautiful hill which contains a natural spring. The temple of Rasubai is also situated on this hill.

VI. L.C.No. 90 : Bhoj :- This village has yielded a copper plate grant of Kartaveerya IV and Mallikarjuna - the brothers belonging to the family of the Rattas of Saundatti - who were joint rulers in the region between 1200 and 1218 A.D.

4. GOKAK TALUK

I. L.C.No. 24 : Ankalgi :- The village is noted for its religious institution belonging to Lingayat community. The Ankalgi Matha has a large following. The village has a temple dedicated to goddess Lakshmi.

II. L.C.No. 54 : Kallolli :- The ancient Jaina basti at this place has an inscription dated in 1205 A.D. It bears reference to the Ratta chiefs and records the construction of a Jaina temple for Shantinatha, the sixteenth Tirthankara, at Kalpole.

III. L.C.No. 106 : Yadvad :- This was a place of considerable importance during the 17th century as well as the 18th century. Italian traveller Gemelli Careri has referred to this place under the name Edour and has mentioned that it was the largest city he had visited since he left Goa on his way to the Moghul camp at Galagale. In 1746, Majid Khan the Nawab of Savanur gave up this place to the Marathas. Later this formed part of the Saranjam (military grant) granted by the Peshwa to the Miraj branch of Patvardhans.

5. HUKERI TALUK

I. L.C.No. 13 : Hidkal :- The dam being constructed across the Ghataprabha river, called the Hidkal Dam, is located near this village.

II. L.C.No. 18 : Hunnur :- On a nearby hill there is an old isolated fort, which it is believed, was built in about 1550 A.D. by the Raja of Kolhapur. The sides of this fort consist partly of rocks and are partly built with stones and mud. This was one of the ten forts of Belgaum district held by Shivaji at the time of his death in 1680 A.D.

III. L.C.No. 42 : Yemakanmardi :- The establishment of this once fortified village is traced to Virpan Ambaji, who was a mamlatdar in the service of the Kolhapur Rajas. In 1827 a number of free-booters from Kolhapur took refuge in the fort which was then in a good condition. They were however put down by an army headed by Colonel Welsh.

IV. L.C.No. 109 : Haragapur :- The village has the ruins of a fort called Vallabhgarh, which is circular in shape and stands on a hill about 90 metres high. This fort formed part of the possessions of Shivaji. In 1786, the chief of Nesargi rebelled against his overlord the King of Kolhapur and seized Ballabhgarh. He was however subdued by the king in 1787.

V. L.C.No. 111 : Akkiwat :- The village has the ruins of an old fort, which for quite a along time formed part of the Kolhapur kingdom. In 1827, this place was made over to the British as it had become a den of robbers who caused endless trouble to those residing in the neighbouring villages which were under the control of the British.

6. KHANAPUR TALUK

I. L.C.No. 10 : Kasba Nandgad :- This place was an important trade centre during the early 19th century. Pratapgad, a fort which is now in ruins, was built here in about 1809 by Malla Sarja the Desai of Kittur to commemorate the event of conferment of the title Pratap Rao on him by Peshwa Baji Rao. Another fort known as Shamshergad is also located here on a hill at an altitude of 540 Metres MSL. The village has an important place in the early history of freedom struggle, for it was here that Sangolli Rayanna was hanged in 1829 by the British. Local legend has it that as he passed along the road to the gallows he pointed out a spot where, he desired, his body should be buried and also foretold that a great tree would come up at the spot in due course. His desire was obviously fulfilled. At this spot there is now magnificent banyan tree and underneath this tree a shrine has been built.

II. L.C.No.62 : Bidi :- In about 1690 A.D., Bidi as well as Sampgaon were held by the Desai of Kittur. Though Haidar Ali gave away this place to the Nawab of Savanur after his conquests, the place remained under the control of the Kittur chiefs. After the annexation of Kittur there was a revolt against the British in 1829. Sangolli Rayanna, a retainer of Kittur Desai gathered support and rose in revolt with the object of restoring the independence of Kittur. He bagan his compaign by burning the Mamlatdar's Office at Bidi. After 4 months, his battle against the heavy odds ended up in his being caught unawares at a moment when he laid aside his arms and was engaged in taking a bath. He was condemned and hanged.

III. L.C.No. 64 : Golihalli :- Near the Kalmeshvara temple of this village there is an inscription stone which records a grant made by a Kadamba who was an underlord of the western Chalukya King Someshvara III (1126-1139 A.D.). There is another inscription stone in front of the small temple of Basava. This inscription is dated in the 14th, 17th and 26th years of the reign of Permadi, a chief belonging to the Goa branch of the Kadambas, who is described as governing the Konkan, Halasi and Belgaum regions. The emblem engraved on this stone slab depicts the following objects : in the centre there is a shrine with linga in its case and a worshipper; to the left there is the figure of Basava with the sun above it and, to the right there are the figures of a cow and a calf underneath those of a crooked knife and a moon. The village is noted for its Ramalinga temple also.

IV. L.C.No. 72 : Kakkeri :- The linga enshrined in the local Kakkayya temple is believed to be the one that was installed by the great reformer Basaveshvara. Kakkayya, a man of very humble origins, became an ardent follower of Basaveshvara and has come to be regarded as a Sharan i.e. saint.

V. L.C.No. 90 : Halashi :- This place of great antiquity was the chief capital of the Early Kadambas (5th century A.D.). During the supremacy of Goa Kadambas between 980 and 1250 A.D. also this place flourished as a minor capital. The village has three large temples and of these the one dedicated to Someshvar is built on a hill nearby. This hill has a sacred pond also. God Someshvara is highly venerated and the annual fair which is held in honour of this deity during September-October attracts a large gathering. Suvarneshvara temple is a large-sized structure which is out of repairs since a long time. Varaha Narasimha temple is an old structure attributed to the famous Jakanacharya. This temple has an inscribed stone tablet with the figures of Lakshmi and Narasimha etched in the top panel. The writing, extending over sixty lines in two parts, records two different gifts made in different years by Permadi of the Goa Kadamba dynasty (1147-1175 A.D.) and his brother. This village has yielded six copper plate grants. The text of these grants is in Sanskrit and these texts begin and end with a typical Jain salutation. In inscriptions and other historical records this place is known by the names such as Palashika, Palshi and Halasige.

VI. L.C.No. 91 : Bijagarni :- An old fort, called Hanumantgad, is located on a hill near this village. The fort has two gateways. On one of these gates, there is the image of Maruti (Hanuman), after whom the fort is named.

VII. L.C.No. 119 : Kumbarde :- The village is known for its monastery of Kanphata saint Handi Bhadagnath.

VIII. L.C.No. 144 : Kirwale : Also known as Gorakhnath hill this place has the monastery of Kanphata saint Gorakhnath.

IX. L.C.No. 171 : Jamboti :- During the Maratha period this was a place of importance and was the seat of Maratha Sardesai. In 1695 A.D. Italian traveller Gemelli Careri who visited this place on his way from Goa to Belgaum has mentioned in his travelogue that this place belonged to a Desai who was paying tributes to the Moghuls.

X. L.C.No. 191 : Kanakumbi :- The village is known for its temples of Kankumbeshvar and Mahulidevi. The Mahulidevi shrine stands at the source of the river Malaprabha and is therefore regarded as very sacred. Local tradition has it that once in every twelve years when the Jupiter enters the Saggitarius, water from the Ganges flows in a subterraneous route all the way to this place and that this phenomenon lasts for an entire year. During this period pilgrims throng the place to have a holy dip at the Malaprabha and thus have all their sins washed away.

7. PARASGAD TALUK

I. L.C.No. 29 : Murgud :- Formerly this village was the headquarters of a petty division and was taken over by the ancestors of Sirsingi Desai in 1565 A.D. Under the auspices of the local Mallikarjuna temple a largely attended annual fair is held during November-December.

II. L.C.No. 33 : Sogal :- A few km to the south-east of this village the river Malaprabha enters the Kaladgi basin through a beautiful gorge, called Navilu-tirtha (peacock's pool). At Sogal there is a beautiful waterfall. The Malaprabha project site is located here and as a result of the construction of a dam here a large reservoir has been formed in this neighbourhood.

III. L.C.No. 87 : Manoli :- Referred to as Munivalli and Munipura, this place seems to be of some historical importance. It has a ruined fort and several old temples including those dedicated to Udachavva and Hanuman. In the precincts of the Udachavva temple there is an inscription stone belonging to the seventh Yadava King Krishna (1246-1260 A.D.). The Panchalinga temple likewise has an inscription stone belonging to Yadava King Singhana II (1209-1246 A.D.). In 1786, Parashuram Bhau took the Manoli Fort from the Torgal chief and added to his possessions. In 1880, the place witnessed a battle between Dhondia Vagh and the pursuing British forces.

IV. L.C.No. 109 : Hooli :- The main object of interest here is the early 12th century temple of Panchalingadeva. This beautiful shrine was originally a Jaina basti. The temple is in three parts having a mantapa with three porches and 22 pillars. The outer hall leads to an inner hall with a temple shrine at the back and one at each side. This temple is however in a ruined condition now. At the foot of hill to the north of the village there is a group of temples in ruins, which too is probably of the early 12th century. One of these, built of hard compact blueish stone, has a large hall and door way of Porphyry carved stones. Standing against the ruins of an old temple nearby there is a large inscription stone. In another temple the door from the outer hall to the inner and larger hall is richly carved with a wonderful variety of inter-twined cobras. Of the three inscriptions found at Hooli, two belong to the reigns of the Western Chalukyan Kings Vikramaditya V (1018-1042 A.D.) and Someshvar II (1068-1075 A.D.) and the third to the reign of Kalachuri King Bijjala (1156-1167 A.D.). The fort on the southern edge of a small range of hills here is said to have been built by Shivaji in 1674 A.D.

8. RAMDURG TALUK

I. L.C.No. 30 : Junipeth :- Remnants of an old fort are found in this village.

II. L.C.No. 43 : Godachi : The village is well known in the region for its Veerabhadra temple. The annual fair held in honour of this deity during December attracts a large number of devotees from far and near.

9. SAMPGAON TALUK

I. L.C.No. 2 : Wakkund :- The main object of interest here is the Trikuteshvara temple which is in the Hoysala style of architecture.

II. L.C.No. 7 : Belawadi :- This village has an ancient temple dedicated to Veerabhadra. Its construction is attributed by the local people to the famous Jakanacharya. The temple has a fragment of an inscription dated in 1070 A.D. and belonging to the reign of the western Chalukya King Someshvara I. The annual fair held here in honour of Veerabhadra attracts a large gathering.

III. L.C.No. 36 : Kittur :- This is a place of historical importance in that the Queen Channamma of Kittur bravely resisted the imposition of the British rule in the year

1824. The British refused to accept the right of her adopted son to the throne of Kittur and demanded that she should surrender the chiefdom to the British. Her struggle however ended in her defeat and imprisonment. But this happened after a display of exemplary courage and bravery - a rarity in those days of supine servility. She has secured for herself an honoured place in the annals of Karnataka's history. In 1829, Sangolli Rayanna mobilised support and rebelled against the British rule and tried in futile to win back the freedom for Kittur. These recent historical events apart, Kittur seems to have been an important place in the past. The village has a small Basava temple which contains an inscription stone as well. The inscription belongs to the 12th century and records a grant made by the Kadamba chief of the Goa branch. It is in Kannada characters and, though unfinished, it narrates how a dispute between two priests over a piece of land enjoyed by the temple of Kalleshvara was resolved. The inscription states that by an order of the minister of the Chief Jayakeshi III (1175-1188 A.D.), the disputants were referred to undergo a fire-ordeal before the merchants of Degamve village - 5 Km west of Kittur. As the redhot plough-share did not burn the hand of the priest who represented the case for Kalleshvara temple the case was decided in his favour.

IV. L.C.No. 43 : Degaon :- Also known as Degaamve and Degaonve this village has a small but elaborately sculptured temple of Kamala Narayana and Mahalakshmi. The construction of this temple is ascribed to Kamala Devi the wife of Goa Kadamba Chief Permadi (1147-1175 A.D.). There are several inscriptions in this temple and while a few are in Devanagari script. Others are in Kannada characters.

V. L.C.No. 63 : Mugutkhan Hubli :- The village Hubli is named after Mugatkhan, an officer who served the Adil Shahi kings of Bijapur with distinction and whose tomb is found in the village. A copper plate grant of the Yadava period dated in 1249 A.D. refers to this place as Hubli.

VI. L.C.No. 64 : Kadrolli : The Shankarlinga temple here, which is said to belong to the 10th century A.D., is situated on the banks of the Malaprabha river. This temple is built of large black stones. The temple consists of 3 shrines and an ante-chamber which are however in a ruined condition now. An inscription stone found in this temple precincts is said to have been shifted to the verandah of a modern temple nearby. The inscription is in old Kannada characters. Though the language is Sanskrit the idiom and inflexions are of old Kannada. It records a grant made during the reign of Western Chalukya King Someshvara II (1068-1075 A.D.).

VII. L.C.No.81 : Sampgaon :- The earliest mention of this place in historical chronicles is in 1683 A.D. when Aurangzeb's son prince Muzzam besieged the fort of Sampgaon and took it. The ancestor of the Kittur Desai family who came to Belgaum with the Bijapur army during the 17th century settled here. During the revolt of 1829 led by Sangolli Rayanna the rebels burnt the Mamlatdar's office at this place and destroyed the records. Once in every 12 years a largely attended fair is held in honour of the local deities Basava and Dyamavva.

VIII. L.C.No. 104 : Mannikere :- The village has an ancient Jaina temple enshrining Brahmadeva. An inscription found on a stone tablet dated in 1208 A.D. belongs to the reign of the 16th Ratta chief Lakshmideva I and speaks of him as a descendant of the Rashtrakuta King Krishna II (875-901 A.D.). This is the first inscription which mentions that the capital of the Rattas was moved from Saundatti to Belgaum.

IX. L.C.No. 119 : Nesargi :- The ancient temple of Basava here is in a ruined condition. It contains an inscription dated in 1210 A.D. and belonging to the Ratta Chief Kartavirya IV. This inscription records the building of three Shiva temples by Bacheyanayaka and also mentions of various grants of lands, titles and duties made over for the maintenance of these temples.

PLACES OF INTEREST IN AND AROUND THE TOWNS :

Altogether there are twenty towns in Belgaum district and a few among these, such as Sambre for instance, do not deserve any detailed consideration as these do not have any places of interest. Athni is noted for its old shrines dedicated to Siddheshvara, Amriteshvara and Kalmeshvara as also a Veerashaiva religious institution known as Gachchina Matha which was established more than 500 years ago. Among the modern temples, that of Raghavendrasvamy is notable. The town has an ancient mosque. Another object of interest here is the fort which is now in a ruined condition. Bailhongal has two inscriptions of the 12th century belonging to the Ratta chiefs. These are found in the Ramalingeshvaragudi (also called Karigudi) which is situated outside the ruined fort wall. The dargah of Hafizbasi and an ancient are the other objects of interest here. On a hillock nearby there is Maradi Basavanna temple which it is believed was founded by Chennabasavanna on his way to Ulavi during the 12th century. This town and its neighbourhood are closely associated with the history of Kittur covering the British period. It was in the Bailhongal fort that the queen Rani Chennamma was detained from 1824 till her death in 1829. The local Veerashaiva matha (Kalmatha) has the tomb of this brave queen. Belgaum proper has two segments, namely Belgaum city and Belgaum Cantonment which has been treated as two separate towns. This is an ancient town of considerable historical interest. A local legend has it that in about 225 B.C. this place was being ruled by a Jaina ruler named Jakkadeva and the construction of a mud fort, the traces of which are seen near Vadagaon-Madhavpur area here, is attributed to him. This legend has aroused the interest of the archaeologists and the recent excavations indicate the one time existence of an ordinary rural settlement and its gradual evolution into a prosperous township during the Shatavahana times. Later, during the 13th century Belgaum flourished as the capital of the Ratta Kings and during the subsequent period of history also continued to retain a place of importance. The chief object of historical interest here is the fort which withstood the onslaughts of mighty rulers. The fort encloses an area of about 40 hectares and has two gates. Inside the fort there is the Safa mosque, dargah of Peer Badruddin, the Kamala or Neminatha basadi and another Jaina shrine which is badly damaged and does not have the idol of any deity. The Kapileshvara temple of Shahpur is said to be a very ancient temple. This apart there are several important temples dedicated to Ganapati, Venkataramana, Maruti, Anantashayana, Basavanna etc. besides a Shiva shrine popularly known as Military Mahadev temple. The city has several Veerashaiva mathas, mosques and dargahs. The tomb of Asad Khan is held in high veneration by the Mulsims as well as the Hindus. These apart, the city has the tomb of Baba Saheb Nargund who attained martyrdom during the first war of independence. The places of interest around the city include Kakati, (which has the Siddheshvara temple), Kanbargi having a cave temple dedicated to Revanasiddheshvara and a sacred spring called Ramatirth and Pant Balekundri which is a noted centre of Dattatreya worship. Chikodi does not have any places of antiquarian interest, though a mention may be made of the traces of a ruined fort which seems to have had two gates. The temples of interest here are those dedicated to Banasankari, Parti Nagalinga, Kala Maruti, Mahadeva and Venkatesha. This small town has six mosques and three dargahs. Kharoshi which has the tomb of a noted Muslim saint and Yedur which is held as a sacred place by the Hindus are the nearby places of religious interest. Gokak is a place of some historical interest and, as can be made out from the inscriptions was at one time known as Gokage or Gokave. It was the headquarters of a feudatory chief. During the reign of Savanur Navabs (1719-1754) a beautiful mosque was built inside the then fortified town. The dargahs of Jangali Saheb and Mastan Saheb here are highly venerated. Panchalingudda, nearby has the ruins of a fort and the ruins of three ancient temples. The noted objects of interest in the town include the temples dedicated to Shankaralinga, Mahalingeshvara and Lakshmi. The town is famous for its painted wooden toys. Near the town there is an enchanting valley known as Yogi Kolla. This

spot is noted for its scenic beauty small water falls and the temples of Mallikarjuna and Nirvanappa. Gokak Falls is a place of archaeological and tourist interest. The river Ghataprabha takes a leap of 51 metres over the sandstone cliff in the picturesque Gokak valley and resembles a horse-shoe in its shape. The beauty of this spot is enchanting especially during the months of July, August and September. On the banks of the river, on either side, there are traces of ruined temples. The ancient Mahalingeshvara temple on the right bank has however been renovated and well maintained. Hukeri is a place of some historical importance and has four Gummats, which represent the monuments of saracenic architecture. The fort at this place is attributed to Ain-ul-Mulk Gilani, the Bijapur Commander while the Chini Gummat and the Kadam Rasul Mosque are attributed to Rustum Zaman. This place is noted for its numerous water cisterns of which only four are said to be in a working condition now. These water cisterns are regarded as a challenge to modern engineering skills in their internal arrangements, source of water, distribution mechanisms and other technical details. At Gajabarwadi near the town there is a dargah built in 1498 by Keta Gowda, a desai of Nanadi village in honour of a Mulsim sardar. This small town has seven mosques. Khanapur town is known to its Panchamukha Ishwara temple. The other objects of religious interest here include the temples of Revanata, Lakshmi, Maruti and Ganesha, a Jaina shrine, 2 churches, four mosques and the dargahs dedicated to Gajaber Saheb and Khadri Sha Vali. The small village of Asoga near this town is noted for its natural sceneries and also the temples of Ramalingeshwara and Visveshvaralinga of which the former is on the bank of the river and the latter is in the middle of the river. Konnur is a place of considerable archaeological interest and has as many as 50 cell tombs or megalithic burial chambers in its neighbourhood. The town has several ruined temples and inscriptions belonging to the 11th century. The chief objects of interest here are the Chikleshvara temple, the Parshvanatha basadi, the modern Lakshmi temple and the dargah of Hussein Peer. Kudachi, which is located on the right bank of the Krishna river, is a place of archaeological importance. Near this town traces of stone-age and copper age settlements were discovered recently. Among the dargahs found here those of Pirzadi and Masapli are highly venerated. Londa of Khanapur taluk and Mudalgi of Gokak taluk do not have any places of interest. Nipani has the ruins of a fort built by the Peshwas in 1771, the Amba Bhavani temple inside this fort and the ruins of the palace of the former desais of Nipani. Neminatha basadi and Chandraprabha basadi also deserve notice. The town has an ancient mosque and the dargah of Dastagir Saheb. About 2 km away there is the Dasoha Matha, a place of considerable religious importance to the Lingayats, which contains the samadhi of Virupakshalingayyaswamy. Tawandi (also called Tavanidhi) about 8 km from the town is a noted Jaina pilgrim centre and has five small shrines dedicated to Vrishabhanatha, Shantinatha, Navakhanda Parshavanatha and Brahmadeva. Ramdurg town was formerly the headquarters of a princely state. It is located on the banks of the Malaprabha and the places of interest here include the bathing ghats with small shrines, old palaces and a big temple dedicated to Venkateshvara. The fort of Ramdurg is attributed to Shivaji who, it is said, entrusted this fort as well as the fort at Nargund to the custody of one Appaji Suru in 1680 A.D. The town has three dargahs which are held in veneration by the Muslims of the neighbourhood. At Sureban nearby there is a beautiful picnic spot known as Sabari-Kolla. Raybag finds mention as Bagi in a 15th century inscription and, much earlier, during the 11th century it was the headquarters of a Jaina principality. The noted objects of antiquarian interest include the ancient temples of Narasimha, Siddheshvara, Somanatha and Bankanatha. The palace of Kolhapur Maharajas which is situated about 3 km away from the town has the temples of Ramadeva and Amba Bhavani. One of the five mosques in the town and a domed tomb nearby are attributed to Ranadullah Khan, the Bijapur general who sacked the town during his campaigns in this region. Sambre of Belgaum taluk and Sadalgi of Chikodi taluk do not have any places of interest either within their limits or in their immediate neighbourhood. It may however be mentioned that the Belgaum Airport is located near Sambre. Sankeshwar has, in its Shankaralinga temple, three inscriptions belonging to the period of the seventh Ratta chief Kartavirya IV (early 12th century). During the medieval period in 1481, Bahadur Gilani, the Bahamani Governor of Konkan rose in rebellion, fortified Sankeshwar and established it as his capital. The Shankara Bharati Matha located on the banks of the rivulet Hiranyakeshi at this place is said to have been founded by a saint of the same name at the initiation of Ranadullah Khan the Bijapur general, towards the end of the 16th century. The other objects of interest include the temples of Lakshmi Narayana, Vitthala, and Lakshmidevi besides the Mahaveera basadi, several mosques and dargahs. Saundatti-Yellamma is a place of historical as well as religious importance. This was the capital of the Ratta chiefs who flourished here during the ninth and the thirteenth centuries. The place has yielded seven inscriptions dated between 875 and 1229 A.D. The Saundatti fort which is in a ruined state now and is situated on a small hillock was built in 1734 A.D. by Jayagond the Navalgund Desai. The places of interest include the ancient temples of Ankuleshvara, Puradeshvara, Shankaralinga and a Jaina basadi. The ruined shrines of Maruthi and Kadasiddheshvara are located inside the fort. The recently built Chidambareshvara temple also deserves notice in that this temple was built to enshrine the deity of the temple of the same name of Gurlhosur which is now submerged under the Malaprabha reservoir project. The Yellamma Hills, is a noted pilgrim centre and the main attraction here is the Yellamma shrine. The main building of temple represents the characteristic features of the 8th-9th century architecture and, of course, there are several later additions. In an inscription found on the base of the wall of the temple which is dated in 1514 A.D. the deity is referred to as Jattaka Maha Maye and the inscription records the completion of the Nagarikhane by Bommappa Nayaka of Bagi. The place has a number of small shrines dedicated to Jamadagni, Parashurama, Matangi etc. In honour of Yellamma fairs are held twice a year - on the full-moon day of Chaitra (April) and on the full-moon day of Margashira (November) - when devotees gather in very large numbers. Local legends associate this place with yogis, such as Eknath and Joginath. The practice of dedicating one's entire life time for the service of Goddess Yellamma which was widely prevalent in the past is lingering on even to this day. Navil-tirth which is at a distance of about 8 km towards the north of the town is a place of tourist interest. It is a narrow gorge surrounded by hills through which the Malaprabha rushes forth. A dam has been built near this spot across the Malaprabha and by the right side of this dam there is the temple of Ramalingeshvara.

9. BRIEF ANALYSIS OF DATA :

i) Population and growth trends :

According to the 1981 census, the total population of Belgaum district is 2,980,440 comprising 1,523,311 males and 1,457,129 females. Amongst the 19 districts, Belgaum is the second most populous district and its population forms 8 per cent of the total population of the State. With reference to geographical area, Belgaum district holds the fifth place and accounts for 7 per cent of the total area of the State. Though there has been no expansion in its area, the passage of every decade has witnessed a steady and substantial addition to its population. Thus, during the latest intercensal decade of 1971-81 there has been an addition of 557,098 souls - a figure which exceeds the aggregate population of two medium-sized taluks of the district. When compared to the general phenomenon of growth in the State as such, the magnitude of the addition to the population of Belgaum district does not appear to be very impressive. The decadal growth rates for the district and the State are 22.99 per cent and 26.75 per cent respectively. Evidently, the pace of growth in Belgaum district is comparatively low. When the districts of the State are arranged in a descending order of their growth rates, Belgaum takes the twelfth place. An analysis of the growth trends during the earlier decades shows that the decadal rates do not conform to any set pattern and that the district, as well as the State, has passed through periods of negative

growth as also stagnation and low growth. During the past 8 decades, while the population of Belgaum district has increased by 163.43 per cent that of the State has increased by 184.46 per cent. It may be noticed from the following discussion that in the State as well as the district the population growth rates have progressively increased from decade to decade.

During the very first decade of this 80 year period, while the population of the State increased by 3.69 per cent that of Belgaum district declined by 4.19 per cent - an unusual feature. The loss in population was particularly noticeable in the urban segment. Since there was no reduction in the number of towns, this loss was mainly due to urban-rural migration - may be of a temporary nature. Till the early 40s, it may be incidentally mentioned, it was a common practice among the town-dwellers to move to nearby villages to escape the fury of the epidemics like plague and cholera and to return to their homes after the situation improved. Inter-district migration too seems to have been an important factor, for large tracts of Belgaum district lie in the drought-prone zone and in those early days failure of monsoons used to cause considerable dislocation, of course of a temporary nature. Between 1911 and 1921, the State as such witnessed a fall in its population to the extent of 1.09 per cent. During this period, however, Belgaum district experienced a marginal gain of 0.46 per cent - the addition was particularly noticeable in the urban areas. The rural areas conformed to the general pattern and suffered a decline. The year 1921 is usually regarded as a turning point in the population growth trends, for after 1921, there has been a continuous rise in the population of the State as a result of economic development and improvements in public health. Belgaum district conforms to this general pattern and in fact displays the trends of faster growth. Between 1921 and 1931, as against the State average of 9.38 per cent, Belgaum district registered a growth rate of 13.63 per cent. In the matter of decadal growth, among the 19 districts Belgaum ranked next only to Bangalore and Chitradurga. This phenomenon of higher growth was perhaps due to the favourable monsoons which enabled those who had emigrated earlier to return to their homes. The same trend of an above-average growth continued during the next decade also. While the average for the State stood at 11.09 per cent the growth rate for Belgaum district worked out to 13.97 per cent. This rate was, however, lower than that returned by only four districts, namely Bangalore, Bidar, Kolar and Mysore. Thereafter, Belgaum district appears to be passing through a phase of relatively retarded growth : even though the decadal growth rates have progressively increased these rates are considerably lower in comparison to the rates given out by the State as a whole. During next three decades of 1941-51, 1951-61 and 1961-71, the population of the State increased at the rates of 19.36 per cent, 21.51 per cent and 24.22 per cent respectively. The corresponding figures for Belgaum district are 16.71 per cent, 20.53 per cent and 22.16 per cent. During the latest decade, the gap between the two sets of figures has further widened. The forces which promote higher population growth are evidently less active in Belgaum district than in several other parts of the State. Inter-district as well as inter-State migration appears to be a factor of considerable significance. Maharashtra, the highly urbanised and industrialised State in the north and the west and the rapidly developing Union Territory of Goa in the west as well as the Uttar Kannad district in the South-west are focal points that are exerting pressure on the labour force available in Belgaum district. For example between 1951 and 1961 while the population of Belgaum increased by 20.53 per cent, Uttar Kannad recorded a growth rate of 33.17 per cent. Similarly between 1971 and 1981 too, Uttar Kannad has returned a growth rate of 26.25 per cent as against 22.99 per cent in Belgaum.

Taluk level data for 1971-81 shows that the population has increased in all the taluks, though at considerably different rates. The decadal growth rate is the highest in Raybag taluk (36.80 per cent) and the least in Hukeri taluk (12.94 per cent). Gokak taluk has returned the second highest rate of 31.80 per cent and this is followed by Belgaum taluk with a tally of 28.62 per cent. Amongst the rest Ramdurg is the only taluk with an above-average rate (25.58 per cent). The growth rates are quite low in the taluks of Chikodi (15.98 per cent) and Athni (17.75 per cent). These variations are to a large extent due to the irrigation projects which have been taken up in the district. The construction of the dam near Hidkal in Hukeri taluk across the Ghataprabha and the dam at Navil-tirth near Saundatti-Yellamma in Parasgad taluk have adversely affected the people of these two taluks in that there have been submersions of lands belonging to several villages and a consequent need to rehabilitate the affected people at different places. Raybag, Ramdurg and Gokak taluks on the other hand have been benefitted due to the extension of assured irrigational facilities to vast extents of lands. Thus while the former taluks have been affected by out-migration the latter have gained considerably due to in-migration. The position becomes clear when the situation in the rural areas of these taluks is examined. Raybag taluk (rural) has returned the highest growth rate of 42.89 per cent and this is followed by Gokak (29.31 per cent) and Ramdurg (23.10 per cent). On the other hand, Hukeri taluk (rural) has returned the lowest growth rate of 10.99 per cent. The case of Belgaum taluk is somewhat different, for though the taluk average happens to be relatively high, the rural growth rate is as low as 13.94 per cent only. The high growth rate in Belgaum taluk is due to the above-average growth trends perceived in its urban areas, particularly the Belgaum city, the limits of which have been extended and the unit itself is constituted into a municipal corporation. Further, an erstwhile village has been classified as urban for purposes of the 1981 census. If the taluk-wise urban growth rates are compared, Belgaum taluk (43.39 per cent) ranks next to Parasgad (64.91 per cent). Saundatti-Yellamma is the only town of Parasgad taluk and the high growth rate here is attributable to the implementation of the Malaprabha Project, the headworks of which are located at a site close to the town and a large number of families adversely affected by the project (due to inundation or acquisition of their lands) have been settled in the rehabilitation camps set up in the limits of this town. Ramdurg (39.89 per cent), Gokak (39.63 per cent) and Sampgaon (36.14 per cent) are the other taluks which have returned growth rates that are slightly more than the district average of 34.88 per cent. These rates, except in the case of Parasgad, are much lower than the State average of 50.65 per cent. Among the 10 taluks Raybag has registered the lowest growth of 6.84 per cent. This phenomenon of extremely low growth is more apparent than real. This taluk has two towns within its jurisdiction, namely Raybag and Kudachi. In 1971, both these places were non-municipal towns (Town Panchayats) and their boundaries were coterminus with the boundaries of the revenue villages of the same name. After 1971, however these places have been constituted into municipal towns with notified boundaries covering mainly the built up area in the main settlements. This delineation of boundaries did not affect the population of Kudachi to any significant extent. But in the case of Raybag town the areas which were excluded from the newly constituted municipal town contained a substantial portion of its 1971 population as well. The bifurcated unit which has been designated as Raybag (Rural) for purposes 1981 census has returned population of 6751. If this figure is also added to the population of Raybag town then the urban growth rate for the taluk would be 32.48 per cent, and at the same time, the rural growth rate would move down to 37.67 per cent. This case illustrates how the computation of growth rates is affected by the conceptual frame of the census and also the jurisdictional changes which at times yield unexpected and un-intended results. Besides Raybag the other taluks which have returned very low rates are : Athni (13.01 per cent) with an old municipal town and Chikodi (18.98

per cent) with 3 towns one of which is an old municipal town and the other two were non-municipal towns in 1971 (Town Panchayats).

As between the rural and urgan segments of the population the latter has increased at a relatively higher rate in the State as a whole and in Belgaum district as well. While the urban population of the State increased by 50.65 per cent the rural areas registered a growth rate of only 19.07 per cent. The corresponding growth rates for Belgaum district are 34.88 per cent and 19.91 per cent respectively. Extension of assured irrigation facilities under the Ghataprabha and the Malaprabha projects to large tracts of lands in the northern and eastern tracts of Belgaum district appears to have activated the forces which promote a rapid growth of population. During the previous decade of 1961-71, however, the rural areas of Belgaum district returned a growth rate of 18.40 per cent - a figure significantly lower than the State average of 21.05 per cent. On the other hand, during this period, the urban population of the district rose by 39.25 per cent in contrast to 35.23 per cent registered by the State. The situation was quite different in the earlier decade of 1951-61 : while the urban population of the State increased by 18.26 per cent that of Belgaum district decreased by 13.29 per cent; at the same time as against a State average of 22.56 per cent, the rural population of the district registered a growth rate of 32.14 per cent. Obviously, the forces which promote a higher growth of population differ from place to place and also from time to time.

Distribution of population :

The population of the district is distributed unequally amongst its ten taluks. The average population of a taluk is 298,044 and only 4 taluks have a population which exceeds this average. Belgaum taluk is the most populous and it accounts for 18.51 per cent of the total population of the district. Chikodi ranks next and contributes 12.06 per cent to the total. Ramdurg is the smallest taluk and its share in the total population works out to only 5.63 per cent. The rural-urban categorisation shows that while those returned from rural areas form 77.47 per cent the urban dwellers account for 22.53 per cent. The rural population is dispersed amongst the 1142 inhabited villages belonging to the ten taluks. On the other hand, the urban population is shared by 20 towns. There are considerable disparities at the taluk level.

The number of inhabited villages in a taluk varies between 53 in Raybag and 219 in Khanapur. Athni which is the second smallest taluk has as many as 89 villages and at the other end too, Belgaum which happens to be the second largest taluk has 126 villages and is followed closely behind by Sampgaon. If the extreme cases are ignored then the number of villages per taluk ranges between 89 and 126 only. The average number of inhabited villages per taluk works out to 114 and the average population per village comes to 2022. When examined with reference to geographical area it is noticed that while Athni taluk tops the list with an area of 1996 sq.km. Raybag occupies the bottom-most place with a tally of only 959 sq.km. Khanapur (1749 sq.km.) is the second largest taluk. In terms of rural population, however, Chikodi happens to be the largest taluk and its share in the rural population of the district comes to 14.89 per cent. Athni, Gokak and Belgaum occupy the next three places and contribute 13.00 per cent, 11.58 per cent and 10.62 per cent respectively to the total. Khanapur, which is the largest in terms of number of villages, is a very small taluk in terms of population size. Its share in the total rural population of the district is 7.23 per cent - a figure which is slightly more than that of Ramdurg the smallest taluk (6.07 per cent). On the other hand Raybag and Hukeri which are the smallest taluks in terms of geographical area contribute as much as 8.01 per cent and 10.07 per cent respectively. Thus, there does not seem to be any direct relationship between geographical area, number of villages and population. The average size of a village varies considerably from taluk to taluk and this is true in respect of geographical area as well as population. For instance in Khanapur taluk which lies in the western fringe of the district and is characterised by a mountainous terrain and dense vegetation there are hardly 763 inhabitants per village. Ramdurg, which is one of the eastern-most taluks, has the next higher average of 1361 persons per village and this figure is 1.8 times the average noticed in Khanapur taluk. In Raybag taluk on the other hand the average number of inhabitants in a village is as high as 3488. The taluks of Chikodi (3438) and Athni (3372) too present a similar situation of high concentration of population. The subregion comprising these three taluks is agriculturally well developed and is known since a long time for its fertile fields irrigated by wells, tanks and canals. The average size of a village is less than a thousand in one taluk, ranges between 1000-1999 in 4 taluks, lies between 2000-2999 in 2 taluks and exceeds 3000 in the remaining three taluks. In a general way it may be observed that this district contains a high proportion of large sized villages.

A size-group distribution of the 1142 inhabited villages reveals that there are a few very small villages and a good number of very large villages as well. Villages with less than 200 inhabitants each account for 4.73 per cent of the total. A significant point which may be noted is that about two-thirds of these villages are located in Khanapur taluk. The proportion of small villages with 200-499 persons each comes to 12.35 per cent and, in this case too, a fairly large number belong to Khanapur taluk. Villages which fall in the population ranges of 500-1999 and 2000-4999 may be regarded as medium-sized villages. Such villages constitute as much as 73.64 per cent of the total and are found in all the taluks of the district in sufficiently large numbers. Large villages with 5000-9999 inhabitants each account for 8.06 per cent of the total. It may be incidentally noted that amongst the 19 districts of the State, Belgaum has the largest number of villages of this size, namely 92, which in fact accounts for 23 per cent of the total number of such villages in the entire State. It is also of interest to note that such villages are found even in Khanapur taluk, where the average size of a village is only 762. Very large villages with a minimum population of 10,000 are also relatively more numerous in Belgaum district. In terms of proportions, with reference to the total number of villages in the district, such villages are seen to account for 1.22 per cent. Though this figure may appear to be quite low no other district within the State has a returned a figure any where near this (Dakshin Kannad ranks next with a tally of 0.79 per cent). Another interesting feature is that, 5 out of the 10 taluks of this district contain such villages. Further, amongst the 35 very large villages found in the entire State as many as 14, that is 40 per cent, are located in Belgaum district. Preponderance of medium and large sized villages is thus a characteristic feature of Belgaum district.

The urban population of the district too is shared in an unequal manner by the 10 taluks. The average urban population per taluk works out to 61,142. However, the actual urban population exceeds this average in the case of only 3 taluks. These taluks namely Belgaum, Gokak and Chikodi, account for 45.68 per cent, 13.73 per cent and 11.69 per cent respectively of the total urban population. The lowest contribution comes from Khanapur taluk (2.75 per cent). Among the rest, while Hukeri accounts for about 6 per cent, the other 5 contribute about 4 per cent each.

The urban population is spread over in 20 towns among which Belgaum is the most populous and Londa is the smallest. It may be of interest to note that Belgaum city is 46 times as large as Londa. Though the average number of towns per taluk is 2, Gokak alone has 4 towns

and the taluks of Chikodi and Belgaum have 3 towns each. Amongst the rest, Hukeri, Khanapur and Raybag have 2 towns each. The average population of a town of the district works out to 33,571. Belgaum, Gokak and Nipani are the only towns with an above-average population. A distribution of the towns by size-class shows that the district has one Class I town (100,000 plus), ten Class III towns (20,000-49,999), six Class IV town (10,000-19,999) and three Class V towns (5,000-9,999). There is thus an obvious preponderance of medium sized towns. The urban population of the district is distributed amongst the different classes of towns in the following manner : Class I : 40.87 per cent; Class III : 42.49 per cent; Class IV : 13.38 per cent and Class V : 3.26 per cent. Belgaum city and the cantonment together constitute an urban agglomeration. If this statistical unit is regarded as a single urban entity then the number of urban units would be 19 and the share of Class I towns as well as Class III towns in the population of the district would be 44.73 per cent and 39.03 per cent respectively.

Urbanisation Trends :

The proportion of urban population to the total population of Belgaum district, works out to 22.53 per cent. This figure is significantly lower than the State average of 28.89 per cent. Obviously Belgaum is one of the less urbanised districts of the State and in fact, when the 19 districts are arranged in a descending order of the size of their urban components, Belgaum holds the eleventh-rank. In 1971, the urban population formed 20.53 per cent of the total population of the district. The corresponding average for the State being 24.31 per cent, Belgaum held the eighth rank. Still earlier, in 1961, the proportion of urban population in this district was much lower, namely 18.02 per cent, as compared to the State average of 22.33 per cent. But in 1951 the situation was somewhat different, : as against a State average of 22.95 per cent Belgaum district returned 25.22 per cent. Further, Belgaum enjoyed the distinction of contributing the largest number of towns namely 36, to the State total of 289. Thus, when viewed with reference to the situation which prevailed in 1951, Belgaum district has suffered a definite setback in the matter of urbanisation. But, after 1961, the process of urbanisation gradually picked up the necessary momentum and during the past 2 decades the size of the urban component has steadily increased. There has been an increase in the number of towns as well : from 15 in 1961 the number has moved up to 20 in 1981. Sambre in Belgaum taluk represents the latest addition.

The average number of towns per hundred inhabited villages is quite often considered as an index of urbanisation. In the case of Belgaum district this number works out to 1.75 and this figure is very much higher than the State average of 1.05. Amongst the taluks of the district, Gokak and Raybag are the most highly urbanised taluks, for in both these cases the average comes to 3.77. Chikodi taluk has 3 towns and one hundred villages. Belgaum taluk, which contains the district headquarters town of Belgaum and has two more towns in addition gives out an average of 2.38. Sampgaon, Khanapur and Parasgad are the taluks which are least urbanised. When examined with reference to the size of the urban component in the population of the taluk, a slightly different picture emerges. With an urban component of 55.58 per cent, Belgaum taluk ranks as the most highly urbanised taluk of the district. This is followed by Gokak (25.63 per cent), Chikodi (18.59 per cent), Ramdurg (16.43 per cent), Hukeri (14.54 per cent), Raybag (13.25 per cent), Parasgad (11.85 per cent), Sampgaon (10.25 per cent), Khanapur (9.95 per cent) and Athni (8.41 per cent).

Another notable feature in the matter of urbanisation is that there has been an increase in the statutory towns : after 1971, municipalities have been constituted in place of town panchayats in the case of 9 towns. Thus amongst the 20 towns, 17 are now municipal towns, one is a cantonment and only 2 are Panchayat towns. The economy of the district is predominantly agricultural. This is perhaps the main reason for its slow progress in urbanisation.

Density of population :

The overall density of population in Belgaum district is 222 persons per square kilometre. Compared to the average density of 194 in the State, Belgaum is relatively more densely populated. When the districts are arranged in a descending order of their respective density figures, Belgaum takes the fifth place. As already mentioned Belgaum is the second most populous district of the State.

Within the district, Belgaum is the most densely populated taluk. One of the reasons for its high density of 532 persons per square kilometre is the heavy concentration of population in its urban areas and another equally important reason is the sound agricultural economy of its rural areas. Next to Belgaum, Chikodi has the highest density (333) and this is followed by Hukeri (274) and Gokak (233). In Khanapur taluk which is noted for its hilly terrain and dense forests, there are only 106 persons per square kilometre. The density is quite low in the taluks of Ramdurg (138) and Parasgad (141). Within the district, the taluks of Chikodi, Hukeri, Belgaum, Gokak and Raybag constitute what may be termed as a high-density tract.

In conformity with the general pattern, Belgaum district too displays a considerably high urban density. As compared to 175 persons per square kilometre of its rural area, the urban areas have a density of 3304. Both these figures are higher than the corresponding urban and rural averages for the State which are 2914 and 140 respectively. There are considerable differences at the taluk level. If the rural density figures for the 10 taluks of the district are examined it is noticed that the density is the highest in Chikodi taluk (275) fairly high in Belgaum taluk (262) and the least in Khanapur taluk (96). The only other taluks with more than 200 persons per square kilometre are Hukeri and Sampgaon. In the case of Parasgad and Ramdurg the rural density figures are seen to be 125 and 116 respectively. The urban density figures range between 1946 in Parasgad taluk and 7718 in Ramdurg taluk. Like the rural areas, the urban areas of Khanapur taluk are also sparsely populated. The density noticeable in the urban areas of this taluk (2135) is high only in relation to that noticed in Parasgad taluk. Sampgaon taluk too displays a similar situation. Next to Ramdurg, Athni taluk (6392) has the highest density. Townwise details show that the density ranges between 8492 in Nipani town of Chikodi taluk and 680 in Sambre town of Belgaum taluk. Sambre is a non-municipal town and covers a wide area beyond the built-up portion, for by definition its limits are coterminus with the limits of the revenue village of the same name. Likewise, in Londa which is also a non-municipal town the density of population is quite low (1163). A grouping of the 20 towns by density ranges reveals the following position:- 7,500 and above : 2 towns; 5,000 upto 7,500 : 5 towns; 4,000 to 5,000 : 1 town; 3,000 to 4,000 : 4 towns; 2,000 to 3,000 : 4 towns and below 2,000 : 4 towns.

An examination of the village level data shows that though there is a preponderance of villages with medium to high densities there are quite a few villages with hardly 10 persons per square kilometre and at the same time there are a few others with densities exceeding 500. A percentage distribution of the 1142 inhabited villages by density ranges throws up the following picture : 10 or less : 0.96 per cent; 11-50 : 8.23 per cent; 51-100 : 16.02 per cent; 101-200 : 34.33 per cent; 201-300 : 19.88 per cent; 301-500 : 16.37 per cent; 501 plus : 4.12 per cent and in one particular case (0.09 per cent) the density cannot be computed as the area of the village is not known. Nearly 60 per cent of the villages of the district have a density of 200 persons or less per square kilometre.

Sex Ratio :

In Belgaum district there are, on an average, 957 females for every thousand males. This sex ratio figure is slightly lower than the State average of 963. When the districts of the State are arranged in a descending order of sex ratio figures, Belgaum district takes the twelfth place. In 1971, the sex ratio was much lower than the current level. With a sex ratio of 947 as compared to the State average of 957, in 1971 too Belgaum district held the twelfth ranking. The rural areas generally have a relatively higher sex ratio. The sex ratio for the rural and urban areas of the district are 965 and 928 respectively. The corresponding averages for the State are 978 and 926 resepctively.

Within the district, the sex ratio varies between 917 in Belgaum taluk and 985 in the taluks of Khanapur and Parasgad. Like Belgaum, Raybag taluk too contains a low proportion of females in its population (sex ratio 937), though for apparently different reasons. The situation in Belgaum taluk may be attributed to the high degree of urbanisation noticed in the taluk, whereas in the case of Raybag, the rural areas of the taluk too have returned the lowest sex ratio. It may be incidentally noticed that this taluk has experienced the highest growth rate during the latest decade (36.80 per cent in the taluk and 42.89 per cent in its rural areas). Much of this growth is obviously due to in-migration and, it appears, there has been a larger influx of men than women. The sex ratio is fairly high (984) in the taluks of Ramdurg and Sampgaon and, is higher than the district average in the taluks of Hukeri (967) and Gokak (967).

If the sex ratio figures in the rural areas of the taluks were to be examined it is noticed that Khanapur has the highest sex ratio of 991 and is followed closely behind by the taluks of Sampgaon (986), Parasgad (985) and Ramdurg (984). The sex ratio is quite low in Chikodi (948) and Belgaum (946) and the least in Raybag taluk (940). In the case of urban areas of different taluks the sex ratio is seen to vary between 895 in Belgaum and 990 in Parasgad. The range of variation is indeed quite large. The lowest sex ratio of Belgaum taluk may be ascribed to the existence of Belgaum city and more so to the Belgaum Cantonment Board area, where the sex ratio is as low as 715. Next to Belgaum taluk, Raybag taluk (which has two towns) has the lowest sex ratio. The reasons for this phenomenon are not quite apparent, for both Kudachi and Raybag are small towns and of the two, the latter has returned an extremely low sex ratio of 885. The somewhat high sex ratio noticed in Parasgad taluk, that is in Saundatti-Yellamma town, may be attributed to the implementation of the rehabilitation programmes under the Malaprabha project involving movement of families from the affected villages to this town. Unlike the voluntary migrations in quest of employment and such other usual causes, this type of migration involves shifting of households as units at a time and is therefore not likely to disrupt the sex ratio at the place of destination. The reasons for differences in the sex ratio returned by different places at different times are quite varied and prevent the formulation of universally acceptable principles. Urbanisation, for example, is believed to bring down the sex ratio. But much depends on how this urbanisation itself has come about. Only a deeper study and analysis of related demographic data including migration patterns can provide a satisfactory explanation regarding the marked variations noticed in the district.

Literacy Rate :

In Belgaum district, the literate persons constitute 36.64 per cent of the total population. This figure is considerably lower than the State average of 38.76 per cent and when the districts are arranged in a descending order of their literacy rates, Belgaum occupies the eleventh place. In 1971, its relative position amongst the 19 districts was much better. Though the literacy rate for the district (30.73 per cent) fell short of the State average (31.52 per cent), Belgaum held the ninth ranking amongst the districts. The position in 1961 was somewhat better, for Belgaum district returned a literacy rate (26.03 per cent) which was slightly more than the State average of 25.40 per cent and among the districts of the State it occupied the eighth place. However, during the past 20 years there has been a steady and substantial increase in the proportion of literates in the population of the district. The literacy rate is not quite uniform throughout the district. There are considerable differences at the taluk level and also between the rural and urban segments of population and between the males and females in each such unit.

Taluk level data reveal that the literacy rate varies between 52.37 per cent in Belgaum taluk and 22.88 per cent in Raybag taluk. The high literacy rate noticed in Belgaum taluk is mainly due to the very high level of literacy returned by its urban areas and also the extremely large size of the urban component in its population. Apart from Belgaum, Chikodi is the only taluk which has returned an above-average literacy rate. This taluk has three towns of which Nipani ranks in importance next to Belgaum. Even though Gokak is also relatively more urbanised and is having four towns, including a town which is slightly larger than Nipani in population size, the proportion of literates to the total population of the taluk is only 30.20 per cent - a figure which is larger only with reference to the figure returned by Raybag taluk. In Ramdurg taluk also the literacy rate is quite low (30.52 per cent). If the literacy rates in the rural areas of the taluks are examined it is noticed that this varies between 37.73 per cent in Chikodi taluk and 20.91 per cent in Raybag taluk. The district average is 30.86 per cent and the taluks with an above-average literacy rate are : Belguam (35.79 per cent), Khanapur (34.14 per cent) and Sampgaon (33.97 per cent). Likewise, the literacy rate in the urban areas of different taluks ranges between 65.63 per cent in Belgaum taluk and 43.25 per cent in Parasgad taluk. The district urban average is 56.51 per cent. In all the taluks the urban literacy rates are much higher than the corresponding rural rates. This gap between the urban and rural rates happens to be the least in Parasgad taluk and the highest in Belgaum taluk. Townwise data show that the proportion of the literate to the total population is the highest (71.12 per cent) in the town of Belgaum Cantonment and the least (26.18 per cent) in Mudalgi town of Gokak taluk. Apart from Belgaum Cantonment, there are only two towns with a literacy rate of more than 60 per cent. These towns are the Belgaum city and Khanapur. At the other extreme besides Mudalgi, Kudachi and Konnur are the only towns with a literacy rate of less than 40 per cent.

Sexwise literacy data reveal that in conformity with the general pattern, in Belgaum district too the male segment of the population of each unit contains a larger proportion of literates in it than its female counterpart. In the district as a whole 48.65 per cent among the males and 24.08 per cent among the females are literate. In the case of male population, at the taluk level, Belgaum taluk has returned the highest literacy rate (62.79 per cent). Among the rest, Chikodi taluk has a literacy rate of more than 50 per cent, 7 taluks have literacy rates in the range of 40 to 50 per cent and Raybag taluk has the least rate of 32.89 per cent. In the case of rural areas, the district average for males is 30.86 per cent. This rate exceeds 50 per cent in Chikodi taluk and while it lies between 40 to 50 per cent in the case of 7 taluks it is just around 38 per cent and 31 per cent in the case of Gokak and Raybag taluks respectively. When the conditions in the urban areas are examined it is noticed that while the male literacy rate exceeds 73 per cent in Belgaum taluk and lies between 60 to 70 per cent in 6 taluks, it ranges between 50 to 60 per cent in two others and happens to be the least (44.52 per cent) in Raybag taluk. In case of female population, at the taluk level, the literacy rate is seen to vary between 12.99 per cent in Raybag and 41.02 per cent in

Belgaum. The range of variation is quite large. The second highest rate is only 26.81 per cent, noticeable in the case of Chikodi taluk. In 5 out of the 10 taluks the female literacy rate is below the 20 per cent mark. When the situation in the rural areas is considered, the average for the district is seen to be 17.98 per cent. This rate exceeds 20 per cent in the case of 4 taluks, lies between 15 to 20 per cent in the case of 3 taluks and happens to be as low as 10.08 per cent in Raybag taluk. In so far as the urban areas are concerned, the female literacy rate is above 25 per cent in all the taluks including Raybag which has returned the lowest rate of 26.28 per cent. Belgaum taluk, where this literacy rate is as high as 56.38 per cent, is the only taluk with a rate exceeding the 50 per cent mark. The urban female literacy rate lies between 40-50 per cent in 4 taluks and between 30-40 per cent in another 4 taluks. Why there should be such large scale variations in the literacy rates returned by apparently similar towns and villages is not amenable for any easy explanation. The factors which determine the level of literacy of a place at any given point of time are numerous and this includes the nature of the basic economy of the place as well as social factors including the attitudes of the people towards education in general and female education in particular.

When the villages are grouped into six population size-classes and the literacy rates are examined for the villages in each group the following picture emerges. In the case of very small villages with less than 200 persons each the literacy rate is 27.80 per cent - much below the rural average of 30.86 per cent. This literacy rate gradually moves up to 28.12 per cent, 28.49 per cent and 28.93 per cent respectively in respect of the small and medium sized villages with population in the range of 200-499, 500-1,999 and 2,000-4,999. Thereafter, the literacy rate suddenly increases to 35.36 per cent in the case of large villages having 5,000-9,999 inhabitants each and then decreases to 33.68 per cent in respect of villages with a minimum population of 10,000. If the downward trend in the case of very large villages is ignored, the data relating to Belgaum district lend support to the generally held view that there is a direct relationship between population size and literacy rate. A village with large population usually contains a larger proportion of literates. Larger villages generally enjoy better educational facilities, offer greater opportunities and provide a more congenial atmosphere for learning.

Economic Activity :

At the 1981 census, there has been a threefold classification of the population, namely main workers, marginal workers and non-workers. Nature of one's activity and the extent of participation in economically productive work are the decisive factors for such a classification. Levels of economic development of different regions within the district, availability of opportunities besides willingness to work, especially among the womenfolk, social attitudes towards working women, initiative and entrepreneurship evinced by the menfolk in general etc., are the main factors that have a direct influence on the distribution of population under these three categories. Belgaum is a predominantly agricultural district and, here both dry-farming and wet-farming are of equal importance. The proportions of main workers, marginal workers and non-workers in the population of the district are : 36.06 per cent, 5.26 per cent and 58.68 per cent respectively. The corresponding figures for the State are : 36.76 per cent, 3.48 per cent and 59.76 per cent.

(a) Main Workers :

The proportion of main workers to the total population of Belgaum district is 36.06 per cent. This proportion varies from taluk to taluk and also between the urban and rural areas of each taluk and between the male and female segments of the population. In Ramdurg taluk the main workers form 41.45 per cent whereas in Belgaum taluk they account for just 33.12 per cent. The proportion of male workers ranges between 46.86 per cent and 58.07 per cent. Likewise in the case of female population this proportion is seen to vary between as low a figure as 3.76 per cent and the highest average of 28.70 per cent. For every female main worker in the district there are 3.6 male main workers.

Taluk level data shows that the proportion of main workers exceeds 40 per cent in the taluks of Ramdurg and Parasgad, lies between 35-40 per cent in the case of 6 taluks and happens to be less than 35 per cent in the taluks of Chikodi and Belgaum. In the taluks of Parasgad and Ramdurg which contain a single town each and several villages of which have recently been benefited by the introduction of assured irrigation facilities a relatively large proportion, especially among women have been returned as main workers. A comparatively high degree of urbanisation appears to be the main reason for the low average noticed in Belgaum. Similar explanation, however, does not hold good in the case of Chikodi taluk. If the situation in the rural areas of different taluks is examined it is noticed that the proportion of main workers is the highest (43.33 per cent) in Ramdurg taluk and fairly high (41.91 per cent) in Parasgad. In three other taluks this proportion exceeds the district rural average of 37.97 per cent and this group includes Belgaum but not Chikodi. In fact the proportion of main workers returned by Chikodi taluk (35.44 per cent) happens to be the least. In the case of urban areas of different taluks this proportion is seen to vary between 28.08 per cent in Khanapur taluk and 32.91 per cent in Chikodi taluk. Though Belgaum taluk contains the most populous town of the district it has a small panchayat town as well within its limits. Perhaps because of this reason the proportion of workers works out to 28.14 per cent - a figure which is slightly higher than 28.08 per cent and 28.11 per cent returned by the taluks of Khanapur and Sampgaon. Chikodi taluk contains the third largest town in addition to two smaller municipal towns. In spite of this the proportion of main workers in its population is the highest. The taluks of Parasgad, Ramdurg, Gokak and Hukeri also have an above-average proportion of main workers and among these Gokak has four towns within its limits and Hukeri has two.

In the male segment of the population of the district, the main workers constitute 55.24 per cent. The range of variation amongst the taluks is quite narrow and in each and every taluk this proportion is above 50 per cent. Raybag taluk tops the list (57.19 per cent) and is followed by Athni (56.56 per cent), Parasgad (56.51 per cent) and Sampgaon (56.46 per cent). At the other end there is Belgaum with a tally of 51.59 per cent and the place immediately above this is held by Gokak (54.78 per cent). If the rural areas alone are taken up for consideration the district average is seen to be 57.23 per cent. Talukwise particulars show that the range of variation is very narrow : this proportion of main workers lies between 56.00 per cent in Hukeri taluk and 58.07 per cent in Raybag taluk. True to expectations the urban areas of the district as such and of the various taluks within the district, contain a lesser proportion of main workers than their rural counterparts. The average for the district being, 48.55 per cent the talukwise proportions lie in the narrow range of 46.86 per cent and 51.47 per cent noticeable in the taluks of Khanapur and Raybag. The only other taluk where the male main workers exceed the 50 per cent mark is Parasgad.

In the female segment of the population of the district, the main workers constitute 16.01 per cent. At the taluk level this proportion varies between 12.41 per cent in Chikodi taluk and 26.22 per cent in Ramdurg taluk. Like Ramdurg, Parasgad taluk also contains a high proportion of female main workers (24.84 per cent). In 8 out of the 10 taluks, this proportion happens to be much less than 20 per cent. In other words not even

one amongst 5 females has returned herself as a main worker in these 8 taluks. In the rural areas, just as in the case of male population, the female population too contains a relatively higher proportion of main workers in it. The range of variation is however comparatively large. Amongst the taluks Ramdurg tops the list with 28.70 per cent and is followed first by Parasgad (26.38 per cent) and then by Belgaum (21.14 per cent) and Khanapur (20.13 per cent). In Chikodi taluk on the other hand, the female main workers form only 11.69 per cent. The situation is very much the same in the taluks of Raybag (14.32 per cent) and Athni (14.32 per cent) which adjoin Chikodi. Among the urban resident females of the district, 9.00 per cent have returned themselves as main workers. This proportion is as low as 3.76 per cent in Raybag taluk whereas in the adjoining taluks of Athni and Chikodi it is 10.14 per cent and 15.53 per cent respectively. In fact, amongst the ten taluks, Chikodi has the highest rate, even though it has the third largest town of the district within its limits. A further probe shows that in this particular town, namely Nipani, the main workers form nearly 22 per cent of the female population. This town is known for its tobacco based industries which can provide work and wages to a large number of women also. Next to Chikodi taluk Ramdurg contains the highest proportion of 13.61 per cent and this is followed by Parasgad. Both these taluks have one town each and in one of these, namely Ramdurg the female main workers are found concentrated in the household industry category whereas in the other town, namely Saundatti-Yellamma the bulk of the female workers are agricultural labourers. In the urban areas of Belgaum taluk the proportion of female main workers comes to 6.29 per cent. Though it may appear strange, amongst the 3 towns, Sambre the smallest and the only non-municipal town of this taluk has returned the lowest proportion of female main workers. Belgaum city itself has a slightly larger proportion than that returned by Belgaum Cantonment. In the urban areas where agriculture and household industry are of greater importance the female segment of the population tends to have a higher proportion of main workers. On the other hand, in towns where non-household industry, trade and commerce are important women get fewer opportunities to engage themselves in economically productive activities. The level of economic development of the town itself and also the attitudes of the different sections of the urban society towards women taking up work outside their homes have a direct influence in this matter.

The relative importance of the main spheres of economic activity may be judged from the pattern of distribution of main workers according to the broad four-fold classification, namely cultivator, agricultural labourer, household industry and the residuary category of other workers. The primacy of agriculture is borne out by the fact that 71.15 per cent of the main workers are engaged in this sector. This figure is significantly higher than the State average of 65.03 per cent. Amongst the female workers in particular, while 31.95 per cent are cultivators and another 50.96 per cent are agricultural labourers, the other workers account for just 12.06 per cent. The contribution of household industry to the economy of the district is not of any great significance, and industrially Belgaum is a backward district. Trade and commerce as well as service occupations account for a fairly good proportion of the main workers.

(b) Marginal Workers :

In Belgaum district the marginal workers constitute 5.26 per cent of the total population. This figure is considerably high in comparison to the State average of 3.48 per cent. Sexwise break-up shows that among males and females the marginal workers account for 0.86 per cent and 9.86 per cent respectively. These figures are both higher than the corresponding State averages of 0.70 per cent and 6.38 per cent. In the rural, as well as in the urban areas the female marginal workers greatly out number their male counterparts. In Belgaum district it is noticed that for every male marginal worker there are roughly 13 female marginal workers in the rural areas. In the urban areas however this ratio is not so very impressive : for every four males there are 13 female marginal workers. In the rural areas, agriculture is the predominant economic activity. During the peak seasons, to cope with the increased demand for workers, those women who do not normally go out for work in the fields are also called upon to contribute their mite to the labour force at least for short periods of time. It is because of this compelling reason that the rural female population contains in it a high proportion of marginal workers (12.01 per cent) than its urban counterpart (2.35 per cent). This apart, the general socio-economic conditions in different taluks and towns too are not quite the same. As a result there are considerable variations at the taluk level in respect of rural as well as urban areas.

Talukwise particulars indicate that the proportion of marginal workers is the highest (8.66 per cent) in Hukeri taluk and is higher than the district average in the three taluks of Khanapur (8.47 per cent), Chikodi (7.44 per cent) and Ramdurg (7.15 per cent). Belgaum taluk has returned the lowest proportion (2.96 per cent) and the main reason for this situation appears to be the very high urban content of its population. When the data pertaining to the rural areas alone are examined it is seen that the above mentioned 4 taluks hold the 4 topmost places in the same order : Hukeri (9.36 per cent), Khanapur (9.23 per cent), Chikodi (8.63 per cent) and Ramdurg (8.02 per cent). Again, these are the only taluks which have returned above-average rates. At the other end, however, Belgaum is replaced by Parasgad taluk, which, with a tally of 3.91 per cent occupies the bottom-most place. Belgaum taluk moves up to the fifth place and the proportion of marginal workers in its rural population (5.65 per cent) exceeds that noticeable in the taluks of Athni, Gokak, Raybag and Sampgaon besides Parasgad. The relative rankings of the taluks get mixed up when the data relating to the urban areas are examined. The proportion of marginal workers varies between 4.58 per cent in Hukeri and 0.80 per cent in Athni. With a tally of 2.79 per cent Parasgad ranks next to Hukeri and is in turn followed first by Ramdurg (2.72 per cent) and then by Chikodi (2.22 per cent). The proportions returned by Sampgaon (1.93 per cent) and Khanapur (1.59 per cent) too are higher than the district urban average of 1.48 per cent. Belgaum taluk holds the penultimate place and the proportion of marginal workers noticed here (0.81 per cent) is only marginally higher than that returned by Athni taluk. The urban population of Belgaum taluk is not only very large but also different in its composition. Further probing shows that just 0.89 per cent of the urban resident females of this taluk have returned themselves as marginal workers. This figure stands out in sharp contrast to 8.11 per cent noticeable in the case of Hukeri taluk.

In the male segment of the population of different taluks this proportion varies between 0.33 per cent in Ramdurg and 1.43 per cent in Hukeri. The second highest rate is given out by Chikodi taluk. Belgaum taluk (0.80 per cent) holds the fifth place amongst the ten taluks. The same position is reflected when the situation in rural areas is examined. In the urban areas this proportion varies between 0.34 per cent in Athni taluk and 1.28 per cent in Hukeri taluk. Belgaum taluk contains a relatively high proportion (0.73 per cent) and just as in the case of rural areas in this case too holds the fifth place. In the female segment of the population of different taluks the proportion of marginal workers is seen to vary between 5.32 per cent in Belgaum and 16.15 per cent in Hukeri . The lowest rate noticeable in Belgaum is mainly due to the situation prevailing in its urban areas. In the case of Hukeri taluk it may be noted that the rural and the urban rates returned by this taluk are the highest. In the rural areas this

proportion ranges between 7.16 per cent in Parasgad and 17.49 per cent in Hukeri. In Belgaum 10.70 per cent of the rural female population consists of marginal workers. In the case of urban areas this proportion varies between 0.89 per cent in Belgaum taluk 8.11 per cent in Hukeri taluk. This rate is below the district urban average of 2.35 per cent in the taluks of Athni (1.28 per cent) and Gokak (1.83 per cent) besides Belgaum. Towns in which non-agricultural activities such as those connected with trade and commerce as well as service and non-household industry are predominant tend to have a low proportion of female marginal workers. There are a few towns where despite the urban status, agriculture happens to be a predominant occupation. So also there are a few towns where household industry like spinning and weaving are important. In towns such as these the womenfolk enjoy greater chances of engaging themselves in productive work. The distribution of population by these economic categories is influenced by a multiplicity of factors.

(c) Non-workers :

All those who have not worked at all during the entire reference year are classified as non-workers. Since the main-workers and marginal workers together form 41.32 per cent of the population of the district, the non-workers account for the remaining 58.68 per cent. In areas where the combined proportions of main workers and marginal workers are high that of the non-workers would naturally be low. Thus in Ramdurg taluk the non-workers constitute 51.40 per cent. In Belgaum taluk on the other hand the non-workers account for 63.92 per cent. When the data relating to the rural areas of different taluks are examined it is noted that it is only in Ramdurg taluk that this proportion is below the 50 per cent mark. Raybag taluk tops the list with a tally of 58.83 per cent. The proportion of non-workers is generally high in the urban areas and, at the taluk level, it is seen to vary between 64.70 per cent in Parasgad taluk and 71.05 per cent in Belgaum taluk. In Khanapur taluk, (which has two small towns) also the proportion of non-workers exceeds 70 per cent. Sexwise break-up shows that the non-workers form 43.90 per cent and 74.13 per cent of the male and female segments of the population. The range of variation is very narrow in the case of males : 42.36 per cent in Chikodi taluk and 47.61 per cent in Belgaum taluk. This is particularly so in the rural areas where it ranges between 40.72 per cent in Chikodi taluk and 42.69 per cent in Gokak taluk. In the case of urban areas the average is 50.78 per cent and this proportion varies between 47.79 per cent in Parasgad taluk and 52.79 per cent in Khanapur. The range of variation is relatively large in the female segment of the population : 60.09 per cent in Ramdurg taluk and 81.69 per cent in Belgaum taluk. Large variations are noticeable at the taluk level in respect of the rural areas as well as the urban areas : namely 55.93 per cent to 77.16 per cent in rural areas and 80.73 per cent to 93.69 per cent in urban areas.

Availability of different types of amenities in villages and towns :

Information on availability of amenities is furnished in detail in the village and town directory statements and in a consolidated form in the appendix as well as the tables presented at the end of this note. Drinking water is one of the primary necessities. In so far as this facility is concerned it may be noted that all the inhabited villages of the district have one type of facility or the other. In most of the villages wells provide the drinking water. Quite a large number of these villages have one or more additional types of sources such as tanks, rivers, handpumps, taps etc. Amongst 1142 villages 660 have reported the availability of 2 or more sources and 409 have reported well as the main source, while tanks and rivers constitute the chief sources of drinking water in 9 villages and 59 villages respectively. It may however be added that this question has not been examined in depth and factors such as sufficiency or otherwise, availability of water throughout the year, and the technical opinion regarding the potability of the available water itself have not been probed into. In a few villages drinking water is supplied through taps. In all the towns of the district arrangements have been made to supply drinking water through taps.

Educational Facilities :

Educational facilities, in the form of at least a primary school, are available in 96.76 per cent of the 1,142 inhabited villages of the district. This coverage is indeed impressive. It is quite close to the ideal of cent per cent coverage. In fact, in 3 out of the 10 taluks, namely Athni, Chikodi and Raybag this ideal has already been achieved. Amongst the other 7 taluks, though it may appear somewhat strange, Belgaum taluk holds the last place with a coverage of only 93.65 per cent while Hukeri tops the list. The situation in Parasgad taluk compares with Belgaum and is equally poor (93.69 per cent). The proportion of villages with schools is fairly high in the taluks of Hukeri (99.10 per cent), Gokak (97.17 per cent) and Ramdurg (97.09 per cent). In terms of number of inhabited villages, Khanapur is the largest taluk and here small villages are quite numerous. Further more, the terrain is hilly and the landscape is forested. Inspite of these drawbacks 95.89 per cent of its villages have been provided with schools. It may be incidentally noted that 9 out of the 37 villages not having educational facilities belong to Khanapur taluk and another 8 belong to Belgaum taluk. Among these 37 villages, 30 have less than 500 inhabitants each.

The proportion of the aggregate population of the villages with educational facilities to the total population of all the villages of the district or the taluk as the case may be represents the proportion of rural population served by the facility. In Belgaum district this proportion works out to 99.57 per cent and, at the taluk level, Athni, Chikodi and Raybag have reported cent per cent coverage. In 6 out of the remaining 7 taluks the proportion of rural population served exceeds 99 per cent. Even in Sampgaon taluk, which holds the last place amongst the ten taluks, the coverage is 98.54 per cent. Belgaum taluk which has the lowest proportion when examined with reference to villages served moves up to the sixth place when the proportion of population is examined. Population size is a factor of considerable relevance in this regard. Generally, the larger villages are found to have better educational facilities both in terms of number of institutions and levels of education. When the villages are grouped according to population size and the corresponding proportions of villages with educational facilities are examined it is noticed that the proportion increases with every rise in population size-group. From 84.62 per cent in the case of villages with less than 500 inhabitants this proportion moves up to 98.78 per cent in the case of villages in the population size-group of 500-1999 and reaches cent per cent in respect of all villages having 2000 or more inhabitants each. If the villages are grouped according to the distance to the nearest town and if for each group the proportion of villages with educational facilities is examined the following picture emerges : the proportion moves up from 96.24 per cent to 98.06 per cent and then decreases to 95.54 per cent respectively in the distance ranges of 0-5 km, 6-15 km and 16-50 km. Villages located in the optimum distance of 6-15 km enjoy better chances of being provided with educational facilities than those that are too close or else are too far. Inhabitants of the villages without any educational institution depend upon the nearby towns and villages with such facilities. The distance to reach such a village happens to be 5 km or less in the case of 35 out of the 37 villages without educational facilities.

It may be noticed from appendix I that several villages have more than one school and quite a large number have schools of different levels as well. While 96.76 per cent of the inhabited villages have primary schools, 60.77 per cent have middle schools and 10.86 per cent have high schools. As the level of education increases the proportion of villages with that facility decreases. Thus facilities for pre-university education are reported from only 6 out of the 1142 villages and only one village, namely Kagvad of Athni taluk has a degree college. The average number of primary schools and middle schools per inhabited village of the district work out to 1.63 and 0.83 respectively. If the villages having primary schools alone (namely 1105 villages) are considered then the average moves upto 1.69. Likewise in the case of middle schools the average comes to 1.36. In so far as high schools and junior colleges are concerned,

the villages with such facilities usually have one high school or one junior college as the case may be. In fact these institutions of a higher level are meant to serve not only the residents of the villages in which these are located but also those residing in several villages of its neighbourhood. In the case of primary and secondary education the approach is slightly different and a single village may have two or more schools depending upon its population on the one hand and its population composition on the other (eg. linguistic minorities). Belgaum is a border district and its northern belt, from west to east, has several villages which have sizeable groups of Marathi speaking people. Thus a fairly good proportion of the villages in the border zone have Kannada medium schools as well as Marathi medium schools and in addition there are Urdu medium schools as well. All the towns of the district have educational facilities from primary level upto pre-university level and all except seven have facilities for pre-university course also. Belgaum is the main educational centre of the district in respect of general collegiate education and also in respect of technical and professional courses. In the rural areas of the district, for every 10,000 rural population, there are on an average 8 primary schools, 4 middle schools and 0.55 high schools. In the urban areas the corresponding averages are seen to be 3.72 primary schools, 3.11 middle schools, 1.41 high schools and 0.42 junior colleges.

Medical Facilities :

Medical institutions of one type or the other are functioning in 289 out of the 1142 inhabited villages of the district. The proportion of villages with medical facilities is 25.31 per cent for the district and at taluk level it varies between 6.85 per cent in Khanapur and 57.00 per cent in Chikodi. Khanapur taluk lies in the western belt and has a larger number of small villages. As a result the proportion of villages served with medical facilities is very low. On the other hand in Raybag, the smallest taluk in the north-eastern sector of the district, also the proportion of villages with medical facilities is quite low, namely 9.43 per cent. In fact the proportion of population served happens to be the least in Raybag taluk. Next to Chikodi, Hukeri (42.34 per cent) and Athni (34.83 per cent) are the best served taluks. The aggregate population of the villages with medical facilities constitutes 54.07 per cent of the rural population of the district. From this point of view also Chikodi (78.28 per cent) and Hukeri (64.26 per cent) are the best served taluks. Athni (61.67 per cent) ranks fourth as the proportion returned by Gokak taluk is slightly more, namely 64.26 per cent. These apart, Belgaum is the only other taluk where the proportion of population served is more than the district average. Though Khanapur has in it the least proportion of villages with medical facilities the proportion of population served here (24.51 per cent) is more than that returned by Raybag taluk (19.93 per cent). Generally, larger villages are provided with medical facilities with a view to cover a larger local population and also serve those residing in nearby villages. Thus, amongst 289 villages with medical institutions as many as 227 (79 per cent) have a minimum of 2000 inhabitants. When examined in relation to the total number of villages in each population size-group it is noticed that among the 195 villages with less than 200 persons each only 2, that is 1.03 per cent have some medical facilities. This proportion moves up to 10.43 per cent in respect of villages belonging to the size-group of 500-1999 and then jumps to 50.75 per cent and 86.79 per cent respectively in the case of villages having 2000-4999 and 5000 or more inhabitants each. Though location, transport and communication and such other factors are also relevant population size is of vital importance and larger the population greater are the chances that the village has one or the other type of medical institution.

Appendix I shows that hospital facilities are available in only two villages of which one is in Belgaum taluk and the other is in Gokak taluk. The hospital at Ghataprabha in Gokak taluk is an unique institution : founded in 1951 by Murusavira Matha, a religious institution of Hubli, it is being run ever since on cooperative principles. Primary health centres are reported from 19 villages and these have Family Welfare Centres as well. While 52 villages have primary health units 8 have dispensaries. In quite a large number of the villages having medical facilities, namely 244 out of 289, there are other types of institutions. This category consists mainly of clinics and nursing homes run by private registered medical practitioners. If the number of such villages were to be any guide, it is obvious that private practitioners are thriving in the taluks of Chikodi, Hukeri, Belgaum and Athni. It is for this reason that in these four taluks the proportion of rural population served is on the high side and the district average itself is above 50 per cent.

All the towns of the district have medical facilities. If the villages are grouped according to the distance from the nearest town and the proportions of villages with medical facilities are examined for each group the following picture emerges : amongst the villages belonging to the distance ranges of 0-5 km, 6-15 km and 16-50 km, 22.46 per cent, 28.88 per cent and 22.31 per cent respectively are having medical facilities. There does not appear to be any direct or inverse relationship between the distance to the nearest town and the availability of medical facilities especially when private institutions are also taken into consideration. The residents of the 853 villages which do not have any medical facilities at all depend upon the facilities available in nearby villages and towns. The distance to the nearest place with medical facilities exceeds 10 km only in the case of 9.52 per cent of these villages and it happens to be 5 km or less in the case of as much as 62.83 per cent of the villages. This shows that for most of the villages medical facilities are available within a reasonable distance of about 10 km.

Postal Facilities :

Postal facilities are available in 47.11 per cent of the inhabited villages of the district. At the taluk level this proportion varies between 19.63 per cent in Khanapur taluk and 79.78 per cent in Athni taluk. The range of variation is very large. The proportion of villages served is fairly high in the taluks of Raybag (73.58 per cent) and Chikodi (73.00 per cent). In Belgaum taluk however this proportion is below the district average and in this matter it holds the 8th rank, the last 2 places being held by Ramdurg (39.81 per cent) and Khanapur (19.63 per cent). The total population of villages with postal facilities forms 78.47 per cent of the rural population of the district. The proportion of population served thus is fairly high. There are considerable differences at taluk level. From this point of view Raybag taluk tops the list with a coverage of 92.79 per cent of its rural population and Athni ranks next (91.90 per cent). The position of Khanapur taluk remains unaltered at the bottom-most place and here the coverage is only 48.24 per cent. Availability of postal facilities at any place depends upon several factors including its population size. Among the small villages with less than 500 inhabitants each only 2.05 per cent have this facility. In contrast, all the villages with a minimum population of 5000 are enjoying postal facilities. In the case of villages belonging to the intermediate groups of 2000-4999 and 500-1999 the coverage is 90.60 per cent and 32.52 per cent respectively. Thus, larger the village greater are the chances that it is provided with a post office. When the availability of postal facilities in villages located at different distances from the nearest town is examined it is noticed that the villages belonging to the optimum distance range of 6-15 km are better served than the others that are either too close or are much farther. The proportion of villages having postal facilities increases from 48.87 per cent in the case of the villages located within a radius of 5 km to 51.94 per cent in

the case of those that fall in the 6-15 km range and then drops to 41.58 per cent in respect of those that are situated beyond the 15 km range. Too close a proximity to a town is definitely a disadvantage, unless of course, the village is large and has other favourable factors like roadside location. Villages not having postal facilities depend upon those that are available in nearby towns and villages. A percentage distribution of the 604 villages without postal facilities according to the distance to the nearest place with such a facility shows that the distance is 5 km or less in the case of as much as 85 per cent and it is beyond 10 km only in the case of 2.6 per cent. A vast majority of these villages are thus seen to be having postal facilities within a reasonably short distance. All the towns have postal facilities as well as telephone connection. Amongst the villages, 310 have only post offices, 133 have post offices and telephone facilities and 93 have postal, telephone as well as telegraphic facilities.

Weekly Market Facilities :

All the towns of the district, except perhaps the small panchayat town of Sambre, have permanent markets and at all these places weekly markets are also held. In the rural areas too there are several large and medium sized villages which have permanent markets and also villages where weekly markets gather. These markets cater to the needs of the rural folk residing in the immediate neighbourhood of such towns and villages which are served by the weekly market facility. In the district as a whole the availability of this facility has been reported in respect of 135 villages, that is 11.82 per cent of the total number of inhabited villages. These villages are unevenly distributed amongst the 10 taluks. While Athni accounts for as many as 23 of these villages, Chikodi and Sampgaon contribute 21 and 20 villages respectively. On the other hand only 7 out of these 135 villages belong to Khanapur taluk which incidentally has the largest number of inhabited villages. The taluks of Belgaum and Raybag also contribute only 8 villages each. When viewed in relation to the total number of villages in the concerned taluk the proportion of villages with weekly market facilities is seen to lie between a minimum of 3.20 per cent in Khanapur and a maximum of 25.84 per cent in Athni. The taluks of Chikodi, Sampgaon and Raybag as well as Parasgad have returned above-average rates. In Belgaum taluk which is the second largest in terms of inhabited villages, the villages with this facility form just 6.35 per cent - a figure which is more only in comparison to that returned by Khanapur.

The aggregate population of the villages having the weekly market facility forms 34.56 per cent of the rural population of the district. At taluk level, the best served taluk is Athni (54.91 per cent) and, as in the case of villages in this case too, the taluks of Chikodi and Sampgaon rank next with a coverage of 45.59 per cent and 42.39 per cent respectively. The taluks of Belgaum (16.28 per cent) and Khanapur (12.81 per cent) appear at the other end and these are the poorly served taluks. The people residing in villages in which weekly markets are not held depend upon such facilities available in nearby towns or villages. In the case of 49.85 per cent of 1007 such villages the distance to the nearest place with a weekly market is 5 km or less. This distance is in the range of 5-10 km in the case of 34.46 per cent and it is beyond the 10 km range in respect of the remaining 15.69 per cent. A fairly large proportion of these villages are located reasonably close to places where weekly markets gather. The extent to which the villagers actually make use of this facility is however an entirely different question.

An examination of the population size of the 135 villages with the weekly market facility shows that 55 per cent have at least 5000 inhabitants each while another 40 per cent fall in the population range of 2000-4999 and none of the rest has less than 500 inhabitants. When examined as a proportion to the total number of villages in each population size class it is observed that this proportion which is nil for the below 500 size-class and just 1.22 per cent in the case of the 500-1999 size-class moves up to 20.30 per cent and 69.81 per cent respectively in respect of villages belonging to the size-classes of 2000-4999 and 5000 plus. Obviously, population size is a vital factor which has a favourable influence in this matter. On the other hand proximity to a town appears to be a disadvantage in one way. Normally, any proposition to organise a weekly market in the close proximity of an urban area does not appear to be quite feasible, for the facilities available in the town would easily cater to the needs of those residing in the adjacent villages. There may however be some exceptional cases and also instances where such markets are held at places beyond the notified limits of the town. Thus, amongst the 133 villages that are located in the distance range of 5 km, 5.26 per cent have the weekly market facility. As the distance increases this proportion also increases to 11.43 per cent and 14.00 per cent respectively in respect of the villages in the 6-15 km and 16-50 km distance ranges. If other factors like size, transport facility etc., are favourable a village which is farther away from a town enjoys a better chance of being provided with the weekly market facility.

Communication Facility :

By communication facility is meant the availability of a bus stop or a railway station or both within the limits of the village concerned. There are neither navigable rivers nor navigable canals in Belgaum district. Amongst the inhabited villages 60.60 per cent are enjoying communication facilities. Among the taluks, Khanapur represents a unique case as it differs from the other taluks in its topographical features. The terrain is hilly and the landscape is densely forested. Rainfall too is heavy. Thus in this taluk, which incidently has the largest number of villages most of which are relatively small in size, only 21.00 per cent of the villages are enjoying communication facilities. This figure is indeed very low and compares poorly with the figure immediately above it, namely 58.49 per cent noticeable in Raybag taluk. In fact Khanapur taluk has pulled down the overall average for the district. The proportion of villages with communication facilities is less than the district average in the case of only two taluks, namely Khanapur and Raybag. Sampgaon (78.23 per cent) is the best served taluks and the situation in Parasgad and Ramdurg taluk is also quite good. These taluks are in the south and south-eastern plains of the district and all round developmental activities are in progress in the taluks of Ramdurg and Parasgad which are covered under the Malaprabha project. The aggregate population of the villages with communication facilities forms 80.43 per cent of the rural population of the district. When examined from this point of view, Belgaum taluk tops the list (89.57 per cent) and Sampgaon ranks next (89.36 per cent). The taluks of Khanapur (42.73 per cent) and Raybag (68.82 per cent) occupy the last two places and are obviously the poorly served taluks. The position of Parasgad taluk (85.24 per cent) is fairly good. Generally, villages with larger populations are more likely to be enjoying this facility. Communication facility is available in only 25.13 per cent of the 195 villages with less than 200 inhabitants each. This proportion jumps to 54.43 per cent in the case of villages belonging to the population range of 500-1999. Thereafter, in respect of the next higher population groups of 2,000-4,999 and 5,000 plus, this proportion rises to 86.47 per cent and 94.34 per cent respectively. Thus, larger the population size greater are the chances that the village has some communication facility. When the availability of this facility is examined with reference to the proximity of the village to the town it is noticed that the proportion of villages having communication facility varies between 57.40 per cent and 64.15 per cent respectively in the case of those located in the 16-50 km range and the 6-15 km range respectively. Amongst those that are much closer to a town (-5 km) the coverage is 58.65 per cent. Thus, villages which are neither too close nor too far away from an urban area enjoy better chances of being provided with bus stop or railway station facility. As may be seen from the appendix, amongst the 692 villages with communication facility 14 have railway station facilities and of these, 7 have bus stop facility as well. Villages which do not have such facilities within their respective limits depend upon those that are available in nearby towns and villages. A grouping of the 450 villages not having communication facilities shows that in the case of only 27 villages (6 per cent) the distance to the nearest place with some communication

facility is more than 10 km. A large proportion of these villages, namely 75.6 per cent, have communication facilities within an easy reach since these are located within a radius of 5 km with reference to a nearest bus stop or a railway station. All the towns of the district are enjoying good road communication facilities. Six out of the 20 towns are having railway station facilities also.

Approach Road :

The facility of pucca approach road is available in 61.65 per cent of the inhabited villages of the district. In this matter also there are large variations at the taluk level. With a coverage of 83.06 per cent and 24.66 per cent respectively the taluks of Sampgaon and Khanapur hold the extreme positions. The proportion of villages with this facility is fairly high in the taluks of Ramdurg (76.70 per cent), Gokak (76.42 per cent) and also Belgaum (74.60 per cent). The position of Athni is better only in comparison to that prevailing in Khanapur. The taluks which have national highways and major district roads are usually in an advantageous position in this regard. The total resident population of all the villages having the pucca approach road facility forms 78.72 per cent of the rural population of the district. In Sampgaon taluk the proportion of population served is as high as 92.31 per cent and this is followed by Belgaum taluk (91.36 per cent). Khanapur taluk as usual takes the last place with a coverage of just 47.41 per cent, and this is the only taluk with a less than 50 per cent coverage. In four taluks this proportion lies between 70 and 80 per cent and in 3 others it is above 80 per cent. Sampgaon and Belgaum are the only taluks with a coverage of more than 90 per cent. As with regard to other facilities in this matter too population size is of vital importance and the larger villages are more likely to have this facility. Among the villages with less than 500 inhabitants each only 28.21 per cent have the pucca approach road facility. This proportion increases with every rise in the population size-group. From 28.21 per cent it jumps to 57.91 per cent and then to 83.46 per cent in the case of villages belonging to the population size-groups of 500-1999 and 2000-4999. Amongst the villages with a minimum population of 5000 the coverage is the highest (88.68 per cent). When examined with reference to the proximity to an urban area it becomes clear that there is no direct or inverse relationship between availability of this facility and distance to the nearest town. Among the villages which are located in a radius of 5 km from the nearest town 60.90 per cent are having pucca approach roads. This proportion slightly improves to 62.60 per cent for villages in the distance range of 6-15 km and then gets reduced to 60.85 per cent for villages beyond the 15 km range. The optimum distance which casts a beneficial influence seems to be about 10 km. All the towns have pucca roads.

Power Supply :

All the towns and 77.85 per cent of the inhabited villages of the district are electrified. In Hukeri taluk, with the exception of 2, all the villages are enjoying power supply facility. The proportion of villages with electricity to the total number of villages in the taluk is 98.20 per cent. On the other hand, in Khanapur taluk this proportion happens to be as low as 42.92 per cent. Khanapur is the only taluk of the district with a coverage of less than 50 per cent. The existence of too many villages, especially of a small population which itself is due to its distinct topographical features, appears to be responsible for such a situation. Parasgad taluk ranks just above Khanapur and in this case the coverage is 63.96 per cent. Belgaum, the taluk containing the district headquarter town ranks fourth from the top. However, the proportion of electrified villages here is fairly high (92.06 per cent). The aggregate population of all the electrified villages constitutes 91.64 per cent of the rural population of the district. Talukwise details disclose that the taluks of Hukeri (99.02 per cent) and Khanapur (68.96 per cent) take up the extreme positions. From the point of view of population served, Belgaum (98.60 per cent) which holds the fourth rank in terms of the proportion of villages covered moves up to the second place. Evidently the few villages which are yet to be electrified in this taluk are quite small in terms of population size. The proportion of rural population served is much below the average in Parasgad taluk. Proximity of the village to an urban area is a favourable factor that improves the chances of electrification of the village. This is borne out when the proportions of villages with power supply facility are examined in respect of villages belonging to the distance ranges of 5 km, 6-15 km and beyond 15 km. As the distance increases this proportion decreases : from 83.46 per cent in the case of villages in the 5 km range to 79.65 per cent and 74.44 per cent respectively regarding the villages belonging to the distance ranges of 6-15 km and 16-50 km. In the matter of providing with electric power population size is an important factor. The data in respect of this district lends support to the generally held view that the larger the village greater are its chances of being electrified earlier. Among the small villages with less than 500 persons each the electrified villages form hardly 40 per cent. As the size-group increases first to 500-1999 and then to 2000-4999 before reaching 5000 plus this proportion is seen to increase first to 79.48 per cent and then to 93.98 per cent and 99.06 per cent. In fact, among the 106 villages with a minimum population of 5000 only one is yet to be supplied with electricity.

In a general way it may be inferred from the foregoing analysis that in all the taluks the larger villages are the most likely ones to be enjoying most of the facilities, amenities and services. The reason is quite simple in that the needs of those living in larger concentration attract the attention of the concerned authorities and are satisfied with relative ease. Further more, availability of a facility has a favourable impact on population growth and every sizeable rise promotes its chances of getting more and more amenities. A large village gradually develops itself into a growth centre and in turn becomes a small town.

Brief Note on Towns :

Belgaum district contains 20 towns and townwise data on growth history, location, municipal finances, availability of various urban amenities and services etc. are presented in the relevant town directory statements. Among the 20 towns, while 15 are being administered by municipal councils, the other five are being administered by a municipal corporation, a cantonment board, a notified area committee, a town panchayat and a village panchayat respectively. Seven out of the 20 towns are old towns which have been enjoying urban status continuously from 1901 if not earlier. As at present, in 1901 also, Belgaum was the most populous town and enjoyed a place of unique importance as a centre of administration, trade and commerce and services. At that time the famous pilgrim town of Saundatti Yellamma was the smallest town. Bailhongal has been enjoying urban status eversince its classification as a town in 1921. Likewise, Chikodi and Khanapur are towns since 1931. Though Gokak Falls too was classified as a town in 1931, it lost its urban status in 1941 and remained in the rural fold till 1971 when it was once again recognised as a town. Six out of the 20 towns acquired urban status in 1951. Of these only Raybag suffered a declassification at the very next census and regained its status in 1971. While Londa and Sadalgi became towns in 1971, Sambre acquired urban status only in 1981. If continuity is taken into consideration Raybag and Gokak Falls are also to be regarded as towns since 1971 only. Thus, amongst the 20 towns, 10 are relatively old and the other ten are comparatively new towns. Over the decades, it is noticed, the old towns have experienced a varied history of growth and also that, except Belgaum all the other 6 towns have suffered a decline during one decade or the other. Between

1901-11, Gokak lost 43.13 per cent of its population and in a like manner Saundatti-Yellamma too lost 42.99 per cent of its population. The towns of Ramdurg and Nipani also registered a negative growth. On the other hand while Athni returned a nominal addition (0.45 per cent) and Belgaum Cantonment a marginal growth (5.00 per cent), Belgaum proper gained by 32.10 per cent. During the next decade, Ramdurg suffered from a continuation of the negative trend which had already set in and lost 8.21 per cent of its 1911 population. In the towns of Athni and Belgaum Cantonment population declined by 5.45 per cent and 10.36 per cent respectively. Gokak, which had lost heavily registered an unprecedented growth rate of 74.05 per cent and this was, in a like manner, followed by Saundatti-Yellamma (35.26 per cent). Belgaum proper continued to grow at a moderate rate. The sudden fall in population and an equally sudden increase at the very next decade suggests that the reasons for the decline were purely of a temporary nature such as for example the evacuation of the town to escape from the fury of an epidemic like plague or cholera. Apparently after 1921, such temporary causes affecting population growth have ceased to be of any real significance in the towns of Belgaum district. During the decade 1921-31, Nipani witnessed an addition of 58.42 per cent of its population - the highest rate ever recorded by this town of commercial importance. Ramdurg witnessed a reversal of the negative trend and experienced a moderate addition of 19.42 per cent. Gokak which had registered as much as 74 per cent growth between 1911 and 1921 continued to grow during this decade also but at a moderate rate of just 17.61 per cent. Among these towns Saundatti Yellamma was the only town to suffer a decline, though of a very nominal magnitude of just 0.19 per cent. The addition to the population of Belgaum was quite marginal, being 5 per cent. During the decade that followed, the negative trend manifested itself in Nipani resulting in a loss to the extent of 8 per cent. The remaining towns gained substantially and amongst these while Belgaum stood at the top with a growth rate of 52.19 per cent followed by Belgaum Cantonment (26.25 per cent), Athni held the bottom-most place with a tally of 7.11 per cent. After 1941, every passing decade has witnessed a positive trend in all these seven old towns and the growth rate has been moderate to heavy depending upon several factors that have manifested from time to time in each one of these towns. The growth rate has steadily increased in the towns of Ramdurg and Saundatti Yellamma and has displayed a fluctuating tendency in the other towns. In Ramdurg the growth rate increased from 15.06 per cent to 39.89 per cent through 20.86 per cent and 23.21 per cent during the intervening decades. Likewise, in Saundatti-Yellamma the growth rate moved up from 14.89 per cent to the all time high average of 64.91 per cent through 22.62 per cent and 30.18 per cent during the intervening decades. Much of this growth of this town during the past decade is attributable to the implementation of the Malaprabha project which involved rehabilitation of several families in this neighbourhood as well. Among these towns Belgaum is the one that has gained heavily. The growth rates registered by Belgaum are seen to be as high as 43.15 per cent, 53.14 per cent, 50.47 per cent and 42.62 per cent respectively during the past four decades. This city has in recent decades gained importance as an administrative centre and also as a prominent centre of trade, industry and commerce on the one hand and of higher education on the other. In Nipani, the population at first rose by 48.44 per cent. But this has to be viewed in relation to the decline the town had suffered earlier. After 1951, the growth trend has accelerated in this town as may be seen from the rates given out during 1951-61, 1961-71 and 1971-81 namely 20.76 per cent, 19.55 per cent and 18.98 per cent respectively. In the towns of Athni, Gokak and Belgaum Cantonment when the population growth is examined from the long range point of view it is seen that over a period of 80 years the population of Belgaum has witnessed a twelve-fold increase - a remarkably high rate of growth indeed. During the same period, while in Gokak the population has increased 4.5 times that in the towns of Nipani, Ramdurg, and Saundatti-Yellamma has increased 3.5 times and has slightly more than doubled itself in Athni and Belgaum Cantonment. The impact of urbanisation has been felt to the maximum extent in Belgaum proper.

Bailhongal which became a town for the first time in 1921 has experienced low to moderate rates of growth during the subsequent decades. Over a period of 60 years its population has nearly trebled itself and during the decade just concluded it has gained most (decadal growth rate 36.14 per cent). Gokak Falls acquired urban status in 1931 but reverted to the rural fold in 1941 itself. Once again this place was reckoned as a town in 1971 and during the past decade it has witnessed an increase by 19.94 per cent. On the other hand Chikodi and Khanapur, which too were reckoned as towns for the first time in 1931 have experienced a steady growth during the past 5 decades. While Chikodi witnessed the heaviest growth rate of 36.18 per cent between 1941-51, Khanapur gained by 31.61 per cent between 1951-61. As has been already mentioned, Hukeri, Konnur, Kudachi, Raybag, Sadalgi and Sankeshwar were classified as towns for the first time in 1951. Thereafter, Raybag suffered declassification in 1961. During the latest decade this town has lost 21.29 per cent of its 1971 population. In 1971, Raybag was a non-municipal town and its jurisdiction was coterminus with the boundaries of the revenue village inclusive of all hamlets and agricultural as well as non-agricultural lands. But now this is a municipal town having jurisdiction over a limited area and a lands belonging to Raybag village and situated outside these municipal limits have been constituted into a separate unit of enumeration. This bifurcation has resulted in a division of the population of Raybag as it stood in 1971 and the town has apparently suffered a decline. Among the other 5 towns, during 1961-71 Konnur lost 23.94 per cent of its 1961 population and this phenomenon was mainly due to the recognition of Gokak Falls area (which lies within the limits of Konnur revenue village) as a separate town. Sadalgi town also registered a decrease in its population during the decade 1961-71. Thus Hukeri, Kudachi and Sankeshwar are the three towns with a continuous positive growth. During each decade the growth rate in these towns is seen to be of a moderate magnitude only. The population has not even doubled itself during the past 40 years in Hukeri and Sankeshwar and has just crossed this mark in Kudachi. Londa and Mudalgi were reckoned as towns in 1971 and, during the past decade, while the former has registered a growth rate of 31.65 per cent the latter has gained by 68.72 per cent. In fact the growth rate returned by Mudalgi happens to be the highest growth rate of the decade and this is followed by 64.91 per cent noticed in the case of Saundatti-Yellamma. During this decade all the towns except Raybag have witnessed an addition. The decadal growth rate is the least (11.22 per cent) in Sadalgi and quite low in Athni as well (13.01 per cent). The growth rate is seen to be less than 25 per cent in 6 more towns. It lies between 25.50 per cent in 8 towns and exceeds 50 per cent only in the two towns of Saundatti-Yellamma and Mudalgi. The foregoing analysis shows that the growth trends displayed by the old as well as the new towns of the district do not conform to any particular pattern and almost every town has passed through different phases such as low growth and moderate to heavy growth rates during different periods of time. The factors that affect the growth of population are quite varied and any explanation in the absence of an in-depth study would not be satisfactory.

In terms of geographical area, Belgaum is the largest town (83.55 sq.km.) and Hukeri is the smallest (2.97 sq.km.). Belgaum city has an urban outgrowth with an area of 0.38 sq.km. and in addition it shares its borders with Belgaum Cantonment (7.20 sq.km.). This entire urban complex, called the Belgaum urban agglomeration, spans an area of 91.13 square kilometres of urban space. A grouping of the 20 towns by size-groups shows that the area is below 3 sq.km. in only one town, lies in the range of 3-4 sq.km. in 5 towns, lies between 4-5 sq.km. in 3 towns, lies between 5-7.5 sq.km. in the case

of 3 more towns and exceeds the 10 sq.km. mark in the three towns of Bailhongal, Saundatti-Yellamma and Belgaum. Small and medium sized towns are thus seen to predominate. Usually towns have a higher concentration of population in a limited and compact area - a phenomenon which would lead to higher densities. In the district as a whole, the urban areas have, on an average, 3304 persons per square kilometre. At the town level this density varies between 680 in Sambre and 8492 in Nipani. The reason for the very low density in Sambre (and also low density of 1163 in Londa town as well) is that this urban area, being a non-municipal town, has a vast jurisdiction covering the agricultural and non-agricultural lands beyond the main built-up area. Among the municipal towns Sadalgi town has the lowest density of 1514. A broad classification of the towns shows that the density exceeds 5000 in 6 towns, lies between 3001 and 5000 in another 6 towns, ranges between 2001-3000 in 4 towns and happens to be 2000 or less in the remaining 4 towns. In the case of Belgaum city which is the most populous urban unit having the largest area the density is seen to be 3285 and, in relative terms, the adjoining town of Belgaum Cantonment area is more densely populated (3603). The density of population for Belgaum u agglomeration works out to 3296 which is quite close to the district urban average.

Amongst the 20 towns of the district, 10 are administrative centres and owe at least a part of their population growth to this fact. All these are headquarters of taluks known after their names (exceptions: Bailhongal of Sampgaon taluk and Saundatti-Yellamma of Parasgad taluk). Belgaum is undoubtedly a centre of higher order, for it is in addition the headquarters of the Sub-division, the district as also the Revenue Division of the State having jurisdiction over four districts. Bailhongal and Chikodi are likewise the headquarters of respective sub-divisions in addition to being the headquarters of the taluk concerned. The remaining ten towns are located comparatively close to their respective taluk-headquarters. The distance in such cases is seen to range between almost nil in the case of Belgaum Cantonment which is contiguous with Belgaum city and 27 km in the case of Mudalgi town of Gokak taluk. Besides Belgaum Cantonment, four other towns are located at a distance of less than 20 km with reference to the concerned taluk headquarter. Belgaum, the district headquarter town is located in the mid-western belt and is linked by road to all the towns. The location of the district headquarters is not quite ideal in that it is slightly off the centre as a result of which it is quite far away from some of the towns in the eastern and north-eastern sectors. The road distance to Belgaum exceeds 100 km in the case of 3 towns, namely Raybag (105 km), Kudachi (127 km) and Athni (148 km), lies between 50 and 100 km in the case of 11 towns and is 50 km or less in the case of the remaining 6 towns including Belgaum and Belgaum Cantonment as well. The towns of the district are influenced to a considerable extent by Belgaum which happens to be a prominent city with more than one lakh inhabitants. However, a few towns are located somewhat closer to certain other cities of the region. Thus while Saundatti-Yellamma and Ramdurg are located closer to Hubli-Dharwad, Athni is nearer to Miraj. Likewise Nipani is nearer to Kolhapur and the towns of Raybag and Kudachi are nearer to Sangli urban agglomeration which includes Miraj also within its limits. In the case of Belgaum itself the nearest city is Hubli-Dharwad. The distance to the nearest city is less than 50 km in the case of 8 towns and lies between 50 and 100 km in the case of the remaining 12 towns. As Belgaum district is in the north-western corner of the State, all the towns are located quite far away from Bangalore, the State capital. The distance by road to Bangalore ranges between 477 km in the case of Saundatti-Yellamma and 610 km in the case of Kudachi. All the towns have bus route facilities and 4 have railway station facilities also. Amongst the remaining 16 towns, Belgaum Cantonment is adjacent to Belgaum city which has a railway station and the distance to the nearest railway station is hardly one km in the case of Konnur town and is as much as 48 km in the case of Ramdurg. There are neither navigable rivers nor navigable canals in the district.

Statement III of the town directory furnishes data on municipal finances for the year 1978-79. Naturally there are large differences from town to town as the volume of transaction depends on several factors including of course the population size of the town. As may be expected, Belgaum city which is the most populous urban area and has the highest form of civic administration, namely municipal corporation, has returned the highest amount under receipts as well as expenditure. On the other hand in the small non-municipal town of Sambre which is being administered by a Town Panchayat the receipts as well as the expenses are the least. The receipts reported for the year ranges between a meagre Rs.16,000 in Sambre and a huge sum of Rs.27,056,300 in Belgaum. Next to Belgaum, Nipani is the most important town. Naturally this town has reported an amount of Rs.2,658,300 which happens to be the second highest figure. Belgaum does not stand comparison with any other town of the district. In the matter of expenditure too the situation is much the same. The total expenditure varies between Rs.20,100 in Sambre and Rs.21,035,700 in Belgaum city. Nipani town ranks next to Belgaum with a tally of Rs.2,618,800. A broad grouping of the towns by the extent of annual receipts shows that it is below Rs.50,000 in 4 towns (Gokak Falls Notified Area, Kudachi municipality, Londa Panchayat and Sambre Panchayat), lies between Rs.50,000 to 99,999 in 3 towns (Konnur, Raybag and Sadalgi - all municipal towns); lies between Rs.100,000 to 499,999 in the 2 towns of Hukeri and Khanapur; lies between Rs.500,000 to 999,999 in the case of as many as 6 towns (Athni, Chikodi, Mudalgi, Ramdurg, Sankeshwar and Saundatti-Yellamma) and exceeds Rs.10 lakhs in the remaining 5 towns. The receipts exceed Rs.2.7 crorea in the lone class I town of the district. Amongst the ten class III towns, while 4 have incomes exceeding Rs.10 lakhs, 5 have reported amounts ranging between Rs.5 to Rs.10 lakhs and the remaining town (Konnur) has realised an income of less than Rs.one lakh. In the case of the 6 class IV towns it is noticed that the receipts exceed Rs.5 lakhs only in one town (Mudalgi) and ranges between Rs.1 to 5 lakhs in two towns, between Rs.50,000-99,999 in one town and happen to be much less in the two towns of Kudachi and Gokak Falls. Raybag, Londa and Sambre are the only 3 class V towns of the district. Among these only Raybag has an income exceeding Rs.50,000. An almost identical picture emerges when the details relating to expenditure are analysed. This leads to the inference that there is a direct relationship between the volume of financial transactions of a civic administrative body and the population size of the town concerned. This generalisation is however true only to a certain extent, for there are several other factors which have a direct influence on municipal finances. The per capita receipts and expenditure data may be regarded as one of the best averages for a comparative analysis. Accordingly it is seen that the per capita receipts vary from Rs.1.89 in Gokak Falls (NAC), a class IV town to Rs.98.59 in Belgaum the class I city. Sambre, where the amount of total receipts is the lowest, yields a per capita of Rs.2.53 which is higher only in comparison to that returned by Gokak Falls. A broad classification shows that the per capita receipts exceed Rs.50 in only 3 towns (Belgaum, Belgaum Cantonment and Nipani); range between Rs.25 and Rs.50 in 8 towns of which 7 are class III towns and only Mudalgi is a class IV town; range between Rs.10 and Rs.25 in the 2 class IV towns of Hukeri and Khanapur and fall below Rs.10 in the remaining 7 towns [one class III (Konnur); 3 class IV and 3 class V towns]. In all the towns, a substantial portion of the receipts is derived from municipal taxes. The per capita expenditure varies between Rs.1.91 in Gokak Falls (NAC) and Rs.81.88 in Belgaum Cantonment. In Belgaum city the expenditure is only Rs.76.65 - a figure which is the second highest. A broad classification shows that the expenditure is above Rs.50 in 3 towns including Nipani; ranges between Rs.25 and Rs.50 in 6 towns; ranges between Rs.10 and Rs.25 in 4 towns and is less than Rs.10 in the remaining 7 towns. On the expenditure side, general adminsitration is an important and recuring item.

An analysis of the details about source-wise receipts and itemwise expenditure throws out an intersting

picture. Property tax is an important source of annual income in every town. However, its share in the total receipts varies considerably from town to town as may be seen from the fact that it is 25.09 per cent in Belgaum Cantonment and 75.05 per cent in Nipani town. This proportion is below 40 per cent in the two towns of Sambre (38.75 per cent) and Belgaum Cantonment, lies between 40 and 50 per cent in 7 towns, lies between 50 and 70 per cent in 9 towns and exceeds 70 per cent in the two towns of Raybag (70.69 per cent) and Nipani. All the towns except Raybag have reported receipts under the head 'receipts from municipal property and powers apart from taxation'. The proportion of income from this source is less than 10 per cent in 10 towns (the least being 1.75 per cent in Khanapur) and 20 per cent or more in 5 towns (the highest being 34.03 per cent in Belgaum Cantonment). With the exception of Belgaum Cantonment and Sambre all the other 18 towns have reported receipts by way of grants. The contribution from this head varies between 3.82 per cent in Konnur and 37.03 per cent in Khanapur. The proportion is fairly high in Sankeshwar (27.01 per cent). In 9 towns however the receipts from this head form less than 10 per cent and in 7 towns the proportion lies between 10 and 20 per cent only. Gokak and Londa are the only towns which have realised 15.85 per cent and 21.55 per cent respectively of the total receipts through loans. This is not a regular source of income and much depends upon local factors and any specific project taken up for execution by the municipality. Likewise advances are obtained in case of need from the Government or any other public or private agencies. During the year under reference 13 towns have reported receipts from this head and the contribution is seen to range between 0.72 per cent in Khanapur and 12.86 per cent in Mudalgi. Apart from these major sources every civic body has a few other minor and miscellaneous sources of income. It is also possible that the amounts not shown under a specific head are reported under the miscellaneous category. Thus in Belgaum Cantonment this head accounts for as much as 39.99 per cent of the total annual receipts. Likewise in Raybag town this proportion is 37.35 per cent. On the other hand in Athni town the share of miscellaneous receipts works out to just 1.29 per cent. On the expenditure side, every civic body incurs substantial sums of money on general administration. When the amount spent on this count is viewed as a proportion of the total annual expenditure it is seen to vary between a minimum of 2.69 per cent in Belgaum city and a maximum of 48.26 per cent in Sambre. Like Belgaum City, Belgaum Cantonment also has returned a very low proportion (2.93 per cent) which does not bear comparison with most of the other towns of the district. In Gokak which is a class III municipal town this head accounts for 6.44 per cent - a proportion which is more than twice that returned by either Belgaum city or Belgaum cantonment. A grouping of the remaining 17 towns shows that this proportion is over 40 per cent in 3 towns, lies between 30 and 40 per cent in 5 towns, between 20 and 30 per cent in 6 towns and between 10 and 20 per cent in the case of the other 3 towns. In Londa which is also a Panchayat town the expenditure on general administration is quite high (35.19 per cent). Likewise the Gokak Falls Notified Area too has returned a high proportion (43.89 per cent). In Nipani, the third most populous town with the second highest volume of financial transaction this head accounts for 24.99 per cent only. There does not seem to be any direct or inverse relationship between this aspect of expenditure and population size of the town. There are also chances of part of the expenditure being reported under different heads due to lack of conceptional clarity. Public safety is also a recurring item of expenditure in all the towns. The amount spent forms as much as 39.80 per cent of the total expenditure in the case of Sambre town and about 30 per cent in the towns of Londa and Konnur. In most of the towns however this head accounts for 10 per cent or thereabouts and the least is 0.49 per cent noticed in the Belgaum city. In Gokak Falls, strange as it may appear, no expenditure has been reported under this head. Next to administration, public health and conveniences, which usually covers the aspects such as maintenance of roads, providing of sanitation facilities etc., constitute a major head of expenditure. The amount spent for this purpose exceeds 40 per cent in 7 out of the 20 towns and Khanapur tops the list with 47.93 per cent followed by Nipani (45.52 per cent). This proportion lies between 20 and 40 per cent in 9 towns and happens to be above 10 per cent in 2 other towns. In Londa and Sambre this head accounts for a negligible 0.43 per cent and 4.97 per cent only. Both these are Panchayat towns and are not favourably placed in the matter of finances. The expenditure on public works depends largely on whether or not a civic body has taken up any project for execution. It is quite possible that maintenance expenses are reported under this head by some of the civic bodies. The proportion of expenditure on this count is nil in Sadalgi and as low as 0.37 and 1.10 per cent in the towns of Athni and Sankeshwar. On the other hand, in Gokak Falls 22.63 per cent of the total expenditure has been reported under this head. A broad grouping shows that this proportion lies between 10 and 20 per cent and below 10 per cent in 7 towns and 10 towns respectively. Most of the civic administrative bodies of the district are not maintaining any public institutions. However when the public institutions and voluntary organisations functioning in the town approach the civic bodies for financial assistance their requests are usually favourably considered and nominal to substantial sums of money are given by way of contribution. This is an optional item which may or may not figure on the expenditure side in one particular year. Thus among the 20 towns, as many as 6 have not incurred any expenditure on this count during 1978-1979. Amongst the rest, it is only Kudachi that has reported 28.12 per cent of its total expenditure for this purpose and this is followed by Belguam Cantonment Board (14.03 per cent) and Hukeri (10.24 per cent). In all the other towns this proportion is quite small and it is in fact less than even one per cent in 6 towns. The residuary category of others assumes considerable importance in a few towns such as Gokak (48.68 per cent). Belgaum city (42.19 per cent) and Saundatti-Yellamma (42.23 per cent) and part of this phenomenon may be attributed to faulty reporting. In Gokak Falls, no expenditure has been reported under this miscellaneous category. Likewise in Sambre the expenditure reported forms hardly 0.50 per cent of the total. By and large it may be observed that this residuary category is of considerable importance for reporting purposes. The data considered here relate to only one particular year and are also of an approximate nature since no probing enquiries have been made either regarding the actual amounts received and spent or about the uniform categorisation under different heads. Thus a proper understanding of the municipal finances requires a deeper study of more reliable data relating to at least a period of 3 successive years and supported by ancillary information pertaining to the towns concerned.

The civic administrative bodies are responsible for providing certain basic amenities and conveniences to the town-dwellers. Roads form an essential part of urban life. The length of roads available in a town depends on several factors including its geographical area, population size and settlement pattern. The total road length is the least (a meagre 4 km) in Sambre town. In keeping with its status Belgaum city corporation has the highest road length of 330 km and stands apart from all the other towns of the district. If this unique case is ignored, Belgaum Cantonment emerges as the town with the highest road length (42 km) and this is followed by Saundatti-Yellamma (36 km) and Bailhongal (31 km). In Nipani which is the third most populous town of the district the total road-length is only 28 km. With the exception of the small Panchayat town all the others have a road length of 10 km more; in 9 towns the road-length lies between 10-20 km, in 6 towns it ranges between 20 and 30 km and happens to be 30 km or more in the case of the remaining 4 towns. When the road-length is examined in relation to geographical area it is noticed that while Sambre retains its last place with a tally of 0.43 km per square kilometre of its area Belgaum city, where the road length comes to 3.93 km only, yields the top-most place to Belgaum Cantonment (5.83 km per square kilometre) and appears after Nipani (5.69 km), Konnur (4.44 km), Hukeri (4.38 km) and Gokak Falls (4.08 km).

In 13 out of the 20 towns the road-length per sq.km. of urban area happens to lie between 2 and 4 km. When examined as a ratio per 1000 population of the town, Ramdurg takes the last place (0.44 km) and Londa, which is the smallest town populationwise, appears at the top (2.87 km) and is followed by Belgaum Cantonment (1.62 km). In the case of Belgaum city this ratio works out to 1.20 and, including this, there are only 8 towns having a road length of 1 km or more per thousand urban population. In almost every town, in addition to the civic body the State Public Works Department has also been maintaining certain stretches of roads. The total road-length in a town depends on the location factor with reference to State roads and also the functional category to which the town belongs. Usually in towns where trade and commerce are of greater importance the total road-length tends to be on the higher side.

Drainage facility is yet another important aspect of urban life. Open or surface drainage facility has been provided in all the towns except Sambre. Underground drainage, that is, sewerage facility is however available only in Belgaum city. All the towns except Kudachi and Sambre have reported the availability of water-borne latrines. The number of such latrines varies considerably from town to town and as may be expected, Belgaum city has the largest number (5,264) which, however, does not appear to be quite adequate when viewed in relation to its population. In 7 towns the number of waterborne latrines is less than a hundred and the second largest number reported is just around 700 in Nipani town. These latrines are connected to underground sewers in Belgaum city and have been provided with septic tanks in all the other towns. Service latrines which require the clearance of night-soil manually have been reported from the 6 towns of Belgaum Cantonment, Athni, Chikodi, Gokak, Nipani and Ramdurg. In all these towns night-soil is removed daily or on alternate days as headloads or in wheel-barrows from the latrines of this type. It may be incidentally stated that this practice is still prevalent in these towns inspite of the Governmental efforts to put it down. This apart a few towns have reported the existence of other types of latrines such as the pit-type for example, which do not require the services of scavengers.

Drinking water is being supplied through taps in 17 out of the 20 towns of the district. Hukeri, Kudachi and Sambre are the 3 towns which do not have this facility. Before the water is supplied to consumers it is pumped from a primary source to a service reservoir or a overhead tank for storage and treatment for removal of impurities. In 11 towns there are service reservoirs of different capacities and 3 of these towns have overhead tanks as well. In four towns there are only overhead tanks while pressure tanks have been reported from Nipani and Saundatti-Yellamma, river infilteration galleries have been reported from Gokak and Ramdurg towns. Details have not been gathered about the quantity of water supplied everyday to the consumers and this cannot be equated with the storage capacity indicated in the town directory statement. For example in the case of Belgaum city the supply capacity is reported to be nearly 20 times the storage capacity which is only 922,500 litres. On the other hand in Belgaum Cantonment the quantity of water supplied is stated to be about one-third the storage capacity. The towns of Athni, Belgaum, Belgaum Cantonment, Gokak, Gokak Falls, Nipani and Saundatti-Yellamma have fire fighting facilities and the distance to the nearest town with such facility varies between 2 to 60 km in the case of remaining 13 towns. All the towns of the district are electrified and in all the towns electricity is being used for domestic, commercial, industrial and several other purposes since a long period. The number of connections under different categories of consumers varies considerably as it depends on several factors including population size and the basic economy of the town. Thus, in keeping with its status as the largest town and the pre-eminent centre of industry, commerce and services, Belgaum city has the largest number of electrical connections of all types and this is followed by Nipani the third most populous town and prominent commercial centre. On the other hand, Sambre the small Panchayat town which is located close to Belgaum city has returned the smallest number of connections under each category. The position of Londa which is the only other Panchayat town is also not quite enviable.

Unrestricted population growth quite often leads to the emergence of slums in towns, especially in large towns and cities. Particulars about the extent of availability of elementary amenities in notified slums are presented in Statement IV A of the town directory in respect of only class I and class II towns. Belgaum is the only class I town of the district and as in 1979 reported the existence of 3 notified slums which in all accommodated a population of less than one thousand. In relation to the total population of the city the slum-dwellers constitute a very small fraction indeed. All these slums are provided with surface drainage facilities, community latrines and street lights but not paved roads. Two of the three slums have public tap facility as well. When viewed in the light of the general impressions about the slums in cities the conditions in the slums of Belgaum do not appear to be that bad.

Statement V presents data on the extent of availability of educational, medical and recreational facilities in the towns of the district. Among the 20 towns, Kudachi is the only one which does not have any medical institutions run by a public agency. The nearest place with such medical facilities happens to be Raybag which is located at a distance of about 20 km. Five towns including Belgaum city and Nipani have hospitals, 4 have primary health centres and 5 each have primary health units and dispensaries respectively. Belgaum city, Gokak, Nipani and Sankeshwar have a dispensary each in addition to hospitals. Belgaum the district-headquarter-town has a large and relatively well equipped hospital with a bed-strength of 720. In the hospitals or primary health centres functioning in the other towns the bed-strength is very much less. When viewed in relation to the population of the town concerned the average number of beds per thousand population is seen to vary between 0.26 in Chikodi and 2.70 in Belgaum city. This position is fairly good in the towns of Saundatti-Yellamma (1.89), Sankeshwar (1.67) and Nipani (1.39). The medical institutions in the town cater to the needs of not only those residing in the towns concerned but also of the people residing in nearby villages and towns.

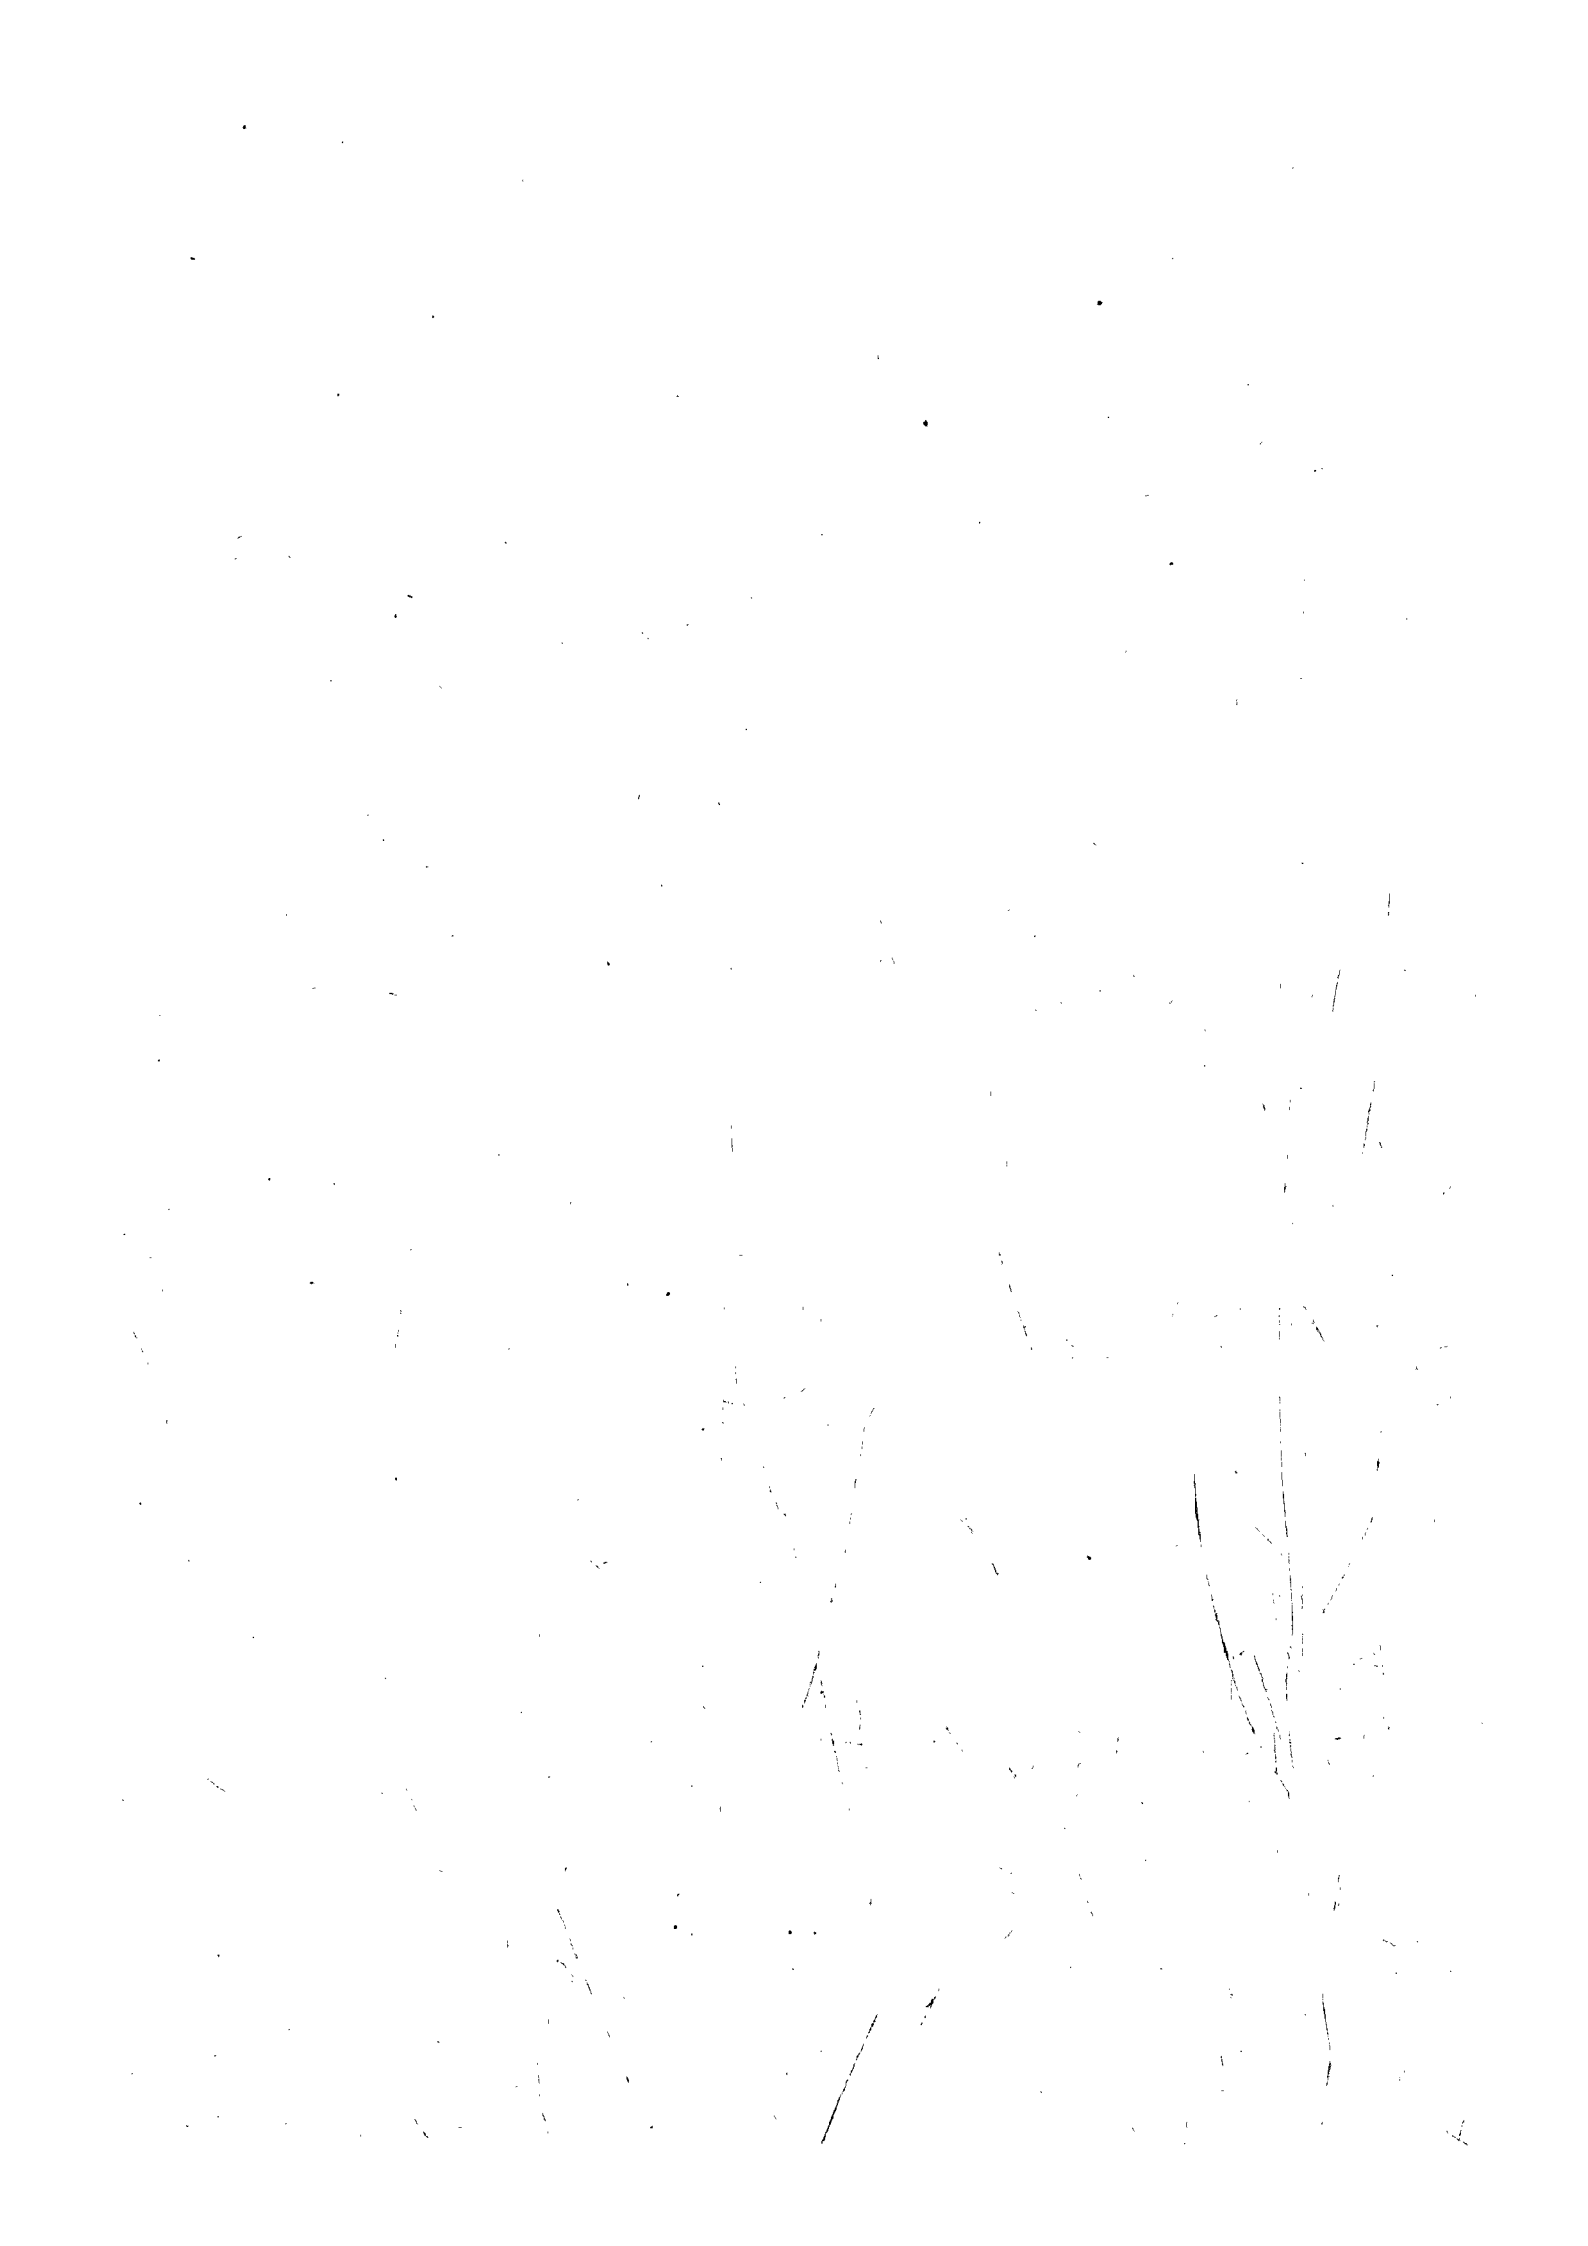

Primary and secondary level educational institutions are functioning in all the towns of the district. The average number of primary schools per ten thousand urban population is the highest in Raybag (10.38) and the least in Gokak Falls (0.86). In Belgaum city this average is only 3.90 whereas in Nipani it is 5.50 and in Belgaum Cantonment it is 5.40. In some of the towns of this district there are schools teaching exclusively in Marathi medium or in Urdu medium depending upon the composition of the population of the town. Again there may be separate schools for boys and separate schools for girls which in a way inflates the total number of schools in the town and also boosts up the average number per unit of population. Secondly generally the schools in larger towns and cities tend to have a higher number of students as well as teachers. Thus a comparison of these averages may not provide any real insight into the actual conditions prevailing in the towns. In the case of middle schools (V to VII standards), while Raybag has returned the highest average of 5.19, Gokak Falls has the least (0.86). In Belgaum city this average works out to 3.68 and in Belgaum Cantonment it comes to 4.24. This average is less than 2 in the towns of Gokak and Mudalgi, besides Gokak Falls. All the towns have high schools and Belgaum city has the largest number. The average per 10,000 inhabitants varies between 0.49 in Konnur and 3.47 in Belgaum Cantonment. While in Belgaum city this average is quite low (1.46) in seven towns it is much lower, being less than one per ten thousand.

It is only in the four towns of Belgaum Cantonment, Khanapur (3.20), Sambre (3.17) and Raybag that this average exceeds 2. If the absolute number of schools is considered it is noticed that in each category Belgaum city tops the list, for it has 40 high schools, 101 middle schools and 107 primary schools. Among the 20 towns, Gokak Falls is the only town having only one school under each one of these three categories. Facilities for pre-university education are available in 13 out of the 20 towns. The number of institutions per 10,000 population happens to be the least (0.24) in Nipani and the highest (1.04) in Raybag. In the case of Belgaum city which has as many as 9 junior colleges this ratio is just 0.40 and as in Belgaum in 5 other towns this ratio is less than 0.50. Residents of towns not having junior colleges depend upon the institutions available in nearby towns and cities. In the case of Sadalgi for example the nearest junior college is the one at Chikodi - a distance of 22 km. This distance is 27 km in the case of Mudalgi town and only 14 km in the case of Konnur. On the other hand in the case of Gokak Falls the distance is hardly 6 km. Facilities for collegiate education are available in 11 towns. The distance to the nearest place with such a facility varies between 6 km in the case of Gokak Falls and 52 km in the case of Londa. Belgaum city which has 3 medical colleges (one each under the allopathic, ayurvedic and homoeopathic systems of medicine), an engineering college and a polytechnic institute is one of the most important centre of education in north Karnataka region.

Hostel facilities that are meant exclusively for working women are available in only two towns. In so far as recreational facilities are concerned it is seen that only Belgaum city has a modern stadium. This city has as many as 14 permanent cinemas and 4 drama halls or community halls. In view of the large population of the city, the number of cinemas in it does not appear to be either large or disproportionate. Gokak and Nipani towns which are having about one-sixth the population of the city have 3 cinemas each while the still smaller towns of Athni, Bailhongal, Chikodi, Ramdurg and Sankeshwar have 2 cinemas each. These apart, Belgaum Cantonment, Khanapur, Raybag and Sadalgi have one permanent cinema each. The other towns such as Hukeri, Saundatti-Yellamma etc., have reported the availability of touring cinemas which provide recreational facilities to the town-dwellers. Public library facilities are available in 16 towns and among these Belgaum City has the largest number of units.

Banking facilities are available in all the towns of the district. True to expectations, Belgaum City has the largest number of Banking Offices (60) and this is followed by Nipani (14) and Gokak (12). Among the other towns, except Gokak Falls and Konnur, all have two or more banking offices. Sixteen out of the 20 towns have agricultural credit cooperative societies. The towns not having this facility are Belgaum City, Belgaum Cantonment, Gokak Falls and Sambre. Non-agricultural Credit Societies are functioning in 18 towns, the exceptions being Londa and Mudalgi. Trade and manufacture are activities of considerable importance in all the urban areas. The items that are brought into the town consist of food grains and provisions, cloth, vegetables etc., which are directly consumed and also items like groundnut, sugarcane, tobacco etc., which are used as raw materials by the local manufacturing units. The items manufactured vary from town to town. When the first most important commodity reported for the towns is considered the following picture emerges. Athni and Chikodi are noted for leather footwear while Belgaum City and Belgaum Cantonment area are known for the aluminium ingots and hydraulic pumps produced therein. The other items reported are groundnut oil, sugar, cotton (lint), fire-bricks and ceramic products and textiles (handloom sarees) by two towns each; tiles and bricks, beedi, snuff, cut-sizes of timber and agarbathi by one town each. Generally it is the goods produced in the town that are exported. And in this matter also there are considerable differences amongst the towns. The commodities exported cover such items as tanned leather, betel leaves, groundnut, rice, yarn, groundnut oil, sugar, sugarcane and jaggery, sarees, sand as also aluminium ingots and hydraulic pumps. In this connection it may be mentioned in passing that the details furnished by the civic authorities concerned are based mainly on an impressionistic assessment and what may be termed as a purely superficial enquiry. Because of this reason, these data are not quite suitable for any critical analysis. These details however present a broad picture.

PART A - VILLAGE AND TOWN DIRECTORY

(i) SECTION I - VILLAGE DIRECTORY
(ii) SECTION II - TOWN DIRECTORY

VILLAGE DIRECTORY - AMENITIES AND LAND USE

EXPLANATORY NOTE

As the title signifies the Village Directory aims to provide information on amenities and land use pattern in respect of each and every village with the reference period as the year 1979-80. In all there are 20 columns in this tabular statement and, out of these as many as 9 are allotted to amenities and services while another 5 are earmarked for data on land use. The remaining columns are concerned about location code number and name of the village area and population, its proximity to an urban centre and, remarks. Since most of these column headings are concise and represent certain concepts, a column by column explanation is furnished herewith. This would enable the reader at the very outset to recognise the scope and appreciate the limitations of the data presented under various columns.

Column 1 : Location Code Number :-

The concept of location code numbers has already been explained in the Analytical Note. The location code number thus assigned to the village is entered in this column. This number, runs serially starting from 1 for every taluk and the data are presented for villages arranged in an ascending order of their location code numbers. If there are any villages in the taluk that are fully incorporated into the limits of any urban area or are completely submerged under the back waters of any reservoir but are continued to be borne on the jurisdictional-lists of the Survey and Settlement authorities such villages are mentioned at the end without any location code number and in all such cases it may incidentally be pointed out, no further data except the name and the area are furnished in the statement. Similarly in the case of villages which are classified as outgrowths of towns, their names and area particulars alone are given treating them at par with villages fully incorporated in urban areas.

Column 2 : Name of Village :-

The name of the village corresponding to the location code number is given in column 1 is spelt out in English in this column. By and large the spellings adopted at the previous i.e. 1971 Census, have been retained even now. However, errors arising out of misreporting and misprinting if any in the 1971 District Census Handbooks have been taken note of and the correct spellings are now used. So also changes in village names duly effected by the Government with the sanction of the concerned authorities have been taken into consideration while finalising the spellings of villages names for 1981 census purposes. Further, if the name of the village has now been spelt differently as compared to the spelling given in the 1971 District Census Hand book for whatever the reason the spelling as adopted in the 1971 District Census Handbook is also furnished within brackets below the present name of the village in the alphabetical list of villages for the convenience of the data user.

A little more explanation appears to be necessary about the places which appear in the list of towns as well as in the list of villages. This phenomenon occurs particularly in the case of Taluk and District Headquarter towns which, as revenue entities are geographically large villages. The main village site areas including the peripheral developed areas would have for long been incorporated into the urban limits without any change whatsoever in Survey and Settlement records. In the Original Survey records and also at the Resurvey, the entire village inclusive of all the lands that are incorporated into the urban limits continues to be shown as a regular revenue village. In other words the portion constituted into a town is not taken out from the parent village and formed into a separate and independent unit in the jurisdictional lists. Every civic body, be it a municipal corporation or a town municipality or a notified area or a sanitary board defines its own jurisdiction confining itself mostly to the built up area and the fringe areas for enforcing municipal rules and regulations. With the administrative and legal sanction of the Government which issues a notification in this behalf the civic body secures statutory rights for administering the local area so defined. The incorporated areas may at times cut across village boundaries and may comprise of portions belonging to the revenue jurisdiction of two or more villages. In some instances entire revenue lands of a village or of several villages are incorporated into the limits of a town in which case for purposes of census operations these villages lose their independent identity and are omitted in the list of villages of the taluk. But it is only in case of villages of which only certain portions are included in the town, especially those that contribute their names to the towns concerned that this apparent duplication of names occurs. In such cases the jurisdiction of the town is very clear and it covers only a portion of village which is constituted into an independent entity as urban for census enumeration purposes. The remaining area too is constituted as an independent unit under the rural category i.e. as a village. In order to distinguish this unique situation, the name of the village bears the suffix Rural within brackets in the census village lists. Division of the village into urban and rural components and the suffixing of the names is a special procedure adopted for census purposes only. That is to say, if one were to ask the Officers of the Survey, Settlement and Land Records whether in their lists there are villages such as say Bellary (Rural), Belgaum (Rural), Bijapur (Rural), Chamarajnagar (Rural), Magadi(Rural) Mandya (Rural), Mysore (Rural), Raichur (Rural) etc., the answer would be a definite 'no' and then they would say that there are villages of the same name but without the suffix Rural. Similarly in the village maps and other records pertaining to the above named places, the lands that are incorporated into urban areas are also shown as part and parcel of the village concerned.

Column 3 : Total area of the village (in hectares)

The total geographical area of the village as per revenue records is furnished in hectares up to two decimal places. In Karnataka the basic records are still maintained in acres and guntas or acres and cents that is the units of measurements which were first adopted at the time of the cadastral survey. After the introduction of the decimal system however the equivalents of these figures are also indicated in addition to the already existing entries in registers such as Akarband and Records of Rights. The area of each Survey number or part thereof is converted into hectares and ares and square yards too in some cases. Thus if these converted figures for each such small unit are added together for the village the resultant total area would normally be either less or more than the corresponding figures that one would derive by the addition of figures in acres - guntas/

acres and cents and conversion of that into hectares and ares. For purposes of presentation in this statement the village level area and land use figures which were furnished in acres-guntas or acres-cents by the Revenue Officers have been converted into hectares and ares and these figures may not therefore be identical with the area as may be found entered in hectares and ares in the records of some of the villages. The marginal differences would be due to the factors explained above. Further, in the case of villages of which certain portions are incorporated into an urban area the extent thus categorised as urban has been deducted from the total geographical area of the revenue village and for this reason the particulars presented here would not be in full correspondence with the total area of that revenue administrative unit as mentioned in the village records. If area figures are not available for any village the abbreviation 'N.A.' is entered in this column and a note at the bottom of the page explains the reason thereof

Column 4 : Total Population and number of households :-

The total population of the village according to 1981 census and the number of households therein are indicated in this column. In the case of villages with no inhabitants i.e. nil population, the word un-inhabited is written across the line.

Columns 5 to 10 : Amenities available (if not available within the village, a dash may be shown in the column and next to it in brackets, the distance in broad ranges, viz.-5 Km, 5-10 Km and 10+ Km of the nearest place where the facility is available may be given):-

As the main heading for these columns suggest if the basic amenity covered under any of these columns were to be not available within the village then, instead of simply stating that fact, an attempt is made here to indicate the minimum distance (in ranges) that one has to cover to avail oneself of that specific facility located in a nearby village or a town. At the data collection stage the name of such nearest place having that amenity as also the distance thereto from the referent village have been ascertained to ensure a higher degree of reliability in reporting. The abbreviations made use of in these columns are explained below column by column.

Column 5 : Education :-

All types of educational institutions functioning in the village irrespective of the levels of education offered, the medium of education and the status of the managing body are considered under this column. The abbreviations used to denote institutions with different levels of education are :

i) P : Primary or Elementary School :

Schools providing education form I standard and upwards upto and inclusive of IV standard are classified as Primary Schools. This would also include junior basic schools if any.

For purposes of reporting, schools which provide education not merely from I to IV but also for higher standards, called composite schools for easy reference, are split up into different levels of education and counted as an independent unit under each such level.

ii) M : Middle or Junior Secondary School :-

Schools providing education from V standard and upwards upto and inclusive of VII standard and classified as middle schools. In Karnataka as a matter of fact the term middle school is no longer in vogue. Primary education itself consists of seven years of schooling and the first four year duration of this course is called Lower Primary and the next 3 year period is termed as Higher Primary. As mentioned above a Higher Primary School with I-VII standard is treated as two units i.e. one Primary School and one Middle School for accounting purposes.

iii) H : Matriculation or Secondary School :-

Schools providing education from VIII standard and upwards upto and inclusive of X standard are classified as High Schools. A composite school with I - X standard is treated as three separate units and counted separately under the category of Primary, Middle and High School.

iv) PUC : Higher Secondary/Intermediate/Pre-university/Junior College :-

Schools and colleges that provide education for the XI and XII standards or as is more common in Karnataka for the I and II year of the Pre-University Course, fall under this category. There are Higher Secondary Schools with VIII standard and upwards covering the XII standard and on the other hand there are also degree colleges which provide education for PUC I and PUC II year. These composite units are as explained earlier, split up into different levels for reporting purposes.

v) C : College :

This would cover all educational institutions that provide post PUC level education leading to University degree in any subject or combination of subjects, and also post-graduate levels of education.

vi) I : Industrial School :

Industrial Schools if any in the villages are indicated by the abbreviation 'I'.

vii) TR : Training School :

All types of Institutes that provide vocational and professional training are covered by this abbreviation.

viii) AC : Adult Literacy Class/Centre :

This abbreviation is recorded in this column only if adult literacy classes were being conducted regularly in the village during the reference year.

ix) O : Others :

All other types of educational institutions such as Sanskrit Pathasala, Urdu Madarasa, Makhtab etc., are included in this residuary category.

It is important to note that in this column whenever the number of institutions of a particular level or class exceeds one, only then the actual number is also reported immediately after the relevant abbreviation within brackets. That is to say the mere presence of an abbreviation without any numerical attribute signifies the existence of the facility,

in at least one institution for which that abbreviation stands. The numerals indicate the number of institutions or units of that level or type.

As explained already if a village does not have any educational institution whatsoever then a dash (-) is entered and thereafter, within brackets, the minimum distance that one has to cover to avail oneself of the primary level of educational facility is indicated. The emphasis here is on the most basic need i.e., the minimum level. In other-words, if the village has primary school, but not middle school or high school then no further information is furnished in respect of the proximity of a middle school and upwards. Similarly for a village with primary and middle schools but no high school or a college no further information is furnished in respect of the proximity of high school and college level facilities.

It may again be recalled that the concept of village covers the entire revenue jurisdiction of that unit and includes all the hamlets i.e. human settlements located therein.

Column 6 : Medical :-

The abbreviations used to denote the existence of medical institutions of different types in the village are :

H : Hospital
MCW : Maternity and Child Welfare Centre
MH : Maternity Home
CWC : Child Welfare Centre
HC : Health Centre
PHC : Primary Health Centre
PHU : Primary Health-Unit
D : Dispensary
FPC : Family Planning Centre
TB : T.B.Clinic
NH : Nursing Home
RP : Registered Medical Practioner
SMP : Subsidised Medical Practitioner
CHW : Community Health Worker
O : Others

If the number of institutions of a particular type happens to be more than one then that number is also indicated immediately after the relevant abbreviation.

If the village does not have any medical facilities whatsoever then the minimum distance that one has to cover to secure the minimum level of medical facility is indicated here in distance ranges.

The abbreviation H which stands for hospitals implies the availability of facilities for the treatment of in-patients also. In several Primary Health Centres also such facilities do exist. Likewise Maternity Homes also entertain in-patiients but then these are confined only to maternity cases. This apart in all other cases except private nursing homes arrangements exist for the treatment of out-patients only. In local parlance in certain areas however even a dispensary is referred to as a hospital and the clinic run by a private medical practitioner as a dispensary and a private nursing home as a hospital. This indiscriminate usage at times leads to confusion and in view of this every attempt has been made to eliminate such reporting errors.

All types of medical institutions, irrespective of the system of medicine practised therein are covered under this colum without any attempt to provide a further break up by systems of medicine.

About the Community Health Worker it may incidentally be mentioned that it does not refer to workers in extension programmes like Malaria Surveillance Workers, Basic Health Worker, Auxiliary Nurse Midwife etc., but refers only to the paramedical personnel who have been specially trained for dispensing medicines for minor ailments at the doorsteps of the patients. This is an altogether new scheme and has not been introduced in Karnataka.

Column 7 : Drinking Water :-

Following are the abbreviations used to indicate the different sources of drinking water that are available in the village. These sources of drinking water supply may be public property or may even be owned by private persons and institutions. If there are two or more sources then all these sources are mentioned one after the other but separated by commas.

T : Tap
W : Well
TK : Tank
TW : Tube Well
HP : Hand Pump
R : River
F : Fountain
C : Canal
L : Lake
S : Spring
N : Nallah/Stream
O : Others
NA : Information not available

If the village does not have any source of drinking water supply at all then, after a dash in this column, the distance range that one has to traverse to reach the nearest place with drinking water facility is indicated.

Column 8 : Post and Telegraph :-

In this column information on the availability of postal, telegraph and telephone facilities in the village is furnished using the following abbreviations.

PO : Post Office
TO : Telegraph Office
PTO : Post and Telegraph Offices
Phone : Telephone connection

Telephone connection need not necessarily indicate the availability of a public call office in the village, for even private telephone connections to subscribers have been taken into considerations while filling up this column. If a village has postal as well as telephone facilities then both these amenities are mentioned. Likewise if there is a PTO and telephone connection then both the abbeviations are entered in this column. On the otherhand if the village is not having any of these facilities then a dash is noted and next to it the distance to the nearest place having the minimum facility of a post office is indicated in ranges.

Column 9: Day or Days of the Market/Hat :-

This column refers to the weekly, bi-weekly markets i.e., the weekly shandy, held in villages with a view to cater to the needs of that village

and more so to the needs of the inhabitants of several surrounding villages. In local terminology such a weekly market is called Santhe and is quite popular in Karnataka. In the case of villages which host such shandies the actual day on which the shandy takes place is mentioned and in all other cases a dash is entered and thereafter the distance to the nearest place with a weekly market is indicated in ranges as specified in the column heading. The place where such weekly market gathers may be located in the limits of an adjoining taluk or district. The important matter for consideration here is the geographical proximity. In some cases where the nearest town or a large-sized village with a permanent market would serve the needs of the villagers, the distance ranges refer to such places with permanent markets only. In such cases obviously the nearest place where a weekly market is held would be very far away and will not be a matter of much significance.

Column 10 : Communication :

For purposes of this column only the means of public transport namely bus, railway and water transport system if any are considered. If the village is served by any mode of such public transport the fact is indicated using the undermentioned abbreviations :

BS : Bus
RS : Railway Station
NW : Navigable Water way (including river, canal, backwaters)

If a bus stop or a railway station is located within the territorial jurisdiction of a village then that villagae is considered as being served by that facility even if that bus stop or railway station is somewhat solitary and is located at some distance from the village-site. If more than one type of communication facility is available then all the relevant abbreviations are mentioned in this column. If no such facility is available at all then a dash is entered and thereafter the distance to the nearest place with a communication facility is indicated in ranges.

Column 11 : Approach to village :-

By approach to village is meant the type of road that leads to the village and this would indicate whether the village is accessible throughout the year or only during the fair season. The abbreviations used in this column are :

PR : Pucca Road
KR : Kachcha Road
NR : Navigable River
NC : Navigable Canal
NW : Navigable Waterway other than river and canal if any
FP : Foot path/Bridle path

If a village has a foot path or bridle path and also both pucca road and kachcha road then, only PR is recorded in this column as it would denote a higher level of facility of the same type. While kachcha road refers only to the unsurfaced mud road the term pucca road covers tar roads, cement roads water bound mecadum roads and metalled roads. But if in addition to either PR or KR the village has a waterway then information on the availability of a water way is also indicated.

Column 12 : Nearest town and distance :

The name of the nearest town, that is any urban area as defined for purposes of the 1981 Census, and the distance thereto from the village are indicated in this column. The town mentioned here need not be located within that very taluk or the district or even the State for that matter. The main point for consideration here is the geographical proximity. The distance however is reckoned not as a 'crow flies' but by some land route or water way. Further, when there is a cross country foot-path or a cart-track and a little more circutious road from the village or its proximity to the town then the distance by road is reported here in preference to the distance by foot-path or cart track. Similarly, when there are natural hurdles like unbridged rivers or streams the distance is furnished by the more circuitious route that the villagers would usually prefer. The information on distance is based on local enquiry by the reporting agency. If the town mentioned in this column belongs to another state then the name of that state is also indicated along with the name of the town and distance thereto.

Column 13 : Power Supply :-

If the village is electrified, that is if power is actually available, whatever may be the form of its use, then the village is regarded as enjoying this amenity of power-supply. If the supply is expressly restricted for say agricultural or any other specific purpose then this point is clearly stated by using a specific abbreviation. On the other hand if electricity is being supplied for all purposes without any reservations then information on various purposes is not separately mentioned. The abbreviations used in this column are :

ED : Electricity for domestic purpose only
E.Ag : Electricity for agricultural purposes only
EO : Electricity for other purposes like industrial, commercial etc,
EA : Electricity for all purposes stated above.

Column 14 : Staple Food :-

Information on the staple food i.e. the cereals used by the majority population during the major portion of the year is furnished under this column. It may incidentally be mentioned here that no probing enquiries have been made to ascertain the exact situation in each and every village and that the details presented here are of a general nature. In several cases when it is not possible to determine the particular staple cereal, a combination, of major staple foodgrains is given.

Columns 15 to 19 : Land use (i.e. area under different types of land use in hectares up to two places of decimal) :

The Ministry of Food and Agriculture, Government of India has recommended to the State Governments the following classifications of land use pattern for the maintenance of records and for

purposes of presentation here the same classification model has been adopted.

1. Forests,
2. Not available for cultivation,
   a) Lands put to non-agricultural uses,
   b) Barren and unculturable lands
3. Other uncultivated lands excluding fallow lands
   a) Permanent pastures and other grazing lands,
   b) Lands under miscellaneous tree-crops and groves not included in the net area sown,
   c) Culturable wastes
4. Fallow lands :
   a) Fallow lands other than current fallows,
   b) Current fallows
5. Net area sown.

Column 15 of the Village Directory corresponds to category 1 i.e., forest, while columns 16 and 17 put together represent the cultivated lands and correspond to the combination of categories 4 and 5 above. Similarly columns 18 and 19 respectively correspond to categories 3 and 2 of the above classification. The data furnished here are based on the village records and pertain generally to the year 1979. The total of the area figures reported under these columns tallies with the total geographical area of the village as noted in column 3.

Column 15 : Forest :-

This includes all lands classed as forests under any legal enactment dealing with forests or administered as forests whether State - owned or private and whether wooded or simply maintained as potential forest land. Lands transferred to forest department for afforestation as also the class C and D lands transfered thus by the revenue department are also classified as forests. Within the forest area itself there may ocassionally be cultivated patches or else there may be grazing lands. But such areas too are shown under column 15 only as forests. If within an area classified as forest some specific extents of lands have been expressly assigned for regular cultivation and the records have not been set right pending formalisation of grants and related processes of survey and settlement then such cropped areas are shown under column 16 or 17 as the case may be and the remainder alone is shown as forest under column 15. The processes of regularisation of land grants and effecting relevant changes in the basic records of survey and settlement are somewhat protracted and time consuming. Therefore the information merely based on records is, in some cases at least, likely to be different when compared with that based on the actual field situation.

Columns 16 and 17 : Irrigated (by source) and Unirrigated :-

These two columns cover all the agricultural lands and when added together would correspond to the net area sown plus the current and other fallows. The latter would imply all lands which were taken up for cultivation, but are temporarily out of cultivation for a period of not less than one year and not more than five years. All lands that are lying uncultivated as fallow for more than 5 years in succession are regarded as permanent fallows i.e., culturable waste and are covered under column 18. Area sown more than once during the same year, if any in the village,is counted only once under these columns. In column 16, a sourcewise break up of the irrigated area is furnished using the following abbreviations :

GC : Government Canal	TK : Tank
PC : Private Canal	R : River
W : Well(without Electricity)	L : Lake
WE : Well (with Electricity)	Wf: Water fall
TW : Tubewell (without electricity)	O: Others
TWE : Tubewell(with electricity)	T: Total

The concept of irrigation implies the existence of a source of water supply within a reasonable distance and an arrangement to regulate the supply of water according to the day-to-day needs of the crops raised in these fields. Naturally therefore all areas that are cultivated under purely rainfed conditions are treated as unirrigated. Though paddy is generally regarded as a wet crop, if it is raised purely as a rainfed crop as it very often is the case in heavy to very heavy rainfall regions, such areas are regarded as unirrigated for purposes of this column and shown under column 17. Similarly about garden crops, the area is considered for column 16 only if there is an element of irrigation. Sometimes it happens that the lands shown as dry and rainfed in the settlement records are in actual fact having irrigation facilities due to recent changes such as sinking of wells, introduction of lift irrigation or canal irrrigation on commissioning of a project etc. In such a case the actual situation is taken note of and despite its classification as rainfed in the records the area concerned is treated as irrigated Though rare, the opposite situation (where a plot of land originally shown as irrigated has ceased to enjoy that facility and is now yielding purely rainfed crops) is also met with and such a situation arises due to reasons such as breaching of tanks, drying up of irrigation wells and small tanks, defunct canal system and so on. The reporting agency has generally assessed the actual situation prevailing during the reference year 1979 while furnishing the data on irrigated lands. Regarding canal irrigation too it is the actual irrigated area and not the command area that has been reported here.

In column 17 the total extent of unirrigated lands, that is, dry lands cultivated as rainfed fields and the fallow lands put together is reported. As explained above, lands yielding rainfed paddy crop are considered as unirrigated.

Column 18 : Culturable Waste (including gauchar and groves):-

This category includes all lands available for cultivation whether not taken up for cultivation or taken up for cultivation once but not cultivated during the past five years or more in succession. Such lands may be either fallow or covered with shrubs and jungles which are not put to any use. These may be assessed or unassessed and may be in isolated blocks or within cultivated holdings. Lands under thatching grass, bamboo bushes and other groves which are not included under orchards or forests are also included under this category. Further, this includes all grazing lands irrespective

of whether they are permanent pastures and meadows or not. In several instances, lands that were at one time reserved for use as grazing fields and pastures and declared as assessed or unassessed wastes have over a period of time been brought under cultivation either fully or in parts as a result of gradual encroachments and also because of the Government policies regarding land grants. Thus, though in the records, the particular plot of land continues to be shown as a pasture the actual field situation would reveal that most of that land is actually under cultivation. In all such cases, to the extent possible, the actual field situation has been taken into consideration by the reporting agency.

Column 19 : Area not available for cultivation

In this column the total extent of land which is not available for cultivation in view of its being barren and unculturable as also that which is put to non-agricultural uses is reported. Mountains, deserts, rocky hills, quarries, ravines and the like as well as the lands that cannot be brought under cultivation except at a very high cost are included in the category of barren and uncultivable lands. The category of lands put to non-agricultural uses covers all lands occupied by buildings, roads, railways, parks and playgrounds, area under water viz., rivers, streams, canals, reservoirs, tanks, ponds etc., and land put to any other use which is apparently non-agricultural.

Column 20 : Remarks including any place of religious, historical or archaeological interest :-

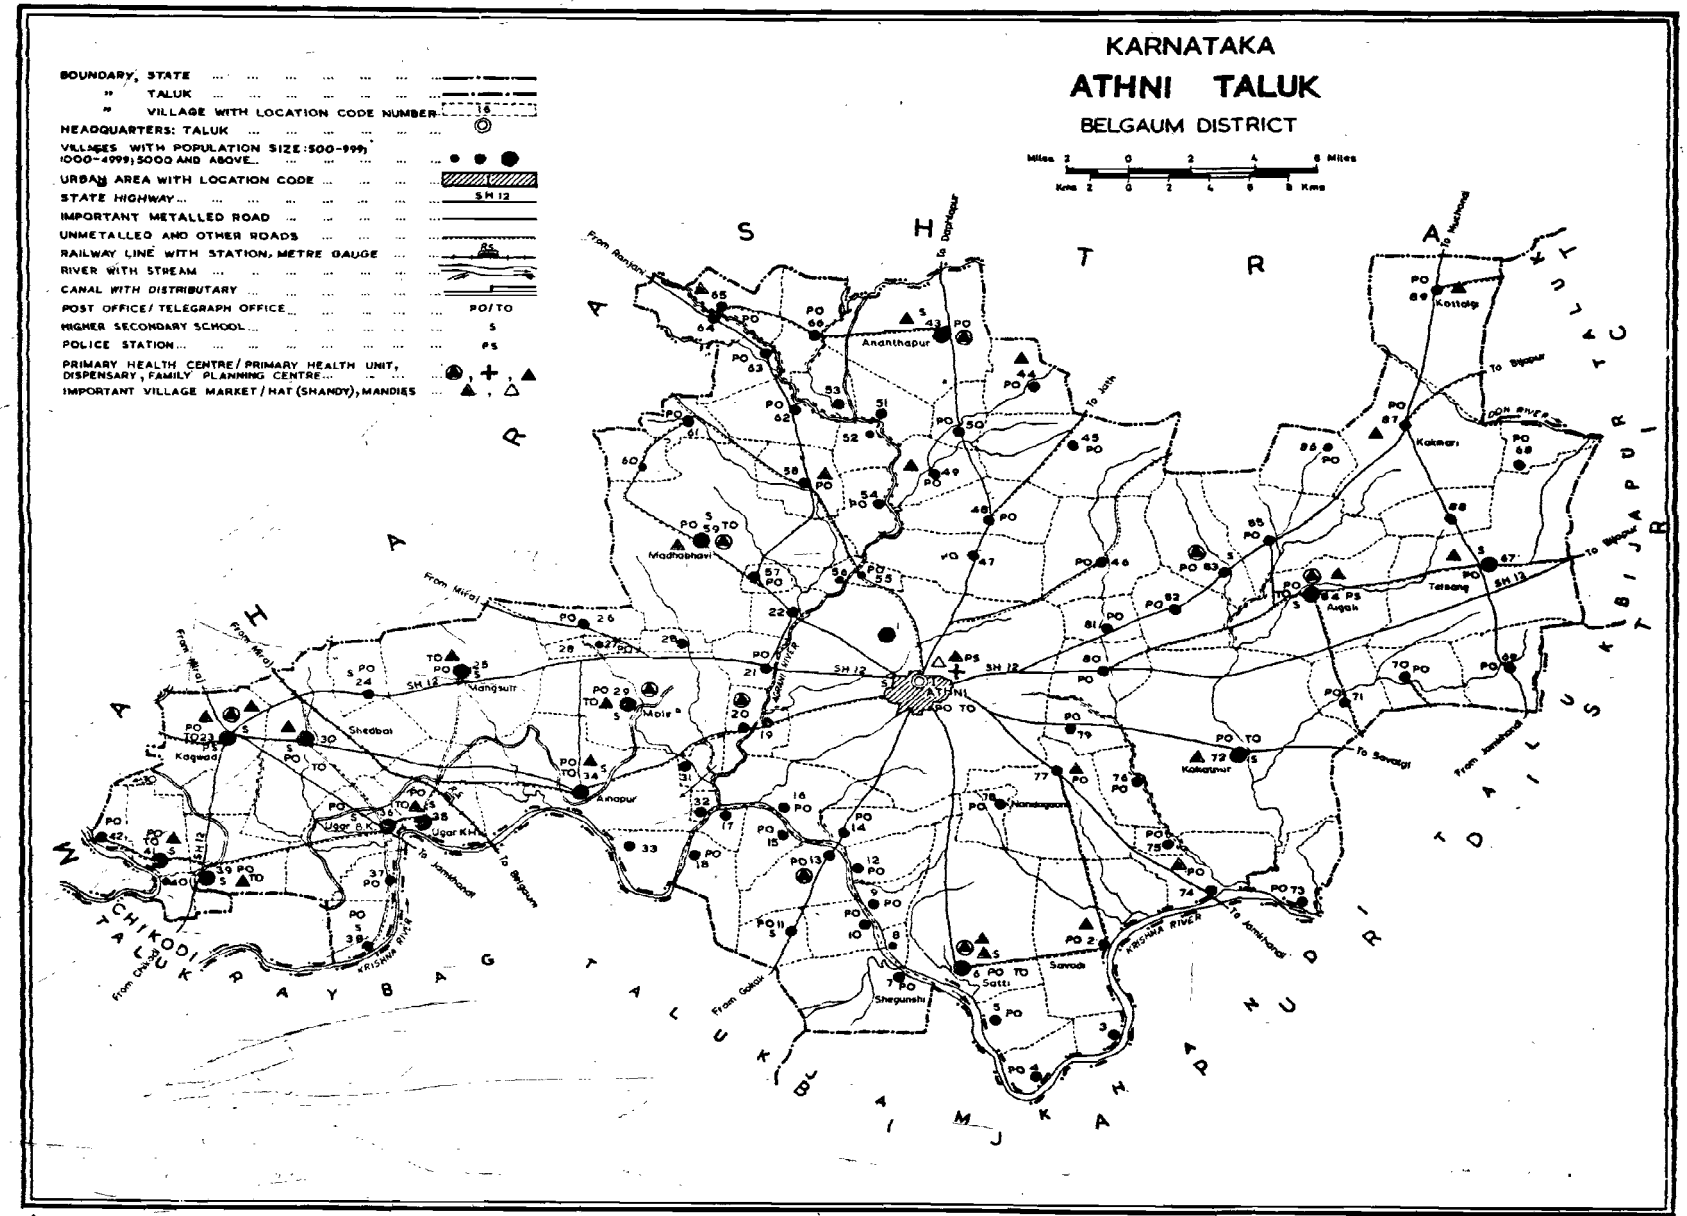

Though the heading does not reveal, in this column, information of general interest has been provided by reporting the number of news - paper copies circulated in the village, number of motor cycles and scooters, number of cars and jeeps as well as the number of tractors available in the village. The following abbreviations are used :-

N : Newspaper copies circulating in the village
M : Motor cycles/Scooters available in the village
C : Cars/Jeeps available in the village
T : Tractors available in village

Immediately after the abbreviations the number of units is indicated to provide a quantitative index to the data furnished. If in a village there is nothing to report on this topic i.e., on any one or more of these items, then the concerned abbreviations are not entered at all. In other words, the abbreviation if found mentioned in this column is always followed by a numerical attribute.

It is necessary to note at this juncture that the information is based on what may be regarded as superficial oral enquiries by the reporting agency and may therefore be considered as a rough estimate at a given point of time i.e. during the year 1979-80. In this column a numerical reference has also been given along with the abbreviation A in respect of the notes, provided elsewhere in the volume, about villages having matters of particular religious, historical or archaeological interest to report. Such notes have generally been prepared on the basis of published material.

* The remaining area of 719.51 hectares are included in the urban limits of Belgaum Cantonment.

% The remaining portion of 38.22 hectares is an outgrowth of Belgaum Urban Agglomeration.

£ The remaining area of 126.37 hectares are included in the limits of Gokak Falls (NAC).

$ The remaining area of 450.31 hectares are included in the municipal limits of Konnur Town.

SECTION II - TOWN DIRECTORY

TOWN DIRECTORY

EXPLANATORY NOTE

Town Directory comprises of six tabular statements as applicable to all the towns and an additional statement regarding the slums, only in respect of towns with a population of 50,000 and above. These are numbered serially from I to VI and the additional statement bears the number IV A in view of the fact that it deals with the same type of information which is covered in statement IV. These statements contain several columns each with brief headings and for presentation of the data, abbreviations have also been made use of for the sake of brevity. These statements are taken up for consideration one by one and an explanatory note is given in respect of each column, with the exception of column 1 which refers to Serial Number and is self-explanatory.

Statement 1 : Status and growth history

Column 2 : Class, Name and Civic Administration Status of town :-

The class to which a town belongs is determined on the basis of its population at the 1981 census count and it is indicated in this column in roman numerals. The classification criterion adopted now is the same as that adopted for analysis and explanations at the earlier censuses. The towns are divided into six classes :-

Class	Population Size	Class	Population Size
I	100,000 and above	IV	10,000 to 19,999
II	50,000 to 99,999	V	5,000 to 9,999
III	20,000 to 49,999	VI	Below 5,000

The concept of urban agglomeration has been adopted for presenting the demographic data at the 1981 census also. But, in Karnataka, unlike in 1971, at this census quite a large number of villages have been recognised as out-growths of the core town or of one of its contiguous constituent towns. In determining the class however, the population of the core town alone is taken into consideration in these cases also. That is to say, the population returned by the geographical entity recognised as a census town, on the basis of the definitions adopted, alone is considered for this classification.

The middle component of this column heading refers to name of the town which does not need elucidation. Name of the town, as adopted in the official records, is reported here.

The civic administration status of the town as on 1.1.1980 is indicated immediately after the name of the town, within brackets. The abbreviations used for this purpose are as follows :-

C : Municipal Corporation
M : City Municipal Council
M : Town Municipal Council
CB : Cantonment Board
NAC : Notified Area Committee
SB : Sanitary Board
TP : Town Panchayat/Nagar Panchayat
P : Village Panchayat/Gram Panchayat
SA : Special Area

The Special Area in fact represents a case where there is no civic administrative body. These areas generally consist of townships or colonies purely under the administrative control of certain public sector factories or undertakings or under specific departments of the Government such as for example the State Public Works Department and the Power Corporation.

With a view to ensuring the fixity of boundaries of various administrative units, that is to ensure that the frame for census taking once finalised with reference to a cut-off date remains unchanged till the completion of the census count the State Government had been requested not to order any jurisdictional changes and not to give effect to any changes in the civic administration status either. However due to more compelling reasons it is quite possible that in some exceptional cases such a change in civic administration status has taken place during the period 1.1.80 to 1.3.81. Such cases if any are indicated by providing a note at the bottom of the concerned page.

Column 3 : Location Code Number :-

The significance as well as the importance of location code numbers has already been explained. Every town bears a distinct location code number consisting of 3 elements. The first element in this code structure indicates the State while the second and the third represent the numbers assigned to the district within the State and the town within the district. The numbers assigned to the towns in the district are all in roman numerals while those relating to the State and the district are in arabic numerals.

column 4 : Name of taluk :-

In Karnataka the term taluk is very much in vogue though the designation of the Revenue Administrative Officer has for long been changed from Amildar or Mamlatdar to Tahsildar. The name of the taluk within the jurisdiction of which the town is located is indicated in this column. There are a few instances wherein a particular town stradles portions belonging to two adjacent taluks. In such a case the town is considered to belong to the Taluk that contains a major portion of the town.

In the statement such cases are marked out by an index and a note at the bottom of the page explains the correct situation.

Column 5 : Area (Sq. Kms) :-

The geographical area of the town is furnished here in square kilometres upto two places of decimal. The area figures reported at first by the concerned civic bodies etc., were examined with reference to the respective town boundary notifications and the relevant village maps as well as the charge maps prepared for the 1981 census operations with a view to ensuring greater accuracy. The final area figures as adopted for the 1981 census are reported here.

Column 6 : Number of Households (1981) :-

The total number of households, including those consisting of institutional and houseless population, enumerated in the town at the 1981 census count is given here even though the same information appears again in the Primary Census Abstract. The purpose is to facilitate a better comprehension of the demographic situation, especially with reference to the population data presented in this statement.

Columns 7 to 15 : Population and growth rate of the town at different censuses from 1901 to 1981 :-

The population figures for the town as returned at the decennial census from 1901 through 1981 are furnished under these columns in order to provide an insight into the history of growth of the town. If in any particular census year the referent town did not enjoy the urban status that is if that place was reckoned as a village for that census its population is not reported under the column concerned and a dash mark is indicated in stead. In other words, the population figures are given here for the town only if it happened to be an urban area at that particular census year.

Thus, a glance at these columns reveals whether the referent town having been first classified as 'urban' has maintained that status continuously through the suceeding censuses or whether there have been subsequent declassifications. From column 8 onwards, the decadal growth rates of the town are indicated within brackets below the population figures in order to permit an easier grasp of the decadal growth trends and to facilitate a comparative analysis. Population variations are quite often associated with changes in the jurisdiction of the urban area and sudden spurts are sometimes due to incorporation of fast developing fringe areas to the town or amalgamation of adjacent towns with the core town during the inter censal period. Such cases are marked out in the statement and explained by way of a note at the bottom of the concerned page.

Column 16 : Density (1981) :-

For every town the density of population per square kilometre is presented in this column. The density figures are determined with reference to the area of the town in Sq Km upto two decimal places and the population returned at the 1981 census.

Columns 17 to 19 : Sex Ratio 1961 to 1981 :-

Sex ratio is expressed as the number of females for every thousand males and is based on the sexwise distribution of the population returned at the census. For each town these figures are furnished for the 3 successive censuses. This information would provide an insight into the changing pattern of sex ratio in urban areas.

Statement II : Physical aspects and location of Towns 1979

Column 2 : Class and Name of Town :-

This column is the same as column 2 of Statement I and does not need any explanation. Unlike in statement I here the civic administration status of the town is omitted.

Columns 3 to 5 : Physical aspects :-

These columns deal with the rainfall and temperature data. It is common knowledge that meteorological observatories have not been established in each and every town, even though most of the towns do have rain-guages and due arrangements have been made to record the rainfall data all through the year. The Director General of Observatories has furnished data on rainfall, maximum and minimumtemperature in respect of towns having Observatories. These figures are standard normals based on the data for 30 years from 1931 to 1960, and are distinguished in the statement by placing an asterisk mark at the top right hand side of the figure. Information of this type is available only for a few towns.

In so far as the data on rainfall is concerned, for most of the remaining towns the particulars have been supplied by the local officers and cross-checked for acceptability with the data furnished by the State Bureau of Economics and Statistics. The rainfall figures are in millimetres and represent the annual average based on the actual figures relating to the preceding ten years. In cases of non-availability of even this type of information, the particulars relating to the nearest town are reported under this column with the distinguishing notation N being placed at the top right hand side of the figure.

In columns 4 and 5 information on temperature is presented in degree centigrade. As stated above the asterisk mark here indicates that the information has been furnished by the Director General of Observatories. Such information is not available for most of the towns. Instead of putting a dash in these columns for such towns the data furnished by the Director General of Observatories as pertaining to a town situated at almost the same altitude and in the proximity of the referent town are reported with the substitute notation N to denote that the data does not actually relate the town and should therefore be regarded as very approximate.

Columns 6 to 12 : Name of and road distance from State H.Q; District H.Q; sub-division/Taluk H.Q; nearest city with a population of 100,000 and more; Railway Station; Bus route Navigable river or Canal (if within 10 Kms) :-

The column headings are self explanatory and are intended to indicate the location of various important centres with reference to the town concerned. If the referent town itself happens to be mentioned in these columns the distance is recorded as '0' (zero) and in all other cases the road distances are given in kilometres. In column 8 the name of the sub-division to which the taluk (in which the town is located) belongs as well as the name of the taluk to which the town belongs are mentioned along with road distances in the same order one below the other. In column 9 the name

of the nearest city with a population of 100,000 and more according to 1981 census and road distance thereto is mentioned in respect of each and every town even if the referent town itself has a population of 100,000 and more.

The proximity by road alone is taken into consideration for filling up this column and as such cities belonging to adjacent states also find an occasional mention in this column.

Column 10 refers to the nearest railway station and distance thereto by road. In a few cases though the name of the railway station is the same as that of the referent town the distance indicated is other than zero because of the fact that the station is actually located beyond the jurisdiction of the referent town.

In case the referent town is enjoying bus route facility (i.e.road transport) the name of the town is mentioned in column 11 and the distance is recorded as zero. Names of bus routes passing through or originating from the town are not indicated here. If there is a navigable river or a navigable canal at a distance of 10 kilometres or less from the referent town then the name of the river or the canal is indicated in column 12. To differentiate between a river and a canal the abbreviations (R) and (C) are made use of and the distance from the town to the navigable waterway is mentioned thereafter. It may incidentally be stated that in Karnataka there are very few navigable rivers and practically no navigable canals.

Statement III : Municipal Finance 1978-79

As the title denotes, this statement deals with the actual income and expenditure of the civic body administering the town. An attempt has been made to present comparable data in the case of non-municipal towns like Panchayats and areas under the administration of public sector undertakings and the like. The data relate to the financial year 1978-79 and have been furnished by the local authorities concerned based on relevant records. It may also be stated here that no probing enquiries have been made and the particulars as reported by the civic bodies have been accepted after ensuring arithmetical accuracy.

Colum 2 : Class and Name of Town :-

This is same as column 2 of Statement II and as such does not require any explanation.

Column 3 : Civic Administration Status (In 1980)

As explained under column 2 of Statement I, the civic administration status of the town as on 1.1.80 is indicated in this column using the same set of abbreviations.

Columns 4 to 10 : Receipt (In Rs. '00) :-

The actual receipt realised by the civic body under various heads of income as well as the total for the year 1978-79 are indicated in hundreds in these columns. The opening balance for the year is not taken into account under any of these columns.

Columns 11 to 17 : Expenditure (In Rs. '00) :-

The actual expenditure incurred during the year is furnished here in hundreds. The various heads of accounts are grouped into 6 broad categories for each of which a separate column is provided. Public safety covers the expenses incurred for road lighting, destruction of rabid and stray dogs, besides that on fire fighting services, Similarly 'public-institutions' covers not merely the contributions made by the civic body to educational, medical and cultural institutions in the town but also the expenditure incurred for the maintenance of educational and such other institutions if any functioning under its direct control.

As in the case of receipt in the case of expenditure also the closing balance at the end of the year is not considered and therefore in almost all the cases the total receipt and the total expenditure are not balanced in this statement.

Statement IV : Civic and other Amenities 1979

Column 2 : Class and Name of Town :-

This is same as column 2 of statements II and III and does not need further explanation.

Column 3 : Civic Administration Status :-

Explanation furnished earlier for column 2 of Statement I and column 3 Statement III holds good for this statement also.

Column 4 : Population :-

The total population of the town according to 1981 Census is mentioned here with a view to facilitate a comparative analysis of the data.

column 5 : Road length (In Kilometres) :-

Generally in a town it is the civic authority that is responsible for construction and maintenance of roads. The term road as used here includes streets also and while the unsurfaced mud and gravel roads are categorised as Kachcha roads, the surfaced roads are classified as Pucca roads. In most of the cities and towns the district roads and highways under the control of the Public Works Department also pass through. The roads situated within the jurisdiction of the town and under the control of the civic authority are shown in one line against the code M and those under the control of the Public Works Department and the like are shown against the code 'PWD' in another line. In both the cases the road length is shown under two categories viz., KR (Kachcha Road) and PR (Pucca Road) as defined above. In order to have an idea about the total length of all types of roads in the town, therefore all these figures are to be added together. In cases where it has not been possible to ascertain the full details by type of road and agency responsible for maintenance the combined road length alone is furnished. The road length is given in kilometres and fractions are rounded off to next integer.

Column 7 : System of Sewerage :-

Generally sewerage system implies the network of mains and branches of underground conduits for the conveyance of sewerage to the final point of disposal. Sewers that carry only household and industrial wastes are called separate sewers while those that carry storm water from roofs, streets and other surfaces are known as storm water drains and those carrying both sewage and storm water are called combined sewers. In towns provided with such systems of underground sewerage also there would in addition be a surface drainage system to

cover the areas not served by sewerage system and also to drain out excess rain water all over the town.

However in towns that are not provided with sewerage system and such towns are far more numerous in the State, there would generally be open drainage system. Where even this system is not prevalent the householders would have made their own arrangements such as soak pits and cesspools. In this column therefore information is presented not only on sewerage system, but also on the drainage system. Like sewerage system, the drainage system is also of different types depending upon the construction material and also the shape of the drains. The two most important types of sewerage/drainage system are reported under this column in the order of their importance in the towns using the following abbreviations.

S : Sewers
OSD : Open Surface drains
BSD : Box Surface Drains
SD : Sylk pattern Drains
PT : Pit System

The box surface drains are also open drains but are built of size stone masonry and are also called Pucca gutters. The sylk pattern drains too are open surface drains only. The open surface drains category thus covers the Kachcha drains involving mere earth-work and also the drains constructed from out of oblong granite slabs or, out of pre-fabricated cement concrete blocks which need only joining and cement pointing after being placed in position. These drains are of U shape, L shape or V shape and to the extent possible these details have also been provided under this column.

Columns 8, 9 and 10 : Number of Latrines :-

Information on total number of latrines of different types as furnished by the concerned civic authorities is reported under these 3 columns. Both private and public latrines are covered here and the particulars in these columns and in column 11 are closely interlinked. The water-borne latrines include all types of flush-out latrines while service latrines refer to only those that are being serviced by manual scavengers either everyday or twice or thrice a week.

Column 11 : Method of Disposal of Night-Soil :-

The phrase disposal of night-soil is generally presumed to refer to the manner in which the garbage is finally disposed of by the civic body i.e. sale by public auction, used as manure etc. However, the main purpose of this column is to provide information on the method by which the night-soil is removed from the latrines, that is, the primary disposal of the human waste. A little elaboration on this aspect therefore appears to be necessary.

There are three systems of disposal of human waste, namely, (i) underground sewerage, (ii) sanitary water flush latrines with individual disposal systems like septic tank, leaching cess pool and collecting well, and (iii) dry type of latrines with manual scavenging.

The system of underground sewerage provides for the street sewerage with which are connected the sanitary latrines constructed in the houses having water closets and fitted with flushing cisterns (or hand flushing).

Through this sewer the faceal matter is transported without the need for scavenging. This system generally exists in cities and large towns besides industrial townships built and controlled by public sector undertakings and large companies and the like. Where the street sewer does not exist these sanitary water flush latrines are connected to a local septic tank with a sub-soil dispersion system or a leaching pit. Where the liquid wastes from the water closet could be disposed of locally in a leaching pit, a septic tank with a soil dispersion system is constructed. This dispersion requires an optimum travel through the pores of the soil which render the harmful liquid bacterially innocuous by the slow process of filteration through the soil traversed.

Where the soil is impermeable, collecting wells are constructed and the sanitary water flush latrines are connected with them. These wells are cleared at periodic intervals by a suitable device. The dry type latrines are of service type from where the human excreta has to be removed by scavangers who move from house to house, in most cases carrying the night-soil as head loads on their head, or shoulders or in baskets with handles or in wheel barrows. This waste is then collected in bullock carts or trucks and transported to dumping grounds at the outskirts of the town.

It may be mentioned in passing that in Karnataka the practice of carrying night-soil by head loads has been discontinued with effect from 15.8.73 consequent on the issuance of a Government order in this behalf. However in a few cases the town dwellers have sought the intervention of the courts and have been able to secure the status quo-ante in respect of the scavenging services that were being provided by the civic body concerned till that date.

The abbreviations used in this column are the following, and if more than one system is prevailing the two most important types are indicated one after the other :

S : Sewerage
ST : Septic tanks
WB : Wheel Barrows
B : Baskets (with handles)
HL : Head Loads

In case the town has latrines of other types that are neither of the sanitary type nor the service type this column does not apply at all and therefore a dash is entered.

Columns 12 and 13 : Protected water supply source and capacity of storage system

The sources of water supply in the town are indicated by using the following four abbreviations :

T : Tap
W : Well
TK : Tank Water
TW : Tube Well/Hand Pump

Supply through the taps implies a primary

source such as a river, stream, bore wells, curb wells, tank and reservoirs etc., which are of course not mentioned in this column. It may be incidentally stated that the term protected is used in a very liberal sense, and no attempt has been made to gather data on the methods of filteration and water purificatory treatment if any resorted to by the agency supplying water through pipes in the towns. The generally prevalent pratice in most of the towns is to pump raw water into the storage tank or reservoir, treat it with bleaching powder and then distribute that water for consumption through pipes.

If there are more than 2 sources of water supply in the town the first two which are regarded as most important are mentioned in that order separated by a comma. In column 13, the systems of storage of water are considered and the two that are most important in the referent town are indicated in that order and after each entry the storage capacity is also mentioned in litres within brackets. The abbreviations used in this column are :

OHT : Overhead Tank
SR : Service Reservoir
IG : River Infilteration Gallery
BWP : Borewell Pumping System
PT : Pressure Tank

The term capacity has its usual meaning, namely, the capacity to store or contain. It may further be clarified that the storage capacity does not necessarily indicate the quantity of water supplied daily to the inhabitants of the town. In some of the towns due to the inadequacy of water supply at the primary source for most part of the year the normal utilisation of the storage capacity would be of the order of 50 to 60 per cent only. On the contrary there are towns where water is pumped into the storage system and also distributed for consumption twice every day almost throughout the year and there are a few towns where the inlets and outlets of the storage systems would both be functioning simultaneously for most part of the day making it somewhat difficult to calculate the quantity of water supplied everyday under such a system.

column 14 : Fire Fighting Service :-

If fire fighting service is available in the town this fact is indicated by the word 'Yes' recorded in this column. In all other cases the name of the nearest place if in the same district or the name of the nearest district if in the same State or other State where such services are available is indicated along with the road distance in kilometres between the referent town and the place with fire-fighting service.

Columns 15 to 19 : Electrification (Number of connections)-Domestic, Industrial, Commercial, Road Lighting (Points) and others :-

In columns 15 to 19 information about the number of electrical connections (installation) for different categories of consumers in the town is furnished. The definitions of the terms used in the column headings are as follows :-

(i) Domestic : Connections to residential houses, bangalows, clubs, hostels and hospitals run on non-commercial lines, charitable, educational and religious institutions are all included in the domestic category, A.E.H. i.e., All Electric Home connections are also categorised as domestic.

(ii) Commercial : This category includes all connections for the supply of electricity to commercial establishments such as wholesale and retail shops, offices and business houses, hotels, resturants, tea stalls, photographic studios, X-ray installations, advertisements and exterior illumination, railway station, bus station, and the like.

(iii) Industrial : Power supply connections to industrial establishments are covered under this column. This would include small establishments such as power looms, flour mills, roasting, grinding, wet grinding, repair workshops using power operated tools and the like.

(iv) Road Lighting : The total number of street lights being maintained in the town is mentioned here.

(V) Others : Connections to all categories other than those cited above are covered under this head ing. This would include temporary connections, connections to pumpsets, water works and such other installations.

Statement -IV A : Civic and other Amenities in Notified slums, 1979

This statement which may be regarded as an appendix to statement IV is confined to towns with a population of 50,000 and more i.e., class I & II towns. Information on slums that are officially recognised as slums (even if those are not notified in some cases) is presented under 14 columns apart from column 1 which relates to serial number and column 2 which relates to name and class of town.

Column 3 : Name of slum :-

The names of slums, if any, in the town are given in separate lines in the alphabetical order of their names.

Column 4 : Area of slum :-

The geographical area of each slum is given in square kilometres up to two plaes of decimal.

Column 5 : Population of slum :-

The population figures for this column are furnished by the civic authorities concerned. Slums as such have not been made independent units for census enumeration and as such 1981 Census data as applicable to the slums covered here are not available.

Columns 7 to 12 : System of Sewerage, Number of Latrines and Method of disposal of Night soil :-

These column headings are same as those appearing in the statement IV and have already been explained. The information is furnished here for each slum separately. The main heading latrines is subdivided into those that are privately owned and those that are for common use of the community i.e., public latrines.

Column 13 : Number of tap points/public hydrants installed for supply of protected water :-

The total number of public taps or hydrants if any in the slum is mentioned here.

columns 14 to 16 : Electrification (Number of connections):-

Total number of electrical connections in each slum provided for purposes of domestic use, road lighting and other than these two is reported seperately under these three columns. The meaning of the terms used in the column heading has already been explained.

Statement - V : Medical, Educational, Recreational and Cultural facilities - 1979

Column 2 : Class and Name of Town :-

This column is same as column 2 of statement IV and therefore calls for no further explanation.

Column 3 : Population :-

The total population of the town according to 1981 Census is noted in this column.

Columns 4 and 5 : Medical Facilities : Hospital/Dispensaries/T.B.Clinic/Health centres/Nursing Homes etc., and number of beds in Medical institutions noted in column 4 :-

The scope of these columns is confined to only such of the facilities that are offered by institutions run by or aided by government/semi-government or local bodies and charitable institutions or social service agencies like the missionaries. In other words data on the facilities provided in the town by private doctors i.e. registered medical practitioners either individually or in establishments where they work in groups,are excluded from the purview of these columns.

The abbreviations used in column 4 are :-

H : Hospital
D : Dispensary
PHC : Primary Health Centre
PHU : Primary Health Unit
FC : Family Planning Centre
TB : T.B.Clinic
NH : Nursing Home
O : Others

If there are two or more number of institutions of the same type then the number of institutions is also indicated within brackets immediately after the relevant abbreviation in the column.

Maternity homes, maternity and child welfare centres, leprosy clinics, chest clinics and veneral diseases clinic etc., if any are all included under the category of 'Others'. But even when a Family Planning Centre is attached to a Hospital or a Primary Health Centre it is treated as an independent unit and counted separately.

If the town has hospitals and dispensaries providing facilities under different systems of medicine such as allopathic, ayurvedic, unani and homoeopathic then this detail too has been included using abbreviations such as : A for Ayurvedic, U for Unani and Hom for the Homoeopathic system. The allopathic institutions do not have any additional abbreviation. Thus, a mere H or D would mean that the reference is to allopathic system; an entry "H (A-1,2)" would mean that 1 Ayurvedic hospital and 2 allopathic hospitals are functioning in the town and an entry like "D (Hom-2,1, U-1)" would imply the existence of 2 homoeopathic dispensaries, 1 allopathic dispensary and 1 Unani dispensary.

If medical facility is not available in the town then the name of the nearest place where it is available if in the same district, and name of the district if in the same State or other State is mentioned here along with the distance in Kilometres shown within brackets.

The number of beds with which the medical institutions noted in column 4 are equipped is indicated in column 5.

Columns 6 to 15 :-

These columns provide information regarding the educational facilities available in the town and are considered stage by stage.

Columns 6 to 9 : Arts/Science/Commerce Colleges (of Degree level and above); Medical Colleges; Engineering Colleges; Polytechnics :-

Particulars of colleges in the town providing general education facilities at degree level are indicated in column 6 using the following abbreviations.

A : Arts only
S : Science only
AS : Arts and Science only
C : Commerce only
AC : Arts and Commerce only
ASC : Combined for all three categories : Arts, Science and Commerce
L : Law

If the number of colleges of any particular category is more than one then that number is also given within brackets against the abbreviation concerned. It may incidentally be mentioned here that the educational institutions with a vocational and professional content such as pharmacy College, B.Ed., Agricultural College etc., are not covered under this but are shown included in the category of "Others" in column 10.

In columns 7, 8 and 9 the number of medical colleges, the number of engineering colleges and the number of polytechnic institutions are indicated.

In case the town does not have any of the colleges referred to in these 4 columns i.e., if the entry were to be a dash in any of these columns then the name of the nearest place with the facility along with the distance thereto is mentioned. If such a place is outside the district then the name and the distance to that place and if such a place is outside the State itself then the name of that State is mentioned in these columns. The same procedure is adopted regarding the other columns dealing with educational facilities.

Column 10 : Recognised Shorthand, Typewriting and other Vocational Training Institutions :

The term recognised would mean recognition by some statutory authority like the Educational Department, Commerce Department, Labour-Department etc., of the Government or semi-government or autonomous bodies or public sector projects. The Teachers' Training Colleges, the Nursing College, the Pharmacy College, the College imparting education in Physical Education and the like are also shown under this column against the category of 'Others'.

SH : Shorthand
TYPE : Typewriting
Sh.Type : Shorthand and Typewriting
O : Others

If the number of institutions of any particular type is more than one that number is also indicated within brackets along with the abbreviation concerned.

Columns 11 to 14 : Higher Secondary/Intermediate/ PUC (Pre-University College)/ Junior College/Secondary, Matriculation, Junior Secondary and Middle Schools and Primary Schools :-

Information about the number of schools of different types functioning in the town is furnished under these columns. All schools irrrespective of the medium of education and the type of administering agency i.e., all those run by or aided by Government or local bodies, as well as the unaided institutions run by private management are considered here for reporting. If there are composite institutions such as a college providing education at degree level and also at Pre-University level then such institutions are split up into degree college and PUC (i.e.Junior College) and separately counted as if they are independent units. Likewise, a composite Junior College which has facilities for providing education say from I to XII standard (i.e., from Primary I standard upto PUC) would be regarded as representing one Junior College, one High School, one Middle School and one Primary School and each of these units would be counted and reported under the relevant column as if each unit was an independent institution in its own right. Similarly a school with I to X standard would get counted under Primary, Middle and High School categories and a composite School with I to VII standard would be considered under the Primary school as also the Middle School category.

In Karnataka the term middle school is no longer in vogue as the primary education consists of 7 years of schooling leading to secondary level. However the first four classes (I - IV standard) are called lower primary classes and the next three are regarded as higher primary classes. There are schools with only I to IV standards. called LPS and also those with V to VII only (formerly middle schools) known as HPS and there is no difficulty in counting such institutions as separate primary and middle schools. But there are composite schools called the Higher Primary Schools having I-VII standards and such schools have now been split up into one Primary and one Middle School for purposes of reporting under these columns of the Town Directory. This method of accounting is therefore different from a simple counting of schools in the town.

Column 15 : Adult literacy classes/centres and others (Specify) :-

If adult literacy classes are being run at regular centres in the town the number of such centres is indicated in this column by the side of the abbreviations AC. Gurukula, Madarasa (Arabic school) and such other quasi religious cum educational institutions if any in the town are also reported in this column under the category of 'others'.

Column 16 : Number of Working Women's Hostels with number of seats :-

Though there are hostels meant for students in almost all the towns, very few have hostels meant for working women. In this column the number of only such hostels that are exclusively meant for working women only are repoted along with the information on the number of seats i.e., its strength.

Columns 17 to 19 : Recreational and Cultural Facilities - stadia, cinema, - auditoria/drama/community halls :-

Column 17 relates to the number of stadia if any in the town. Ordinary play grounds which one usually comes across in towns and cities are excluded from the purview of this column. The term stadium is used in its strict sense to refer to those constructed at considerable costs and are under proper upkeep.

In column 18 the total number of permanent cinema theatres in the town is indicated. Touring talkies i.e., cinema tents of a purely temporary nature are not taken into account for this column. If there are any auditoria, drama halls and community halls in the town the total number of such units is reported in column 19.

The number of public libraries and reading rooms are separately furnished by the side of abbreviation PL for Public Library and RR for Reading Room. Such facilities offered by educational and private institutions including those that are commercialised (called circulating libraries in local parlance) are not covered for reporting under this column.

Statement - VI : Trade, Commerce, Industry and Banking 1979

Column 2 : Class and Name of Town :-

This column is the same as column 2 of the preceding statement and therefore calls for no further explanation.

Columns 3 to 8 : Names of three most important commodities imported and names of three most important commodities exported :-

For purposes of these columns, commodities for which the town serves only as a transit centre by importing for the specific purposes of exporing the commodities without any processing are not considered either as imports or as exports. Agricultural and such other allied produce may be regularly brought into the town from the neighbouring villages and sold to commission agents and wholesalers at the regulated market for further export to areas outside the town. In such cases

the produce that is brought into the town is not considered as import. On the other hand if these items are mainly consumed within the town either as consumption goods or as raw materials by any manufacturing industry then the commodities would be regarded as imports. Thus the commodities imported are either locally consumed in the same form, or else processed further and thereafter either consumed locally or exported to other centres. This restriction apart there is no limitation concerning the nature and quantity of the commodities that may be considered for reporting under these columns. Importance in a town is restricted basically to the few or several commodities that qualify for consideration either as imports or as exports. By and large the commodidities reported under exports would coincide with the commodities reported as manufactured in the town because of the specific exclusion of transit goods. As a result, the image that some of the towns have built up over decades as traditional exporters of certain goods does not get reflected under these columns.

In these columns the importance of a commodity is reported in very general terms and decided upon in terms of the estimated volume of commodities transacted and is based on local enquiries by the civic authorities concerned.

Columns 9 to 11 : Name of three most important Commodities manufactured.

The order of importance is determined broadly by taking into consideration the volume of the total output of the commodities or the scale of operation and for these columns too it is the civic authority that has furnished the information after local enquiries. All types of manufacturing and processing irrespective of the sector to which they belong are considered and of these the three that are most important are reported.

Column 12 : Number of Banks :-

Information on this item has been supplied by the office of the Registrar General, India after ascertaining the details from the Reserve Bank of India. The data relates to the year 1979 and in conformity with the instructions issued in this regard, no attempt has been made to update the data. If a bank has two or more branches then each such branch is regarded as a separate Bank for computing the number of banks.

Column 13 : Number of Agricultural Credit Societies :-

The total number of agricultural co-operative credit societies functioning in the town, irrespective of the type to which they belong (i.e., primary, service, multipurpose, agricultural produce marketing etc) is reported under this column. In quite a large number of towns agriculture is an important means of livelihood for a number of persons and agriculturists of urban areas too have for long been influenced by the co-operative movement.

Column 14 : Number of Non-agricultural Credit Societies :-

Consumer co-operative societies which extend credit facilities to the members, and all other credit co-operative societies that cannot be classified as agricultural are considered for this column. Several groups of people belonging to specific categories might have formed co-operative societies to cultivate the habit of thrift and to make use of the benefit arising out of the encouragement given to the co-operative movement. All such co-operative societies are covered under this column.

PART B - PRIMARY CENSUS ABSTRACT

(i) DISTRICT PRIMARY CENSUS ABSTRACT

(ii) TALUK-WISE PRIMARY CENSUS ABSTRACT

PRIMARY CENSUS ABSTRACT

EXPLANATORY NOTE

The Primary Census Abstract furnishes in a nutshell as it were, vital information on the basic demographic and economic composition of the population. This statement, referred to as PCA, comprising hardly 16 main columns,summarises the whole mass of data gathered at the Census. The smallest geographical unit with a defined boundary identifiable on the field that has been delineated for ensuring cent percent coverage of area under the jurisdiction of various administrative divisions, is the census Enumerator's block. The details gathered in the household schedules and the individual slips in respect of each and every person enumerated in each such block have been meticulously tabulated to prepare this Primary Census Abstract. The tabulation has been done entirely by manual processing of the data at the Regional Tabulation offices. The village PCA is derived from the Block PCA and in case of urban areas, the Block PCA has yielded the ward and Town PCA. In turn the Taluk (Rural) and Taluk (Urban) as well as Taluk (Total) PCA statements are built up on the basis of Village-wise and Town-wise data. This process goes on until it yields the data for higher and higher administrative divisions culminating at the apex in the form of a single line statement for the country. The entire edifice thus rests on the information contained in the individual slips filled up by the enumerator.

In the pages that follow, the District Primary Census Abstract with the taluk level data giving rural-urban breakup is presented first. Thereafter for each taluk starting with Location Code No.1 the village level PCA and within each taluk wardwise PCA for each town are furnished. As already stated particulars relating to Scheduled Castes and Scheduled Tribes are omitted here. Though there are altogether 24 columns in the urban and village PCA statement, as many as 12 out of these are merely sub-columns to provide sexwise data. In essence therefore there are 12 columns only. Most of these column headings represent the census concepts and these have been explained in the Analytical Note. However, a brief description of the column headings is given here.

Column 1 : Location Code Number :-

The location code number assigned to the village or the town as the case may be is entered in this column.

Column 2 : Name of Village/Town/Ward :-

The name of the village or the town as finally adopted for the 1981 census purposes is entered in this column. The towns and cities are quite often divided into smaller geographical segments called wards, mohallas or divisions for purposes of administration. Such units bear distinctive locality names or specific numbers. It is this name or the number of the ward or its equivalent unit that is mentioned here in the case of towns.

Irrespective of whether a town is divided into administrative wards or not every town is invariably constituted into territorial divisions for the conduct of civic elections. This delimitation of constituencies is done as an essential and preliminary proess of civic elections scheduled to be held periodically. So, in some cases the name or number in this column refers to such territorial divisions and not to administrative divisions.

Column 3 : Area of the village in hectares and of town in square kilometres :-

These area particulars have already been furnished in village and town directory portions. For the villages the area is reported here in hectares upto two places of decimal and for the towns, as also the wards or divisions thereof, the area figures are furnished in square kilometres upto two places of decimal. If the area figures are not available for any reason the abbreviation NA is entered in this column.

Column 4 : Occupied Residential Houses :-

A 'Census House' could be wholly residential or else completely non-residential according to the use to which it is put. All census houses enumerated as either wholly or partly residential at the time of the census count are added together to get the data for the block and from thence to derive the data for higher units. Houses found vacant at the time of the census count are not reckoned as occupied residential houses. The information for this column has been compiled from the Abridged Houselists.

Column 5 : Number of Households :-

This information too is compiled from the Abridged Houselists. The actual total number of households including the normal, institutional and the houseless that were enumerated at the census count is mentioned in this column. Generally, the number of households in any unit would be equal or more than the occupied residential houses in that unit because of the houseless households that one may come across in that unit and also because of the occasional instances, of two or more households sharing a common census house.

Columns 6, 7 and 8 : Total population (including Institutional and Houseless population) :-

The total population as on the reference date is furnished in column 6 while in the next two columns the sexwise break-up is given. The institutional population refers to such of those who were enumerated in institutions like hostels, chummeries, hospitals, prisons etc., The houseless persons represent those enumerated on the night of 28th February at the places where they were found at that time, if they had not already been enumerated elsewhere.

Columns 9 and 10 : Literates :-

Sexwise break up of the total number of persons who are literate, irrespective of their levels of educational attainments and age, is given in these two columns. By definition a literate is a person who can both read and write with understanding in any language. It is important to note that by convention all children below 5 years of age are regarded as illiterate.

Columns 11 to 20 : Main Workers :-

These 5 pairs of columns deal with the main workers. Out of these, while the first pair provides only the total the other 4 pairs give out further break-up according to the sector of the economy in which these persons are working. The reference period for judging whether a person is a worker or not is the year preceding the day of enquiry. If a person had worked even for one day during this entire period he or she is entitled to be classified as a worker. If for any such

worker the period of work is 183 days or more then that person is a main worker. On the other hand, if such period is less than 183 days then that worker is a marginal worker. In columns 11 and 12 the total number of main workers is furnished sexwise.

Columns 13 and 14 : Cultivators (I) :-

These two columns give out the number of male and female workers who satisfy the conditions laid down in the definition of a cultivator. A cultivator may be an employer, a single worker or an unpaid family worker. Participation in work may be by way of physical labour or by way of supervision and direction. The lands cultivated may be owned by the household or taken on lease for payment of money or kind or share in the produce. Cultivation as already emphasised involves ploughing, sowing and harvesting and allied activities in the production of cereals and millet crops, pulses, raw jute and kindred fibres, sugarcane, tapioca and oil seeds.

Columns 15 and 16 : Agricultural labourer (II) :-

A person who works in another person's land for wages in money or kind or share and does not have any lease or contract on the land on which he or she works is an agricultural labourer. In this case too the crops grown on the lands are quite pertinent and the difference between a cultivator and an agricultural labourer lies in the fact that the former works on his own or leased in lands as an independent worker while the latter works for wages having no right whatsoever on the lands on which he works. The sex-wise break-up of such workers is given in these two columns.

Columns 17 and 18 : Household Industry (V (a)) :-

Household industry belongs to the broad category of 'manufacturing, processing, servicing and repairs' and represents a particular sector therein. Household industry is generally conducted by the head of household himself or herself and or mainly by the members of the household, at home or within the village in the case of those dwelling in rural areas and only within the residential premises occupied by the household in the case of those living in urban areas. A person may be a labourer or a petty employee in the household industry run by some other household. By and large the household industry is carried on by individuals on a small scale with assistance of family members all of whom work as unpaid family workers and the entire earnings are treated as family income.

Columns 19 and 20 : Other Workers (III, IV, V(b), VI to IX) :-

All the other workers who are main workers but are neither cultivators nor agricultural labourers nor engaged in house hold industry are covered under these two columns. This is a broad category, covering all those who are working in fishing, forestry, plantations, construction of roads buildings etc., non-household manufacturing industries, trade and commerce, transport and storage and other services.

Columns 21 and 22 : Marginal Workers :-

Males and females who are workers but have worked to a marginal extent only during the reference year are reported under these two columns. Such workers, irrespective of the economic sector in which they work, are considered together and reported here.

Columns 23 and 24 : Non-Workers :-

Irrespective of age and sex all those who are not economically active are non-workers and a sexwise break-up of such persons is given in these two columns. The aggregate of the main workers, marginal workers and non-workers would be equal to the total population of that unit.

Note : 5 The area figures for the district given under column No.4 against 'Total' represent "Geographical Area" and have been furnished by the Surveyor General, India. The figures for the urban areas are either those supplied by the concerned authorities of the towns or compiled in this Directorate on the basis of the records available pertaining to the delimitation of urban units. Area figures for Rural Areas are derived by subtracting the total urban area from the total area of the taluk/district. The total of the area figures of all the taluks in a district will not tally with the district figures (except for urban), because the former represent "Land Use" area derived from the figures supplied by the Director of Survey, Settlement and Land Records in Karnataka.

6 Urban area given under column No.4 for the taluks is the total of the area of the respective individual urban units included under them rounded off to one place of decimal.

SUPPLEMENT

INTRODUCTORY NOTE

This supplement to the District Census Handbook is devoted exclusively to the particulars relating to the Scheduled Castes and Scheduled Tribes. The District Census Handbook was first introduced at the 1951 Census to meet the ever increasing demand for micro-level data and since then this has remained the only Census publication which gives out data at the village level in the case of rural areas and at the enumeration block level in the case of urban areas. The scope of this publication was enlarged in 1961 and also in 1971 so as to render it more useful by presenting in it a wealth of information on infrastructural facilities in villages and towns. The current volumes of the District Census Handbook are thus the fourth in the series and are marked by a greater degree of comprehensiveness and uniformity in approach. As compared to the 1971 series the village and town directory formats have been slightly modified. So also the Primary Census Abstract too has undergone certain changes. The previous practice of presenting the administrative statistics and the various district and taluk-level tables has been given up. Apart from these general changes at the All-India level, in so far as Karnataka is concerned, because of certain technical reasons all the particulars relating to the Scheduled Castes and the Scheduled Tribes envisaged for presentation in the District Census Handbook, have been pooled together and brought out in the form of a separate supplement.

These details are presented in the following sequence:

Statement I : Total, Scheduled Castes and Scheduled Tribes population in the taluks and towns of the district. (These details form part of the General District Primary Census Abstract.)

Statement II : District Primary Census Abstract - Scheduled Castes.

Statement III : District Primary Census Abstract - Scheduled Tribes.

Statement IV : Scheduled Castes and Scheduled Tribes population - (A) Village-wise and (B) Town-wise (within town ward-wise). (These details form part of the Urban/Village Primary Census Abstract.)

Statement V : Total, Scheduled Castes and Scheduled Tribes population—Urban Block-wise. (This corresponds to the Appendix to Urban/Village Primary Census Abstract.)

Statement VI : Description of boundaries and details of areas included in Census enumeration blocks — in the case of urban areas of the district (corresponding to the annexure to the Appendix to the Urban/Village Primary Census Abstract.)

Statement VII : List of villages arranged according to the proportion of (a) Scheduled Castes and (b) Scheduled Tribes population to the total population of the village concerned by ranges. This would correspond to Appendix - IVA and B to the Village Directory.

Statement VIII : List of Scheduled Castes and Scheduled Tribes.

The concept of Scheduled Castes and Scheduled Tribes as evolved by the Government of India and embodied in the Government of India Act 1935 Section 309 for the first time and standardised later on for the purposes of the Constitution of the Indian Republic has all along been adopted for purposes of Census operations as well. 'Scheduled Castes' means such castes, races or tribes or parts or groups within such castes, races or tribes as are deemed under Article 341 (of the Constitution of India) to be the Scheduled Castes for purposes of the Constitution of India. No person who professes a religion different from the Hindu or the Sikh shall be deemed to be a member of a Scheduled Caste. Likewise, 'Scheduled Tribes' means such tribes or tribal communities or parts or groups within such tribes or tribal communities as are deemed under Article 342 (of the Constitution of India) to be the Scheduled Tribes for the purposes of the Constitution of India. Persons belonging to the Scheduled Tribes may profess any religion. State-wise statutory lists of Scheduled Castes and Scheduled Tribes were notified for the first time after independence under the 'Constitution (Scheduled Castes) order 1950' and the 'Constitution (Scheduled Tribes) order 1950'. These orders have close links particularly with Article 46 of the Constitution which lays down that "The State shall promote with special care the educational and economic interests of the weaker sections of the people, and in particular, of the Scheduled Castes and Scheduled Tribes and shall protect them from social injustice and all forms of exploitation"

These lists have subsequently been modified, supplemented or amended from time to time. As a result of the re-organisation of the States in 1956 involving

transfer of territories from one State to another, a major change became necessary in most of the States. Consequently the "Scheduled Castes and Scheduled Tribes (Modification) order 1956" was promulgated and the interests of these two sections of the society were adequately safeguarded. Twenty years later, in 1976, with the main objective of removing the area restrictions imposed within the States, the parliament enacted the "Scheduled Castes and Scheduled Tribes Order (Amendment) Act, 1976" (Act No. 108 of 1976 dated the 18th September, 1976). The lists of Scheduled Castes and Scheduled Tribes notified thereunder as applicable to Karnataka State have been adopted for purposes of the 1981 Census operations. Copies of these lists, in English as well as in Kannada, were supplied to each and every census enumerator and supervisor. Necessary instructions for filling up answers to the questions relating to the members belonging to the Scheduled Castes and Scheduled Tribes were also issued. The following points were emphasized by way of clarifications:

"If the person belonging to a Scheduled Caste or a Scheduled Tribe returns his/her caste or tribe by a synonym or generic name of a caste or tribe, it should be reckoned as a Scheduled Caste or a Scheduled Tribe only if the name finds a place in the list furnished to you. Similarly, if the answer to this question is in general terms like Harijan/Girijan or Achut/Adivasi, you should not reckon the person enumerated as belonging to a Scheduled Caste or Scheduled Tribe as the case may be. In such a case you should ascertain the name of the caste/tribe fully and if that name finds a place in your list, you should reckon the person as belonging to Scheduled Caste or Scheduled Tribe as the case may be. If a person is negligent and insists on calling himself/herself merely 'Harijan' or 'Achut' or 'Adivasi' or 'Girijan', as the case may be, or repeats the synonym or generic name of a caste or tribe, please tell him/her that his description is not adequate for Census purposes and persuade him/her to give the actual name of the Scheduled Caste or Scheduled Tribe. If the person merely claims to be a Scheduled Caste or Scheduled Tribe, but says that he/she does not belong to any of the notified communities applicable to the area, as reflected in the list supplied to you, he/she will not be reckoned as belonging to a Scheduled Caste or a Scheduled Tribe".

Analysis of Census Results: As compared to the earlier lists of Scheduled Castes and Scheduled Tribes which formed the basis for census enumeration at the Censuses of 1961 and 1971, there has been a substantial change in the lists adopted for the 1981 Census. The area restrictions that were prevalent regarding numerous castes and tribes included in the lists have now been removed. Therefore the 1981 Census results cannot be straight away used for any comparative analysis of growth trends and such other factors unless one delves deeper into the historical, social, economic and demographic aspects of life of these two categories of the population. Such an analysis is beyond the scope of this volume and has therefore not been attempted here. Salient data about the distribution of the Scheduled Castes and Scheduled Tribes in rural as well as urban areas of the district as also the pattern of distribution in administrative units of different levels within the district are included in this slender volume in the form of tabular statements.

1 Towns treated as such for the first time in 1971 Census and which continue as towns in 1981 Census are indicated by an asterisk (*) on thier left.

2 Towns treated as such for the first time in 1981 Census are underlined.

3 The following abbreviations have been used within brackets against the names of the towns to indicate the civic status of the town.
M : Municipality C : Corporation CB : Cantonment Board
TP : Town Panchayat NAC : Notified Area Committee P : Panchayat

4 Out-growths of the Urban Agglomerations have been denoted by 'OG' within brackets against their names.

Scheduled Tribe figures would appear to include high returns relating to certain communities with nomenclatures similar to those included in the list of Scheduled Tribes consequent on the removal of area restrictions.

£ Formerly Sadalga

1 Towns treated as such for the first time in 1971 Census and which continue as towns in 1981 Census are indicated by an asterisk (*) on their left.

2 Towns treated as such for the first time in 1981 Census are underlined.

3 The following abbreviations have been used within brackets against the names of the towns to indicate the civic status of the town.

M : Municipality C : Corporation CB : Cantonment Board
TP : Town Panchayat NAC : Notified Area Committee P : Panchayat

4 Out-Growths of the Urban Agglomeration have been denoted by 'OG' within brackets against their names.

* Scheduled Tribe figures would appear to include high returns relating to certain communities with nomenclatures similar to those included in the list of Scheduled Tribes consequent on the removal of area restrictions.

* * * * * *

NOTE : 1 Towns treated as such for the first time in 1971 Census and which continue as towns in 1981 Census are indicated by an asterisk(*) on their left.

2 Towns treated as such for the first time in 1981 Census are underlined.

3 The following abbreviations have been used within brackets to indicate the civic status of the town :

C : Corporation CB : Cantonment Board M : Municipality TP : Town Panchayat
NAC : Notified Area Committee P : Panchayat

3 *Scheduled Tribes figures would appear to include high returns relating to certain communities with nomenclatures similar to those included in the list of Scheduled Tribes consequent on the removal of area restricted.
