PREFACE

We had intended to bring out the 1971 series of District Census Handbooks in an alphabetical order and according to this arrangement the present volume should have been published immediately after the one about Anantnag. We are sorry that for certain unavoidable reasons the plan had to be altered and consequently there has been some delay in bringing out this publication. All the same, we hope, that the data furnished in these pages will be found useful by various administrative agencies and may facilitate drawing up of future development schemes for the district concerned.

The district of Baramula (32°—55′ to 33°—50′ north latitude and 73°—45′ to 75°—20′ east longitude) is one among the three constituent districts comprising the Kashmir valley. The valley, oval-shaped and commanding an average height of 1581 ms but spread on a flat surface is famous throughout the world for its salubrious climate and scenic beauty. Individually as well as collectively the districts share these characteristics, are situated contiguously and constitute a single and compact territorial entity in terms of race, language and culture. Besides they are served by a common river, the Jhelum, to which are joined numerous tributaries on both banks with their source in everlasting shows.

Because of their temperate climate, abundant irrigational facilities and fertile soil, the valley districts collectively are more populous than the rest of the State put together. At the 1971 Census the population of the State stood at 46.16 lakhs, out of which the three districts of Anantnag, Srinagar and Baramula constituting the Kashmir valley contributed 52.76%. In inter-district comparison, the Baramula district claimed the third position within the State as a whole with its population standing at 775,724. Within the valley, however, it recorded a higher growth-rate viz; 29.00 than both Anantnag (28.22) and Srinagar (27.54) districts for the 1961-71 decade. In the matter of sex-ratio while Jammu and Kashmir as a whole continues to be placed in the category of 'very low (less than 900)', among the States of India, the position of Baramula district as revealed at the 1971 Census appears to have suffered a set-back in that it returned only 848 females per 1,000 males as compared to 862 returned for this district at the preceding Census.

In the sphere of literacy, while the rate recorded at the 1961 Census for the State was only 11.03%, it went up to 18.58% during the decade under review. However, Baramula district at the 1971 Census recorded even a lower rate of literacy (13.16%) than the State average and is placed higher only to the Ladakh district in this respect. Similarly in the sphere of urbanisation, it continues to occupy a backward position contributing only a fraction (7.72%) to the State's total urban population of 858,221. It is perhaps relevant to mention here that the district contains no class I or class II town and its biggest towns namely Sopore and Baramula fall in the category of class III towns. The number of workers according to the latest definition claim a proportion of 31.06% to the district's total population as against 29.76% representing the State average. However, cultivators and agricultural labourers constitute the overwhelming majority providing corroborative evidence of the fact that the economy of the district continues to be predominantly rural in character. Nevertheless it is gratifying to note that the proportion of 'other workers' suggesting diversification of occupations, registered a sharp rise from 14.5%, in 1961 to 23.4%, at the recent Census.

It may be recalled that the economy of the district was badly shaken if not shattered by the Pakistani invasion of 1947. With the Srinagar-Rawalpindi road closed, the district undoubtedly lost its former position as the gateway to the Kashmir valley. But the loss appears to have been more than made up by expansion of horticulture and timber industry on a vast scale in the post-1947 decades which simultaneously witnessed intensification and improvement of agriculture.

In compiling this publication, I feel specially indebted to Shri Ali Mohd. Kalloo, Tabulation Officer, Social Studies, who scrutinised and analysed the tables. The names of my other colleagues who were associated with the work are mentioned separately in this book.

Srinagar,
the 4th April, 1974.

£ Excludes 12 Forest/Boat blocks which have not been treated as villages.

PART X-A
TOWN AND VILLAGE DIRECTORY

INTRODUCTION

The practice of bringing out of District Census Handbooks in Jammu and Kashmir on a regular basis was started at the 1961 Census. Although due to various reasons, the Handbooks could not be brought out on time at that census yet they served a useful purpose in apprising the administration of important statistical data at the grass-roots level viz., village or urban block in each district. It was on the basis of this information that the demarcation of electoral constituencies was worked out. Several development schemes of the states third five year plan also owe their origin to the detailed data supplied in the District Census Handbooks.

Profiting by the experience of the 1961 Census and realising that District Census Handbooks are the only publications which incorporate data down to a village and mohalla or ward of a town, it was decided at this census not only to enlarge and improve their scope but to phase out their publication in such a manner that part of the useful information to be carried in the District Census Handbooks becomes available to the data users with minimum delay. Consequently at this census, a District Census Handbook was split into three parts :–

Part A : Village and Town Directory.

Part B : Village and Town-wise Primary Census Abstract.

Part C : Analytical Report, Administrative Statistics and District Census Tables.

Under this arrangement, parts A & B have been fused together to form the present volume. Part C which must await collection of further details is bound to take time, hence it has been decided not to allow it to delay the publication of readily available information and instead, bring it out in a separate volume.

The contents of parts A & B of the District Census Handbook constituting this volume are as follows :–

Part A :

gives for each village of the district the particulars of amenities available in the matter of educational and medical institutions ; power supply ; drinking water ; post and telegraph facilities ; communication ; particulars of land use and places of religious, historical or archaeological importance. It also gives for each town in the district in the form of suitable statements, the status of the town administration ; its origin ; growth of population ; functional category ; physical and locational aspects ; latest municipal finances ; civic and other amenities ; medical, educational and cultural facilities ; trade, industry and banking facilities and population returns by religion.

Part B :

highlights for each village and for each block and ward/mohalla of a town, the primary census data incorporating area ; occupied residential houses ; number of households ; total population and its break up by sex ; scheduled caste population ; literate population ; working population by nine industrial categories and non-working population.

Baramula District :

The district is known after its headquarter town of Baramula, which is situated at a distance of 56 kms. in the north of Srinagar city. The district has the distinction of being the largest of the three districts forming the Kashmir province. Its total area as per the latest assessment made by the Surveyor General of India, is provisionally estimated to stand at 7,458.0 km^2 constituting 47% of 15,853.0 km^2, the total geographical area of the province. The northern and eastern regions of the district are interwoven by dense forests and soaring mountains. The terrain as also the topography is such that the areas in these regions are less productive and sparsely populated. The southern and some part of the central regions are, however, plain and densely populated. The western region is neither productive nor mountainous.

The district is meandered by river Jehlum which after pouring its deposits in the Wular Lake again takes off a south-westernly direction passing through the towns of Sopore, Baramula and Uri. Other important rivers are Kishen Ganga, Pohru Nallah, Kamil Nallah, Sindh, Madumati and Bruzul Nallah.

Location :

The district is located between 32°-55′ to 33°-50′ north latitude and 73°-45′ to 75°-2o′ east longitude. The height of the district is 1,555 metres which is lower than 1,588 metres for Srinagar and 1,600 metres for Anantnag districts.

Boundaries :

The district is bounded in the north and north-west by the area under illegal occupation of Pakistan and in the south and south-west, it is bounded by the lofty Pir Panjal range which separates it from Punch. In the east, the great Himalayan range bounds it from the Kargil tehsil of Ladakh district. Towards south and south-east, the district is contiguous with Srinagar district.

Rainfall & Climate :

The district enjoys adequate rainfall except areas such as Kandi tracts of Baramula tehsil, the Lolab valley of Kupwara tehsil and other smaller valleys of Handwara tehsil where defficient rains are responsible for partial or complete failure of crops. Besides this, there are low lying marshy areas in the district, particularly those of Baramula and Sonawari tehsils which owing to their proximation to the river Jehlum are frequently subjected to flooding and loss of crops during heavy rains.

There are, in all seven Raing-gauge Stations in the district, one each at Bandipore, Baramula, Gulmarg, Gurez, Handwara, Langet and Sopore. The only observatory in the district is located at Gulmarg. Even this operates seasonally from June to September and consequently the data collected by it does not give month to month variation of temperature, etc. However, the district on an average receives a rainfall of 968.041 mms. or (31.11″) per year.

The district experiences severe cold in winter and a moderate temperature in summer. Snowfall is heavy during winter months viz., middle of December to end of February and very heavy in areas like Keran sector, the Lolab and Gurez valleys and in and around Gulmarg, which usually remain cut off from the rest of the district for these months. The district towards its west does not experience as heavy snowfalls as in other parts, because as we tend towards the west, decline in height starts. The maximum and minimum average temperatures recorded in the district stand at 19.6°C (67.28°F) and 7.6°C (45.68°F) respectively.

Early History :

The early history of the district has already been given in detail in the 1961 District Census Handbook of Baramula. However, a brief mention thereof would not be out of place here. The district was for ages known as Kamraj, which name was assigned to it as a result of the settlement arrived at between two princes-Kaman and Marhan-over the crown of their father. The part of the valley lying between Pir Panjal and Srinagar was made over to Marhan and was known as Maraj; the part below Srinagar fell to Kaman and was named after him as Kamraj now called district Baramula. The part in between the two viz., Srinagar was called Yamraj. While Anantnag and Srinagar now no longer retain these original names, the district Baramula is still called Kamraj.

Let us now see how the district assumed its present nomenclature as Baramula. In this connection there are many a version current. According to one version couched in the Record of Rights (Mislihaqqiat) preserved in the Revenue Department, not endorsed by all, there was a spring 'Wara-Ganga' at this place, because of which the town came to be known as 'Waramuli', 'Wara' implying name and 'Muli' place where the foundation of a structure may have been laid. With the passage of time, the word 'Waramuli' was distorted into Baramula. Even now many amongst the Kashmiris called this place as 'Waramul'.

Another version, which is corraborated by several writers, says that the whole valley was once a great expanse of water and its waters were then drained off at Khadinyar near Baramula by volcanic eruption of rocks at twelve places. The place was thus known as Baramula meaning twelve bores. This view is also supported by Kalhana in his book 'Rajtarangni' (book V Section 156 and 213). He says that during the reign of King Awantivarman (855-883 A.D.), the mountains near Khadinyar were violently rocked by the unparalled earthquake that struck the valley then. Huge rocks and boulders rolled down to block the passage of water at this place. This led to the inundation of vast areas of the valley, crops were washed away and thus the people came

within the grip of acute famine. At this juncture, he says, when there was desparation all around, a local engineer, Suya by name, whose survival from death was itself a miracle, formulated a plan to salvage the valley from this catastrophe, if provided with enough money and gold. The king having heard of this, summoned him and placed all his treasury at his disposal. According to the plan devised by him, he embedded scores of earthen pitures stuffed with money and gold at the place where the flow of water had been plugged with huge rocks and boulders, and followed it by an announcement that the pitures alongwith their contents would be owned by anybody who dives to unearth them. The place was thus thronged by thousands and within a matter of few days all the boulders and rocks were removed, causing thereby a reduction in water level and in this way the valley was saved from great devastation.

Baramula, it must be conceded, has not lagged behind in partaking its share of vicissitudes and convultions that the valley has witnessed since prehistoric era. The grand architectural pieces that lie strewen in the district as old ruins testify to the architectural accomplishments which the district may have experienced once. The district abounds in health resorts of great charm which have earned fame throughout the world. Amongst them Gulmarg, 49 kms. from Srinagar and 2,652 metres from sea-level, is of international repute. During summer months, the place invariably throbs with visitors. In Gulmarg is situated one of the world's best golf courses located on a lush meadow of flowers. The golfing season which starts in June and lasts till September, attracts thousands of sports-men both from in and outside the country. The gradual and even slopes around Gulmarg offer excellent scope for skiing. Prior to 1947, it used to be the headquarter of Ski Club of India. The Central Government with a view to giving a fillip to tourism in Kashmir, have launched an intensive development plan to make Gulmarg as winter sports centre in next 5 years. The plan interalia envisages a centrally heated motel, an aerial ropeway and ski lift from Gulmarg to Khilan-marg.

The fame of the district is also derived from the fact that at a short distance from Gulmarg, amidst thick green fir forests is situated the shrine of Baba Payum-ud-Din alias Baba Rishi. A cluster of hutments has been erected in the premises of the shrine to provide shelter to the pilgrims who continue to pour in, in multitudes, all the year round.

The Wular, the biggest lake in Asia, 34 kms. from Srinagar is yet another attraction for which the district can rightly boast of. In circumference, the lake measures 48 kms. and its area in normal conditions, spreads over 12.5 sq. miles. It provides an unending source of fish and water chestnuts (singharas).

Monuments :

The district is rich in places of archaeological interest ; these consist chiefly of the ruins of ancient mosques and temples. Although these including fairs and festivals will be discussed amply in Part C of this publication, a brief mention thereof will not be out of place here. The following places of archaeological or religious interest are located in the district :—

1. Ancient Hindu temples at Pattan. According to Rajtarangni, these temples have been built during 883-901 A. D. by King Shankaravarman.
2. Ruins of Ramkund temple at Farkian (Handwara)
3. Shardamai temple at Guglusa (Handwara)
4. Nandrishi Pir's tomb at Magam near Trehgam (Handwara)
5. Dhyaneshwar temple at Simattan (Handwara)
6. Ancient Hindu temples at Kanlibag, Dewar-Ikmanpura, Sumbal-Indrakote (Baramula)
7. Ruins of Bhuddist period at Fatehgarh and Baramula (Baramula)

Fairs and Festivals :

The following fairs and festivals are celebrated in the district :—

1. Baba Abdullah Sahib's fair in Baisakh at Guzarial (Handwara)
2. Ziarat Janbaz Sahib's fair in Rabi-ul-Awal at Baramula.
3. Peer Dastgir's fair in Baisakh at Palhalan (Sonawari tehsil)
4. Ziarat Payam-ud-Din alias Baba Rishi Sahib's fair in Poh (December) at Gulmarg.
5. Nand Keshvar's fair in Jeth at Seer Jagir (Baramula tehsil)

6. Papchan Nag fair in Cheth at Papchan (Bandipore town)
7. Ziarat Sayed Haji's fair in Maghar, Poh and Magh at Kareari (Baramula tehsil)

Jurisdiction :

Baramula district came into being in 1911, the area of the territory it was then composed of, stood at 3,553 sq. miles or 9,201.91 km². In the subsequent decades viz., 1921-61, the district suffered a substantial loss in area by way of inter-district jurisdictional changes and re-orientation of the district following 1947 tribal raides, in which more than $\frac{1}{3}$rd. of the State territory fell under illegal foreign occupation. The net effect of all this was that at the 1961 Census, the area of the district got reduced to 2,536.0 sq. miles or 6,568.2 km². During 1961-71 however, the district has witnessed notable jurisdictional changes. So far as inter-district changes are concerned, the district has lost 7 villages which were transferred from Baramula tehsil to Beerwah tehsil of Srinagar district. Although, in this way, the district should have further lost in area but as per reassessment made by the Surveyor General of India, the uptodate area of the district is reported to stand provisionally at 7,458.0 km².

The district, which earlier comprised of *1,064 villages, after both inter and intra-district changes, now consists of only *1,032 villages. As regards intra-district change, the district at the time of 1961 Census was composed of 6 tehsils viz; Baramula, Sopore, Handwara, Sonawari, Uri, and Karnah and 9 towns, namely Baramula, Sopore, Bandipore, Gulmarg, Sumbal, Hajin, Ajas, Palhalan, and Uri but during the last ten years, while the district with the addition of 3 more tehsils, namely Bandipore, Gulmarg and Kupwara, has improved its position administratively, it has lost in urban sector. As against one town of Handwara, declared urban in 1970, 4 towns of Sonawari tehsil, namely Ajas, Hajin, Sumbal and Palhalan were denotified, with the result the number of urban areas was reduced from 9 to 6.

Explanatory Note on Town Directory

We may now focus our attention to the urban part of the district and discuss the economic, cultural and demographic characteristics of each town of the district.

*Forest/Boat blocks have not been treated as villages.

The Directory consists of seven statements plus an appendix giving all the towns of the district arranged according to 1971 Census Location Code Numbers.

Definition of Town :

Before analysing the data incorporated in the Town Directory it would be relevant to explain here the standard definition of town. The definition evolved for the first time at the 1961 Census and adopted with a slight modification for this census also lays down the following criteria for determining a place as urban :—

a) all places with a Municipality, Corporation or Cantonment Board or Notified Area or Town Area Committee irrespective of their population or other characteristics.

b) all other places satisfying the following tests :—
1. an area/village whose population is not below 5,000,

2. an area/village whose $\frac{3}{4}$th of male working population consists of non-agriculturists, and

3. an area which has a density of not less than 1,000 persons per sq. mile. (390 persons per km.²)

According to the above definition the following places were treated as urban at the 1971 Census :

1. Bandipore,
2. Baramula,
3. Gulmarg,
4. Handwara,
5. Sopore and
6. Uri

While all the six of them satisfy criteria (a) of the standard definition of a town; it is only Baramula and Sopore which fulfil the intrinsic characteristics of a town as laid down in criterion (b) of the standard definition. All the same some of the above towns have been able to improve their class status over what it was at the 1961 Census. This is revealed in the following inset table :—

INSET TABLE NO. 1

Sl. No.	Name of Town	Class of Town in 1961 Census	Class of Town in 1971 Census
(1)	(2)	(3)	(4)
1.	Baramula	IV	III
2.	Sopore	IV	III
3.	Bandipore	VI	V
4.	Handwara	..	V
5.	Gulmarg	VI	VI
6.	Uri	VI	VI

Data Content :

We may now discuss the scope of each of the seven statements constituting the Urban Directory of the publication and see what they have to reveal about each town.

STATEMENT—I

This statement consists of 15 columns, incorporating statistics on civic administration status as in 1970, population growth during the decades 1901 to 1971 and functional traits based on 1961 and 1971 Censuses.

In column 5, the latest administrative status has been denoted with the help of the following abbreviations :—

T. A. : Town Area Committee

N. A. : Notified Area Committee

While retracing the history of the 6 places that are borne on the urban list, it will be discerned from cols. 6–13 of the statement that though all of them acquired their urban status in 1911, only two towns viz, Baramula and Sopore could maintain their status as such during the last sixty years. From rest of the towns, two, namely Bandipore and Gulmarg were declassified in 1921 and continued in that status till 1961 when they were classified as towns. Uri, on the other hand, was declassified in 1921 and re-appeared in 1931 to continue in the urban list un-interruptedly till todate. It is interesting to note that Handwara which appears as a recent addition, was in fact declared urban alongwith other towns of the district in 1911. It was, however, reverted to the rural list in 1921 and continued as such till late seventy when it was again notified as urban.

At the 1961 Census, the district had nine urban units. Four of them were, however, declassified during the last decade, all belonging to tehsil Sonawari. These are given in the following inset Table :—

INSET TABLE NO. 2

Towns declassified in 1971 Census

Sl. No.	Name of Town	Population-1961 Census
(1)	(2)	(3)
1.	Palhalan	3,762
2.	Hajin	3,701
3.	Ajas	3,584
4.	Sumbal	2,755

It will be seen that all the four declassified towns had a population of less than 5,000. All of them had been notified as urban in late fifties and later declassified in 1970. It appears that they were initially declared urban for administrative reasons because in 1955-56 the State Government launched an intensive development scheme to salvage the low lying and marshy areas of Sonawari tehsil, where crop failure had become an usual phenomenon and where more or less the whole area was subject to frequent inundation with slight rise in the water level of river Jehlum. However, with the completion of the plan which among other things included raising of embankments, setting up of dewatering and pumping stations etc. and which, as a matter of fact, changed the whole complexion of the area from one of deficit to surplus, these towns lost their administrative utility and were, therefore, reverted to the rural list.

How far the various size class towns of the district have been able to improve their status during last ten years, is reflected in the following inset table :—

INSET TABLE NO. 3

Population size	No. of towns in 1961 Census	Population 1961 Census	Percentage to total urban population in 1961 Census	No. of towns in 1971 Census	Population 1971 Census	Percentage to total urban population in 1971 Census
(1)	(2)	(3)	(4)	(5)	(6)	(7)
I—(100,000+)	..	..	..	..	..	..
II—(50,000-99,999)	..	..	..	..	..	..
III—(20,000-49,999)	..	..	..	2	54,031	88.26
IV—(10,000-19,999)	2	38,841	89.16	..	..	..
V—(5,000-9,999)	..	..	..	1	6,201	10.13
VI—(less than 5,000)	3	4,721	10.84	2	986	1.61

The comparsion is made in respect of 5 towns only, which are common to both censuses. It will be seen from the table that 3 of the 5 towns have been able to improve their status during the last decade, two of them viz, Barmula and Sopore having scrambled from class IV to class III and the third, namely Bandipore from VI to V. Gulmarg and Uri have, on the other hand, continued to hold their old position.

Columns 12 and 13, giving 1961 and 1971 Census population of each town of the district reveal that excepting Uri, all these towns, have registered a high growth of population. Gulmarg with a growth rate of 163.59% stands on the top. The low growth rate of Uri which is barely 0.45% is easily understandable. Uri is a border town, susceptible to border conditions. It appears that the 1965 Indo-Pak conflict has been greatly responsible for growth rate of the town being as it is.

It may not be out of place to mention here that the population figures for 1951 recorded in column 11 is the mean of 1941 and 1961 population, because, as already stated, no Census was conducted in the State in 1951 owing to the abnormal conditions prevailing then.

Functional Category :

The information given in columns 14 and 15 of the statement indicates the functional characteristics of each urban area of the district. This information so useful to researchers and administrative agencies, brings out the role that the town plays in such activities as commerce, industry, transport, communication, administration, construction, education, etc. and also the functional changes the town has experienced over the last ten years as a result of urban development.

Functional characteristics of a town as shown in the statement are assessed by taking into consideration, the participation rates of workers in the nine recognized industrial categories as given below :—

I. Cultivation
II. Agricultural labour
III. Livestock, Forestry, Fishing, Hunting, Plantations, Orchards and Allied Activities
IV. Mining and Quarrying
V. Manufacturing, Processing, Servicing & Repairs
   a) Household Industry
   b) Other than Household Industry
VI. Construction
VII. Trade and Commerce
VIII. Transport, Storage and Communications
IX. Other Services

These categories have been further re-grouped into the following five broad categories :—

	Group	*Constituent Categories*
1.	Primary Activities	I+II+III+IV
2.	Industry	Va+Vb+VI
3.	Trade and Commerce	VII
4.	Transport	VIII
5.	Services	IX

If the proportion of workers in a town under any of the five broad categories forms or exceeds 40% of the total working force, it has been treated mono-functional. If, on the other hand, the proportion under any single category is less than

40% but becomes 60% or more with the combination of two predominant categories, the town has been designated as bi-functional. Similary, when three predominant categories, on adding, constitute 60% or more of the total working force, the town has been classified as tri-functional. The functional classification so worked out for 1961 and 1971 and in respect of each town has been reproduced in cols. 14 and 15 of the statement. The columns reveal that amongst the five towns common to both censuses, 4 were mono-functional and one bi-functional in 1961. By 1971 the number of mono-functional towns has reduced to 3, one, namely Baramula having become a tri-functional town. Similarly, Sopore which was bi-functional earlier has also become tri-functional in the intervening period. This shows that economic activities in these towns is under gradual transformation towards diversification which speaks of the operation of healthy influences. Bandipore and Uri are, of course, the two towns where this transformation appears to be rather slow and which have, therefore, not been able to turn the corner so far. It is, however, significant to note that unlike at the 1961 Census, when no town qualified to be functionally classified under trade and commerce, 3 of the 6 towns have at the present Census returned trade and commerce as one of their functional traits, Gulmarg having returned it as its sole functional characteristic.

It is equally interesting to note that functional characteristics of a town are directly influenced by the size class of the town. Bigger the town, larger the diversification of its economic functions. The two towns of the district which have returned themselves as tri-functional at the 1971 Census belong to size class-III while all four towns returned as mono-functional fall in size class V & VI.

STATEMENT-II

The statement, consisting of 13 columns, depicts the physical and locational aspects of towns. Physical as well as locational aspects include data on the distance from the town of the city with population of one lakh & more, of state, district & tehsil headquarters, railway station, bus route. It also gives information on the location of navigable river, if within 10 kms. and sea port, if within 50 kms. from the town. The data shown under cols. 3—5 has been supplied by the respective Chairman.

There is a lone observatory in the district situated at Gulmarg, which too operates seasonally and, therefore, the data supplied by it bears no coherence as to month to month variation in rainfall and maximum and minimum temperatures.

The climate of the district, as already mentioned, is akin to that of the other two districts of the valley. Gulmarg, however, is the only town in the district which is located at high altitude and for that reason, experiences severe cold for major part of the year besides heavy snowfalls during winter months. Inspite of these extremes, the place is known for its salubrious climate in hotter months. At this place, mention should also be made of Uri, which is perhaps the only town in the valley, located at a comparatively lower altitude and as such does not experience the kind of cold and snowfall experienced by other towns of the district. Although the district on an average receives a rainfall of 968.04 m. m. or 31.11" per year, there are some regions such as Kandi areas and Lolab and Gurez valleys which are frequently stricken with drought.

The part of the statement which deals with the locational aspects of the towns clearly highlights the fact that all the urban areas of the district enjoy communication facilities. In fact two main towns of the district viz., Baramulla and Sopore are situated on the bank of the river Jehlum-the only major navigable river of the valley and the third town Bandipore, skirts Wular lake. Both river Jehlum as also Wular lake contribute a lot to the economic activity of these towns and for that matter to that of the whole district. Timber, firewood, fish, chestnuts, bricks, stones, lime etc. are some of the major items carried by river transport, which is relatively cheaper than surface transport.

Column 7 of the statement mentions two State headquarters viz., Srinagar and Jammu, the former serves for summer months, when Jammu province broils under scorching heat and latter for winter months, when the life in the Kashmir province gets benumbed because of heavy snowfall and frosty chill. This regular and seasonal movement of State Offices between these two headquarters has been in vouge from very early times.

The various symbols used in the statement are :-

N. A. : Not Available
R : River

STATEMENT—III

The statement highlights the budgetary picture as in 1968-69 of the towns which existed in the district in that year, and excludes Handwara which came into being in late seventy. The statement has two distinct parts, part first, extending over columns 3 to 9, gives the sources of revenue and part second composed of columns 10 to 16 presents the total outlay by main heads of allocation.

For convenience of study and saving printing space, the figures incorporated in the statement have been rounded off and expressed in terms of hundreds.

The inset table below brings out the per capita receipt and expenditure of all Town/Notified Area Committees of the district classified by population sizes :—

INSET TABLE NO. 4

Per Capita Receipt and Expenditure by Size Class of Towns

Class of Town	No. of towns	Receipt (Rs.)			Expenditure (Rs.)			
		Total	Through taxes	From all other sources	Total	On public health and conveniences	On public institutions	On other items
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
Class III (20,000-49,999)	2	13.71	4.53	9.18	12.58	1.78	0.15	10.65
Class IV (10,000-19,999)	..	..	..	..	..	..	..	..
Class V (5000-9,999)	1	16.43	9.55	6.88	9.98	1.77	..	8.21
Class VI (less than 5,000)	2	69.57	49.19	20.38	58.72	2.64	..	56.08

The table reveals that Gulmarg and Uri, the only two class VI towns in the district rank high in the per capita receipt and expenditure as compared with other towns falling in classes III and V, there being no class I, II and IV towns in the district. It is interesting to note that Baramula and Sopore, the two class III towns of the district, accounting for 81.56% of the total urban population of the district, rank lowest in the matter of per capita receipt and second in the matter of per capita expenditure. The two class VI towns viz., Gulmarg and Uri are placed better, largely because of their relative importance. Even though, they together, constitute only 1.49% of the total urban population of the district, Gulmarg commands immense attention as an important tourist resort and Uri as a border town. Consequently, the respective local bodies receive handsome grants, aids and loans from the Government for the upkeep of these two places. This is more so in case of Gulmarg where the demands of tourist traffic make it expendient to spend on public health conveniences.

Bandipore, the only class V town in the district stands second in the per capita receipt and lowest in the per capita expenditure, the figures being Rs. 16.43 and Rs. 9.98 respectively. The corresponding figure in respect of class III towns is : Receipt per capita Rs. 13.71 and expenditure Rs. 12.58. Baramula and Sopore-both class III-are the only towns which have made a provision for public institutions, the expenditure on this head being Rs. 0.15 per head. It may be mentioned that the expenditure on this head is quite paltry and in respect of all other towns is conspicuous by its absence, which is a glaring indication of too much dependence on Government financial assistance.

STATEMENT—IV

The statement provides useful information with regard to availability in each urban area of the district of civic amenities ; system of sewerage ; number and type of latrines ; method of disposal of night soil ; sources of drinking water ; capacity of water reserviors ; electric connections etc. The information pertains to the year 1969.

Since the statement consists of 16 columns, liberal use has been made of abbrevations in relevant columns economising on space. These are amplified below :—

Column 4

PD : Pucca Drainage
KD : Kutcha Drainage

Column 8

WB : Wheel Barrows
DS : Dumping System
TS : Trench System
H : Hand-cart
R : Thrown in River

Column 9

TW : Tube-well
S : Spring
N : Nallah

Roads :

From column 3 of the statement it will be seen that Bandipore town maintains a road length of 11 kms., which is the largest among all the towns, constituting 34.92% of the total road length in all the towns of the district. The distinct position that the town has achieved in the matter of road length is due to the fact that after the big conflagration of 1963 in which nearly whole of the town was destroyed, the Government reconstructed the town under a Master Plan, providing for a net work of roads, lanes and sub-lanes. Baramula, the district headquarter, follows with a road length of 9.0 kms. Sopore which is an equally important town of the district comes next with a road length of 6.40 kms. Handwara, which was recognised as a town in 1970 is placed at the bottom with a road length of 2.10 kms. There are no local body roads in Gulmarg, all roads, meandering through the town being directly maintained by the State P. W. D. The length of these roads is, however, not indicated in the statement as it deals exclusively with the roads maintained by the Local Bodies. It would have been interesting to know further about the classification of these roads into kutcha, pucca, etc. but no such information could become available from the concerned Local Bodies.

Drainage System :

As is evident from the statement, the system of sewerage in every town of the district is crude and archaic. There are practically no underground sewers anywhere including the two main towns viz ; Baramula and Sopore or even Gulmarg, the ideal tourist resort. The waste water including even the faecal matter is drained into the rivulets, brooks, cess-pools, underground ditches, etc. through kutcha and pucca surface drains.

Sanitation :

Water-borne latrines are conspicuous by their absence in all the urban units of the district except in the case of standard hotels and restaurants and important public institutions. The most common latrines are the service and dry type latrines, the arrangement being that the human excreta is removed by scavangers and dumped in the nearby vegetable gardens. After decomposition, it serves as manure for the growth of vegetables.

The most common instruments used in the disposal of night-soil are the wheel barrows and the handcarts. The method of dumping is also practised. The arrangement is that the garbage etc., is removed to reception centres and from thence it is carried and deposited outside urban limits in deep dug trenches. The whole method is crude and speaks of the state of the backwardness of sanitation and public health facilities persisting in the urban areas of the district.

Water Supply :

It is, however, somewhat heartening to note that all the urban units of the district enjoy potable drinking water facilities through taps fed by reservoirs of varying capacities maintained by the State Public Health Engineering Department. All the same, even this facility is far too inadequate to meet the requirements almost in all the towns excepting Gulmarg and Uri. In amplification of this point it may be mentioned here that on the basis of 30 gallons per head per day, which is the standard norm of consumption of potable water in urban areas, the capacity of reservoirs, if only to meet the requirements of population returned at the 1971 Census should have been 1,86,000 gallons in the case of Bandipore, 7,90,000 gallons in the case of Baramula, 1,51,000 gallons in the case of Handwara and 8,31,000 gallons in the case of Sopore as against 50,000, 1,05,000, 30,000 and 60,000 gallons respectively.

Fire-Fighting Facilities :

As the column 11 of the statement discloses, only 4 of the 6 towns in the district are provided with fire-fighting facilities. In the event of a conflagration in any rural part of the district besides the two towns presently not provided

with fire-fighting stations, the fire brigades are rushed from the neighbouring towns, equipped with such stations. Considering the fact that most of the areas in the district experience ravages of fire almost as a regular phenomenon causing damage to movable and immovable property worth lakhs of rupees, the existing facilities for protection against fire can by no means be considered adequate. This lends all the more urgency to the need for provision of fire-fighting stations in the towns of Handwara and Uri.

Electricity :

Baramula was the first district in the State to have earned the distinction of being the source of electricity, with hydro-electric plants at Mohra, about 38 kms. from Baramula supplying electricity to other areas of the valley. The initial capacity of this station was 3,000 kwts. After 1947 tribal invasion, in which the power house was considerably damaged, not only was it renovated but its capacity was also raised to 6,000 kwts. besides adding another hydro-electric plant with a generating capacity of 15,000 kwts. at Ganderbal, about 22 kms. from Srinagar. Inspite of these two power houses and a number of diesal stations installed at various places in the valley, the available electric supply is far too meagre to meet the growing industrial and domestic demand. Conscious of the requirements and role of electricity as an instrument of economic growth and social welfare, the State Government have already taken some big electric projects in hand, which when completed are bound to bring about alround development of the State in a big way. Sheri Electric Project in Baramula district is one of such projects with a potential capacity of 92 Mwts., which is in an advanced stage of implementation.

It will be seen from the statement that all the towns of the district are electrified and the electric connections as available in the towns have been categorised into domestic, industrial, commercial, road lighting and others. So far as domestic connections are concerned, Baramula with 2,751 such connections or 45.37% of the total number of domestic connections, in the district ranks first, followed by Sopore town, with 2,492 connections. Gulmarg with 5 connections, stands at the bottom. The information about industrial connections is particularly interesting, as providing, as it does, with a glimpse into the industrial character of the towns. Obviously, Sopore and Baramula with 219 and 40 connections respectively, are the only towns in the district speaking of the relation to the industrial development going on in these towns. In the case of other towns the number of such connections ranges between 2—4. The border town of Uri has not even one connection issued under this head.

Uri is an exception to road lighting facilities also available in other towns of the district. Respective Local Bodies cater to this facility, with 418 such connections, Baramula ranks on top, followed by Sopore with 263 connections.

STATEMENT - V

The statement, consisting of 17 columns presents a broad picture of medical, educational, recreational and cultural facilities as available in 1969 in the various towns of the district. Abbreviations used in columns 3 and 5 of the statement are amplified below :—

Column : 3

H	:	Hospital
HC	:	Health Centre
D	:	Dispensary
FC	:	Family Planning Centre
TBC	:	T. B. Clinic
LC	:	Leprosy Clinic
M	:	Mission Hospital

Column 5

ASC : Arts, Science and Commerce College.

Medical Facilities :

Column 3 of the statement indicates that all the urban units of the district are provided with medical facilities. An interesting feature of this facility is that all the towns of the district are provided with medical institutions equipped with beds to cater to in-patients. In the matter of bed strength, Baramula with 120 beds (50 in Government Hospital and 70 in Mission Hospital) stands on the top followed by Sopore with 30 beds. Among other towns, Gulmarg with 4 beds ranks at the bottom in comparison to Bandipore, Handwara and Uri with a bed strength of 10 in each case. How many beds are available per 1,000 of population is revealed by the following inset table :—

INSET TABLE NO. 5

Sl. No.	Name of Town	Total No. of beds	No. of beds per 1,000 population
(1)	(2)	(3)	(4)
1.	Bandipore	10	1.6
2.	Baramula	120	4.6
3.	Gulmarg	4	7.4
4.	Handwara	10	2.0
5.	Sopore	30	1.1
6.	Uri	10	22 6
	Total	184	2.8

It will be seen that with 10 beds Uri has the highest bed strength available per 1,000 population. This, however, turns out to be so, because of the smallness of population of this town. Gulmarg follows with a strength of 7.4 beds per 1,000 population. Amongst other towns Baramula is relatively better placed with 4.6 beds per 1,000 population. The smallest ratio of 1.1 beds per 1,000 population in the case of Sopore, an important business town, is somewhat surprising. The following inset table shows the distribution of various types of medical institutions in towns of different size-classes.

INSET TABLE NO. 6

Size-class of towns	Type of medical institution					
	Hospital	Health centre	Dispensary	Leprosy clinic	T.B. clinic	Family planning centre
(1)	(2)	(3)	(4)	(5)	(6)	(7)
III (20,000-49,999)	3	1	1	..	1	2
IV (10,000-19,999)	..	..	..	..	..	.
V (5,000-9,999)	..	2	..	1	..	1
VI (Below 5,000)	..	1	1	..	..	..
Total	3	4	2	1	1	3

As it is, all types of medical institutions except leprosy clinics are concentrated in the two class III towns viz; Baramula and Sopore. In classes V and VI in which the rest four towns of the district fall, the available medical facilities consist of 3 health centres, one dispensary, one family planning centre and one leprosy centre. There is no family planning centre in Handwara falling under class V and Gulmarg and Uri falling under class VI.

Educational Facilities :

Before examining the data incorporated in the statement, it may undoubtedly be acknowledged that the earnest attention and urgency accorded by the State Government in the post-independence period to education and its expansion has, as elsewhere, appreciably improved the position of educational institutions in the urban areas of the district. The number of schools in the six towns under reference, which in 1961 stood at 40 made up of 3 higher secondary, 5 high, 18 primary/basic activity and 14 central/middle schools has during the last eight years risen to 62 consisting of 10 higher secondary/secondary, 15 junior secondary/middle, 28 primary and 9 other schools. This makes an increase of 55%. As a result of this, the urban literacy level has gone up from 18.41 in 1961 to 30.50% in 1971. However, the fact that the literacy level in the rural and urban parts of the district put together has only reached the bare level of 13.16% shows how deep-rooted the educational backwardness of this district is and how much more attention should be paid to bring the district out of the morass of illiteracy.

The statement, under reference, gives the number of different types of educational institutions functioning in the towns of Baramula district. It will be seen that amongst the six towns, it is only Baramula and Sopore which are provided with a college-each with facilities for education in arts, science and commerce upto the degree level. They have to cater to the post-matric educational demands of not only the other towns but also of the entire rural part of the district. The lone Industrial Training Institute with facilities for vocational guidance in various trades is located at the headquarter town of Baramula.

The following inset table gives the number of higher secondary/secondary; middle/junior secondary and primary schools per 1,000 population in each town of the district :—

INSET TABLE NO. 7

Sl. No.	Name of Town	No. of schools per 1,000 population			
		All educational institutions	Higher Secondary/ Secondary Schools	Middle/ Junior Secondary Schools	Primary Schools
(1)	(2)	(3)	(4)	(5)	(6)
1.	Bandipore	0.64	0.32	0.16	0.16
2.	Baramula	0.69	0.08	0.23	0.38
3.	Gulmarg	1.84	..	..	1.84
4.	Handwara	1.79	0.40	0.20	1.19
5.	Sopore	0.61	0.07	0.22	0.32
6.	Uri	9.03	4.51	2.26	2.26
	Total	0.80	0.16	0.22	0.42

As in the case of medical facilities, Uri ranks on the top in the matter of schooling facilities with a total population of 443, the town has 2 higher secondary/secondary schools, one middle and one primary school. But then they cater to the educational requirements of most of the surrounding rural areas as well. The lowest ratio has been returned by Sopore and Baramula towns, the two biggest towns in the district. The data given in the inset table is not, however, sufficient to provide any conclusive evidence as to the relative impact of the available schooling facilities in the various towns of the district. This could better be manifest with the help of additional information such as the number of students on roll in various schools in the town, the ratio it bears to the total number of school-going childern in the town, the teacher-pupil ratio in respect of each school and the period for which the school has been existing in the town, etc.

Recreational and Cultural Facilities :

Columns 14—17 of the statement highlight information on recreational and cultural facilities available in the various towns of the district. It will be seen that these facilities are practically non-existent in almost all the towns of the district. The recreational facilities in the shape of cinemas of medium standard are, however, available in the comparatively bigger towns viz; Baramula and Sopore, the number being 2 and one respectively. Sopore is the only town in the district which has a drama hall. As regards public library facilities, it is only the towns of Baramula and Sopore which have this kind of facility with 2 and 4 reading rooms respectively.

STATEMENT - VI

The statement, spread over 14 columns, portrays the extent to which trade, commerce, industry and banking facilities are available in various towns of the district.

Columns 3—11 of the statement indicate the names of three most important commodities imported, exported and manufactured in the town. Wherever these commodities are known by their local names, these have also been given within brackets by the side of their english equivalents. Column 12 gives the number of banks, if any, functioning in the towns and columns 13 and 14 reveal the number of agricultural credit societies and non-agricultural credit societies, if any, functioning in the towns.

Before scanning the information incorporated in cols. 3—11, it would be worthwhile to mention here that the selection of the specified commodities has been made on the basis of their relative importance in each case generally by reference to their money value or quantity involved in transaction. If, however, a specific commodity has been found out to be closely linked with the reputational value of a town even though not so significant in terms of its money value or bulk transaction that commodity has been chosen, in preference, as of importance for the concerned town. Within this framework, let us see what each town/notified area has to reveal. Bandipore, a small town on the bank of the famous Wular-lake, though regarded as a servicing centre for the surrounding areas, including far-flung places like Gurez etc., is particularly reputed for the manufacture of coarse woollen blankets or 'chadries' as known locally. This constitutes an important household industry for the town, being run with the use of wooden handlooms-khadies. The raw material comes mainly from the suburbs which abound in rich grasses and pastures. The preliminary process like cleaning and spinning of wool and cotton is done in households before it goes to weavers. The price of a blanket depends on its quality and texture, besides the size. The sizes in vogue are two. One is 'ekbari' which consists of 2 breadths, each piece being $4\frac{1}{2}'$ broad and $17\frac{1}{2}'$ long, the other is of two breadths sewn together, both together being $4\frac{1}{2}'$ broad and $17\frac{1}{2}'$ long. The price of a blanket whether single or double generally ranges between Rs. 50/- to Rs. 400/-. Chadries of the types and the warmth produced in Bandipore are one of the vital defences used by a common man against the curelities of winter. The industry is, however, facing a stiff competition from the machine made woollen blankets which are softer, more beautiful and cheaper. Besides for chadries, Bandipore shares with Sopore the prominence for export of waterchest nuts (Trapa bispinosa) or 'Singhara' as called locally. A substantial portion of the yield of this commodity which for the years 1965-66—1970-71 has been reported to have been to the tune of 10 lakh quintals has gone in export outside the State. All the several varieties of Singhara generate white flowers afloat on the surface of the water on stems supported by air vessels. The fruits on ripening sink to the bottom of the lake. Singhara is found on the Dal lake also, but its home is the Wular lake in the close

vicinity of which lie the two towns of Bandipore and Sopore. The best among the varieties of 'Singhara' is known as 'Basmati' which is a small nut with a thin skin and gives 1/3rd of kernal and 2/3rds of shell. The 'dogru' and 'Kangar' are the other varieties, the former being comparatively a larger nut with a thicker shell and the latter having a very thick shell with long projecting horns giving the least kernel. The extraction and collection of black or ripe 'Singharas' generally starts from Ist November and lasts till the end of February while that of green or unripe 'Singharas' is completed between middle of April to the middle of September. The outer cover of Singharas, serves as very good fuel.

Baramula and Sopore are the only two towns of the district which have some symptoms of industrial character. The former is reputed for the manufacture of matches and medicines like Belladona, Santonin and Tinctures. The factories producing these items have been brought under public sector with raw materials coming from the State forests. The production of matches, however, caters only to a fraction of the internal demand and, therefore, stands an assured market, if taken up for large scale expansion. The santonin and other tinctures, in view of their mounting demand from outside the State, is now reckoned among the most export earning items. Besides this, Baramula is also known for its stone slabs which are extracted from the surrounding quarries. These are largely used by the sanitary fitters for covering of pits, besides being used for construction work. Sopore, on the other hand, has won a name in the production of flour, canned james and in the export of fish, fruit, sawn timber and saw dust. The areas in and around the town are covered with orchards producing maryiad varieties of apples like Delicious, French, American, Maharaji and Ambri etc. Fruit worth lakhs of rupees is annually exported outside the State. Fish also goes in sale outside the town in large quantity. On an average 60—70 maunds of fish go out to the suburbs and other areas of Kashmir province daily.

Gulmarg, Handwara and Uri are the three towns which owing to their proximity to the forests are in a position to produce milk products and minor forest products for sale in other parts of Kashmir province. Uri, which is skirted by high steep forests is reputed for the supply of mushrooms or 'Ghuchhian' as called locally. It is an underground smut which makes into a delicious dish on cooking.

Banking Facilities :

Column 12 of the statement brings out the extent to which banking facilities are available in the urban units of the district. It will be seen that Uri is the only exception to an otherwise encouraging position. Sopore with five banks has the distinction of being on top of the other towns of the district in matter of banking facilities. Bandipore and Gulmarg rank lowest in this sphere, the number of banks being one in each case. The position of Baramula, the headquarter town of the district, is also not very enviable, having only two banks particularly when even Handwara has three. No hasty conclusion, however, need be drawn in the absence of any information about the relative business turn over of these banks.

Agricultural Credit Societies :

As is evident from column 13 of the statement, all the town/notified areas excepting Gulmarg are provided with agricultural credit societies. Their role in ameliorating socio-economic ills of the people can hardly be over emphasised. Sopore, with five such societies leads in the enjoyment of these facilities also. Other towns do not have more than one such society in each case.

Non-agricultural Credit Societies :

As is evident from column 14 of the statement non-agricultural credit facilities are conspicuous by their absence in almost all the towns of the district. Sopore is the sole exception with two such societies.

STATEMENT - VII

This statement gives the distribution of the population of each town of the district as returned at the 1971 Census on the basis of religion for males and females separately.

Religion is an important and one of the basic cultural characteristic of population. From the statement it is quite evident that all the urban units of the district are multi-religious. Viewed in the aggregate, the distribution of the entire urban population of the district by various religions emerges as under :—

INSET TABLE NO. 8

Religion	Urban Population	
	Total	Percentage
(1)	(2)	(3)
All Religions	*66,243*	*100.00*
Buddhist	6	0.01
Christian	155	0.23
Hindu	5,703	8.61
Muslim	57,694	87.09
Sikh	2,680	4.05
Others	4	0.01
Religion not stated	1	Negligible

The table reveals that as for the whole district in the urban areas also, Muslims constitute the most predominant part of the population, claiming more than 87%. Hindus follow with a numerical strength of 5,703, constituting 8.61% of the total urban population. From the remaining 4.30% of the total urban population, Sikhs claim 4.05% followed by Christians with a proportion of 0.23%. The number of Buddhists and others is insignificant, their proportion being 0.01% in each case.

It would be interesting to see how each religion is represented in various towns/notified areas of the district.

Buddhists :

Of the total number of 342 Buddhists in the district, only 6 or 1.75% were returned at the 1971 Census in its urban areas, of whom 3 were in Sopore, 2 in Baramula and one in Handwara. No Buddhist has been returned from Bandipore, Gulmarg and Uri. All the 6 Buddhists returned from three towns of the district are males which clearly indicates that they are not normal residents living in normal households in these towns, but may have been there in pursuit of livelihood.

Christians :

Of the total number of 270 Christians returned in the whole district at 1971 Census, 155 or 57.41% have been returned in the urban sector. Here also their concentration is confined to Baramula town to the extent of 148, the remaining 7 having been returned from Sopore.

The sex ratio of this small urban population of Christians gives 722 females for 1,000 males which is evidently much lower than the over all urban sex ratio in the district.

Hindus :

Of the total Hindu population of 21,237 in the district made up of 14,083 males and 7,154 females, 5,703 (3,228 males and 2,475 females) live in the urban part. 45.29% of them are concentrated in Baramula town alone. Another 34.39% of them are in Sopore town. The remaining 20.32% are distributed in the other 4 towns in the ratio of 9.96% in Handwara, 5.73% in Uri, 3.03% in Bandipore and 1.60% in Gulmarg. Considering the proportion Hindus make to total population in individual towns, Uri, a small border town, stands out prominently with the Hindu population constituting 73.81% of the total population of this town. Gulmarg follows with a proportion of 16.76%, Bandipore with a proportion of 2.79% ranks at the bottom.

The overall urban sex ratio of this community stands at 767 females per 1,000 males which is less than the district average of 848 females per 1,000 males. In Baramula town where they are concentrated in the largest proportion, Hindus show a sex ratio of 806 females per 1,000 males which is better than the overall urban sex ratio.

Muslims :

Muslims, who constitute 87.09% of the total urban population, are predominantly concentrated in the two big towns of Sopore and Baramula, Sopore claiming 44.42% and Baramula 36.68% of them. The remaining 18.90% are distributed in the other 4 towns, in the ratio of 10.40% in Bandipore, 0.75% in Gulmarg, 7.65% in Handwara and 0.10% in Uri.

The urban sex ratio of this religious community works out at 869 females per 1,000 males which is slightly more favourable than the overall urban sex ratio. Taking individual towns into consideration, Gulmarg and Uri give out a comparatively much lower sex ratio of females to males. Both are small towns with most of the tradesmen drawn from outside, constituting single member households. In all the other towns Muslims show a comparatively favourable sex ratio as compared to other communities.

Sikhs :

Of the total number of 9,803 Sikhs living in the district, 2,680 persons or 27.34% belong to the urban sector. They are found in varying proportions in almost all the towns of the district,

but their main concentration is in Baramula town which claims 90.93% of them. Their number in all other towns is rather insignificant and ranges between 1% and 3% of the total urban Sikh population.

The urban sex ratio of this community works out at 869 females per 1,000 males which is much better than the corresponding sex ratio of 835 females per 1,000 males returned for the community at the State level. Coming down to individual towns, the sex ratio of the community in Uri, Bandipore and Baramula is particularly favourable, the number of females per 1,000 males being 968, 941 and 914 respectively.

EXPLANATORY NOTE ON VILLAGE DIRECTORY

Data Content :

The Village Directory which constitutes an integral part of this publication is intended to provide a glimpse into the socio-economic, recreational, cultural and demographic life of each village of the district. It gives succinct details of the amenities available in each village in such fields as area ; educational and medical facilities ; power supply; drinking water; communication; post & telegraph facilities; land use pattern; distance of the village from the nearest town; day or days of market/hat and places of religious, historical and archaeological importance.

The Village Directory was brought out as part of the District Census Handbook for the first time in 1961 and those of the readers who might have gone through the publication would find that more information has been added in the directory this time. The object of including data on staple food, land use, amenities, distance from the nearest town, market days etc. is to facilitate the study as to what socio-economic changes have taken place in the rurality of the district during the last ten years.

Appendices :

The Village Directory is supplemented with the following appendices :-

Appendix-I : gives the list of villages of each tehsil arranged in an alphabetical order along with location code number alloted to each such village at the 1971 Census.

Appendix-II : presents tehsil-wise abstract of educational, medical and other amenities.

Maps :

The publication has been supplemented with the following detailed maps :-

1. District map depicting tehsil boundaries and location of towns.
2. Tehsil map indicating boundaries of each village and town within the tehsil, illustrating by suitable symbols population and various amenities available in villages and towns.

Abbreviations :

Due to limitations of printing space in the statement designed to present this information, liberal use has been made of the following abbreviations :-

O	:	Other than Canal and River

Definition of Village :

The definition of a village as well as the changes that this concept has undergone right from 1901 to 1971 has been amply explained in the District Census Handbook of Anantnag. However, for the facility of readers, a brief outline of the same may be worthwhile here. According to the definition adopted in 1901, an area whose residential houses were clustered together or if sparsely located were separated from other similar areas by natural barriers, such as rivulets, khuls, hillocks, fields etc., was treated a village. In 1911, a village was defined as an area already settled or under settlement, a territorial or revenue village which had been duly surveyed, demarcated and treated as a unit for purposes of assessment. In 1921, however, a village was defined as the smallest unit of administration which was separately assessed to land revenue. This definition in 1931 was subjected to variation according to local conditions and was also followed in 1941. There was no Census in 1951 owing to the abnormal conditions prevailing then in the State. In 1961 a village was defined as an area with well defined boundaries for revenue assessment having residential houses densely or sparsely populated irrespective of the number of hamlets flanking it. In accordance with this definition, every revenue mauza was treated as a census village in all the areas of the State territory. This definition was adopted for 1971 Census also.

It may not be out af place to mention here that it was in 1961 for the first time that a uniform definition of what constitutes a village was adopted in for the whole country. Due to varying pattern of village settlements obtaining in different parts of the country this had always eluded successive censuses in the past since 1872.

Rural Area :

The rural part of the district, which extends to an area of 2,072.26 km^2 is composed of 1,032 villages, of which 1,008 are inhabited and 24 un-inhabited. On the basis of number of villages, Baramula ranks third largest among all the districts of the State, the first and second being Anantnag and Jammu districts. In 1961 Census, the district comprised, 1,064 villages, but because of inter and intra-district jurisdictional changes during the last decade, the number got reduced to 1,032 villages. This is accountable to the transfer of 7 villages to Srinagar district, amalgamation of 34 villages into 16 villages and inclusion of 12 villages under urban limits. In the meanwhile, however, there was an increase of 5 villages by creation of the new village of Pernal in Karnah tehsil and denotification of four towns viz., Ajas, Hajan, Palhalan and Sumbal of Sonawari tehsil.

With the creation of 3 more tehsils viz, Bandipore, Gulmarg and Kupwara, the district is now administratively divided into 9 instead of 6 tehsils. With this measure the district has come to achieve greater cohesion in its administrative set up. Among the tehsils, Handwara with 183 villages within its jurisdiction, is the largest tehsil of the district followed by Baramula and Sopore tehsils which account for 165 and 138 villages respectively. Karnah with only 49 villages within its fold is the smallest tehsil of the district. The sub-joined table gives the number of inhabited, un-inhabited and un-administered villages in respect of each tehsil of the district.

INSET TABLE NO. 9

S. No.	Name of tehsil	Number of villages				Remarks
		Total	Inhabited	Un-inhabited	Un-administered	
(1)	(2)	(3)	(4)	(5)	(6)	(7)
1.	Bandipore	73	73	..	..	73 villages and one town transferred from Sopore tehsil.
2.	Sonawari	86	83	3	..	..
3.	Sopore	138	136	2	..	..
4.	Baramula	165	164	1	..	..
5.	Gulmarg	101	100	1	..	101 villages and one town transferred from Baramula tehsil.
6.	Uri	100	91	3	6	..
7.	Handwara	183	179	4	..	..
8.	Karnah	49	46	..	3	..
9.	Kupwara	137	136	1	..	137 villages transferred from Handwara tehsil.
	Total	*1032	1008	15	9	

NOTE :—* Excludes forest/boat blocks.

Villages by Area :—

The following table gives the tehsil-wise distribution of villages by area :—

INSET TABLE NO. 10

Distribution of Villages with reference to their area (Area in acres)

S.No.	Name of tehsil	50 or less	51-100	101-200	201-500	501-1,000	1,001-2,000	2,0001-5,000	Total No. of villages
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
1.	Bandipore	..	5	13	28	15	11	1	73
2.	Sonawari	4	5	7	23	24	15	8	86
3.	Sopore	2	11	29	46	33	15	2	138
4.	Baramula	1	13	27	76	30	17	1	165
5.	Gulmarg	3	24	31	32	7	3	1	101
6.	Uri	2	8	16	22	21	23	2	94
7.	Handwara	2	22	35	82	38	4	..	183
8.	Karnah	..	5	10	17	10	4	..	46
9.	Kupwara	4	10	20	45	40	16	2	137
	Total	18	103	188	371	218	108	17	1,023

This and all the subsequent tables are exclusive of 9 unadministered villages (6 falling in Uri and 3 in Karnah tehsil) the area of which is not available.

It will be seen that the area group 201-500 acres claims 36% of the total number of villages in the district which is the largest proportion claimed by any size category. Next comes the area size category 501-1,000 acres accounting for a proportion of 21.31% of the total villages. It is interesting to note that the number of villages in the lowest size category 50 acres or less and the upper category 2,001-5,000 acres is the least being 18 and 17 respectively. There is no village in the district with an area of 5,001 acres or more. By and large the same picture is reflected at the tehsil level also with slight variation in individual cases.

Education :

According to the information available for the year 1968-69, there are 1,072 educational institutions, consisting of 801 primary/basic activity schools/patshalas, 195 central/middle schools and 76 lower high/high/higher secondary schools in the rural areas of the district. The corresponding number of educational institutions in 1961 was 599, comprising 489 primary/basic activity, 82 central/middle and 28 lower high/high/higher secondary schools. This shows that the number of schools of various kinds has registered an increase of more than 78% during the last eight years which by any standard is a significant achievement. Inspite of this sizeable expansion in educational facilities, the literacy level in the district persists to be far too low and if Ladakh is left apart, Baramula ranks at the bottom among all the districts of the State. The educational backwardness of the district is deep rooted. Education was a neglected subject in the pre-independence era throughout the rurality of the State. The circumstances of Baramula district were more adverse in that major part of the district consisting of far-flung and hilly areas which in the absence of communication facilities, could hardly attract adequate attention of the Government.

The real effort towards economic, social and educational upliftment began only after independence and from that stand-point the progress achieved is by no means insignificant.

The following inset table gives an idea about the availability of schooling facilities by reference to their distance from the nearest town :—

INSET TABLE NO. 11

Educational amenities with reference to the distance of villages from the nearest town

Distance from the nearest town (in kms.)	Total No. of villages	Number of villages having									
		All types of educational institutions	Percentage	Primary/ Basic Activity/ MKT/ Pathshalas	Percentage	Middle/ Central Schools	Percentage	Lower High/ High/ Hr. Sec. Schools	Percentage	Others	Percentage
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)
5 or less	125	104	83.20	72	57.60	24	19.20	8	6.40	..	..
6—10	235	184	78.30	129	54.89	43	18.30	12	5.11	..	..
11—15	212	186	87.73	123	58.02	42	19.81	20	9.43	1	0.47
16—25	236	203	86.02	155	65.68	31	13.14	17	7.20	..	..
26—50	140	131	93.57	93	66.43	30	21.43	8	5.71	..	..
51—100	57	51	89.47	38	66.67	8	14.03	5	8.77	..	..
101—200	18	15	83.34	13	72.22	1	5.56	1	5.56	..	..
Total	1,023	874	85.44	623	60.90	179	17.50	71	6.94	1	0.10

It will be seen that over 85% of all the villages, whatever their distance from the nearest town, are provided with schooling facilities. While as the villages at a distance of 26-50 kms. from the nearest town are on the top with 93.57% of them already equipped with these facilities, the position of other villages whether more or less away from the nearest town is no less satisfactory. Considering the progress already achieved it appears to be no distant a goal to fulfil the long cherished target of covering every village with a school.

This s, of course, so in so far as the elementary education is concerned. Much, however, remains to be done for the provision of middle and higher stage schooling. The proportion of villages provided with middle schools is only 17.50%. Similarly the proportion of villages covered with high/higher secondary schools is bare 6.94%. Distance from the nearest town has hardly any influence on this poor position. It is only when adequate ground is covered in the matter of higher education that social and economic transformation of any significance can be expected to take firm roots in our villages. A more intensive effort on this front is, therefore imperative.

Medical Facilities :

Column 5 of the statement shows that there are 126 medical institutions in the rural part of the district made up of 84 dispensaries, 10 health centres and 32 family planning/first aid/sub-centres. The corresponding number of such institutions in 1961 stood at 55, comprising 49 dispensaries and 6 health centres. The number of medical institutions has thus more than doubled during the last eight years. As a consequence, there is now one medical institution for every 5,631 persons in the rural part of the district as against one institution for every 9,891 persons in 1961, notwithstanding a growth of 30.42% in the rural population of the district during the intervening period.

The following inset table brings out the area-institution ratio which may give an idea about the actual dispersal of these institutions.

INSET TABLE NO. 12

Medical Facilities per 100 sq. kms.

Sl. No.	Name of Tehsil	Total village paper area (in km²)	No. of medical institutions of any kind	No. per 100 km²
(1)	(2)	(3)	(4)	(5)
1.	Bandipore	156.89	12	8
2.	Sonawari	300.48	14	5
3.	Sopore	278.04	13	5
4.	Baramula	315.27	22	7
5.	Gulmarg	108.40	7	6
6.	Uri	254.13	13	5
7.	Handwara	272.50	17	6
8.	Karnah	80.67	8	10
9.	Kupwara	305.88	20	7
	Total	2,072.26	126	6

It will be seen that area-medical institution ratio, ranges from 5 institutions per 100 sq. kms. in the case of Uri, Sopore and Sonawari tehsils to 10 institutions per 100 sq. kms. in the case of Karnah tehsil.

Power Supply :

Even though the State's first Hydraulic Power Station is located in Mohara village of Baramula district. By 1961, only 15 out of total number of 1,039 inhabited villages of the district stood electrified. The number of electrified villages has now risen to 107. In other words, the proportion of electrified villages has gone up from 1.4% in 1961 to 10.46% in 1969. This is obviously good progress, but looks insignificant when viewed from the stand-point that there are still 90% villages which continue to be immersed in darkness.

The following inset table brings out the position of electrified villages by reference to distance from the nearest town :—

INSET TABLE NO. 13

Distance from the nearest town (in kms.)	Total No. of villages	No. of villages with electric power supply	Percentage of electrified villages to total No. of villages
(1)	(2)	(3)	(4)
5 or less	125	21	16.80
6—10	235	27	11.49
11—15	212	30	14.15
16—25	236	18	7.63
26—50	140	10	7.14
51—100	57	1	1.75
101—200	18	..	..
Total	1,023	107	10.46

It will be seen that villages falling at shorter distance from the nearest town have a slight edge over those falling at longer distances in the matter of electrification. The reason is obvious. It is economically as well as operationally more convenient to extend the lines around the already electrified area than extending them far to beyond. However, with the fructification of various power generation projects, particularly that of Lower Jehlum Project, provision of electricity to most of the villages of the district will be within easy reach.

Communication :

Communication constitutes one of the basic items of infra-structure for social and economic development. Column 8 of the Village Directory shows that 769 out of 1,023 villages or 75.17% of the total villages in the district are now connected by roads. Of these, 340 or 44.21% villages are connected by pucca roads and 429 or 55.78% by kutcha roads. This is indeed a significant record progress, particularly when viewed in the context of the past position which was marked by more or less total lack of such facility.

A rail-line, of course, continues to be conspicuous by its total absence as much in this district as in other districts of the valley. If, however, the

proposed circular railway system for the valley takes concrete shape, it is bound to change the face of all rural areas including those of Baramula district.

The following inset table gives the channels of communication available to various villages of the district by reference to their distance from the nearest town :-

INSET TABLE NO. 14

Distance from the nearest town (in kms.)	Total No. of villages	Number of villages connected by		
		Pucca road	Kutcha road	Pucca road & river
(1)	(2)	(3)	(4)	(5)
5 or less	125	57	48	1
6—10	235	80	104	1
11—15	212	73	79	..
16—25	236	88	82	..
26—50	140	40	75	..
51—100	57	..	26	..
101—200	18	..	15	..
Total	1,023	338	429	2

It will be seen that none of the villages located beyond a distance of 50 kms. from the nearest town are connected by a pucca road.

Villages nearer a town are expectedly better placed in this sphere. From out of the villages located at a distance of 5 kms. or less as many as 45.60% are linked by pucca roads and this proportion reduces to 28.57% for villages located at a distance of 26-50 kms.

Post and Telegraph Facilities :

The total number of villages equipped with post offices, telegraph offices and telephone facilities in the district is 146,4 and 5 respectively.

The following inset table indicates the availability of post offices by reference to area :-

INSET TABLE NO. 15

Sl. No.	Name of Tehsil	Total village paper area (in km²)	Total No. of post offices	No. of post offices per 100 Km²
(1)	(2)	(3)	(4)	(5)
1.	Bandipore	156.89	15	10
2.	Sonawari	300.48	11	4
3.	Sopore	278.04	21	8
4.	Baramula	315.27	24	8
5.	Gulmarg	108.40	11	10
6.	Uri	254.13	13	5
7.	Handwara	272.50	23	8
8.	Karnah	80.67	5	6
9.	Kupwara	305.88	23	8
	Total	2,072.26	146	7

It will be seen that Sonawari, comparatively a bigger tehsil in area, ranks at the bottom, with a ratio of only 4 post offices per 100 km². On the other hand, Gulmarg and Bandipore, lead with a ratio of 10 post offices per 100 km². This is perhaps because of the relative importance wielded by Gulmarg as a tourist centre and Bandipore as a service centre for Gurez valley and areas around. Sopore, Baramula, Handwara and Kupwara equally important tehsils follow with 8 post offices per 100 km² each.

Staple Food :

According to the available information, majority of villages in the district have returned rice as their staple food. Maize or wheat serves as staple food only in such areas as are located on high altitudes and Kandi areas as also villages of Gurez and Lolab valleys where sources of irrigation are deficient. It is for this reason that in most of the tehsils maize or wheat constitutes a co-staple food for its villages.

Land use Pattern :

The land use pattern, as maintained by the Revenu Department has been classified into the following 9 categories :-

I. Forests :

This includes all actually forested land (other than maintained by Forest Department) classified or administered as forests under any legal enactment, dealing with forests whether State owned of private.

II. Land put to Non-Agricultural uses :

This includes all lands occupied by buildings, roads, railways of underwater including rivers and canals.

III. Barren and Unculturable Land :

This includes all barren and unculturable land like mountains, deserts, etc., and lands which cannot be brought under cultivation except at an exorbitant cost.

IV. Permanent Pastures and Other Grazing Lands :

This includes all grazing lands whether they are permanent pastures and meadows or not, covering also village commons and grazing lands within forest areas.

V. Land under Miscellaneous Tree Crops :

This includes all cultivable land which is not included in net area sown but is put to some agricultural use. It also includes lands used for thrashing grasses, bamboo bushes and other groves for fuel etc.

VI. Culturable Waste :

It includes all such lands as are available for cultivation, but not taken up for cultivatlon continuously for more than 5 years.

VII. Fallow Land other than Current Fallows :

It includes all lands which were taken up for cultivation, but have been temporarily out of cultivation for a period of not less than one year and not more than 5 years.

VIII. Current Fallows :

This represents cropped area which is kept fallow during the current year.

IX. Net Area Sown :

This represents net area sown with crops and orchards, the areas sown more than once during the year being counted once only.

For consideration of economy in space, the nine-fold classification of land use as explained above has been reduced into the following four categories for purposes of this publication :—

I. Forests

II. Cultivated Land

a) Irrigated

b) Un-irrigated

III. Culturable waste

IV. Area not available for cultivation.

The following inset table gives the tehsil-wise picture of land use statistics on the basis of the above classification :—

INSET TABLE NO. 16

Tehsil-wise Land Use Pattern (in acres)

Sl. No.	Name of Tehsil	Forest	Cultivated land	Irrigated	Un-irrigated	Culturable waste	Area not available for cultivation
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
1.	Bandipore	91	21,212	7,358	13,854	10,502	6,964
2.	Sonawari	46	51,272	21,112	30,160	10,457	12,475
3.	Sopore	156	53,055	24,875	28,180	7,540	7,954
4.	Baramula	120	61,077	23,870	37,207	9,145	7,562
5.	Gulmarg	103	18,114	12,053	6,061	2,897	5,673
6.	Uri	1,961	16,668	6,749	9,919	23,489	20,678
7.	Handwara	594	48,465	21,311	27,154	10,854	7,422
8.	*Karnah	46	6,766	2,481	4,285	3,336	9,456
9.	Kupwara	36	50,506	31,642	18,864	12,309	12,732

* Excludes classification of 329 acres of un-administered villages.

It will be seen that the village paper area of the rural part of Baramula district stands at 5,12,062 acres, constituting 27.99% of the geographical area of the district. The cultivated land, which adds upto 3,27,135 acres, forms 63.89% of this area. The proportion of other categories is as under :—

1. Forest=0.62%
2. Culturable waste=17.68%
3. Area not available for cultivation=17.75%

Of the total cultivated land, only 46% is irrigated; that as much as 54% of the cultivated area still continues to be subject to the vagaries of natural rainfall brings into the focus the extent of inadequacy of the available irrigation facilities. Down at the tehsil level we find that with an acreage of 61,077 acres of cultivated land which works out to 0.57 acres per capita, Baramula is on top of other tehsils. However, Gulmarg and Kupwara have the distinction of commanding a fairly high percentage of irrigated land, the proportion being of the order of 66.54% and 62.65% respectively. In the case of Sonawari, Sopore and Handwara tehsils the per capita cultivated land stands at 0.53 acres each, Karnah which is the smallest tehsil of the district has also the lowest proportion of irrigated land-36.67% only. Even the per capita cultivated land is the lowest in the tehsil-0.31 acres only. In so far as Baramula tehsil is concerned, while as much as 78.40% of its village paper area is cultivated, the proportion of its irrigated cultivated land is as low as 39.08%.

PART X-B

VILLAGE AND TOWNWISE PRIMARY CENSUS ABSTRACT

PRIMARY CENSUS DATA

This part of the publication embodies primary census data based on 1971 Population Census giving in respect of each village and block/ward/ mohalla of each town of the district, information on such items as area; occupied residential houses; number of households; total population and its break-up by sex; scheduled caste population literate and educated persons; working population by nine industrial categories and non-working population. All this data has been presented in the form of a statement spreading over 38 columns. The salient points of this data are discussed below :—

Household Size :

As per 1971 Census, the total population of the district is 7,75,724 persons, which is distributed in 1,21,609 households. This gives an average household size of 6.4 for this district as against 6.0 for the State as a whole. Coming down to tehsil level, the position is more or less the same except of course in the case of Sopore and Gulmarg tehsils where the average size of household is 7.0 and 5.7 respectively. Even between the rural and urban household size no significant variation obtains at the district level. At the tehsil level, however, Sopore, Gulmarg and Uri form an exception to this phenomenon. While in the case of Sopore tehsil, the urban household size is 7.3 as against the rural household size of 6.9 in that of Gulmarg and Uri tehsils, the urban household size is 2.5 and 5.8 respectively as against the corresponding rural size of 5.8 and 6.6.

Another characteristic which deserves mention here is that at the 1971 Census, the number of occupied residential houses in the district stood at 97.215. This gives an average of 7.98 persons per occupied residential house as against the State average of 6.92 persons. Going down to the tehsil level the ratio is even larger in the case of Sopore and Baramula, the average number of persons per residential house being 8.98 and 8.31 respectively. As between rural and urban areas Gulmarg and Uri are the only tehsils where urban ratio is lower than rural ratio. This is because of slow urbanization in these two tehsils for obvious reasons. In all other tehsils the urban ratio is significantly higher. Particular mention may be made of Sopore and Baramula towns where the number of persons per occupied residential house is 10.15 and 9.77 respectively as against corresponding rural ratio of 8.71 and 8.02. This is indicative of the pressure released by growing urbanisation of these towns on the available residential housing stock. Notwithstanding this position there is no problem of houseless population in the district. The 1971 Census has recorded only 175 persons in the whole district as houseless.

Population and its growth :

With a population of 7,75,724 persons, made up of 4,19,862 males and 3,55,862 females constituting 16.80% of the total population of the State, Baramula is the third populous district of the State, the first two being Anantnag and Srinagar. The 1961 Census population of the present jurisdiction of the district was 601,351 persons made up of 322,859 males and 278,492 females. The district has thus registered a growth of 29.0% during the decade which is the highest among the three valley districts though slightly lower than the State level growth of 29.65%. Amongst the tehsils, Sopore, contributing 16.48%, of the population of the district has recorded a much higher growth of 35.90% during the decade followed by Sonawari tehsil with a growth of decadal of 34.0%. The headquarter tehsil of Baramula, which is the second largest tehsil of the district in population has recorded a growth of 31.54% during the last ten years. The lowest growth of 19.22% has been recorded by Karnah tehsil which is otherwise also the smallest tehsil of the district constituting a bare 2.84% of its population. A low growth of 19.29% has been recorded by Uri tehsil also which is another border tehsil of the district constituting 6.47% of its population. Bandipore, Kupwara and Gulmarg the 3 newly carved out tehsils, constituting 9.23%, 18.02% and 4.77% of the total population of the district have, however, recorded a corresponding growth of 28.17%, 26.12% and 20.08% respectively. Handwara tehsil which contributed 12.38% population of the district has registered a growth of 28.42%.

With 91.46% of its population still concentrated in its villages, Baramula continues to be overwhelmingly rural in character. The very low proportion of 8.54% of its urban population pales into

insignificance even in comparison to the low urban proportion of 18.59% at the State level. Three tehsils of the district namely Sonawari, Kupwara and Karnah are entirely rural. And even amongst the other tehsils Handwara, Gulmarg, Uri and Bandipore constitute as little as 18.44% of the total urban population of the district. Whatever little the urban population of the district has is mainly concentrated in Sopore and Baramula tehsils which together constitute 81.56% of this population.

Sex Ratio :

The Sex distribution of the population shows that there are 848 females per 1,000 males in the district. At the 1961 Census this ratio was 863 females per 1,000 males. It thus appears that during the last ten years the gap between males and females has further condensed in this district. The sex ratio in the district compares un-favourably even with most of the other districts of the State. No specific explanation can be given in support of this phenomenon. It is, however, a common observation that females generally suffer extra risks of mortality right from birth to old age which leads to higher death rate in their case. Relative social neglect and high incidence of maternity deaths are among other factors contributing to this position.

At the tehsil level, the lowest sex ratio has been returned in the case of Sonawari and Gulmarg with 831 and 821 females per 1,000 males respectively. On the other hand Sopore, Uri, Baramula and Bandipore tehsils have recorded a sex ratio of 874,855,851 and 849 females per 1,000 males respectively which is somewhat higher than what it is for the district as a whole. In the remaining three tehsils namely Karnah, Kupwara and Handwara a lower ratio of 845,841 and 840 females per 1,000 males has been returned. A more adverse female sex ratio prevalent in these tehsils as also a Gulmarg can mostly be attributed to the fact that a large proportion of their population lives in hilly areas with little facilities available to them in the field of medical care and maternity welfare.

Literacy Level :

While with a level of 18.58% the State itself ranks at the bottom among other States of India in literacy, the position of Baramula district is still worse. With a literacy level of 13.16%, the district takes the lowest position among other districts of the State barring Ladakh. For the two sexes separately the literacy level works out to be 21.01% for males and 3.89% for females. However, compared to the position obtaining in 1961, when the proportion of literate population in the district stood at 7.93% (13.39% for males and 1.59% for females), the progress made during the last ten years is not very insignificant.

At the tehsil level, Baramula with a literacy percentage of 18.14% (26.61% for males and 8.20% for females) ranks on top, followed by Sopore with a literacy level of 15.67% (24.04% for males and 6.10% for females). On the other hand, Sonawari tehsil is placed at the bottom with a literacy level of 8.91% (15.28% for males and 1.25% for females). The picture is more or less the same in other tehsils also except for Bandipore where the proportion of literate population (14.24%) is slightly higher than what it is for the district as a whole.

The difference between rural and urban literacy levels is, however striking, the former being only 11.54% as compared to 30.50% in the case of latter. Considerable effort and attention on the part of the Government is indicated not only to minimize the rural, urban disparity, but also to push up the literacy in both the sections to a fairly reasonable level.

It needs be pointed out here that the literacy rates discussed here are inclusive of the population in the age group 0—4.

Work Participation :

The number of workers in Baramula district, as returned at the 1971 Census, stood at 2,40,913. This gives a proportion of 31.06% to the total population of the district. For both sexes, the work participation rate works out to be 55.23% for males and 2.53% for females. In 1961 however, the proportion of workers to total population of the district was 46.69% (61.24% for males and 29.82% for females). The apparent drop in the work participation rates in 1971 as compared to 1961 need not sound intriguing. This is primarily due to the different definitions of 'work' adopted at the two censuses. For convenience of reference, these are reproduced here :—

1971 Census Definition of Worker :

Every person was asked what his main activity is, that is, how he engaged himself, mostly. For

the purpose of this question, all persons got themselves divided into two broad streams of main activity, namely (1) workers and (2) non-workers according to the type of main activity that the person returned himself or herself engaged in mostly.

A 'worker' was a person whose main activity was participation in any economically productive work by his physical or mental activity 'work' involved not only actual work but effective supervision and direction of work.

The reference period was one week prior to the date of enumeration in the case of regular work in trade, profession service or business. If a person had participated in any such regular work on any one of the days during this reference period and this had been returned as his or her main activity, the person was categorized accordingly. A person who normally worked but had been absent from work during this reference period on account of illness or travel, holiday, temporary breakdown strike etc., the person was treated as engaged in regular work in which he or she should have otherwise been employed, but for his or her temporary absence. Persons under training such as apprentices with or without stipends or wages were considered as economically active and recorded as working. A person who had been merely offered work but had not actually joined it, was not to be treated as engaged in work.

There are certain types of work which are not carried on throughout the year such as cultivation, livestock keeping, plantation, some types of household industry etc. A person's main activity was ascertained with reference to such work in the last one year even if he or she was not economically active in the week prior to enumeration. It was likely that even when a person otherwise engaged in some other work during the period of one week prior to the date of enumeration, had as his or her main activity, cultivation, agricultural labour or some other work attended to normally by him or her in the course of the year. Care was taken to see that the main activity was properly ascertained in such cases. For example, a person's main activity may have been agricultural labour and in the week prior to enumeration he or she may have been engaged as a sugercane factory labourer or as a road coolie. He or she was categorised for his or her main activity as agricultural labourer only as he or she engaged himself or herself mostly in that work and the other work was treated as his or her subsidiary work.

A man or woman who was engaged primarily in household duties such as cooking for own household or performing own household duties or a boy or a girl who was primarily a student attending an educational institution, though at the same time helping in the family economic activity but not as a full time worker, was not treated as a worker for the main activity. On the other hand, if a person was primarily engaged in some economic activity but at the same time attended to some household chores or attended a night school etc., he or she was treated basically as a worker for the main activity and categorised accordingly.

A person who merely received an income such as a rent receiver or a pensioner who had not to work for receiving the income was not treated as economically active unless the person was also engaged in some economic activity and only if that activity was returned as the main activity of the individual.

1961 Definition of Worker :

The basic qualifications of the definition of 'work' was satisfied at the 1961 Census in the case of seasonal work like cultivation, livestock, dairying, household industry etc., if the person had some regular work of more than one hour a day throughout the greater part of the working season. In the case of regular employment in any trade, profession, service, business, or commerce, the basis was satisfied if the person was employed during any of the fifteen days preceding the day on which the household was enumerated. If on check of revisional round such a person was found to be un-employed, no change in the original entry was to be made. A person who was working but was absent from his or her work during the fifteen days preceding the day on which enumerated or even exceeding the period of fifteen days due to illness or other causes was treated as worker. A person who had been offered work, but had not actually joined was treated as non-worker. However, as in the case of 1971 Census, 'work' included not only actual work, but effective supervision and direction of work.

Persons under training as apprentices with or without stipend or wages were regarded as working. An adult woman who was engaged in household

duties but doing no other productive work to augment the family's resources was not considered as working for the purpose of this question. If, however, in addition to her household work such as rice pounding for sale or wages, or in domestic service for wages for others or minding cattle or selling fire wood or making and selling cow-dung cakes or grass etc., or any such work, she was to be treated as worker.

A public or social service worker who was actively engaged in public service activity or a political worker who was also actively engaged in furthering the political activity of his or her party was regarded as a worker and entered accordingly.

It is evident that the 1961 definition of work was on the liberal side and was bound to have exaggerated the position of work participation rates of the population. As already explained, under this definition a person was categorised basically as an economically active worker even if such a person's contribution to work was extremely marginal. In respect of seasonal work, if a person had put in an hour's work a day during the major part of a working season, such a person was treated basically as an economically active worker. So much so, if a woman who was basically engaged in attending to household duties or assisting her husband even for about an hour in-tending cattle, in any process of cultivation, in household industry or any other economic activity, she was un-ambiguosly returned as a worker. Similarly a full time student, if he or she sat for a little time however brief, in his or her father's shop even on a single day in a fortnight preceding the enumeration, he or she was treated as an economically active worker.

At the 1971 Census every individual was required to declare himself or herself what according to him or her was his or her main activity. If his or her answer indicated that he or she was economically active worker, he or she was classified as working as a cultivator, or as an agricultural labourer or engaged in household industry or in other work, such as, forestry, mining, manufacture, trade, transport, services, etc. If a person returned himself or herself basically as not engaged in any economic activity, such a person was required to state if he or she was engaged in household duties, or was a student, a retired person or a rentier, a dependant, a beggar or a vagrant, inmate of a charitable or penal institution or other non-worker such as being mostly an unemployed person he or she was returned as a non-worker. In addition, at this Census every one was also asked to state if he or she attended to any secondary work for the purpose of finding out his or her marginal contribution to work in the case of those who had declared themselves basically as a house wife or a full-time student.

The work participation figures as presented in the P. C. A. by nine standard Industrial Categories relate to only those who were returned as workers according to their main activity, excluding such persons who were returned only as secondary workers. For this reason, the 1971 Census figures of workers are not strictly comparable with those of 1961 Census.

A comparison of the rural and urban participation rates shows that the proportion of workers to total population is lesser in urban areas than in the rural areas, the two proportions being 27.32% and 31.41% respectively. The predominance of primary activities like cultivation and agricultural labour etc., gives an edge to the rural areas over urban sector in the matter of work participation, though the workers mainly engaged in these activities may not generally be fully employed. For this very reason, the work participation rates of females is also slightly higher in the case of rural areas than in urban areas, the two ratios being 2.54% and 2.44% respectively. It needs be pointed out here that from out of 8,272 females returned as workers in the rural sector of a district, 6,931 or 83.79% have indicated cultivation as their main activity. The position in the urban sector of the district is altogether different, from out of a total of 746 female workers only 129 or 17.29% were engaged in cultivation. The same picture more or less obtains at the tehsil level also.

While comparing the sectoral distribution of workers between rural and urban areas either at the district level or at the tehsil level, it will be seen that in the urban areas, although they still retain much of their rural character there is a definite shift towards diversification of economic activity in favour of secondary and tertiary sectors of employment as compared to the rural areas where agriculture continues to wield predominance. In this context, it would serve a pointer, to see that 83.53% of rural workers are absorbed in the primary sector of economic activities like cultivation and agricultural labour etc., as against only 25.0%

of urban workers. On the contrary, 75% of urban workers are engaged in the secondary and tertiary sectors as against 16.47% of the rural working force. At the tehsil level, this type of trend in the economic activity is more pronounced in the tehsils of Baramula, Sopore and Gulmarg where urban units are relatively more developed with better facilities of urban infrastructure.

* Represents provisional "geographical area" figures supplied by the Surveyor General, India. Figures for urban areas are those supplied by the Local Bodies. Area figures for rural areas are derived by subtracting the urban area from the total area of the district. The total of the area figures of the tehsils will not tally with the district figures because the former represent "Land Use" area and are derived from the figures supplied by the Revenue Department.

Conversion factor 1 Acre = 0.40,469 Hectares and 100 Hectares = 1Km^2
