VILLAGE & TOWN DIRECTORY
VILLAGE & TOWN-WISE
PRIMARY CENSUS ABSTRACT

B. K. DAS
of the Indian Administrative Service
Director of Census Operations, Karnataka

KUDREMUKH

The picture on the cover is a symbolic representation of the Kudremukh mountain range in Chikmagalur district and also of the large scale mining activity that has recently been taken up in the region. Kudremukh, pronounced more properly as Kudre mukha in Kannada, literally means 'the face of a horse'. The mountain range takes its name from its appearance from a distance, particularly from the Arabian sea to the seafarers. From the ancient times this lofty peak with an altitude of about 1896 metres MSL has been a well known land mark amongst the navigators.

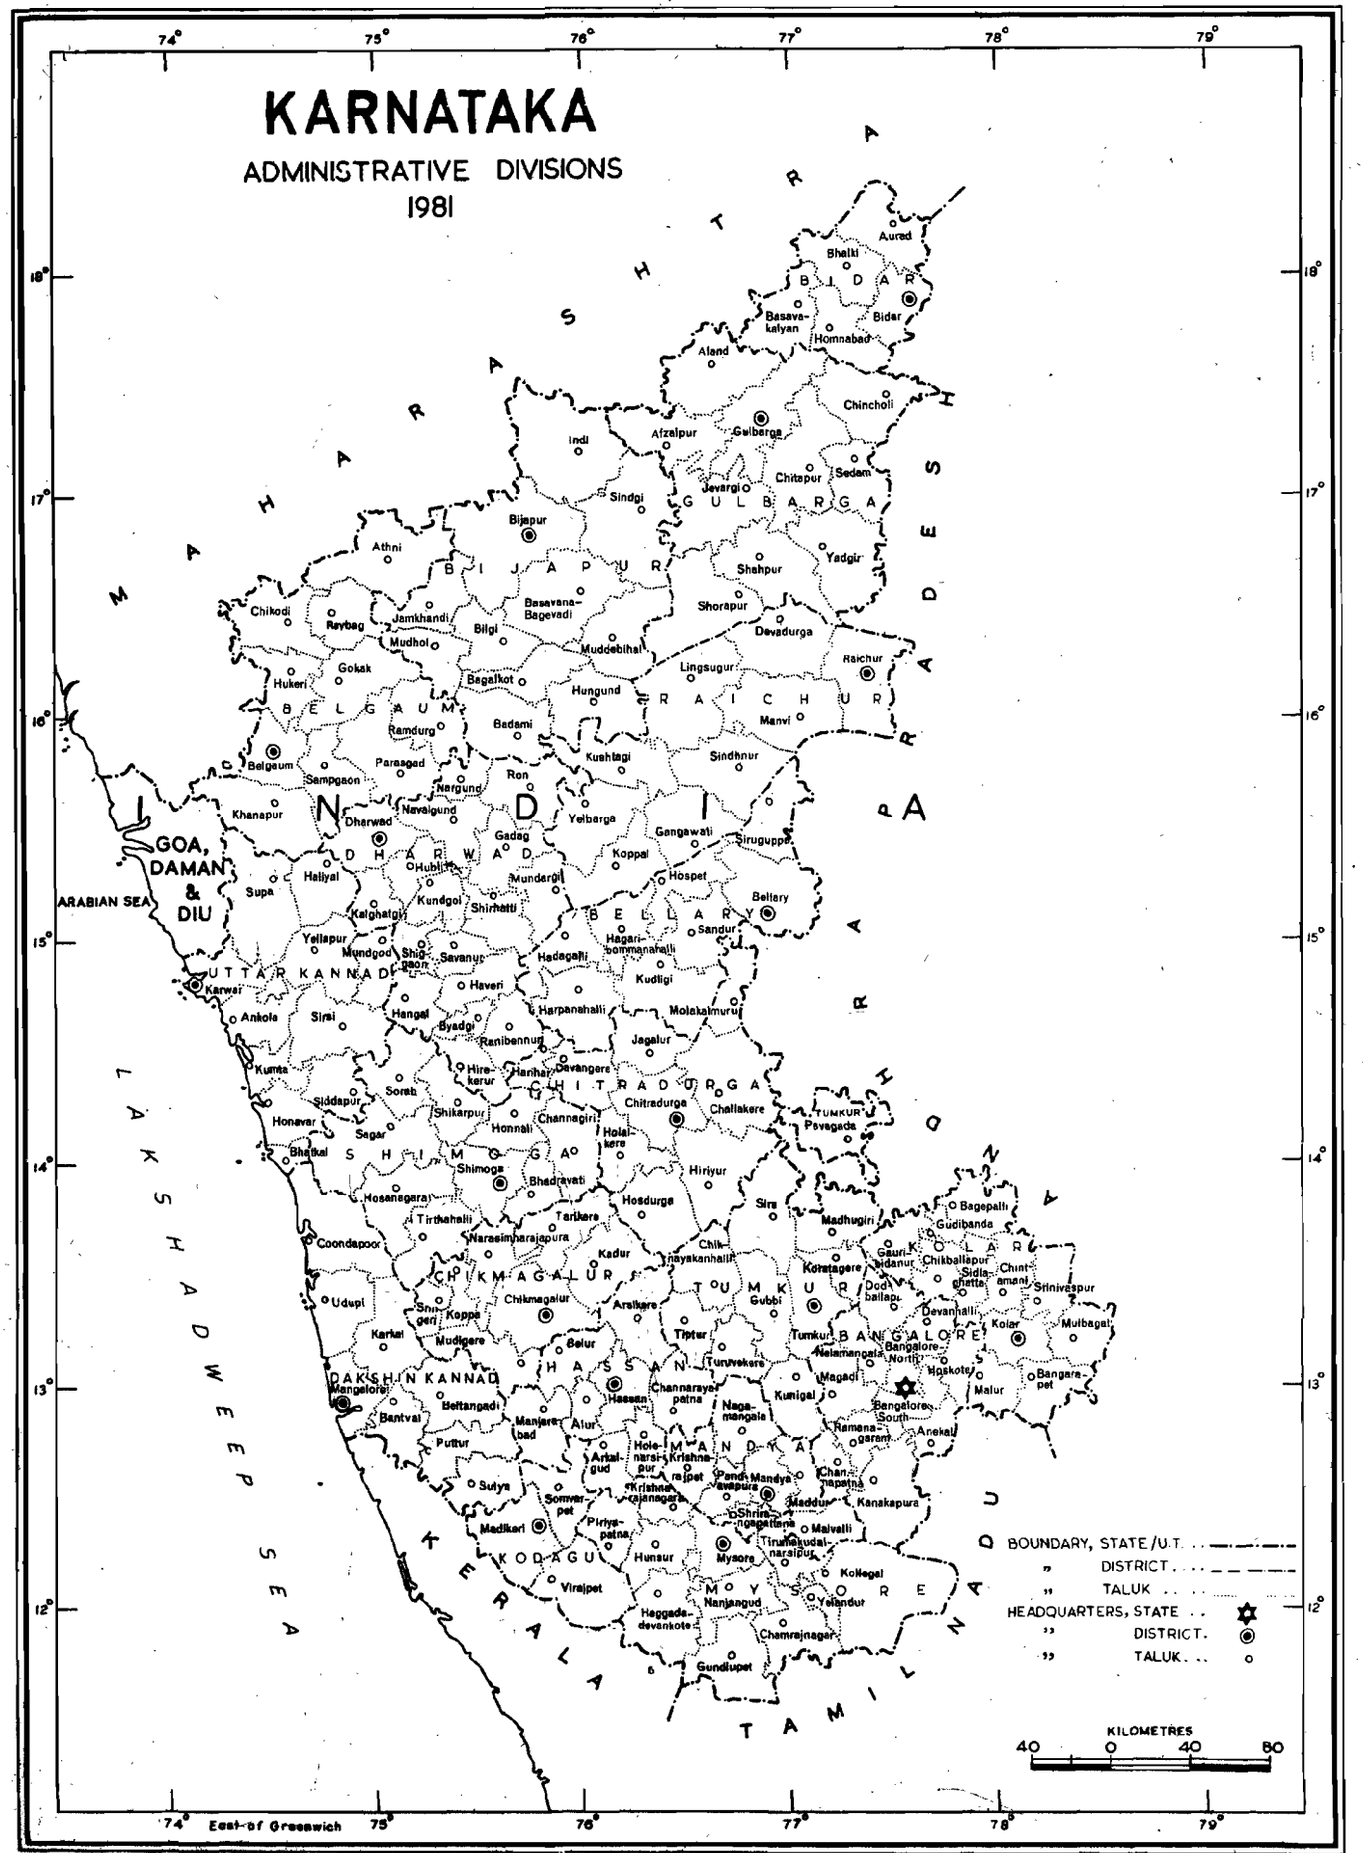

The economic significance of the mountain range lies in the fact that this Kudremukh-Aroli-Gangamoola range is a veritable treasure house as it contains iron ore deposits in very large quantities. The detailed investigation by the National Mineral Development Corporation of India has revealed that the Kudremukh ore body is a sedimentary pre-cambrian ore formation composed of thin laminated layers of magnetite and quartzite. The ore reserves of this area are estimated at 610 million tonnes. The ore is of a low grade and the iron content is estimated at 39 per cent only. As a result, till recently, neither the Government nor the private entrepreneur evinced any interest in exploiting this wealth.

However, during the later half of the 1960's the possibility of extracting the ore in large quantities, enriching it and exporting the same thereafter to countries such as Japan and Iran was examined and found quite feasible. These efforts culminated in the establishment of the Kudremukh Iron Ore Company Limited, in 1976. This is a Government of India enterprise administered by the Union Ministry of Steel and Mines and is entrusted with the tasks of mining, beneficiation and transportation of the ore as slurry to the New Mangalore Port for being shipped abroad.

The company has made arrangements to mine and move 20.6 million tonnes of ore every year to obtain 7.5 million tonnes of ore concentrate. After mining, the ore is moved to the concentrator plant where it is fed with water to autogenous mills which are fitted with large rotating drums where the ore is ground into small particles. This material is then concentrated by magnetic separators first and then by gravity spirals. The slurry consists of 60 per cent solid and 40 per cent water. This slurry is then drawn into a pump house and transported by hydraulic transport process through pipes which cover a total length of about 67 km to reach the Mangalore Port.

The establishment of the company has led to the founding of a new and modern township at Malleshwara, a hamlet of same village in Mudigere Taluk. The activity connected with this enterprise has led to the overall development and growth of infra-structural facilities in a heretofore remote and hilly region. Dense forests have been cleared, new roads have been made where none existed earlier and bridges have been built. Opportunities have thus been created for the rapid economic development of the region and there is now plenty of scope for starting ancillary industries in the region. Thus Kudremukh has turned out to be a symbol of modernization and economic prosperity.

FOREWORD

The district census handbook (DCH), compiled by the Census Organisation on behalf of the State governments, is one of the most valuable products of the Census. The DCH is constantly referred to by planners, adminsitrators, academicians and researchers. It is inter alia used for delimitation of constituencies, formulation of local level and regional plans and as an aid to District Administration. The district census handbook is the only publication which provides Primary Census Abstract (PCA) data upto village level for the rural areas and wardwise for each city or town. It also provides data on infrastructure and amenities in villages and towns, etc.

The district census handbook series was initiated during 1951 Census. It contained important census tables and PCA for each village and town of the district. During 1961 Census the scope of the DCH was enlarged and it contained a descriptive account of the district administrative statistics, census tables and a village and town directory, including PCA. The 1971 DCH series was planned in three parts. Part-A related to village and town directory, Part-B to village and town PCA and Part-C comprised analytical report adminsitrative statistics, district census tables and certain analytical tables based on PCA and amenity data in respect of villages. However, in some States it was confined to district census tables and in a few cases altogether given up due to delay in compilation and printing.

While designing the format of 1981 DCH series some new features along with the restructuring of the formats of village and town directory have been attempted. At the same time, comparability with the 1971 data has also been kept in view. All the amenities except power supply in the village have been brought together in the village directory with the instruction that in case an amenity is not available in the referent village the distance in broad ranges from the nearest place where the amenity is available may be given. The restructuring infrastructure aspect, particularly in relation to amenities and land-use pattern, is expected to further meet the need of microlevel planning for rural areas. It is expected to help not only in local area planning but regulating the provision of goods and services as well as to minimise the regional imbalances in the process of development. A few new items of information have also been introduced to meet some of the requirements of the Revised Minimum Needs Programme, Such new items of information as adult literacy centres, primary health subcentres, and community health workers in the village have been introduced in the village directory with this objective in mind. The new item on approach to the village is to have an idea about the villages in the district which are inaccessible. A new column, "total population and number of households" has been introduced to examine the correlation of the amenities with the population and number of households they serve. Addition of two more appendices listing the villages where no amenities are available and according to the proportion of scheduled caste and scheduled tribe population to the total population has also been made with this view in mind.

The formats of the town directory have also been modified to meet the requirements of the Minimum Needs Programme by providing information on a few new items. A new statement on civic and other amenities in slums in Class-I and Class-II towns (Statement-IV-A) has been introduced with this objective in mind. It is expected that this will help the planners to chalk out programme on provision of civic amenities for the improvement of slums. The columns on Scheduled Castes and Scheduled Tribes population in Statement IV relating to civic and other amenities and adult literacy classes/centres under educational facilities in Statement V are also added inter alia with this view. A significant addition is class of town in all the seven statements of the town directory. The infrastructure of amenities in urban areas of the country can be best analysed by taking the class of towns into consideration. The addition of the columns on civic administration status and population in a few statements also serves this purpose.

The format of the primary census abstract for the villages and towns has been formulated in the light of changes in the economic and other questions canvassed through the individual slip of 1981 Census.

In order to avoid delay in publication of 1981 DCH series it has been so designed that Part-A of the volume contains village and town directory and Part-B the PCA of villages and towns including the Scheduled Castes and SCheduled Tribes PCA upto Tahsil/ Town levels. At the beginning of the DCH a detailed analytical note supported by a number of inset tables based on PCA and non census data in relation to the infrastructure has been introduced to enhance its value. The district and tahsil/Police Station/C D block etc., level maps depicting the boundaries and other important features have been inserted at appropriate places, to further enhance the value of the publication.

This publication is a joint venture of the State Government and the Census Organisation. The data have been collected and compiled in the State under the direction of Shri B.K.Das, the Director of Census Operations, Karnataka, on behalf of the State Government which has borne the cost of printing. The task of planning, designing and coordination of this publication was carried out by Shri N.G.Nag, Deputy Registrar General (Social Studies) of my office. Dr.B.K.Roy, Deputy Registrar General (MAP) provided the technical guidance in the preparation of the maps. Data received from Census Directorates have been scrutinised in the Social Studies Division at the headquarters under the guidance of Shri M.M.Dua, Senior Research Officer, I am thankful to all who have contributed in this project.

NEW DELHI
26th April, 1982

P.PADMANABHA
REGISTRAR GENERAL, INDIA

PREFACE

The Registrar General and Census Commissioner of India has in his foreword to this series of publications, not only provided the reader with the historical background of the District Census Handbooks but has also explained at some length the scope and coverage envisaged for this country-wide project. As uniformity in approach and comprehensiveness of data are distinctive features of this series every attempt has been made to adhere to the concepts and definitions adopted in designing the formats. These volumes contain the salient results based on the data gathered at the actual census count and, in addition contain a wealth of other than census information in respect of villages and towns of the district. It is hoped that these volumes would go a long way to meet the ever increasing demand for the micro-level data in this era of planned development.

The district census handbook is divided into two portions : while Part A contains the village and town directory Part B confines itself to the primary census abstract. Since combining of these two parts and presenting the same in a single volume enhances the utility of the volume and also because the districts of the State are not so large as to render such single volumes unwieldy in Karnataka, Part A and Part B of each district are being published together in a single volume. But, there is a major point of departure from the all-India pattern in so far as Karnataka is concerned. Owing to certain technical reasons all the particulars on Scheduled Castes and Scheduled Tribes proposed for publication in the DCHB as part of Primary Census Abstract and also the other derived statements have been pooled up separately and presented in the form of a Supplement. While such Supplements have been brought out as separate volumes in the case of Bidar and Mandya, in the case of the other districts this material also forms part of the single volume of the District Census Handbook and appears separately after Part B.

In the preparation of the district census handbooks the role played by the census organisation is that of data gatherer and the cost of publication is borne by the State Government. In accomplishing this task we have had the ready and whole-hearted cooperation of the staff at various levels of different departments of the State Government. For operational convenience the village directory was divided into two portions viz. that relating to area and land use pattern, and that relating to the amenities. The relevant formats were mailed to the Tahsildars and Block Development Officers respectively requesting them to furnish information on land use pattern and amenities. Much of the data so supplied by these field-level officers have been cross-checked with the data obtained from various departments and an attempt has been made to reconcile the descripancies as well.

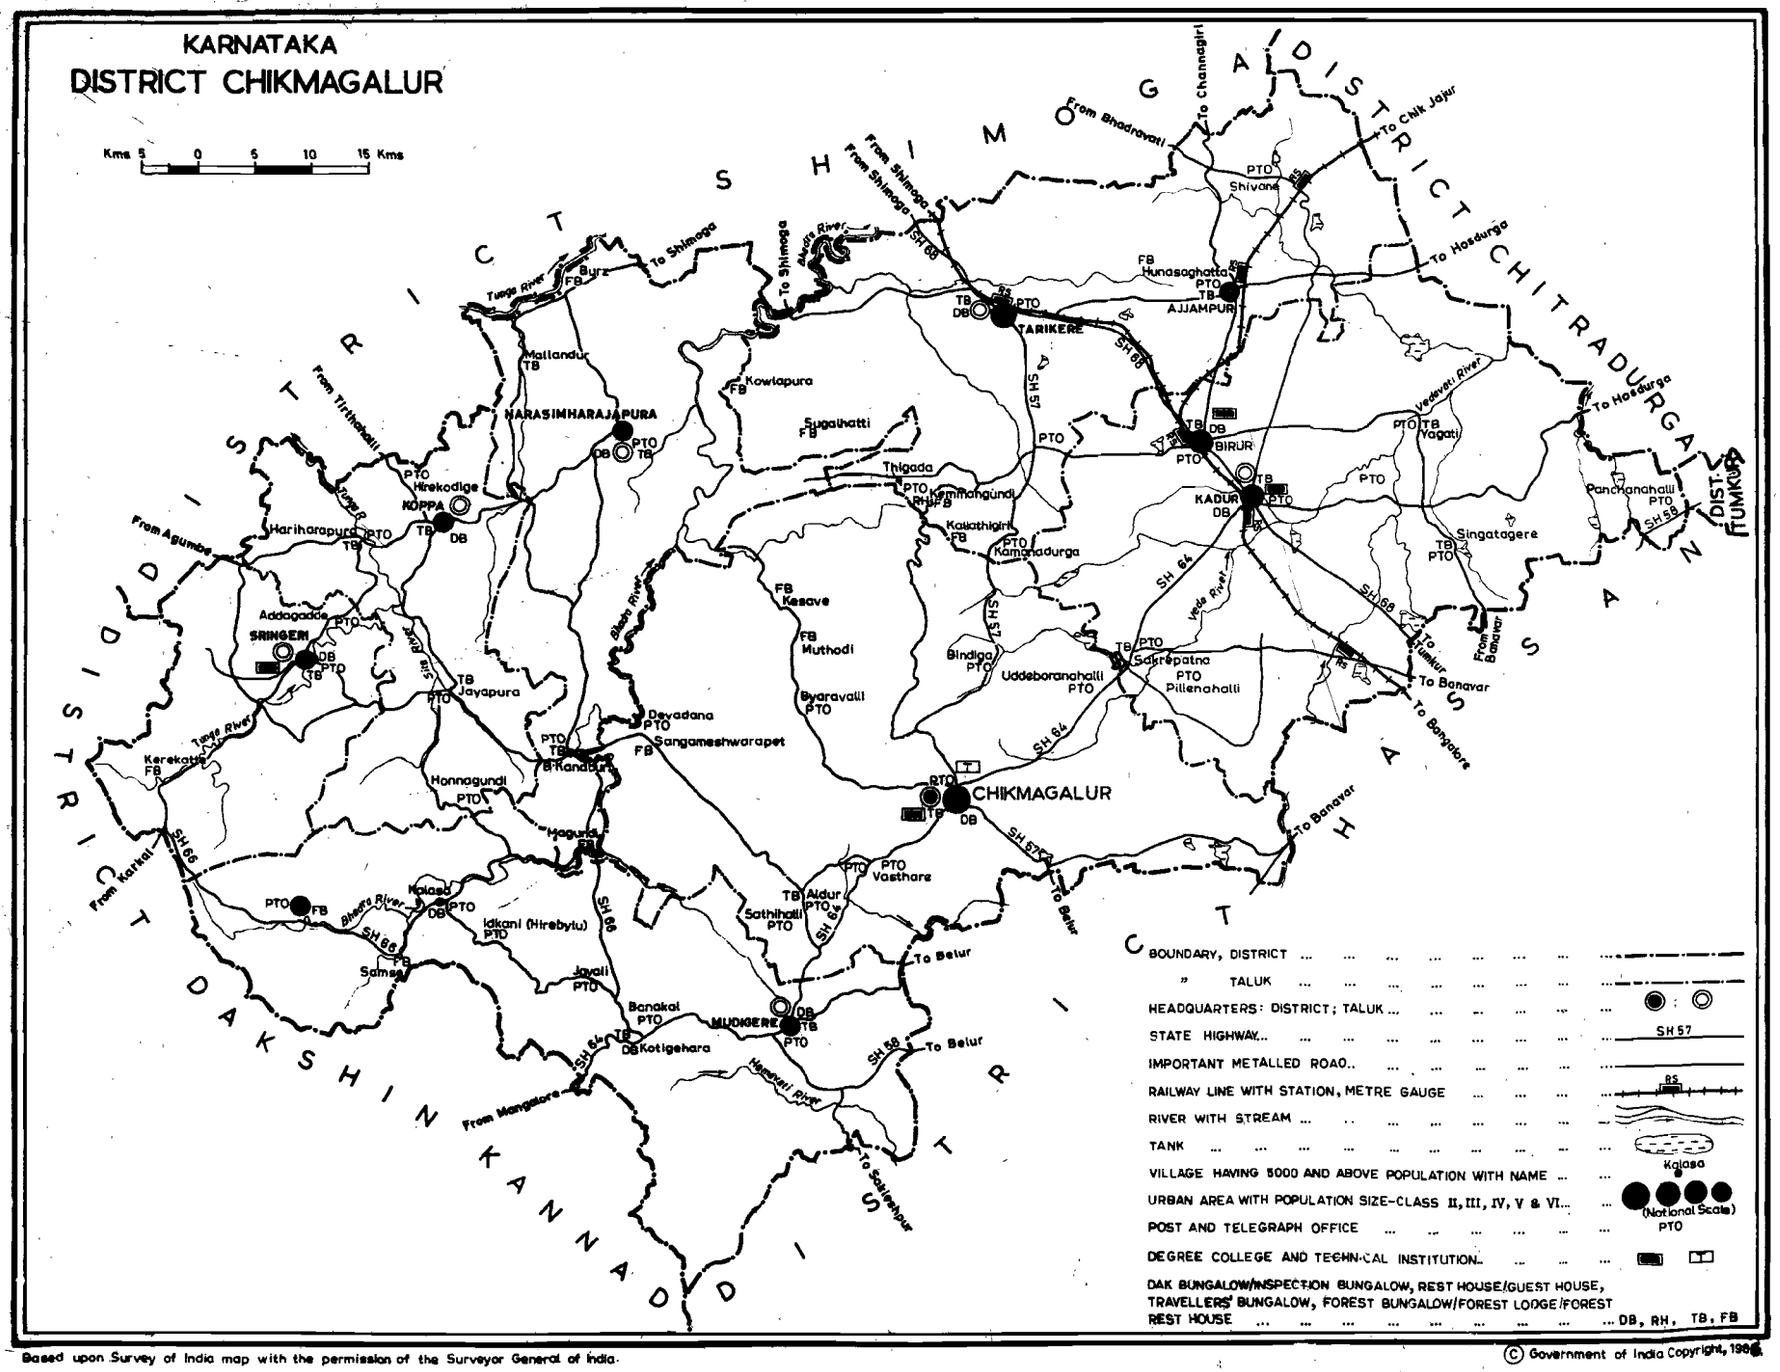

I take this opportunity to offer my greatful thanks to all the officers and officials who have been actively involved in the compilation and preparation of this volume.

I am deeply grateful to Shri P.Padmanabha, I.A.S. the Registrar General, India for the benefit I have derived by way of guidance and advice. I also express my thanks to Dr.N.G.Nag, Deputy Registrar General (Social Studies), Dr.B.K.Roy, Deputy Registrar General (Map) and Shri M.M.Dua, Senior Research Officer.

Lastly, I am thankful to the Government of Karnataka for having agreed readily to bear the cost of publication of the district census handbook volumes. The Director, Printing, Stationery and Publications, Karnataka has evinced keen interest in bringing out these volumes.

A N A L Y T I C A L N O T E

ANALYTICAL NOTE

BRIEF HISTORY OF THE DISTRICT CENSUS HANDBOOK :

The District Census Handbook was first introduced at the 1951 Census to meet the ever increasing demand for micro-level data by administrators planners and other Census data users. These series were primarily envisaged to replace the 'Part IV Taluk Tables' and 'Part V - Village Tables' of the earlier Censuses and to present the basic demographic and economic data at village level in the form of primary census abstract. In addition, these volumes were to contain a set of important census tables at taluk, town and district levels.

At the 1961 Census the scope of the volume was greatly enlarged by incorporating into it (i) a descriptive account of the district, (ii) a set of non-census tables dealing with administrative statistics of a decade, (iii) taluk and town level Census tables on economic and socio-cultural aspects and (iv) the village and urban block level primary census abstract. In a somewhat general way information on the availability of certain basic amenities like drinking water wells and schools was also furnished.

The 1971 Census witnessed an overall improvement in the matter of data compilation as well as in presentation of the results. A countrywide uniformity in approach and a comprehensive coverage are the hall marks of this series of publications. The District Census Handbook was split up into three parts: i) Part A consisting of land use data on villages and data on amenities and services available in villages and towns compiled in the form of village and town directory, ii) Part B consisting of district, taluk, town, village and urban block level primary census abstract, and iii) Part C consisting of an analytical note based on census as well as the non-census data included in the volume, a set of tables depicting the administrative statistics in greater details, census tables at district, taluk and town levels besides a set of tables generated on the basis of village-wise Census data and particulars on amenities. The main objective was to present a comprehensive and intelligible portrait of the district and an overall view of the results of a decade long developmental activities in the district. The publication programme too was phased out: Part A was planned to be released first to be followed by part B and then Part C which could be published only after the finalisation of various census tables that were to be included therein and analysed. In Karnataka, Part A and Part B were combined and published on time as a single volume for each district except in the case of Bangalore. Owing to reasons beyond control there has been an inordinate delay in the publication of Part C volumes.

The current volumes of District Census Handbook are thus the fourth in the series and at every succeeding census there has been an endeavour to enhance the utility of these volumes.

2. SCOPE OF 1981 DISTRICT CENSUS HANDBOOKS :

Regarding uniformity and comprehensiveness, the approach in 1981 is much thesame as in 1971. The contents have been slightly enlarged and the formats too are restructured to some extent to meet the requirements of the data users. The District Census Handbook has been divided into two parts: i) Part A consisting of town directory and village directory and, ii) Part B consisting of District, taluk, town village and ward level primary census abstracts besides the special PCA at taluk and town levels in respect of the Scheduled Caste and Scheduled Tribes. Compilation of administrative statistics has been abandoned altogether. Though divided into two parts, in Karnataka as a matter of fact both the parts are being presented in a single combined volume for each district. There is however a point of departure from the all India pattern: all particulars relating to Scheduled castes and Scheduled Tribes are excluded from the main volume of the district census handbook and are presented districtwise in the form of a supplement.

i) Town Directory : In the town directory section there are 7 statements in all to furnish townwise information on aspects such as: growth history; physical aspects and location; municipal finance; civic and other amenities in towns; civic and other amenities in notified slums; medical, educational, recreational and cultural facilities and trade, commerce, industry and banking. As compared to the 1971 series the statement about religionwise population has been dropped and an additional statement has been introduced in respect of urban areas with a population of 50,000 and more to furnish some basic data on slums. This apart, there are a few more variations mainly by way of inclusion of a few additional columns in each statement to indicate the size class of the town, population and also civic administration status with a view to facilitating an easier grasp of the data. In statement I, provision has been made to indicate the decadal growth rates, area and density of population as in 1981 and the sex ratio observed at the three successive censuses. The introduction of additional columns has resulted in the elimination of 2 columns which in 1971 presented comparative information on functional classification of towns. Statements II and III are very much the same while in statement IV additional information on water storage system with capacity has now been provided. In addition, in case of non-availability of fire-fighting station in the town itself reference to the nearest place with that facility has been given. In statement V too in case of non-availability of medical and educational facilities in the town information on the nearest place with such a facility has been provided. An additional column in this statement presents information on working women's hostel. Statement VI has remained almost unchanged except in the explanation regarding the imports and exports concerning the goods which simply pass through the town.

The towns in the district are arranged serially on the basis of their names in an alphabetical order and assigned location code numbers starting from I. For presentation of data in the town directory statements the same order of the towns has been followed. The concept of urban agglomeration, introduced in 1971, has been

retained for use at the 1981 Census also. Where an agglomeration includes two or more independent towns, the names of the constituent towns are indicated in the correct sequence as per alphabetical arrangement of their names. But, the details to be furnished in the subsequent columns are skipped with a view to avoiding duplication. Instead, immediately after the name of the town, a cross reference is given by the legend "See..Urban Agglomeration" printed within brackets. The name of the core town of the urban agglomeration too would appear at its correct sequence with the legend as above and immediately below that the same name with the additional title ".....Urban Agglomeration" appears again without bearing any serial number. Against this line the cumulative totals for the urban agglomeration as a statistical unit are presented wherever such a procedure is relevant and meaningful. This line is followed by those relating to the constituent towns of the urban agglomeration starting with the name of the core city and followed by the others arranged in the alphabetical order of their names. This procedure is the same as that followed in 1971 and enables one to have a fairly good assessment of the data in relation to the smaller civic administrative units that form part of the large unit and also of the larger statistical unit itself simultaneously. In case there are outgrowths which are not 'urban' in their own right the particulars relating to such areas are merged with those relating to the concerned town and presented in the statement. Such towns having outgrowths are marked out by an asterisk mark and for all purposes the town includes not only its statutory limits but also all the outgrowths and together constitutes an independent statistical unit. In an appendix, the names of these outgrowths and the population thereof are furnished townwise. These outgrowths appear in the Village Directory also. However, in all such cases merely a legend to the effect that it is an outgrowth of such and such a town is recorded along the line instead of furnishing land use data and information on amenities. In the case of villages certain parts of which are regarded as outgrowth while the other parts are considered as rural the data relating to the outgrowth is included in the town directory statements and the data relating to the rest of the portion appears in the village directory. It may incidentally be mentioned that there are no such cases in Karnataka.

In statements II, III and VI where it is not relevant to combine the data for the urban agglomeration as a whole the legend 'see constituent units' is printed along the line instead of allowing the entire line blank.

ii) Village Directory :

In the village directory the columns regarding the land use pattern are very much the same while those relating to amenities have been slightly modified. Unlike in 1971, this time if a village is not having a particular amenity then the distance range within which that amenity is available and may be availed of has been indicated. This enquiry is however confined only to the basic level under each category of amenity. In other words, if a village is not having any educational institution at all then the distance that one has to cover to reach the nearest place having a primary school is indicated in ranges of less than 5 Km., 5-10 Km and 10+ Km. If a village is however having a primary school no attempt is made to provide similar information in relation to middle school, high school and college level in a progressive manner. Similar procedure has been followed regarding medical, postal and communication facilities. Regarding weekly markets too, if the village is not the venue of such a market the distance to the nearest weekly market is indicated in ranges.

In the village directory an additional column has been introduced to indicate the population of the village as well as the number of households therein. This juxta-positioning of population and amenities data would help one to assess at a glance the adequacy or otherwise of the amenities available within or in the immediate neighbourhood of the village. Another change with regard to the area and land use data this time is that these figures are furnished not in acres but in hectares upto two places of decimal. One more notable addition is the provision to indicate information about the proximity of the public transport facility such as bus stop and railway station in respect of each village. In 1971 though information on railway station (i.e., if available within one Kilometre from the village) was furnished in addition to the general condition of the road to the village under the column for communication, there was no reference at all to bus transport facility. This time, in the column about approach road the condition of the road that leads to or passes through the village is indicated. In the remarks column general information about the number of copies of newspapers circulating in the village as also about the number of different types of automobile vehicles available in the village is furnished.

In the case of uninhabited villages i.e., villages which have returned nil population at the 1981 Census, only the details in respect of land use are furnished and in the columns pertaining to amenities the word uninhabited has been printed. If there are any villages that are regarded as outgrowths of an urban agglomeration, then neither the land use data nor the data on amenities is furnished in this statement. After the location code number and name of the village a legend indicates the name of the urban agglomeration of which that village is a part. Practically this administrative unit has lost its independent existence having been merged in another unit for statistical purposes. But if only a portion of a village is so affected by inclusion in an urban agglomeration then information as may be relevant to the portion that has still remained in the rural fold as a village has been furnished in the village directory.

In order to facilitate easy reference, an alphabetical list of villages showing population figures according to the censuses of 1971 and 1981 is given in respect of each taluk. At the end, the following appendixes have also been included to provide an over all view of the district: talukwise abstract of amenities; list of inhabited villages not having any amenities; and land utilisation data for non-municipal towns if any.

iii) Primary Census Abstract :

As at the two previous censuses this time also the Primary Census Abstract is presented village-wise in the case of rural areas. But,in so far as the urban areas are concerned the practice of furnishing data upto urban census enumerator's block level has been given up and the particulars are presented upto ward or division level only. Within the district the taluks are arranged in the alphabetical order of their names in English and covered one after the other in that order. For each taluk after furnishing the taluk level data with the rural-urban break up the villagewise details are furnished and this is followed by the data relating to towns in the taluk.

In the Primary Census Abstract format itself there have been certain changes. Though fresh columns have been introduced to cover a new category of workers viz, marginal workers, the total number of columns is reduced in view of the elimination of details regarding workers engaged in activities other than cultivation and household industries. There are now hardly 22 columns in the statement i.e., excluding those related to Scheduled Castes and Scheduled Tribes which however appear separately in the Supplement. The workers are classified into main workers and marginal workers and the main workers are further classified into one of the four categories viz, cultivator, agricultural labourer, worker in household industry and 'other' worker depending on the nature of work done and the sphere of economic activity.

In the case of urban agglomerations the same procedure as has been adopted for presentation of data in town and village directories has been followed. That is to say, the urban agglomeration is regarded as a single statistical unit and the aggregate figures obtained by the addition of details in respect of each constituent town and outgrowth are noted against the name of the urban agglomeration which in itself does not bear a location code number. In the section dealing with the Urban Primary Census Abstract the core town with its location code appears first carrying the legend: 'See...urban agglomeration'. Immediately below that line the full name of the urban agglomeration appears and the aggregate figures for the urban agglomeration are furnished. This line is then followed by the constituent towns arranged in alphabetical order of their names along with their Location Code number and full details under various columns. If the core town or any other town for that matter were to have any outgrowths then the first line for the town would in fact be a sub-total as it includes data not only of the town but also of the outgrowths. Thereafter, the name of the town and its constituent outgrowths are given along with the relevant data.

In the rural portion of the Primary Census Abstract if an entire village were to form part of any urban agglomeration then only the name of the village is indicated along with the legend that this village is included in such and such urban agglomeration. In the case of villages partly included in an urban agglomeration details relating to only such portion as has remained under the rural category are given.

3. BRIEF NOTE ON CENSUS CONCEPTS :-

Census taking is a massive operation carried out in a short span of time with the active participation of a veritable army of enumerators. The reference moment for the 1981 census is the sunrise of March 1,1981 i.e., the census provides a snap shot of the population of the country as it existed at the sunrise of March 1,1981. Actual enumeration was spread over a period of 20 days from 9.2.81 to 28.2.81 followed by a revisional round up to 5.3.81 for updating of the population figures with reference to the sunrise of March 1, 1981. The questionnaire canvassed by the enumerators viz., the household schedule and individual slip are perforce brief in their wordings and this naturally implies the use of abstractions and concepts. With a view to ensuring uniformity in approach in understanding the various concepts and in properly eliciting and recording of the information, the enumerators and supervisory officers were imparted both practical and theoretical training intensively.

As a preliminary to the actual census the urban and rural areas were identified and listed out in respect of each administrative unit and thereafter geographical areas that could be conveniently covered by each census enumerator were carefully carved out to constitute the enumerator's blocks.

The second major step was the houselisting operation which was carried out in the State during May 1980. Thereafter, in order to adhere to the prescribed work-load norms the actual census enumerator's blocks were carefully demarcated on the basis of the lay out sketches and notional maps prepared for the houselisting operations. The detailed information on households and population collected at the houselisting operations was also quite useful in this task of formation of census enumerators blocks. Definitions and explanations regarding the important census concepts are given in the following paragraphs.

i) Urban areas: The definition adopted in 1961 and adhered to in 1971 has by and large been retained for the 1981 census also. There is however a minor modification regading the classification of fishing and forestry. These two activities have now been regarded as allied to agriculture unlike in the earlier censuses when these were treated as purely non-agricultural activities for working out the proportion of agricultural and other than agricultural workers. According to definition the urban areas include :

"i) All places with a Municipality, Corporation, Cantonment Board or Notified Town Area Committees etc.,

ii) All other places which satisfy the following criteria :-

a) minimum population of 5,000.
b) at least 75 per cent of male working population engaged in non-agricultural pursuits;
c) a density of population of at least 400 per sq.km. (1,000 per sq.mile)
d) all places which, though not satisfying the above criteria had pronounced urban characteristics"

Demarcation of urban areas was done at the preliminary stage itself. In the case of non-statutory towns the empirical test was applied on the basis of the population returns of the 1971

census and this was supplemented by consultation with the State Government authorities concerned. The changes such as declassification i.e., abolition of municipalities, constitution of new municipalities and such other civic bodies, coming up of large human settlements at construction sites and other centres, de-population of project areas and former labour camps etc., have all been considered while preparing the lists of urban areas. Urban areas with a population of 100,000 and more are called cities and the others are termed merely as towns.

ii) Urban agglomeration: This concept which in 1971 replaced the concept of town group has been retained for the 1981 census also. It has been observed that very often railway colonies, university campuses, port areas, military camps and large residential colonies etc., come up quite adjacent to but situated outside the statutory limits of cities and towns. Such areas may not by themselves qualify to be treated as towns. But, if they form a continuous spread with the town they are outgrowths of the town and deserve to be treated as urban. Such towns together with their outgrowths have been treated as one urban unit called 'urban agglomeration. An urban agglomeration may consist of : a) A city with continuous outgrowth (the part of outgrowth being outside the statutory limits but falling within the boundaries of the adjoining village or villages ; b) One town with similar outgrowth or two or more adjoining towns with their outgrowth as in (a); or c) A city and one or more adjoining towns with their outgrowths all of which form a continuous spread. It may further be noted that geographical contiguity with the statutory limits of the core town has been the main factor in determining whether or not a nearby satellite town or an outgrowth is to be included in the agglomeration. This is purely a statistical concept and for carrying out the actual census operations the administrative jurisdictions of the city or the towns concerned as well as the outgrowths situated in villages have been kept quite intact. The data have been pooled together only at the tabulation stage and presented in the combined form for the urban agglomeration as a whole and also severally for each one of the constituent units.

iii) Rural areas i.e. Villages: Areas which are not classified as urban according to the definition given above constitute the rural areas. The basic unit for rural areas is the revenue village which has definite surveyed boundaries. In the case of unsurveyed villages the boundaries as determined by the local usage have been adopted. The revenue village may consist of a single nucleated settlement or comprise of several hamlets i.e. human settlements or clusters of houses located at several places within the territorial limits of the village, or may be completely uninhabited. That is to say, the census village and the revenue village are identical in the matter of jurisdiction. However, there are a few exceptions to this general rule. These are for example:

1) When the main setttlement of the village with or without the surrounding lands is constituted into an urban area the remaining tracts of the revenue village are collectively treated as a separate unit for purposes of census enumeration, i.e. the truncated portion itself is considered as an independent village in itself.

2) When outlying portions of certain revenue villages are incorporated into the limits of urban areas by notification such areas, whether populated or not, are excluded from the revenue village concerned and for purposes of census operations the village boundaries are re-defined.

3) Revenue villages which are completely incorporated in the limits of urban areas or else, are submerged under reservoir projects but are still maintained in the jurisdictional lists of the survey and settlement authorities pending resurvey and such other procedures are taken note of as revenue villages but are omitted for census purposes. i.e. these are not treated as census-villages. The names of such villages if any in a taluk are given at the end without serial number but with due remarks.

4) If there are forest areas that do not form a part of any of the revenue villages, then such areas are identified clearly and the smallest administrative unit in vogue such as Forest Beat, has been reckoned as the census village. A forest range may consist of several such census villages.

5) For purposes of local administration such as collection of land revenue a single revenue village may sometimes be found to be sub-divided into two or more units. Instead of ignoring such divisions, occasionally each such unit gets reported as a separate independent revenue village. In spite of efforts to eliminate such cases it is quite likely that a few may persist till the very late stage when necessary corrections cannot be carried out.

iv) Census Enumerator's Block: In urban as well as in rural areas the smallest unit adopted for enumeration is the Census Enumerator's Block. The town is generally divided into wards and divisions and wherever such units exist their distinctness has been retained. The geographical area comprised in each such ward or, the town in its entirety is constituted into several blocks in such a way that every bit of land stands included in one block or the other. If there were to be any islands then each island is treated as a separate unit and divided into one or more number of blocks as may be necessary. Generally in the urban areas each census enumerators block consists of about 130 households covering a population of about 650 persons. However, in view of the fact that each block should have clear cut boundaries recognisable on the field, smaller blocks have also been constituted. In constituting these blocks all the lands included in the statutory limits of the town are taken into consideration. In the case of non-municipal towns such as a Town Panchayat or a Group Village Panchayat the revenue limits of only that village which has been classified as a town on the basis of the empirical criteria have been considered as the boundaries of that census town. In other words, the panchayat jurisdiction and the census jurisdiction need not necessarily be identical in the case of non-municipal towns.

In the case of villages, irrespective of the population size every hamlet and every island has been constituted into a separate block. If the hamlet or the island is large the number of enumerator's blocks constituted therein may be two or even more. The work-load norm per block is 150 households with a population of about 750 persons

and this generally applies to large nucleated settlements having more than this fixed limit and therefore require division into two or more blocks. In each village care has been taken to ensure that no bit of land belonging to that village is left out of consideration while constituting blocks. That is to say the entire revenue jurisdiction of the village is divided into blocks in such a way that even the agricultural lands that may not contain any houses or households stand included in one block or the other. In other words, enough emphasis has been laid to ensure complete coverage of the territorial jurisdiction of each village.

v) Location code number : Every State in the country, every district in the State, every taluk or Town in the district, every village in the taluk and every ward or division in the city or town and every enumerator's block in the village or town is assigned a number for operational ease, in a particular order. When these numbers are written side by side in the same order starting from the state and separated by an oblique line the identity of any particular census enumeration block can be known quite easily. The numbers assigned are in international numerals except in the case of towns in which case Roman numerals have been adopted. The states, the districts, the towns and the taluks are arranged in an alphabetical order of their names for assigning these numbers. Taluk maps showing the boundaries of various villages therein are quite essential since these provide the basis for assigning location code numbers to villages. For purposes of revenue administration the villages of a taluk are usually organised into a few circles or Hoblis and each such unit will have a headquarters town or village. The identity of such units is maintained to the extent possible. Starting from the circle of which the taluk headquarter town or village happens to be the circle headquarter as well the villages in its jurisdiction are serially numbered by proceeding in a clockwise direction i.e. in a concentric manner around the headquarter village or town, or in a serpentine manner starting from the north-west corner. After exhausting all the villages of the circle the next circle situated in the clockwise direction to the first one is taken up and commencing from the headquarter village all the villages within its jurisdiction are numbered. Thereafter, the next circle is taken up and in this manner it is ensured that all the villages of the taluk as well as any other analogous units such as islands, reserve forest tracts not included in any revenue village etc., if any, are assigned location code numbers. The numbering of villages runs continuously for the taluk through the different circles or Hoblis. Taluk maps showing the boundaries of various villages along with their corresponding location code numbers are also presented in these volumes for reference purposes.

vi) Building : A building is generally a single structure on the ground. Sometimes it is made up of more than one component unit which are used or likely to be used as dwellings (residences) or establishments such as shops, business houses, offices, factories, worksheds, schools, places of entertainment, places of worship, godowns, stores etc. It is also possible that buildings which have component units may be used for a combination of purposes such as shop-cum-residence, workshop-cum-residence, office-cum-residence etc.

vii) Census House : A Census House is a building or part of a building having a separate main entrance from the road or common courtyard or staircase, etc., used or recognised as a separate unit. It may be occupied or vacant. It may be used for a residential or non-residential purpose or both.

viii) Household : A Household is a group of persons who commonly live together and would take their meal from a common kitchen unless the exigencies of work prevented any of them from doing so. There may be a household of persons related by blood or a household of unrelated persons or having a mix of both. Example of unrelated households are boarding houses, messes, hostels, residential hotels, rescue homes, jails, ashrams etc. These are called 'Institutional Households'. There may be one member households, 2 member households or multi-member households. For census purposes, each one of these types is regarded as a 'household'. If a group of persons who are unrelated to each other live in a census house but do not have their meals from the common kitchen, they would not constitute an institutional household. Each such person would be treated as a separate household. The important link in finding out whether there is a household or not is a common kitchen. There may be a household which does not at all have a house to live in and may temporarily dwell on the roadside, pavements, in humepipes, temples, mantaps, platforms etc, or move about from place to place resting underneath shade-bearing trees, pavements and verandahs of public or private buildings. Such households are for purposes of reference termed as Houseless Households.

ix) Criteria for enumeration of a person in a particular household :

a) All those who normally stay and are present in that household during the entire period of enumeration i.e. from February 9 to February 28, 1981 (both days inclusive)

b) Also those who are known to be normally residing and had actually stayed during a part of the enumeration period (February 9 to 28, 1981) but are not present at the time of enumerator's visit;

c) Also those who are known to be normally residing and are not present at the time of the enumerator's visit but are expected to return before February 28, 1981 and,

d) Visitors who are present in the household censused and are away from the place (s) of their usual residence during the entire enumeration period. For the purpose of enumeration, such visitors will be treated as normal residents of the household in which they are actually found during the enumeration period provided they have not been enumerated elsewhere.

x) Literate : A person who can both read and write with understanding in any language is to be taken as literate. A person who can merely read but cannot write is not literate. It is not necessary that a person who is literate should have received

any formal education or should have passed any minimum educational standard.

xi) Workers and non-workers : Depending upon the nature of his or her activity during the reference period every individual enumerated at the Census is classified as either a worker or a non-worker. By definition, a worker is one who has worked, that is, 'participated in any economically productive activity'. Such participation may be physical or mental in nature. Further, work involves not only actual work but also effective supervision and direction of work. The reference period for determining whether a person is worker or a non-worker is the full year preceding the date of enumeration. The criterion is somewhat liberal and, even a person who has participated in the production of economic goods and services for a very brief period will be categorised as 'worker'.

Among workers however there are two categories:

a) Main Workers:- Those who have worked for at least 183 days during the preceding year i.e. the entire reference period. (even though this may be in broken spells and in different occupations),

b) Marginal Workers:- Those who have worked for less than 183 days during the entire reference period.

For both the categories of workers further details on the sector of economy in which they have worked, their occupation (that is, the actual nature of work done) and employment status (that is whether employer, employee, unpaid family worker or own account worker) have also been ascertained. The industrial classification of workers as adopted at the Censuses of 1961 and 1971 has been retained at the 1981 Census also. The industrial classification categories are : (I) Cultivators, (II) Agricultural labourers (III) Workers in livestock, forestry, fishing, hunting, plantations, orchards and allied activities, (IV) Workers in mining and quarrying, (V) Workers in manufacturing, processing, servicing and repairs which are (a) run as household industry, (b) not run as household industry, (V) Workers in construction, (VII) Workers in trade and commerce, (VIII) Workers in transport, storage and communication, (IX) Workers in other services. For purposes of presentation in the Primary Census Abstract however the details in respect of main workers alone are considered and the industrial classification categories of III IV, V(b), VI, VII, VIII and IX are pooled together and shown under the heading 'Other Workers'. The broad classifications therefore are : I-Cultivators, II-Agricultural labourers, V(a)-Workers at house hold industries, manufacturing, processing, servicing and repairs and, III, IV, V(b) and VI to IX-Other Workers. Explanations regarding the broad categories are given below:-

a) Cultivators : For purposes of the census a person is working as Cultivator if he or she is engaged either as employer, single worker or family worker in cultivation of land owned or held from Government or held from private persons or institutions for payment in money, kind or share. Cultivation includes supervision or direction of cultivation.

A person who has given out his or her land to another person or persons for cultivation for money, kind or share of crop and who does not even supervise or direct the cultivation of land will not be treated as cultivator. Similarly, a person working in another person's land for wages in cash or kind or a combination of both (agricultural labourer) will not be treated as cultivator.

Cultivation involves ploughing, sowing and harvesting and production of cereals and millet crops such as wheat, paddy, jowar, bajra, ragi etc. It is important to note that for certain reasons the growing of certain crops is not considered as agriculture. If a person is engaged in the growing of such crops he or she will not be considered as cultivator or agricultural labourer.

The growing of the following crops is considered as cultivation :

1. Cereal and millet crops : Paddy, wheat, jowar, bajra, maize, ragi, barley, gram, etc.

2. Pulses : Arhar, moong, masur, urd, kesari etc.

3. Fibre crops : Raw cotton, jute, mesta, sunhemp and kindred fibre crops.

4. Oil seeds : Sesamum, ground-nut, rape, mustard, linseed, castor, etc.

5. Cash crops : Sugar-cane

The growing of the following crops will not be considered as cultivation :

1. Plantation crops : Tea, coffee, rubber, tobacco, pepper, cardamom, etc.

2. Edible nuts (Other than groundnut) : Walnut, almond, cashewnut, etc.

3. Fruits : Bananas, apples, grapes, mangoes oranges, etc.

4. Coconut

5. Ganja, Chinchona, opium, and medicinal plants.

6. Arecanuts.

7. Flowers.

8. Roots and tubers, chillies and spices (other than pepper and cardamom).

9. Vegetables.

10. Other crops not specifically included under cultivation.

b) Agricultural Labourer : A person who works in another person's land for wages in money, kind or share is regarded as an agricultural labourer. He or she has no risk in the cultivation. The Agricultural labourer has no right of lease or contract on land on which he or she works.

c) Household Industry : Household Industry is defined as an industry conducted by the head of the household himself or herself and or by the members of the household at home or within the village in rural areas and only within the precincts of the house where the household lives in urban areas. Tne larger proportion of workers in a household

industry would consist of members of the household including the head. The industry should not be run on the scale of a registered factory which would qualify or has to be registered under the Indian Factories Act.

d) Other Workers : The type of workers that come under this category include factory workers; plantation workers; those engaged in trade, commerce, business, transport, mining, construction, political or social work; all government servants; municipal employees; teachers; priests; entertainment artists, etc. In effect, all those who work in any field of economic activity other than as cultivators and agricultural labourers or in household industry are categorised as 'Other Workers'.

xii) Marginal Workers : Though similar classification is possible in respect of the marginal workers also the Primary Census Abstract does not aim to present these details. The total number of marginal workers alone is indicated sexwise. In respect of such persons answers on how they have engaged themselves mostly during the reference period have also been elicited. That is to say, the concept of main activity as adopted in the 1971 census is kept in view and, as in the case of non-workers, relevant details about their activity have been ascertained.

xiii) Categories of non-workers : Depending upon the manner in which the non-workers have engaged themselves for most of the time during the reference period they are classified into one or the other of the six categories, mentioned below, at the time of the enumeration itself. However the Primary Census Abstract does not furnish details according to the categories of non-workers but indicates the total number of non-workers by sex.

a) Household duties : This covers all persons who are engaged in unpaid home duties and who do no other work or have not done any work at all during the last one year.

b) Students : This will cover all full-time students including children attending school.

c) Dependents : This category includes all dependents such as infants, children not attending school, and persons permanently disabled form work because of illness or old age. Dependents will include even able-bodied persons who cannot be categorised in any other category of non-workers but are dependent on others.

d) Retired persons or Rentiers : A person who has retired from service and is doing no other work i.e., not employed again in some full time work or not engaged in some other work such as cultivation business, trade, etc., or a person who is a rentier or living on agricultural or non-agricultural royalty, rent or dividend, or any other persons of independent means for securing which he or she does not have work, will come under this category.

e) Beggars : This will cover beggars, vagrants or cases such as persons without indication of source of income and those with unspecified source of subsistence who are not engaged in any economically productive work.

f) Inmates of Institutions : This will cover convicts in jails or inmates of a penal, mental or charitable institution even if such persons are compelled to do some work such as carpentry, carpet weaving, vegetable growing, etc., in such institutions. But an undertrial prisoner enumerated in a jail would be recorded for the work he or she was doing before he or she was apprehended. Similarly, a person temporarily in a hospital or similar institution would be recorded for the kind of work he or she was doing before he or she was admitted into the hospital or institution. But, for a long-term undertrial prisoner or convict in a prison or for long-term inmates of penal or charitable or mental institutions, the person's previous work would not be taken into consideration. A person will be considered as 'Long-term' inmate if he or she is in such an institution for 6 months or more.

4. BRIEF HISTORY OF THE DISTRICT :

As an administrative unit under the current name, the district has a history of about three decades. In this densely forested mountainous district human settlements are known to have existed in the remotest past, namely the old stone age. References to several places of this district could be traced in myths and legends as well as in historical monuments. Vishnu, in his incarnation as Varaha the Great Boar, killed Hiranyaksha and rested for a while near about Gangamoola on the peak of the mountain here which has since been called Varaha Parvata. The drops of sweat which trickled down from the tusks and eyebrows of this Great Boar on touching the ground beoame the three great rivers named Tunga, Bhadra and Netravati. In his incarnation as Parashurama, Vishnu, visited these areas and it is from the top of the Sahyadri mountains that he threw his axe on the surging seas and retrieved the entire west coast for human habitation. At Hiremagalur adjacent to the district headquarter town of Chikmagalur, a Parashu, the weapon of Parashurama, in the form of a large sized axe made out of stone, is enshrined and is being worshipped from times immemorial. The present site of Hariharapura is said to be the spot where Daksha, the father-in-law of Shiva, performed a sacrifice. Agastya, Gautama, Mrikandu, Markandeya, Vibhandaka, Rishya Shringa and several other sages are believed to have set up their hermitages in various parts of the district. Rishya Shringa, after whom the town of Sringeri takes its name, had his hermitage here and finally, he became one with the God in the form of a linga at the place in Kigga where the Rishya Sringeshvara temple now stands. It is this sage that officiated at the Putra Kameshti yaga performed by Dasharatha, the father of Rama the epic hero. Shakunagiri hill is supposed to be the spot to where Hanuman flew back from Lanka in search of Sanjivini, the herb which was badly required to reawaken the coma-struck Lakshmana, Rama's brother. The Pandavas are supposed to have spent some time during their exile at Machcheri (identified as Matsya puri) and at a place called Bhimanagudda. Bhima is supposed to have killed Kichaka. Janamejaya Maharaja is said to have performed Sarpa-Yaga at the sitewhere the present-day Hiremagalur is located, for here is an implanted stone pillar which is pointed out as the Yupa-Stambha (sacrificial post) that was used for the purpose of the sacrifice. Renowned preceptor Dattatreya is known to have had dwelt and meditated for a short period at Bababudangiri near Chikmagalur.

Coming to historical times, it is known that in the earlier period this region stood included in the Kadamba-Mandala and was for a long period under the suzerainty of the Chalukyas. Though ruled by the Kadambas, the Gangas of Talkad, the Pallavas, and the Santaras of Humcha none of the places of the district enjoyed the distinction of being a seat of administration. But, in about 1209 A.D. Balludeva Santara is said to have shifted his capital from Humcha to Kalasa of this district and subsequently this place came to be known as Kalasa One Thousand and retained its importance for a long time as a seat of administration.

Sosevur the home town of the mighty Hoysalas is another important historical place of the district. Sala the first ruler of this dynasty seems to have consolidated himself at this place, identified with the present Angad village. His successors rose to prominence at first as vassals of the Chalukyas and later on assumed all the royal titles and held sway in the South for more than two centuries. However, they soon shifted their capital from Sosevur to Belur at first and from thence to Halebid, also known as Dorasamudra. During this period however none of the places of Chikmagalur district rose to prominence even though a few do bear testimony by way of hero stones and inscriptions and such other lithic monuments to fierce battles that once took place and to the religious and cultural importance of certain places. For instance, the Sevuna army which had penetrated to Belavadi which is deep inside the Hoysala Kingdom was repelled in 1276 A.D. Asandi was then a minor seat of administration and was a centre of Kalamukhas. A herostone of 1367 A.D. found at Bidare in Kadur Taluk records that a hero named Kankeya who fought along with king Ballala III in the capture of Beligi smiting the army of Turukas was killed in action on 8th September 1342.

During the reign of Vijayanagara emperors with the exception of Sringeri no other place of this district seems to have gained prominence especially as a noted Administrative centre. Sringeri was granted by the founders of the Vijayanagara empire to the spiritual preceptor and inspirer Shri Bharati-Teertha so that with his disciples he could carry on his religious devotions. From that peri Sringeri received continued attention of the Vijayanagara monarchs as a spititual centre and a protective force.

After the decline and fall of Vijayanagar local chieftains reigned supreme. For some period, this region was ruled by the Balam chiefs and then taken over by the Nayakas of Keladi.

The Santhe-Bennur chiefs also known as Basavapatna chiefs, at first had their principal seat of administration in Shimoga district. But in 1636 A.D. when forced by Ranadulla Khan moved out to Tarikere and later recouped with Kaldurga as the main fortress. They were subsequently vanquished by Haider Ali and the territory became part of the Mysore Kingdom. After the fall of Tipu Sultan in 1799 this entire area was taken over by British and made a part of the Mysore State. In 1830, Sarja Hanumappa Nayaka a scion of the Tarikere chiefs, joined the insurgent forces. He was captured and hanged to death in 1834.

There were frequent local changes in regard to the taluk and district limits during the British period. It appears that originally the district had only Kadur, Yagati, Garudanagiri and Banavar taluks. Later Yagati was absorbed in Kadur and Garudanagiri was merged with Banavar. Till 1875, the western portion of Chikmagalur taluk formed part of Vastare taluk. Mudigere taluk came into existence in 1876. Lakkavalli gave its name till 1882 to a taluk which included Bababudangiri and parts of Koppa and Balehonnur taluks. In 1882, Kadur and Banavar were combined into one taluk. It was in 1886 when Hassan district was restored that the jurisdiction of this district, then known after Kadur town, was restricted to the area as found at present. The district headquarters was located at Chikmagalur town though the name of the district was different. Thereafter, the district boundaries have remained unaltered though several internal changes have taken place. Balehonnur is no longer a taluk headquarters, and Sringeri is no longer a Jahgir. In 1947, the name of the district was officially changed from Kadur district to Chikmagalur district. The district comprises of two revenue sub-

divisions known after Chikmagalur and Tarikere. The former consists of the taluks of Chikmagalur, Mudigere, Sringeri and Koppa, while the latter consists of the taluks of Tarikere, Narasimharajapura and Kadur.

5. LOCATION AND PHYSICAL ASPECTS :

Situated somewhat south-west off the geographical centre of the State, Chikmagalur district covers an expanse of 7201 square kilometres lying between the north latitudinal parallels of 12°55' and 13° 54' and the east longitudinal parallels of 75° 05' and 76° 22'. All along its northern side, the district is bounded by Shimoga district. On the eastern side however there are three districts: to the north-east is Chitradurga district, for a small tract on the proper east lies Tumkur district and to the south-east there is the Hassan district. On the south too it is bounded by Hassan district and on the west lies the Dakshin Kannad district. The western ghats form the natural boundary of this district on the west.

Large parts of this district are situated in the heavy to very heavy rainfall region. These tracts are characterised by a mountainous terrain and constitute a malnad. However, about a fourth of the district's area that lies on the eastern sector of the taluks of Kadur and Tarikere being more or less a level-land partakes of the features of the maidan region. The transition from malnad to maidan is somewhat abrupt and quite striking.

On the west there is the formidable range of western Ghats having some of the loftiest peaks. The congeries of mountains seem to range themselves into a central ridge running north and south, with great loop or circle on either side. The main ridge commences at Ballalarayanadurga, and passing east of Metrigudda and Koppadurga, separates the basin of the Bhadra from that of the Tunga. On the west of this ridge lies the beautiful valley in which Sringeri town is located. To its east there is the famous Jagara valley which is completely surrounded by Baba-budan mountains. The Baba-budan range, known in legends as Chnadradrona Parvata, which is the loftiest range on the Karnataka table-land is situated in the middle portion of the district forming a tremendous ridge of horse-shoe shape. The summits are grassy slopes and the ravines are well wooded. On the sides of the hills there are dense forests and also numerous coffee plantations. The highest point in the district and also in the state itself is the Mullayyanagiri peak (1927 metres MSL). Kudremukh, a well-known landmark to the navigators, is another lofty peak (1896 metres MSL) which has in recent years shot into prominence on account of the deposits of iron ore it contains in large quantities. Baba-budangiri (1895 metres MSL) is a noted cultural centre of importance to the Hindus and also to the Muslims of the district. Devirammanagudda, Kalhattigiri (1877 metres MSL) Metrigudda (1663 metres MSL), Woddingudda (1527) metres MSL), Ballalarayana Durga (1507 metres MSL) Gangamoola (1458 metres MSL) and Lakke-parvata (1422 metres MSL) are the other important peaks of the district.

As many as seven rivers originate in this district, and of these the Tunga and the Bhadra may be considered as the principal rivers of the district. Bhadra river has been harnessed for purposes of irrigation and power-generation within the district itself while this as well as the other rivers have been of immense benefit to the people of the neighbouring districts. Veda and Avati rivers which later on merge into Vedavati or Hagari river as well as the Tunga and Bhadra which together form the mighty Tungabhadra of the plains belong to the Krishna basin. Hemavathi and Yagachi rivers belong to the Cauvery basin. Netravati flows west and after being joined by Kumaradhara forms an important river of the coastal district of Dakshin Kannad. Besides these perennial rivers the district abounds in numerous hill streams which are mostly of a seasonal character. By and large this district is free from floods though in an occasional year the Tunga and the Bhadra flow well above the danger mark and cause some anxiety to those dwelling in the adjoining low lying areas.

Geologically, the district is made up of Archaean schists and gneisses. The Dharwar schist cover about 50 per cent of the area and occur in 3 well-defined belts named after Kudremukh-Gangamoola, Koppa and Baba-budan. The rest of the area is made of granitic gneisses. The gneisses found around Balehonnur are amongest the oldest rock formations in the State.

This mountainous malnad district, especially in its central and western belts, is endowed with some of the most useful and densest forests of the country. These forests have been providing enough shelter to numerous coffee plantations on hill slopes and also exert a beneficial effect on the climate and rainfall. The eastern belt is also forested to a significant extent especially as compared to the plains further east. However these forests are very much lesser in extent and are covered with a sparser tree-growth. Furthermore in view of the higher population densities and easy accessibility to wooded areas the forests of this belt seem to have for long been over-exploited.

A meteorological Observatory is located at Balehonnur. Besides, there are rainguage stations at several places. Nature has blessed this district with an aggreeable climate all throughthe year. Though March, April and May are regarded as the summer months the maximum temperature stays around 30°C and at night the temperature would be around 19°C. South-west monsoon sets in during the June and the rainy season lasts till the end of October. This period is marked by incessant rainfall in the western tracts and intermittent rainfall in the rest of the district. The day temperatures would be relatively low and thenights would be quite pleasant. November may be regarded as post-monsoon month with a bright and pleasant weather. Winter sets in during December and this season, lasting till the end of February, is one of clear bright weather during the day and chilly cold weather during nights. As may be expected, the western and southern hilly regions of the district have a more severe winter and a more pleasant summer.

Composed as it is of two distinct physio graphic regions, the district is subject to wide variations both in the quantum of rainfall and number of rainy days. Though the overall average rainfall is 1990 mm., the eastern belt receives a rainfall of about 600 mm only. On the other hand the western zone receives a rainfall about 3000mm. In Sringeri taluk for instance the normal annual rainfall is of the order of 3695mm., while that in Koppa is 3003 mm. In fact, it is quite close to the western borders of Sringeri taluk that Agumbe (Shimoga district), the place which gets the heaviest amount of rainfall and is hailed as the Chirapunji of Karnataka is located. The average number of rainy days in the district is 92 and this varies between 42 at and around Kadur and 122 at Balehonnur. Generally the district gets an adequate and timely rainfall as a result of which

scarcity and famine conditions are very rare occurences. At times heavy unseasonal rains have adverse effect on agricultural productivity and property. For instance in October 1972, certain parts of Koppa and Sringeri taluks were hit by a severe cyclonic storm which uprooted several thousands of standing areca palms and to some extent damage to life and property as well.

Changes in jurisdiction during the decade:

The district has not witnessed any major events of geographical or geophysical importance during the decade. This zone is completely free from earth - quakes and it is very rarely that any tremors even of a mild intensity occurs in any part of this district. The comparatively large water-bodies i.e. lakes, in the district are the Madagakere, the Ayyanakere and the Bhadra Reservoir and all these are in existence for several decades. A new addition to this group during the decade is the reservoir formed by the dam that has been built across Jambadahalla near Duglapura in Tarikere taluk. A mention may perhaps be made of the iron ore mining operations which have been taken up on a massive scale during the last decade and also of the formation of new connecting roads and some denudation of evergreen forests in the process These events as of now do not seem to have affected the ecology of the district to any perceptible extent.

The boundaries of the district as well as those of the various taluks into which it is organised have remained unaltered during the decade. However, in the matter of villages and towns reckoned for census purposes there are a few variations as indicated in the following talukwise statement. Kudremukh Mines Area is the new urban area added on to the 1971 list of towns.

Sl. No.	Taluk	Total number of villages according to			Names of Revenue circles or Hoblies and number of villages in each shown in brackets) (1981 census)	No. of Towns as per census list	Reasons for variation in the number of villages as shown in	
		Survey Settlement and land records department	List finalised for census				Cols 3 and 4	Cols 4 and 5
			1981	1971				
1	2	3	4	5	6	7	8	9
1	Chikmagalur	233	231	231	Chikmagalur (37) Amble (29) Vasthare (36) Aldur (14) Avathi (21) Khandya (11) Jagara (23) Lakya (60)	1	Two villages, Dantramakki, and Basavanahalli, are fully incorporated in the municipal limits of Chikmagalur Town. Hence, omitted in the census list of villages.	
2	Kadur	307	307	306	Kadur (57) Sakrepatna (56) Birur (38) Hirenallur (49) Yagati (57) Singatagere (50)	2	------	In 1971, lands of Birur village situated outside the municipal limits, were not shown as a separate unit. But now this area has been identified and Birur (Rural) has been added.
3	Koppa	80	80	80	Koppa (29) Harlharapura (25) Jayapura (26)	1	------	------
4	Mudigere	140	140	140	Mudigere (41) Gonibeedu (37) Banakal (27) Balur (22) Kalasa (13)	2	------	------
5	Narasimharaja-pura	65	58	59	Narasimharaja-pura (31) Balehonnur (27)	1	Six villages namely Hosahalli, Thadasa, Malagadde, Malalihole, Gorgallur, Galikoppa are fully submerged under Bhadra Reservoir, and yedehalli is fully incorporated in Narasimharaja-pura Town. Hence these are omitted in the census list of villages	Galikoppa found in the 1971 list is now deleted as it is fully submerged under Bhadra Reservoir

1	2	3	4	5	6	7	8	9
6	Sringeri	49	49	49	Sringeri (23)	1	-----	-----
7	Tarikere	248	248	245	Tarikere (40) Kigga (26) Lakkavalli (30) Lingadahalli (26) Amruthapura (56) Ajjampur (47) Shivane (49)	2	-----	In 1971, Tarikere & Ajjampura were left out on the presumption that the entire areas of the revenue units stood included in the municipal town limits. But now it is found that only portions are incorporated in the municipal limits. Consequently, Tarikere (Rural) and Ajjampura (Rural) have been added. Another small village Jodigullada-hatti which was not treated as a separate village in 1971, has now been added as it is an independent revenue villages.

6 MAJOR CHARACTERISTICS OF THE DISTRICT WITH REFERENCE TO ECONOMIC RESOURCES :

Chikmagalur is well known in the country and also outside for its coffee and Cardamom exports as well as for its iron ore deposits. The district is noted for its forest wealth too. As in the case of most of the land-locked districts, in Chikmagalur also, land is the primary resource on which rests the entire economic edifice of the district. The value of land has been greatly enhanced by the mineral deposits that lay buried underneath the rugged surface of the earth and the bountiful rainfall that pormotes and sustains the growth of a variety of useful trees, plant and creepers. As the area of the district and the 1981 population are 7201 square kilometres and 911,769 persons respectively the gross extent of land available per person comes to a mere 0.79 hectare.

The land utilisation data reveal that a little more than 25 per cent of the gross area of the district stands classified as forests. The forests of the district mainly belong to the Southern Tropical variety and are of the following five types: evergreen, semi-evergreen, moist deciduous, dry-deciduous and thorn forests. The first three types confined to the hilly malnad region have been catering to the needs of various forest-based industries of the State such as plywood, packing cases, slate-frames, sandal-frames, and match splints and have also been providing the much needed timber and firewood to the general public. The chief sources of forest revenue are the sandal wood, hard wood and the soft wood. A variety of useful items which go by the name of minor forest produce are also gathered from these forests. These items include among other things, bamboo, betta (cane), bark of tangadi and kakke plants, leaves of tupra or tumri trees, honge seeds, tamarind, honey, wax and resigns. Areawise, about 51 per cent of the forests are located in the limits of Chikmagalur and Tarikere taluks. Another 32 per cent is accounted for by the taluks of Mudigere and Narasimharajapura. Sringeri, Kadur and Koppa taluks, roughly contribute 9 per cent, 5 per cent and 3 per cent respectively. The quality and economic value of the forests vary considerably within the district and so does the revenue derived thereof. For administration purposes these forests are constituted into 2 divisions with headquarters at Chikmagalur and Koppa respectively and there is one more Divisional Office at Chikmagalur known as the working plan division. There are Government Forest Depots at ten places within the district. An idea about the total Annual revenue realised from the forest produce may be had when it is known that it amounted to Rs.142.48 lakhs, Rs.165.87 lakhs and Rs.205.40 lakhs during the years 1977-78, 1978-79 and 1979-80 respectively. Forestry has all along been providing gainful work to a significant proportion of the economically active population of the district.

Iron ore deposits constitute the chief mineral wealth of the district. The occurence of iron ores in large quantities in the Baba-budan range and the Kudremukh-Aroli-Gangamoola range has been known from a long period. Rich ore concentrations found at Kemmannugundi and Kallahattigiri are being mined from about 1924 by tne iron works at Bhadravati. The iron ore reserve at Kemmannugundi which has an iron content of 55 to 65 per cent, is estimated at 15 million tonnes. Ropeways and tramways are being used for transporting the ores from the mines to the factory. Investigations by the National Mineral Development Corporation indicated that in the Baba-budan range itself the estimated quantity of the iron-ore deposit exceeds 3000 million tonnes and that the grade of ore-concentrate is of the order of about 60 per cent. The Kudremukh range iron-ore deposits, which are of a lower grade, with only about 39 per cent of iron content, attracted the attention of the prospective buyers and the Government only during the last decade and a half. The National Mineral Development Corporation started detailed investigations in about 1965 and proved that this belt contains sedimentary pre-cambrian iron-ore formation of proven ore to the extent of 610 million

tonnes and that with the adoption of latest technology this low-grade magnetic ore could be beneficiated into a concentrate having ready acceptance in the market. At first Japan evinced keen interest to import these ore concentrates. But, finally it was Iran that came forward to purchase 150 million tonnes over a period of 20 years. Thereupon in 1976, Kudremukh Iron Ore Company, Limited, a Government of India undertaking was established to carry out the tasks of mining, beneficiation and transportation of the concentrated ore as slurry to the New Mangalore port. About 20.6 million tonnes of ore are expected to be mined every year to obtain about 7.5 million tonnes of concentrates, the rest being disposed of as tailings with water. The Company has founded a new township at Malleswara in the limits of Samse village of Mudigere taluk and has also caused the formation of a new trunk road from Kudremukh to Mangalore besides the contruction of a dam across the Lakya Stream. This huge project has provided a good deal of impetus to the all-round development of the region.

Apart from iron ores the district is known to contain 45,000 tonnes of asbestos, about a million tonnes of copper and 54,500 tonnes of Kaolin. Deposits of gold are known to be located Jalagargundi, Siddarahalli, Tambadihalli, Nandi (Hosahalli), Deverakal, Ajjampura and Bukkambudi. Though there are traces of extensive old workings at these sites, gold mining has not been attempted so far in recent decades. A passing mention may be made of certain other useful minerals like mica, bauxite, chromite, graphite, manganese, steatite, soapstone etc., which though found in small quantities are at present not of much importance to the economy of the district.

The rivers, streams, reservoirs and numerous tanks with which the district is endowed provide ample water spread area for fishing activity There is also an abundance of fish in the rivers and tanks. This wealth is not being fully exploited and pisciculture as such has not yet acquired and distinctive place in the economy of the district. It is only during the last decade that certain schemes have been launched in this district for development of inland fisheries. The fish fauna of the district consists of carps, catfish, murrels eels etc., and traditional methods of fishing like angling with rod and line, and fishing with cast net, gill net, and drag net besides traps are being followed. From 1971-72 the Inland Fisheries Development Scheme and from 1976-77, the Small Water Development Scheme are in operation. The latter scheme aims at the renovation of small tanks and ponds so that these are fit for fish culture. Since about 1970 a Fish Farm is functioning at Agasarakatte tank and recently, under the Drought Prone Area Project, a Regional Fish Farm has also been set up at Ayyanakere tank. According to the estimate by the Fisheries Department there are about 2000 professional fishermen in the district and, in addition another 3000 persons engage themselves in occasional fishing activity during certain seasons of the year. At present annually about four thousand metric tonnes of fish are being caught and marketed. With the proposed intensification of stocking programme the production is expected to go up to about eight thousands tonnes.

In the economy of the district agricultural land enjoys an unique place even though it is hardly 39 per cent of the gross geographical area that has been brought under the plough and this includes current fallows also. Latest land use data disclose that forests occupy about 25 per cent of the gross area while another 19 per cent represent permanent pastures and grazing lands; about 3.7 per cent of the lands are under miscellaneous groves and 3.5 per cent represent cultivable wastes; about 5 per cent of the lands each fall under the category of barren lands and lands put to non-agricultural uses. Thus, if the entire cultivable lands including the fallows and pastures are taken into consideration the per capita availability of agricultural lands would be 0.52 hectares. But, if the net area sown alone were to be considered which, for example, stood at 238,281 hectares during 78-79, the per capita would slide down to 0.26 hectares. The lands of the district are however of a higher economic value and relatively large areas are suitable for plantation and garden crops.

Because of heavy rainfall and rugged terrain certain areas of the district have over a period of time been adversely affected. There are large extents of fallow lands and lands that have gone out of cultivation due to hyper acidity, Salinity or water logging. A survey conducted in 1966-67 revealed that the extent of such lands aggregated to about 37 thousand hectares. The Department of Agriculture suggested various measures such as clearance and contour bunding with outlets and terracing either level, ridge or bench for lands suitable for moderate and limited cultivation; trenching, gully plugging and afforestation for lands not suitable for cultivation of food crops due to steep slopes, rough and rugged surface and high level of erosion; and enclosure, furrowing, compartmental or rotational grazing and reseeding for lands not found useful for cultivation. The reclamation measures taken up thereafter have been adding a couple of hundreds of hectares to the cultivable category every year.

The agricultural lands of the district are distributed unevenly amongst a large number of small land holders. According to the latest i.e. 1977 Agricultural Census, the average size of land holding is 2.54 hectares. The predominance of the small holders becomes clear from the fact that those holding less than 2 hectares each form about 63 per cent of the total number of land holdings and that the aggregate land thus held accounts for 23 per cent of the total land held. The next size group of 2 to 4 hectares forms 21.4 per cent of the holdings and 22.3 per cent of the total land held. Very large holdings of above 50 hectares each constitute a mere 0.2 per cent of the total land holdings but accounts for about 8 per cent of the total land held. In a district known for coffee plantation one would expect a larger proportion of large holdings and even a considerable number of coffee estates spanning large geographical areas. But, even among coffee Plantation land holders there is a preponderance of small estates. According to the Census of Coffee Estates conducted during 1972-75, out of the 7917 estates in Chikmagalur district as many as 4552 estates belong to the size group of less than 5 acres (i.e. 2 hectares) while another 1368 belong to the size group of 5 to 10 acres (i.e.2 to 4 hectares) each. Only 67 estates or a meagre 0.84 per cent were company owned. Thus irrespective of the type of produce obtained from the lands the land holdings of the district are small.

The principal food crops are paddy, ragi and jowar. While paddy is grown in all the taluks of the district, ragi and jowar are confined and the maidan belts of the taluks of Kadur, Tarikere and Chikmagalur. In the malnad taluks of Koppa, Sringeri, Narasimharajapura and Mudigere practically paddy which is cultivated as a rainfed wet crop is the only food crop raised.

Chikmagalur district may be regarded as a pioneer in coffee cultivation in India. In about 1670 Bababudan is said to have brought coffee seeds from Yemen and raised seedlings on the hills near Dattatreya Peetha. Subsequently coffee plants became popular and were raised in backyards and kitchen gardens. The era of plantation on commercial lines began around the 1820s. Thomas Cannon

established the first such plantation in 1830 and called it the Mailimane Estate. This estate is said to be in very good condition even now. In about 1911, Kent, the owner of Doddangudda estate near Aldur found out a new variety of Arabica coffee which acquired fame as 'Kent coffee'. Dr. Leslie Coleman, a mycologist and an Entomologist of repute made strenuous efforts during this period to develop coffee plantations and evinced a keen interest in coffee research, In 1925, under his stewardship a coffee Research Station was established at Balehonnur. In 1941 the Coffee Board was formed and since then several developmental programmes have been launched in the district. The area under coffee is increasing every year, though at a low rate. For example, the area under coffee plantation which stood at 33,714 hectares in 1967-68 has moved up to 42,224 hectares in 1977-78. The production too has increased considerably over the years. In the economy of the district coffee enjoys a very important place.

Cardamom, pepper, areca and coconut are the other important crops of the district. Cardamom, with an estimated area of about 12 thousand hectares is confined mainly to Mudigere taluk. Pepper vines are generally found grown as an inter-crop in the coffee and areca gardens especially in the taluks of Mudigere, Koppa and Chikmagalur. The total area under pepper was estimated in 1970 to be around a thousand hectares. The taluks of Koppa, Kadur, Sringeri and Tarikere are noted for the areca gardens and, in the district, the area under areca was estimated at 14 thousand hectares in 1979. Coconut is an important garden crop particularly in the taluks of Kadur (about 8040 hectares) and Tarikere (about 2245 hectares). From about the mid-sixties several development schemes have been in operation in this district to promote and develop the cultivation of cardamom, pepper, arecanut, coconut, cashew, a variety of vegetables and fruits. There are a couple of tea estates also in the district.

Though one of the important irrigation works Viz, the Bhadra Project is located near Lakkavalli of this district the waters released thereof mainly irrigate the lands belonging to the neighbouring district of Shimoga, Chitradurga the district beyond and certain parts of the far off Bellary district. However canal irrigation is available in respect of about ten thousand hectares or about a third of the gross irrigated area. There are numerous tanks found dispersed all over the district and the aggregate of tank irrigatedarea comes to a little more than 16 thousand hectares. Well irrigation is of considerable importance in the eastern parts of the district where the rainfall is low.

Livestock rearing is an important economic activity among the agriculturists of the district. Cattle manure is even now highly valued. In the malnad belt the cattle which are of an inferior non-descript breed are usually of stunted growth. The period of lactation and yield of milk are both comparatively low. The bullocks too are of a stunted growth and are suitable for ploughing and such other agricultural operations. About 67 per cent of the livestock heads consists of cattle while buffaloes and sheep account for about 11 per cent each. Buffaloes, sheep, goats and pigs are reared in relatively larger numbers in the eastern maidan parts of the district. According to the 1977 cattle census the total number of livestock heads (excluding poultry birds) in the district stood at 7.21 lakhs. Chikmagalur occupied the 16th rank among the distriots in the matter of livestock wealth as it contributed just 3.35per cent to the total livestock population of the State.

In the maidan parts the cattle are of a better breed. As early as in 1929 a cattle Breeding Station was established at Ajjampura with the object of meeting the needs of the Amrit Mahal breed of cattle known for its draught quality, disease-resistance and hardiness. This station has under its control: (i) the Cattle Breeding Sub Station at Basur (773 hectares), (ii) Economic Cattle Farm at Birur (348 hectares) (iii) a Gosadan at Yemmedoddi and (iv) a Bull-calf Rearing centre at Birur and all these are in Kadur taluk. The Station is maintaining gomals (grazing lands), called Amrit Mahal Kavals of about 21,133 hectares for grazing the farm animals in different seasons in six districts, the extent in Chikmagalur being 5282 hectares.

Chikmagalur does not enjoy any special reputation for any particular industry. In fact, it ranks amongst the industrially very backward districts of the State. Mining is important. But it is a primary activity as it is mainly confined to extraction of the ore. It is only very recently that it has assumed the semblance of a manufacturing industry-the reference here is to the ore beneficiation work taken up by the Kudremukh Iron Ore Company. There are practically no large scale industries at all. The largest among the existing industrial units is perhaps the Vignyan Industries Limited located at Tarikere which employs about 300 persons and was recently taken over by the Bharat Heavy Electricals Limited, Bangalore. This factory produces steel and alloy steel castings and ingots. A mention may be made of the Khandasari Sugar factory, an edible oil mill and a small factory which manufactures Ayurvedic medicines. A dozen or so coffee curing works, rice mills, saw mills, three tea factories, carpentry workshops engaged in manufacture of furniture, doors and windows etc., printing presses, brick kilns, engineering and mechanics workshops etc., are the other industrial units that are found in the district. Recently industrial estates have been formed at Kadur and Chikmagalur with a view to help the entrepreneurs to utilise the financial and other assistance extended by the Government for the industrial development of the district.

The district enjoys a fairly good network of roads and communications. In the economy of the district, trade and commerce are also of considerable importance. Coffee, paddy, cardamom and arecanut are the chief exports of the district. There are two regulated markets - one at Kadur and the other at Tarikere. For promoting the marketing of arecanut, the Malnad Areca Marketing Cooperative Society Shimoga has established branches at Koppa and Sringeri. The main trade centres of the district are the towns of Chikmagalur, Tarikere, Kadur, Birur, Mudigere and Koppa. The cooperative movement has also been quite successful in this district. Banking facilities are available in all the urban areas and also in several large sized villages. Under the Lead Bank Scheme the Canara Bank conducted a survey in 1970 to assess the credit gaps and identify growth centres and, the Bank later on formulated a detailed credit plan also.

Chikmagalur district is thus seen to have its economic base mainly in its agricultural and horticultural activities including coffee plantations. Its name is very closely associated with coffee and one of the hill ranges of the district has been named after the man who is said to have introduced coffee cultivation in India. Forestry and mining activities are also of considerable significance in the economy of the district.

7. MAJOR SOCIAL AND CULTURAL EVENTS, NATURAL AND ADMINISTRATIVE DEVELOPMENTS AND MISCELLANEOUS ACTIVITIES OF NOTE DURING THE DECADE:

Among the major socio-cultural and religious events that took place in the district during the last decade a mention may be made of the Shishya Sweekara ceremony held at Sringeri. As is well known one of the four cardinal mathas established

by Adi Shankaracharya, called Dakshina Amnaya Shri Sharada Peetham, is at Sringeri. The present pontiff Jagadaguru H.H.Shri Abhinava Vidyateertha nominated his successor and initiated him into the order of Sanyasins in accordance with the tradition, during November 1974. The occasion attracted a large gathering of learned men, political leaders and administrators. A Dharma Sammelana as well as a Sahitya Sammelana were organised to mark the event. A large number of disciples of the institution from different parts of the country also attended the week-long celebrations. Another event of socio-political importance that took place in the district is the bye-election to the Lok Sabha from the Chikmagalur constituency held in November 1978. On account of the political developments which had taken place in the country between June 1975 and March 1977 and thereafter, and also because of the national and international stature of the main contender for the Lok Sabha seat, the event attracted world wide attention. The name of this tiny district suddenly shot itself into fame and innumerable correspondents representing various national and international newspapers descended on the district to obtain first hand information regarding the most intensive election campaign that had ever been launched in the country. The verdict of the electorate at this bye-election has proved to be of great importance in the history of Indian democracy.

In keeping with the local traditions, during the last decade also annual fairs, festivals and rituals associated with various religious institutions of different denominations were held in towns and villages of the district. Generally such celebrations function as a cohesive force in the society. On a particular occasion in 1976 due to the action of some miscreants a minor communal clash occurred in certain parts of the district. This apart, because of discontent among students, industrial workers and the like there were protest marches, bundhs, picketing etc., almost every year for brief spells and social tension did prevail to a considerable extent on the eve of every election in the district. By and large the social and cultural life of the people of the district has remained quite placid during the last decade.

During the decade the Government initiated several programmes aimed at achieving the all round development of the district and the welfare of the different sections of the population. A special mention may be made of the effective implementation of the 20 point economic programme. The other important programmes carried out in the district are the Western Ghat Development Scheme, Integrated Agricultural Area Programme, Drought Prone Area Programme, Tribal Sub-plan, Bhadra command Area Development Programme, Inland Fisheries Development Programmes and schemes initiated by the Coffee Board etc., for promoting coffee cultivation. In the matter of overall development, amongst the districts of the State Chikmagalur holds the 14th rank. Though economic growth has of late been taking place at an accelerated rate there is still much scope for improvement of its industrial base and expansion of agricultural and allied activities. The district has natural resources in an ample measure and with the available man-power these can be better and further exploited to ensure a higher level of prosperity.

BRIEF NOTES ON PLACES OF RELIGIOUS, HISTORICAL OR ARCHAEOLOGICAL IMPORTANCE

CHIKMAGALUR TALUK

I L.C.No. 2 : Teguru :

This place, situated on the left bank of the river Yagachi, has an ancient temple of Anjaneya and attracts a large number of devotees. A festival called Peru is held here and prayers are offered for rains.

II L.C.No. 8 : Mattavara :

The ancient Parshwanatha basadi here is said to have been visited by the Hoysala king Vinayaditya about the middle of the 11th century A.D. There is a dilapidated Shiva temple with a fine figure of Bhairava. Besides, the village has the shrines of Anjaneya, Deveeramma and Chaudeshwari. A large number of Cromlechs were found in the Government plantations to the Southwest of the village.

III L.C.No. 12 : Aralaguppe :

A temple of Deveeramma highly venerated by the local people is situated here. At Kaimara a hamlet of Aralaguppe, there is the Nirvana swamy 'Matha.' Nirvana swamy is said to have worshipped an 'Udbhavalinga' called Mallesha and to have performed several miracles. In honour of this saint a fair is held for three days in April every year.

IV L.C.No. 24 : Arasinguppe :

The village has three Viragals and one Satistone with inscriptions belonging to the Hoysala period and an epigraph mentioning gifts of land and authorisation to administer certain temples. This epigraph is dated in the year 1742 A.D. and belongs to the time of Santebennur chiefs.

V L.C.No. 33 : Uppalli :

A Ganga land-grant inscription dated in 959 A.D. and well carved but mutilated figures of Veerabhadra, Subramanya, Ganapathi etc, are found here. A simple Virgal of early eleventh century A.D. found here has a standing figure of a man armed with bow and arrow at the top.

VI L.C.No. 37 : Hire Magalur :

According to a Puranic account this place was once the residence of nine siddhas who performed penance near a pond which is now known as "Siddha Pushkarini". The village is also known as Bhargavapuri after Bhargava i.e. Lord Parashurama who is believed to have stayed here for some time and built the Rama and Kodandarama temples. Emperor Janamejaya is said to have performed the serpent saorifice in this village. A stone pillar about 9 feet high, with top fashioned like a trident is pointed out as the Yupa stambha or sacrificial post used by him. Kodandarama temple is a structure in the Hoysala style so for as the Garbagriha and Sukhanasi are concerned the remaining portions being subsequent additions in the Dravidian style.

VII L.C.No. 38 : Amble :

In certain inscriptions dated in 959 A.D. and later this place is referred to as Ammale and this seems to have once been a flourishing agrahara. There are 4 ancient temples dedicated to Chennigaraya, Lokeshvara, Veerabhadra and Gopalakrishna.

VIII L.C.No. 43 : Marle :

There are two ancient temples, dedicated to Channakeshava and Siddeswara constructed in the Hoysala style in 1130 A.D. According to an inscription near the Channakeshava temple, Vishnuvardhana visited this temple in 1130 A.D. at the time of the consecration of the deity. Behind the Kamatheshwara temple, there is a curious Mastikal with three projecting hands. An old Nolamba record has also been recently discovered here.

IX L.C.No. 67 : Vastare :

There are two obscure inscriptions on a stone near the shrine of Padmavathi. These inscriptions have been assigned to the middle of the eighth century and to about 900 A.D. Vastare was one of the pioneering centres of coffee cultivation by Europeans.

X L.C.No. 84 : KUDUVALLI :

There are five Ishwara shrines dedicated to Oneshwara, Rameshwara, Harihareshwara, Someshwara and Gautameshwara. On account of these pancha-lingas, the place has been hailed as the Talkad of Chikmagalur district. Also called Purushottamapura this village was granted to Sringeri matha when Purushottama Bharati Swami, was the pontiff of the matha.

XI L.C.No. 86 : Gautameshwara :

According to a local tradition sage Gautama, had his hermitage here and Ahalya, his wife, was released from her curse by Lord Ramachandra atthis place.

XII L.C.No. 89 : Kotevuru :

This place is noted for its ancient inscriptions. Among them, one that is ascribed to about 800 A.D. gives details of a line of chiefs called Taryyallas or Kusha-Taryyallas. Several expressions in it resemble those of Kadamba grants. At the Rameshwara temple there are Senavara epigraphs mentioning Marasenavarma who is said to have constructed several temples. There is also a Viragal near Mannirkatte at the entrance to the village. An annual fair of Rameshwara is held for three days in the month of March.

XIII L.C.No. 103 : Aldur :

Known as Arundur in the past, it has two 'Viragals' (hero-stones) with inscriptions dated in 1116 A.D., when Hoysala Vishnuvardhana was ruling over this region.

XIV L.C.No. 159: Bisagni Matha :

There is a Veerashaiva 'Matha' called Sri Guru Dattatreya Adi-Gadduge Inam Bisagni Matha. A tradition says that a saint named Prabhulinga shivacharya of this place performed extraordinary acts like bathing in boiling water and taming a mad elephant during the time of Keladi Someshekhara Nayaka.

XV L.C.No. 162 : Dattatreya Peetha :

Baba-Budan Giri range, on which this place is located is the highest hill range on the Karnataka table land. This chain has a horse-shoe like form with its opening to the north west. The northern arm commencing with the Hebbegudda (1,337.4metres) Streches eastwards without interruption for about 25 kms. Bending southwards, it presents to the east an unbroken wall of more than 32 Kms. The southern arm is formed by the Basavanagudda and Woddinagudda ranges. The character of the chain is that of a tremendous ridge, 1,829 metres above the sea-level and in some parts only a few yards wide at the summit, rising at intervals into loftier peaks.

Mullaiyanagiri peak rising 1,926 metres above the sea level, is the highest point between the Himalayas and the Nilgiris. About 15 metres below the top of Mullaiyanagiri there are three large caves in which Siddhas named Mullappa swami (Mullaiya), Muppanappa swami and Noorondappam swami are said to have performed meditation. The Yagachi river originates from the southern slope of this hill.

The 1,895 metres high Baba-Budan Giri has a noted shrine which is venerated by Hindus and Muslims alike and is known as Sri Guru Dattatreya Peetha, and as Baba-Budan's Darga among the Hindus and Muslims respectively. At a short distance from this shrine are situated the three sacred spots known as the Gada-teertha, Kamana-teertha and Nellikayi teertha formed by Manikya-Dhara water falls. The range is called "Baba-Budan Giri" as a Muslim saint called Baba-Budan who is said to have brought coffee to India from Yemen resided on one of the southern slopes and promoted coffee cultivation.

XVI L.C.No. 165 : Muttinapura :

This place is situated one the Baba-Budan hill range and it has the Adi-Gadduge Sri Guru Dattatreya Phalahara Matha and a temple dedicated to Prasanna Virupaksheshwara. Two inscriptions, one of the 13th century, and the other of 1615 A.D. were found in this temple. The Matha has in its possession 4 copper-plate inscriptions dated 1698, 1702, 1707 and 1717 A.D. respectively. This hill range is described as Chandradrona and Veda Parvata is believed to contain Sanjeevini and Siddha-rasa.

XVII L.C.No. 171 : Pandaravalli :

A local legend has it that the Pandavas stayed here for some time during their exile. The village has a shrine of Mallikarjuna.

XVIII L.C.No. 204 : Sindigere :

It is named after Sindhamma a Jaina lady. Two inscriptions have been noticed in the Brahmeshwara shrine at the Jain Basadi here. One mentions that Hoysala Ballala married the three daughter's of the Dandanayaka of this place in the Shaka year 1025. The other one dated 1137 A.D. records land grants made by the Hoysala ruler Vishnuvardhana to the basadi.

XIX L.C.No. 216 : Belavadi :

According to a legend Belavadi is the Ekachakrapura of the Mahabharata times, where Bhima, is said to have slain Bakasura. There are remnants of some important temples belonging to the Hoysala period.

XX L.C.No. 227 : Kalasapura :

There are two main temples of which Cheluva-Narayana temple is an old one with a newly built exterior and the Mallikarjuna temple is an early Hoysala structure with well-carved Hoysala crest on the top.

KADUR TALUK

I L.C.No. 16 : Machcheri :

This is said to be Mathsyapuri, the capital of Virata of Mahabharata fame. About a kilometre to the east Vedavati river flows on a hard rock-bed eroding it in several places. This spot is known as Kunti Hole where Kunti is said to have met the Pandavas during their ajnathavasa. A nearby hillock is known as Keechakanagudda.

II L.C.No. 58 : Sakrepatna :

A Telugu copper plate found in this place refers to the village as Galipooji-Sankarapattnam. Myths associate this place with giant Shambarasura and the pious king named Ambareesha. Another legend says that Anjaneya, who came here in search of the Sanjeevini herb, killed the giant named Kalanemi. He then came across a good omen (Shakuna) forecasting the success of his mission of finding the herb and hencheforth the nearby hill came to be known as Shakunagiri. According to the Sthalapurana this place was in olden times the capital of king Rukmangada, a king mentioned in the Mahabharatha. A monument to Hon-billa who sacrificed his life for the stability of Ayyanakere, a great gun and an image of immense slab of stone called Vira Ballala Chauki are the objects of interest here. This village became a possession of Argur or Balam chiefs during the time of Vijayanagar Kings. It was next taken by the Nayakas of Ikkeri-Srirangaraya king of Vijayanagar took refuge with the Ikkeri chief who espoused his cause and established him in power at Sakrepatna. But it was taken over by Mysore Army in 1690 A.D.

The Car festival held in honour of Ranganatha swamy in the month of Vaishaka is an important event in this neighbourhood.

III L.C.No. 61 : Brahmasamudra :

In this place, also known as Lakshminarayana pura, there are two temples:- (i) Nakanatheshwara temple originally erected by one Naka, a Sarvadhikari and chief minister of the Hoysala Narasimha I in 1169 A.D. and, (ii) Vishnu temple constructed

in 1172 A.D. by Achiraja who was also a Sarvadhikari under the same ruler.

IV L.C.No. 86 : Devanur :

In sanskrit, the place is called Surapura and Girvanapura. In an inscription of 1234 A.D. this place is referred to as Lakshminarayana pura. This village has acquired fame as it is the birth place of Mahakavi Lakshmeesha, a well known Kannada poet. He was an ardent devotee of Lord Lakshmikanta, the presiding deity of one of the temples of Devanur, to whom he dedicated his famous work Jaimini Bharata. The Kannada poet Rudrabhatta who flourished in the 12th century A.D. has alsodedicated his work Jagannatha Vijaya to Lord Lakshmikanta.

V L.C.No. 129 : Hiriyangala :

In this village a number of mutilated figures of Vishnu and other dieties are found.

VI L.C.No. 144 : Yemmedoddi :

Ayyanakere or Dodda Madagadakere is a large lake, surrounded by high hills at the base of the Baba-Budan hill range. This magnificient and delightful reservoir has been formed by embanking the perennial Gaurihalla stream at the foot of Shakunagiri hill. This tank is said to have been constructed by Rukmangada Raya, the Chief of Sakrepatna and was renovated later during the time of Hoysala king Narasimha. The vicinity of this extensive and enchanting lake is a popular picnic spot.

VII L.C.No. 157 : Girivapura :

The village has temples of Basaveshwara and Kendala Monnappaswamias also a gadduge (tomb-shrine) of Marula-Siddeshwara. A ShivayogaMandira and an "ashrama" called Shantidhama Sri Guru Kumarashrama were founded here fifty years ago by Sadashiva Shivacharya of Sakrepatna.

VIII L.C.No. 163 : Asandi :

About 14 inscriptions including Virgals, a number of beautiful temples and a few other notable structures have been found here. During the Ganga and Hoysala times, this was the headquarters of an administrative division called Asandinadu.

IX L.C.No. 166 : Antaraghatta :

The local temple of goddess Durgambika, also called Antaraghattamma and Chamundeswari is popular in this neighbourhood. A fair is held during February-March for ten days and the event attracts a large gathering.

X L.C.No. 268 : Devara Hosahalli :

The ancient Lakshmiranganatha temple here is surrounded by a fort and on its north-western side there is a big pond called Anehonda. The annual fair in honour of Lakshmiranganatha is held here every April for eight days in the Mahanavami maidana which is olose to the temple.

KOPPA TALUK

I L.C.No. 28 : Narasipura :

At Narve, a hamlet of this village which is situated on the bank of the river Tunga, sage Vibhandaka, the father of Rishyashringa of the Ramayana period is said to have had his hermitage. Of the Gopalakrishna and Ganga-Vishweshwara temples here the former is of Hoysala workmanship. In an inscription dated 1588 A.D. this place is referred to as Nari while in another dated 1592 A.D., it is referred to by the name Narave.

II L.C.No. 30 : Hariharapura :

From the inscriptions of 1392 and 1418 A.D. found here, it is learnt that an agrahara town was established here by king Harihara II of Vijaya nagara and was named after him. There is a matha belonging to Smartha Brahmins and in it there are two shrines dedicated to Narasimha and Sharada. Besides, there is the Madhveswara temple, in which two inscription stones are also found. According to a local tradition Daksha performed a great sacrifice near Someshwara temple, situated close to Hariharapura.

In Jammatige hamlet there is a small temple of Nilkanteshwara. Built in 1733 A.D., it is remarkable for its sculptures. Every inch of space in this temple is carved with figures depicting stories of Ramayana, Mahabharata and Bhagavata purana.

III L.C.No. 55 : Javapura :

A legend has it that at this place sage Valmiki had his hermitage. The village, formerly known as Sollebylu, has two temples of Hoysala period dedicated to Lokeshwara and Channakeshava. In addition there are the shrines of Ganapathi Anjaneya and Durga, a Jumma Masjid and a Catholic St. Rita's church all of which are of considerable religious importance in the neighbourhood.

I L.C.No.2 Halase: MUDIGERE TALUK

The village is noted for its Remeshwara temple constructed recently and also for its annual Suggi-habba which lasts for 3 days and is held during March-April.

II L.C.No. 42 : Gonibeedu.:

Named after Gona, a local chief this village has the shrines of Ganapathi, Channakeshava and Basaveshwara.

III L.C.No. 56 : Devarunda :

According to a legend, sage Kapila had his hermitage here, the presiding deity Prasanna-Rameshwara in the temple of that name here is said to have been installed by Lord Parashurama. Besides this temple, there are shrines dedicated to Keshava, Veerabhadra, Anjaneya and Devi as also two epigraphs of the Vijayanagar period.

IV L.C.No. 71 : Angadi :

This place has been identified as Sasakapura or Sosevur which was the original home of the Hoysalas who rose to great power in South India. There are many old inscriptions and some beautiful sculptures in the two Jain basadis. Remnants of ancient temples dedicated to Keshava, Patalarudra and Malleshwara are also found here. The Vasantika temple here is said to be the spot where Sala, the founder of Hoysala dynasty, killed a tiger at the bidding of his teacher.

V L.C.No. 72 : Hanturu :

The old Parshwanatha basadi here was got constructed by Hariyabbarasi, the eldest among the younger sisters of Kumara Ballaladeva, a Hoysala prince in 1129 A.D. There are two other shrines of Kalleshwara and Deveeramma which are also of some importance.

VI L.C.No. 78 : Gonibeedu Agrahara :

According to a legend this place was the abode of a rakshasa named Gonasura who was ultimately killed by Adi-Subrahmanyeshwara. The local temple of Adi-Subrahmanyeshwara is attributed to Harihara a Vijayanagara king, who got the deity installed in fulfilment of a dream he had experienced earlier

VII L.C.No. 104 : Taruve :

Ballalarayanadurga, located near here is on a sprawling hill in the Western Ghats which is about 1507 metres high. Extensive fortifications were built on it by the Hoysalas, who developed the area into a military strong-hold which commanded the Kottigehara pass leading from the hilly area of Chikmagalur to the coastal area of Dakshina Kannada

VIII L.C.No. 111 : Durgadahalli :

In the midst of a jungle nearby there is a temple dedicated to Kalabhairava. The 3 daylong Kalabhairava fair held here during February March every year is an important event.

IX L.C.No. 126 : Javali :

The Hemavathi river also called Yenne-hole, rises from a spring situated within the limits of this village.

X L.C.No. 128 : Kalasa (Mavinakere) :

The Bhadra river flows here in three directions, rendering the place into a peninsula. Very near to the Bhadra, there are Pancha-teerthas (five sacred) ponds called Kotiteertha, Rudrateertha, Ambuteertha, Nagateertha and Vasisthateertha. Kalasa is said to be one of the five sacred places situated on the banks of the Bhadra river. According to the Skandapurana, two sages, Mitra and Varuna performed penance at the place. According to a legend the renowned sage Agastya had his hermitage on the bank of the Bhadra here.

There is a large temple dedicated to Kalaseswara, surrounded with inscriptions attributed to the Bairarasa Wodeyars of Karkala. The temple is said to have been founded by Shrutabindu a king from the North. Mounds covering ruins on all sides point to the existence of a large town in former times. It was included in the dominions of Humcha and of the Karkala chiefs (1132 A.D.to 1598 A.D.). Subsequently the place was also the residence of Aigur chiefs. The former town at this site included the present villages of Melangadi. Kilangadi and Rudrapada. At Melangadi, there is a sacred bathing place called Ambuteertha where the stream rushes very deep between eroded rocks. At one point there is a large boulder placed horizontally on another. There is an inscription on this boulder stating that Sri Madhvacharya brought and placed it there in one hand. According to Madhva-Vijaya, Madhvacharya saw a big rock capable of supporting a water fall from a height, abandoned at a place through utter inability to carry it to its destination. When he enquired as to why the rock was not conveyed to its destination the people told him that there were no men able to convey it and that even if Bhima were to try, it was doubtful whether he could do it. The Acharya is said to have conveyed the stone easily with one hand and placed it at the destined spot.

According to some inscriptions, it is learnt that Kalasa was administered by three Hebbars. It might have enjoyed a kind of self-government about which fuller particulars are not available. Some of the princes of Vijayanagar family are said to have ruled over Kalasa.

XI L.C.No. 129 : Samse :

Tunga and Bhadra rivers originate at Gangamula in the nearby Varaha Parvata (Western Ghats). According to a legend, Vishnu in his incarnation as Varaha(boar) raised the earth which was plunged into the ocean by Hiranyaksha. After killing Hiranyaksha Vishnu rested for a while on the peak which has, since then come to be known as Varaha Parvata. The drops of sweat which trickled down from the tusks of the great Varaha are beleived to have formed into the twin streams Tunga and Bhadra

Within the limits of this large densely forested village the famous Kudremukh range is located.

This is a lofty peak on the Western ghats, which looks like the face of a horse from the side of the Arabian sea. This has been a well known land mark for navigators. Now, iron ore is being extracted in this area on a large scale by the Kudremukh Iron Ore Company Limited, a Government of India undertaking, for export to Iran and other countries.

In the limits of this village a new township named Malleswara after a hamlet already existing has come up because of the activities of the Kudremukh Mines Company.

It is said that a Jaina Muni named Shambhunatha had his hermitage here. A copper plate grant of 1675 A.D., found here mentions the chiefs of the Aigur dynasty.

XII L.C.No. 131 : Horanadu :

A stone inscription as also a copper plate grant, both of 1675 A.D., were found here. The local temple dedicated to Annapurneshwari which was recently renovated and enlarged is of some importance in this neighbourhood. This village has an ancient Jaina basadi also.

NARASIMHARAJAPURA TALUK

I L.C.No. 11 : Kanabur :

Balehonnur, which is a part of this village is situated on the left bank of the river Bhadra and has yielded a number of epigraphs and inscriptions of olden days. The Jagadguru Rambhapuri Veerasimhasana Mahasamsthana Peetha, situated at Balehalli (also called as Rambhapuri), a hamlet of this village is of considerable religious importance to a large section of the Veerashaivas in view of its being one of the five important point ifical seats of the Panchaacharya Mathas. A temple of Veerabhadra is also attached to the Matha. Balehonnur has a meteorological station and is known all over India because of the Coffee Researchs Station functioning here since 1925.

II L.C.No. 26 : Hebbe :

Known as Heramba-Kshetra this is considered to be one of the Panchakshetras situated on the banks of river Bhadra. There is an old temple dedicated to Bhavani-Shankara, where the deity is said to be a Udbhavalinga. Bhadra wild life Sanctuary is situated close to this village.

SRINGERI TALUK

I L.C. No. 21 : Bettagere :

The small Shankaranarayana temple in the hamlet called Tanikodu is said to have been constructed about 200 years ago. In a place called Tippanakoppa which is also a hamlet of Bettagere, there is a curious Mastikal having three panels.

II L.C.No. 23 : Vidyaranyapura :

This village was granted as an agrahara by the Vijayanagar king Harihara II in memory of Vidyaranya. According to a legend, sage Vashishta had a hermitage here. Guru Vidyateertha is stated to have performed penance at this place. There are temples of Vigneswara and Vidyashankara and a stone temple of Sadashiva, built by Ikkeri chief Shivappa Nayaka. Tunga river flows towards the west only in this village and this spot is of great sanctity as the river here is a Pashchimavahini.

III L.C.No. 24 : Rishyashringapura :

This place, also called Markal, but popularly known as Kigga has the ruins of an old fort and five epigraphs of which four are of 8th century A.D., and the fifth is of 11 th century A.D. Kilga seems to be an old name of this village according to the epigraphs. The well known temple dedicated to Rishyashringeshwara here is a fairly large Dravidian structure and the sculptured pillars in the navarange show an ingenious combination of men and animals. The shrine of Ganapathi found at the Sukhanasi has a rare figure of Balamuri Ganapathi with only two hands, his trunk turned to the right.

IV L.C.No. 32 : Gandaghatta :

In a hamlet called Ardhini, there are two Mastikals of elaborate workmanship each about seven feet high and having six panels.

TARIKERE TALUK

I L.C.No. 40 : Lakkavalli :

Bhadra Reservoir has been built here. A place nearby called Ratnapuri is said to have once been the capital of Vajramakuta Raya, a legendary king.

II L.C.No. 62 : Somapura :

According to a legend this was the place where Lord Parashurama washed away the last stains of blood on his axe. Somapura is regarded as one of the Pancha-kshetras. There is a temple dedicated to Prasanna-Someshwara which was orginally built in the 12th century A.D.

III L.C.No. 77 : Kallathipura :

The peak of Kalhattigiri situated in this village limits is 1877 metres above MSL and has a shrine of Kattina Choudeshwari at the top. It is said that sage Agastya had one of his hermitages here and that he built a temple dedicated to Veerabhadra in such a way as to bridge a gap lying between two rocky mounds. The temple looks like a cave temple and has the figure of elephants in front. Water of the falls known after the name of this village, rushes forth passing over the head of these elephants and pilgrims take pleasure in bathing at this spot. The water falls here in cascades from a height of about 122 metres.

IV L.C.No. 78 : Tigada :

Kemmannugundi, also called Krishnarajendra hill station, is a hamlet of Tigada village. This place commands the view of a magnificent natural scenery of the western ghats. Near about Kemmannugundi there are a number of beauty spots and centres, like Shanti falls, Hebbe water falls, Kalahasti falls, Jagara Valley Sanctuary, Baba-budangiri peak, Mullaiyanagiri peak, Dattatreya cave, the Bhadra reservoir and the meandering rivers Tunga and Bhadra. Iron ore is mined nearby and carried down by a rope way.

V L.C.No. 88 : Nandi :

The Nandi Jatra and cattle fair held in the month of October-November in honour of Shiva Sharana Nuli Chandayya, a Veerashaiva saint of the 12th century A.D., attracts a large gathering.

VI L.C.No. 96 : Amritapura :

The village has the remnants of a very fine and large temple of Amriteswara built in Hoysala style around 1197 A.D. during the reign of Viraballala II.

VII L.C.No. 162 : Baggavalli :

This place, said to have had the hermitage of sage Bhargava, was formerly known as Bhargavapuri Some inscriptions have been found here. The village has a Channakeshava temple.

VIII L.C.No. 178 : Gadihalli :

The village has the temples of Adi-Kalinatha and Ramanatha, besides the old shrines of Ishwara, Channakeshava, Basaveshwara, Ranganatha, Beeradeva and Masti.

IX L.C.No. 194 : Sollapura :

The famous temple of Siddharameshwara is situated here. The presiding deity in the from of a linga is often covered with the fascimilies of trimurti i.e. figures representing Allama Prabhu, Siddarama and Channabasavanna, who were the associates of Basaveshwara. A 15-day long jatra is held here once in every 12 years.

BRIEF NOTE ON PLACES OF INTEREST IN AND AROUND THE TOWNS

AJJAMPURA :

This town, known as Azimpura during the Mughal period, derives its name from Azim Khan. Much earlier the name of the place was Keral. There are the ruins of a fort and the temples of Anjaneya, Someshwara, and Keralamma. The fort, said to have been built by Bukka Raya, the Vijayanagara king and restored by Hanumappa Nayaka, a chief of Tarikere, was finally razed by Haider Ali in 1761. A fair held here for 6 days every April is an important event in this neighbourhood. Sri Shankarananda Swamiji has founded a spiritual centre here for the propagation of the teachings of Bhagavad Gita.

BIRUR :

According to an inscription of 1063 A.D. found here this place was known in the past as Beeravura There are several temples, the most important being that of Beeredevaru. Birur, a railway junction, is a noted centre of trade, commerce and communications but does not have any places of tourist interest.

CHIKMAGALUR :

Chikmagalur, the district Head Quarters town is situated south of Bababudan range in a fertile valley. The literal meaning of the name of the town is 'Younger daughter's town'. The name Kiriya Mugali has been used in many inscriptions, the earliest being that of 899 A.D. Hiremagalur, referred to as Piriya or Hiriya Mugali in inscriptions is adjacent to this town. Many inscriptions, Virgals and Mastikals have been found here. One Mastikals, which is ascribed to the 17th century, has a figure of a soldier holding a gun and a sword. The town is an important centre of coffee trade in the country and is a health resort.

KADUR :

This was a Jaina settlement during the period of the Gangas. Though the local temple of Ishwara and Anjaneya are structures of the 17th century A.D., the idols enshrined and the pillars are of Hoysala and Rashtrakoota period and these are of excellent workmanship.

KOPPA :

The town has an old temple of Veerabhadra the outer walls of which have sculptural representations of Shiva Leelas.

KUDREMUKH MINES AREA TOWNSHIP :

Because of the large-scale Iron ore mining taken up recently in the area of Kudremukh hill range, this new township has come up within the limits of Samse village. This town is linked by newly formed road with New Mangalore Port on the west coast.

MUDIGERE :

The town has several temples and ancient inscriptions. The temples of Remeshwara and Lakshminarayana are of some importance.

NARASIMHARAJAPURA :

Known as Yedehally, the town was re-named in 1915 in honour of the visit of the then Yuvaraja of Mysore. This is a noted place of Pilgrimage, for the Jainas and is one of the eleven centres of Jaina Bhattarikas surviving in the country at present. The traditional name of Bhattarikas of this place is Lakshmisena. At Singanagadde nearby there are three Jain Basadis and a Matha.

TARIKERE :

This place of antiquity was known as Amaravatipura and was an agrahara in the 12th Century A.D. The local temples of Keshava and Subramanya have traces of Hoysala workmanship.

SRINGERI :

Sringeri, situated on the banks of Tunga river, was formerly known as Rishyashrungagiri, after the legendary sage Rishyashrunga, son of sage Vibhandaka. Later it came to be called Shringagiri and then corrupted into Sringeri. It has gained fame throughout the country because of the Matha-one of the Chaturmanyas i.e. the four cardinal mathas-established here by Adi-Shankaracharya, the propounder of the Advaita philosophy. In the precincts of the Matha there

are the beautiful temples of Sri Sharada and Vidya Shankara besides those of Janardhana and several samadhi-gudis, mostly built on the tombs of former pontiffs of the Matha. The temple of Mallikarjuna known as Malahanikareshvara located on a small hilllock in the town as also that of Venkataramana and the Jain Basadi are of considerable interest. These temples are real treasures of art and architecture that enthral the ordinary tourist and the devout pilgrim alike. Close to Sringeri the other places of tourist interest are (i) the Rishyasringeshwara temple at Kigga (Rishyasringapura) and, (ii) Agumbe the renowned spot from where one can have an enthralling view of the sunset during the fair Season.

BRIEF ANALYSIS OF DATA

Population and growth trends :

According to 1981 census the total population of the district is 911,769. This implies that there has been an addition of 175,122 souls during the intercensal decade. In absolute terms this figure is almost equivalent to the present population of as many as three smaller taluks of the district namely, Sringeri, Koppa and Narasimharajapura. The decadal growth rate works out to 23.77 per cent and this rate is significantly lower than the overall average rate of 26.75 per cent registered by the State. During the earlier decade of 1961-71, also the growth rate noticed in the district namely 23.33 fell short of that observed in the State as a whole which stood at 24.22 per cent. But, in the still earlier decade of 1951-61, the district witnessed a spectacular rise in its population, and among the 19 districts of the State Chikmagalur ranked second, the top place being held by Shimoga district. In contrast to the State average rate of 21.57 per cent, Chikmagalur registered a decadal growth rate of 43.05 per cent. Significantly enough the other Malnad districts of the State such as Shimoga, Kodagu and Uttar Kannada also experienced a relatively very high growth during this decade. One of the reasons for this phenomenon is the success achieved by the Malaria Eradication Programme. It is common knowledge that in the earlier period greater parts of the hilly malnad area used to remain cut off for almost one half of the year due to heavy rains over flowing streams and absence of communication facilities. The general conditions that prevailed in malnad area were not quite conducive for even a normal growth. The endemic malaria and the hostile climate rendered the life somewhat difficult and the people from the plains used to consider life in malnad as dreadful. A quick appraisal of the decadal growth trends over the past 80 years reveals that (i) during 1901-11 while the population of the State increased, though marginally, that in Chikmagalur declined, (ii) during 1911-21 the district conformed to the general trend and registered a slight decline, (iii) during the next 20 years the population of the district increased though at a comparatively lower rate, (iv) between 1941-51, the growth rate suddenly jumped to 16.54 per cent, but even then this rate was lower than the State average of 19.36 per cent, and was therefore a reflection of the general trends (v) the decade 1951-61 witnessed an unprecedented growth-almost double the State average and (vi) thereafter the population is steadily growing but at a lower rate as compared to the overall average for the State. The sudden increase in 1951-61 may perhaps be attributed among other things to influx of plantation labourers consequent on a gradual expansion in the area under coffee plantation and also the impetus gained in the areca cultivation.

All the 7 taluks have registered a positive growth during the intercensal decade. The growth rates are however not uniform. The highest rate of increase is noticed in Mudigere and next to that is Chikmagalur, the taluk which contains the district headquarter town. In Kadur, the most populous taluk, the growth rate is exactly equal to the growth rate registered by the district as a unit. Mudigere, Koppa, Narasimharajapura and Sringeri are located fully in the malnad zone. The reasons for the above-normal increase in Mudigere and correspondingly below normal growth rates in the other three taluks appear to be the establishment of the Kudremukh Iron Ore Company in the limits of Mudigere taluk, the subsequent internal movement of population in search of better economic prospects and also the in-migration of people from outside the district to the project site. The higher growth rate observed in Chikmagalur may be attributed to the influx of coffee plantation workers, its importance as a central place and its somewhat higher level of industrialisation.

Generally the growth rates in urban areas tend to be higher than those in rural areas. Chikmagalur district, as a unit is not an exception to this trend. While the average growth rate in the rural areas is 20.97 per cent that in the urban areas is 38.93 per cent. These rates are 19.07 per cent and 50.65 per cent respectively for the rural and urban areas of the State. Seen in this perspective, the rural areas of the district have experienced growth at a rate higher than the State average and in spite of the spectacular 202.31 per cent growth in Mudigere taluk, the urban areas as a whole have experienced growth at considerably lower rates. Narasimharajapura taluk stands apart, for in this taluk the urban growth rate is a meagre 3.24 per cent in contrast to the total growth rate of 21.93 per cent, a figure which is above the district average. Out-migration of families or more so of workers perhaps from the only town of this taluk accounts for this phenomenon. It is likely that the Kudremukh project site has been the main focal point of such internal movement of population. Koppa and Sringeri towns and the rural areas as well appear to have been affected to a considerable extent by this process of migration. Amongst rural areas of the taluks, Chikmagalur taluk has experienced growth at a relatively high rate of 25.25 per cent while in Koppa the rate observed is even less than one-half of this. In the case of urban areas of the taluks, Mudigere taluk has the unique distinction of having trebled its population during the decade. This may be attributed to the classification of the Kudremukh Mines Project Area, which grew up in the last quarter of the decade, as urban for purposes of 1981 census. The growth rates in the other 6 taluks are very much lower than the State average of 50.65 per cent. Leaving aside the exceptional case of Mudigere taluk, it is Chikmagalur the taluk which contains the district headquarter town that has registered the relatively highest growth rate of 45.49 per cent. There have not been any outbreaks of epidemics or loss of life on a very large scale in any part of this district-either urban or rural-and there are no reasons to assume that the corresponding death rates and birth rates are radically different for different areas within the district. Thus, it is the migration factor that appears to be responsible for the varying growth trends observed in different administrative units of this district.

The urban population is spread over 10 towns and the average population of an urban area of the district is 15,983. Chikmagalur the most populous town is the headquarters of the district and has also been developed over the decades as an important centre of trade, commerce, industry and service functions. The population of this town alone constitutes 37.89 per cent of the total urban population. Tarikere is the next most important urban centre in terms of population size and also the urban characteristics. This town is

very close to the important industrial centre of Bhadravati urban agglomeration and is in itself a centre of industry, trade and commerce of considerable significance. Because of the developmental activities undertaken at the project site by the Kudremukh Iron Ore Company a new township grew up at Malleshwara in Samse village of Mudigere taluk. Though this area has not yet been statutorily declared as urban by constituting a Notified Area Committee or a municipal council, for census purposes it has been classified as a Census town with the status of a Special Area. In terms of population, this newly added town occupies the fifth place amongst the ten and holds out a prospect of rapid growth in the years to come Sringeri, the seat of a major religious institution and a cultural centre is the smallest town of the district and its position has remained so over several decades. By and large it may be observed that the towns of malnad region are smaller in population size and function more as mediocre centres of trade, commerce and service than of industries.

Villages and towns :

The rural population of the district is scattered amongst 1013 inhabited villages. From the point of view of number of inhabited villages and population size Kadur taluk occupies the top most place amongst the seven taluks. Chikmagalur and Kadur hold the second and third rank respectively while Sringeri with a tally of just 47 villages and a rural population of 27,354 persons shows itself up as the smallest taluk Sringeri was formerly a Jahgir and prior to 1971 i.e., prior to the transfer of 26 villages from Koppa taluk, it was still smaller in area as well as population. The population size of an inhabited village varies between 582 in Sringeri taluk and 886 in its neighbouring taluk of Koppa, the district average being 742. As Sringeri and Koppa share similar climatic and physiographical features it is rather difficult to explain why there should be such a marked difference in this matter between these two adjacent taluks. Sringeri is however more densely forested as it is closer to the western ghats than Koppa which lies to its east. In the predominantly maidan taluks of Kadur and Tarikere the average size comes to 723 and 730 respectively. In this district there are two distinctive settlement patterns: that noticeable in the malnad villages which is characterised by scattered clusters of houses and isolated homesteads; and (ii) the settlement pattern in the maidan villages which tends to be nucleated and concentrated by and large in a single village site. If each human settlement within the revenue limits of a village irrespective of its size and a minimum qualifying distance from the nearest settlement say of one km, were to be regarded as a separate hamlet, each village in the malnad belt would have scores of such units and identification of each such unit with reference to permanent features would also pose great difficulty. In the maidan region even if a village were to have hamlets, as conceived in the normal sense in which the terms is used, the number of such hamlets per village would be hardly 2 or 3. The average size of an inhabited village is considerably lower in the maidan taluks of Kadur (499 hectares) and Tarikere (481 hectares) and naturally these villages are more densely populated as compared to their counterparts in the malnad region.

Trends of Urbanisation:

With only 17.54 per cent of its population residing in urban areas as compared to 28.89 per cent in the state as a whole, Chikmagalur ranks amongst the least urbanised districts of the State. If the urban content in the total population of the district, as revealed at the three earlier decadal censuses were to be examined it is seen that the proportion which stood at 15.95 per cent in 1951 moved down to 14.98 in 1961 and then increased to 15.62 per cent in 1971. The main reason for the apparent decline in the urban content between 1951 and 1961 appears to be the abnormal increase in the overall population of the district (43.05 per cent), the accretion being more pronounced in rural areas (44.71 per cent). In absolute terms the urban population of the district increased from 66,588 in 1951 to 89,472 in 1961 i.e. by 34.37 per cent. During the same period the urban population of the State registered a growth of just 18.26 per cent. Another significant point is that during this period while several districts of the State suffered a loss in the number of towns due to declassification, Chikmagalur remained unaffected. When viewed in this general background despite the apparent setback, Chikmagalur district is seen to conform to the general trends perceived in the State and the country and is moving up in the direction of a higher degree of urbanisation, even though it has to be conceded that the rate of progress is not so very impressive.

There are considerable variations in the degree of urbanisation acheived by different taluks of the district. The taluks of Kadur, Mudigere and Tarikere have two towns each and on this count may be regarded as comparatively more urbanised than the other four taluks. The number of inhabited villages per town in the taluk may also be regarded as an index of urbanisation. It is noticed that on an average for every town of the district there are 101 inhabited villages. This ratio is however very low, i.e., 1:47 in Sringeri taluk. The taluks of Koppa, Mudigere and Narasimharajapura also have lesser number of villages than the average for the district. Paradoxically the taluk which contains the district-headquarter-town of Chikmagalur has the highest ratio of 1:218 and appears as the least urbanised if a single criteria were to be adopted. Chikmagalur is the most populous town of the district, and in contrast to the smaller towns of the malnad belt it has the predominant urban characteristics in an ample measure. The proportion of urban population in the total population of the taluk may be considered as a better index of urbanisation. When examined from this point of view Chikmagalur taluk with 26.58 per cent of its population living in urban areas, emerges as the most highly urbanised taluk. In koppa taluk the proportion is a meagre 6.29 per cent. Though the taluks of Tarikere, Kadur and Mudigere have two towns each the proportion of urban population is as low as 17.59 per cent, 16.17 per cent and 13.27 per cent respectively. Thus, from the point of view of the size of the urban component in the total population, the sheer population size of the town itself and the scale at which the various urban functions are being discharged, Chikmagalur may be regarded as the most highly urbanised taluk of the district. Between 1961 and 1981, the population of this town has doubled itself.

Population size Class of towns and Villages :-

In Chikmagalur district, a major portion of which lies in the hilly malnad zone small towns are preponderant. Two of the ten towns have below 5000 inhabitants each and belong to class VI according to Census classification of towns by population size group. Another four towns having a population in the range of 6000 to 8000 belongs to Class V. Kadur and Birur, both of Kadur taluk and located on the Bangalore-Honavar Highway hardly 6 kilometres apart, have a population of slightly below 20,000 each. Both the towns thus belong to class IV. Tarikere is the only class III town which is also located on the Bangalore-Honavar Highway. Among the 10 towns, Chikmagalur stands apart as the largest town and belonging to class II, by itself it accounts for about 38 per cent of the

total urban population of the district. The contributions of the other classes of towns to the total urban population of the district are: Class III: 15 per cent, Class IV: 23 per cent, Class V: 18 per cent and Class VI: 6 per cent. Chikmagalur town which crossed the barrier of 50,000 during the inter-censal decade and is located in the transition zone functioning as a main transit centre is thus by far the most important town of the district.

A size-group wise distribution of the inhabited villages highlights the predominance of small and medium sized villages. None of the villages of the district has more than 10,000 inhabitants and only two have a population in the range of 5000 to 9,999. Large villages with a population in the range of 2000 to 4999 constitute 5.62 per cent while the medium sized villages account for 46.99 per cent. Very small villages with less than 200 inhabitants each are also quite numerous and these form 19.94 per cent of the total number of inhabited villages. The average size of a village of the district is 742 and as already pointed out this varies between 582 and 866. A comparison of the average size by taluks does not disclose any definite pattern that facilitates any generalisation. Very small and small villages as also medium sized villages occur in all the taluks and equally well in both the regions of the district.

Density:- With a density of 127 persons per square kilometre Chikmagalur ranks amongst the sparsely populated districts of the State. The mountainous terrain, heavy rainfall, a higher proportion of forest land and a somewhat hostile climate appear to be the factors that are responsible for this low density. As everywhere else in this district also the urban areas are more densely populated. Thus while the density for urban areas works out to 2369 persons per square kilometre of urban space that for the rural areas comes to 105 persons only. The maidan zone viz, Kadur and Tarikere taluks, is more densely populated than the malnad area. Kadur taluk rural has the density of 138 persons. The lowest density of 56 is noticeable in the rural areas of Mudigere taluk and next to it is Sringeri with 62 persons per square kilometre. Even if the area of inhabited villages alone were to be considered it is seen that in the rural areas of Sringeri and Narasimharajapura taluks the density is just 62 while in the rural areas of Mudigere taluk the density is about 88. Though located purely in malnad, Koppa taluk has a density of 124 persons per every square kilometre of its rural area. The maidan taluks of Tarikere and Kadur have higher densities of 150 and 146 respectively while Chikmagalur taluk which spans both the zones has a medium density of 109 persons.

If the aggregate area of the inhabited villages alone were to be considered the density in rural areas would be 112 persons per square kilometre. A distribution of the inhabited villages by convenient density ranges shows that about 40 per cent of the villages have less than 100 persons per square kilometre and another 37 per cent have densities in the range of 100 to 200. Villages with densities much higher than even the rural State average of 140 are also found in a significant proportion. Villages with higher densities are met with more in maidan parts than in the interior malnad zone. The average area of an inhabited village in Tarikere taluk comes to 481 hectares while that in its adjacent maidan taluk of Kadur works out to 499 hectares. In contrast the average area of an inhabited village of Sringeri taluk is as high as 1262 hectares. The conditions in the plains are better suited for a larger number of persons to live together in a compact geographical area.

Kadur with 10,841 persons per square kilometre is the most densely populated town of the district and Tarikere with 10,495 persons holds the second place. Both these are towns of the maidan area. In Birur too the density is quite high. Except Kudremukh Mines area all the other towns are statutory towns with a notified boundary. In terms of geographical area Chikmagalur with an area of 9.32 square kilometres is the largest and Sringeri with 0.46 square kilometres is the smallest. The total area under the administrative control of the Kudremukh Mines area is 46.05 square kilometre and since the population enumerated in this gross area is 7972 the average density comes to a mere 173. Here too the main township is confined to a smaller area which is more densely populated. Perhaps when a Notified Area Committee with a limited area is constituted (regarding which proposals have already been made) to carry on the civic administration of the township proper a correct picture regarding the density would be available.

Sex Ratio :- In the district as a whole there are 953 females for every thousand males. This ratio is slightly lower than the State average of 963 and the district holds the 14th rank. In 1971, with a sex ratio of 937 against the then State average of 957, Chikmagalur held the 16th rank. Taluk level data shows that the sex ratio figure has increased in every taluk of the district during the inter censal decade. In 1971, Mudigere taluk had the lowest sex ratio of 895 while Kadur had the highest average of 958. The relative positions of the taluks have considerably changed during the decade. While, despite a slight rise in sex ratio from 895 to 904, Mudigere taluk has retained the last place Koppa taluk, which in 1971 held the fourth rank with a sex ratio of 905 has now shot up to the top most place with a sex ratio of 97[illegible]. Similarly, Narasimharajapura which held the sixth rank has now moved up to the fourth place. The sex ratio has increased from 904 to 958 in this taluk during the decade. It is also noticed that this increase is noticeable to a greater extent in the rural areas. As already pointed out the taluks of Koppa, Sringeri and Narasimharajapura have experienced a very low population growth during the decade. Selective out-migration, especially of able-bodied men from these taluks in search of work appears to be one of the important reasons for this phenomenon. The Kudremukh Project area has been attracting quite a larger number of male workers as is clear from the fact that in this town there are hardly 576 females for every 1000 males. As between Tarikere and Kadur it appears that Tarikere has gained better and edged out Kadur by a slight margin. Both these are in the maidan region and the sex ratio observed here namely 963 and 964, is very close to the State average. In the malnad zone where coffee plantations and areca gardens are predominant the composition of the migrant workers is an important factor that affects the sex ratio and has therefore to be taken into consideration in any deeper analysis.

The sex ratio tends to be low in urban areas of any taluk or the district for that matter, for it is generally held that a lower sex ratio implies a higher degree of urbanisation. This disparity is highly pronounced in Mudigere taluk: the sex ratio for rural areas is 939 and that for urban areas is 698. Such a difference is minimal in the maidan taluks of Tarikere and Kadur. In Chikmagalur which is by far the most highly urbanised taluk of the district, the sex ratio in urban areas namely, Chikmagalur town is 925 while that in rural areas is 963. Among the towns, as already indicated, the newly added urban unit of Kudremukh Mines Area has the lowest sex ratio of 576 while another equally small town, namely, Ajjampura of Tarikere has the highest sex ratio of 994. In

statement I of the Town Directory, particulars on sex ratio for the three successive censuses of 1961, 1971 and 1981 are presented townwise. A perusal of these figures indicates that in every town the sex ratio has increased from one census to the next, the two exceptional cases being that of Chikmagalur and Sringeri which have registered a slight decline during the current decade.

Literacy :

In Chikmagalur district the literates constitute 43.50 per cent of the total population. This rate is considerably higher than the State average of 38.76 per cent and when the districts are arranged according the descending order of literacy rate Chikmagalur occupies the sixth rank. In 1971 with a percentage of 34.93 this district held the seventh rank. Obviously, Chikmagalur has registered growth at a higher rate. A perusal of the literacy rates at the earlier censuses discloses that this district has all along been maintaining a rate higher than the State average.

Within the district the literacy rate varies between 39.28 per cent in Kadur taluk and 56.30 per cent in Sringeri taluk. This wide disparity may be partly attributed to the relative size of these two taluks: Kadur is the largest in terms of population as well as number of villages while Sringeri is the smallest. Furthermore, Sringeri has historically been a religious and cultural centre with a relatively high concentration of Brahmin community which is traditionally noted for learning. Sringeri is situated in a purely malnad belt. Kadur on the other hand is located mainly in the maidan and has a more complex caste and community structure. The literacy rates are much higher than the average in the other malnad taluks of Koppa and Narasimharajapura also. However, Mudigere taluk which too lies in malnad has a rate that is lower than the district average. One of the main reasons for this inconsistency is the influx of labourers from the plains to Mudigere taluk to work in the construction of roads and buildings as well as in mines. It appears that this migrant labour force consists a larger proportion of males than females and that among such male labourers quite a large number are illiterate.

Sexwise data reveals that, in conformity with the general pattern, in Chikmagalur district also the literacy rate for males is considerably higher than that for females and this is so in all the towns as well the rural areas of all the taluks. This disparity is more pronounced in the maidan areas. In Kadur taluk for instance, while the female literacy rate is 27.87 per cent only the male literacy rate is 50.26 per cent. The position in Tarikere taluk is very much the same though the gulf is a little bit narrower: 20.12 points as compared to 22.39 points in Kadur taluk. Though Mudigere taluk belongs to the malnad zone the disparity is well pronounced. In the matter of male literacy this taluk holds the last place among the taluks of the district. But regarding female literacy it holds the fourth rank. The gulf between the male and female literacy rates is the narrowest, being only 13.28 points, in Narasimharajapura taluk. For both males and females and in both rural and urban areas the rates are highest in Sringeri taluk.

Among the towns, Sringeri with 76.40 per cent literate in its population tops the list. The literacy rate of 50.12 per cent noticed in Kadur taluk is the lowest average for any town of the district. Birur too contains an equally low proportion of literates (50.15 per cent). In Kadur, the second largest town of the district the literacy rate is slightly lower than the urban average. A perusal of the town level data thus reveals that the smaller towns which lie in the malnad have significantly higher rates of literacy than the larger town as also the small towns of the maidan.

When the villages are grouped into population size-classes and the literacy rates for each class are examined, it is noticed that the villages in the higher population ranges tend to have higher rates of literacy. The average literacy rate is as high as 55.26 per cent for the two villages that belong to the 5000 - 9999 range. In contrast, for the 202 small villages with less than 200 inhabitants each the average literacy rate is 36.50 per cent. Generally, the larger villages enjoy better facilities locally and offer more opportunities. In malnad villages however in view of the dispersed nature of the settlement pattern the schools are almost always situated at some distance in respect of the bulk of the households. In the case of the three middle size-classes of 200-499 500-1999 and 2000 - 4999 the difference in literacy rate is very very marginal and these rates are very close to the district average of 39.90 per cent. Perhaps a regrouping of the villages in such a way as to have a uniform difference in population as for instance: below 200, 200 - 399, 400-599, 600-799, 800-999 etc., may throw out sufficient evidence to support the hypothesis that a larger population of the village implies a higher literacy rate. Apart from population size, the caste composition, location, level of economic development besides the nature of economic activity pursued in the village are the important factors which are to be considered in any detailed and deeper analysis of literacy data.

Economic activity :

At the 1981 census there has been a three-fold classification of Population: main workers, marginal workers and non-workers. Nature of one's main activity and the extent of participation in economically productive work are the decisive factors for such a classification. Levels of economic development of different regions within the district, availability of opportunities besides willingness and ability among women to undertake economically productive work, social attitude towards such working women, initiative and entrepreneurship evinced by menfolk in general etc., are the important factors that influence the distribution of population by these three categories. Chikmagalur district, as already noted, is well known for coffee and cardamom plantations as well as areca and coconut gardens. These are labour intensive enterprises and have enough scope for engaging women and child workers as well for a major parts of the year.

In the State, the proportion of main workers to the total population is 36.76 per cent. In Chikmagalur district the corresponding figure is significantly higher than the State average. With a work participation rate of 38.82 per cent, the district holds the seventh rank amongst the 19 districts when these are arranged in a descending order of the proportion of main workers to total population. In 1971, the proportion of workers stood at 34.61 per cent and this was slightly lower than the State average of 34.74 per cent. Chikmagalur district held the eleventh rank. During the decade the district has witnessed a relatively higher rate of growth in employment generation and utilisation of labour force.

The proportion of workers varies considerably amongst the different taluks of the district. Generally in the malnad areas where there are coffee plantations the proportion of main workers tends to be high. Added to this, in Mudigere taluk, construction of roads and buildings and mining of iron ore have assumed considerable importance of late. Thus in Mudigere taluk the proportion of workers is 44.78 per cent and this is the highest average. Though Sringeri lies in Malnad it is more interior in its location, does

not have coffee plantations and is quite small in population size. Perhaps for these reasons it is an exception and has a proportion of only 36.89 per cent workers in its population. This figure is lower than that returned in Tarikere taluk, though it is much higher than the rate observed in the other maidan taluk of Kadur. With a proportion of 34.63 per cent Kadur taluk holds the last rank amongst the taluks. The very low work participation rate among females especially in rural areas, has pulled down the taluk average considerably. It is however this very taluk that has the highest proportion of marginal workers. This preponderance of marginal workers too has resulted in the lowering of the proportion of main workers. If the proportions of main as well as marginal workers are combined together and the work participation rates are examined, it is seen that Kadur taluk with its 47.93 per cent tops the list while Sringeri occupies the last place.

If the rural areas alone of each taluk are considered the picture that emerges conforms to the foregoing general pattern. The district average is 40.26 per cent. Except in Sringeri and Kadur taluks in the other taluks the rates are higher than the district average. The range of variation is however very moderate being about 12.5 per cent, on either side i.e., from 34.76 to 45.07 per cent.

The taluk urban rates vary between 29.69 per cent and 42.89 per cent, the district average being 32.03 per cent. It is only in Mudigere taluk urban that the rate is very high for the second highest average noticed as low as 33.90 per cent in Kadur urban. Of the two towns in Mudigere taluk, the new township of Kudremukh has the highest proportion of workers in its population because of its present special characterstic and this has helped the urban areas of the taluk improve its overall average also.

Generally, in rural as well as in urban areas the proportion of main workers in the male population tends to be much higher in comparison to that noticeable among females. Chikmagalur district is not an exception to this general tendency. As compared to 56.74 per cent among rural males the main workers among rural females constitute only 23.15 per cent. In rural areas, for every pair of female workers there are 5 male workers. Within the district, among the taluks there are considerable variations. In Kadur taluk for instance while the proportion of main workers among rural females is just 12.52 per cent - the lowest rate returned by any of the taluks of the district - that among rural males is 56.31 per cent. This type of difference is very narrow in Mudigere taluk. Both these appear to be exceptional cases. In Kadur taluk quite a large proportion of females have returned themselves as marginal workers as a result of which the proportion of main workers has come down. On the other hand in Mudigere taluk because of the Kudremukh project there is a greater demand for labourers and, at least quite a few females who would not have normally worked at all or would have been marginal workers are now returned as main workers. In the rural areas generally about one-fourth of the female population is economically active. But in the urban areas the proportion of female main workers tends to be around 10 per cent only. At the same time the proportion of main workers among urban males also tends to be somewhat lower than that in rural areas. In Tarikere taluk the difference between the two rates is quite large: as against 50.13 per cent of main workers among males the main workers among females form just 8.40 per cent. In the neighbouring maidan taluk of Kadur on the other hand, this difference is comparatively small : while 14.26 per cent among females are main workers, among males only 52.34 per cent are so engaged. In the taluks where there are large extents under coffee cultivation the proportion of main workers among women tends to be high.

The marginal workers constitute 5.78 per cent of the total population of the district. This figure exceeds the State average of 3.48 per cent by 66 per cent. Amongst the 7 taluks Kadur tops with 13.30 per cent followed by Tarikere with its 7.38 per cent. These are maidan taluks where dry-farming is the mainstay of the rural economy. The proportions of marginal workers are less than one-half and are about a fifth of the district average respectively in the taluks of Chikmagalur and N.R. Pura on the one hand and Mudigere and Sringeri on the other. Koppa taluk has the lowest average of 0.27 per cent. Migration of workers appears to be the main reason for this low rate. Unlike among main workers, among marginal workers there is a preponderance of females. The crude male - female ratio among marginal workers in the State is 1:9 and the corresponding ratio for the district is 1:8. This figure too varies considerably from taluk to taluk; 1:10 in Chikmagalur in contrast to 1:4 in Koppa. Generally, in rural areas there are greater opportunities and scope for women to work during peak seasons and thus get reported as marginal workers. In the rural areas of Kadur 28.35 per cent of the females have returned themselves as marginal workers and this stands out in sharp contrast to the 0.46 per cent reported from Koppa taluk. In the urban areas of [illegible] not even a single male member has returned himself as a marginal worker and among females only 0.04 per cent are marginal workers. It is in the urban areas of Kadur taluk, that is in Kadur and Birur towns, that the highest proportion of male and female marginal workers are returned. In these two towns areca curing is a seasonal occupation which perhaps provides some work to female workers also.

Those who are neither main workers nor marginal workers are classified as non-workers. In Chikmagalur district since the proportion of main workers as well as that of marginal workers is considerably higher than the State average the proportion of non-workers is lower to a corresponding extent. Compared to the State average of 59.76 per cent in Chikmagalur the non-workers form only 55.40 per cent. In the urban areas the non workers are more numerous and they constitute as much as 67.06 per cent whereas their counterparts in the rural areas form only 52.[illegible] per cent. At the taluk level these figures vary between 52.07 per cent in Kadur and 61.98 per cent in Sringeri. The rural areas of Kadur have the lowest (49.82 per cent) proportion of non-workers. In the case of urban areas the proportion of non-workers is lowest in Mudigere taluk and highest in Narasimharajapura. Among females, non-workers are preponderant and this is so in every taluk and every town of the district. But as compared to State average of 74.67 per cent the proportion of non-workers among females here is only 68.55 per cent.

Availability of different types of amenities in villages and towns :

Information on this aspect is furnished in detail in the village and town directory statements and also in a condensed form in the appendix and the tables appended. Regarding drinking water facilities it may be observed that such facilities are existing in all the villages and towns. It may however be added that this question has not been examined in depth and factors such as the sufficiency or otherwise, availability of water through out the year or otherwise, technical opinion regarding the potability of the available water itself etc., have not been probed into. In most

of the villages open draw wells constitute the main source of water supply and several villages have more than one source like wells and rivers, wells and handpumps, wells and streams, and a few have taps as well. All the towns are having the facility of water supply through taps.

i) Educational facilities :

Out of the 1013 inhabited villages as many as 789, that is 77.89 per cent, have at least one primary school each within their respective revenue limits. The aggregate population of these villages forms 94.09 per cent of the rural population of the district. Among taluks Narasimharajapura ranks first as the proportion of villages with schools and population served respectively work out to 89.66 per cent and 97.13 per cent. Though Sringeri and Koppa rank second and third in terms of the percentage of villages with schools in each when the proportion of population served is considered the position gets reversed. In Koppa taluk the total population of villages with at least a primary school constitutes 96.61 per cent whereas in Sringeri taluk the corresponding figure is only 93.45 per cent. Mudigere taluk with only 73.38 per cent of its villages having schools holds the last place and even with reference to the proportion of population served it occupies the last place only as its tally is 91.67 per cent. Even though it lies in the malnad zone and shares the general characteristics of the adjoining taluks of Koppa, Sringeri and Narasimharajapura it has the disadvantage of a larger number of villages, a larger area of a mostly densely forested type and of a mountainous terrain. In Kadur, the taluk with the largest number of villages, 77.44 per cent of the inhabited villages have at least a primary school each and the total population of these villages forms 96.39 per cent of the rural population of the taluk. The position of this taluk is slightly better than that of Chikmagalur and Tarikere. The general impression that one gains is that the malnad areas of the district are somewhat better served than the maidan areas.

In the case of 218 out of the 224 villages not having any school at all within their limits it is noticed that at least the primary school facility is available at a distance of less than 5 kilometres. The distance is more than 10 kilometres in the case of 2 villages and lies between 5 and 10 kilometres in the case of another 4 villages. The population size-group classification of these villages discloses that 199 out of 224, that is 89 per cent, are small villages each with less than 500 inhabitants and the remaining 25 are medium sized. If the total number of villages in each size-group are considered it is seen that educational institutions exist in all the villages with 2000 or more inhabitants, in 94.75 per cent of the villages with a population in the range of 500 and 1999 and in only 58.37 per cent of the small villages with less than 500 inhabitants each. Obviously the larger villages enjoy better chances of having educational facilities. Another interesting feature with reference to the proximity of the village to the town is that a larger proportion of villages that are farther off from the town tends to have educational institutions. The proportionate figures for the villages in the three distance ranges of 5 kilometres or less, 6 to 15 kilometres and 16 to 50 kilometres are seen to be 68.55 per cent, 78.24 per cent and 80.09 per cent respectively.

As some of the villages have more than one primary school each, the average number of primary schools per inhabited village of the district works out to 1.13 and that in respect of only the villages having schools comes to 1.44. As the level of education increases the number of villages with such higher education facilities tends to decrease suddenly. While the proportion of villages with Primary Schools to the total inhabited villages is 77.89 per cent, that of the villages with Higher Primary or Middle schools is 30.90 per cent and that of villages with high schools is a meagre 5.13 per cent, only 6 out of the 1013 villages have junior colleges while only one village, namely Sringeri (Rural) has a degree college. For all practical purposes this college, as well as the Junior College attached to it, is reckoned as belonging to Sringeri town even though it is physically located outside the notified limits of the town municipality in the area which has for census purposes been constituted into a separate unit of enumeration. Generally high schools and junior colleges are located in large-sized villages that enjoy central location with a view to cater to the needs of students from a large number of surrounding smaller villages. Among taluks, Kadur has the largest number of high schools and the proportion of villages with high schools to inhabited villages of this taluk comes to 8 per cent. Of the two villages in Sringeri taluk which have high schools one in fact is Sringeri (Rural) and represents the area of Sringeri revenue village outside the municipal limits and this high school is for all purposes reckoned locally as belonging to the town.

In all the towns of the district, facilities are locally available for studying from I standard upto and inclusive of X standard that is, high school level. All the towns excepting Kudremukh Mines Area have a junior college as well. Chikmagalur, the district headquarter-town and Sringeri the traditional centre of learning have degree colleges.

ii) Medical Facilities :

Medical institutions of one type or the other are functioning in all the towns and in 8.79 per cent of the 1013 inhabited villages of the district. If taluk is considered as the unit for comparison of the situation prevailing in rural areas, Koppa the small malnad taluk shows itself up as the best served (11.25 per cent) among the seven taluks. The adjacent malnad taluk of Sringeri which is the smallest taluk of the district takes the last place with a mere 6.38 per cent. The position of Mudigere and Narasimharajapura, also of malnad zone, is somewhat better than that of Sringeri. Even in Chikmagalur taluk the proportion of villages with medical facilities is less than the district average. As between the two maidan talukso f Kadur and Tarikere, the former which is the largest taluk enjoys a better position with its tally of 9.77 per cent.

A grouping of the 924 villages, not having medical facilities locally, according to distance range with reference to the nearest place with a minimum level of such a facility shows that for 535 villages, (58.0 per cent) the distance is less than 5 kilometres, for 321 villages (34.7 per cent) the distance is between 5 and 10 kilometres and for the remaining 7.3 per cent of the villages the distance is more than 10 kilometres. Several villages are thus seen to have medical facilities within a reasonable distance. The medical institution in any village or town serves not only the locally resident population but also those residing in surrounding villages. For purposes of a rough analysis the proportion of population of villages with medical facilities to the rural population of the taluk can be used as an index. The resident population of the 89 villages with medical facilities forms 24.75 per cent of the rural population of the district. The proportion of population so served is the highest, namely 30.35 per

cent, in Narasimharajapura taluk and the least (7.98 per cent) in Sringeri taluk. Both the taluks are located in malnad and are small in terms of number of villages and also population. Koppa taluk which has the highest percentage of villages with medical facilities ranks third and Kadur the largest taluk ranks second. Generally the medical institutions are located in large-sized villages and the largest village in a particular cluster may not after all be really very large with reference to the villages in another cluster. It is noticed that amongst the 89 villages with medical institutions only 3 are having less than 500 inhabitants each, 51 that is 57.3 per cent, are having a population in the range of 500 to 1999 and the remaining 35 villages (39.3 per cent) have more than 2000 inhabitants each. If the number of villages with facilities is considered in relation to the total number of villages in each population size group it is observed that medical facilities exist in the two villages (i.e. 100 per cent) with 5000 plus population, in 57.89 per cent of the villages having 2000 to 4999 persons each, in 10.71 per cent of the villages having 500 to 1999 persons each and in a negligible 0.63 per cent of the villages with less than 500 inhabitants each. Population size is thus an important factor: larger the population greater is the possibility to have medical facilities locally. Distance from urban centre is yet another important factor but this operates inversely for the obvious reason that the institutions in the town serve the people of the nearby villages also. Thus, the closer a village is to a town lesser are its chances to have such a facility within its limits. Out of 89 villages with medical facilities only 2 are located within the distance of 5 kilometres from the nearest urban centre, while as many as 52 are located beyond the distance of 15 kilometres.

All the towns of the district have medical institutions with facilities to provide treatment to in-patients also. The average number of beds per thousand population in towns varies between 0.98 in Narasimharajapura and 7.91 in Mudigere the average for the district being 3.44. The situation in the other town of Mudigere taluk, namely the Kudremukh Mines Area, is also quite good, being next only to that found in Mudigere town. This new town is a special area being developed according to a pre-conceived plan by a Government of India Undertaking and as such its position cannot be normally compared with that prevailing in the other municipal towns of the district. Chikmagalur, the most populous town of the district, besides being the headquarters of the district enjoys good medical facilities and here the average number of beds per thousand population comes to 4.80. In view of its status the hospital at Chikmagalur serves a population much greater than that residing in the town.

iii) Postal Facilities :

In 237 villages, forming 23.40 per cent of the inhabited villages, postal facilities are locally available. The proportion of such villages varies considerably among the seven taluks. While in Koppa taluk the facilities exist in 42.50 per cent of the villages in Kadur taluk the villages with postal facilities form only 18.42 per cent. Koppa is a small malnad taluk while Kadur is the largest taluk of the district and is in the maidan region. The position of Sringeri taluk which is in malnad and is the smallest taluk appears to be slightly better than that of Kadur. But, if the proportion of population served, that is the proportion of the population of villages with facilities to the total population of the inhabited villages, were to be considered Sringeri taluk occupies the last place with a mere 30.35 percent while Kadur with its 44.24 per cent holds the sixth place. The position in Tarikere the other maidan taluk is better than that of Kadur both in terms of proportion of villages with facilities (21.46 per cent) and proportion of population served (48.76 per cent). The population of the villages with postal facilities forms 48.76 per cent of the rural population of the district. In this matter too Koppa with 60.54 per cent appears to be the best served taluk. As in the case of several other facilities regarding postal facilities too the size of a village is an important factor. All the villages with 5000 plus population, 94.74 per cent of those having 2000 to 4999 inhabitants each, 33.82 per cent of the villages having 500 to 1999 persons each and only 4.18 per cent of the small villages with a population of less than 500 are having postal facilities. Villages that are farther off from urban centres and are relatively large appear to enjoy better chances of having postal facilities. Among the 124 villages located within 5 kilometres from a town only 19.35 per cent have postal facilities. The corresponding figures for the distance ranges of 6 to 15 kilometres and 16 to 50 kilometres are 22.45 per cent and 25.38 per cent.

In the case of 628 villages out of the 776 not having postal facilities locally the distance to be covered to reach the nearest post office is less than 5 kilometres. That is to say, nearly 83.5 per cent of such villages have postal facilities within a walking distance. In the case of 27 villages (3.5 per cent) this distance is more than ten kilometres. Generally such villages tend to be quite small in population size and also are found to be located in the interior parts of the district.

Postal and telegraph as well as telephone facilities are available in all the towns of the district. Among villages, 9 have only telephone facilities, 28 have postal, telegraph and telephone facilities and another 45 have postal and telephone facilities.

iv) Weekly market facilities :

All the towns and most of the large and medium sized villages generally have at least a few permanent shops which deal with the daily necessities. Weekly markets are also held in almost all the towns and in as many as 24 villages of the district. In Mudigere taluk the proportion of villages where weekly markets are held to the total number of inhabited villages is 3.60 per cent and this figure is the highest for any of the taluks of the district. On the other hand in none of the villages of Sringeri taluk such a weekly market is held. Even in Sringeri town weekly market is being held only during the fair season and for a few years this practice too had been given up. The taluks of Chikmagalur and Kadur are better placed than the others, for of the 24 villages where weekly markets gather, 7 are in Kadur and 6 are in Chikmagalur. The resident population of the 24 villages forms 9.12 per cent of the rural population of the district. Mudigere taluk with 14.74 per cent appears to be the best served taluk. Though weekly market is held in only one village of Narasimharajapura taluk the proportion of population served is as high as 14.59 per cent because of its large size. In Koppa taluk where also the market gathers in only one village the proportion of population served in just 4.42 per cent. With a percentage figure of slightly above 8 the taluks of Chikmagalur, Kadur and Tarikere the three larger taluks seem to represent the normal conditions met with in the rural areas of the district. When examined with reference to

the number of villages in each population size group it is noticed that it is only in 0.21 per cent and 1.68 per cent of the small and medium sized villages that weekly markets are held. In contrast, weekly markets gather in 22.81 per cent and 100 per cent of the villages that are large and very large respectively. Of the 24 villages as many as 15 have more than 2000 inhabitants each and another 8 have 500 to 1999 persons each while only one is a small village with less than 500 inhabitants. If the distance from the nearest urban centre is considered it is seen that 15 out of the 24 are quite far away, being at a distance of more than 15 kilometres and the other 9 are located in the distance range of 6 to 15 kilometres. Thus, large-sized villages that are located farther away from towns enjoy better chances of functioning as important market centres.

A classification of the 989 villages in which weekly markets are not held, according to the distance to be covered to reach the nearest market place shows that the distance is less than 5 kilometres for 35.3 per cent, 6 to 10 kilometres for 37.5 per cent and more than 10 kilometres in the case of the remaining 27.2 per cent of the villages. The coming up of the permanent shops in villages and expansion of communication and transport facilities in recent years have to some extent undermined the unique importance of the weekly markets. In Chikmagalur district however, in viewof the geographical and climatic conditions the weekly markets are even now regular events of considerable significance to the villagers, for these markets provide them with a convenient venue to transact businessand to have a get-together at periodic intervals.

v) Communication facilities :

By communication facilities is meant the availability of a bus stop or a railway station or both in the limits of the village concerned. There are no navigable rivers or waterways in the district, which however enjoys a good network of roads. The metre-guage railway that connects Bangalore and Kolhapur passes through the maidan region and at Birur the railway line branches off to link up Bangalore with Shimoga and Sagar. Thus, Birur has for long been an important railway junction. Apart from the towns of Ajjampura, Birur, Kadur and Tarikere four villages have railway station facilities. In the district 44.52 per cent of the inhabited villages have communication facilities. The percentage of such villages is considerably high in the taluks of Mudigere and Koppa and even with reference to the proportion of population served these two taluks are seen to occupy the top most places. The position of Kadur taluk is also fairly above average. In Sringeri the smallest and the comparatively most interior taluk only 27.66 per cent of the villages, having a population that forms 41.53 per cent of the rural population of the taluk, are having bus stop facilities. Even in these villages because of the dispersed nature of the settlement pattern the residents have invariably to cover some distance to reach the village bus stop. Between the two maidan taluks Kadur is better served than Tarikere.

A grouping of 562 villages not having communication facilities according to the distance to be covered to reach the nearest bus stop indicated that the distance is less than 5 kilometres for 82.38 per cent, it is between 5 and 10 kilometres for 13.35 per cent and beyond 10 kilometres for the remaining 4.27 per cent of the villages.

The villages that are closer to towns seem to enjoy better chances of having good communication facilities. Of the 124 villages within the distance of 5 kilometres from the nearest town as many as 60 (48.39 per cent) have this facility. But the villages which are beyond 15 kilometres from the nearest town are far more numerous and among these 44.42 per cent are having communication facilities. As with all other facilities in the matter of communication facility also population size is an important factor. The larger the village greater are the chances that it has some communication facility. Both the villages with a population of 5000 plus, 94.74 per cent of the villages in the size-group of 2000 to 4999 and 54.62 per cent of the villages with 500 to 1999 inhabitants each are having communication facilities. In contrast amongst the more numerous small villages each with less than 500 inhabitants only 28.24 per cent of the villages have this facility.

All the towns of the district are enjoying very good communication and road transport facilities. In addition 4 out of the 6 towns are having railway station facilities as well.

vi) Approach by Pucca road :

About 50 per cent of the villages of the district are having the facility of approach by a pucca road. The aggregate population of these villages constitutes as much as 65.40 per cent of the rural population of the district. In terms of villages enjoying the facility Koppa taluk ranks first while Kadur the largest taluk, holds the last place with only 42.48 per cent of its villages having pucca roads. In the case of villages located in the purely malnad zone the existence of a pucca road is not a matter of great significance because the houses are generally scattered all over the revenue villages and most of these houses can be reached only by some Katcha road or by a footpath. If the proportion of population served is considered, of course subject to the above remarks, Narasimharajapura taluk holds the first place and is followed by Tarikere taluk which pushes Koppa to the third rank. In Sringeri, the smallest taluk, the proportion of population served is only 57.82 per cent, a figure which is lower than that observed in Kadur taluk. When examined in relation to population size of the villages it is noticed that among the larger villages the proportion of those enjoying the facility is higher.

vii) Power supply :

Out of the 1013 inhabited villages of the district 836, that is 82.53 per cent are electrified. The total population of these villages forms 93.31 per cent of the rural population. In Koppa taluk the percentage of villages electrified isag high as 98.75 and the proportion of population served is 99.93 per cent. In fact, of the 80 villages of this taluk only one village with the meagre population of 47 remains to be electrified. In Sringeri the adjacent taluk only 63.83 per cent of the villages accounting for 83.98 per cent of the rural population of the taluk are electrified. In Narasimharajapura taluk parts of which are inundated under the back waters of the Bhadra reservoir the position is slightly better than that found in Sringeri. Next to Koppa it is Tarikere taluk that has the highest proportion of electrified villages (91.71 per cent) and the highest proportion of population served (98.60 per cent).

Both the villages with 5000 plus population and 96.49 per cent of the villages with 2000 to 4999 inhabitants each are electrified. In the case of medium sized villages of size 500 to 1999 the electrified villages constitute 93.49 per cent whereas among the villages having less than 500 persons each the proportion of electrified villages

works out to only 69.87 per cent. Thus, in the matter of power supply also the larger villages stand better chances and receive a more favourable consideration. When examined with reference to the distance from the nearest town it is noticed that the proximity to the town enhances the chances of being electrified. Among the 124 villages situated at a distance of 5 kilometres or less 87.10 per cent are electrified. But among the 457 villages located beyond 15 kilometres from the town only 80.53 per cent are electrified.

Brief note on towns :

There are ten towns in the district and of these as many as nine are enjoying urban status from as early as 1901 Census if not a couple of decades earlier. Ajjampur suffered declassification at the 1911 census whereas in the other towns there has been no break at all in their urban status. Over the decades these towns have had a varied history of growth. In 1901, Tarikere ranked first as the most populous town and Chikmagalur held the second place. The towns of Ajjampur, Koppa, Mudigere and Narasimharajapura had a lesser number of inhabitants as compared to the population of Sringeri town. But now, Chikmagalur is the most populous town. While this town has experienced a little more than sixfold increase the population of Tarikere has merely doubled itself and grown a little further so much so the ratio between the population of Tarikere and Chikmagalur is 1:2.5. Tarikere suffered a setback between 1901 and 1911 censuses from which it could not recover for a long period. One of the reasons perhaps lies in the emergence of Bhadravati soon after 1921 as an important industrial centre at a distance of hardly 20 kilometres from Tarikere. Though Chikmagalur town too experienced a fall in its population at the 1911 census, in the very next decade it recovered and, from then on, the town is on the course of a steady and sustained growth. It has developed into an important transit town on account of its proximity with and easy accessibility to the important urban areas of the maidan region and its links with the small malnad towns and coffee estates. The status of Chikmagalur as the headquarters of the district has also aided the accelerated growth of the population of the town, especially after independence. Similarly, Birur and Kadur have had varied careers of growth. These two are located hardly 7 kilometres apart on the main road that connects Bangalore with Shimoga and both are having railway station facilities. Birur has the added advantage of being a railway junction. In 1901, the population of Birur was one and a half times more than that of Kadur. But now the position is reversed and the population of Kadur is about one and one-tenth the population of Birur. Both the towns suffered a setback in 1911 census and while Kadur regained its original population level in 1921 Birur experienced a further fall. Thereafter however, Birur too has been growing steadily but at decadal rates that are lower than those perceived at Kadur. Being the headquarters of the taluk, Kadur enjoyed greater importance. Between 1941 and 1951 this town experienced a decadal growth at the rate of 71.34 per cent, the highest ever registered by any town of the district during the past 8 decades. Sringeri, the seat of an important religious institution has now been reduced to the status of the smallest town of the district. This town suffered a massive depopulation around 1921 and took nearly 4 decades to regain its 1911 population level. Kudremukh Mines Area is the town that has been added at the 1981 census. This is a special area and has sprung up as a result of the massive iron ore project taken up in the interior parts of Mudigere taluk. During the decade of 1971-81, Chikmagalur town has registered a growth at the highest rate of 45.49 per cent while Narasimharajapura has experienced a growth at the rate of only 3.23 per cent. The factors that promote the growth of one urban centre at a rate higher than that perceived in another are quite varied and these can be identified only by resorting to a comparative study of the population dynamics in depth.

With the exception of Kudremukh Mines Area the other towns are functioning as administrative centres at different levels. Ajjampura and Birur are the headquarters in respect of a cluster of villages called Hobli while the other 7 towns are the headquarters of the taluks known after their respective names. Chikmagalur town is the headquarters of a revenue sub-division as well as of the district itself. With reference to taluk headquarters, the road distance is just about 7 kilometres in the case of Birur, about 22 kilometres in the case of Tarikere and as great as 76 kilometres in the case of Kudremukh Mines Area. The district headquarter-town does not enjoy a central location as it is found to be situated close the south-western border of the district. If this town itself is excluded from consideration it is noticed that the road distance to the district headquarter-town is less than 50 kilometres for 3 towns, between 50 and 100 kilometres for another 5 towns and for the remaining town which incidentally is the recent addition, namely Kudremukh Mines Area, the distance is 109 kilometres. The towns of the district are at a moderate distance with reference to both the Divisional Headquarters (Mysore) and the State Headquarters (Bangalore City). Kadur which lies on the Bangalore-Honavar State Highway is the town that is nearest to Bangalore (206 kilometres) while Kudremukh Mines Area (locally called Malleshwara) is the town which is at the farthest distance of 360 kilometres. All the towns except Ajjampur have good road transport facilities and are directly linked with important places like Bangalore, Shimoga, Mysore and also Mangalore. As already mentioned Ajjampur, Birur, Kadur and Tarikere are connected with Bangalore and other places by railway also.

Bhadravati urban agglomeration happens to be the nearest urban centre with a population exceeding one lakh in respect of 8 towns of the district. The intervening distance ranges between 21 kilometres in the case of Tarikere and 92 kilometres in the case of Sringeri. Shimoga city which is an important commercial centre and a seat of administration is quite close to Bhadravati and thus lies close to the 8 towns of Chikmagalur district. This city has for long been exerting considerable influence on the towns of the district on account of its proximity and intrinsic importance as a centre of higher education. In respect of Kudremukh Mines Area and Mudigere the nearest Class I city happens to be Mangalore urban agglomeration.

A rough idea regarding the scale of financial transactions of the municipalities may be had from the data presented in statement III of the Town Directory. Kudremukh Mines Area is a census town and this is being administered by a company which has founded the township and is also responsible for providing all the civic amenities and services to the town dwellers without levying any taxes or

cesses. The conditions here therefore do not stand comparison with the other municipal towns. The extent of income and expenditure of the municipal towns vary considerably from year to year and from place to place. In terms of gross receipts Chikmagalur excels all the other towns of the district and this is quite appropriate as well because it is the most populous town. Generally the larger towns realise higher incomes as the tax base would be broader and the efforts to obtain grants and advances as well as loans would be more fruitful. Sringeri which is the smallest town has an income which is slightly more than that realised in Ajjampur a town with a larger population. Sringeri was formerly under the Jahgir administration and as the seat of Jagadguru Sankaracharya of Shri Sharada Peetham even now enjoys greater attention than the other small towns of the district especially a town like that of Ajjampur which does not have any special advantages. For instance the sourcewise data discloses that Sringeri realised as much as Rs.71,200 by way of Government grant and Rs.65,800 by way of revenue derived from municipal property and Powers apart from taxation. In Ajjampur on the other hand these two sources have yielded Rs.13,900 and Rs.21,200 only. Specific grants released by the Government during a particular year as also the advances received vary from year and affect the income pattern considerably. In the matter of expenditure too, Chikmagalur town tops the list with an expenditure as heavy as Rs.3,345,400. In Tarikere the second largest town the expenditure is of the order of only Rs.756,700. Ajjampur holds the last place with an expenditure of Rs.143,700. General administration, public safety and public health and conveniences are the regular heads of expenditure on which considerable sums of money are to be spent by every municipality. Any extra item of work or project taken up in any particular year would alter the expenditure pattern. For example in Chikmagalur town about 60 per cent of the expenditure in the year 78-79 was incurred on other than the regular items of expenditure. In Mudigere town about 42 per cent of the expenditure is similarly accounted for. For a meaningful comparative study of the income and expenditure pattern it would be necessary to have data for atleast five consecutive years along with brief reports on the plans and programmes taken up and executed in each town. Such a study is however beyond the purview of this brief analysis.

It would perhaps be more appropriate to compare the receipts and expenditure of municipalities in relation to the 1981 census population, that is as per capita. When viewed thus Koppa a small town tops the list with a per capita receipt of Rs.81.84 and this is followed behind by Sringeri with its tally of Rs.60.35 (that is if Kudremukh Mines Area (Rs.66.43 is ignored). Chikmagalur town occupies the fourth rank. But Ajjampur retains its last place with a per capita receipt of Rs.22.60. In the matter of expenditure too Koppa town remains at the top. But Sringeri moves over to the third place and Chikmagalur town ranks second. As in the matter of receipts in the matter of expenditure also Ajjampur retains the last place. Since the opening balance and closing balance have not been taken note for compiling the data on actual receipt and expenditure it is noticed that in the towns of Koppa and Chikmagalur the expenditure exceeds the actual receipt during the year.

Data on civic and other amenities are furnished in Statement IV of the Town Directory. All the towns have pucca roads, though of varying road lengths, as well as Katcha roads. Certain portions of these roads are seen to be under the maintenance of the State Public Works Department while certain others are under the maintenance of the municipality. In each town the proportion varies. The overall road length in town ranges between the minimum of 5 kilometres in Sringeri and the maximum of 36 kilometres in Tarikere. Chikmagalur and Kudremukh Mines Area too have about 35 kilometres of roads within their respective jurisdictions. If the road length in each town is examined in relation to the geographical area it is observed that the road length per square kilometre of urban space varies between 0.76 kilometre (Kudremukh) Mines Area) and 19.56 kilometres (Mudigere). In Tarikere the average is 15.78 kilometres and in Sringeri which is the smallest town in terms of area as well as population the road length per square kilometre is 10.87 kilometres. From this point of view Chikmagalur Town fares very badly as in this case the road length per square kilometre of urban space works out to only 4.02 kilometres. The situation in the maidan towns of Kadur, Birur and Ajjampur as also Tarikere is very much better in comparison to that prevailing in the district headquarter town. A similar conclusion can be drawn when the road length is examined in relation to the population of the town. In Chikmagalur town for every one thousand of its population the road length is just 0.58 kilometres. In Kudremukh Mines Area which covers a vast area and has a low population the road length per 1000 persons works out to 4.39 kilometres. Mudigere town gives out the second highest of 2.54 kilometres and in other towns the value ranges between 1.17 kilometres (Sringeri) and 1.80 (Narasimharajapura). None of the towns of the district is noted for its vertical growth. Thus gradually new extensions are formed and additions are made to the existing road length year after year and quite often the vacant lands between two clusters of houses get filled up by new buildings and there may not be any actual formation of roads at all.

All the towns are provided with open or surface drainage facility and only two have underground sewers. Chikmagalur has secured this amenity on account of its population size and also its importance as a district headquarter town while the Kudremukh Mines Area has this facility on account of the fact that it has been built up by a Government of India undertaking. Box surface drains, sylk pattern drains and open surface drains in towns drain out the excess water. In all the towns there are water-borne or flush out latrines even though it may be observed that the number of latrines in the towns does not bear any consistent relationship with the number of households in the towns. For instance the small town of Kudremukh has 1400 flush-out latrines while the most populous and important town of Chikmagalur has only 896. This difference may be attributed to the difference in the civic administration bodies. Among the towns Tarikere has a considerably larger number of latrines. The number of latrines per 100 households comes to as high as 60 in Kudremukh Mines Area and to about 51 in two other towns viz. Narasimharajapura and Sringeri. The lowest average of 6 per 100 households is noticed in Kadur and next to it by one place is Chikmagalur with its tally of about 9 per 100. These latrines, in the absence of a sewerage system, (excepting in the towns of Chikmagalur and Kudremukh Mines Area) are provided with septic tanks or collecting wells for the disposal of night soil. There are no service latrines in any of the towns of the district.

In all the towns arrangements have been made to pump the water from bore wells or streams nearby, store the same in overhead tanks and after chlorination supply drinking water to the town dwellers through taps. Fire fighting service is available only in the newly formed township of Kudremukh Mines Area. In respect of the other towns of the district, if required in an emergency this facility has to be procured from places like

Hassan or Bhadravathi which are located well within the distance of a hundred kilometres. All the towns are electrified and power is being supplied for domestic, industrial, commercial and other purposes depending upon the local demands.

Though Chikmagalur is a Class II town as on 30.6.1979 there were no notified slums within its limits. It is however learnt that an attempt was made to identify such slum like areas and send up proposals for the issuance of a notification under the relevant Act.

All the towns have medical facilities and this aspect has already been touched upon. The district headquarter town of Chikmagalur has better facilities than the other towns. The other nearby important centres where medical facilities of a better order are available are Shimoga city and Manipal. So also the educational facilities as are available in the towns have been discussed already. All towns except Kudremukh have Junior Colleges. In Chikmagalur, Birur and Sringeri degree colleges are functioning. In this district except for a polytechnic institute at Chikmagalur there are no other technical or professional colleges. Engineering and medical colleges at Hassan, Davangere and Manipal are the ones that are nearest to towns of the district. In all the towns with the exception of Kudremukh Mines Area there are facilities to learn typewriting. On an average in the urban areas of the district per every 10,000 population there are 5.07 lower primary schools, 3.38 middle schools (higher primary schools), 1.75 high schools and 0.75 junior colleges. These ratios vary from town to town depending upon the population of the town its historic past and the extent of influence that the leaders of the town can exert on the powers that be when the matter of sanctioning institutions come up.

In none of the towns the facility of working women's hostel is available. Regarding recreational facilities it is seen that in 6 out of the 10 towns there are permanent cinema theatres and in four towns there are auditoria drama halls or community halls. While Chikmagalur the most populous town has four cinema theatres which gives an average of one theatre per 15,000 of its population, in Kadur there are 3 theatres for a population of a little less than 20,000. But, in Tarikere which is the second largest town with about 24 thousand inhabitants there are only two theatres. The 3 small towns of Sringeri, Ajjampur and Narasimharajapura besides the newly added town of Kudremukh Mines Area are not having any permanent cinema theatres even though it is quite likely that for a major part of the year touring cinemas pitch their tents and provide entertainment to the town dwellers. In seven towns i.e, with the exception of Ajjampur, Kudremukh Mines Area and Narasimharajapura there are public libraries.

With the exception of Kudremukh Mines Area, every other town of the district is functioning as an important centre of trade, commerce and industry. The relative importance among the towns themselves vary considerably and the scale of operations or the volume of turnover registered in Chikmagalur town can by no means be compared to those noticeable in a small town like Sringeri or Koppa. In every town there are banks and also credit coope - rative societies to cater to the needs of different sections of the town's population. The important commodities imported to the towns are foodgrains, sugar, cloth, arecanut and construction material like iron and cement. Besides items such as tobacco and steel scrap are also imported to serve as raw materials in the towns of Ajjampur and Tarikere. The district is not in any way noted for its manufacturing industries. Coffee curing is of course prevalent to some extent and coffee seeds are exported. This apart the town wise data discloses that scented arecanut, groundnut oil, avalakki (Pheera), cut sizes of timber, tiles beedi and steel ingots are the important items that are manufactured and exported from the towns of the district. The towns are transit centres in respect of the rural hinterland from where commodities are brought to the towns and disposed of by local wholesalers and commission agents. Coffee, cardamom, arecanut, coconut, and rice are the most important commodities that are dealt with.

In summing up it may be observed that Chikmagalur is one of the prosperous districts of the State. Plantation and foodgrain cultivation are the twin pillars on which the economy of the district is resting now. Recently one more resource has been opened up for exploitation on a large scale and as a result considerable amount of construction work has been taken up and a new township has emerged. This enterprise too just as coffee plantation industry, has international implications and enables the nation to earn considerable sums of foreign exchange. During the latter half of the last decade the district received the attention of the State Government in an adequate measure and developmental activities were taken up in full-swing. Among the taluks those in the malnad belt are somewhat better developed in comparison to their counterparts in the maidan. But the villagers of malnad are handicapped in that their houses are scattered and the mere availability of a facility in the village does not imply that the distance barrier has been completely over come. However the situation is far better and Koppa is no longer a place to be feared about when an official is transfered there. Malaria has more or less been rooted out and to almost all nooks and corners of the hilly malnad roads have been made and bridges have been built. Compared to several other districts of the State especially of the northern maidan region Chikmagalur can be regarded as well developed district.

PART A-VILLAGE AND TOWN DIRECTORY

(i) SECTION I - VILLAGE DIRECTORY
(ii) SECTION II - TOWN DIRECTORY

VILLAGE DIRECTORY - AMENITIES AND LAND USE

EXPLANATORY NOTE

As the title signifies the Village Directory aims to provide information on amenities and land use pattern in respect of each and every village with the reference period as the year 1979-80. In all there are 20 columns in this tabular statement and, out of these as many as 9 are allotted to amenities and services while another 5 are earmarked for data on land use. The remaining columns are concerned about location code number and name of the village area and population, its proximity to an urban centre and, remarks. Since most of these column headings are concise and represent certain concepts, a column by column explanation is furnished herewith. This would enable the reader at the very outset to recognise the scope and appreciate the limitations of the data presented under various columns.

Column 1 : Location Code Number :-

The concept of location code numbers has already been explained in the Analytical Note. The location code number thus assigned to the village is entered in this column. This number, runs serially starting from 1 for every taluk and the data are presented for villages arranged in an ascending order of their location code numbers. If there are any villages in the taluk that are fully incorporated into the limits of any urban area or are completely submerged under the back waters of any reservoir but are continued to be borne on the jurisdictional-lists of the Survey and Settlement authorities such villages are mentioned at the end without any location code number and in all such cases it may incidentally be pointed out, no further data except the name and the area are furnished in the statement. Similarly in the case of villages which are classified as outgrowths of towns, their names and area particulars alone are given treating them at par with villages fully incorporated in urban areas.

Column 2 : Name of Village :-

The name of the village corresponding to the location code number is given in column 1 is spelt out in English in this column. By and large the spellings adopted at the previous i.e. 1971 Census, have been retained even now. However, errors arising out of misreporting and misprinting if any in the 1971 District Census Handbooks have been taken note of and the correct spellings are now used. So also changes in village names duly effected by the Government with the sanction of the concerned authorities have been taken into consideration while finalising the spellings of villages names for 1981 census purposes. Further, if the name of the village has now been spelt differently as compared to the spelling given in the 1971 District Census Hand book for whatever the reason the spelling as adopted in the 1971 District Census Handbook is also furnished within brackets below the present name of the village in the alphabetical list of villages for the convenience of the data user.

A little more explanation appears to be necessary about the places which appear in the list of towns as well as in the list of villages. This phenomenon occurs particularly in the case of Taluk and District Headquarter towns which, as revenue entities are geographically large villages. The main village site areas including the peripheral developed areas would have for long been incorporated into the urban limits without any change whatsoever in Survey and Settlement records. In the Original Survey records and also at the Resurvey, the entire village inclusive of all the lands that are incorporated into the urban limits continues to be shown as a regular revenue village. In other words the portion constituted into a town is not taken out from the parent village and formed into a separate and independent unit in the jurisdictional lists. Every civic body, be it a municipal corporation or a town municipality or a notified area or a sanitary board defines its own jurisdiction confining itself mostly to the built up area and the fringe areas for enforcing municipal rules and regulations. With the administrative and legal sanction of the Government which issues a notification in this behalf the civic body secures statutory rights for administering the local area so defined. The incorporated areas may at times cut across village boundaries and may comprise of portions belonging to the revenue jurisdiction of two or more villages. In some instances entire revenue lands of a village or of several villages are incorporated into the limits of a town in which case for purposes of census operations these villages lose their independent identity and are omitted in the list of villages of the taluk. But it is only in case of villages of which only certain portions are included in the town, especially those that contribute their names to the towns concerned that this apparent duplication of names occurs. In such cases the jurisdiction of the town is very clear and it covers only a portion of village which is constituted into an independent entity as urban for census enumeration purposes. The remaining area too is constituted as an independent unit under the rural category i.e. as a village. In order to distinguish this unique situation, the name of the village bears the suffix Rural within brackets in the census village lists. Division of the village into urban and rural components and the suffixing of the names is a special procedure adopted for census purposes only. That is to say, if one were to ask the Officers of the Survey, Settlement and Land Records whether in their lists there are villages such as say Bellary (Rural), Belgaum (Rural), Bijapur (Rural), Chamarajnagar (Rural), Magadi(Rural) Mandya (Rural), Mysore (Rural), Raichur (Rural) etc., the answer would be a definite 'no' and then they would say that there are villages of the same name but without the suffix Rural. Similarly in the village maps and other records pertaining to the above named places, the lands that are incorporated into urban areas are also shown as part and parcel of the village concerned.

Column 3 : Total area of the village (in hectares)

The total geographical area of the village as per revenue records is furnished in hectares up to two decimal places. In Karnataka the basic records are still maintained in acres and guntas or acres and cents that is the units of measurements which were first adopted at the time of the cadastral survey. After the introduction of the decimal system however the equivalents of these figures are also indicated in addition to the already existing entries in registers such as Akarband and Records of Rights. The area of each Survey number or part thereof is converted into hectares and ares and square yards too in some cases. Thus if these converted figures for each such small unit are added together for the village the resultant total area would normally be either less or more than the corresponding figures that one would derive by the addition of figures in acres - guntas/

acres and cents and conversion of that into hectares and ares. For purposes of presentation in this statement the village level area and land use figures which were furnished in acres-guntas or acres-cents by the Revenue Officers have been converted into hectares and ares and these figures may not therefore be identical with the area as may be found entered in hectares and ares in the records of some of the villages. The marginal differences would be due to the factors explained above. Further, in the case of villages of which certain portions are incorporated into an urban area the extent thus categorised as urban has been deducted from the total geographical area of the revenue village and for this reason the particulars presented here would not be in full correspondence with the total area of that revenue administrative unit as mentioned in the village records. If area figures are not available for any village the abbreviation 'N.A.' is entered in this column and a note at the bottom of the page explains the reason thereof also.

Column 4 : Total Population and number of households :-

The total population of the village according to 1981 census and the number of households therein are indicated in this column. In the case of villages with no inhabitants i.e. nil population, the word un-inhabited is written across the line.

Columns 5 to 10 : Amenities available (if not available within the village, a dash may be shown in the column and next to it in brackets, the distance in broad ranges, viz.-5 Km, 5-10 Km and 10+ Km of the nearest place where the facility is available may be given):-

As the main heading for these columns suggest if the basic amenity covered under any of these columns were to be not available within the village then, instead of simply stating that fact, an attempt is made here to indicate the minimum distance (in ranges) that one has to cover to avail oneself of that specific facility located in a nearby village or a town. At the data collection stage the name of such nearest place having that amenity as also the distance thereto from the referent village have been ascertained to ensure a higher degree of reliability in reporting. The abbreviations made use of in these columns are explained below column by column.

Column 5 : Education :-

All types of educational institutions functioning in the village irrespective of the levels of education offered, the medium of education and the status of the managing body are considered under this column. The abbreviations used to denote institutions with different levels of education are :

i) P : Primary or Elementary School :

Schools providing education form I standard and upwards upto and inclusive of IV standard are classified as Primary Schools. This would also include junior basic schools if any.

For purposes of reporting, schools which provide education not merely from I to IV but also for higher standards, called composite schools for easy reference, are split up into different levels of education and counted as an independent unit under each such level.

ii) M : Middle or Junior Secondary School :-

Schools providing education from V standard and upwards upto and inclusive of VII standard and classified as middle schools. In Karnataka as a matter of fact the term middle school is no longer in vogue. Primary education itself consists of seven years of schooling and the first four year duration of this course is called Lower Primary and the next 3 year period is termed as Higher Primary. As mentioned above a Higher Primary School with I-VII standard is treated as two units i.e. one Primary School and one Middle School for accounting purposes.

iii) H : Matriculation or Secondary School :-

Schools providing education from VIII standard and upwards upto and inclusive of X standard are classified as High Schools. A composite school with I - X standard is treated as three separate units and counted separately under the category of Primary, Middle and High School.

iv) PUC : Higher Secondary/Intermediate/Pre-University/Junior College :-

Schools and colleges that provide education for the XI and XII standards or as is more common in Karnataka for the I and II year of the Pre-University Course, fall under this category. There are Higher Secondary Schools with VIII standard and upwards covering the XII standard and on the other hand there are also degree colleges which provide education for PUC I and PUC II year. These composite units are as explained earlier, split up into different levels for reporting purposes.

v) C : College :

This would cover all educational institutions that provide post PUC level education leading to University degree in any subject or combination of subjects, and also post-graduate levels of education.

vi) I : Industrial School :

Industrial Schools if any in the villages are indicated by the abbreviation 'I'.

vii) TR : Training School :

All types of Institutes that provide vocational and professional training are covered by this abbreviation.

viii) AC : Adult Literacy Class/Centre :

This abbreviation is recorded in this column only if adult literacy classes were being conducted regularly in the village during the reference year.

ix) O : Others :

All other types of educational institutions such as Sanskrit Pathasala, Urdu Madarasa, Makhtab etc., are included in this residuary category.

It is important to note that in this column whenever the number of institutions of a particular level or class exceeds one, only then the actual number is also reported immediately after the relevant abbreviation within brackets. That is to say the mere presence of an abbreviation without any numerical attribute signifies the existence of the facility,

in at least one institution for which that abbreviation stands. The numerals indicate the number of institutions or units of that level or type.

As explained already if a village does not have any educational institution whatsoever then a dash (-) is entered and thereafter, within brackets, the minimum distance that one has to cover to avail oneself of the primary level of educational facility is indicated. The emphasis here is on the most basic need i.e., the minimum level. In otherwords, if the village has primary school, but not middle school or high school then no further information is furnished in respect of the proximity of a middle school and upwards. Similarly for a village with primary and middle schools but no high school or a college no further information is furnished in respect of the proximity of high school and college level facilities.

It may again be recalled that the concept of village covers the entire revenue jurisdiction of that unit and includes all the hamlets i.e. human settlements located therein.

Column 6 : Medical :-

The abbreviations used to denote the existence of medical institutions of different types in the village are :

H : Hospital
MCW : Maternity and Child Welfare Centre
MH : Maternity Home
CWC : Child Welfare Centre
HC : Health Centre
PHC : Primary Health Centre
PHU : Primary Health-Unit
D : Dispensary
FPC : Family Planning Centre
TB : T.B.Clinic
NH : Nursing Home
RP : Registered Medical Practioner
SMP : Subsidised Medical Practitioner
CHW : Community Health Worker
O : Others

If the number of institutions of a particular type happens to be more than one then that number is also indicated immediately after the relevant abbreviation.

If the village does not have any medical facilities whatsoever then the minimum distance that one has to cover to secure the minimum level of medical facility is indicated here in distance ranges.

The abbreviation H which stands for hospitals implies the availability of facilities for the treatment of in-patients also. In several Primary Health Centres also such facilities do exist. Likewise Maternity Homes also entertain in-patiients but then these are confined only to maternity cases. This apart in all other cases except private nursing homes arrangements exist for the treatment of out-patients only. In local parlance in certain areas however even a dispensary is referred to as a hospital and the clinic run by a private medical practitioner as a dispensary and a private nursing home as a hospital. This indiscriminate usage at times leads to confusion and in view of this every attempt has been made to eliminate such reporting errors.

All types of medical institutions, irrespective of the system of medicine practised therein are covered under this colum without any attempt to provide a further break up by systems of medicine.

About the Community Health Worker it may incidentally be mentioned that it does not refer to workers in extension programmes like Malaria Surveillance Workers, Basic Health Worker, Auxiliary Nurse Midwife etc., but refers only to the paramedical personnel who have been specially trained for dispensing medicines for minor ailments at the doorsteps of the patients. This is an altogether new scheme and has not been introduced in Karnataka.

Column 7 : Drinking Water :-

Following are the abbreviations used to indicate the different sources of drinking water that are available in the village. These sources of drinking water supply may be public property or may even be owned by private persons and institutions. If there are two or more sources then all these sources are mentioned one after the other but separated by commas.

T : Tap
W : Well
TK : Tank
TW : Tube Well
HP : Hand Pump
R : River
F : Fountain
C : Canal
L : Lake
S : Spring
N : Nallah/Stream
O : Others
NA : Information not available

If the village does not have any source of drinking water supply at all then, after a dash in this column, the distance range that one has to traverse to reach the nearest place with drinking water facility is indicated.

Column 8 : Post and Telegraph :-

In this column information on the availability of postal, telegraph and telephone facilities in the village is furnished using the following abbreviations.

PO : Post Office
TO : Telegraph Office
PTO : Post and Telegraph Offices
Phone : Telephone connection

Telephone connection need not necessarily indicate the availability of a public call office in the village, for even private telephone connections to subscribers have been taken into considerations while filling up this column. If a village has postal as well as telephone facilities then both these amenities are mentioned. Likewise if there is a PTO and telephone connection then both the abbeviations are entered in this column. On the otherhand if the village is not having any of these facilities then a dash is noted and next to it the distance to the nearest place having the minimum facility of a post office is indicated in ranges.

Column 9: Day or Days of the Market/Hat :-

This column refers to the weekly, bi-weekly markets i.e., the weekly shandy, held in villages with a view to cater to the needs of that village

and more so to the needs of the inhabitants of several surrounding villages. In local terminology such a weekly market is called Santhe and is quite popular in Karnataka. In the case of villages which host such shandies the actual day on which the shandy takes place is mentioned and in all other cases a dash is entered and thereafter the distance to the nearest place with a weekly market is indicated in ranges as specified in the column heading. The place where such weekly market gathers may be located in the limits of an adjoining taluk or district. The important matter for consideration here is the geographical proximity. In some cases where the nearest town or a large-sized village with a permanent market would serve the needs of the villagers, the distance ranges refer to such places with permanent markets only. In such cases obviously the nearest place where a weekly market is held would be very far away and will not be a matter of much significance.

Column 10 : Communication :

For purposes of this column only the means of public transport namely bus, railway and water transport system if any are considered. If the village is served by any mode of such public transport the fact is indicated using the undermentioned abbreviations :

BS : Bus
RS : Railway Station
NW : Navigable Water way (including river, canal, backwaters)

If a bus stop or a railway station is located within the territorial jurisdiction of a village then that villagae is considered as being served by that facility even if that bus stop or railway station is somewhat solitary and is located at some distance from the village-site. If more than one type of communication facility is available then all the relevant abbreviations are mentioned in this column. If no such facility is available at all then a dash is entered and thereafter the distance to the nearest place with a communication facility is indicated in ranges.

Column 11 : Approach to village :-

By approach to village is meant the type of road that leads to the village and this would indicate whether the village is accessible throughout the year or only during the fair season. The abbreviations used in this column are :

PR : Pucca Road
KR : Kachcha Road
NR : Navigable River
NC : Navigable Canal
NW : Navigable Waterway other than river and canal if any
FP : Foot path/Bridle path

If a village has a foot path or bridle path and also both pucca road and kachcha road then, only PR is recorded in this column as it would denote a higher level of facility of the same type. While kachcha road refers only to the unsurfaced mud road the term pucca road covers tar roads, cement roads water bound mecadum roads and metalled roads. But if in addition to either PR or KR the village has a waterway then information on the availability of a water way is also indicated.

Column 12 : Nearest town and distance :

The name of the nearest town, that is any urban area as defined for purposes of the 1981 Census, and the distance thereto from the village are indicated in this column. The town mentioned here need not be located within that very taluk or the district or even the State for that matter. The main point for consideration here is the geographical proximity. The distance however is reckoned not as a 'crow flies' but by some land route or water way. Further, when there is a cross country foot-path or a cart-track and a little more circutious road from the village or its proximity to the town then the distance by road is reported here in preference to the distance by foot-path or cart track. Similarly, when there are natural hurdles like unbridged rivers or streams the distance is furnished by the more circuitious route that the villagers would usually prefer. The information on distance is based on local enquiry by the reporting agency. If the town mentioned in this column belongs to another state then the name of that state is also indicated along with the name of the town and distance thereto.

Column 13 : Power Supply :-

If the village is electrified, that is if power is actually available, whatever may be the form of its use, then the village is regarded as enjoying this amenity of power-supply. If the supply is expressly restricted for say agricultural or any other specific purpose then this point is clearly stated by using a specific abbreviation. On the other hand if electricity is being supplied for all purposes without any reservations then information on various purposes is not separately mentioned. The abbreviations used in this column are :

ED : Electricity for domestic purpose only
E.Ag : Electricity for agricultural purposes only
EO : Electricity for other purposes like industrial, commercial etc,
EA : Electricity for all purposes stated above.

Column 14 : Staple Food :-

Information on the staple food i.e. the cereals used by the majority population during the major portion of the year is furnished under this column. It may incidentally be mentioned here that no probing enquiries have been made to ascertain the exact situation in each and every village and that the details presented here are of a general nature. In several cases when it is not possible to determine the particular staple cereal, a combination, of major staple foodgrains is given.

Columns 15 to 19 : Land use (i.e. area under different types of land use in hectares up to two places of decimal) :

The Ministry of Food and Agriculture, Government of India has recommended to the State Governments the following classifications of land use pattern for the maintenance of records and for

purposes of presentation here the same classification model has been adopted.

1. Forests,
2. Not available for cultivation,
   a) Lands put to non-agricultural uses,
   b) Barren and unculturable lands
3. Other uncultivated lands excluding fallow lands
   a) Permanent pastures and other grazing lands,
   b) Lands under miscellaneous tree-crops and groves not included in the net area sown,
   c) Culturable wastes
4. Fallow lands :
   a) Fallow lands other than current fallows,
   b) Current fallows
5. Net area sown.

Column 15 of the Village Directory corresponds to category 1 i.e., forest, while columns 16 and 17 put together represent the cultivated lands and correspond to the combination of categories 4 and 5 above. Similarly columns 18 and 19 respectively correspond to categories 3 and 2 of the above classification. The data furnished here are based on the village records and pertain generally to the year 1979. The total of the area figures reported under these columns tallies with the total geographical area of the village as noted in column 3.

Column 15 : Forest :-

This includes all lands classed as forests under any legal enactment dealing with forests or administered as forests whether State - owned or private and whether wooded or simply maintained as potential forest land. Lands transferred to forest department for afforestation as also the class C and D lands transfered thus by the revenue department are also classified as forests. Within the forest area itself there may ocassionally be cultivated patches or else there may be grazing lands. But such areas too are shown under column 15 only as forests. If within an area classified as forest some specific extents of lands have been expressly assigned for regular cultivation and the records have not been set right pending formalisation of grants and related processes of survey and settlement then such cropped areas are shown under column 16 or 17 as the case may be and the remainder alone is shown as forest under column 15. The processes of regularisation of land grants and effecting relevant changes in the basic records of survey and settlement are somewhat protracted and time consuming. Therefore the information merely based on records is, in some cases at least, likely to be different when compared with that based on the actual field situation.

Columns 16 and 17 : Irrigated (by source) and Unirrigated :-

These two columns cover all the agricultural lands and when added together would correspond to the net area sown plus the current and other fallows. The latter would imply all lands which were taken up for cultivation, but are temporarily out of cultivation for a period of not less than one year and not more than five years. All lands that are lying uncultivated as fallow for more than 5 years in succession are regarded as permanent fallows i.e., culturable waste and are covered under column 18. Area sown more than once during the same year, if any in the village,is counted only once under these columns. In column 16, a sourcewise break up of the irrigated area is furnished using the following abbreviations :

GC : Government Canal	TK : Tank
PC : Private Canal	R : River
W : Well(without Electricity)	L : Lake
WE : Well (with Electricity)	Wf: Water fall
TW : Tubewell (without electricity)	O: Others
TWE : Tubewell(with electricity)	T: Total

The concept of irrigation implies the existence of a source of water supply within a reasonable distance and an arrangement to regulate the supply of water according to the day-to-day needs of the crops raised in these fields. Naturally therefore all areas that are cultivated under purely rainfed conditions are treated as unirrigated. Though paddy is generally regarded as a wet crop, if it is raised purely as a rainfed crop as it very often is the case in heavy to very heavy rainfall regions, such areas are regarded as unirrigated for purposes of this column and shown under column 17. Similarly about garden crops, the area is considered for column 16 only if there is an element of irrigation. Sometimes it happens that the lands shown as dry and rainfed in the settlement records are in actual fact having irrigation facilities due to recent changes such as sinking of wells, introduction of lift irrigation or canal irrrigation on commissioning of a project etc. In such a case the actual situation is taken note of and despite its classification as rainfed in the records the area concerned is treated as irrigated Though rare, the opposite situation (where a plot of land originally shown as irrigated has ceased to enjoy that facility and is now yielding purely rainfed crops) is also met with and such a situation arises due to reasons such as breaching of tanks, drying up of irrigation wells and small tanks, defunct canal system and so on. The reporting agency has generally assessed the actual situation prevailing during the reference year 1979 while furnishing the data on irrigated lands. Regarding canal irrigation too it is the actual irrigated area and not the command area that has been reported here.

In column 17 the total extent of unirrigated lands, that is, dry lands cultivated as rainfed fields and the fallow lands put together is reported. As explained above, lands yielding rainfed paddy crop are considered as unirrigated.

Column 18 : Culturable Waste (including gauchar and groves):-

This category includes all lands available for cultivation whether not taken up for cultivation or taken up for cultivation once but not cultivated during the past five years or more in succession. Such lands may be either fallow or covered with shrubs and jungles which are not put to any use. These may be assessed or unassessed and may be in isolated blocks or within cultivated holdings. Lands under thatching grass, bamboo bushes and other groves which are not included under orchards or forests are also included under this category. Further, this includes all grazing lands irrespective

of whether they are permanent pastures and meadows or not. In several instances, lands that were at one time reserved for use as grazing fields and pastures and declared as assessed or unassessed wastes have over a period of time been brought under cultivation either fully or in parts as a result of gradual encroachments and also because of the Government policies regarding land grants. Thus, though in the records, the particular plot of land continues to be shown as a pasture the actual field situation would reveal that most of that land is actually under cultivation. In all such cases, to the extent possible, the actual field situation has been taken into consideration by the reporting agency.

Column 19 : Area not available for cultivation

In this column the total extent of land which is not available for cultivation in view of its being barren and unculturable as also that which is put to non-agricultural uses is reported. Mountains, deserts, rocky hills, quarries, ravines and the like as well as the lands that cannot be brought under cultivation except at a very high cost are included in the category of barren and uncultivable lands. The category of lands put to non-agricultural uses covers all lands occupied by buildings, roads, railways, parks and playgrounds, area under water viz., rivers, streams, canals, reservoirs, tanks, ponds etc., and land put to any other use which is apparently non-agricultural.

Column 20 : Remarks including any place of religious, historical or archaeological interest :-

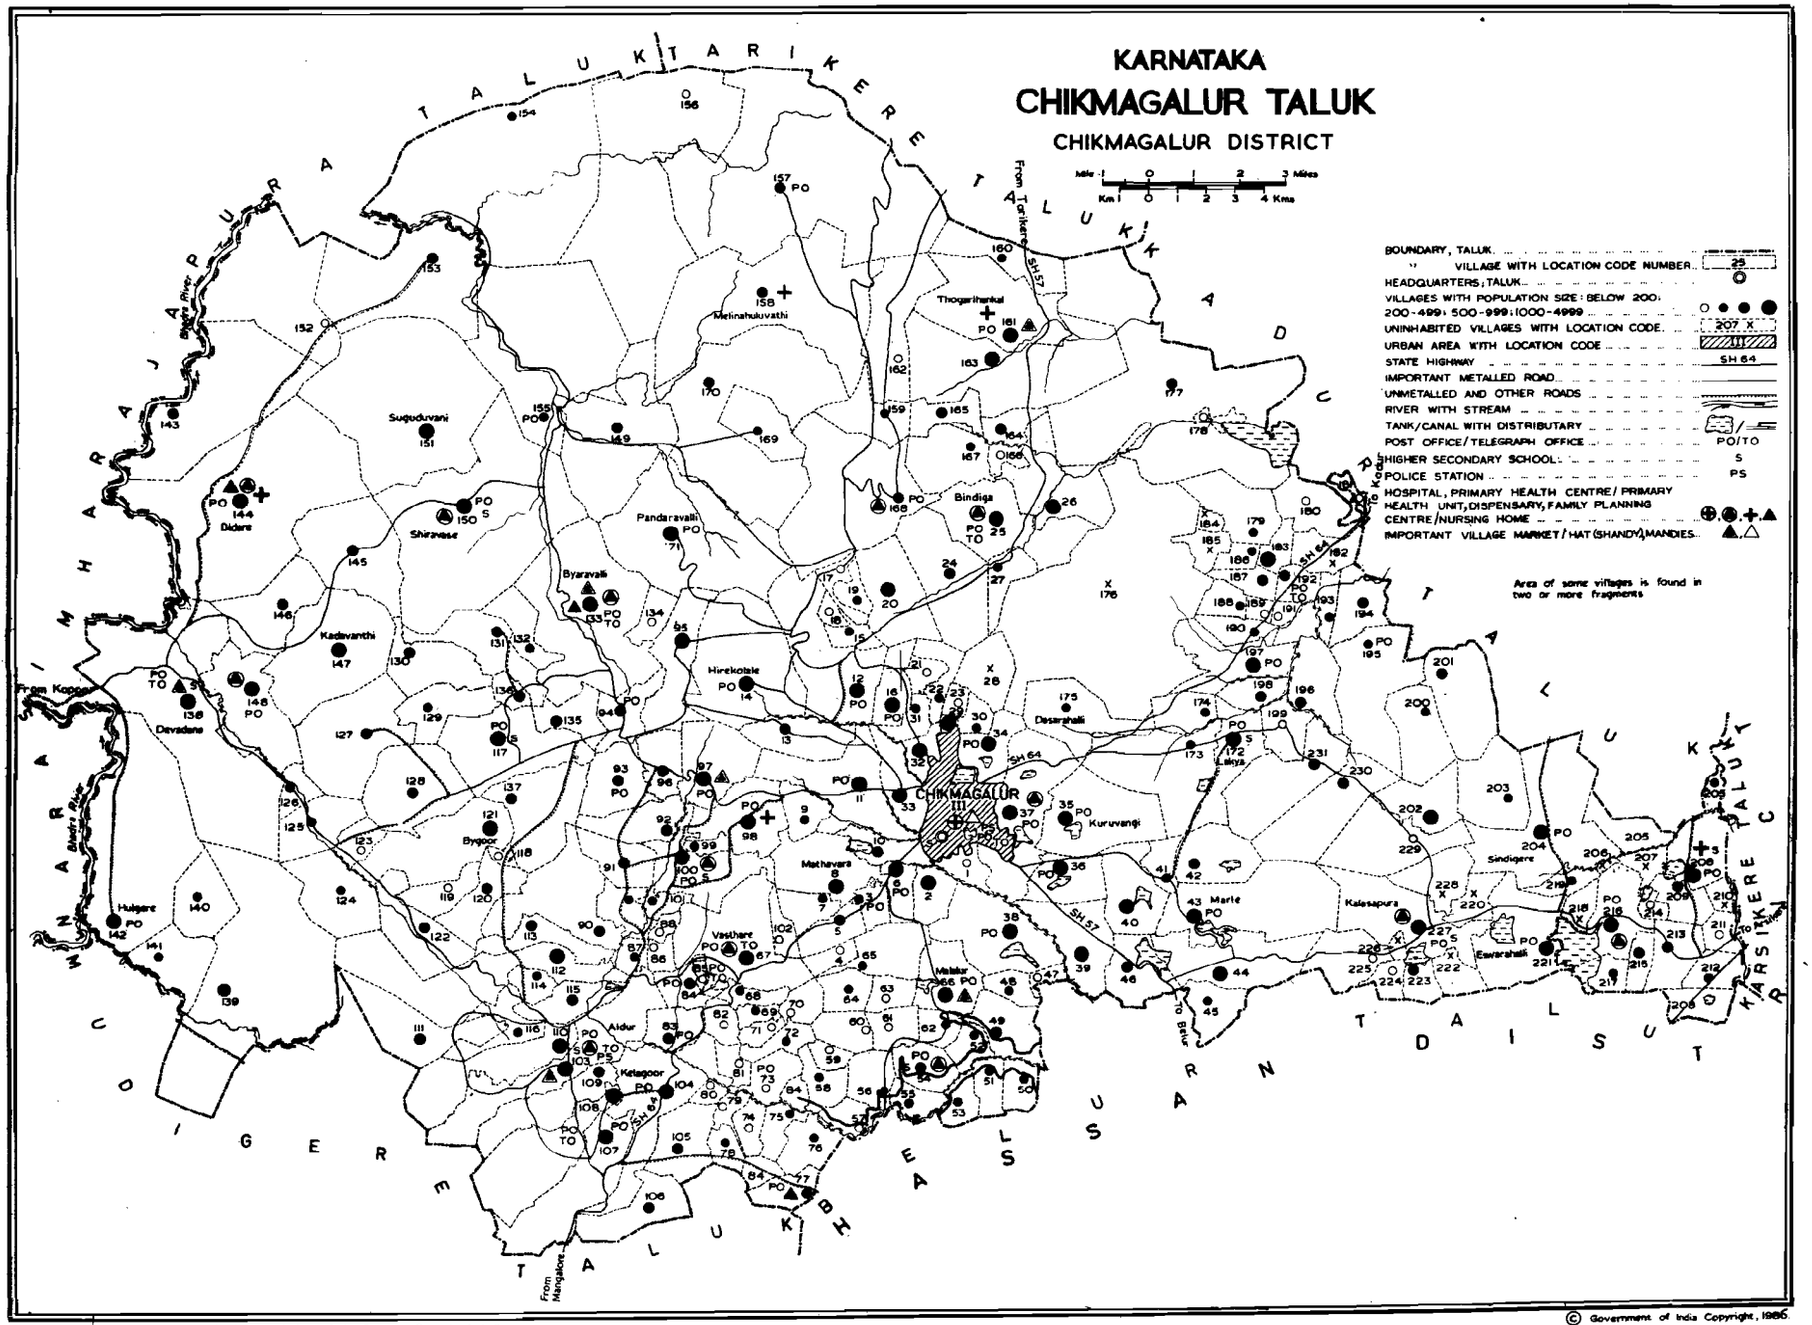

Though the heading does not reveal, in this column, information of general interest has been provided by reporting the number of news - paper copies circulated in the village, number of motor cycles and scooters, number of cars and jeeps as well as the number of tractors available in the village. The following abbreviations are used :-

N : Newspaper copies circulating in the village
M : Motor cycles/Scooters available in the village
C : Cars/Jeeps available in the village
T : Tractors available in village

Immediately after the abbreviations the number of units is indicated to provide a quantitative index to the data furnished. If in a village there is nothing to report on this topic i.e., on any one or more of these items, then the concerned abbreviations are not entered at all. In other words, the abbreviation if found mentioned in this column is always followed by a numerical attribute.

It is necessary to note at this juncture that the information is based on what may be regarded as superficial oral enquiries by the reporting agency and may therefore be considered as a rough estimate at a given point of time i.e. during the year 1979-80. In this column a numerical reference has also been given along with the abbreviation A in respect of the notes, provided elsewhere in the volume, about villages having matters of particular religious, historical or archaeological interest to report. Such notes have generally been prepared on the basis of published material.

SECTION II - TOWN DIRECTORY

TOWN DIRECTORY

EXPLANATORY NOTE

Town Directory comprises of six tabular statements as applicable to all the towns and an additional statement regarding the slums, only in respect of towns with a population of 50,000 and above. These are numbered serially from I to VI and the additional statement bears the number IV A in view of the fact that it deals with the same type of information which is covered in statement IV. These statements contain several columns each with brief headings and for presentation of the data, abbreviations have also been made use of for the sake of brevity. These statements are taken up for consideration one by one and an explanatory note is given in respect of each column, with the exception of column 1 which refers to Serial Number and is self-explanatory.

Statement I : Status and growth history

Column 2 : Class, Name and Civic Administration Status of town :-

The class to which a town belongs is determined on the basis of its population at the 1981 census count and it is indicated in this column in roman numerals. The classification criterion adopted now is the same as that adopted for analysis and explanations at the earlier censuses. The towns are divided into six classes :-

Class	Population Size	Class	Population Size
I	100,000 and above	IV	10,000 to 19,999
II	50,000 to 99,999	V	5,000 to 9,999
III	20,000 to 49,999	VI	Below 5,000

The concept of urban agglomeration has been adopted for presenting the demographic data at the 1981 census also. But, in Karnataka, unlike in 1971, at this census quite a large number of villages have been recognised as out-growths of the core town or of one of its contiguous constituent towns. In determining the class however, the population of the core town alone is taken into consideration in these cases also. That is to say, the population returned by the geographical entity recognised as a census town, on the basis of the definitions adopted, alone is considered for this classification.

The middle component of this column heading refers to name of the town which does not need elucidation. Name of the town, as adopted in the official records, is reported here.

The civic administration status of the town as on 1.1.1980 is indicated immediately after the name of the town, within brackets. The abbreviations used for this purpose are as follows :-

C : Municipal Corporation
M : City Municipal Council
M : Town Municipal Council
CB : Cantonment Board
NAC : Notified Area Committee
SB : Sanitary Board
TP : Town Panchayat/Nagar Panchayat
P : Village Panchayat/Gram Panchayat
SA : Special Area

The Special Area in fact represents a case where there is no civic administrative body. These areas generally consist of townships or colonies purely under the administrative control of certain public sector factories or undertakings or under specific departments of the Government such as for example the State Public Works Department and the Power Corporation.

With a view to ensuring the fixity of boundaries of various administrative units, that is to ensure that the frame for census taking once finalised with reference to a cut-off date remains unchanged till the completion of the census count the State Government had been requested not to order any jurisdictional changes and not to give effect to any changes in the civic administration status either. However due to more compelling reasons it is quite possible that in some exceptional cases such a change in civic administration status has taken place during the period 1.1.80 to 1.3.81. Such cases if any are indicated by providing a note at the bottom of the concerned page.

Column 3 : Location Code Number :-

The significance as well as the importance of location code numbers has already been explained. Every town bears a distinct location code number consisting of 3 elements. The first element in this code structure indicates the State while the second and the third represent the numbers assigned to the district within the State and the town within the district. The numbers assigned to the towns in the district are all in roman numerals while those relating to the State and the district are in arabic numerals.

column 4 : Name of taluk :-

In Karnataka the term taluk is very much in vogue though the designation of the Revenue Administrative Officer has for long been changed from Amildar or Mamlatdar to Tahsildar. The name of the taluk within the jurisdiction of which the town is located is indicated in this column. There are a few instances wherein a particular town stradles portions belonging to two adjacent taluks. In such a case the town is considered to belong to the Taluk that contains a major portion of the town.

In the statement such cases are marked out by an index and a note at the bottom of the page explains the correct situation.

Column 5 : Area (Sq. Kms) :-

The geographical area of the town is furnished here in square kilometres upto two places of decimal. The area figures reported at first by the concerned civic bodies etc., were examined with reference to the respective town boundary notifications and the relevant village maps as well as the charge maps prepared for the 1981 census operations with a view to ensuring greater accuracy. The final area figures as adopted for the 1981 census are reported here.

Column 6 : Number of Households (1981) :-

The total number of households, including those consisting of institutional and houseless population, enumerated in the town at the 1981 census count is given here even though the same information appears again in the Primary Census Abstract. The purpose is to facilitate a better comprehension of the demographic situation, especially with reference to the population data presented in this statement.

Columns 7 to 15 : Population and growth rate of the town at different censuses from 1901 to 1981 :-

The population figures for the town as returned at the decennial census from 1901 through 1981 are furnished under these columns in order to provide an insight into the history of growth of the town. If in any particular census year the referent town did not enjoy the urban status that is if that place was reckoned as a village for that census its population is not reported under the column concerned and a dash mark is indicated in stead. In other words, the population figures are given here for the town only if it happened to be an urban area at that particular census year.

Thus, a glance at these columns reveals whether the referent town having been first classified as 'urban' has maintained that status continuously through the suceeding censuses or whether there have been subsequent declassifications. From column 8 onwards, the decadal growth rates of the town are indicated within brackets below the population figures in order to permit an easier grasp of the decadal growth trends and to facilitate a comparative analysis. Population variations are quite often associated with changes in the jurisdiction of the urban area and sudden spurts are sometimes due to incorporation of fast developing fringe areas to the town or amalgamation of adjacent towns with the core town during the inter censal period. Such cases are marked out in the statement and explained by way of a note at the bottom of the concerned page.

Column 16 : Density (1981) :-

For every town the density of population per square kilometre is presented in this column. The density figures are determined with reference to the area of the town in Sq Km upto two decimal places and the population returned at the 1981 census.

Columns 17 to 19 : Sex Ratio 1961 to 1981 :-

Sex ratio is expressed as the number of females for every thousand males and is based on the sexwise distribution of the population returned at the census. For each town these figures are furnished for the 3 successive censuses. This information would provide an insight into the changing pattern of sex ratio in urban areas.

Statement II : Physical aspects and location of Towns 1979

Column 2 : Class and Name of Town :-

This column is the same as column 2 of Statement I and does not need any explanation. Unlike in statement I here the civic administration status of the town is omitted.

Columns 3 to 5 : Physical aspects :-

These columns deal with the rainfall and temperature data. It is common knowledge that meteorological observatories have not been established in each and every town, even though most of the towns do have rain-guages and due arrangements have been made to record the rainfall data all through the year. The Director General of Observatories has furnished data on rainfall, maximum and minimumtemperature in respect of towns having observatories. These figures are standard normals based on the data for 30 years from 1931 to 1960, and are distinguished in the statement by placing an asterisk mark at the top right hand side of the figure. Information of this type is available only for a few towns.

In so far as the data on rainfall is concerned, for most of the remaining towns the particulars have been supplied by the local officers and cross-checked for acceptability with the data furnished by the State Bureau of Economics and Statistics. The rainfall figures are in millimetres and represent the annual average based on the actual figures relating to the preceding ten years. In cases of non-availability of even this type of information, the particulars relating to the nearest town are reported under this column with the distinguishing notation N being placed at the top right hand side of the figure.

In columns 4 and 5 information on temperature is presented in degree centigrade. As stated above the asterisk mark here indicates that the information has been furnished by the Director General of Observatories. Such information is not available for most of the towns. Instead of putting a dash in these columns for such towns the data furnished by the Director General of Observatories as pertaining to a town situated at almost the same altitude and in the proximity of the referent town are reported with the substitute notation N to denote that the data does not actually relate the town and should therefore be regarded as very approximate.

Columns 6 to 12 : Name of and road distance from State H.Q; District H.Q; sub-division/Taluk H.Q; nearest city with a population of 100,000 and more; Railway Station; Bus route Navigable river or Canal (if within 10 Kms) :-

The column headings are self explanatory and are intended to indicate the location of various important centres with reference to the town concerned. If the referent town itself happens to be mentioned in these columns the distance is recorded as '0' (zero) and in all other cases the road distances are given in kilometres. In column 8 the name of the sub-division to which the taluk (in which the town is located) belongs as well as the name of the taluk to which the town belongs are mentioned along with road distances in the same order one below the other. In column 9 the name

of the nearest city with a population of 100,000 and more according to 1981 census and road distance thereto is mentioned in respect of each and every town even if the referent town itself has a population of 100,000 and more.

The proximity by road alone is taken into consideration for filling up this column and as such cities belonging to adjacent states also find an occasional mention in this column.

Column 10 refers to the nearest railway station and distance thereto by road. In a few cases though the name of the railway station is the same as that of the referent town the distance indicated is other than zero because of the fact that the station is actually located beyond the jurisdiction of the referent town.

In case the referent town is enjoying bus route facility (i.e.road transport) the name of the town is mentioned in column 11 and the distance is recorded as zero. Names of bus routes passing through or originating from the town are not indicated here. If there is a navigable river or a navigable canal at a distance of 10 kilometres or less from the referent town then the name of the river or the canal is indicated in column 12. To differentiate between a river and a canal the abbreviations (R) and (C) are made use of and the distance from the town to the navigable waterway is mentioned thereafter. It may incidentally be stated that in Karnataka there are very few navigable rivers and practically no navigable canals.

Statement III : Municipal Finance 1978-79

As the title denotes, this statement deals with the actual income and expenditure of the civic body administering the town. An attempt has been made to present comparable data in the case of non-municipal towns like Panchayats and areas under the administration of public sector undertakings and the like. The data relate to the financial year 1978-79 and have been furnished by the local authorities concerned based on relevant records. It may also be stated here that no probing enquiries have been made and the particulars as reported by the civic bodies have been accepted after ensuring arithmetical accuracy.

Colum 2 : Class and Name of Town :-

This is same as column 2 of Statement II and as such does not require any explanation.

Column 3 : Civic Administration Status (In 1980)

As explained under column 2 of Statement I, the civic administration status of the town as on 1.1.80 is indicated in this column using the same set of abbreviations.

Columns 4 to 10 : Receipt (In Rs. '00) :-

The actual receipt realised by the civic body under various heads of income as well as the total for the year 1978-79 are indicated in hundreds in these columns. The opening balance for the year is not taken into account under any of these columns.

Columns 11 to 17 : Expenditure (In Rs. '00) :-

The actual expenditure incurred during the year is furnished here in hundreds. The various heads of accounts are grouped into 6 broad categories for each of which a separate column is provided. Public safety covers the expenses incurred for road lighting, destruction of rabid and stray dogs, besides that on fire fighting services, Similarly 'public-institutions' covers not merely the contributions made by the civic body to educational, medical and cultural institutions in the town but also the expenditure incurred for the maintenance of educational and such other institutions if any functioning under its direct control.

As in the case of receipt in the case of expenditure also the closing balance at the end of the year is not considered and therefore in almost all the cases the total receipt and the total expenditure are not balanced in this statement.

Statement IV : Civic and other Amenities 1979

Column 2 : Class and Name of Town :-

This is same as column 2 of statements II and III and does not need further explanation.

Column 3 : Civic Administration Status :-

Explanation furnished earlier for column 2 of Statement I and column 3 Statement III holds good for this statement also.

Column 4 : Population :-

The total population of the town according to 1981 Census is mentioned here with a view to facilitate a comparative analysis of the data.

column 5 : Road length (In Kilometres) :-

Generally in a town it is the civic authority that is responsible for construction and maintenance of roads. The term road as used here includes streets also and while the unsurfaced mud and gravel roads are categorised as Kachcha roads, the surfaced roads are classified as Pucca roads. In most of the cities and towns the district roads and highways under the control of the Public Works Department also pass through. The roads situated within the jurisdiction of the to[illegible]nd under the control of the civic authority are shown in one line against the code M and those under the control of the Public Works Department and the like are shown against the code 'PWD' in another line. In both the cases the road length is shown under two categories viz., KR (Kachcha Road) and PR (Pucca Road) as defined above. In order to have an idea about the total length of all types of roads in the town, therefore all these figures are to be added together. In cases where it has not been possible to ascertain the full details by type of road and agency responsible for maintenance the combined road length alone is furnished. The road length is given in kilometres and fractions are rounded off to next integer.

Column 7 : System of Sewerage :-

Generally sewerage system implies the network of mains and branches of underground conduits for the conveyance of sewerage to the final point of disposal. Sewers that carry only household and industrial wastes are called separate sewers while those that carry storm water from roofs, streets and other surfaces are known as storm water drains and those carrying both sewage and storm water are called combined sewers. In towns provided with such systems of underground sewerage also there would in addition be a surface drainage system to

cover the areas not served by sewerage system and also to drain out excess rain water all over the town.

However in towns that are not provided with sewerage system and such towns are far more numerous in the State, there would generally be open drainage system. Where even this system is not prevalent the householders would have made their own arrangements such as soak pits and cesspools. In this column therefore information is presented not only on sewerage system, but also on the drainage system. Like sewerage system, the drainage system is also of different types depending upon the construction material and also the shape of the drains. The two most important types of sewerage/drainage system are reported under this column in the order of their importance in the towns using the following abbreviations.

S : Sewers
OSD : Open Surface drains
BSD : Box Surface Drains
SD : Sylk pattern Drains
PT : Pit System

The box surface drains are also open drains but are built of size stone masonry and are also called Pucca gutters. The sylk pattern drains too are open surface drains only. The open surface drains category thus covers the Kachcha drains involving mere earth-work and also the drains constructed from out of oblong granite slabs or, out of pre-fabricated cement concrete blocks which need only joining and cement pointing after being placed in position. These drains are of U shape, L shape or V shape and to the extent possible these details have also been provided under this column.

Columns 8, 9 and 10 : Number of Latrines :-

Information on total number of latrines of different types as furnished by the concerned civic authorities is reported under these 3 columns. Both private and public latrines are covered here and the particulars in these columns and in column 11 are closely interlinked. The water-borne latrines include all types of flush-out latrines while service latrines refer to only those that are being serviced by manual scavengers either everyday or twice or thrice a week.

Column 11 : Method of Disposal of Night-Soil :-

The phrase disposal of night-soil is generally presumed to refer to the manner in which the garbage is finally disposed of by the civic body i.e. sale by public auction, used as manure etc. However, the main purpose of this column is to provide information on the method by which the night-soil is removed from the latrines, that is, the primary disposal of the human waste. A little elaboration on this aspect therefore appears to benecessary.

There are three systems of disposal of human waste, namely, (i) underground sewerage, (ii) sanitary water flush latrines with individual disposal systems like septic tank, leaching cess pool and collecting well, and (iii) dry type of latrines with manual scavenging.

The system of underground sewerage provides for the street sewerage with which are connected the sanitary latrines constructed in the houses having water closets and fitted with flushing cisterns (or hand flushing).

Through this sewer the faceal matter is transported without the need for scavenging. This system generally exists in cities and large towns besides industrial townships built and controlled by public sector undertakings and large companies and the like. Where the street sewer does not exist these sanitary water flush latrines are connected to a local septic tank with a sub-soil dispersion system or a leaching pit. Where the liquid wastes from the water closet could be disposed of locally in a leaching pit, a septic tank with a soil dispersion system is constructed. This dispersion requires an optimum travel through the pores of the soil which render the harmful liquid bacterially innocuous by the slow process of filteration through the soil traversed.

Where the soil is impermeable, collecting wells are constructed and the sanitary water flush latrines are connected with them. These wells are cleared at periodic intervals by a suitable device. The dry type latrines are of service type from where the human excreta has to be removed by scavangers who move from house to house, in most cases carrying the night-soil as head loads on their head, or shoulders or in baskets with handles or in wheel barrows. This waste is then collected in bullock carts or trucks and transported to dumping grounds at the outskirts of the town.

It may be mentioned in passing that in Karnataka the practice of carrying night-soil by head loads has been discontinued with effect from 15.8.73 consequent on the issuance of a Government order in this behalf. However in a few cases the town dwellers have sought the intervention of the courts and have been able to secure the status quo-ante in respect of the scavenging services that were being provided by the civic body concerned till that date.

The abbreviations used in this column are the following, and if more than one system is prevailing the two most important types are indicated one after the other :

S : Sewerage
ST : Septic tanks
WB : Wheel Barrows
B : Baskets (with handles)
HL : Head Loads

In case the town has latrines of other types that are neither of the sanitary type nor the service type this column does not apply at all and therefore a dash is entered.

Columns 12 and 13 : Protected water supply source and capacity of storage system

The sources of water supply in the town are indicated by using the following four abbreviations :

T : Tap
W : Well
TK : Tank Water
TW : Tube Well/Hand Pump

Supply through the taps implies a primary

source such as a river, stream, bore wells, curb wells, tank and reservoirs etc., which are of course not mentioned in this column. It may be incidentally stated that the term protected is used in a very liberal sense, and no attempt has been made to gather data on the methods of filteration and water purificatory treatment if any resorted to by the agency supplying water through pipes in the towns. The generally prevalent pratice in most of the towns is to pump raw water into the storage tank or reservoir, treat it with bleaching powder and then distribute that water for consumption through pipes.

If there are more than 2 sources of water supply in the town the first two which are regarded as most important are mentioned in that order separated by a comma. In column 13, the systems of storage of water are considered and the two that are most important in the referent town are indicated in that order and after each entry the storage capacity is also mentioned in litres within brackets. The abbreviations used in this column are :

OHT : Overhead Tank
SR : Service Reservoir
IG : River Infilteration Gallery
BWP : Borewell Pumping System
PT : Pressure Tank

The term capacity has its usual meaning, namely, the capacity to store or contain. It may further be clarified that the storage capacity does not necessarily indicate the quantity of water supplied daily to the inhabitants of the town. In some of the towns due to the inadequacy of water supply at the primary source for most part of the year the normal utilisation of the storage capacity would be of the order of 50 to 60 per cent only. On the contrary there are towns where water is pumped into the storage system and also distributed for consumption twice every day almost throughout the year and there are a few towns where the inlets and outlets of the storage systems would both be functioning simultaneously for most part of the day making it somewhat difficult to calculate the quantity of water supplied everyday under such a system.

column 14 : Fire Fighting Service :-

If fire fighting service is available in the town this fact is indicated by the word 'Yes' recorded in this column. In all other cases the name of the nearest place if in the same district or the name of the nearest district if in the same State or other State where such services are available is indicated along with the road distance in kilometres between the referent town and the place with fire-fighting service.

Columns 15 to 19 : Electrification (Number of connections)-Domestic, Industrial, Commercial, Road Lighting (Points) and others :-

In columns 15 to 19 information about the number of electrical connections (installation) for different categories of consumers in the town is furnished. The definitions of the terms used in the column headings are as follows :-

(i) Domestic : Connections to residential houses, bangalows, clubs, hostels and hospitals run on non-commercial lines, charitable, educational and religious institutions are all included in the domestic category, A.E.H. i.e., All Electric Home connections are also categorised as domestic.

(ii) Commercial : This category includes all connections for the supply of electricity to commercial establishments such as wholesale and retail shops, offices and business houses, hotels, resturants, tea stalls, photographic studios, X-ray installations, advertisements and exterior illumination, railway station, bus station, and the like.

(iii) Industrial : Power supply connections to industrial establishments are covered under this column. This would include small establishments such as power looms, flour mills, roasting, grinding, wet grinding, repair workshops using power operated tools and the like.

(iv) Road Lighting : The total number of street lights being maintained in the town is mentioned here.

(V) Others : Connections to all categories other than those cited above are covered under this head ing. This would include temporary connections, connections to pumpsets, water works and such other installations.

Statement -IV A : Civic and other Amenities in Notified slums, 1979

This statement which may be regarded as an appendix to statement IV is confined to towns with a population of 50,000 and more i.e., class I & II towns. Information on slums that are officially recognised as slums (even if those are not notified in some cases) is presented under 14 columns apart from column 1 which relates to serial number and column 2 which relates to name and class of town.

Column 3 : Name of slum :-

The names of slums, if any, in the town are given in separate lines in the alphabetical order of their names.

Column 4 : Area of slum :-

The geographical area of each slum is given in square kilometres up to two plaes of decimal.

Column 5 : Population of slum :-

The population figures for this column are furnished by the civic authorities concerned. Slums as such have not been made independent units for census enumeration and as such 1981 Census data as applicable to the slums covered here are not available.

Columns 7 to 12 : System of Sewerage, Number of Latrines and Method of disposal of Night soil :-

These column headings are same as those appearing in the statement IV and have already been explained. The information is furnished here for each slum separately. The main heading latrines is subdivided into those that are privately owned and those that are for common use of the community i.e., public latrines.

Column 13 : Number of tap points/public hydrants installed for supply of protected water :-

The total number of public taps or hydrants if any in the slum is mentioned here.

columns 14 to 16 : Electrification (Number of connections):-

Total number of electrical connections in each slum provided for purposes of domestic use, road lighting and other than these two is reported seperately under these three columns. The meaning of the terms used in the column heading has already been explained.

Statement - V : Medical, Educational, Recreational and Cultural facilities - 1979

Column 2 : Class and Name of Town :-

This column is same as column 2 of statement IV and therefore calls for no further explanation.

Column 3 : Population :-

The total population of the town according to 1981 Census is noted in this column.

Columns 4 and 5 : Medical Facilities : Hospital/Dispensaries/T.B.Clinic/Health centres/Nursing Homes etc., and number of beds in Medical institutions noted in column 4 :-

The scope of these columns is confined to only such of the facilities that are offered by institutions run by or aided by government/semi-government or local bodies and charitable institutions or social service agencies like the missionaries. In other words data on the facilities provided in the town by private doctors i.e. registered medical practitioners either individually or in establishments where they work in groups,are excluded from the purview of these columns.

The abbreviations used in column 4 are :-

H : Hospital
D : Dispensary
PHC : Primary Health Centre
PHU : Primary Health Unit
FC : Family Planning Centre
TB : T.B.Clinic
NH : Nursing Home
O : Others

If there are two or more number of institutions of the same type then the number of institutions is also indicated within brackets immediately after the relevant abbreviation in the column.

Maternity homes, maternity and child welfare centres, leprosy clinics, chest clinics and veneral diseases clinic etc., if any are all included under the category of 'Others'. But even when a Family Planning Centre is attached to a Hospital or a Primary Health Centre it is treated as an independent unit and counted separately.

If the town has hospitals and dispensaries providing facilities under different systems of medicine such as allopathic, ayurvedic, unani and homoeopathic then this detail too has been included using abbreviations such as : A for Ayurvedic, U for Unani and Hom for the Homoeopathic system. The allopathic institutions do not have any additional abbreviation. Thus, a mere H or D would mean that the reference is to allopathic system; an entry "H (A-1,2)" would mean that 1 Ayurvedic hospital and 2 allopathic hospitals are functioning in the town and an entry like "D (Hom-2,1, U-1)" would imply the existence of 2 homoeopathic dispensaries, 1 allopathic dispensary and 1 Unani dispensary.

If medical facility is not available in the town then the name of the nearest place where it is available if in the same district, and name of the district if in the same State or other State is mentioned here along with the distance in Kilometres shown within brackets.

The number of beds with which the medical institutions noted in column 4 are equipped is indicated in column 5.

Columns 6 to 15 :-

These columns provide information regarding the educational facilities available in the town and are considered stage by stage.

Columns 6 to 9 : Arts/Science/Commerce Colleges (of Degree level and above); Medical Colleges; Engineering Colleges; Polytechnics :-

Particulars of colleges in the town providing general education facilities at degree level are indicated in column 6 using the following abbreviations.

A : Arts only
S : Science only
AS : Arts and Science only
C : Commerce only
AC : Arts and Commerce only
ASC : Combined for all three categories : Arts, Science and Commerce
L : Law

If the number of colleges of any particular category is more than one then that number is also given within brackets against the abbreviation concerned. It may incidentally be mentioned here that the educational institutions with a vocational and professional content such as pharmacy College, B.Ed., Agricultural College etc., are not covered under this but are shown included in the category of "Others" in column 10.

In columns 7, 8 and 9 the number of medical colleges, the number of engineering colleges and the number of polytechnic institutions are indicated.

In case the town does not have any of the colleges referred to in these 4 columns i.e., if the entry were to be a dash in any of these columns then the name of the nearest place with the facility along with the distance thereto is mentioned. If such a place is outside the district then the name and the distance to that place and if such a place is outside the State itself then the name of that State is mentioned in these columns. The same procedure is adopted regarding the other columns dealing with educational facilities.

Column 10 : Recognised Shorthand, Typewriting and other Vocational Training Institutions :

The term recognised would mean recognition by some statutory authority like the Educational Department, Commerce Department, Labour-Department etc., of the Government or semi-government or autonomous bodies or public sector projects. The Teachers' Training Colleges, the Nursing College, the Pharmacy College, the College imparting education in Physical Education and the like are also shown under this column against the category of 'Others'.

SH : Shorthand
TYPE : Typewriting
Sh.Type : Shorthand and Typewriting
O : Others

If the number of institutions of any particular type is more than one that number is also indicated within brackets along with the abbreviation concerned.

Columns 11 to 14 : Higher Secondary/Intermediate/ PUC (Pre-University College)/ Junior College/Secondary, Matriculation, Junior Secondary and Middle Schools and Primary Schools :-

Information about the number of schools of different types functioning in the town is furnished under these columns. All schools irrrespective of the medium of education and the type of administering agency i.e., all those run by or aided by Government or local bodies, as well as the unaided institutions run by private management are considered here for reporting. If there are composite institutions such as a college providing education at degree level and also at Pre-University level then such institutions are split up into degree college and PUC (i.e.Junior College) and separately counted as if they are independent units. Likewise, a composite Junior College which has facilities for providing education say from I to XII standard (i.e., from Primary I standard upto PUC) would be regarded as representing one Junior College, one High School, one Middle School and one Primary School and each of these units would be counted and reported under the relevant column as if each unit was an independent institution in its own right. Similarly a school with I to X standard would get counted under Primary, Middle and High School categories and a composite School with I to VII standard would be considered under the Primary school as also the Middle School category.

In Karnataka the term middle school is no longer in vogue as the primary education consists of 7 years of schooling leading to secondary level. However the first four classes (I - IV standard) are called lower primary classes and the next three are regarded as higher primary classes. There are schools with only I to IV standards. called LPS and also those with V to VII only (formerly middle schools) known as HPS and there is no difficulty in counting such institutions as separate primary and middle schools. But there are composite schools called the Higher Primary Schools having I-VII standards and such schools have now been split up into one Primary and one Middle School for purposes of reporting under these columns of the Town Directory. This method of accounting is therefore different from a simple counting of schools in the town.

Column 15 : Adult literacy classes/centres and others (Specify) :-

If adult literacy classes are being run at regular centres in the town the number of such centres is indicated in this column by the side of the abbreviations AC. Gurukula, Madarasa (Arabic school) and such other quasi religious cum educational institutions if any in the town are also reported in this column under the category of 'others'.

Column 16 : Number of Working Women's Hostels with number of seats :-

Though there are hostels meant for students in almost all the towns, very few have hostels meant for working women. In this column the number of only such hostels that are exclusively meant for working women only are repoted along with the information on the number of seats i.e., its strength.

Columns 17 to 19 : Recreational and Cultural Facilities - stadia, cinema, - auditoria/drama/community halls ;-

Column 17 relates to the number of stadia if any in the town. Ordinary play grounds which one usually comes across in towns and cities are excluded from the purview of this column. The term stadium is used in its strict sense to refer to those constructed at considerable costs and are under proper upkeep.

In column 18 the total number of permanent cinema theatres in the town is indicated. Touring talkies i.e., cinema tents of a purely temporary nature are not taken into account for this column. If there are any auditoria, drama halls and community halls in the town the total number of such units is reported in column 19.

The number of public libraries and reading rooms are separately furnished by the side of abbreviation PL for Public Library and RR for Reading Room. Such facilities offered by educational and private institutions including those that are commercialised (called circulating libraries in local parlance) are not covered for reporting under this column.

Statement - VI : Trade, Commerce, Industry and Banking 1979

Column 2 : Class and Name of Town :-

This column is the same as column 2 of the preceding statement and therefore calls for no further explanation.

Columns 3 to 8 : Names of three most important commodities imported and names of three most important commodities exported :-

For purposes of these columns, commodities for which the town serves only as a transit centre by importing for the specific purposes of exporing the commodities **without any processing** are not considered either as imports or as exports. Agricultural and such other allied produce may be regularly brought into the town from the neighbouring villages and sold to commission agents and wholesalers at the regulated market for further export to areas outside the town. In such cases

the produce that is brought into the town is not considered as import. On the other hand if these items are mainly consumed within the town either as consumption goods or as raw materials by any manufacturing industry then the commodities would be regarded as imports. Thus the commodities imported are either locally consumed in the same form, or else processed further and thereafter either consumed locally or exported to other centres. This restriction apart there is no limitation concerning the nature and quantity of the commodities that may be considered for reporting under these columns. Importance in a town is restricted basically to the few or several commodities that qualify for consideration either as imports or as exports. By and large the commodidities reported under exports would coincide with the commodities reported as manufactured in the town because of the specific exclusion of transit goods. As a result, the image that some of the towns have built up over decades as traditional exporters of certain goods does not get reflected under these columns.

In these columns the importance of a commodity is reported in very general terms and decided upon in terms of the estimated volume of commodities transacted and is based on local enquiries by the civic authorities concerned.

Columns 9 to 11 : Name of three most important Commodities manufactured.

The order of importance is determined broadly by taking into consideration the volume of the total output of the commodities or the scale of operation and for these columns too it is the civic authority that has furnished the information after local enquiries. All types of manufacturing and processing irrespective of the sector to which they belong are considered and of these the three that are most important are reported.

Column 12 : Number of Banks :-

Information on this item has been supplied by the office of the Registrar General, India after ascertaining the details from the Reserve Bank of India. The data relates to the year 1979 and in conformity with the instructions issued in this regard, no attempt has been made to update the data. If a bank has two or more branches then each such branch is regarded as a separate Bank for computing the number of banks.

Column 13 : Number of Agricultural Credit Societies :-

The total number of agricultural co-operative credit societies functioning in the town, irrespective of the type to which they belong (i.e., primary, service, multipurpose, agricultural produce marketing etc) is reported under this column. In quite a large number of towns agriculture is an important means of livelihood for a number of persons and agriculturists of urban areas too have for long been influenced by the co-operative movement.

Column 14 : Number of Non-agricultural Credit Societies :-

Consumer co-operative societies which extend credit facilities to the members, and all other credit co-operative societies that cannot be classified as agricultural are considered for this column. Several groups of people belonging to specific categories might have formed co-operative societies to cultivate the habit of thrift and to make use of the benefit arising out of the encouragement given to the co-operative movement. All such co-operative societies are covered under this column.

PART B - PRIMARY CENSUS ABSTRACT

(i) DISTRICT PRIMARY CENSUS ABSTRACT
(ii) TALUK-WISE PRIMARY CENSUS ABSTRACT

PRIMARY CENSUS ABSTRACT

EXPLANATORY NOTE

The Primary Census Abstract furnishes in a nutshell as it were, vital information on the basic demographic and economic composition of the population. This statement, referred to as PCA, comprising hardly 16 main columns,summarises the whole mass of data gathered at the Census. The smallest geographical unit with a defined boundary identifiable on the field that has been delineated for ensuring cent percent coverage of area under the jurisdiction of various administrative divisions, is the census Enumerator's block. The details gathered in the household schedules and the individual slips in respect of each and every person enumerated in each such block have been meticulously tabulated to prepare this Primary Census Abstract. The tabulation has been done entirely by manual processing of the data at the Regional Tabulation offices. The village PCA is derived from the Block PCA and in case of urban areas, the Block PCA has yielded the ward and Town PCA. In turn the Taluk (Rural) and Taluk (Urban) as well as Taluk (Total) PCA statements are built up on the basis of Village-wise and Town-wise data. This process goes on until it yields the data for higher and higher administrative divisions culminating at the apex in the form of a single line statement for the country. The entire edifice thus rests on the information contained in the individual slips filled up by the enumerator.

In the pages that follow, the District Primary Census Abstract with the taluk level data showing rural-urban breakup is presented first. Thereafter for each taluk starting with Location Code No.1 the village level PCA and within each taluk wardwise PCA for each town are furnished. As already stated particulars relating to Scheduled Castes and Scheduled Tribes are omitted here. Though there are altogether 24 columns in the urban and village PCA statement, as many as 12 out of these are merely sub-columns to provide sexwise data. In essence therefore there are 12 columns only. Most of these column headings represent the census concepts and these have been explained in the Analytical Note. However, a brief description of the column headings is given here.

Column 1 : Location Code Number :-

The location code number assigned to the village or the town as the case may be is entered in this column.

Column 2 : Name of Village/Town/Ward :-

The name of the village or the town as finally adopted for the 1981 census purposes is entered in this column. The towns and cities are quite often divided into smaller geographical segments called wards, mohallas or divisions for purposes of administration. Such units bear distinctive locality names or specific numbers. It is this name or the number of the ward or its equivalent unit that is mentioned here in the case of towns.

Irrespective of whether a town is divided into administrative wards or not every town is invariably constituted into territorial divisions for the conduct of civic elections. This delimitation of constituencies is done as an essential and preliminary proess of civic elections scheduled to be held periodically. So, in some cases the name or number in this column refers to such territorial divisions and not to administrative divisions.

Column 3 : Area of the village in hectares and of town in square kilometres :-

These area particulars have already been furnished in village and town directory portions. For the villages the area is reported here in hectares upto two places of decimal and for the towns, as also the wards or divisions thereof, the area figures are furnished in square kilometres upto two places of decimal. If the area figures are not available for any reason the abbreviation NA is entered in this column.

Column 4 : Occupied Residential Houses :-

A 'Census House' could be wholly residential or else completely non-residential according to the use to which it is put. All census houses enumerated as either wholly or partly residential at the time of the census count are added together to get the data for the block and from thence to derive the data for higher units. Houses found vacant at the time of the census count are not reckoned as occupied residential houses. The information for this column has been compiled from the Abridged Houselists.

Column 5 : Number of Households :-

This information too is compiled from the Abridged Houselists. The actual total number of households including the normal, institutional and the houseless that were enumerated at the census count is mentioned in this column. Generally, the number of households in any unit would be equal or more than the occupied residential houses in that unit because of the houseless households that one may come across in that unit and also because of the occasional instances, of two or more households sharing a common census house.

Columns 6, 7 and 8 : Total population (including Institutional and Houseless population) :-

The total population as on the reference date is furnished in column 6 while in the next two columns the sexwise break-up is given. The institutional population refers to such of those who were enumerated in institutions like hostels, chummeries, hospitals, prisons etc., The houseless persons represent those enumerated on the night of 28th February at the places where they were found at that time, if they had not already been enumerated elsewhere.

Columns 9 and 10 : Literates :-

Sexwise break up of the total number of persons who are literate, irrespective of their levels of educational attainments and age, is given in these two columns. By definition a literate is a person who can both read and write with understanding in any language. It is important to note that by convention all children below 5 years of age are regarded as illiterate.

Columns 11 to 20 : Main Workers :-

These 5 pairs of columns deal with the main workers. Out of these, while the first pair provides only the total the other 4 pairs give out further break-up according to the sector of the economy in which these persons are working. The reference period for judging whether a person is a worker or not is the year preceding the day of enquiry. If a person had worked even for one day during this entire period he or she is entitled to be classified as a worker. If for any such

worker the period of work is 183 days or more then that person is a main worker. On the other hand, if such period is less than 183 days then that worker is a marginal worker. In columns 11 and 12 the total number of main workers is furnished sexwise.

Columns 13 and 14 : Cultivators (I) :-

These two columns give out the number of male and female workers who satisfy the conditions laid down in the definition of a cultivator. A cultivator may be an employer, a single worker or an unpaid family worker. Participation in work may be by way of physical labour or by way of supervision and direction. The lands cultivated may be owned by the household or taken on lease for payment of money or kind or share in the produce. Cultivation as already emphasised involves ploughing, sowing and harvesting and allied activities in the production of cereals and millet crops, pulses, raw jute and kindred fibres, sugarcane, tapioca and oil seeds.

Columns 15 and 16 : Agricultural labourer (II) :-

A person who works in another person's land for wages in money or kind or share and does not have any lease or contract on the land on which he or she works is an agricultural labourer. In this case too the crops grown on the lands are quite pertinent and the difference between a cultivator and an agricultural labourer lies in the fact that the former works on his own or leased in lands as an independent worker while the latter works for wages having no right whatsoever on the lands on which he works. The sex-wise break-up of such workers is given in these two columns.

Columns 17 and 18 : Household Industry (V (a)) :-

Household industry belongs to the broad category of 'manufacturing, processing, servicing and repairs' and represents a particular sector therein. Household industry is generally conducted by the head of household himself or herself and or mainly by the members of the household, at home or within the village in the case of those dwelling in rural areas and only within the residential premises occupied by the household in the case of those living in urban areas. A person may be a labourer or a petty employee in the household industry run by some other household. By and large the household industry is carried on by individuals on a small scale with assistance of family members all of whom work as unpaid family workers and the entire earnings are treated as family income.

Columns 19 and 20 : Other Workers (III, IV, V(b), VI to IX) :-

All the other workers who are main workers but are neither cultivators nor agricultural labourers nor engaged in house hold industry are covered under these two columns. This is a broad category, covering all those who are working in fishing, forestry, plantations, construction of roads buildings etc., non-household manufacturing industries, trade and commerce, transport and storage and other services.

Columns 21 and 22 : Marginal Workers :-

Males and females who are workers but have worked to a marginal extent only during the reference year are reported under these two columns. Such workers, irrespective of the economic sector in which they work, are considered together and reported here.

Columns 23 and 24 : Non-Workers :-

Irrespective of age and sex all those who are not economically active are non-workers and a sexwise break-up of such persons is given in these two columns. The aggregate of the main workers, marginal workers and non-workers would be equal to the total population of that unit.

SUPPLEMENT

INTRODUCTORY NOTE

This supplement to the District Census Handbook is devoted exclusively to the particulars relating to the Scheduled Castes and Scheduled Tribes. The District Census Handbook was first introduced at the 1951 Census to meet the ever increasing demand for micro-level data and since then this has remained the only census publication which gives out data at the village level in the case of rural areas and at the enumeration block level in the case of urban areas. The scope of this publication was enlarged in 1961 and also in 1971 so as to render it more useful by presenting in it a wealth of information on infrastructural facilities in villages and towns. The current volumes of the District Census Handbook are thus the fourth in the series and are marked by a greater degree of comprehensiveness and uniformity in approach. As compared to the 1971 series the village and town directory formats have been slightly modified. So also the Primary Census Abstract too has undergone certain changes. The previous practice of presenting the administrative statistics and the various district and taluk level tables has been given up. Apart from these general changes at the all India level, in so far as Karnataka is concerned, because of certain technical reasons all the particulars relating to the Scheduled Castes and the Scheduled Tribes envisaged for presentation in the District Census Handbook, have been pooled together and brought out in the form of a separate supplement.

These details are presented in the following sequence :—

Statement I : Total, Scheduled Castes and Scheduled Tribes population in the taluks and towns of the district. (These details form part of the General District Primary Census Abstract).

Statement II : District Primary Census Abstract — Scheduled Castes

Statement III : District Primary Census Abstract — Scheduled Tribes

Statement IV : Scheduled Castes and Scheduled Tribes population — (A) Villagewise and (B) Townwise (within town ward-wise) [These details form part of the Urban/Village Primary Census Abstract .

Statement V : Total, Scheduled Castes and Scheduled Tribes population — Urban Block-wise (This corresponds to the Appendix to Urban/Village Primary Census Abstract).

Statement VI : Description of boundaries and details of areas included in census enumeration blocks — in the case of urban areas of the district (corresponding to the annexure to the Appendix to the Urban/Village Primary Census Abstract).

Statement VII : List of villages arranged according to the proportion of (a) Scheduled Castes and (b) Scheduled Tribes population to the total population of the village concerned by ranges. This would correspond to Appendix IV A and B to the Village Directory.

Statement VIII : List of Scheduled Castes and Scheduled Tribes.

The concept of Scheduled Castes and Scheduled Tribes as evolved by the Government of India and embodied in the Government of India Act 1935 section 309 for the first time and standardised later on for the purposes of the Constitution of the Indian Republic has all along been adopted for purposes of census operation as well. 'Scheduled Castes', means such castes, races or tribes or parts or groups within such castes, races or tribes as are deemed under Article 341 (of the Constitution of India) to be the Scheduled Castes for purposes of the Constitution of India. No person who professes a religion different from the Hindu or the Sikh shall be deemed to be a member of a Scheduled Caste. Likewise, 'Scheduled Tribes' means such tribes or tribal communities or parts or groups within such tribes or tribal communities as are deemed under Article 342 (of the Constitution of India) to be the Scheduled Tribes for the purposes of the Constitution of India. Persons belonging to the Scheduled Tribes may profess any religion. Statewise statutory lists of Scheduled Castes and Scheduled Tribes were notified for the first time after Independence under the 'Constitution (Scheduled Castes) order 1950 and the 'Constitution (Scheduled Tribes) order 1950'. These orders have close links particularly with Article 46 of the Constitution which lays down that "The State shall promote with special care the educational and economic interests of the weaker sections of the people, and in particular, of the Scheduled Castes and Scheduled Tribes and shall protect them from social injustice and all forms of exploitation".

These lists have subsequently been modified, supplemented or amended from time to time. As a result of the re-organisation of the States in 1956 involving transfer of territories from one State to another, a major change became necessary in most of the States. Consequently the "Scheduled Castes and Scheduled Tribes (Modification) order 1956" was promulgated and the interests of these two sections of the society were adequately safeguarded. Twenty years later, in 1976, with the main objective of removing the area restrictions imposed within the States, the parliament enacted the Scheduled Castes and Scheduled Tribes order (Amendment) Act, 1976" (Act No. 108

of 1976 dated the 18th September 1976). The lists of Scheduled Castes and Scheduled Tribes notified thereunder as applicable to Karnataka State have been adopted for purposes of the 1981 census operations. Copies of these lists, in English as well as in Kannada, were supplied to each and every census enumerator and supervisor. Necessary instructions for filling up answers to the questions relating to the members belonging to the Scheduled Castes and Scheduled Tribes were also issued. The following points were emphasized by way of clarifications :

"If the person belonging to a Scheduled Caste or a Scheduled Tribe returns his/her caste or tribe by a synonym or generic name of a caste or tribe, it should be reckoned as a Scheduled Caste or a Scheduled Tribe only if the name finds a place in the list furnished to you. Similarly, if the answer to this question is in general terms like Harijan/Girijan or Achut/Adivasi, you should not reckon the person enumerated as belonging to a Scheduled Caste or Scheduled Tribe as the case may be. In such a case you should ascertain the name of the caste/tribe fully and if that name finds a place in your list, you should reckon the person as belonging to Scheduled Caste or Scheduled Tribe as the case may be. If a person is negligent and insists on calling himself/herself merely 'Harijan' or 'Achut' or 'Adivasi' or 'Girijan', as the case may be, or repeats the synonym or generic name or a caste or tribe, please tell him/her that his description is not adequate for census purpose and persuade him/her to give the actual name of the Scheduled Caste or Scheduled Tribe. If the person merely claims to be a Scheduled Caste or Scheduled Tribe, but says that he/she does not belong to any of the notified communities applicable to the area, as reflected in the list supplied to you, he/she will not be reckoned as belonging to a Scheduled Caste or a Scheduled Tribe".

Analysis of Census Results : As compared to the earlier lists of Scheduled Castes and Scheduled Tribes which formed the basis for census enumeration at the censuses of 1961 and 1971, there has been a substantial change in the lists adopted for the 1981 census. The area restrictions that were prevalent regarding numerous castes and tribes included in the lists have now been removed. Therefore the 1981 Census results cannot be straight away used for any comparative analysis of growth trends and such other factors unless one delves deeper into the historical, social, economic and demographic aspects of life of these two categories of the population. Such an analysis is beyond the scope of this volume and has therefore not been attempted here. Salient data about the distribution of the Scheduled Castes and Scheduled Tribes in rural as well as urban areas of the district as also the pattern of distribution in administrative units of different levels within the district are included in this slender volume in the form of tabular statements.
