NOTE ON SPELLING

In the notes and tables the spelling of the police stations follows generally that adopted by the Home (Police) Department, and of towns by the Land & Land Revenue Department, Government of West Bengal.

In the District Map appearing in the frontispiece, which has been prepared in the office of the Director of Land Records and Surveys, Government of West Bengal, the names of the police stations have been spelt as per the records of that office.

PART I

INTRODUCING THE DISTRICT

INTRODUCTION

THE DISTRICT OF HOWRAH lying to the west of the river Hooghly falls within the jurisdiction of Presidency division. It is the smallest district in the State except the city of Calcutta. Its area is even less than that of many a subdivision of West Bengal. In shape it is an irregular triangle bounded on two sides by two great rivers.

The name of the district Howrah may have been derived from *hawor* or vast swamps (like the *hawors* of Kisorganj in Mymensingh district in East Bengal) in which the district once abounded.

Extending over an area of 575 square miles or 1,489 square kms., the district is inhabited by 2,038,477 persons of which 1,127,392 are males and 911,085 females as per census—1961. In terms of population it ranks seventh amongst the districts of West Bengal including Calcutta. The districts of 24-Parganas, Midnapore, Burdwan, Calcutta, Murshidabad and Hooghly are above this district in so far as the population is concerned. The position of the district amongst others may be seen in the diagram given at page (4).

The present area of the district is 575 square miles according to the Surveyor General of India. Area figures according to the State Survey Department are not readily available because revisional survey operations and the consequent revision of the Jurisdiction Lists had not been finalised. According to the computation made in the Census Office from the latest available Jurisdiction Lists the total area of the district is 560.1 square miles (1,450.7 sq.kms) of which 515.7 sq.miles (1,335.5 sq.kms) are rural and 44.4 sq. miles or 115.2 sq. kms. urban. As has already been said Howrah is the smallest sized district in this State except Calcutta.

The district comprises two subdivisions namely, Sadar or Howrah and Uluberia with their headquarters at Howrah city and Uluberia. The Sadar subdivision covers the thanas of Bally, Howrah, Sibpur, Jagacha, Sankrail, Panchla, Jagatballavpur and Domejur. The Uluberia subdivision is constituted of six police stations namely, Bawria, Uluberia, Shampur, Bagnan, Amta and Udaynarayanpur.

The district has twenty-three towns, only two of which are administered by the Board of Municipal Commissioners and the rest are non-municipal urban areas. Both the municipal towns Baly and Howrah are situated within the Sadar subdivision. In addition to these two towns, the Sadar subdivision has another fourteen non-municipal towns. All these non-municipal towns have been declared as urban areas for the first time in 1961 census. Baly town has two constituent parts, the municipal town of Baly and the rest of the town not yet covered by the municipal administration. Both these constituents together have been taken as a single town for the purpose of census 1961. The Baly municipality itself exceeds the population of one lakh and added to it the non-municipal town of Baly gives the total population of 130,896 for the whole city of Baly. Howrah city has a population of more than five lakhs. Excepting Panchla non-municipal town, all the other thirteen non-municipal urban areas of the Sadar subdivision have been shown in the census under three different town-groups. Jagachha town-group is constituted of Jagachha, Santragachhi and Unsani. The Sankrail town-group comprises Sankrail, Sarenga, Manikpur Jhorhat, Andul and Banupur. Domjur town-group covers the towns of Domjur, Kolara, Nibra and Mahiari. The Uluberia subdivision has seven non-municipal towns of which Bauria and Uluberia were declared as urban areas in the 1951 census and the other five have gained the urban status only in this census of 1961. Excepting Amta, the other six towns have been shown under Uluberia town-group. The constituent towns are Bauria, Burikhali, Fort Gloster, Chengail, Uluberia and Banitabala.

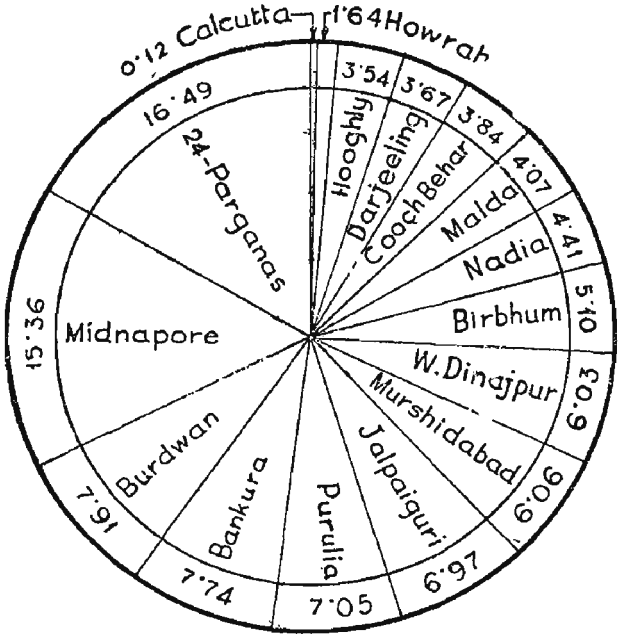

In the district the total number of *mauzas* borne in the Jurisdiction Lists is 831 of which eleven are uninhabited. The total number of inhabited *mauzas* is 787 and a number of 33 *mauzas* are included fully in the urban areas of the district. The statement below indicates the changes in the number of inhabited villages during 1901-61.

Year	No. of Inhabited Villages
1901	1,451
1911	967
1921	861
1931	1,111
1941	828
1951	815
1961	787

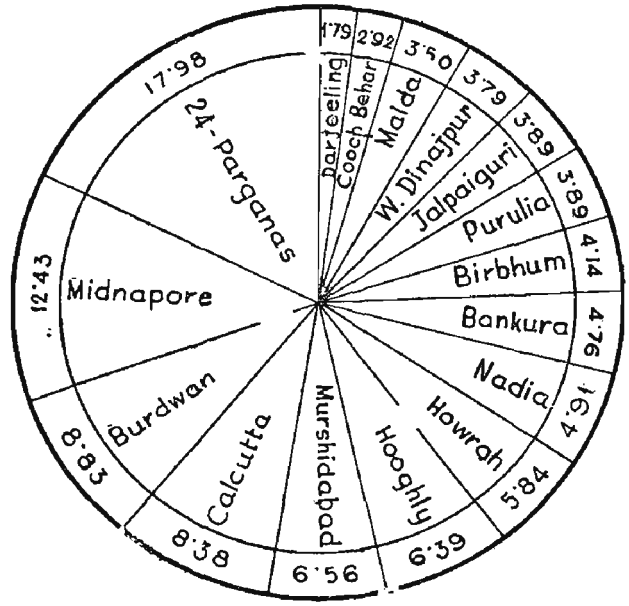

The variation over sixty areas are largely due to changes in number of *mauzas* by settlement operations, changes in the jurisdiction of the district, changes in number of uninhabited *mauzas* and absorption of rural *mauzas* by towns.

WEST BENGAL

PERCENTAGE OF AREA

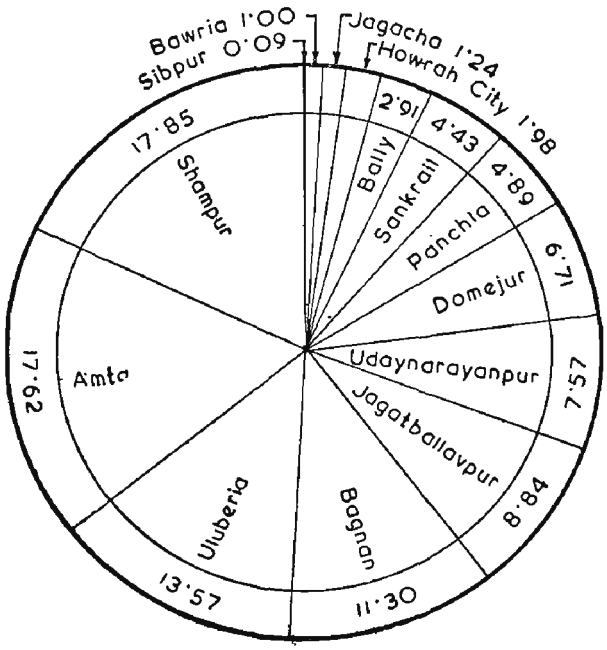

PERCENTAGE OF POPULATION

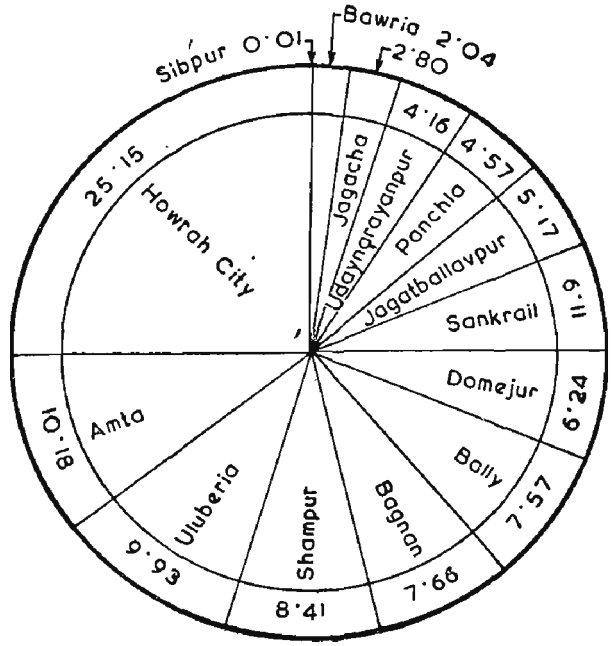

HOWRAH

PERCENTAGE OF AREA

PERCENTAGE OF POPULATION

Apparently a considerable discrepancy is observed between the area figures of the district as reported in different censuses since 1901. The statement given below will show the area figures in square miles as reported in different censuses.

Year	Area in Sq. Miles
1901	510
1911	510
1921	530
1931	522
1941	561
1951	(a) 568.2
	(b) 560.1
1961	(a) 575
	(c) 560.1

There has not yet been any major transfer of territory to justify the wide fluctuation and the difference must be put down to differences in measuring the area of the district at the Survey Office. The last cadastral survey of the district was held between 1934-39.

It is interesting to recall here the numerous changes that the district had undergone in its jurisdiction since the establishemnt of British rule in the country.

The Battle of Plassey led to momentous changes in the administration of Bengal. Since the day of taking over by the East India Company various changes in the general administration of the country were introduced, abandoned or adopted in the modified form. These changes very often involved changes in the jurisdiction of different districts of Bengal.

In September 1760 the interior of the district, a part of *Chakla* Burdwan was ceded. Riperian area was acquired by the Dewani grant by August, 1765.

In 1787, the Government wishing to reduce the charges of the district administration, amalgamated part of Hooghly with Jessore and part with Nadia; and apparently the strip of land known as Muhammad Aminpur was transferred to Nadia. In this period Howrah had no separate entity from Hooghly. After the Permanent Settlement, in 1795, Hooghly, with the greater part of Howrah, was detached from Burdwan and created a separate magisterial charge; but no change was made in the Collectorate. At that time thanas Bagnan and Amta were placed in the Hooghly jurisdiction but Howrah city formed a part of Calcutta, its criminal cases being tried by the Magistrate and Judge of 24-Parganas, who used to come over once a week. In 1814 thana Rajapur (now Domejur), and in 1819 thanas Kotra (now Shampur) and Uluberia were transferred from the 24-Parganas to Hooghly. On the 1st May 1822 the Hooghly and Howrah Collectorate was entirely separated from Burdwan. In the meantime, the city of Howrah had been growing steadily, and its increasing importance led to another change, the magisterial jurisdiction of Howrah being separated from that of Hooghly in 1843, when William Taylor was appointed Magistrate of Howrah with jurisdiction over Howrah, Salkia, Amta, Rajapur, Uluberia, Kotra and Bagnan. For twenty years the Magistrate remained subordinate to the Judge of the 24-Parganas, but in 1864 the district was transferred to the jurisdiction of the Judge of Hooghly. Minor changes in the boundaries of the district took place thereafter. In 1894 Singti outpost was transferred to this district from Hooghly by a notification dated 18th September, 1894. Up to the time when the Gazetteer of the district was written by L.S.S.O' Malley in 1909, the administration of revenue and civil justice was included in the jurisdiction of Hooghly although as early as February 1843 the magisterial charge of Howrah had become distinct from that of Hooghly. The district was finally separated in all respects from Hooghly on the 1st January 1938.

The District and Sessions Judge of Howrah used to be designated as an Additional District and Sessions Judge of Hooghly at Howrah up to 1937, but the separation was completed by Notification No. 9150-J. of the 8th December 1937, published in the *Official Gazette* of the 16th December 1937. The Revenue Departments of the Collectorate were fully organised in 1920, when the Collector of Howrah became independent of the Collector of Hooghly.

Between 1951-61 some minor adjustments were done in fixing up the jurisdiction of certain police stations. Notification No. 2702 Pl, dated the 17th June 1959 created a new police station styled as Udaynarayanpur police station with J. L. Nos. 1 to 62, 166 to 176, 178 and 179 of Amta police station. (By Notification Nos. 4021 Pl, 4022 Pl, dated the 13th September 1958 a new police station styled as Lilua police station was created by adjusting the boundary of the existing Bally police station. Since these notifications were not given effect to till the Census, they were not taken into account.)

(a) According to the Surveyor General of India.

(b) According to the D. L. R. & S., West Bengal.

(c) According to the computation made in the Census Office from the last published Jurisdiction Lists.

Before 4th March, 1963 the district was within the jurisdiction of Burdwan division. Since that day the district has been placed under the charge of Presidency division. The revenue, police and judicial jurisdiction of the district are conterminous with its geographical boundaries. The District Magistrate and Collector is in overall charge of the district administration. He is aided by an Additional District Magistrate who is in immediate charge of revenue administration of the district. There are two Subdivisional Officers, one at each of subdivisional headquarters. The sanctioned strength of Executive Officers at different stations are seven Officers each of the West Bengal Civil Service and of the Junior Civil Service at Sadar subdivision and one of the West Bengal Civil Service and four of the Junior Civil Service at Uluberia subdivision. But in August 1965 there were eleven officers of each cadre at Sadar and two Deputy Magistrates and three Sub-Deputy Magistrates at Uluberia.

There is a District and Sessions Judge at Howrah. There are also two Additional District Judges. The Superintendent of Police is in charge of police administration of the district. He is aided by one Additional Superintendent of Police, one Assistant Superintendent of Police and four Deputy Superintendents of Police. There is one Subdivisional Police Officer at Uluberia.

There are 14 development blocks covering the 11 police stations of the district. They all work under the supervision of the Special Officer, Planning and Development, who is a member of West Bengal Civil Service. The Special Officer works under the control of the District Magistrate. The Special Officer, Planning and Development, is also the District Panchyat Officer and an Officer of the West Bengal Civil Service works as the Executive Officer of the Zilla Parisad. The District Magistrate is in immediate charge of excise administration of the district. He is assisted by one Superintendent of Excise who belongs to West Bengal Excise Service. The Superintendent of Excise is himself assisted by a few Range Inspectors of Excise and several other Sub-Inspectors in charge of different units.

PHYSICAL ASPECTS

1. Location and Boundaries

The district of Howrah lies between the latitude 22°12′ and 22°48′ in the northern hemisphere. The eastern most extremity of the district is bounded by 88°23′ east longitude and its western most extremity by 87°50′. The chief town of the district is Howrah which is situated on the right bank of Hooghly and opposite the city of Calcutta, in 22°35′ north latitude and 88°21′ east longitude.

The district is a triangular tract of country, the apex being situated at the southern end. The base of the triangle lies along the northern boundaries and the two great rivers the Hooghly and the Rupnarayan form its eastern or rather south-eastern and western or rather south-western arms respectively. The boundaries of the district are partly natural and partly artificial. The northern boundary is an artificial line separating it from the district of Hooghly while the Hooghly on the east and the Rupnarayan on the west separate it from the districts of 24-Parganas and Midnapore respectively. The total length of the northern base line of the triangle would be roughly about 32 miles, that of its eastern arm about 36 miles and that of its western arm about 28 miles with an extension of about 12 miles at the extreme north-west corner. The district is bounded in the north by the Arambag and Serampore subdivisions of the Hooghly district; on the east by Barrackpore, Alipore and Diamond Harbour subdivisions of the 24-Parganas; Calcutta; on the south by the Tamluk subdivision of Midnapore; and on the west partly by Tamluk and Ghatal subdivisions of Midnapore and partly by the Arambagh subdivision of the Hooghly district.

2. General Configuration

Hemmed in between the Hooghly on the east and the Rupnarayan on the west, and intersected by the Damodar, the Howrah district consists of a flat alluvial plain, with a gradual flow of drainage being consequently to the south and south-east. The product of these rivers and their branches comprises two main divisions, *viz.*, the raised river banks and the large marshes of lowlands that separate them. In this way three distinct tracts are formed, each with a depression in the centre bounded by the high banks of the rivers, *viz.*, an eastern tracts stretching away from the Hooghly and its branch the Saraswati, a central tract traversed by the Damodar and its branch the Kana Damodar or Kausiki, and a western tract consisting of the country between the Damodar and the Rupnarayan. The upper courses of the Damodar and the Rupnarayan are somewhat higher than the Hooghly; and in the intervening country are numerous watercourses or creeks, called *khals*, which run dry or are very shallow in the hot weather and the beds of a great many of which are now cultivated in summer and put under *boro* paddy.

In the interior, the country is broken up into extensive swamps (*jhils*), or depressions, which form a vast sheet of water in the rains. There is little high land except on the banks of the rivers, whose windings the villages follow. These villages have a quiet beauty of their own, being surrounded by a dark belt of mangoes, feathery palms and clustering bamboos, while rich rice fields stretch to the verge of the reed-bordered marshes. Between Makardah and Bargachia (Bargechhe), however, the country is so low that for miles not a single house or tree is visible, the monotonous flatness of this fen being broken only by the banks of the Rajapur channel. South of the South Eastern Railway line from Kolaghat to Uluberia, the scenery changes. The rivers become broader, the currents stronger, and the land more fluvial in nature. The villages are situated at greater distances, while the country has to be protected from inundation by long embankments. Roads are few in number, and boats, or the paths along the embankments, are the chief means of communication. In the rains the floods often burst through the embankments or pour in through the creeks, spreading far and wide over the country. This tract then resembles an inland sea, from which the scattered villages stand out like islands; while the rivers sweep on with increasing velocity, cutting away their banks and carrying an enormous volume of silt to the sea.

3. The River System

The chief rivers are (1) the Hooghly and its branch, the Saraswati; (2) the Damodar with two branches, the Kana Damodar, or Kausiki, and the Old Damodar; and (3) the Rupnarayan. The district is also intersected by numerous tributaries or effluents of the main rivers, which are generally called *khals* or creeks. In the case of the Hooghly, these are the Bally (Bali), Rajganj, Sankrail, Sijberia and Champa *Khals*, which are mostly tidal offshoots navigable by boats of 4 to 5 tons burden for short distances inland. The Sankrail and Sijberia

Khals are the lower reaches of the Saraswati and Kana Damodar, respectively. Into the Damodar fall a dozen channels and into the Rupnarayan about half that number, the more important being the Madaria, Banspati and Gaighata (or Giaghata) *Khals* among the former, and the Bakshi *Khal* among the latter. The Bakshi and Gaighata *Khals* join one another froming a tortuous passage between the two rivers, which is much used by country boats. The following is an account of the principal rivers of the district:

Hooghly—The Hooghly is the main westerly channel by which the waters of the Ganges enter the Bay of Bengal.

The river first touches the district at Bally, and, after flowing past Ghusuri and between the cities of Calcutta and Howrah, turns due west at Shalimar Point for a short distance along Garden Reach as far as Hangman Point. It then pursues a south-easterly course as far as Uluberia, after which it describes another wide arc and then bows almost due south, receiving the Damodar opposite Falta Point and the Rupnarayan opposite Hooghly Point. These great tributaries deflect the stream to the east for no less than 8 miles and have set up in it, just above the mouth of the Rupnarayan, the dreaded moving shoals known as the James and Mary Sands.

Saraswati—The Saraswati, known locally as the Sarsati or Sarsuti, branches out from the Hooghly at Tribeni a few miles above Hooghly town, and enters the Howrah district near Baluhati (Baluti) as a small shallow stream. It then meanders on to the south in a tortuous course, and, keeping the Rajapur *Jhil* on the west, flows past Domjur and Andul, falling into the Hooghly just above sankrail. It is navigable up to Andul, but only by boats of small burden. Its high banks, and the remains of large boats occasionally dug out from its bed, show that once it must have been a broader and deeper stream. This inference is confirmed by the numerous large pools, called *dahas*, found in its bed, from which many river-side villages take their name, *e.g.*, Makardah, Jhapardah, Bhandardah, etc. The silting up of the river began some centuries ago.

Damodar—The Damodar is the only large river passing through the district. After forming the north-western boundary for seven miles, it enters the district near the village of Akna at Dihi Bhursut and then flows south to Amta, where it receives the Madaria *Khal* on its left bank, further south, about 3 miles below it receives the Gaighata creek on its right bank. Leaving Amta, it follows a winding southerly course to Bagnan, being crossed at Prasadpur-Kulitapara by the Uluberia Canal and then flows to the south-east falling into the Hooghly opposite Falta Point. Its total length within or touching the district is 45 miles. The Damodar is influenced by the tide as far as Raspur two miles north of Amta. At Amta the spring tide rises 2 to 2½ feet in summer; ten miles lower down at Mahishrekha the rise is 5 feet at neap and 8 feet at spring tides. During the summer, *i.e.*, from March to May bores are felt as far up as Amta, especially when strong southerly breezes are blowing. The height of the bore-wave varies according to weather and tides, but does not usually exceed 4 feet. The river has in summer 6 to 8 feet of water at Mahishrekha and is not usually fordable below the junction of the Gaighata *Khal*. Above this point the river narrows rapidly, and at Amta shrinks in the hot weather to a width of only 10 to 12 feet and a depth of a foot or so. Cargo boats do not ply as far up as Amta after October, except during spring tides.

No important change in the course of the Damodar has taken place for many years past, but, on acocunt of a large breach at Begua in the Burdwan district, the volume of water passing down it has been much diminished, a large quantity being diverted from its present channel. No islands have been formed in the channel, except near Bansberia but several large *chars* have sprung up along the banks, all more or less covered with grass, while a few are under cultivation. The banks are well-defined and vary from 6 to 15 feet in height. The river has beeen embanked on both sides, but the embankments on the upper part of the western side have not been maintained. It has been found that inundations on that side cause less damage, while the existence of embankments on both sides, by walling in the river and raising its bed, tends to cause heavy loss when breaches occur. The eastern embankment is now kept up by Government throughout, and also that portion of the western which extends from the junction of the Gaighata *Khal* up to the Hooghly river. The flooded tracts produce excellent cold weather crops, especially pulses and tobacco. The Damodar is crossed at Mahishrekha by the Orissa Trunk Road, a little lower down near Bagnan by the South-Eastern Railway, and about half a mile further down-stream by the High Level Canal.

Kana Damodar—Of the several branches of the Damodar, two only call for special mention, *viz.*, the Kana Damodar or Kausiki and a branch on the west also called the Damodar. The Kana Damodar enters this district on the east of Ichhanagari village (Jurisdiction List No. 1, police station Jagatballavpur), and flows

south, winding its way to the west of the Rajapur *Jhil*. Finally, turning south-east, it falls into the Hooghly a mile north of Uluberia town, after a course of nearly 20 miles in the district. A small stream now, it must have been more important in old days, as several large villages lie along its course.

The western branch issues from the main channel of the Damodar in the extreme north of the district, and after a winding course of some 14 miles rejoins the Damodar 3 miles north-west of Amta.

Rupnarayan—The Rupnarayan first touches this district on the south-west near Uttar Bhatora village where it is joined by the Mundeswari Nadi and Pansuli *Khal*. It then flows south-east, receiving an accession of water from the Bakshi *Khal*, and follows a generally south-easterly course to Tamluk. Here it bends to the east and finally falls into the Hooghly opposite Hooghly Point. The river nowhere intersects the district, but has a tortuous course along the boundary for some 35 miles. The stream widens considerably towards the mouth, and has at places a breadth of nearly 3 miles. The Rupnarayan is influenced by the tide throughout this portion of its course, and a heavy bore ascends it in the hot weather as far as the mouth of the Bakshi *Khal*. It is nowhere fordable and is navigable by boats and small steamers all through the year. Several islands are found in the river channel, while accretions in the shape of grass-covered *Chars* are not infrequent, especially on the right side. From the confluence of the Bakshi *Khal* down to its mouth, the river is embanked along the left bank. The embankment, however, is what is known as a retired line; and in April and May the lands between it and the bed are inundated by spring tides and rendered unfit for cultivation by saline impregnations, except where minor embankments have been thrown up round the fields to keep out the brackish water. The river is crossed by the South-Eastern Railway line at Kolaghat (in the Midnapore district), and within a short distance of that place by the Orissa Trunk Road and the High Level Canal. The river has been bridged at Kolaghat establishing a direct road connection between Calcutta and the South-Western part of the country.

Gaighata Bakshi Khal—The Gaighata (or Giaghata) Bakshi *Khal* is an improved natural waterway, 7½ miles in length, forming a connecting link between the Damodar and Rupnarayan rivers. The channel was taken over by the Public Works Department from the District Board of Howrah in 1894.

Changes in the river courses—Within historic times great changes have taken place in the courses of the principal rivers. The changes have been greatest in the case of the Damodar. Formerly it discharged its waters into the Hooghly near Nayasarai, 3 miles above Tribeni and about 39 miles north of Howrah. This channel appears gradually to have silted up, and in Rennell's map (1779-81) it is shown as the "Old Dummodah", from which it may be inferred that the volume of the main stream had been diverted from it. This diversion appears to have been the chief cause of the silting up of the Saraswati at its head and of the decay of the port of Satgaon. The channel must, therefore, have deteriorated by the middle of the 16th century, for in the *Ain-i-Akbari* Hooghly is mentioned as a port superior to Satgaon, though it does not appear in early maps, such as those of Gastaldi (1561) and De Barros (1553-1613), which show only Satgaon.

The main volume of the Damodar water appears next to have flowed south along the channel now called the Kana Damodar. De Barros, followed by Blaev (1650), shows the Damodar as debouching by two mouths above Pistola, which has been identified with the modern village of Pichhaldaha close to Fort Mornington Point. One of these mouths is the present mouth of the Damodar opposite Falta Point, and the other is the Sijberia *Khal* above Uluberia, by which the Kana Damodar falls into the Hooghly. In the maps and accounts of the 17th century and the beginning of the 18th century the latter river was called the Jan Perdo, "a river for great ships" according to the chart of 1701. In Bowrey's map of the river Hooghly (1687) it is shown with small islands at its mouth, and these are also mentioned in 1676 by Streynsham Master. In Rennell's map, however, it is shown as a small stream, serving only to carry off local drainage. But it seems clear that it formed the main southerly channel of the Damodar up to the beginning of the 18th century, and its size and importance are still attested by the long marshes on either side, as well as by the populous villages crowded along its banks.

The present channel of the Damodar can be traced to the second half of the 16th century in De Barros' map, while in Bowrey's chart it appears as the Raspas, and in the pilot chart of 1703 as the Mondelghat, after the Mandalghat *pargana* through which it flows. Gradually, as the eastern branches silted up at their mouths, it became the main channel. The Madaria *Khal* between the present channel and the Kana Damodar is another old branch of the Damodar. This channel is shown in Rennell's Atlas of 1779 as branching off above Rajbal-

hat and rejoining the Damodar near Bagnan, whereas it now falls into the parent stream above Amta. Traces of the old course still survive in the Banspati *Khal* and a number of pools (*dahas*), each about half a mile long and a quarter of a mile broad, at Dudkhali, Chota Maira, Bara Maira, Jagannathpur, Mansmari, Dhapa and Milki. It is said to have been navigable by ships, and it is reported that on its bank, at the village of Gobardhanpur 1½ miles from Bagnan, there was formerly a place called Jahajghata, *i.e.*, the anchorage for ships. There was formerly also a branch to the west from Rajbalhat to Amta, but this also has silted up.

The changes in the lower portion of the Rupnarayan are also considerable. This river was known to Europeans up to the 18th century by a number of different names. It was called Ganga in the maps of Gastaldi and De Barros, Guenga in Blaev's map, Tamalee in Bowrey's chart, Tomberlie in the pilot chart of 1703, Patraghatta by Valentijn (1670), and finally the Rupnarayan by Rennell, who referred to it as "falsely called the Old Ganges". Similarly, in the older accounts, such as the *Da Asia* of De Barros, it went under the name Ganga, and in the later accounts of the 17th century it was designated Tumbolee (Hedges), Tumberleen (Master), and Tombolee (Bowrey). From Valentijn's map it appears that a large branch of the Damodar fell south into the Rupnarayan above Mandalghat and Tamluk, while another branch running east fell into the Hooghly near Kalna. The main channel of the Damodar is still connected with the Rupnarayan by the Kana Dwarakeswar, and it is not unlikely that a large stream joined the Rupnarayan somewhere near Ghatal. By these two branches boats could have come from the Bhagirathi to the Rupnarayan without difficulty, and this probably led to the idea of its being a branch of the Ganges. The next prominent fact is that the Rupnarayan is shown in older maps (Gastaldi, De Barros and Blaev) as discharging itself by two channels enclosing a large island at its mouth. The westerly channel disappears in Valentijn's map, Bowrey's chart and the pilot map of 1703 A. D.; and it appears, therefore, that it must have silted up and that the island became more or less joined to the mainland in Midnapur. The combined result of its discharging all its silt-laden water through the eastern channel alone and the close proximity of the main stream of the Damodar was the formation of the James and Mary Sands in the Hooghly.

It remains to note the deterioration of the Saraswati, which seems to have been due to the diversion of the Damodar water from the upper reaches of the Hooghly. By Rennell's time (1779-81) it had so far silted up, that it was quite a small stream; and now it is merely a shallow narrow creek, except for a few miles above its outfall. It is shown as a large river in old maps as late as Valentijn's (based on information gathered in 1660-70) and was formerly used by country boats and small sloops for inland traffic, but there appear to be no good grounds for the common belief that it was once the main channel of the Hooghly or Ganges.

4. Geology

The district of Howrah is composed of alluvium and presents no features of special geological interest. The surface soil in the western parts of the district, served by the Rupnarayan and Damodar, is a sandy loam, while nearer to the Hooghly hard clayey loam predominates. The thickness of the alluvium is very great; it has been encountered by long in the deep borings at Santragachhi (714 feet deep), Sibpur Botanic Gardens (690 feet deep) and elsewhere. In 1835-40 a boring was made which reached a depth of 481 feet without signs either of a rocky bottom or marine beds. At a depth of 30 feet below the surface, *i.e.*, about 10 feet below sea level beds of peat with wood were found, which indicated the existence of ancient land surface. The wood in the upper peat beds was examined and found to be of two kinds, one of which was recognised as belonging to the *sundri* tree (*Heritiera littoralis*) which grows in abundance on the muddy flats of the Ganges delta, while the other was probably the root of a climbing plant resembling *Briedelia*. At considerable depths, bones of terrestrial mammals and fluviatile reptiles were found, but the only fragments of shells noticed, at 380 feet, are said to have been of fresh-water species. At a depth of 175 feet to 185 feet, and of 300 to 325 feet, and again throughout the lower 85 feet of the bore-hole, pebbles were found in considerable quantities. The present configuration of the district is due to the action of its siltladen rivers. When the whole country is under water, moving rapidly through river-beds, and remaining stationary in the intervening marshes, the dead water of the marshes keep the river water in channels and help them raise their banks and beds with silt. This gradually gives rise to a criscross of river channels traversing the country in many directions, between banks which are higher than the intervening flats, and these flats form persistent marshes, known in the Ganges delta as *jhils* or *bils*, saucer-shaped depressions which drain the surrounding land.

5. Soils

The soil throughout the district of Howrah is alluvial and varies from sand in the river beds to sticky clay

in the interior along the silted-up streams, and mud in the swamps. Clayey and deep loamy soils prevail in the north, and lighter loams in the south, where the deposits are more recent. According to composition, the soil may be *bele* or sandy, *entel* or clayey, *penko* or muddy, *dhasa* or marshey, and so forth.

6. FLORA

Outside the Indian Botanic Garden at Sibpur, of which a description may be found in the 1951 District handbook, there is little of especial interest to a botanist. The vegetation is composed almost exclusively of the aquatic and marsh plants to be met with in the alluvial rice fields of Bengal, such as *Hydrilla, Utricularia, Caesulia*, or of those semi-spontaneous plants that form the village shrubberies of Central Bengal, such as *Glycosmis, Trema, Urena, Solanum, Datura, Leonotis* and the like. Waste places are generally covered by a weedy vegetation, and one of the striking features of the district is the extent to which the weeds which occur in these places are exotic so far as Bengal is concerned. Many of them, indeed, such as *Scoparia Ageratum, Evolvulus nummularius* and *Peperomia pellucida*, though now remarkably abundant, were originally natives of America.

7. FAUNA

The district being fringed with factories and under cultivation elsewhere, wild animals are scarce. The larger species are practically unrepresented, for there is no jungle which could furnish cover for big game. One or two leopards have, however, been reported in the district within recent years. Wild pigs abound in parts of the Uluberia subdivision, and a few are said to be found in the Jagatballavpur thana. Crocodiles are sometimes to be seen on the banks of the Hooghly and Damodar rivers during the winter months; and during the rains they frequently find their way into tanks and flooded lowlands near the river. In the cold weather snipe of two or three varieties are fairly numerous in the paddy fields within the Domejur, Sankrail and Jagatballavpur thanas in the Headquarters subdivision, and also in the Uluberia subdivision. The common, whistling and cotton teal are found in fair numbers in the flooded area between Maju and Amta, and sometimes two or three of the commoner varieties of duck.

8. FISH

The principal varieties of river fish netted in the Hooghly river are *hilsa, bhetki, tengra*, and, during the season, *tapsi* or mango-fish (*Polynemus paradiseus*). The Hooghly from Uluberia to Diamond Harbour is, in fact, noted for the delicious fish last named, which is described by Walter Hamilton (1820), "as the best and highest flavoured fish not only in Bengal, but in the whole world." It is caught with or without roe in large numbers from April to June; and Uluberia is a centre for its exports. Members of the carp family are found in almost every tank, and *rui, mrigel and katla* spawn are reared extensively. The impregnated eggs float in small lumps near the shallow edges of rivers and are collected in pieces of cloth by certain low caste people and also by fishermen. They are bought by the rearers and put in shallow ponds, where they hatch in a few days. In about a month's time, it becomes possible to distinguish the various kinds. The fry are then caught with fine nets, sorted and put in different tanks; some also are disposed of to hawkers, who carry them about for sale to stockers of tanks. Amta is a centre of this business.

9. CLIMATE

An oppressive summer season, profuse rains and high humidity all through the year are the main characteristics of the climate of the district Howrah. The year may be divided into four seasons, hot summer from March to May, south-west monsoon from June to September, retreating monsoon from October to first half of November and the cold season covering rest of the year.

The hot season begins with strong westerly winds from the middle of March and continues upto the middle of May. The weather is oppressively hot and thunder-storms commonly occur in the afternoon in association with heavy rains with hails, on some occasions with severe squalls coming usually from the north-west. The westerly winds during this hot season often become the cause of widespread village fires. The *Kalbaishakhi* or the norwesters are often violent and cause sharp drop in temperature.

In the month of May storms and depressions from the Bay of Bengal reaching the district cause widespread heavy rains accompanied by high winds. Sea storms frequent the district in May but towards its end the sea breeze often fails, making the days sultry and oppressive. This acts as the prelude to the burst of the south-west monsoon. Depressions during the monsoon affect the district appreciably and cause heavy downpour.

The rains commence in about the middle of June and continue upto September, the period from the middle of July to the middle of September being that of the greatest rainfall in the district. During the rains, wind generally blows from the south veering to the east at their close. Rainfall during the monsoon is often associated with thunder. The post monsoon season *i.e.*, from October to first half of November is fairly pleasant. Of course, in October a few thunder-storms occur. But Howrah does not lie in the usual tracts of storms and cyclones.

The cold season lasts till the end of February. In December and January, the cold after sun down is so bitter as it makes a fire quite agreeable. Occasional fog occurs in the cold seasons.

Humidity is very high in July and August but the weather becomes most trying in September, the period being vulgarly known as '*Pacha Bhadra*' *i.e.*, the sodden month of *Bhadra*.

The climate is better in the south than in the water logged tracts in the north. Shampur thana is said to be the healthiest area in the district. The tract lying between the thickly populated banks of the silted up Saraswati and Kana Damodar are extremely unhealthy. The sanitary conditions in the urban and industrial belt are extremely deplorable because of their being excessively dirty and unclean.

Records of rainfall in the district have been given in the Statistical Tables in part IIB of this volume. The period from November to April being dry and fine, the normal rainfall during this period is around 1". August is the month of heaviest rainfall. The average annual rainfall in the district is 1520·1 mm. or 59.84". The annual rainfall in the district varies from place to place.

In a normal year days begin to be hot from the beginning of March. The day temperature reaches a maximum in April-May. The mean maximum temperature during these months remains at about 36°C (96.8°F) and the mean daily minimum at about 24°C (75.2°F). The maximum temperature sometimes rises upto 46° or 47°C (111.8° or 116.6°F) in this part of the country.

The night temperature continues to rise even in the monsoon season. In fact, as the mosnoon sets in *i.e.*, with the onset of south-west monsoon, days become cooler but nights continue to be hot. The weather is very oppressive in summer due to the high moisture content in the air. Even sometimes in between two rains instead of feeling a soothing effect people of Howrah experience the same oppressive weather because of high humidity and rising night temperature. Both days and nights begin to be cool as the south-west monsoon withdraws in the first week of October when the temperature drops down steadily. During the cold season the night temperature drops more rapidly than the day temperature. In January *i.e.*, in the coldest days the mean daily minimum temperature remains at about 12° to 13° C (53.6° to 55.4° F) and the mean daily maximum about 25°C (77.0° F). In association with passing western disturbances spells of cold weather are experienced in the winter season and the minimum temperature may go down to about 4°C (39.2° F).

The humidity of the atmosphere is high all through the year. It is lowest in March after which it increases steadily and reaches the highest point in August-September. In October there is a slight fall and at the beginning of February it begins to decrease further till the lowest grade of saturation is reached in March. In the summer season relative humidity is comparatively less especially in the afternoon when it may be of the order of 30 per cent only.

The sky over this part of the country is generally crisp and clear in winter and early summer. In May some specks of black cloud are observed here and there in the sky overhead. The sky is overcast with heavy clouds as the monsoon sets in. Cloudiness decreases as the monsoon withdraws from the district *i.e.*, in the month of October.

Wind blows gently over this district. It gains in momentum and moves with some force in summer and monsoon season. In May and south-west monsoon season wind blows mostly from directions between south-east and south-west. Rainy season bidding goodbye to the district in the month of October wind blows lightly, though its variability still exists. In winter wind blows mainly from northerly or north-westerly directions. In March-April they are mostly between the south and south-west.

HISTORY

by

ASHIM MUKHOPADHYAY

Research Fellow, Department of International Relations, Jadavpur University

The district of Howrah which is today an important industrial area and a centre of brisk, commercial activity should have a complete history of its own. Unfortunately no connected and comprehensive history of this district is readily available to us. It must also be admitted that it is very difficult to trace the history of the bygone days of Howrah. Things are changing fast and the clues for writing the past history of a particular area are disappearing quickly due to various factors. Still it is belived that there is a method of studying history, following which a better and more complete history of an area may be written and this is the method of studying history from the bottom up through the use of local materials and a local focus. To equip himself for the task of writing this history the author made field survey in different villages of Howrah and took interviews of persons who have historical inquisitiveness and experience of field survey. With this the library work was combined.

Who were the earliest inhabitants of this district and what was their mode of living? To answer this question we shall have to study its geography. A low and marshy land with dense forests and great water ways, Howrah, as it was in the past, was certainly inhabited by the people who with every passing day became more and more dependent on the rivers for both livelihood and means of communication. Although several centuries have elapsed and through various changes the present Howrah district has been shaped anew, still in the interior, where the common people have not yet lost their cultural affinity with the past, one would be able to trace ample evidences of the lost predominance of the fishing and boating tribes in different spheres of life. In the villages under the Amta Thana (subdivision Uluberia) these two tribes are still a significant element in the population and in the local fairs and festivals their influence can still be felt. Not only that, wherever I went through this district I found the belief in the existence of kings Shanibhangar and Finga (who are said to have descended from the fishing tribe) deeply embeded in the mind of the people. As there is nothing concrete to prove the existence of these two kings and their kingdoms it will be better to put them aside but the fact that the fishing and boating tribes form the predominant element in the population of the river side areas seems to indicate that the story of their one-time greatness is not all myth. Contributions of these two tribes in the domain of our culture can never be denied, because they are the people who in earlier days kept contact between Bengal and other parts of India and they were in fact our first cultural delegates abroad.

Two very ancient sites have been recently discovered in this district and the author believes that they deserve attention of the Archaeological departments of both the Central and State Governments. One of them is Bachri (Thana Shampur, subdivision Uluberia) and the other is Harinarayanpur (Thana Bagnan, subdivision Uluberia). Careful excavations at these two cities may reveal more about the earliest inhabitants of this district, (the fishing and the boating tribes), about their way of life in the palaeolithic and neolithic ages and in the subsequent periods. These two tribes mentioned above were definitely of non-Aryan origin for nothing has yet been found to prove the Aryan penetration in this region nor in any other part of the West Bengal before the 6th century A.D. In the Acharanga Sutta of the 4th century A.D., we find the present West Bengal to be mentioned for the first time and it was then known as Radha or Suhma. In the Acharanga Sutta, Suhma has been described as a wild tract infested with ferocious animals and the people who lived there were all ignoble savages. The Buddhist Mahavamsa too has depicted a similar picture of the Suhma. In the Sabhaparva of the Mahabharata we find reference to Bhima's conquest of the lower Bengal, there, the inhabitants of this region have been described as "Mlechchas".

No serious excavation has yet been conducted in the district of Howrah to reveal the pre-historic past. Two sites of Archaeological importance in this district, Bachri and Harinarayanpur have already been mentioned. These two places, I believe may yield hundreds of antiquities of the ancient age. So far as Bachri is concerned, many terra-cotta seals and figurines of the Pala and Sena period have been discovered here. Among the antiquities discovered so far at Bachri, the most important is a Vishnu Patta, its date would be about 12th century A.D. At Harinarayanpur, the most important discovery is a neolith celt of triangular shape. Other antiquities discovered here consist of terra-cotta seals,

figurines, bangles and grey pottery wares of the pre-Pala period. At Jagatvallavpur, a village under the Sadar subdivision a few terra-cotta figurines and pottery wares have been discovered. Serious excavations may unveil the forgotten past more successfully and after carrying on such excavations we may have a better picture of the non-Aryan civilization that flourished in this region.

Towards the beginning of the 7th Century A.D. a major portion of the district came under the subjugation of the neighbouring Tamralipta kingdom. From the account of the Chinese traveller Hiuen Tsang, who visited the lower Bengal in the first half of the 7th century A.D. we come to learn that a vast tract of land on the opposite bank of Rupnarayan river was within Tamralipti's sphere of influence. But the existence of Tamralipti at that time as an independent kingdom is rather doubtful, for the *Epigraphia Indica* believes that even in the thirties of the 7th century A. D. the vast territory extending from Burdwan in the north to Puri and Ganjam in the south was under the direct administration of Sasanka, the great king of Bengal. The *Epigraphia Indica* says that a copper plate of Sasanka has been discovered at Ganjam and it indicates the boundaries of his kingdom. Now, if we accept these reports of the *Epigraphia Indica* as true, the existence of an independent kingdom at Tamralipti passes in obscurity. Therefore, it may be concluded that in the first half of the 7th century A.D. the modern Howrah district was either connected with the Tamralipti kingdom or both of them were under the control of king Sasanka.

Round about the 8th century A.D. the southern portion of Suhma or Radha was somehow separated from the north and there the kingdom of Bhurisrestha gradually came into prominence. In the "Nyaya Kandali" of Sridharacharya, the famous philosopher of ancient India who was born at Bhurisrestha in the 10th century A.D. we find reference to king Pandudasa, who ruled over Bhurisrestha and its neighbouring territories. Unfortunately, the earlier history of the kingdom is still unknown and what we have learnt about it is not up to satisfaction.

In the 11th century A.D. waves of invasions from outside swept over Bhurisrestha. The Chola king Rajendrachola Deva occupied a major portion of modern Midnapore and Howrah. Towards the beginning of the 12th century A.D. Chodaganga Deva, the first Ganga king of Orissa invaded the lower Bengal and marched up to Aparmandar kingdom which corresponds to the present Mandaran now under the Arambagh subdivision of the Hooghly district. Therefore, it would not be wrong to conclude that on his way to Aparmandar the king of Orissa invaded and occupied a major portion of the present Uluberia subdivision. The next Oriya king who invaded Bengal was Anangabhima Deva. During his reign the northern boundary of the Ganga kingdom was extended up to the northernmost limit of the Uluberia subdivision. These invasions from Orissa did not cease but continued long after the advent of the Muslims in Bengal. In the first-half of the 16th century A.D. king Makunda Deva Harichandana invaded Bengal, ravaged the south-eastern portion of Howrah and conquered territories up to Tribeni (district Hooghly). However, his hold over the country was soon lost, for in 1568 Sulaiman Kararani, the Sultan of Bengal drove him out and finally conquered the whole country as far as the Chilka lake.

The picture of the socio-economic condition of this district before the Muslim penetration in Bengal is not very clear. The oldest maritime trading centre of this district was Betor, now a part of the city of Howrah south of Sibpur. In the Govindpur inscription of Laksmana Sena, Betor has been described as Vetadda Chaturaka which again seems to be identical with the ancient port of Vettachara or Vettadhara. In the ancient age, Betor was a rendezvous of foreign traders. Fragments of pottery wares of foreign origin have been found here. Another flourishing place was Bhurisrestha, now identified with the little village of Dihi Bhursut on the Kana Damodar. It was a great centre of Sanskrit learning and habitation of wealthy merchants. The Kana Damodar was navigable at that time and formed a broad highway of commerce. From the Probodha Chandradoya of Krishna Misra, the court poet of the Chandella king —Kirtivarma we have an idea of the prosperity of Bhurisrestha:

গৌড়ং রাষ্টমনুত্তমং নিরুপমা তত্রাপি রাঢ়াপুরী ।
ভুরি শ্রেষ্ঠিক নাম ধাম পরমং তত্রোত্তমো নঃ পিতা ।।
তৎ পুত্রাশ্চ মহাকুলা ন বিদিতাঃ কস্যাত্র তেষামপি ।
প্রজ্ঞাশীল বিবেক ধৈর্য বিনয়াচারৈরহং চোত্তমঃ ।।

According to Sridharacharya, the author of "Nyaya Kandali", southern Radha, especially Bhurisrestha was a stronghold of Hinduism in Bengal before the coming of the Muslims.

It is most probable that the Muslims in Bengal first established themselves at Tribeni and then pressing inland from the river occupied territories which are now included within the present districts of Burdwan and

Hooghly. Whether at that time the territories that now comprise the present Howrah district came under their control, is not known for certain. Bhurisrestha or Bhursut which is not very far way from Tribeni and Saptagram, two of the earliest settlements of the Muslims in Bengal was still ruled by the Hindu kings. It was during the reign of Sultan Ala-ud-din Husain Shah that the district directly felt the weight of the Muslim administration. From the Chaitanya Charitamrita of Krishnadas Kaviraj we know that a considerable area in the lower Bengal, including the district of Howrah was under the Sultan's control. Krishnadas writes:—

"মদ্যপ যবন রাজার আগে অধিকার।
তার ভয়ে পথে কেহ নারে চলিবার ।।
পিছলদা পর্যন্ত সব তার অধিকার।
তার ভয়ে নদী কেহ হৈতে নারে পার ।।
দিনকথো রহ, সন্ধি করি তার সনে।
তবে সুখে নৌকাতে করাইব গমনে ।।"

Thus we find that the territories extending upto Pichhalda came under the control of Husain Shah. Pichhalda has been identified with Pichhaldaha, two miles north-northwest of Fort Mornington point in the extreme south of the Uluberia subdivision.

On the defeat and death of Daud Kararani, who rebelled against Emperor Akbar, Bengal formally became a part of the Mughal empire. The revenue system of Todormal which was soon introduced in the newly conquered province necessitated many changes in the sphere of administration. One such change was the distribution of the district of Howrah between three sarkars, *Satgaon, Sulaimanabad and Mandaran.* The kingdom of Bhursut which was included in the Pargana of Sulaimanabad, lost its independence and became a tributary state of the Mughal empire. The most important ruler of Bhurisrestha during the Mughal period was Pratapnarayan. Attracted by his cultured court many scholars and artists took shelter in Bhurisrestha. After his death, his vast zamindari began to disintegrate and in the beginning of the 18th century A.D. it was occupied by Kirtichandra, the zamindar of Burdwan. No other important zamindari that could excell Bhurisrestha in prosperity emerged in the district during this period. The petty landholders who were scattered over different parts of the district were weak and did not dare to shake their allegiance to the local *faujdar.* But it was the Portuguese, who first started troubles in this region. From the beginning of the 16th century A.D. these Portuguese began to build their factories in the river side areas of Bengal. And by the middle of that century they were well established with more factories at Dacca, Tamluk, Hijli and other settelments in Bakergunj, Jessore and Noakhali districts. The Portuguese considered the Bengal trade as their monopoly and thus threatened the interest of the other European nations, the Dutch, the British and the French. Skirmishes ensued which later developed into serious armed-clash and ultimately the Portuguese yielded to their rivals. Repercussion of this rivalry between the European traders was soon felt in the life of the common people. Seeing the door of commerce closed, many Portuguese turned pirates. These Portuguese pirates together with their Arakanese counter-parts became a nightmare to the people of Bengal. From the accounts of shihab-ud-din Talish and Bernier we have an idea of their atrocities committed over the people in general. They infested the channels and arms of the Ganges and the other navigable rivers of lower Bengal and often penetrated even so far as forty or fifty leagues up into the country, carried off Hindus and Muslims, threw them in the docks of the ships and sold them to the Dutch, British and French merchants at the ports of Orissa and Deccan. The villages on both banks of the river Hooghly up to Budge Budge were often attacked by the pirates.

It would however, be unwise to think that the piratical activities of the Portuguese precipitated the fall of Hooghly, for the Portuguese settlers of Hooghly did not themselves commit piracy in the Mughal territorial waters. But they shared the odium of their fellow countrymen who lived in Arakan, and together with the Arakanese made annual raids in the rivers of Bengal. The fear of the creation of an imperium in imperio obsessed Shahjahan and to get rid of the Portuguese he ordered Qasim Khan to take possession of Hooghly. The capture of Hooghly thus served one purpose but not the other, it gave peace to the Emperor but not to his subjects. Even after this incidents the pirates continued their raids. To save the people of the riverside villages from the hands of these pirates, the Government of Bengal built a fort apparently about 1666, on the site now occupied by the Botanical Garden. People called it Makea Kella. This fort is shown in Valentijn's and subsequent maps, in the diary of the Agent, Streynsham Master it was described as Fort Tanny. It was frequently mentioned in the European accounts of the 17th and 18th centuries and played an important part in the early struggles of the British. However, the fear of the pirates continued even after the erection of the "Makea Kella" and nobody dared to bathe or kindle a light any where south of this fort.

Nearly twenty years after the erection of the "Makea Kella" fresh trouble started between the Government of Bengal and the Europeans. It was a dispute over trade between the British and Shaista Khan; the Governor of Bengal and this dispute can be regarded as a landmark in the history of Howrah.

The trade of the East India Company had been brought to a standstill by the lawlessness and greed of the Mughal officials. William Hedges, the Agent of the Company himself saw Shaista Khan at Dacca but nothing resulted from this mission and the Mughal officials continued to stop the Company's boats and seize their goods. This enraged the British and they decided to make war on the empire and attempted to sack Hooghly. But they were overpowered by the Mughals and sailing down from Hooghly took shelter at Sutanati, the present site of Calcutta. As a large army was advancing against them, they decided to take shelter at Hijli further down the river, and on their way occcupied the "Makea Kella" or the "Fort Tanny". The war was concluded in August 1687. The British were allowed to settle on the present site of Uluberia with the privileges of erecting magazines and constructing a dock for shipping. Job Charnock recommended that the British should set up their headquarters at Uluberia. But the Bengali council rejected his recommendation and turned their eyes to Sutanuti, as we learn from a subsequent letter referring to:—"Our General Letter by the Beaufort, and Our Diaries of that year wherein we have laid down our reasons for the altering our opinion about Ulubarreah and pitching on Chuttanuttee as the best and fittest up the river on the Maine, as we have since experienced, and likewise been satisfied that Ulubarreah was misrepresented to us by those sent to survey it". Thus the chance of Uluberia becoming the heart of Bengal was nipped in the bud.

Peace of the district was again disturbed when Shova Singh, a zaminder of Cheto-Barda in the Ghatal-Chandrakona subdivision of the Midnapore district rebelled against the Mughal Government, sacked the town of Burdwan and killed its revenue collector Rajah Krishnaram. Although he failed to capture Hooghly, he ravaged the territories on the west Bank of the river Hooghly and built up a state of his own some 180 miles in length along the bank of the river and it is most probable that a considerable portion of the district of Howrah fell in his hands. However, Shova Singh was soon stabbed to death at Burdwan by the daughter of Rajah Krishna Ram.

On the accession of emperor Farrukhsiyar the Bengal Council petitioned for the renewal of their *farmans* and prayed for the lease of additional villages, 5 on the west side and 33 on the east side of the river Hooghly. The 5 villages on the west side of the river were in the district of Howrah. They were mentioned in the consultation Book of the Council as "Salica" (Salkia), "Harirah" (Howrah), "Cassundeah" (Kasundi), "Ramkrissnapur" and "Batter" (Betor). The council secured the lease of the villages on the east side of the river, but could not secure the villages on the opposite side because of the opposition of the Governor of Bengal.

During the next 12 years the rent-roll of Bengal was twice revised, as a result of which the whole of Uluberia and a large part of the Sadar subdivision were included in the zamindari of Burdwan. Furthermore a strip of land on the west bank of the river from Hooghly down to Howrah was separated and raised into a distinct zamindari called Muhammad Aminpur.

In 1741-42 A.D., the Marathas under Bhaskar Pandit swept over the western Bengal and the whole tract from Rajmahal to Midnapore and Jaleswar came into their possession. Those Maratha invaders entered the Howrah district on their way to Midnapore and ravaged villages which now comprise the Sadar subdivision and captured the "Makea Kella". Hundreds of villagers crossed the river and took shelter in the riverside villages of the 24-Parganas.

In 1756 serious conflict started between Siraj-uddaula, the Nawab of Bengal and the British. The Nawab started march towards Calcutta and arrived outside the city on the 16th June. The British attacked the "Makea Kella" as a retaliatory measure. The Nawab's troops were forced to evacuate the fort. An officer who saw the action wrote in his letter (1st February, 1757) about the capture of the "Makea Kella":—"We sailed from Tanna Forts, about two miles below Calcutta the 1st of January; but they abandoned them on our approach. The salisbury was left a guardship there"

The battle of Plassey made the British virtual masters of Bengal. They now started the game of king-making. Mirjafar whom they gave the throne was soon replaced by Mir Kasim. From Mir Kasim they received the assignment of the 3 districts of Burdwan, Midnapore and Chittagong. Howrah was included in Burdwan and thus became a British territory.

It has already been stated that during the reign of Akbar, the district was distributed between the sarkars

of Satgaon, Sulaimanabad and Mandaran. Of this, the portion that was included in the Sarkar of Sulaimanabad, was particularly rich and yielded a large amount of revenue.

Two most important centres of trade in the district during this period were Betor and Amta. Betor, as the author has already mentioned was an entrepot of Bengal in the ancient age, it gradually lost its importance and after the rise of Saptagram in the 9th or 10th century A.D. was reduced to one of its subsidiary markets.

Amta was the centre of the river-borne trade between Howrah and Midnapore and a part of it is still known as "Bandar" or port as a memorial of that time. Three notable industries of the district during this period were weaving, silk rearing and salt manufacturing. Weaving was the hereditary occupation of two Hindu castes, Tantis and Jugis, and of the Muslim Jolahs. Chief centres of cotton weaving were in thanas Domejur, Jagatballavpur, Amta and Bagnan. Silk rearing was carried on in large scale in Shampur, Uluberia, Bagnan, Amta and Jagatballavpur. The raw-silk produced in those areas used to be exported to the neighbouring districts of Hooghly and Midnapore. Salt manufacturing was another important industry of the district and flourished particularly in its southern part where the composition of the soil was suitable for it. The chief centre of salt manufacturing were in the villages of Bagnan. Three main factors were responsible for the decline of these industries (i) the annual raids of the pirates, (ii) the ravages and plunders of the Maratha invaders, (iii) the monopolistic invasion of the East India Company in the field of trade.

Such was the fear of the pirates in those days that the traders on the rivers were often unnerved to see any distant vessel and had but very little hope to reach their destination. Silk, salt and hand-made cotton fabrics were often seized by those pirates.

Influence of the Maratha invasions on the cotton and silk manufactures of Bengal was also highly disastrous. So far as the district of Howrah was concerned, its north eastern portion was repeatedly invaded by the Marathas. Many weavers and silk rearers crossed the river Hooghly during these invasions and settled permanently in the 24-Parganas, as a result of which manufacture of the silk in the district was greatly affected.

But it was the monopolistic invasion of the East India Company in the field of trade that actually crippled those industries. It is true that in the early phase of their trade the company had to face many difficulties. There was the competition of other European traders, like the French, the Portuguese, the Dutch, the Danes as well as the Asiatic traders. The Mughal officials at Hooghly often stopped the Company's boats and seized their goods. The local zamindars also disturbed the agents of the Company and exacted money from their merchants. The invasions of the Marathas also did much harm. But all these obstacles disappeared in course of time and after the battle of Plassey the Bengal trade came completely into the grip of the company. None of the important articles of trade escaped their notice Rice, Sugar, Silk, Salt, Cotton, Betelnut, everything became their monopoly. William Bolt in his "consideration on Indian affairs" says "The first was the private monopoly in partnership which commenced in the beginning of June 1765, between Lord Clive, Messieurs Summers, Sykes, and Verelst, each one quarter part for purchasing large quantities of salt that was in the hands of private merchants and in August 1765, the monopoly of inland trade in salt, betelnut and tobacco was established". Men, whom the company appointed agents started their own private trade. Mr. Bolt says that the ruinous practices of these agents hastened the destruction of the native manufacturers. The imposition of heavy duties on Indian cotton cloth in England and the large imports of Lancashire machine-made price-goods also—dealt a fatal blow to the weaving industry of Bengal.

The advent of the Muslims and their establishment of political control over the province introduced many changes in the structure of the Hindu society. So long the member of the Hindu society were divided into two starta, the upper and the lower. The upper stratum comprised men and women of noble origin, such as the Brahmins, Kayasthas, Vaidyas etc., and the lower stratum comprised those of humble origin. There was no genuine harmony or mutual co-operation between these two strata. The poor, untouchable and ignorant Hindus were very often dragged to humiliation by the upper caste and therefore cherished a speedy demolition of the entire social structure and erection of a new one in which they would be able to enjoy their rights and privileges equally with others. Therefore, when the Muslims started military expedition in Bengal and the Muslim preachers spread over the different parts of the province to convert the natives into Islam, a quick response came from many low-caste Hindus and without any hesitation they turned Muslim. There was also an economic factor to inspire the natives to embrace Islam. The oppressed

and ignorant Hindus thought that their conversion would surely put an end to their poverty and so gave up their religion. But in reality their condition did not improve. Thus in the Hindu society of this period we find the emergence of a new class, that of the native Muslims. The repercussion of this conversion of the natives was soon felt in the upper stratum of the society. The Brahmins being the guardians of Hindu society became so hysterical that they prohibited all kind of intermixtures between the Hindus and the Muslims and tried to turn the society into a water-tight compartment. The fear of the Brahmins increased as days rolled on and obsessed them completely after the advent of the Europeans and the Arkanese. Several rules and regulations were introduced regarding marriage, food and drink and other social habits. Most of these rules and regulations were meaningless and harmful. They did great injury to the community, poluted its atmosphere and gave birth to lawlessness and all sorts of crime. It is a tragedy that the womenfolk of the Hindu community who had nothing to do with all this mishaps had to fall a victim to them. Early marriage, polygamy, "Sati", "Antarjali Jatra" and other obnoxious practices became wide spread and kept the women in a moribund state. The Brahmins of this period were rather emotional and irrational. They could not realize that the Muslims now being the masters of the country and its economy being completely under their control, their culture would definitely penetrate into the Hindu society and it would not be possible on the part of the Hindus to check that penetration. However the Brahmins soon realized their mistake and yielded to the force of time. It is a paradox of history that the Brahmins who posed as the guardians of the society and hated the Muslims from the very bottom of their heart were ultimately forced to submit themselves to the newcomers. This submission of the Brahmins has been well reflected in the contemporary Bengali literature:- -

"ব্রাহ্মন রাখিবে দাড়ি পারশ্য পড়িবে।
মোজা পায়ে নাড়ি হাতে কামান ধরিবে ।"

In the field of education a great change took place during this period. So long *tols* and *chatuspathis* were the only educational institutions and there the medium of instruction was Sanskrit. But since the Muslim conquest of the country a change in the system of education set in. Muslim educational institutions like *Maktabs* and *Madrasas* were established and Persian became the official language of the day. Many of the notable Hindus who desired to qualify themselves for posts under the Muslim Government sought to acquire some knowledge of Persian.

In the field of religion also we find an amalgamation between Hinduism and Islam and it was well reflected at the bottom of the society, in the life of the masses where worship of Muslim preachers, like the *gazis* and *fakirs* was introduced. Men and women of both communities were their devotees.

Thus the social life of Bengal took a new shape during the Muslim rule and a complex culture was born. After the coming of the British and their seizure of political power from the Muslims new situations arose in which the social life of the country took a new turn.

THE PEOPLE

1. Population and its Growth

In the Census of 1961, 2,038,477 persons have been counted in the district of Howrah of which 1,127,392 are males and 911,085 females. Table A-I in Part II A of this volume gives the distribution of population for all the administrative divisions of the district for total, rural and urban areas separately.

Ten years back the district was inhabited by 1,611,373 number of people. During these last ten years, therefore, the population of the district have increased by 427,104 *i.e.* 26.51 per cent over its population of 1951. The highest rate of growth (35.62 per cent) was observed in the district during the decade 1931-1941. The rural population of the district have increased only by 11.42 per cent during the last decade while the urban population have gone up by 57.97 per cent.

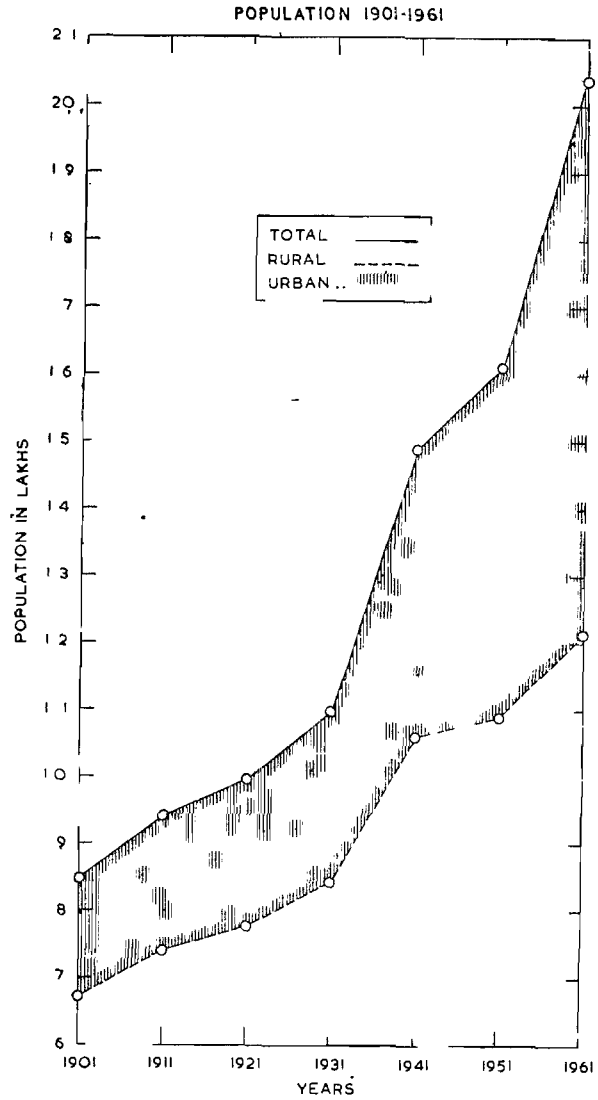

In the State of West Bengal as a whole the population have increased by 32.80 per cent during the decade of 1951-61. The rural population have gone up by only 31.81 per cent in the State while the urban population have shown an increase of 35.97 per cent during the last decade.

The statement 1.1 given below shows the growth of population in Howrah district since 1901 separately for its total, rural and urban sectors:

STATEMENT 1.1

Total Rural Urban	Year	Population	Decade Variation	Percentage Decade Variation
1	2	3	4	5
Total	1901	850,514		
	1911	943,502	92,988	10.93
	1921	997,403	53,901	5.71
	1931	1,098,867	101,464	10.17
	1941	1,490,304	391,437	35.62
	1951	1,611,373	121,069	8.12
	1961	2,038,477	427,104	26.51
Rural	1901	674,258		
	1911	742,102	67,844	10.06
	1921	778,893	36,791	4.96
	1931	843,647	64,754	8.31
	1941	1,060,615	216,968	25.72
	1951	1,089,053	28,438	2.68
	1961	1,213,385	124,332	11.42
Urban	1901	176,256		
	1911	201,400	25,144	14.27
	1921	218,510	17,110	8.50
	1931	255,220	36,710	16.80
	1941	429,689	174,469	68.36
	1951	522,320	92,631	21.56
	1961	825,092	302,772	57.97

The population of the district in each of the last seven censuses has been shown graphically below for total, rural and urban areas.

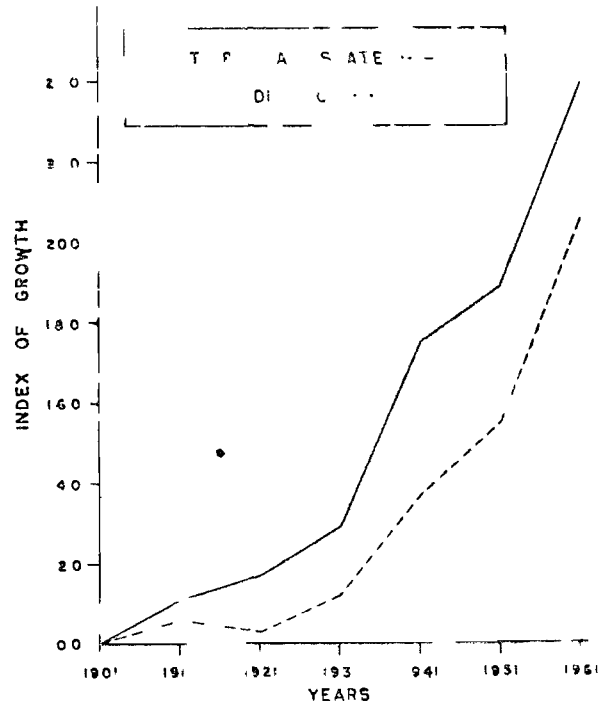

Compared to the growth rate of the State, the district of Howrah had always shown a higher growth rate upto 1941. In the last two Census decades of 1941-51, and 1951-61 the district grew at a lesser rate. During 1911-21 the State suffered from a depletion by 2.91 per cent while Howrah could add even 5.71 per cent more to its population of 1911. Since 1921 the district has been steadily growing and its growth rate of population has been higher than that of the entire State upto 1941. In 1951 while the State of West Bengal grew at the rate of 12.22 per cent, Howrah district's growth rate of population was only 8.12 per cent. In the present Census

also the district has lagged much behind the entire State in respect of the average growth rate of population. Against the State's average rate of 32.80 per cent, Howrah has registered a growth rate of only 26.51 per cent. The same phenomenon is observed in the case of the rural population a so. Rural Bengal suffered a loss during 1911-21 by only 4.43 per cent. Rural Howrah could encounter a gain of above 5 per cent during the great epidemic decade of 1911-21. Rural Howrah has been growing very little since 1941, as it appears from the Statement 1.1. Against the State's growth rate of population in the rural sector of 8.27 and 31.81 per cent in the decades ending in 1951 and 1961, rural Howrah has grown only by 2.68 per cent in 1951 and 11.42 per cent in 1961. This apparent lesser growth of population in the rural sector of the district during the last two decades can be explained by the fact that Howrah's urban sector has rapidly expanded during this period. The Urban population of Howrah grew also at a higher rate since the beginning of the present century than the urban population of the State, except, of course, in the Census decades of 1941-51. During the influenza epidemic decade of 1911-21 while the population living in towns of West Bengal increased by only 7.16 per cent in spite of an over-all loss of population in the State, those living in the towns of Howrah district increased quite appreciably by 8.50 per cent. During the last decade also the urbanisation of Howrah has been much greater than the State as a whole. In 1951 Howrah's urban growth of population was indicated by an increase of 21.56 per cent, against the State's growth rate of 32.52 per cent in that year.

During the first twenty years of the present century an increase of population by only 17.27 per cent was registered in the district of Howrah against the State's meagre growth of only 3·15 per cent. Population in the urban sector had gorwn by about a quarter of the 1901 population. In the rural sector people had grown during this period by 15·52 per cent.

During the next forty years *i. e.* 1921-61 while the population of West Bengal increased by nearly cent per cent, Howrah's population growth was a little more, 104·38 per cent over the population of 1901. The rural population had not grown so fast as their urban counterpart. The rural population during this period increased by only about 55·78 per cent while in the urban areas the growth had been as much as 277·60 per cent.

Since the turning of the present century *i.e.* during the last sixty years period of 1901-61, the State of West Bengal registered an increase of its population by 106·00 per cent. The district of Howrah during this period showed an increase of 139·68 per cent over its population of 1901. In the rural sector the growth was much less pronounced. it being only to the extent of 79.96 per cent. But urbanisation in Howrah during this sixty years had been phenomenal as is evident from the growth of population in the urban sector which has been to the extent of 368·12 per cent.

The index of growth of population since 1901 has been shown in the diagram above for the State and the district of Howrah for all the seven Census decades. The year 1901 has been taken as the base year and the population in that year has been taken as 100. From the diagram and the statement 1.2 given here it is indicated that Howrah was always higher than the State in respect of the index of growth of population.

STATEMENT 1.2

Index of Population Growth

	1901	1911	1921	1931	1941	1951	1961
West Bengal	100	106	103	112	137	155	206
Howrah District	100	111	117	129	175	189	240

In 1872 when the first Census was taken, Howrah, which then had two subdivisions, Howrah and Mahishrekha, with a total area of 539 square miles, was treated as part of the Hooghly district. The Khanakul thana

was transferred from Mahishrekha to Jahanabad (Arambag) subdivision of Hooghly after the Census of 1881; and Singti outpost with a number of villages extending over 34 square miles was added to thana Amta after the Census of 1891. Allowing for these changes, the population of the district, as now constituted, was 595,865 in 1872 and rose to 635,381 or by 6.6 per cent in 1881; to 763,625 or by 20.2 per cent in 1891; to 850,514 or by 11.4 per cent in 1901; to 943,502 or by 10.9 per cent in 1911; to 997,403 or by 5.7 per cent in 1921; to 1,098,867 or by 10.2 per cent in 1931; to 1,490,304 or by 35.6 per cent in 1941; and to 1,611,373 or by 8.1 per cent in 1951. The growth of population between 1872 and 1921 was 67.4 per cent for the fifty-year period, while in the following thirty-year period, 1921-51, the rate of growth was as much as 61.6 per cent on the 1921 population. In the sixty years of the present century the population of Howrah has grown by 139.68 per cent of what it was in 1901. Part of the increase in 1881 and 1901 was due to better enumeration. Between 1872 and 1891 the district suffered much from epidemics of fever, the mortality due to the virulent fever known as the Burdwan fever, being estimated in 1881 as 50,000. In later years the death rate was inflated by cholera and bowel complaints in the riparian tracts until 1896 when the construction of the Howrah water-works gave the city a supply of filtered water.

The increase is chiefly due to the great industrial activity in the metropolis of Calcutta, in Howrah city and along the river bank as far south as Uluberia. The numerous mills and other industrial concerns have attracted a large number of labourers from other parts of India, and the local inhabitants have been enriched by the trade they bring. The drainage schemes of Howrah, Barajol and Rajapur made the thanas Domejur and Jagatballavpur less unhealthy. The embankments in the Uluberia subdivision have prevented disastrous floods and facilitated the extension of cultivated area. The following statement shows the variation in population of the police stations and subdivisions of the Howrah district between 1901 and 1961.

Udaynarayanpur	26.1	- 1.4	24.9	4.0	2.1	+ 6.1

This is one of the few districts in the State; where every police station has recorded increases uniformly, from decade to decade after 1881, barring Sankrail, Panchla and Bawria in 1921-31, and Sibpur, Domejur, Jagatballavpur and Bawria in 1941-51. Even in 1872-81 the Burdwan Fever affected only three police stations Panchla, Jagatballavpur and Amta. The first two suffered a decrease of 3.4 per cent each, while Amta suffered a decrease of only 0.5 per cent. The decrease in 1941-51 in Sibpur, Domejur, Jagatballavpur and Bawria was due to the threefold reason. Each of these police stations contain mixed populations of Hindus and Muslims' who vied one another to inflate the Census returns in 1941 with bogus entries. Thus the record of increase for these police stations was so high in 1941, that, except for Sibpur and Bawria which were industrial areas and might be given the benefit of the doubt, it is scarcely the credible. Against the high increases of 1941, the increases of 1951, everywhere look very small indeed, much smaller than they need have been in truth. But there was another reason which showed a decrease for these police stations in 1951, which was the communal riots of March-April 1950. As a result of these riots, Bengali Muslim families from Sibpur, Domejur and Jagatballavpur moved into areas where they felt less isolated and more secure among other fellow-Muslims, while a fair number of Bihari and Uttar Pradesh Muslim industrial workers returned to their homes. According to the West Bengal Government no Muslim is reported to have migrated to East Bengal for good. The third reason is that Domejur and Jagatballavpur were about the only two police stations which surrendered victims to the famine and epidemics of 1943-44.

The district yearly received the attention of the Government in the matter of drainage. Two schemes for the drainage and consequent reclamation of swampy areas,—the Howrah and Rajapur schemes,—which now drain an area of 50 and 270 square miles, respectively, have benefited the district. The former was completed in 1885 and the latter in 1894-95. Another, the Dankuni drainage works completed earlier in 1873, benefited the Chanditala police station of Hooghly district but also the north of Domejur police station. These schemes have proved very successful in reclaiming useless swamps and improving other lands. In years of heavy rainfall the surplus is drained away by means of channels and sluices; in years of drought water from the Hooghly is let in for the purposes of irrigation. The people are thus assured of good harvests both in years of drought and in years of heavy rainfall. Two police stations have been especially benefited by these schemes, *viz.*, Domejur and Jagatballavpur. The rest of the district lower south is flushed by estuarine tides, and the mouths of

big rivers. Drainage schemes have been carried out in Amta which is now healthier than before. The south of the Uluberia subdivision is not so water-logged and is generally healthier. The district was opened up very early by the East Indian Railway in 1854-55, the Howrah -Sehakhala light suburban railways in 1898-1900. The district Howrah and Bally were industrialised later than the Hooghly strip in Hooghly district but already in 1901 there were large railway workshops, many mills and factories. Between 1931 and 1951 Howrah City had rapid growth in engineering workshops and foundaries in Bally, Lillooah, Bantra, Golabari, Malipanchghara and Belur.

During 1891-1901 except in 1897 and 1898, fever was prevalent. Before 1896 Cholera broke out annually but the construction of the waterworks that year, in addition to improving the general health of Howrah City, resulted in a far smaller mortality from epidemic diseases. The crops were bad three years owing to deficient rainfall, and in two years they suffered from floods, but the people were so well off that relief works were never necessary. During 1901-11 agricultural conditions were on the whole favourable. The special industrial census carried out in this decade showed that no other district in the Burdwan Division was so little dependent on the outturn of its crops. One-seventh of the total male population was at work in manufacturing or industrial concerns employing 20 persons or more. It was during this decade that the tramways from Calcutta was extended into Howrah. During 1911-21 the influenza epidemic did not affect the district to the point of forcing a decrease in population, but in 1921-31 three police stations suffered decrease, as already noted, ascribed to the closing down of mills and factories and the retrenchment of staff. During 1931-41 there was no event of special note but 1941-51 was marked by the famine and epidemics of 1943-44 and the communal riots of 1950. The decade 1951-61 has nothing significant to be recorded except flood-havocs in 1956 and 1959 and otherwise a steady progress all through.

Large numbers of agriculturists and aboriginals immigrate to seek employment in cultivation, in the brickfields or on railway works. There must be many agriculturist families from Midnapore, Hooghly and Bankura also. Howrah sends out for temporary periods large numbers of male emigrants to 24-Parganas and Calcutta. Emigration from Howrah as elsewhere, however, does not necessarily prove that Howrah people are emigrating in a real sense. It is probable that the bulk of those born in Howrah but found elsewhere only happened to be born while their parents were temporarily sojourning in Howrah, and afterwards went back with them to their native country. This lacuna is inevitable in a mode of accounting of migration.

In the Census of 1961 as many as 426,976 persons have returned themselves as being born outside the district. During the ten-year period of 1951-61 a number of 263,804 persons have immigrated to the district. Of the total migrants to the district 133,403 have come from other parts of the State, majority coming from the neighbouring districts of 24-Parganas, Calcutta, Hooghly, Burdwan and Midnapore. The settlement of displaced persons in different parts of the district has also had a great bearing on the growth of population. A total number of 80,229 persons having been born in Pakistan, have been enumerated in the district of Howrah. Of those, more than half about 48,648 in number have come to this district during the last ten-year period of 1951-61. Fifty per-cent of the inmigrants to the district of Howrah have been returned as workers in the Census of 1961. Majority of the migrant workers are seen to be employed in different manufacturing industries of the district, their proportion being a little more than half of the total inmigrants to the district. In the field of agriculture, female migrants are better employed than their male counterparts in this district. Similar is also the case with those engaged in trade and commerce. About 18 per cent of the total working migrants of this district are engaged in other services.

From a study of the Vital Statistics of the district, it is observed that the death rate has fallen quite appreciably during the passing decade. It has been looking down decade to decade since 1921. Improved public health measures could control malaria and other epidemics which have been conspicuous by their absence during past ten years. In the decade 1941-50, the death rate (registered) was 16.6, but this rate has been reduced to only 8.4 per cent in the present decade. The birth rate (registered) has also been showing a downward trend during the last twenty years. In 1941-50, the registered birth-rate was seen to be 15.8 while the decade before it was as high as 23.7 and in the present decade of 1951-60 it has further gone down to 14.4. If the number of births per thousand total population calculated on the estimated population on the 30th June of each year as derived by the Director, State Bureau of Health Intelligence, West Bengal is taken, it is observed that during the last decade the birth rate is considerably low being of the order between 7 and 8. A glimpse at the Table 2.1 on Vital Statistics in Part IIB of this volume would confirm this idea.

STATEMENT 1.5

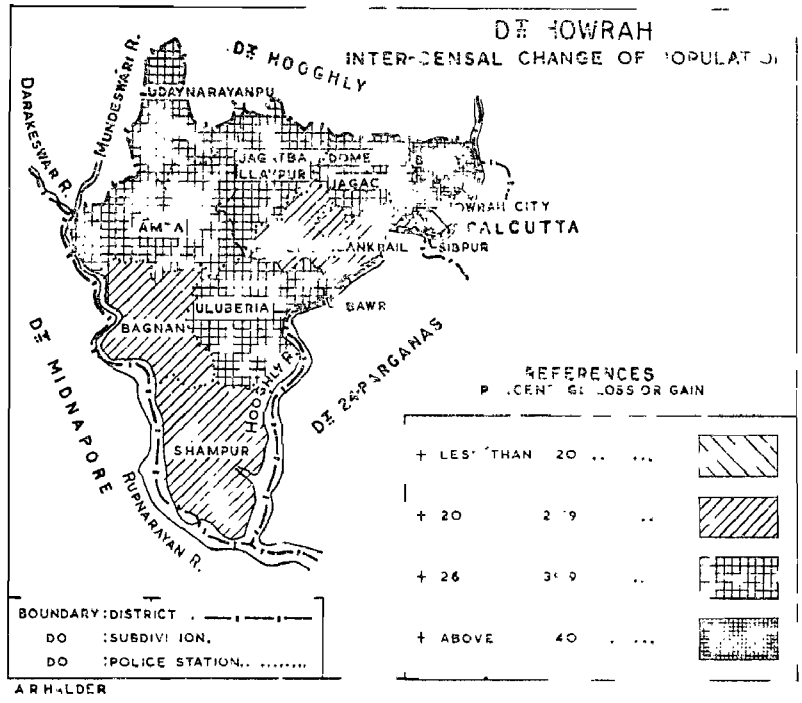

INTER-CENSUS GROWTH RATE OF POPULATION AGAINST THE INTER-CENSUS BIRTH AND DEATH RATE

State/District	Geometric Mean Population of Decade				Inter-Census Population Growth Rate				Inter-Census Birth Rate (Registered)			
	1951-60	1941-50	1931-40	1921-30	1951-60	1941-50	1931-40	1921-30	1951-60	1941-50	1931-40	1921-30
1	2	3	4	5	6	7	8	9	10	11	12	13
West Bengal	30,409,483	24 733,304	20,988,831	18,176,419	+28.4	+ 12.4	+20.6	+ 7.8	21.4	20.3	27.2	28.3
Howrah	1,816,565	1,550,051	1,284,662	1,047,315	+23.5	+ 7.8	+30.5	+9.7	14.4	15.8	23.7	25.4

State/District	Inter-Census Death Rate (Registered)				Inter-Census Rate of Natural Increase (Registered)				Migration-*cum*-Registration Error (Rate)			
	1951-60	1941-50	1931-40	1921-30	1951-60	1941-50	1931-40	1921-30	1951-60	1941-50	1931-40	1921-30
1	14	15	16	17	18	19	20	21	22	23	24	25
West Bengal	8.8	18.7	20.7	25.7	+12.6	- 1.6	6.5	2.6	+15.8	+ 10.9	14.1	-5.3
Howrah	8.4	16.6	16.8	24.3	+6.0	+0.8	- 6.9	+ 1.1	+17.5	+8.6	+23.6	+8.6

From the available data of Vital Statistics on registered births and deaths, if the above statement 1.5 is constructed the inter-census birth and death rates of the district in comparison with that of the State can be studied.

From the statement 1.5 it is seen that the inter-census rate of natural increase (registered) has gone up to 6.0 per cent in 1951-60, while in the decade it was only 0.8 per cent. Of course, the registration-*cum*-migration error (rate) has been found to be 17.5 per cent.

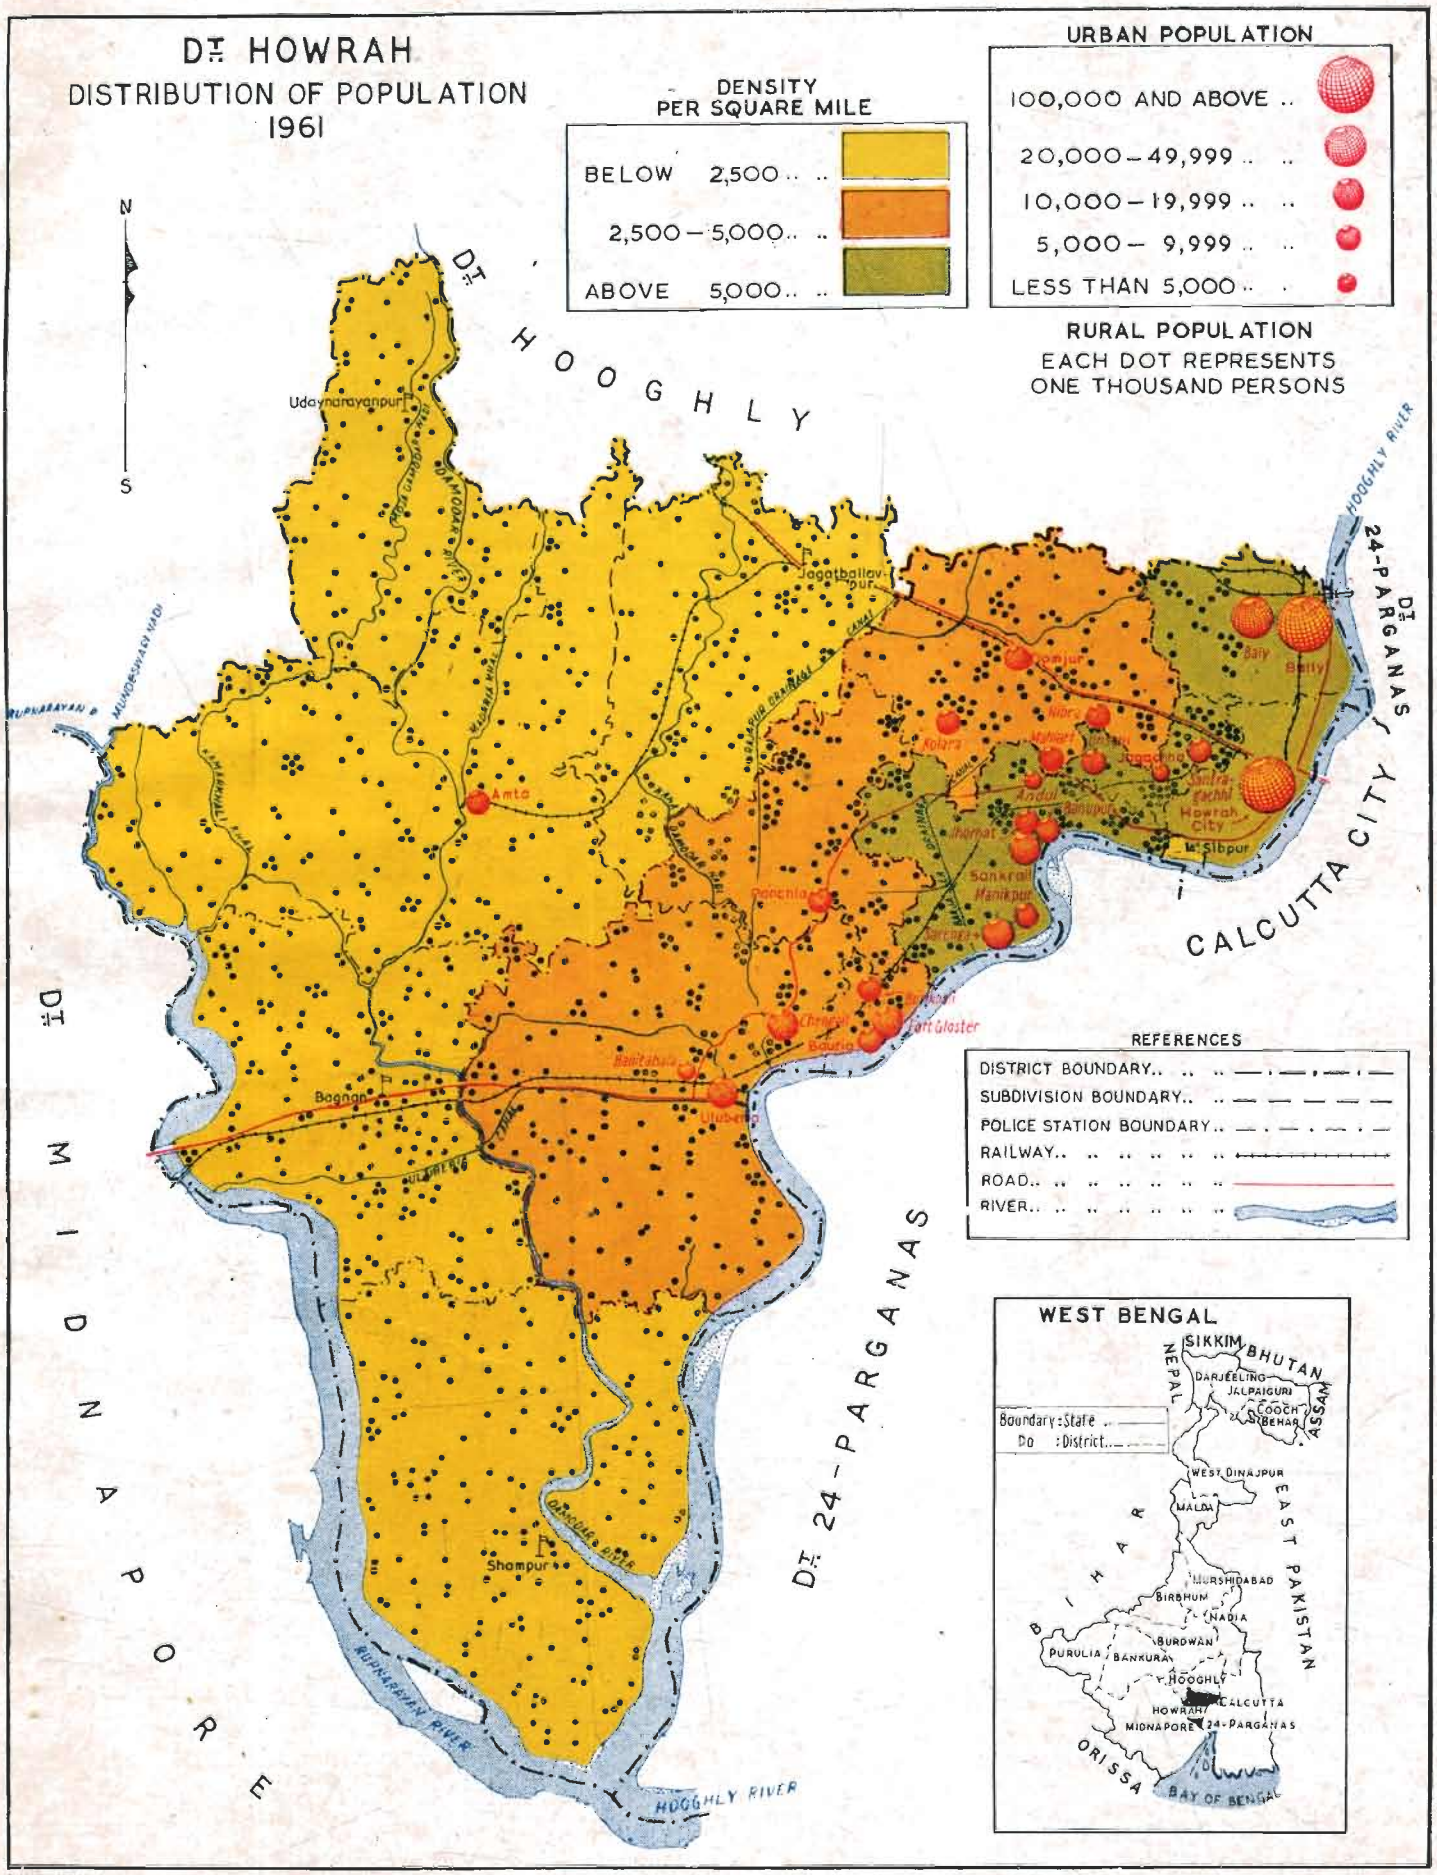

2. DENSITY

Howrah forms one of the most densely populated regions in the State of West Bengal. In the State 1,021 persons on an average are found to be occupying one square mile of area. In the district of Howrah as many as 3,639 persons appear in the Census of 1961 to be living in an area of one square mile. Except the City of Calcutta the district Howrah is seen to have the highest density of population in the State.

This region has all along been one of the most crowded part of the country. The extreme density of population was observed even in the first Indian Census of 1872. The density of Hooghly-Howrah region at that time exceeded that of the area covered by the district of 24-Parganas and Calcutta together.

Starting from the city of Baly in the north-eastern corner of the district down to Uluberia all along the bank of the river Hooghly the area exhibits a highly urbanised character. In this riparian strip of land town follows town almost without a break and animated by a touch of rapid industrialisation, this area has been converted into a busy industrial and trading centre. In this riparian strip of industrialised urban area as many as

BAY OF BENGAL

S.N. GANGULI.

18,000 people stagger together in an average square mile of area. The rural portions lying at the outskirts of these towns have also to experience a very high pressure of population on the soil. The only outlying non-municipal urban area of Amta has a density of only 4,729 persons per square mile.

The rural areas of the district have an average density of 2,353 persons per square mile against the rural density of only 787 persons to one square mile for the entire State. Not a single police station of the district excepting, of course, the little area of Sibpur rural police station shows the density below the State average. On the other hand the density figure ranges between 1,713 in the rural police station of Shampur to 9,472 and 8,261 in Bally and Jagacha police stations respectively. No other district in the State has shown such a high pressure of the population on its rural soil as has been shown by this small district of Howrah. The statement given below shows variations in density for the seven Census decades for the district and its different administrative units.

STATEMENT 2.1

VARIATIONS IN DENSITY (PERSONS PER SQUARE MILE) BETWEEN 1901–1961

District/Subdivision/Police Station	1961	1951	1941	1931	1921	1911	1901
1	2	3	4	5	6	7	8
Howrah District	**3,639**	**2,877**	**2,661**	**1,962**	**1,781**	**1,685**	**1,519**

Bagnan	2,466	1,966	1.810	1.466	1,257	1,226	1,144
Amta	2,102	1,651	1,689	1,352	1,300	1,274	1,200
Udaynarayanpur	2,002	1,587	1,609	1,288	1,238	1,213	1,143

With the passage of time the pressure of the population on the soil became more and more in this part of the country. While in 1872 Howrah had a density of only 1,064 persons per square mile, in 1901 the density figure rose only slightly to 1,519. But since the beginning of the present century and within the span of only 60 years the density figure has more than doubled itself. Congregation has been more pronounced in the urbanised police stations of the district. The rural areas have also not been spared from the gradually increasing pressure of the population on the soil. This is evident from the statement 2.2 showing variations in density for total, rural and urban areas separately.

STATEMENT 2.2

Total Rural Urban	Variations in Density						
	1961	1951	1941	931	1921	1911	1901
1	2	3	4	5	6	7	8
Total	3,639	2,877	2,661	1,962	,781	1,685	1,519
Rural	2,353	2,112	2,057	1,636	1,510	1,439	1,307
Urban	18,583	11,763	9,678	5,748	4,921	4,536	3,970

3. Sex Ratio

In the Indian subcontinent males outnumber females. The same is true with the State of West Bengal also. In West Bengal males have always outnumbered females since 1901, when the sex ratio was 945. Upto 1941 it was gradually going down in each Census year and the Census of 1951 marked a slight improvement over that of 1941. In the present Census it has further gone up. In 1961 there are 878 females for every one thousand male population in the State of West Bengal. In the district of Howrah almost the same trend is observed. In 1901 the sex ratio was not as bad as it is to-day. There were then 935 females per thousand males. In 1941 this ratio touched the bottom when it was 788 and since 1951 it took a turn towards improvement and in the present Census of 1961 the sex ratio has slightly fallen down to 808.

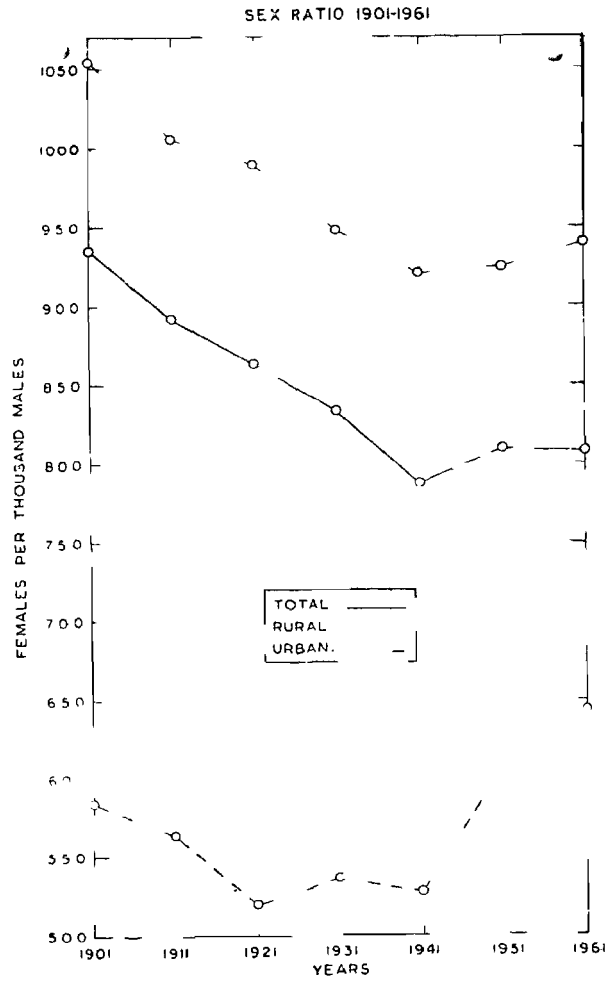

Howrah shows a lesser proportion of sexes compared to that of the State as a whole and also to that observed in the nearby industrial districts of 24-Parganas (866), Hooghly (892), or Burdwan (858). The proportion of female population over males was always low in this district in comparison to that in the State in all the past Census years. In 1941 while there were 852 females for every one thousand males in the State, in Howrah district this proportion was only 788. The statement 3.1 given below shows the variations in the proportion of sexes between the last sixty years for the district of Howrah as compared to those for the entire State of West Bengal for total, rural and urban areas separately.

STATEMENT 3.1

Number of Females per 1,000 Males

Year	Howrah District			West Bengal		
	Total	Rural	Urban	Total	Rural	Urban
1901	935	1,054	584	945	982	652
1911	892	1,006	564	925	982	614
1921	864	990	520	905	971	591
1931	834	948	537	890	961	578
1941	788	921	528	852	945	559
1951	810	925	610	865	939	660
1961	808	940	644	878	943	701

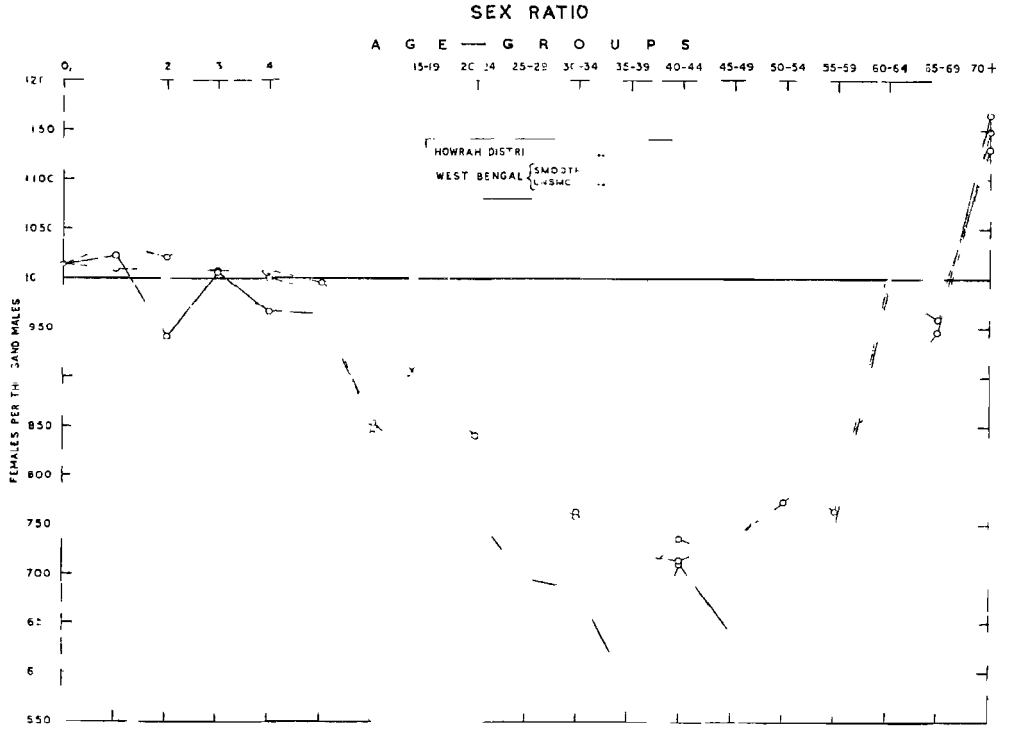

In the rural areas of the district the proportion of female population to males is quite high. In fact, females outnumbered males in the rural areas of the Howrah district in 1901 and 1911 but since then preponderance of males over females is being observed in the rural tracts. In 1941 the sex ratio of rural Howrah came down at 921. In the next decade this ratio became 925. But in the present Census the sex ratio of the rural tracts has further gone up to 940. In the urban sector the sex ratio of the district is much lower than that of the State. The sex ratio in urban area was declining since 1901 and touched the bottom in 1921 but since then has been going on its way to improvement and has come as 644 in this Census of 1961. The rural-urban difference in sex ratio in this district is quite marked which indicates generally the selective migration of the male population from the rural areas to the urban areas in search of education and employment. The diagram given below shows variation in sex ratio for total, rural and urban areas of the district between the last sixty years.

The inaccuracy of the age statistics especially for females is so great that it is difficult for any conscientious demographer to place much reliance on the proportion of females to males at each age period. The deficiency of female poulation is more marked in the age-group 10-14 and also beyond the age-group 15-19 upto the age period 55-59, where the sex ratio appears

to be lower than even the district average. Preponderance of females over males is observed in the district only in the ages 0, 1 and 3, though this preponderance is observed at each of the ages 0, 1, 2, 3 and 4 in the case of the State of West Bengal as a whole. Low mortality of female children in this part of the country reasonably explains this state of affairs.

The marked deficiency of females in the age-group 10-14 is a common feature in almost every part of the world. In the age-group 10-14 there is a sharp fall in the sex ratio but it begins to improve in the next higher age-group and reaches a maximum in the age period 20-24. This marked deficiency seems due to under-statement of their age if still unmarried and to the exaggeration of it if they are married and especially if they have become mothers. The over-statement of age in the age-group 10-14 seems somehow to be compensated by a sharp rise in the sex ratio in the age-group 20-24. But Howrah presents a peculiar case of sex ratio. Here the proportion of sexes is not as bad in the age-group 10-14, as it is in the higher age-groups. In fact beyond this age-group the sex ratio falls. It touches the bottom in the age-group 35-39 after which period sex ratio appears to fluctuate from one age-group to another.

The alternative rises and falls in the proportion of females at subsequent age periods beyond 39 illustrate the special predilection of women for multiples of 10 in stating their age. Digital preference acts as particular bias in age returns and specially in the case of the women. The alternative ups and downs in the proportion of sexes may be visualised in the curve given here.

Beyond 69, *i.e.*, in the age-groups 70 and above the females bear a larger proportion over males and this steady increase in their relative number beyond the age 69 might be due to in part their greater longivity.

The single year age returns have been smoothed for the State of West Bengal in the Office of the Registrar General, India. The proportion of sexes for different age periods has also been calculated on the smoothed data for age returns for the State. In the diagram given below a curve has been given showing the proportion of sexes in different age-groups calculated on the smoothed data of ages for the State. The statement 3.2 at page [28] indicates the sex ratio at different age periods based on raw age returns as well as on the smoothed data for the State and only on raw age returns for the district. The sex ratio on the smoothed data has been shown within bracket against each age-group for the State.

Though the average proportion of sexes taking the district as a whole is significantly below the State average, the preponderance of males is not so uniformly observed all over the district. The sex ratio seems to be quite normal, as normal as it can be expected in any average police station of Southern Bengal, in the areas where urban and industrial penetration has not been much too noticeable. The whole of Uluberia subdivision barring the police station of Bawria, which is largely occupied by an industrial complex, has shown on an average more than 900 women for each 1,000 of men population. Similar is also the case with the group of police stations Panchla, Jagatballavpur and Domejur in the Sadar subdivision. In the whole industrial complex Bally has proportionately the least number of

women population. Its sex ratio is even worse than that of the urban police station of Howrah. Industrial male labour force leading a single life and leaving their women far away in the rural interior of this State as well as other States of India constitutes a single major factor to explain this wide disparity in the male-female ratio.

STATEMENT 3.2

Age-group	Sex Ratio by Age-groups: West Bengal	Howrah District
0	1,014 (1,014)	1,014
1	1,035 (1,009)	1,023

4. Rural Population

About three-fourths of the total population of the State of West Bengal live in villages. But in the district of Howrah most people, accounting for about 60 per cent of the total population of the district live in villages.

A village is conterminous with the revenue survey *mauza* for the purpose of Census. The exact definition of village has been very much confusing during the first few Census decades. When the Census Commissioner of India observed in his Report for 1931 that "the distribution between a town and a village however arbitrary is easily effected on a numerical basis but the definition of the village as unit is by no means always so easy", he was speaking for his successors as well as for his predecessors. The way of defining a village was contemplated in the Census of 1881 as well as in 1891 to be by defining a village community according to Sir Henry Maine, but this did not yield much positive result for by that time revenue village or *mauza* had already come in the picture, thanks to the great Revenue Surveys of India which had commenced in the 18th century. The slow emergence of the revenue *mauza* as the village is traced in the first three volumes of Phillimore's Historical Records of the Survey of India.

In 1901 and 1921 when cadastral survey had not been completed in most of the districts of West Bengal and when the *mauza* boundaries laid down in the general revenue survey had not always been clearly traceable, the term village in Census parlance was rather indeterminate, because it had different meanings in different areas. Sometimes it meant a survey *mauza* and sometimes a residential village. In the own words of E.A. Gait, the Census Superintendent of 1901 of Bengal, 'A village may be either a collection of houses bearing a separate name, or else the *mauza, i.e.*, the area treated as a village at the survey. The latter has the advantage of being a definite unit regarding which there can be no manner of doubt so long as the boundaries laid down at the survey are known, but it does not at the present time necessarily correspond to the residential village. One of the latter may spread over two *mauzas* or survey villages, or two may lie in the same *mauzas* or the *mauza* may be altogether uninhabited. On the other hand, if the survey unit be neglected, it is very difficult to say with any precision what constitutes a village. There are many collections of houses which would by one person be called separate villages, while another would treat them as hamlets of other villages in the neighbourhood. In Bengal the records of the revenue survey have not been

kept up-to-date and in most districts the survey *mauza* is no longer c early traceable. Generally therefore, a village was taken for Census purposes to mean a residential village, *i.e.*, as a collection of houses bearing a separate name with its dependent hamlets. Where, however, there has been a recent cadastral survey, as in parts of Bihar and Orissa, the survey *mauza* was taken as the Census unit.'

O'Malley in 1911 commented on the Census village as follows:

'The census village corresponds to the *mauza* or survey unit of area in the Burdwan and Presidency Division and Cooch Behar, and elsewhere to the residential village, or collection of houses bearing a common name with its dependent hamlets. As a rule, the difference between the *mauza* and the residential village is small; but this is not so in tract which were uninhabited at the time of revenue survey, and so were not properly subdivided. A striking instance of this is found in the western part of Midnapore district, known as the Jungle Mahals, where ninteen *mauza* contain more than 20,000 villages and hamlets. The village is thus a somewhat indeterminate entity.'

It was from 1921 onwards the term village in West Bengal corresponds to a revenue survey *mauza*. Owing to the peculiar configuartion of the country the houses being scattered over the face of the land without any reference to civic unity or corporate life there was practically nothing much which could correspond a village in ordinary sense of the term. The *mauza* which had been demarcated as a unit for revenue purposes was translated as village for convenience's sake.

It should be borne in mind that what is reckoned for all administrative purposes and consequently also for the Census as a village may or may not be the same as what we normally have in mind when we speak of a village. A village in the ordinary sense may mean a cluster of houses whose inhabitants are regarded by themselves as well as by others as distinctive social units with its identities marked by distinctive local name. The village in the administrative sense is the *mauza*, a settled area with definite boundaries for which records have been prepared. The administrative convenience for taking the survey unit of the area as a village is very great. It enables the Census field staff to make absolutely certain that no tract however remote is left out of account. Thus in 1961 a village as a general rule has been taken to mean a revenue survey *mauza* with jurisdiction list number.

Table A-III in Par II A of this volume gives the number of villages according to different size classes of population as per 1961 Census for the district and its administrative units. In 1961 as many as 787 villages have been found to be inhabited in the district of Howrah. Changes in the number of inhabited villages during the last sixty year period of 1901-1961 have already been indicated at page [3]. There has been a large reduction in the number of villages in this district owing to jurisdictional changes that have taken place from time to time in fixing up the district boundaries and also due to elevation of status of many big villages to that of towns. The number of villages was gradually coming down up to 1921. Then there was a sudden jump in 1931, but it has been again on the decline and reduction in the number of villages is still going on.

The distribution of inhabited villages has been indicated by a number of 1'5 villages being located in hundred square miles of the rural areas of the State of West Bengal. Villages in the district of Howrah are more closely situated. There are 153 villages to every one hundred square miles of rural areas. Situation of villages in the eastern part of the district represent a more congregated pattern than in the rest. The highly industrialised and urbanised police stations of Jagacha and Bawria have even more than two villages on an average in one square mile of their rural areas. The Sibpur rural police station contains only one village covering an area of half a square mile.

In the State of West Bengal 686 persons reside in a village on an average. In the district of Howrah many more persons live together in a village on an average. As many as 1,542 persons are found to be living in one inhabited village on an average. In the Sadar subdivision as a whole this average number exceeds even 2,000. In the police station of Jagacha an average village contains as many as 4,614 persons. The police stations Bally and Panchla have an average village being inhabited by more than 2,600 persons. Sankrail and Bawria police stations have an average number of persons per inhabited village a little more than 2,000. The statement 4.1 at page [30] shows rural population, number of inhabited villages, average population per village and number of villages per hundred square miles of rural areas of the district and its different administrative units as also for the State as a whole.

STATEMENT 4.1

Number of inhabited villages, average population per village and number of villages per hundred square miles

In the district of Howrah the maximum number of villages have a population of more than 1,000 but less than 1,999. They account for about one-third of the total number of villages but population living in such village account for only 31.40 per cent of the total population of the district. In 1951 this class of villages accounted for 30 per cent of the total number of villages in the district and the persons living in such villages accounted for only 22 per cent of the total rural population of the district. In 1951 the maximum number of rural population were found to be living in villages having a population of more than 10,000. They accounted for about 34.84 per cent of the total rural population in 1951. In the present Census of 1961, persons living in this class only account for 1.06 per cent of the total rural population of the district. This is because in 1961 Census many places have been taken into the urban fold which were otherwise treated as rural in 1951 Census. In the present Census maximum number of persons accounting for about 42.56 per cent of the rural population of the district of Howrah are found to live in the villages having been inhabited by more than 2,000 persons but less than 5,000. The statement 4.2 below shows the percentage distribution of villages and population by size class of villages of the district as compared to that of the State both for 1951 and 1961 Censuses.

STATEMENT 4.2

Class of Villages (According to size of population)	Year	West Bengal		Howrah District	
		Percentage of number of villages in this class to total number of villages	Percentage of population in this class to total population	Percentage of number of villages in this class to total number of villages	Percentage of population in this class to total population
1	2	3	4	5	6
Less than 500	1961	57.97	19.24	13.85	2.95
	1951	67.69	27.95	19.05	2.99
500—999	1961	22.14	22.87	27.83	13.78
	1951	19.68	26.41	32.60	11.96
1,000—1,999	1961	13.59	27.25	33.54	31.40
	1951	9.14	23.83	30.16	21.61
2,000- 4,999	1961	5.61	23.47	22.62	42.56
	1951	3.15	16.97	15.14	21.70
5,000—9,999	1961	0.63	5.85	2.03	8.25
	1951	0.30	3.77	2.20	6.90
10,000-	1961	0.06	1.32	0.13	1.06
	1951	0.04	1.07	0.85	34.84

There is only one village in the district which is inhabited by more than 10,000 people and there are 16 villages which have population of more than 5,000 but below 10,000. Uttar Baksara (J.L. No. 7) in the police station Jagacha is the biggest village in the district of Howrah in respect of population size. Being situated on the South-Eastern Railway and having the city of Howrah and the two non-municipal towns of Jagachha and Unsani as its boundary in the east, north and west, it is inhabited by as many as 12,845 persons and is thus numerically larger than even the other three non-municipal towns namely Jagachha, Santragachhi and Unsani of the same police station and many other non-municipal towns of the district. Only 30 per cent of the population of this place are in the working force, most of them being engaged in manufacturing industries, transport, storage and communications. Having been served with electricity, the place has a post-office, a high school and three primary schools. This village has thus a highly urbanised character which in near future might lead it to earn an urban status.

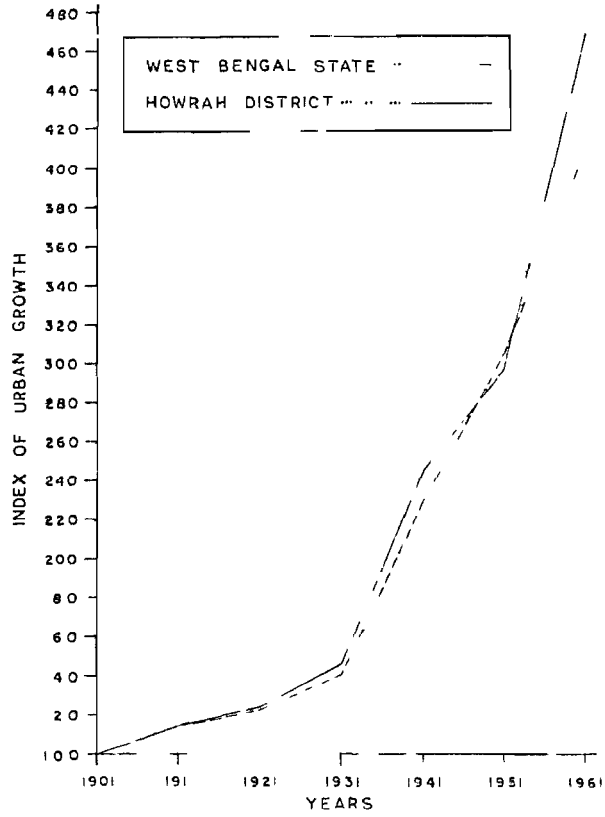

5. Urban Population

Howrah's urban tract mainly consists of the narrow riverine stretch along the river Hooghly starting from the north-east corner to the town of Uluberia, the headquarters of the only outlying subdivision of the district. This urban tract has been crossed by the South-Eastern Railway towards the south and the Eastern Railway towards the north. The only town which lies outside this compact urban complex is Amta. It is also connected by a light railway from the city of Howrah.

Howrah seems to be the most urbanised district in the State of West Bengal. While every fourth man is a town dweller in the entire State taken as a whole, two out of any five in this small district live in a town. The city of Howrah, the second major city in the State, alone contains a quarter of the total district's population.

Even in respect of the rate of population growth in the urban sector during the last Census decade of 1951-61, Howrah seems to have by far surpassed any other district in the State. Its gain in respect of urban population has been to the extent of fiftyeight per cent over the population of 1951, while the corresponding State percentage is only thirtysix.

For the first time in 1951 all Census statistics were presented separately for rural and urban areas. This has been continued in 1961 as a basic stratification as fundamental as the presentation of all data separately for males and females. An urban area for the purpose of Census 1961 includes (a) all municipal towns, cantonments and any other areas being administered by local bodies such as town committees, union committees etc., (b) any other place which satisfies the following emperical tests *viz.*, (i) a population of not less than 5,000 persons (ii) a density of at least 1,000 persons per sq. mile and (iii) three-fourths of the occupations of the working population should be outside of agriculture and (iv) the place should have a few pronounced urban characteristics and amenities like location of educational, medical or public institutions, offices or trading centres in it.

The district has a total number of 23 towns including two cities, the city of Howrah and the city of Baly. All the other twentyone towns are non-municipal urban areas declared as such for the purpose of Census. With the exception of two *viz.*, Uluberia and Bauria the other 19 have gained the urban status only at the Census of 1961. All these towns have formed a complex industrial belt along the river Hooghly. The statement 5.1 shows the constituent *mauzas* of these new towns with their areas and 1951 population.

STATEMENT 5.1

NEW TOWNS ADDED IN 1961 SHOWING THE JURISDICTION LIST NUMBER, NAME AND POPULATION IN 1951 OF ALL VILLAGE NOW CONSTITUTING THE TOWN

District	Name of Town	Constituent villages	J.L. No.	Area (in acres) in 1951	Population in 1951
HOWRAH	Manikpur	Manikpur	19	597.16	6,894
	Jhorhat	Jhorhat	30	361.54	5,842
	Andul	Andul	29	128.58	424
	Bamnipur	Bamnipur	32	126.68	4,589
	Panchla	Panchla	24	1,116.22	8,409
	Amta	Amta	145	1,092.24	6,434
	Chengail	Chengail	105	1,01[illegible].19	13,767
	Banitabala	Banitabala	87	763.93	4,578
	Burikhali	Burikhali	2	460.37	4,672
	Fort Gloster	Fort Gloster	6	289.13	*
		Chak Madhu	1	194.92	1,575
		Ramchandrapur	7	109.03	656

*Included in urban area

The city of Baly has two constituent parts, the municipal town of Baly and the rest of the town not yet covered by municipal administration. For the purpose of the present Census of 1961, both these constituents together have been treated as a single town. Excepting Panchla non-municipal town, all the other thirteen non-municipal towns of the Sadar subdivision have been shown under three different town-groups. Of the seven towns of Uluberia subdivision six have been grouped under Uluberia town-group. Table A-I in Part II A shows the distribution of population of different town-groups formed in the 1961 Census.

An immense growth of urban population has been registered during the decade 1951-1961 in the district of Howrah. In the statement 1.1 given at page [19], decade variations of the urban population of the district have been shown. It is seen from that statement that during the last decade the urban population have grown by 57.97 per cent against the State's urban growth of 35.97 per cent. Taking the urban population of 1901 as 100 the index of urban growth has been calculated both for the State and the district of Howrah which is given in statement 5.2 below.

STATEMENT 5.2

Year	Index of Urban Growth	
	West Bengal	Howrah
1901	100	100
1911	114	114
1921	122	124
1931	140	145
1941	229	244
1951	304	296
1961	413	468

The urban population of Howrah became more than of double in 1941 of what it was in 1901. In 1961 it has become more than four times. In the State the urban growth is less pronounced. In 1941 it became more than double of what it was in 1901. In 1951 it was more than three times and now in 1961 it has become more than four times of the urban population of 1901.

The following statement gives the growth of each town during the last sixty years.

STATEMENT 5.3

GROWTH OF POPULATION OF EACH TOWN SINCE 1901

Name of Town	Status of Town	Year	Area		Persons	Decade Variation	Percentage Variation	Males	Females
			Sq. miles	Sq. Km.

Amta	Non-Municipality	1961	1 71	4.43	8,086			4,168	3,918

The most marked growth is observed in the municipal town of Baly, where the growth rate has been to the extent of sixty per cent over its population of 1951. This town formed a part of the Howrah city until 1882-83, when it was constituted a separate municipality. Since then it has been growing very steadily. Even its fringe area has developed a complete urban character so as to enable it to gain an urban status in the 1961 Census. The city of Howrah has not grown so fast as has done the city of Baly. It could add only 18.21 per cent more to its population of 1951. The subdivisional headquarters town of Uluberia has also developed quite considerably during the last Census decade of 1951-61. This town has registered a growth rate of population to the extent of 47.19 per cent but the other non-municipal town Bauria in the same Uluberia subdivision has shown a decrease of population in 1961. This decrease is not real because 1951 population of the town,12,977 included two *mauzas*. Bauria (J. L. No. 4) and Fort Gloster (J. L. No. 6). In 1961 Fort Gloster was treated as separate town and the population of 8,492 relates to the *mauza* Bawria only. Other *mauza* has 5,366 inhabitants in 1951 and, therefore, there was actually an increase of 2,829 persons in the decade.

It has been observed that in this part of the country population has not grown according to space available but according to where it can find the means of sustenance. Any place showing any sign of prospect of livelihood and sustenance attracts people from outside. This trend is particularly marked in the narrow urban strip of Howrah. The various organised industries in this tract being mainly established within municipal limits or just at its outskirts obtain the benefits and amenities of municipal administration for themselves and for their labour, like *pucca* roads, protected water supply, efficient or at least tolerable sewerage and scavenging service, electricity and street lighting and good markets for fresh vegetables, other eatables or any other consumer commodity. Moreover the industries being situated so close to one another and also due to their proximity to the metropolis an inexhaustible supply of labour force is always being maintained. For the labour force an alternative employment is not at all difficult to secure for if one factory closes down, there is frequently another which may be recruiting labour. The possibility of alternative employment keeps a big supply of labour ready at hand. Thus with the opening of newer and newer industries

in this belt, congregation of more and more men becomes inevitable thus resulting in the streadily increasing density of this locality. Much to the advantage of the dwellers of these towns, the wide Trunk Roads run through their entire length. The people of this area are excellently served by good, fast, cheap and frequent motor stage services and also by electric suburban trains. The over populous city of Calcutta has been greatly relieved by many men having chosen this urban tract of Howrah as their place of residence for a comfortable and peaceful living. These people can very easily attend their place of duties located either in the city of Calcutta itself or nearby daily in time and at very little recurring expenses.

Most of the towns in the industrial complex have to experience a greater pressure on the soil than any town outside the influence of the industrial complex. The city of Howrah has an average area of one square mile being occupied by as many as 46,056 persons. Baly city in that respect experiences a lesser pressure on the soil. Both the municipal and non-municipal towns of Baly taken together have an average density of 14,432 persons per square mile. Andul and Banupur are the two towns in the Sankrail town-group, which have exceeded the density by far than the other towns located nearby. Andul shows a density of 23,450 and Banupur has 28,270 persons in each square mile of its area. Unsani non-municipal town in the Jagachha town-group experiences the least pressure on its soil, the density being only as low as 3,237 persons to a square mile. The non-municipal town of Amta in the north western part of the district has an average density of 4,729 only.

Preponderance of males, has been the characteristic feature with almost every urban area of the country. This is more so in the industrialised urban area. In the city of Howrah there are only 630 women to every 1,000 men. In fact, the proportion of sexes in this city was coming down since the Census of 1901 and it touched the bottom in 1921. 1951 Census showed a marked improvement, while this Census has shown a further improvement in this respect. In case of Baly city the disparity in the female ratio is more obvious, where it can be said that there is only one woman for every two men. Here also the sex ratio touched the bottom in 1931 and since then it is on its way to improvement. The sex ratio is even below 500 in the towns of Banupur and Fort Gloster. Overwhelming proportion of immigration of male labour in the industrial areas is certainly the most obvious reason for the wide disparity in the male-female ratio. But in the city of Howrah and its adjacent areas lack of housing and enormous preponderance of slums popularly known as *bustees* form another important explanation for such a low proportion of female population in these towns.

According to Census classification of towns based on population sizes, two towns are in Class I, one in Class III, five in Class IV, thirteen in Class V and the rest three in Class VI.

The statement 5.4 shows the changes in classification of town from 1901 in the district of Howrah.

STATEMENT 5.4

Class I	100,000 and above	Class IV	10,000 to 19,999
Class II	50,000 to 99,999	Class V	5,000 to 9,999
Class III	20,000 to 49,999	Class VI	less than 5,000

(M) Municipality
(N.M.) Non-Municipal Town

In a Census report towns are generally classified by population sizes. In 1961 the Registrar General, India, attempted to functional classification of towns on the basis of predominant function of a town based on Census data on industrial classification of workers adopted in 1961 Census. According to this classification 19 towns including the cities of Baly and Howrah have been classified as industrial and manufacturing towns. All these towns have a chain of organised industries in them. Two towns Kolara and Nibra have been classified as artisan towns. Amta and Andul have been classified as service towns being of residential and educational in character.

Urbanisation is generally defined as a process where people tend to agglomerate in certain regions, principal pursuit of them being non-agricultural. In almost all the developed countries it has been observed that industrialisation has a positive influence on expeditious process of urbanisation. The district of Howrah is in the process of rapid industrialisation and as such people from neighbouring areas are likely to concentrate in this industrialised areas to have a better income and better standard of living. If mathematically observed the pattern of urban growth is seen to follow an exponential form. This means that as people are agglomerating more and more to a certain area, the rate of increase of population gets retardated. Not that it would follow the pattern of logistic curve where at a point of time population increase gets saturated but it will follow a different course in population increase in a manner peculiar to its own character.

Considering the above factors the growth of urban population of Howrah district has been examined a mathematical model of the form $Y = e^{a+bt+ct^2}$ where y stands for index of growth and a, b, c are constants and t is the time. The values of the constants a, b, c are worked out with the help of least square method.

The same exponential curve has also been used to fit the urban population percentage since 1901. Thus the two mathematical models combined together help not only predict total urban population but also are useful to estimate the total population of the district at any future point of time. The statement below gives the index of growth and percentage of urban population for the district in all the Census years since 1901.

STATEMENT 5.5

Year	Time	Index of growth	Percentage and urban population
1	2	3	4
1901	0	100	20.72
1911	1	114	21.35
1921	2	124	21.91
1931	3	145	23.23
1941	4	244	28.83
1951	5	296	32.41
1961	6	468	40.48

After solving the normal equation the value of the constants are found for (1) Index of growth as a = 4.610714, b = 0.049909, c = 0.034629 and for (2) percentage of urban population as a 3.036828, b = — 0.012397, c = 0.020628

Thus the fitted equations come as,

1. Index of growth :
   $\text{Log}_e Y = 4.610714 + 0.049909t + 0.034629t^2$
2. Percentage of urban population :
   $\text{Log}_e Y = 3.036828 - 0.012397t + 0.020628t^2$

The expected and observed values of index of growth and percentage of urban population since 1901 have been tabulated in the statement given below:

STATEMENT 5.6

Year	Index of growth		Percentage of urban population	
	Observed	Expected	Observed	Expected
1901	100	101	20.72	20.84
1911	114	109	21.35	21.01
1921	124	128	21.91	22.08
1931	145	160	23.23	24.17
1941	244	214	28.83	27.59
1951	296	379	32.41	32.80
1961	468	582	40.48	39.85
1971	..	960	..	52.50

The expected values have been calculated for 1971 also with the help of the same mathematical models.

6. Age Distribution

Distribution of population by quinquennial age-groups may be obtained from the Table C-II in Part II A of this volume. The following statement shows the percentage distribution of population in some broad age-groups in the last two Censuses of 1951 and 1961 for the district of Howrah as compared to that of the State of West Bengal.

STATEMENT 6.1

Age-group	Howrah District				West Bengal			
	1951		1961		1951		1961	
	Males	Females	Males	Females	Males	Females	Males	Females
0—14	32.05	37.22	36.18	42.12	33.52	37.02	39.21	42.86
15—54	61.40	54.79	56.86	49.76	59.30	55.22	53.69	49.54
55+	6.55	7.99	6.96	8.12	7.18	7.76	7.10	7.60

During the last ten years, the proportion of child population has increased to a considerable degree in the district. This increase is greater in case of female children than in the case of the male children. The increase in the proportion of children of the age-group 0-14 has almost been compensated by a decrease of the same extent in the population of middle aged men and women between the ages 15 and 54. An appreciable increase in the age-group 0-4 has apparently been brought out by a fall of infantile mortality rate and a rise in birth rate. In the higher age-groups 55 and over, the proportion has almost become stationary. It has increased slightly during the last decade for both the sexes. Almost the same trend is observed in the pattern of distribution of males and females in different broad age-groups while viewed in respect of the State of West Bengal as a whole. In the State too the proportion of child population in the age-group 0-14 has considerably increased apparently at

the cost of a decrease by almost of the equal extent in the age-group 15-54. In the higher age-groups of 55 and over, the proportion almost remains the same in the State.

Majority of the males, as well as of the females, about a little more than one third of them are between the ages 15 to 34 in the district. The abundance of young men and women is no doubt a healthy sign in the age composition of a country. But the proportion of the youngmen and women has been gradually coming down. In 1951 they enjoyed a larger proportion amongst the total males and females. In the next higher age-group (35-54) the proportion of the persons of both sexes have also gone down within the last ten years.

The children, both male and female in the school going age (5-14) constitute about one fourth of the total male and female population of the district. In other words every fourth male or female in Howrah is a boy or a girl in the school going age. The children of this group are growing in number. Their proportion has considerably increased over the decade in this district.

In the district the proportion of female children is higher than the corresponding proportion of male children amongst total male population. In the age period 0-4 females comprise about 15.60 per cent amongst their total number while this percentage for males is 12.77. In the next higher age-group 5-14 the proportion amongst males is 23.41 against the female proportion of 26.52 per cent. In the district the aged women are less in number than the aged menfolk.

In West Bengal, male children of the age-group 0-14 only constitute 39.21 per cent of total male population of the State, whereas in the district of Howrah they are nearly 36.18 per cent of the total male population. Amongst females this proportion in the case of the State of West Bengal is about 42.86, while in the district this is nearly 42.12. But in the age-group 15-54 both in case of males and females, the State proportion is lower than the district proportion.

During the decade a significant change is observed in the number of young and aged persons *i.e.*, persons in the age-group 0-14 and 55 and over taken together per hundred of supporting population *i.e.*, persons in the age-group 15-54. This may be seen from the following statement of dependency ratio *i.e.*, ratio between persons in the age-group 0-14 and 55 and above and those in the age-group (15-54).

STATEMENT 6.2

Year	Total Rural Urban	Dependency Ratio	
		Howrah District	West Bengal
1951	Total	86	75
1961	Total	86	93
	Rural	104	102
	Urban	65	71

The 1961 population of the district as well as in the State bear a larger load of dependency than in 1951. This is possibly due to the high fertility and low mortality in the State. This load is, however, greater in rural areas than in urban areas. Howrah's rural population have to bear a load larger than even the State average while reverse is the case with the urban sector.

7. Marital Status

Civil condition of the people by age-group has been shown in Table C-II in Part II A of this volume. The following is a statement of percentage of population by age-groups classified by different marital status for the Censuses of 1951 and 1961.

STATEMENT 7.1

Year	Age-group	Never Married		Married		Widowed		Divorced and Separated and Unspecified Status	
		Males	Females	Males	Females	Males	Females	Males	Females
1951	All Ages	49.01	37.31	47.51	45.52	3.48	17.17	..	..
	0-14	99.23	92.28	0.76	7.59	0.01	0.13	..	..
	15-34	40.81	7.79	57.67	83.60	1.51	8.60	..	..
	35-54	3.98	0.39	89.26	57.60	6.75	42.01	..	..
	55+	0.92	0.60	77.33	20.56	21.75	78.84	..	..
1961	All Ages	54.87	45.15	42.62	41.53	2.15	12.96	0.37	0.35
	0-14	99.84	97.90	0.13	2.04	0.00	0.02	0.03	0.04
	15-34	49.17	11.62	49.71	83.94	0.60	3.79	0.52	0.65

	55+	1.67	0.24	81.12	22.66	16.61	76.73	0.60	0.37

In 1961 Census during sorting and tabulation all children below 10 years of age were treated as never married irrespective of their actual marital status returned in the enumeration slips. Thus, there may be some scope for doubt about the observation on civil conditions of persons in the age-group 0-14.

Some children below ten years of age in this district have actually returned themselves as married in Census 1961. 78 boys and 71 girls belonging to ages 0-9 years are married in Howrah. All of them live in the rural areas, except 8 girls only living in the towns.

Child marriage apparently decreased to a considerable extent during the last decade. In 1951, about 7.59 per cent of the total female population in the age-group 0-14 were married. In 1961, this figure has come down to only 2.04 per cent. In the case of male population 99.84 per cent of those below 15 years of age have returned as unmarried in 1961 Census.

Another remarkable feature of the civil condition prevailing in Howrah district revealed in the 1961 Census is that the proportion of married persons has fallen down as compared to that at the 1951 Census. While about 47.51 per cent of the total male population and about 45.52 per cent of the female population returned as married in the 1951 Census, in 1961 this figure has come down to 42.62 in case of males and 41.53 in case of females. The proportion of those widowed or divorced has also decreased a little in 1961 as compared to that in 1951. Only a few women in the age-group 15-34 have remained unmarried in 1961, about 83.94 per cent of them in this age-group being married. But in the next higher age-group *i.e.*, 35-54, a little less than two-third of the women population have been returned as married and about one-third of them are widowed, very few only remaining unmarried. Majority of the menfolk of the age-group 35-54 are married. In the age-group 55 and above about 77 per cent of the women are widows. In case of males only 17 per cent are widowed in this age-group. The number of divorced or separated men and women in the district is very small, only 2,968 males and 2,857 females respectively.

The statement below gives an account of the child-women ratio in the district as compared to that in 1951.

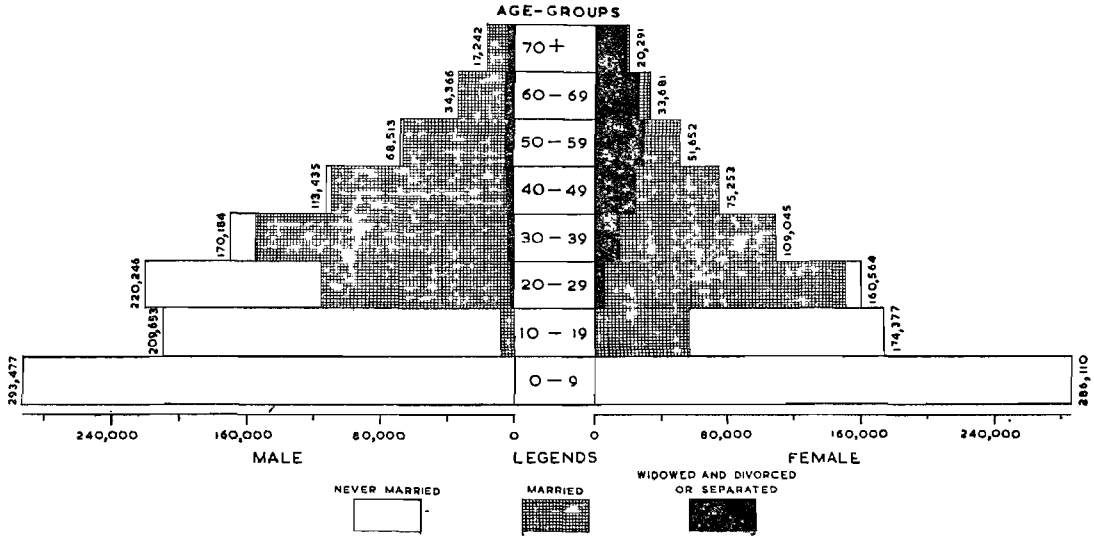

STATEMENT 7.2

CHILD-WOMEN RATIO

Year	Total Rural Urban	No. of children 0-4 years per 1,000 females of 15-44	No. of children 0-4 years per 1,000 married women of 15-44	No. of Total widow females per 1,000 married women of 15-44
1	2	3	4	5
1951	Total	515	645	455*
1961	Total	731	890	367
	Rural	796	936	409
	Urban	627	807	294

* In 1951 persons, widowed and divorced were not shown separately.

The Child-women ratio has considerably increased during the last ten years apparently suggesting a fall in infantile mortality rate in the district. The child-women ratio when standardised for married women of the age-group 15-44 illustrates how high the specific fertility of

adult women of the district is. The ratio is higher in the rural areas indicating thereby higher fertility in the rural area than in urban areas of the district. The incidence of widowhood has decreased since 1951. This is higher in rural areas than in the urban areas.

The diagram at page [37] is the age-pyramid showing the different civil condition in each decennial age-group of the district as returned in 1961 Census. The left horizontal bars stand for the male population, and the right horizontal ones stand for the female population. White portions signify the population of unmarried males and females, checks signify the extent of married males and females and blacks signify that of divorced or widowed males and females. The number inserted sideways to each horizontal bar signifies the total male and female population in that particular age-group. The vertical legends in the middle between the two sets of horizontal bars indicate the age-groups to which the bars relate.

8. LANGUAGE

The principal language of the district is Bengali. It is the mother-tongue of the majority of the people of the district. In 1961 Census 85.47 per cent of the population of Howrah returned their mother-tongue as Bengali. The industrialised areas of Howrah city, Bally (outside Howrah city) and Sibpur (outside Howrah city) police stations have attracted people from various parts of the country outside the State who have come to stay there for earning their livelihood. The outsiders belonging to different language groups have considerably reduced the bulk of Bengali speaking men in these areas. In all other areas of the district nearly 80 per cent or more of the population have returned Bengali as their mother-tongue. In Bally police station only 63.28 per cent of its people have their mother-tongue Bengali. In Howrah city 63.27 per cent of its people are Bengali speaking. In Sibpur police station only 34.23 per cent of their total population have Bengali as their mother-tongue.

Hindi is the next major mother-tongue in vogue amongst the inhabitants of Howrah. This language has been returned by about 8.89 per cent of the total population of the district as their mother-tongue. 57.76 per cent of the total population of Sibpur (outside Howrah city) police station are Hindi speakers. In Bally (outside Howrah city) police station 24.20 per cent of the total population have Hindi as their mother-tongue. In Howrah city 22.35 per cent of the population belong to the Hindi mother-tongue. In Bawria police station their percentage is 11.36 and in Sankrail police station Hindi has been claimed to be the mother-tongue of 9.14 per cent of its people. In Jagacha police station nearly 8 per cent of the total population have Hindi as mother-tongue. These people having mostly come from Northern India, specially from Bihar and U.P. are working in the various industries located in these police stations.

Urdu occupies the third position in so far as the mother-tongue returns are concerned. It is the mother-tongue of 3.09 per cent of the total population of the district. Urdu speakers are more abundantly found in Howrah city, Bally (outside Howrah city) and Bawria police stations. In Howrah city 9.80 per cent of its population have their mother-tongue Urdu. The percentages of Urdu speakers in Bally (outside Howrah city) and Bawria police stations are 4.94 and 3.64 respectively.

In 1911 more than 85 per cent of the people of Howrah were Bengali speakers. Since then their proportion was slowly increasing. In the next decade they constituated 85.25 per cent of the district's total population. A decade after it increased to 85.26 per cent. In 1951 the percentage of Bengali speakers in this district was 91.87. But in 1961 it came down to 85.47 per cent. The growth of Bengali speaking population has always been more than the general rate of growth of population of the district except in the last decade, when they have grown by 17.70 per cent over 1951, which is less than the general rate of growth of population (26.51) in the district of Howrah.

Hindi speakers were having a decreasing share in the district's population all through. But in the present decade of 1951-61, their proportion has increased. While in 1911 their share of the district's population was to the extent of 12.37 per cent, it came down to 11.10 per cent in 1921, 10.24 per cent in 1931 and 5.19 per cent in 1951. In 1961 Hindi speakers again came up to 8.89 per cent of the total population of Howrah district. In 1951-61, Hindi speakers of Howrah registered phenomenal increase to the tune of 116.83 per cent over their number of 1951.

The Santali speakers formed only 0.04 per cent of the district's population in 1911, while in the Census of 1961 their percentage to total population is 0.08. In 1911-21, the Santali speakers increased highly, the rate being 236.16 per cent over the Santali population of 1911. In the last decade also the growth of Santali speaking people has been enormous (329.33 per cent) over the Santali population of 1951

The statement below gives population at each Census, intercensal variation and percentage to total population for the three important languages in the district.

STATEMENT 8.1

SHOWING PERCENTAGE CHANGE IN EACH DECADE (1911-61) OF POPULATION OF THREE MORE IMPORTANT LANGUAGES (INCLUDING MOTHER-TONGUES GROUPED UNDER THEM) AS OF 1961

Oriya is the next major mother-tongue of the district. Oriya speakers are mainly found in the industrial areas. In Bally (outside Howrah city) police station they comprise about 4.94 per cent of its population. In Howrah city nearly 2 per cent of its population have their mother-tongue Oriya. In Jagacha police station 3.59 per cent of its people are Oriya speakers. In Sankrail police station 1.58 per cent of the population belong to the Oriya mother-tongue. In Bawria police station Oriya has been claimed to be the mother-tongue of 3.64 per cent of its people and in Uluberia police station their percentage is 1.26. Telugu is the next mother-tongue to Oriya in this district. In Jagacha police station Telugu has been returned by about 3.08 per cent of its population.

As many as fifty mother-tongue names have been returned by the people of Howrah. Of them five have been found unclassifiable by the Linguist for want of any dependable information and six belong to countries outside the Indian Sub-continent. These six mother-tongues have been treated as foreign languages in the Census of 1961.

The rest of the thirty-nine classified mother-tongues have been divided into four families *viz.*, Austric Family, Tibeto-Chinese Family, Dravidian Family and Indo-European Family following the method of Grierson's classification of languages.

Five mother-tongues belong to the Austro-Asiatic Sub-Family of the Austric Family. Of them four are attested by Grierson and the one non-attested by him has been tentatively classified by the Linguist to the Registrar General. These five mother-tongues are Adibhasha-Munda, Ho, Koda/Kora, Mundari and Santali of Munda Branch.

There are two mother-tongues in the Tibeto-Burman Sub-Family of the Tibeto-Chinese Family. These two mother-tongues are attested by Grierson. Among them Bhutia-unspecified of Tibetan Group is found in Tibeto-Himalayan Branch. In Assam-Burmese Branch, Mech is found in Bara or Bodo Group. Number of speakers are only 2 in each case.

In the Dravidian Family four mother-tongues, *viz.*, Kannada, Madrasi, Malayalam and Tamil are classified in Dravida Group. Adibhasha-Kurukh/Oraon and Kurukh/Oraon are found in Intermediate Group. Telugu is found in Andhra Group. Adibhasha-Kurukh/Oraon (12 speakers) is tentatively classified with Kurukh/Oraon by the Linguist to the Registrar General. A notable increase of Malayalam speakers is observed in 1961. 168 such speakers are found in 1961 against the 1951 return of only 3 speakers. Similarly, more number of Tamil and Telugu speakers have been returned in this district in this Census than in the previous Census in 1951. Within ten years the Tamil speakers have increased from 736 to 2,226 and Telugu speakers from 2,841 to 9,356.

In the Aryan Sub-Family of the Indo-European Family as many as twenty-five mother-tongue returns are found. In Eranian Branch, Kashmiri (5 speakers) is found in Dard Group and Persian (25 speakers) is found in Persian Group. The rest of the twenty-three mother-tongues are found in Indo-Aryan Branch.

In outer Sub-Branch, Sindhi in North-Western Group, Goanese, Konkani and Marathi in Southern Group and Assamese, Bengali, Bhojpuri, Madhesi, Maithili, Malpaharia, Oriya and Sadan/Sadri in Eastern Group are found. Goanese (3 speakers) is tentatively reclassified with Konkani by the Linguist to the Registrar General. Mother-tongues like Bhojpuri (14 speakers), Madhesi (5 speakers), Maithili (58 speakers), Malpaharia (1 speaker) and Sadan/Sadri (12 speakers) are returned in 1961 Census which were not available in 1951 Census in this district.

A regular increase in number of Bengali speakers is found. In 1951 the figure was 1,480,333 and in 1961

it is 1,742,373. The increase in the number of Oriya speakers is notable. While their number in 1951 was 18,958, it is 25,957 in 1961. But the number of Assamese speakers has decreased in this district in the present Census than in the previous Census in 1951. Within ten years the Assamese speakers have decreased from 1,558 to 986.

In Inner Sub-Branch, 11 mother-tongues which are attested by Grierson, are found in Central Group and Pahari Group. In Central Group these mother-tongues are Gujarati, Gurmukhi, Hindi, Marwari, Nagari-Hindi, Punjabi, Rajasthani, Rajputani and Urdu. In Pahari Group these are Garhwali and Nepali.

Gurmukhi is the script name used for language. It is grouped with Punjabi. In 1951 Gurmukhi speakers were 1,607 in number, but their number in 1961 is 3,559. 30 speakers of Nagari-Hindi are grouped with Hindi.

The people of Howrah have not given an encouraging account regarding the extent of bilingualism in the district. Only 6.91 per cent of the total population of Howrah have claimed to have known a second language in addition to their mother-tongue. It is seen that the Bengali speaking population have little inclination in knowing a subsidiary language. Only 6.12 per cent of the total Bengali speakers of this district know a second language in addition to their mother-tongue Bengali. Very few of the Bengali speaking women have claimed to have known another language. Nearly two among every one hundred Bengali speaking women know a second language, while 9.90 per cent of the Bengali male speakers have claimed to have known another language. The number of Bengali speakers knowing a second language is shown for each of the subsidiary languages as: English (M-78,645; F-12,617), Hindi (M-7,604, F-1,850), Urdu (M-3,035; F-896), Arabic/Arabi (M-1,013; F-706), Sanskrit (M-87; F-2), Oriya (M-39; F-26), Persian (M-7), Telugu (M-7), French (M-4), Assamese (M-3; F-1), Tamil (M-3), Ceylonese/Simelu—Singhalese (M-1), Gujarati (M-1).

The speakers of tribal languages are generally bilingual. Amongst Santali speakers 13.48 per cent know Bengali as a second language. Amongst those having mother-tongue Kurukh/Oraon 7.59 per cent know Bengali and 5.21 per cent know Hindi as second language. Nearly 4.95 per cent of the Mundari speakers have claimed to know subsidiary language. Amongst them 4.02 per cent kn Hindi as a second language,

Amongst the people belonging to different language groups hailing from other States outside West Bengal, the Sindhi speaking population know a second language in addition to their own mother-tongue by a greater proportion than others. 83.33 per cent of them have known a subsidiary language. Every nine out of ten males having Sindhi as their mother-tongue know another language. Amongst their women folk 75 per cent have known a second language. Majority of such women know English and a few know Hindi as second language. Amongst the males, English is known to the maximum number. Hindi is also known to some of them. 56 per cent of the Rajasthani speakers know a second language. Amongst their womenfolk nobody knows a second language. Amongst the males, Hindi is known to the maximum number. English and Bengali are also known to a good number of them. Amongst the Kashmiri speaking population 40 per cent have known a second language. Amongst their males 33.33 per cent have known a subsidiary language. Every alternate woman having Kashmiri as her mother-tongue knows another language. English is only the second language of the Kashmiri speaking population. In respect of bilingualism, Malayalam speakers occupy the next position. 38.69 per cent of them know a second language. Amongst the males, English is known to the majority as a second language and Hindi, Bengali and Telugu are also known to a few of them. Amongst their females Hindi is known to the maximum number. About 30.91 per cent of the Marwari speakers know a second language. Marwari speaking women are more bilingual than their male counterparts, Hindi is known to the majority of such women and English and Bengali are also known to a good number of them. In fact more women know Hindi than their male counterparts. Next comes Gujarati in respect of bilingualism. 30.35 per cent of the Gujarati speakers know a second language. Amongst their males, English is known to the maximum number. Hindi and Bengali are also known to some of them. Amongst their womenfolk majority of them know English and Hindi and a few of them know Bengali and Koda/Kora languages. 28.35 per cent of the Gurmukhi speakers know a second language. Amongst their males, English and Hindi are known to the majority and Bengali is also known to quite a number of them. Urdu, Nepali and Telugu are also known to a few of them. Majority of Gurmukhi speaking women know Hindi and English and Bengali is known to a good number of them. A few of them know Urdu as a second language. Amongst the Tamil speaking population 24.66 per cent have known a second language. English is known to the majority and Bengali, Hindi, Telugu, Urdu and Oriya are also known to a

few of them. Amongst the Maithili speaking persons 24.14 per cent are bilingual. Hindi is known to the majority and Bengali and English are also known to some of them. Amongst the Marathi speakers 21.67 per cent know a second language. Most of them know English and Hindi as second language. A few of them know Bengali, Telugu and Urdu. Amongst the Kannada speakers 20.41 per cent know a second language, majority of whom know Hindi. English is also known to a few of them.

9. RELIGION

Two major religions *viz.*, Hinduism and Islam are noticed in the district of Howrah. Here majority are Hindus. The composition of Howrah's population by different religious communities has not altered to any appreciable extent during the Census decade 1951-61. In 1951 about 83.45 per cent of the total population of Howrah were Hindus. In this Census the percentage of Hindus is about 83.31. Ten years back the Muslims comprised only 16.22 per cent of the total population. In the Census of 1961 about 16.36 per cent of the total population have reported their religion as Muslim. Both in 1951 and 1961 the Buddhist have constituted only 0.01 per cent and the Sikhs only 0.1 per cent of the total population of the district. The followers of Jesus Christ constituted 0.2 per cent in 1951 whereas in the present Census they account for only 0.16 per cent of the district's total population.

Panchla in the Sadar subdivision is the only police station in the district of Howrah, which has shown the percentage of Hindu population less than 70. The police stations of Bally, Sibpur and Udaynarayanpur have more than 90 per cent of their population belonging to the Hindu community.

Panchla is the only police station where about one-third of its total population have claimed to have professed Islam religion. In Bawria police station also the followers of Islam are quite abundant. Here they constitute more than one-fourth of thana population (26.55 per cent). In Uluberia their percentage is even a little more than 28.44 per cent. No other police station of the district has more than 20 per cent of their population professed Islam religion.

The Hindus have increased during the decade 1951-61 by only 26.30 per cent in the district. The rate of increase is quite at par with general rate of growth of population of the district. The growth rate of Islam population is just a little higher. They have grown by 27.57 per cent over the decade. There has been decrease to the extent of only 3 per cent in the population belonging to Christian community The Sikhs in the district of Howrah have increased during the last decade by 85.74 per cent and Jains have increased more than cent per cent.

Table C-VII in Part II A in this volume gives distribution of population by different religions. The statement given below shows the percentage distribution of Hindus and Muslims in the district and its different administrative divisions.

STATEMENT 9.1

District/Subdivision / Police Station	Religion	
	Hindu	Muslim
1	2	3
Howrah District	**83.31**	**16.36**
Sadar Subdivision	*84.78*	*14.70*
Bally (outside Howrah City)	90.95	7.78
Howrah city	87.95	11.42

Uluberia	71.47	28.44
Shampur	86.00	14.00
Bagnan	83.77	16.21
Amta	82.31	17.68
Udyanarayanpur	92.60	7.40

The following is an account of minor deities of the district quoted from O'Malley's Gazetteer, published in 1909.

Bankura Rai –Some of the godlings are invoked to protect their votaries against wild animals, tigers and nakes. The gods of tigers are Dakshin Rai, Kalu Rai and Bankura Rai. They are worshipped as spirits in water-pots or as stone images, rudely carved into the form of an armed male seated on a tiger, which are placed under trees, or housed in huts or temples. No special time is fixed for their worship. Goats are sacrificed, with offerings of rice and sweets. Occasionally a low caste priest, but usually a Brahman, officiates. These godlings are recognised as sons of Siva, and are mentioned, especially Bankura Rai, in old Bengali poems.

Manasa—Manasa is the godling of snakes, whose worship is widespread in this district on account of the number of snakes it contains and the dread of their bite. She is represented either by the *manasa* plant (*Euphorbia Nerifolia* or *Ligularia*) or by a bit of stone, which is rudely carved into the form of a female seated on a snake,

or it may be, by a shapeless block smeared with vermillion. The plant or stone is generally found under a tree, preferably an *aswatiha* tree, or is housed in a hut, a room, or occasionally a small brick temple. The officiating priest is sometimes a man of low caste, *e.g.*, a Kaibartta at Srikrishnapur, and a Bagdi or Hari, at Jaypur in the Uluberia subdivision, but more frequently he is a Brahman. The offerings consist of rice and other articles, but on important occasions goats are sacrificed. The goddess is said to be particularly found of two plants, the *raktajava* (Rosa *Chinensis*) and the *durba* grass. She is especially worshipped on the last days of the months of *Sraban* and *Bhadra* (August and September), a season when snakes are forced out of their holes by rain and are a very real danger to the bare-footed wayfarer. The Goalas, who graze cattle in the open country and are therefore particularly liable to snake-bite, besides losing many cattle, worship the goddess under the name of Rakhal manasa. A *manasa* plant is set up under a tree, and a special festival takes place on the last day of *Pausi*, *i.e.*, in the middle of January. The cowherd boys go round begging and collect money for the offerings, the ceremony itself being conducted by a Brahman.

According to tradition Manasa was the sister of the snake Vasuki, wife of the sage Jaratkaru and mother of the sage Astik, of whom a long story is told in the Adiparva of the *Mahabharata*. She is repeatedly mentioned in old Bengali poems, while special poems were composed describing her efforts to extend her worship, and the punishment awarded to the unbelievers. The story of Chand Saudagar and his daughter-in-law Behula has been versified by Bipradasa (1495 A.D.), Kshemananda and others.

Panchanan—For the prevention or cure of illness worship is offered to several godlings, *e.g.*, for children's illness Panchanan and Sasthi, and for other ailments, Sitala, Ola-Bibi and Ghantakarna. Panchanan (Panchananda or Panchu Thakur) is worshipped either as a spirit in a water-pot, or is represented by a clay or stone image riding a goblin, which is placed under trees or in a petty temple. He has sometimes a priest of the lower castes; *e.g.*, a Kaibartta at Dankha and a Bagdi at Jaypur in Uluberia subdivision, but more often a Brahman. Rice, sweets and flowers are offered to him with clay horses; and when the villagers think he is much displeased with them, a goat is sacrificed. If several children die, he is propitiated in order that he may spare the lives of the children born after them, and the latter are called Panchu or Panchi. The number five is sacred to him; and the children are believed to be free from illness for five years after birth, if his worship is observed. He is also propitiated for the cure of certain special ailments of children, *e.g.*, when they get a crick in the neck. The tradition runs that he was the son of Siva by a Koch woman, and that, on account of his low birth, none paid him reverance until he was made master of eight diseases.

Sasthi—Sasthi is a benignant goddess who presides over the health and well-being of children. She is worshipped at home in a water-jar with a branch of the banyan tree, and with offerings of sun-dried rice, sweets, curds, fruit and flowers, 6 days, 21 days and 31 days after the birth of a child; Brahman officiates. She is worshipped by Brahmans on the 21st day in the case of a male and on the 31st day in the case of a female child; but Kayasthas worship her on the 31st day whether the child is male or female. The ceremony on the 21st day is often performed outside the house under a banyan tree, under which is a representation of the goddess, *viz.*, a stone daubed with vermillion or a clay image seated on a cat surrounded by little images. Her blessings can be invoked on any sixth day in the light half of a month, when mothers fast and offer her rice and other articles through a Brahman. Her chief festival is on the *banasasthi* day of the month of *Jayaistha* (May-June). Fans in hand, the village women go to the banyan tree, taking bamboo-leaves tied with saffron-coloured threads. A Brahman officiates as priest and gets the rice, fruit, etc., offered. The women take back the threads and tie them round their children's wrists to ensure their health. Sasthi is probably a relic of the old Vedic Animism. According to tradition, she is a daughter of Brahma and wife of Skanda, the general of the gods. She brought to life the dead son of king Priyabasta, who in gratitude promised to extend her worship on earth.

Sitala—The Goddess Sitala is believed to have power to produce and disperse infectious diseases, such as measles, chicken-pox, and above all small-pox; hence she is also called Basanta-chandi. Among the higher castes a Brahman officiates as priest; but Kaibarttas and members of other low castes officiate for the castes to which they belong. She is represented as a spirit in a water-jar, as a simple block of stone or an image under a banyan or *bakul* tree, or is housed in a small temple. The image is one of a naked female riding an ass, with an winnowing-fan on her head, with spots on her cheeks like pox pustules, and holding in her hands a vessel and a broom; the latter is symbolical of her power to sweep away diseases. Rice, fruit and sweets are offered to her with goats or sheep in special cases. *Batasa* is said to be her favourite sweetmeat.

When an epidemic of small-pox or even cholera breaks out, the women resort to her shrine, pour water on the roots of the tree or on the temple verandah, and burn lights before her in the evening, accompanied by blowing of conch-shells A party of men, usually of the low castes, are hired to sing her praise for three days. At the end of this time there is a puja, and sweets etc., are distributed among the villagers, generally by the woman that cleans the place. Low caste men, such as Bagdis, Doms and Chandals, sing from door to door, and beg for alms, carrying a little clay figure of Sitala in a basket. According to tradition she is the daughter of Savitri by Brahma, and is the chief of seven sisters, mistresses of contiguous diseases. Her worship is an old one, being referred to in early Bengali literature.

Ola-Bibi—Ola-Bibi, or as Hindus prefer to call her Olai-Chandi, is propitiated in epidemics of cholera (Bengali *ola-utha*), chiefly by low cas Hindus or Muhammadans, from whom the priests are recruited. A number of these men beg from door to door, gather rice and pice, and then go to her shrine. She is usually represented by a water-jar under a *nim* (*Melia Azidarachta*) tree. Rice, sweets and fruits are offered, and goats are sacrificed. After the *puja* is concluded, the people return home, playing on the *dhol* and singing songs. The employment of a Muhammadan as priest is peculiar, and the present form of worship must be post Muhammadan.

Ghantakarna—Ghantakarna (*i.e.*, the bell-eared) is the godling of skin diseases. He is worshipped on the last day of *Phalgun* for the prevention of itch, eczema, etc., which are common in the beginning of the spring. The ceremony takes place before the front door of the house and is finished before sunrise. Ghantakarna is represented by a lump of cow-dung placed on a blackened old earthen pot, into which are put a few cowries dyed with vermillion An old woman recites *mantras*, which are repeated by other women, and offers rice *dal* and fruit with *ghentu* flowers (*Clerodenfron infortunatum*) and *durba* grass. When the offerings have been made, the children break the pot to pieces with sticks. According to tradition, Ghantakarna was a devoted servant of Siva and was rewarded with the power to cure of prevent skin diseases.

Jwarasur—Jwarasur (*i.e.*, the fever-demon) is invoked in individual cases to grant recovery from fever and by the villagers generally during epidemics of malarial fever. He is worshipped by the lower castes with the aid of a Brahman. Besides the usual offerings of rice, sweets and fruit, goats are sacrificed in special instances.

Satya-Narayan—Satya-Narayan is a godling whom all classes of Hindus worship in order that they and their families may prosper. He is worshipped on the evening of the full-moon and by many every month, a Brahman acting as priest. The *thakur*, as he is called, is represented by a drawing on a wooden seat with a few loops, called *mokams*, and a post at each corner, called *tir*. The offerings consist of flour, molasses or sugar, and milk (each weighing five *pawas*), betel-leaves and nuts (25 each) with 32 plantains. This is known as *kachcha sirni*. Five *pawas* each of *pakha sirni* sweets, *sandesh* and *batasa* are added. The priest worships Narayan and then repeats the story of the god. The articles offered are mixed and made into a jelly, part of which is distributed among the worshippers present, and the rest is sent to neighbours.

The worship smacks strongly of Muhammadanism. The absence of any image, the use of words like *sirni*, *mokam* and *tir*, the five loops in the drawing, and the recurrence of five as a number in the offerings, all indicate Musalman influence. Legend, moreover, relates that Narayan appeared in the guise of a *fakir* or Musalman ascetic, and that objection was at first raised to his worship because he was a Yavana. Satya-Narayan would thus appear to be a variant of Satyapir, a deity worshipped by a lower class of Muhammadans and evolved after the establishment of Islamic rule in Bengal.

Subachani—Another godling of disease is Subachani, who if duly propitiated will restore health to the sick. She is worshipped in a water-pitcher by a Brahman priest, with the usual offerings of rice, milk, sweets and fruit. But the chief peculiarity of the worship is that the priest draws 21 ducks, one of which is one-legged. The story is that a man ate up as many ducks and was imprisioned for this grave offence, but was released on worshipping Subachani. In some places, a part of the offerings is given to a Musalman.

Mangal Chandi—Mangal Chandi is another deity represented by no image, but worshipped as a spirit in a water-pot. The worship takes place on Tuesdays in the month of Jayaistha. Tradition runs that the childless king Anga obtained issue by worshipping this deity.

Hu—Hu is worshipped on the last day of the month of Kartik and on the following Sunday in the month of Agrahayan. Tradition relates that a poor Brahman obtained wealth in consequence of his two daughters worshipping this deity. According to some the Sun god, and according to others Durga, is worshipped in the form of Hu; but the name appears to point to a non-Aryan origin.

In rural sector also labour participation by both males and females has been lower in Howrah than in the State. While 53.47 per cent amongst males and 10.62 per cent amongst females in the State of West Bengal are workers, in the district of Howrah only 49.85 per cent amongst males and 2.27 per cent amongst females have been classed as workers. In the urban areas labour participation by males has been higher in Howrah than in the State, while reverse is the case with the females. Howrah's women labour force in the urban sector are mostly engaged in other services.

1.2 Labour participation in different Administrative Units

The labour participation per *mille* is the highest in Sibpur police station of the district of Howrah. Next comes Bally police station. In Sibpur police station 489 persons per *mille* are workers, whereas 399 persons for one thousand of the total population of Bally police station belong to the working class. In Howrah city and in Bawria, Jagacha and Sankrail police stations 370, 342,334 and 315 persons per *mille* are workers respectively. The labour participation in all these police stations is higher than that of the district as a whole, where only 309 persons per *mille* are workers. Domejur, Uluberia, Shampur, Udaynarayanpur, Panchla, Jagatballavpur, Amta and Bagnan police stations are below the district average in respect of the labour participation.

In the rural areas of the district the position of Sibpur being a rural police station, has shown the highest proportion of workers (48.93 per cent) and the labour participation also in the rural areas of Jagacha, Domejur, Sankrail, Shampur and Bally police stations is higher than that of the rural areas of the district as a whole. 268 persons per *mille* are workers in the rural areas of the district, whereas, in rural areas of Jagacha, Domejur, Sankrail, Shampur and Bally police stations 354, 288, 285, 277 and 276 persons per *mille* are workers respectively. The labour participation in the rural areas of the police stations of Udaynarayanpur, Uluberia, Panchla, Jagatballavpur, Amta, Bagnan and Bawria is also below the district average for the rural sector.

In the urban sector maximum labour participation has been observed in Bally police station where this ratio is 42.06 per cent. Bawria follows next. The urban labour participation in Bawria police station is 38.75 per cent and this ratio in Howrah city police station is 36.97 per cent. The labour participation in the urban areas of the police stations of Sankrail, Uluberia, Jagacha, Domejur, Panchla and Amta is also below the district average for the urban sector where only 36.88 per cent of its population are workers.

The labour participation by males is found to be highest in Sibpur police station where 644 male components per *mille* are workers. In Howrah city and in Bally, Jagacha and Bawria police stations 585, 614, 563 and 557 males per *mille* are workers respectively. In other police stations this ratio varies between 53.39 per cent in Sankrail police station to 47.35 per cent in Bagnan police station. Urban men seem to be more active than the men living in the rural areas of the district of Howrah.

As has already been seen, female labour participation in this district is awfully below the State average. In the State of West Bengal 94 females per thousand males are workers, while in Howrah district 26 female per thousand male population are workers. Female participation is highest in Sibpur police station where 27.85 per cent of the total female population of the thana are workers. But nowhere else in the district it is above 5 per cent. Female labour participation is lowest in Panchla police station where only 1.19 per cent of them are workers, and in Panchla town this ratio is almost the same (1.11 per cent). In the urban areas of the district the female labour participation is highest in Bawria police station where 5.94 per cent of the total female population in urban areas are workers and this proportion is also higher than the district average for females in urban sector.

The statement below gives the percentage of workers amongst total population, males and females for the district as well as for all the police stations of Howrah by rural and urban areas separately.

STATEMENT 10.1

PERCENTAGE DISTRIBUTION OF WORKERS TO TOTAL POPULATION FOR TOTAL, RURAL AND URBAN AREAS SEPARATELY

District/Police Station	Total Rural Urban	Persons	Males	Females

Udaynarayanpur	R	26.33	48 42	3.65

1.3 Participation by different industrial classes

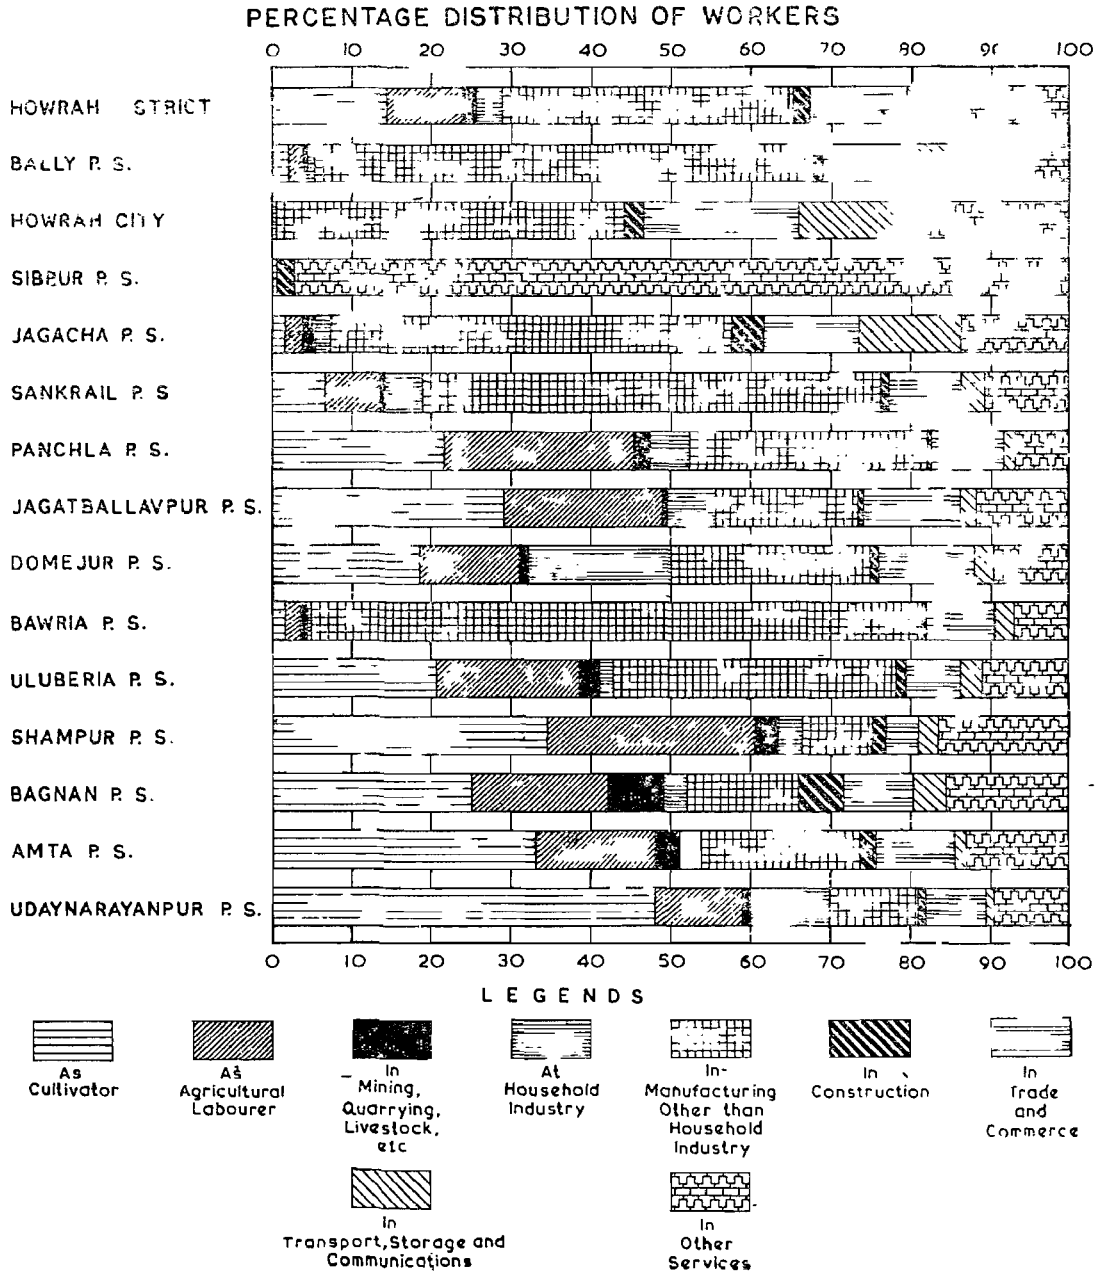

Out of every thousand workers in Howrah district 143 persons are engaged in cultivation and 95 persons of every thousand workers are engaged as agricultural labourers. In the State of West Bengal as a whole only 54 per cent of the total working population are engaged in agricultural pursuits against 24 per cent in the district of Howrah. In the district the proportion between cultivators and agricultural labourers is 1 5.1, but in the State of West Bengal this proportion is about 2.5:1.

In mining, quarrying, plantation, forestry, etc. and in household industry also, the proportion of workers are greater in the State of West Bengal than that of the district of Howrah. But in all other spheres of activity Howrah's participation is in higher proportion than that of the State of West Bengal. It is seen that industries have played a significant role in the economic life of Howrah district because it forms the highest proportion of all the working categories of the district. Only 39.3 per cent of the total workers of this district are engaged in industrial pursuits, household or non-household. The other manufacturing industries have absorbed more persons here than in household industries. Every 32 workers per *mille* are absorbed in household industries against the State's participation of 42 workers per *mille* and in other manufacturing industries 361 workers per *mille* are engaged in this district against the corresponding State figure of 114 persons per thousand working population.

Plantation is also not a major industrial pursuit for the workers of the district of Howrah. Only 16 workers per one thousand of the total working population of this district are seen to be engaged in mining, quarrying, livestock, forestry, fishing, hunting, plantations, orchards and allied activities. In the State of West Bengal as a whole, the corresponding proportion of the workers in mining, plantation etc. is 50 in every one thousand of working population. Trading and commercial activities have absorbed 122 workers per *mille* of the total workers of the district, while in the State they account for 75 workers for every thousand of the total working population. In transport, storage and communications about 7 per cent of the total working population of the district are engaged whereas in the State of West Bengal they form about 3.4 per cent of the total workers. In other services about 15 per cent of Howrah's workers are engaged against the State's corresponding percentage of 13.4.

91 women workers for every one thousand of their total number are found in this district to be working as cultivators, while the corresponding proportion of the female cultivators in the State of West Bengal as a whole is 368 per *mille*. It is found that the female labour participation in agricultural pursuits in the district of Howrah is not quite marked in comparison with the State's

female participation. Participation as agricultural labourers is very low in the district. Only 2.0 per cent of the total working women of Howrah are labourers in the agricultural fields, whereas in the State this percentage is as high as 21.1. Another remarkable feature of the working women of this district is that a larger proportion of them are gainfully employed in other services than that observed in the State of West Bengal. In Howrah 368 women workers of every one thousand working women are engaged in other services, while in the State the corresponding number is 130. The female labour participation in other manufacturing industries is much higher than that of the State. In other manufacturing industries 241 women workers per *mille* of the total working women are engaged, while the State's corresponding proportion of the females in this category is 49 women workers. Trading activities are also more favourable with the women of Howrah. In this district 13.1 per cent of the total female workers are engaged in trade and commerce against the State's percentage of 2.3 only.

In household industries Howrah's female workers are almost in same proportion with the State's female participation. In this district about 12 per cent of the total female workers are engaged in household industries against the State's corresponding percentage of 12.2.

The statement given below indicates the distribution of 1,000 workers by persons, males and females and by industrial categories of workers for the district of Howrah as compared to that of the State.

STATEMENT 10.2

	West Bengal			Howrah District		
	Persons	Males	Females	Persons	Males	Females
Total Workers	1,000	1,000	1,000	1,000	1,000	1,000
I	385	388	368	143	145	91
II	153	144	211	95	98	20
III	50	44	90	16	17	14
IV	42	30	122	32	29	115
V	114	124	49	361	365	241
VI	13	15	3	20	21	6
VII	75	83	23	122	121	131
VIII	34	38	4	65	67	14
IX	134	134	130	146	137	368

In the rural police stations of this district labour participation has been found to be in a large proportion in the agricultural sector. In the police stations of Udaynarayanpur, Shampur, Jagatballavpur and Bagnan 47.84 per cent, 34.32 per cent, 28.95 per cent and 24.97 per cent of the total workers respectively are engaged as cultivators. In Amta thana it is 32.84 per cent. In Uluberia and Panchla police stations more than 20 per cent of the workers are cultivators. In Shampur police station the agricultural labourers are in highest proportion forming about 26.02 per cent of its total working population. The proportion of agricultural labourers is lowest in Howrah city where 0.04 per cent of the workers belong to this category.

Manufacturing employment amongst the workers of Howrah is more marked in Bawria, Bally, Sankrail and Jagacha Police stations in comparison to other areas of the district. 76.52 per cent, 62.01 per cent, 57.30 per cent and 50.26 per cent of the total workers of Bawria, Bally, Sankrail and Jagacha police stations respectively are engaged in manufacturing industries. Employment in household industries is maximum in Domejur police station where 17.88 per cent of the workers belong to this category. In Udaynarayanpur police station 10.15 per cent of the workers are engaged in household industries.

A comparatively larger proportion of workers of Howrah city and of Jagacha, Jagatballavpur, Domejur, Bally and Amta thanas are engaged in trade and commerce. Their percentage in Howrah city is 19.58, followed by 12.01 per cent in Jagacha, 11.94 per cent in Jagatballavpur, 11.90 per cent in Domejur, 10.76 per cent in Bally and 9.74 per cent in Amta. In Shampur thana the proportion of trade and commerce workers is quite low. In this thana only 4.32 per cent of the total workers are engaged in trade and commerce. In Howrah City 13.22 per cent of the total working population are absorbed in transport, storage and communications.

The labour participation in other services is in the highest proportion in Sibpur police station of this district. In Sibpur thana 97.27 per cent of the total workers are engaged in other services. In other police stations of this district this proportion is quite low in comparison to that of Sibpur thana. A pictorial representation of the percentage distribution of workers for all the police stations of the district may be seen at page (47).

The statement below shows the sector-wise distribution of thousand persons by sex among primary, secondary and tertiary sectors of industry and non-workers for the district of Howrah as compared to that of the State.

STATEMENT 10.3

	West Bengal			Howrah District		
	Persons	Males	Females	Persons	Males	Females

1.4 Comparison with Earlier Censuses

As observed earlier the proportion of workers has been gradually declining since the past census decades. The participation of workers as cultivators is also on the decline. In 1921 nearly 22 per cent of the workers were engaged as cultivators. In 1951 the proportion of cultivators came down considerably (14.25 per cent). In this Census this percentage has remained more or less stationary. Participation of persons at work as agricultural labourers went down considerably in 1951 as compared to that in 1921, and it has further gone down in this Census. 40 years back every third worker of Howrah was employed in manufacturing. The proportion of those engaged in manufacturing had remained almost stationary in 1951. But in this Census in household industries and in manufacturing together the participation amongst workers is marked by the percentage of 39.31. The participation in trade and commerce is on the course of improvement. In transport and communications the participation has definitely improved. While it was only 4.22 per cent in 1922, this has become 6.47 in 1961. In other services also there has been improvement in the participation of Howrah's workers though not significantly. Comparative figures for the working population divided by nine broad industrial categories of workers as conceived in 1961 Census for different Censuses since 1921 have been derived by applying the principles enunciated in 'A note on Working Force Estimates 1960-61' given in Appendix 1 to 'Census of India 1961, Paper No. 1 of 1962—Final Population Totals' published by the Registrar General, India. The statement given below shows the distribution of workers by nine industrial categories and their percentages (shown within bracket) for the Censuses of 1921, 1931, 1951 and 1961.

STATEMENT 10.4

Year	Workers	Industrial Categories of Workers								
		I	II	III	IV*	V	VI	VII	VIII	IX
1	2	3	4	5	6	7	8	9	10	11
1921	376,886	81,547	52,323	10,475		130,191	10,413	36,125	15,908	39,874
	(100 00)	(21.64)	(13 88)	(2.78)		(34.54)	(2.77)	(9.59)	(4.22)	(10.58)
1931	326,188	51,682	56,891	11,575		99,158	9,720	46,250	13,660	37,252
	(100.00)	(15.84)	(17.44)	(3.55)		(30.40)	(2 98)	(14.18)	(4 19)	(11.42)
1951	557,503	79,444	60,391	7,317		186,091	8,614	78,885	47,920	88,841
	(100.00)	(14.25)	(10.83)	(1.31)		(33 38)	(1 54)	(14.15)	(8 60)	(15.94)
1961	629,519	89,828	60,002	10,316	20,387	227,095	12,687	76,590	40,708	91,906
	(100.00)	(14.27)	(9.53)	(1.64)	(3.24)	(36.07)	(2.01)	(12 17)	(6.47)	(14.60)

*Household Industry figures were not recorded in the decades 1921, 1931, 1951.

It is noteworthy that the rate of growth of manufacturing employment in the district of Howrah goes well ahead of the rate of growth of total employment and has, even exceeded the growth of general population in the district. While the growth rate of total employment in the district has been slightly less during the decade 1951-61 than the corresponding growth rate considered for the period covering thirty years between 1921-51, the rate of growth of manufacturing employment on the other hand during 1951-61 has far exceeded that observed during the thirty years period of 1921-51. This is evident from the following statement borrowed from 'Regional Planning for West Bengal' published by the Calcutta Metropolitan Planning Organisation.

STATEMENT 10.5

RATE OF GROWTH OF EMPLOYMENT AND POPULATION

	Employment				Population	
	1921-51		1951-61			
	Total Emp.	Mfg. Emp.	Total Emp.	Mfg. Emp.	1921-51	1951-61
West Bengal	0.88	1.40	2.39	3.23	1.37	2.9
Howrah	1.34	1.74	1.15	2.78	1.61	2.4

1.5 Sex ratio of workers

It appears from the above discussions that working women in this district are not in keeping with their total

number. It has been seen earlier that against 53.72 per cent of the males only 2.63 per cent of the females of this district are workers. Howrah's sex ratio amongst general population is a little less than that of West Bengal. For every 1,000 males there are 808 females in Howrah and amongst the working population for every 1,000 male workers the number of female workers is 40. In the State of West Bengal the proportion of sexes amongst general population is 878, but this proportion amongst the working population is 153. It appears, therefore, that the women of Howrah have been engaged in any sort of productive occupation by an appreciably lesser proportion than the women living in other parts of the State as a whole. Women here do not find any favourable employment as agricultural labourers, in plantations, in household industries or even in other manufacturing industries. In these four categories the sex ratio has been found to be 833,156 and 26 respectively. The corresponding sex ratio in the State is 225 in Category II, 316 in Category III, 625 in Category IV and 61 in Category V. In trade and commerce the sex ratio of this district is the same as that of West Bengal. In this Category the sex ratio in Howrah is 43, the corresponding sex ratio in the State is 43 also. In other services the proportion of sexes is lower in the district than in that of West Bengal. In Howrah it is 106 against the State figure of 148. The statement given below shows the sex ratio (females per 1,000 males) among the total population, total workers, each category of workers and non-workers in rural and urban areas of the district as compared to that of the State.

STATEMENT 10.6

SEX RATIO (FEMALES PER 1,000 MALES)

	West Bengal			Howrah District		
	Total	Rural	Urban	Total	Rural	Urban
Total Population	878	943	701	808	940	644

IX	148	143	153	106	92	116
Non-workers	1,728	1,811	1,491	1,700	1,831	1,503

1.6 Workers in industries

In Howrah district 3.24 per cent of the workers are engaged in household industries. The total number of persons being primarily engaged in any household industry in this district is 20,387. In household industries workers are mostly employed in making of textile garments, manufacture of tobacco products, cotton weaving in hand looms, manufacture of hosiery and other knitted fabrics and garments, manufacture of materials from cork, bamboo, cane, leaves and other allied products, non-metallic mineral products and manufacture of earthen pottery. Maximum persons (3,513 M, 95 F) are engaged in this district in making of textile garments including rain coats and headgear as a household industry. Majority of the women (554) are engaged in manufacturing of earthenware and earthen pottery. It is quite remarkable that persons are engaged in cotton weaving in handlooms in this district.

Of those engaged in various non-household industries, majority are employed in jute spinning and weaving. 53,704 persons of Howrah are employed in jute spinning and weaving and next 32,134 persons are engaged in manufacture of sundry hardware such as G.I. pipe, wire, net, bolt, screw, bucket, cutlery etc. 4,550 persons are engaged in this district in fishing in inland waters.

Persons engaged in different manufacturing works are mostly employed in cotton spinning and weaving in mills, making of textile garments including raincoats and headgear, manufacture of iron and steel including smelting, refining, rolling, etc., manufacture of wood and wooden products, manufacture of structutal clay products such as bricks, tiles etc.

A good proportion of workers of this district are engaged in different wholesale and retail trading. In different forms of retail trading 62,534 persons are engaged. Of them 21,170 persons are absorbed in retail trading in cereals, pulses, vegetables, fruits, sugar, spices, oil, fish, dairy products, eggs, poultry, etc. 19,765 persons of the district are employed in transporting by railways. 7,082 persons of this district are engaged in transporting by man such as carrying of luggage, hand cart driving, cycle rickshaw driving. A large number of workers are also engaged in different public services, educational services, medical and health services, religious and welfare services and personal services.

There are 22,480 persons whose services could not be classified elsewhere and there are about 6,032 persons in this district whose activities were not adequately described in the Census returns.

Table B-IV in Part II A of this volume gives a detailed distribution of workers according to different

industries as classified in the Standard Industrial Classification adopted by the Government of India in the Ministry of Labour and Employment.

1.7 Workers by occupation

The table B-V in Part II A of this volume presents a detailed picture about the various occupations of, and services rendered by the working population of the district. These occupations have been classified and coded according to the National Classification of Occupations. From a study of these, the different types of services available to the people of Howrah are easily obtained. So far as medical facilities are concerned, it is observed from Table B-V of 1961 Census that there are 2,351 physicians, surgeons and dentists, of whom only 34 are women. But there are only 748 qualified allopathic physicians and surgeons of whom only 13 are women. This means that there is one qualified allopathic doctor for a population of 2,725. There are 373 homeopathic physicians in the district. 294 persons have returned themselves to be practising *ayurvedic* system of medicine. 280 persons have been returned as physicians, surgeons and dentists who could not be classified otherwise. They are possibly not qualified persons who due to experience have created some confidence in the minds of the people in their medical or supernatural abilities to cure their diseases. There are 367 nurses in the district of whom 317 are women.

On the educational side, the total number of teachers is 8,352 as per 1961 Census, of whom 1,080 are women. There are 428 university teachers who generally teach in colleges. There are only 34 such teachers amongst the women of Howrah. There are 2,031 teachers of secondary schools of whom 435 are women. There are as many as 4,156 middle and primary schools teachers in the district, 339 of them being females. 1,668 persons have returned their occupation as teaching, but they could not be classified in any one of the above categories.

In the district there are 1,575 architects and surveyors, 615 of them are civil engineers including overseers. 497 persons have returned their occupation as belonging to this group, but they could not be classified in any one of the above classes.

There are 876 jurists in the district, of whom 16 are judges and magistrates. There are 499 legal practitioners and advisers in the district. There are 40 law assistants and 321 others who have not been classified elsewhere.

A total number of 11,886 persons have returned themselves as farmers, fishermen, hunters, loggers and related workers. Of them 4,409 are farmers and farm-managers, 2,599 are farm workers. There are 4,672 fishermen (inland and coastal waters) in the district. 196 persons are returned as loggers and other forestry workers.

19,307 persons have returned their occupation as belonging to transport and communication services. There are 7,584 drivers engaged in road transport, of whom 2,038 are cycle rickshaw pullers and 362 are animal drawn vehicle drivers. Motor vehicle drivers are 3,232 in number.

In the division 7-8 *i.e.*, craftsmen, production process workers and labourers not elsewhere classified, total number of persons returned are 270,078. There are 52,913 spinners, weavers, knitters, dyers and related workers, 14,543 tailors, cutters and related workers, 17,625 furnacemen, rollers, drawers, moulders and related metal making and treating workers. There are 47,557, tool-makers, machinists, plumbers, welders, platers and related workers. There are 3,376 precision instrument makers, watch makers, jewellers and related workers' of whom 2,430 are jewellers, goldsmiths and silversmiths. There are 12,984 carpenters and cabinet makers (Wood). There are 10,119 potters, kilnmen, glass and clay formers and related workers, of whom 1,656 are women.

There are 4,505 persons of whom 171 are women employed as tobacco preparers and products makers. There are also 6,098 workers whose occupations are unidentifiable or unclassifiable. 1,255 persons have not reported their occupation in the 1961 Census.

1.8 Workers by age-groups

On an analysis of the age structure of the workers of Howrah district it is observed that a larger proportion of workers of this district belong to higher age-groups above 35 years in comparison to those in other parts of the State. Table B-I in Part II A of this volume gives a distribution of working population by different industrial categories of workers and by broad age-groups. In this district 46.86 per cent are workers in the working age-groups of 15-34. The proportion of workers in this age-group is about 51.41 per cent in the entire State of West Bengal.

The proportion of child workers in this district is much lower than that of the State averge. While amongst every 1,000 of the Howrah's working population only 14 are child workers, in the State of West Bengal their proportion is as high as 39 per *mille*. Generally speaking,

this age-group represents the school going age and as such a few of them are expected to come in the working force. Amongst the child workers in the district majority are engaged in manufacturing industries, in other services, in agricultural pursuits, in trade and commerce and at household industries. In the urban areas participation by child workers has been in this district by 11 for every 1,000 of the total child population. In the State of West Bengal the corresponding percentage of child workers in the urban areas is 1.23. The statement below gives the age-group wise distribution of workers in the district as well as in the State.

STATEMENT 10.7

	West Bengal			Howrah District		
Age-group	Persons	Males	Females	Persons	Males	Females
1	2	3	4	5	6	7
All ages	1,000	1,000	1,000	1,000	1,000	1,000
0-14	39	36	57	14	14	17
15-34	516	514	533	528	532	426
35-59	388	392	364	403	400	476
60+	57	58	46	55	54	81

1.9 Literacy amongst workers

Table B-III in Part II A of this volume, shows industrial classification of workers by different educational levels both in rural and urban areas separately. Both the rural male and female workers of this district seem to be higher in attainment of literacy than their counterparts in other areas of the State of West Bengal. Amongst the rural workers of Howrah about 55 out of every one hundred are literate. In the State of West Bengal as a whole the extent of literacy amongst the working population is seen to be limited within 34 persons for every one hundred of their total number. Amongst the male workers living in the villages of Howrah about 57 per cent are literate but amongst the female workers of the rural Howrah illiteracy is very much marked where 90.90 per cent of the total female workers are illiterate. Only 37 out of every one hundred working men in the rural areas of the district are literate without having attained any educational level, about 16 of them passed primary or junior basic examination and only 37 amongst one thousand working rural men have passed the Matriculation examination. Majority of the literate working women living in the villages are just literate. More of the illiterate workers, as is expected, are generally engaged in the agricultural sector. A good number of them are also engaged in manufacturing industries, in other services, in household industries and trade and commerce, obviously as various categories of labourers.

Spread of literacy amongst the urban working force is lower in the district of Howrah than in the State of West Bengal taken as a whole. In Howrah 59.07 per cent of the urban workers are literate, whereas in the State 63.32 per cent of the urban workers are literate. Amongst the male urban workers 39·66 per cent are illiterate against the State percentage of 35. Amongst the females 76.06 per cent of the urban workers are illiterate in this district, whereas in the State, for every 10 females at work 7 are illiterate. Majority of the literate working men and women are without any educational level and also a fair proportion of them have passed the primary or junior basic examination.

1.10 Secondary occupation

In 1961 Census the entire population were classified by nine broad industrial categories of workers according to a person's principal work. In case of a person engaged in more than one activity, the work in which he spent most of his time was considered to be his principal work, and what occupied his second most time was considered the secondary work of that person. Table B-VII in Part II A of this volume gives information on such secondary work.

Amongst the cultivators of Howrah 29.05 per cent have a secondary occupation. Most of them are secondarily engaged in the agricultural fields as labourers (27.07 per cent). Only 1,784 (1.99 per cent) cultivators of Howrah are engaged in household industries in addition to their principal occupation. 21.64 per cent of the total agricultural labourers of this district have a secondary occupation, mostly being engaged as cultivators (21.51 per cent) and only 76 (0.13 per cent) at household industry. Of those primarily engaged in household industries, 9.40 per cent have a secondary occupation, mostly as cultivators (7.49 per cent) and a few (1.92 per cent) as agricultural labourers. The persons who are primarily engaged in various non-agricultural and non-household industries like manufacturing, trade and commerce, transport, construction, other services etc., have, by a negligible proportion, some secondary occupation in the household industry.

2. NON-WORKING POPULATION

In the 1961 Census returns 69.12 per cent of the total population of the Howrah district have reported themselves as non-workers. The corresponding figure

for the State of West Bengal as a whole is 66.84 per cent. The male non-workers and the female non-workers separately account for 46.28 per cent amongst males and 97.37 per cent amongst females respectively in the district of Howrah, as against 46.02 per cent and 90.57 per cent in the State. The variation between the percentage ratio of male non-workers and female non-workers both in rural and in urban areas is striking. The statement below gives the percentage distribution of total male and female non-workers to total persons, total males and total females respectively for the district and the State for total, rural and urban areas separately.

STATEMENT 10.8

State/District	Total Rural Urban	Percentage of Non-workers to Total		
		Persons	Males	Females
1	2	3	4	5
West Bengal	T	66.84	46.02	90.57
	R	67.33	46.53	89.38
	U	65.34	44.62	94.88
Howrah	T	69.12	46.28	97.37
	R	73.20	50.15	97.73
	U	63.12	41.47	96.72

In the working age-group 15-59 amongst males, those who are not engaged in any productive activity and thus have been shown as non-workers in the Census 1961, form about 13.62 per cent only of total male population of the same age-group in the rural areas of the district of Howrah. Amongst females majority about 96.06 per cent of total female population in the working age-group 15-59 are not in the working force. The corresponding figures for male and female non-workers in the same age-group are 17·19 per cent and 94.40 per cent in the urban areas of the district. It shows that the percentage of female non-workers of the workable age is much higher than that of the male non-workers both in rural and urban area. The unusually high percentage of the female non-workers is mainly due to the fact that most of the female non-workers of the workable age are engaged in household duties. The female non-workers of workable age engaged in household duties form 88.24 per cent and 78.61 per cent of the total female non-workers in the age-group 15-59 in rural and urban areas respectively. The percentage of male non-workers in the workable age seeking employment for the first time and of those employed before but now out of employment and seeking work together accounts for 30.57 per cent and 39.24 per cent of the total male non-workers of the same age in rural and urban areas respectively as compared to 0.04 per cent and 0.67 per cent for the corresponding female non-workers.

In the age-group 0-14 the participation in the working force should be the least. This is more so in the urban areas, where 98.00 per cent of the boys and about 99.91 per cent of the girls between the age 0-14 are non-workers. Most of the members of the young folk of the age-group 0-14 in urban areas are school going, while in rural areas a significant number of young people belonging to age-group 0-14 are found to be engaged in agricultural pursuits. The following statement shows the percentage of non-workers in different age-groups to total males and females separately for the different age-groups.

STATEMENT 10.9

Age-group	Percentage of Non-workers to Total			
	Rural		Urban	
	Males	Females	Males	Females
1	2	3	4	5
Total	**50.15**	**97.73**	**41.47**	**96.72**
0-14	97.89	99.88	98.00	99.91
15-34	19.40	97.11	22.68	95.83
35-59	5.00	94.34	8.04	91.57
60+	29.43	96.38	51.42	96.52

In the urban areas of the district the unemployed persons having educational attainment of Matriculation or Higher Secondary and above constitute only 12.90 per cent of the total unemployed in urban areas as compared to 8.65 per cent formed by the unemployed persons in rural areas having the educational level of Matriculation or Higher Secondary and above. The maximum number among the unemployed is found as illiterate in urban areas of the district of Howrah. This category alone forms 32.17 per cent in the urban areas. Next come literate persons without educational standard who constitute 31.79 per cent of the total unemployed in the urban areas of this district. The rest of the unemployed persons (23.14 per cent) are in the primary or junior basic level.

The Maximum unemployed persons who are literate without educational level, among the total unemployed are found in the rural areas of the district of Howrah. These persons constitute 34.50 per cent in the rural areas. The male unemployed persons having educational level of Primary or Junior Basic, are 33.09 per cent as against 23.63 per cent illiterate unemployed males in the rural areas. Unemployed males with educational standard of Matriculation and above constitute only 8.43 per cent. Literate (without educational standard) unemployed males account for 34.85 per cent in the rural areas. But the picture in respect of the unemployed females is quite different from that of the unemployed

males. 61.27 per cent of the total unemployed females in rural areas are illiterate.

The distribution of one thousand non-workers according to the 8 types of activities of the non-workers show that the largest number of male non-workers are found to be dependants, infants or disabled. More number of female non-workers are found as engaged in household duties and next as dependants, infants or disabled. The number of female non-workers who are full time students or children attending school, both in rural and urban areas, are far less than such male non-workers. Again the number of full time students or children attending school both for males and females in urban areas is, as it should be, higher than that in rural areas. The number of male unemployed persons both in rural and urban areas is also more significant than such female unemployed persons of this district. The following statement showing distribution per thousand of non-workers according to different types of activities will give a clear idea about the non-workers.

STATEMENT 10.10

Type of activities of Non-working Population	Total		Rural		Urban	
	Ma-les	Fe-males	Ma-les	Fe-males	Ma-les	Fe-males
1	2	3	4	5	6	7

0—Nil

LITERACY AND EDUCATION

1. Progress of Education

The progress of education in the district can be viewed more rationally from a study of the Census figures in respect of attainment of literacy by the people of the district. In Census 1961, the enumerator was instructed to record a person as illiterate if that person could neither read nor write or could merely read but was unable to write in any language. A person who could both read and write with understanding, was treated as literate. The test for reading was ability to read any simple letter in print or in manuscript. The test for writing was ability to write a simple letter. If a person could both read and write and also had passed a written examination or examinations as proof of an educational standard attained, the highest examination passed by the person was recorded in the enumeration slip.

In the district of Howrah only 369 persons for every one thousand of its population have passed the test for literacy in the Census of 1961. Compared to other parts of the State, this district has all along been carrying a glorious tradition of remaining above the State average in respect of literacy. On the results of 1961 Census Howrah occupies the second place amongst the districts of West Bengal in terms of literacy amongst population. In the State of West Bengal as a whole only 293 persons out of every 1,000 population have the rudiments of learning. As regards individual districts, Calcutta is *facile princeps*, 593 out of every 1,000 having sufficient knowledge to pass the Census test. The districts of Hooghly and 24-Parganas have occupied the third and fourth position respectively in so far as literacy is concerned.

If literacy amongst male population is considered, it is seen that Howrah occupies the second position after Calcutta. For every ten literate men only four women of Howrah are literate. Amongst the menfolk 48.41 per cent of their total male population living in this district are literate, against the State literacy figure of 40.08 per cent amongst males. The womenfolk of Howrah though not at par with their male counterparts in attainment of literacy, evidently seem to be quite advanced as compared to other parts of the State. Howrah's womenfolk occupy the second position in the State after Calcutta in so far as literacy is concerned. 22.67 per cent of the total female population living in this district have known the rudiments of learning. In the State of West Bengal as a whole the percentage of literates amongst females is only 16.98.

In the last Census of 1951, 29.48 per cent of the total population living in the district of Howrah were literate. In the State of West Bengal as a whole the percentage of literates was only 21.5 in the last Census of 1951. It is observed that at the turn of the present century 11.52 per cent of the total inhabitants in the district of Howrah were found to be literate. Amongst the menfolk, the percentage of literates was 21.18. Amongst the women, literacy and education was a far cry at that time. Only 12 out of every 1,000 of total women living in Howrah district were literate in 1901. There was appreciable progress of literacy with the passing out of one decade, as the Census figures of 1911 point out. A little more advancement was noticed in 1921. In 1931 improvement was more pronounced amongst the womenfolk of Howrah in showing a better trend of literacy. In that year 7.50 per cent of the total women of Howrah district were seen to have known the art of reading and writing with felicity. In the next decade Howrah's population became literate by a better proportion. From 18 per cent in 1931, the percentage of literates became 25.86 in 1941. Remarkable advancement was particularly noticed amongst the males of this district to take up education. In 1941, 36.71 per cent of the total male population living in Howrah district became literate. In 1951 the people of Howrah could not make any commendable progress in respect of literacy and education. The percentage of male literates in 1951 was only 40.45. Amongst the women, 15.48 per cent of the total women living in this district in 1951 were found to be literate. In the present Census of 1961 both males and females of this district have shown a commendable progress in taking up of education and attainment of literacy. The statement below gives the percentage of literates amongst total population and separately for males and females in the district for each of the census decades during the last sixty years.

STATEMENT 11.1

Year	Percentage of Literates since 1901		
	Persons	Males	Females
1	2	3	4
1961	36.91	48.41	22.67
1951	29.48	40.45	15.48
1941	25.86	36.71	11.99
1931	17.99	26.75	7.50
1921	14.94	25.19	3.06
1911	14.21	24.83	2.31
1901	11.52	21.18	1.19

In the rural areas of the district 297 persons per *mille* are literate. Ten years back only 240 persons per every 1,000 of the rural population were literate. Amongst menfolk literacy has gone up from 36.64 per cent in 1951 to 43.81 per cent in 1961. In the entire State of West Bengal literates amongst the rural males are only 32.86 per cent. In 1951 only 9.85 per cent of the women living in the villages of Howrah were literate. One decade gone by this percentage has fairly increased itself. 14.58 per cent of the rural female population are found to be literate in the present Census. Female literacy in rural areas, taking the entire State into consideration is seen to be limited only to 97 women for every 1,000 of their total number.

Education is, as might be expected, far more widely disseminated amongst the urban than rural population. Urban literacy has been increasing from decade to decade. In the last decade it was 41.60 and in the present Census it has become 47.58. Amongst the males living in the urban areas of Howrah district the percentage of literates is 54.16. Ten years back their percentage was 47.44 only. Amongst the womenfolk living in various towns of the district 374 for every 1,000 of their total number have returned themselves as literate in 1961. A decade before, their proportion was only 315 for every 1,000 of their total number. Howrah's urban centres being mostly industrial in character, urban literacy of the district is not as bright as is observed in the urban areas of the State taken as a whole. People living in the villages of Howrah district have given a fairer account than their urban counterparts in attainment of literacy in comparison to other parts of the State of West Bengal as a whole. The statement below will show percentage of literates amongst persons, males and females in rural and urban areas separately for the district as well as for the State.

STATEMENT 11.2

State/District	Rural Urban	Percentage of Literates		
		Persons	Males	Females
West Bengal	R	21.64	32.86	9.73
	U	52.89	59.59	43.33
Howrah District	R	29.65	43.81	14.58
	U	47.58	54.16	37.37

2. Literacy for different Administrative Units

Amongst the two subdivisions of the district, Sadar subdivision has shown a fairer account in respect of attainment of literacy amongst its people. In the Sadar subdivision 42 out of every 100 persons are literate. Every 3 out of 10 persons are found to be literate in the Uluberia subdivision. The urban influence has played a good role in showing such a high percentage of literates in these two subdivisions. 50.66 per cent of the total male population and 29.83 pet cent of the total female population living in the Sadar subdivision are found to be literate.

Amongst the police stations of the district, Howrah city containing the headquarters town of Howrah municipality in it, has shown the highest literacy figures in the district where 516 persons per *mille* are literate. Howrah municipal town being mostly a residential one and being classed as an industrial town has shown quite a high percentage of literates amongst its inhabitants. Every alternate man of this town 'has' claimed to be literate in 1961 Census. Bally police station of the Sadar subdivision has also given a fair account of literacy, where 48.31 per cent of its people are literate. Jagacha and Bawria police stations containing a chain of non-municipal towns are also the abodes of a fairly high number of literate and educated persons. In Jagacha police station, the percentage of literates is 43.92. In Bawria police stations, 35.06 per cent of its people living in this police station are found to be literate. The non-municipal towns within the jurisdiction of Jagacha police station show a percentage of literates as 43.75. In the non-municipal towns of Bawria police station the literacy figure is 37.46 per cent of its people living in these towns. A chain of organised industries are located within the municipal and non-municipal limits of some of the towns in Howrah Bally, Jagacha and Bawria police stations of the district. This chain of towns being within a very easy reach to the city by train and other means of conveyance, has been chosen by many people working in Calcutta and its suburbs as their place of residence. These men are mostly workers at the desk in various Government and non-Government organisations. Most of them are literate. On the other hand the industrialised towns of Sankrail, Panchla and Uluberia police stations are mainly dwelling places of many illiterates millhands. This is precisely the reason for which in the urban areas of Sankrail police station, the percentage of literates is only 30.59 which is below the district urban average. In the urban areas of Panchla and Uluberia police stations, the percentages of literates are only 30.93 and 32.70 respectively. The statement below gives the percentage of literates by sexes in all the administrative units of the district.

STATEMENT 11.3

3. LITERACY BY AGE-GROUPS

In 1951 amongst the children of the age-group 5 to 14 only 25.90 per cent were literate in the district of Howrah. In 1961 this corresponding percentage of literates amongst the population in the age-group 5 to 14 is 34.44. In the rural sector 355 out of every 1,000 young boys of the age-group 5 to 14 are literate against the corresponding State figure of 289 only. Amongst the girls for every 1,000 of those within the age-group 5 to 14 only 208 are literate. In the age-group 15-34 only 226 out of every 1,000 females living in the villages of Howrah district, are found to be literate. Amongst the girls of rural areas maximum incidence of literacy is observed in the higher or working age-group 15 to 34 and in also the school going age-group 5 to 14 unlike the male population in which case steady rise in relative strength of male literates is observed as they advance in years. The explanation of this apparent anomaly is that the education among women being a development of comparatively recent times, the number of those who have been educated is naturally high among the younger generation. The next cause is that the education of a girl is generally stopped after her marriage due to her undertaking the duties of a housewife. The same phenomenon is also observed if the entire State is taken into consideration.

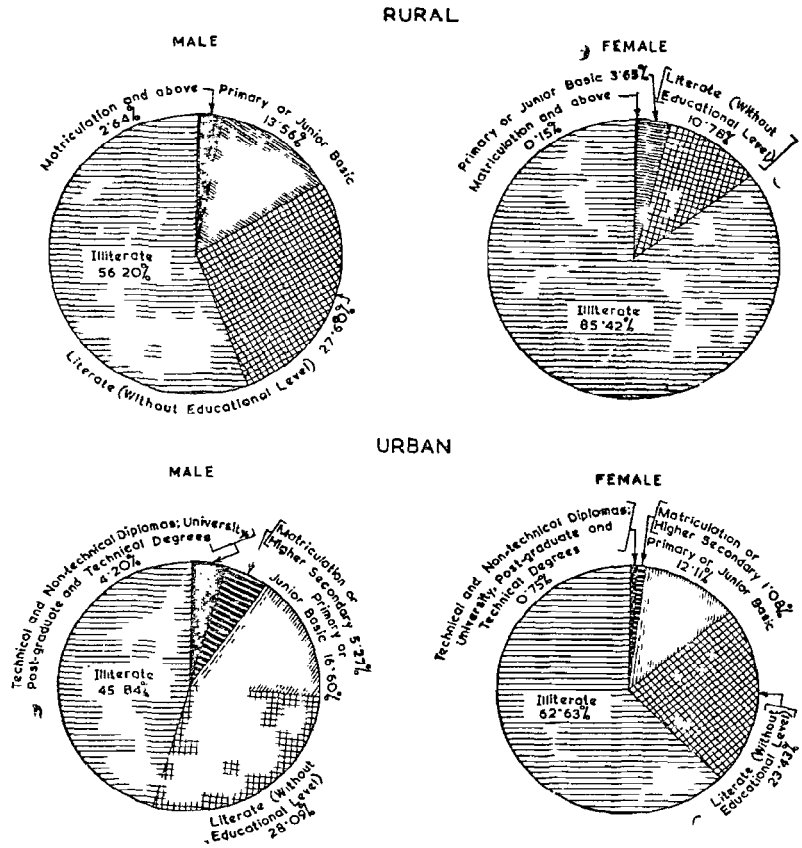

Amongst the menfolk, majority of the literate males are found in the age-group 15-34 which is precisely the working age-group. The percentage of male literates amongst the total males in the age-group 15 to 34 in the rural areas is as high as 63.1. In the urban areas their percentage is even higher being of the order of 64.2 per cent. In the urban areas literacy amongst womenfolk are more pronounced in the middle age-group, *i.e.*, 15 to 34. 50.8 per cent of the total females living in different towns of Howrah district in the age-group 15 to 34 are found to be literate. In the rural areas males belonging to the age-group 35 to 59 have given a fairer account in respect of literacy than those under age-groups 60 years and above, but in the urban areas the males above sixty years of age, have given a better account in so far as the literacy is concerned than those in the next below age-group 35 to 59. More or less the same trend is observed in the State of West Bengal as a whole in respect of literacy in the various age-groups. The statement below gives the distribution of the number of literate males and females per 1,000 of total male and female population of the district in different age-groups above 5 years of the age against the corresponding figures for the State of West Bengal as a whole.

STATEMENT 11.4

State/District	Age-group	Rural		Urban	
		Males	Females	Males	Females
1	2	3	4	5	6
West Bengal	All persons above 5 years	389	117	660	500
	5—14	289	144	572	498
	15—34	469	140	702	574

	60+	390	36	689	308
	Age not stated	197	32	302	145
Howrah	All persons above 5 years	517	174	599	435
	5—14	355	208	480	425
	15—34	631	226	642	508
	35—59	560	90	611	362
	60+	507	36	631	233
	Age not stated	318	78	161	222

4. Different Educational Levels

Table C-III in Part II A of this volume gives a distribution by different levels of education amongst the population of Howrah district in rural and urban areas separately. It is seen that amongst the rural population of Howrah, persons having just passed the test of literacy in Census 1961 and not having gone through any recognised written examination account for 27.60 per cent amongst the total male population. Amongst the females, literates without any educational level account for 10.78 per cent of the total rural female population. 136 men per *mille* living in different villages of Howrah district have passed the primary or junior basic examination. Majority of such men, are in the age-group 15-19 and next in the age-group 10-14. Amongst the rural female population of Howrah, one in every 27 has passed the primary or junior basic examination. 35.79 per cent and 54.92 per cent of the total women having passed the primary or junior basic examination are found in the age-group 5-14 and in the age-group 15-34 respectively. This evidently indicates that advancement of education amongst the females living in rural interiors, has been more pronounced since only recent years. Higher education has not very much disseminated amongst the villagers. Only 26 out of 1,000 menfolk living in different villages of the district have passed the matriculation or higher examinations. Amongst the females in the rural areas higher education is still a far cry. Only one amongst every 1,000 of female population living in the villages of Howrah district has claimed to have passed the Matriculation examination.

Amongst the persons living in different towns of Howrah district one in every 4 of the male population is literate but without having any educational standard. He can only read and write but has not passed any recognised written examination. Amongst the female population living in the urban areas of the district, it is seen that about 23.43 per cent of them have been classed as literate without educational level. Amongst the male population in this class more persons belong to higher age-groups, but amongst the female population more of such women are in the age-group 5-14 which account for a little less than one third of the total literate women having no educational level. 166 men per *mille* and 121 women per *mille* amongst the town dwellers of Howrah district have passed the primary or junior basic examination. 53 men and 11 women per 1,000 of total males and females living in urban areas of the district have passed the Matriculation or Higher Secondary examination. Amongst those having taken post-Matriculation higher studies, there are 42 men and 8 women for every 1,000 of the total males and females living in different towns of Howrah district. Quite a number of persons in this district are found to have taken different technical and non-technical diploma not equal to degree. There are 10,102 persons living in the urban areas of the district who have taken University degree or post-graduate degree other than technical degree. Amongst the technical degree holders a number of persons have taken degrees in engineering, medicine or in teaching. The diagrams given at page (58) illustrate the position of different educational levels amongst the people of Howrah in its rural and urban areas separately.

5. Primary Education

The Official Statistics presented in series 12 in Part IIB of this volume give a full account of the present position of various educational institutions in the district. Within ten years after the first Census was taken in the post Independance period, the number of primary schools in this district has nearly doubled itself. In 1951-52 the district had a total number of 835 primary schools with the student enrolment of 105,903. In 1960-61 the number of schools has become 1,440 and the number of students attending these schools has become 197,366 These figures include those for the junior basic schools. In 1960-61, there were 50 junior basic schools, with a student enrolment of 7,522. Thus the primary schools in this district in 1961 are 1390 with a number of 189,844 pupils. The number of schools directly managed by the Governemnt is 49 with 9,419 on the rolls. The District School Board and the different Municipalities of this district have been managing 69 number of primary schools having a strength of 152,254 students. 167 schools are under private management which have been receiving aids from the Governmet or from the District or Municipal Boards. This district has only 5 unaided schools.

In the Census year 1961 the number of students attending various primary and junior basic schools in the district have accounted for about 42.12 per cent of the total persons in the age-group 5-14. The male students have accounted for 50.42 per cent and the girl students for 33.04 per cent amongst the total male and female population of the district in the age-group 5-14 respectively. There are 5,407 primary school teachers of which 764 are female teachers in this district. Of them only 1,125 male and 189 female teachers are trained.

6. Secondary Education

The progress of secondary education in the district has been quite appreciable during the last decade. In 1951-52 this district had a total number of only 86 high schools with a number of scholars 34,939 only. At the passage of one decade in 1961 the total number of high and higher secondary institutions in the district has risen to 138. The student enrolment has gone upto 54,472. In the whole State of West Bengal the total number of high or higher secondary schools is only 1,957. The district 24-Parganas has the largest number of such schools (388).

Out of the total number of 138 schools, 82 are high schools and the rest 56 are higher secondary institutions. More number of students have preferred the higher secondary course to the school final examination. The students for higher secondary institutions are 28,944 in number against the student enrolment of 25,528 in the high schools. Of the higher secondary schools one institution is entirely under the management of the Government with a number of scholars 376 in this school. This school is in Howrah city. The rest 55 of the higher secondary institutions are under the private management but receive aids from the Government. Only 68 high schools of this district are aided, being under the private management. This district has 14 unaided high school.

There are 123 junior high schools in the district. The total number of the scholars reading in all these 123 junior high schools of the district is 12,058. There are 5 senior basic schools with a number of scholars 479 in this district. In the 128 middle schools, there are 627 teachers of whom only 46 are trained. Of the total number of 180 female teachers only 17 are trained.

There are 2,063 teachers in high and higher secondary schools, of whom 697 are trained. Of the 385 women teachers in the secondary schools, 185 are trained.

7. Higher Education

There are 16 schools imparting vocational and technical education to the students of the district of Howrah. These 16 schools teach a number of 2,178 students of whom 1,760 are boys and 418 girls. Altogether 182 teachers are engaged in teaching in all these 16 schools. Of these teachers only 29 are women.

The district has three teachers' training schools with a student enrolment of only 83, of which again ten only are girls. There is one teachers' training college in the standard of post-graduate education. This teachers' training college has a total number of 112 students, all male.

There are at present 7 colleges for general education with the student enrolment of 3,527 boys and 1,552 girls. Howrah has the distinction of having one of the best engineering colleges in the country. The Sibpur Engineering College has a total strength of 1,757 boys and 19 girls on its roll. A total number of 238 professors are employed in the colleges for general education of which 16 are women. There is a girls' college in the Howrah city. In the two colleges for professional education 155 teachers are engaged, of them only 5 are women.

In 1951-52 the number of scholars reading in the seven different colleges including the colleges for professional education in the district was only 2,450. In 1960-61 the number of college students have become 7,310.

NATIONALITY AND MIGRATION

1. Non-Indian Nationals

Most of the inhabitants of Howrah are Indian nationals. Only a total number of 1,217 persons enumerated in the district are non-Indian nationals. In 1951 the non-Indian nationals numbered about 20,130 in the district.

As per 1961 Census, majority of the non-Indian nationals are Nepali nationals in Howrah district. Their number is 829 in the present Census. In 1951 their number was 679. The Nepali nationals residing in Howrah district account for only 7.23 per cent of their total number in the State. There are 286 Pakistani nationals in the district. In 1951 there were nearly 18,000 Pakistani nationals in this district. The number of British nationals in the district is 25. They form only 0.60 per cent of the total British nationals in the State.

2. Migration

The fact that strikes most about the distribution of population over any region is its unevenness, its variation in density from place to place. Changes in the pattern of population distribution in a country are the product of two forces, (a) migratory movements and (b) variations in the rate of natural increase. The latter factor above, as has already been discussed in earlier chapters, in a country or in a region marked by rural-urban differentials in fertility and mortality would produce a considerable change in the pattern of population distribution. But where economic opportunities exist, migratory movements have a vital role in fixing the population distribution of the region. The 'laws of migration' set forth by E.G. Ravenstein state, (i) the bulk of migration move only a short distance, (ii) a city absorbs population by drawing most heavily on its immediate hinterland.

The sensitivity of internal migration for economic conditions can be inferred from the fact that urban population growth tends to be more rapid in prosperity than in depression. The 'pull' of urban employment opportunities is probably a more important cause of year to year variations in the rate of cityward migration than is the 'push' of rural population pressure.

As already stated, apart, from natural increase migration plays a predominant role in the growth of population in a region where urbanisation is taking place, and urbanisation is the result of rapid industrialisation and is a process of population concentration. People usually migrate from one place to another for higher wage rate, good economic opportunities and good land to settle.

The Census definition of migration must be clarified first. People in a particular region have been enumerated according to their place of birth and duration of stay in that particular region. The place of birth statistics regarding migrants will naturally be a crude measure of inflow and outflow of migrants. But in absence of any other reliable data, they will provide a good picture of the flow-pattern of the migrants and its impact on population growth.

The data on migration as processed in 1961 Census have been fully presented in Census of India 1961, Part II-C (ii), Vol. XVI, West Bengal and Sikkim. For want of space any such data could not be presented in this volume.

2.1 Place of birth

The data on migration have been broadly divided under two classes, (a) all time imigrants into Howrah district by place of birth (both rural and urban) and (b) inmigrants to and outmigrants from the Howrah district.

An extract Table D-II is given below showing all time inmigrants into the district of Howrah by place of birth (rural and urban).

STATEMENT 12.1

Total Migrants	Total	426,976	271,091	155,885
	Rural	77,153	33,244	43,909
	Urban	349,823	237,847	111,976

If the number of persons born anywhere in the district of Howrah as given in items I (a) and (b) in the statement above are excluded, it is revealed that the total number of inmigrants into Howrah district is nearly 427 thousand of which 271 thousand are males and a little less than 156 thousand are females.

2.2 *Migrants from other States*

Of those total inmigrants to the district of Howrah, 207,533 persons have come from other parts of India outside West Bengal. They make about 48.61 per cent of the total inmigrants to the district. Amongst all the States, Bihar's contribution to inmigration to the district of Howrah is the largest. Bihar has sent a little less than one lakh of people to the district of Howrah. They account for 48.1 per cent of the total inmigrants coming from other States of India. Uttar Pradesh has the second largest contribution. A little less than 61 thousand people born in Uttar Pradesh have been enumerated in the district of Howrah in 1961 Census. They make 29.33 per cent of the total inmigrants from other States of India. Orissa holds the third position in this respect. 11.59 per cent of such inmigrants have come from the neighbouring State of Orissa. Madras's contribution is of the extent of 2.61 per cent. The inmigrants coming from Rajasthan account for 1.78 per cent, those born in Andhra Pradesh form 1.67 per cent, the Punjab-born inmigrants form 1.65 per cent and the inmigrants from Madhya Pradesh account for 1.49 per cent of the total migrants from other States of India. The rest of other States have contributed to the extent of less than one per cent each.

Some scholars have expressed surprise and suppressed resentment at this rate of heavy inflow of migrants from other States of India to this part of the land. But actually there is no reason for surprise. It is a corollary of the economic opportunities provided by Calcutta Portland and its adjacent areas. The various organised industries located within the peripheral limits of the Calcutta Port commands a vast area extending all over Bihar, Uttar Pradesh, Madhya Pradesh, Orissa, Nepal and Assam. This has been effectively brought out by Asok Mitra in his 'Calcutta—India's City'.

The proportion of sexes amongst the total inmigrants in the district of Howrah, is seen to be 575 females per one thousand males. The females coming from Mysore have outnumbered their male counterparts. The sex ratio of the migrants coming from Mysore is 1,362. It is 908 for the persons coming from Andhra Pradesh. For every one thousand males coming from Tripura, 879 females have come to this district. The sex ratio for the migrants coming from Rajasthan is 808. It is 679 for Assam and 616 for Madras. The sex ratio for the migrants coming from Delhi is 597. The proportions of sexes for those born in Punjab, Gujarat and Maharashtra, but enumerated in the district of Howrah are 458 females, 383 females and 379 females for every one thousand each of their males respectively. For Madhya Pradesh it is 354. For every one thousand males coming from Bihar, only 273 females have come to this district. The sex ratio for the migrants coming from Kerala is 254 only. From Uttar Pradesh 253 females for every one thousand males have come to Howrah district. The sex ratio is least amongst those coming from Orissa, in which case the sex ratio is only 159.

2.3 *Inflow and outflow by other districts*

The inmigrants coming from other districts of West Bengal are 133,403 in number. Of the total number of 426,976 all time inmigrants into the district of Howrah, they comprise about 31.2 per cent. The statement below gives an idea of the extent of inmigration into and outmigration from the district of Howrah by other districts of the State.

STATEMENT 12.2

Name of District	Inmigrants	Percentage of inmigrants from different districts	Outmigrants	Percentage of outmigrants to different districts	Net Migrants

Bankura	4,289	3 22	2,116	1.11	2, 73
Midnapore	15,991	11 99	18,062	9 49	— 2,071
Purulia	1,153	0.86	1,124	0, 59	1 29

Of the total inmigrants into this district from other districts of West Bengal, 24-Parganas contributed the highest, 31,607 persons, comprising 23.69 per cent. Hooghly comes next with 21.26 per cent. The percentage figures from the districts of Calcutta, Midnapore and Burdwan are 13.81, 11.99 and 7.53 respectively. It is observed, therefore, that most of the inflow of migrants into the district of Howrah being restricted to the above-mentioned districts, it only substantiates the, 'laws of migration', already stated. Now coming to the case of outflow, it is seen that because of heavy pull factor in the districts of Calcutta, 24-Parganas, Hooghly, Midnapore and Burdwan, emigrants from the district of Howrah outnumbered the immigrants. It is also observed that the figures of out-migrants to other districts of the State, are greater than that of inmigrants into this district coming from other districts of the State. The net emigratorial increase is 56,853 persons. Each district of the State of West Bengal has a contributing factor in increasing the total population of Howrah district but for the five districts, *viz.*, Calcutta, 24-Parganas, Hooghly, Midnapore and Burdwan, which, being a tremendous attracting centres of economic opportunities have dragged away more people as against pushing them into the district of Howrah.

The influx of immigrants and outflow of emigrants from the contiguous districts can be seen from the following statement.

STATEMENT 12.3

	Inmigrants	Percentage	Out-migrants	Percentage	Net Migrants	Percentage
Contiguous District (*including* Calcutta)	94,383	70.75	166,064	87 28	71,681	126.08
Other Districts	39,020	29 25	24,192	12.72	+ 14,828	26.08

Of the total inmigrants, 94.383 persons (70 75 per cent) came from the contiguous districts, including Calcutta. But the percentage for emigrants is even greater about 87.3 (166,064 Persons). Here the contiguous districts mean the districts of Calcutta, 24-Parganas, Hooghly and Midnapore.

Does it tend to show that pressure on agriculture has been reaching the maximum? A considerable bulk of the working force being rejected by agricultural is gradually attracted towards industrial employment. This view has been further seconded by an analysis of the economic activities of the inmigrants into the district later in this chapter.

STATEMENT 12.4

SEX RATIO OF MIGRANTS IN AND FROM THE DISTRICT OF HOWRAH FROM AND TO OTHER DISTRICTS OF THE STATE OF WEST BENGAL

(*Females per 1,000 males*)

District	Inmigrants			Outmigrants		
	Rural	Urban	Total	Rural	Urban	Total
Darjeeling	3,647	1,444	1,516	2,545	4,056	3,800
Jalpiguri	2,018	1,406	1,464	1,368	1,483	1,440
Cooch Behar	4,224	1.167	1,328	632	304	337
West Dinajpur	1,500	1,055	1,073	3,484	2,043	287
Malda	12,737	998	1,209	794	3,128	2,041
Murshidabad	2,945	788	1,005	2,798	779	1,128
Nadia	2,563	1,067	1,191	824	1,127	1,010
24-Parganas	3,503	888	1,334	1,554	788	987
Calcutta	1,339	1,015	1,092	..	568	568
Hooghly	6,659	757	1,861	4,052	973	2,580
Burdwan	3,444	780	969	1,588	804	1,120
Birbhum	3,659	1,322	1,561	947	857	891
Bankura	2,868	996	1,176	2,274	792	1,622
Midnapore	1,998	636	1,055	4,054	855	2,858
Purulia	1,114	1,080	1,085	1,109	1,251	1,166

On an analysis of the sex ratio of inmigrants and out-migrants of Howrah district by different districts of West Bengal, it is observed that there is a preponderance of females for both rural and urban areas. Though mobility of population is generated through economic opportunities and consequently age-sex-selective migration takes place, the high number of female migrants (in and out) can be accounted for marriage. Of course, the shift of the male population is mainly due to seeking employment in other places.

2.4 Economic activities of the migrants

Participation in any economic pursuit by the migratory population is, as expected, higher in proportion than that by the people in general in the district of Howrah. Every 496 persons per *mille* among the inmigrants into the district of Howrah have been returned as workers in 1961 Census and the remaining 504 persons as non-workers. But in the district of Howrah only 309 per *mille* of its general population have been classed as workers and the rest of 691 persons have been recorded as non-workers. Amongst the male migrants, participation is also higher than that of general males in this district. Labour participation ratio among male migrants in the district of Howrah is 74.79 against the percentage of workers among general males is 53.72 only. Amongst the female migrants of Howrah 5.68 per cent of those born outside the district have been classed as workers, while participation by general females at work in this district is of the extent of 2.63 per cent only.

Majority of the working inmigrants of this district are engaged in various manufacturing industries. 50.93 per cent of the total working inmigrants are engaged in manufacturing industries. Amongst their males at work 51.22 per cent are found to be engaged in manufacturing. 44.25 per cent of the female migrants at work have been engaged in manufacturing.

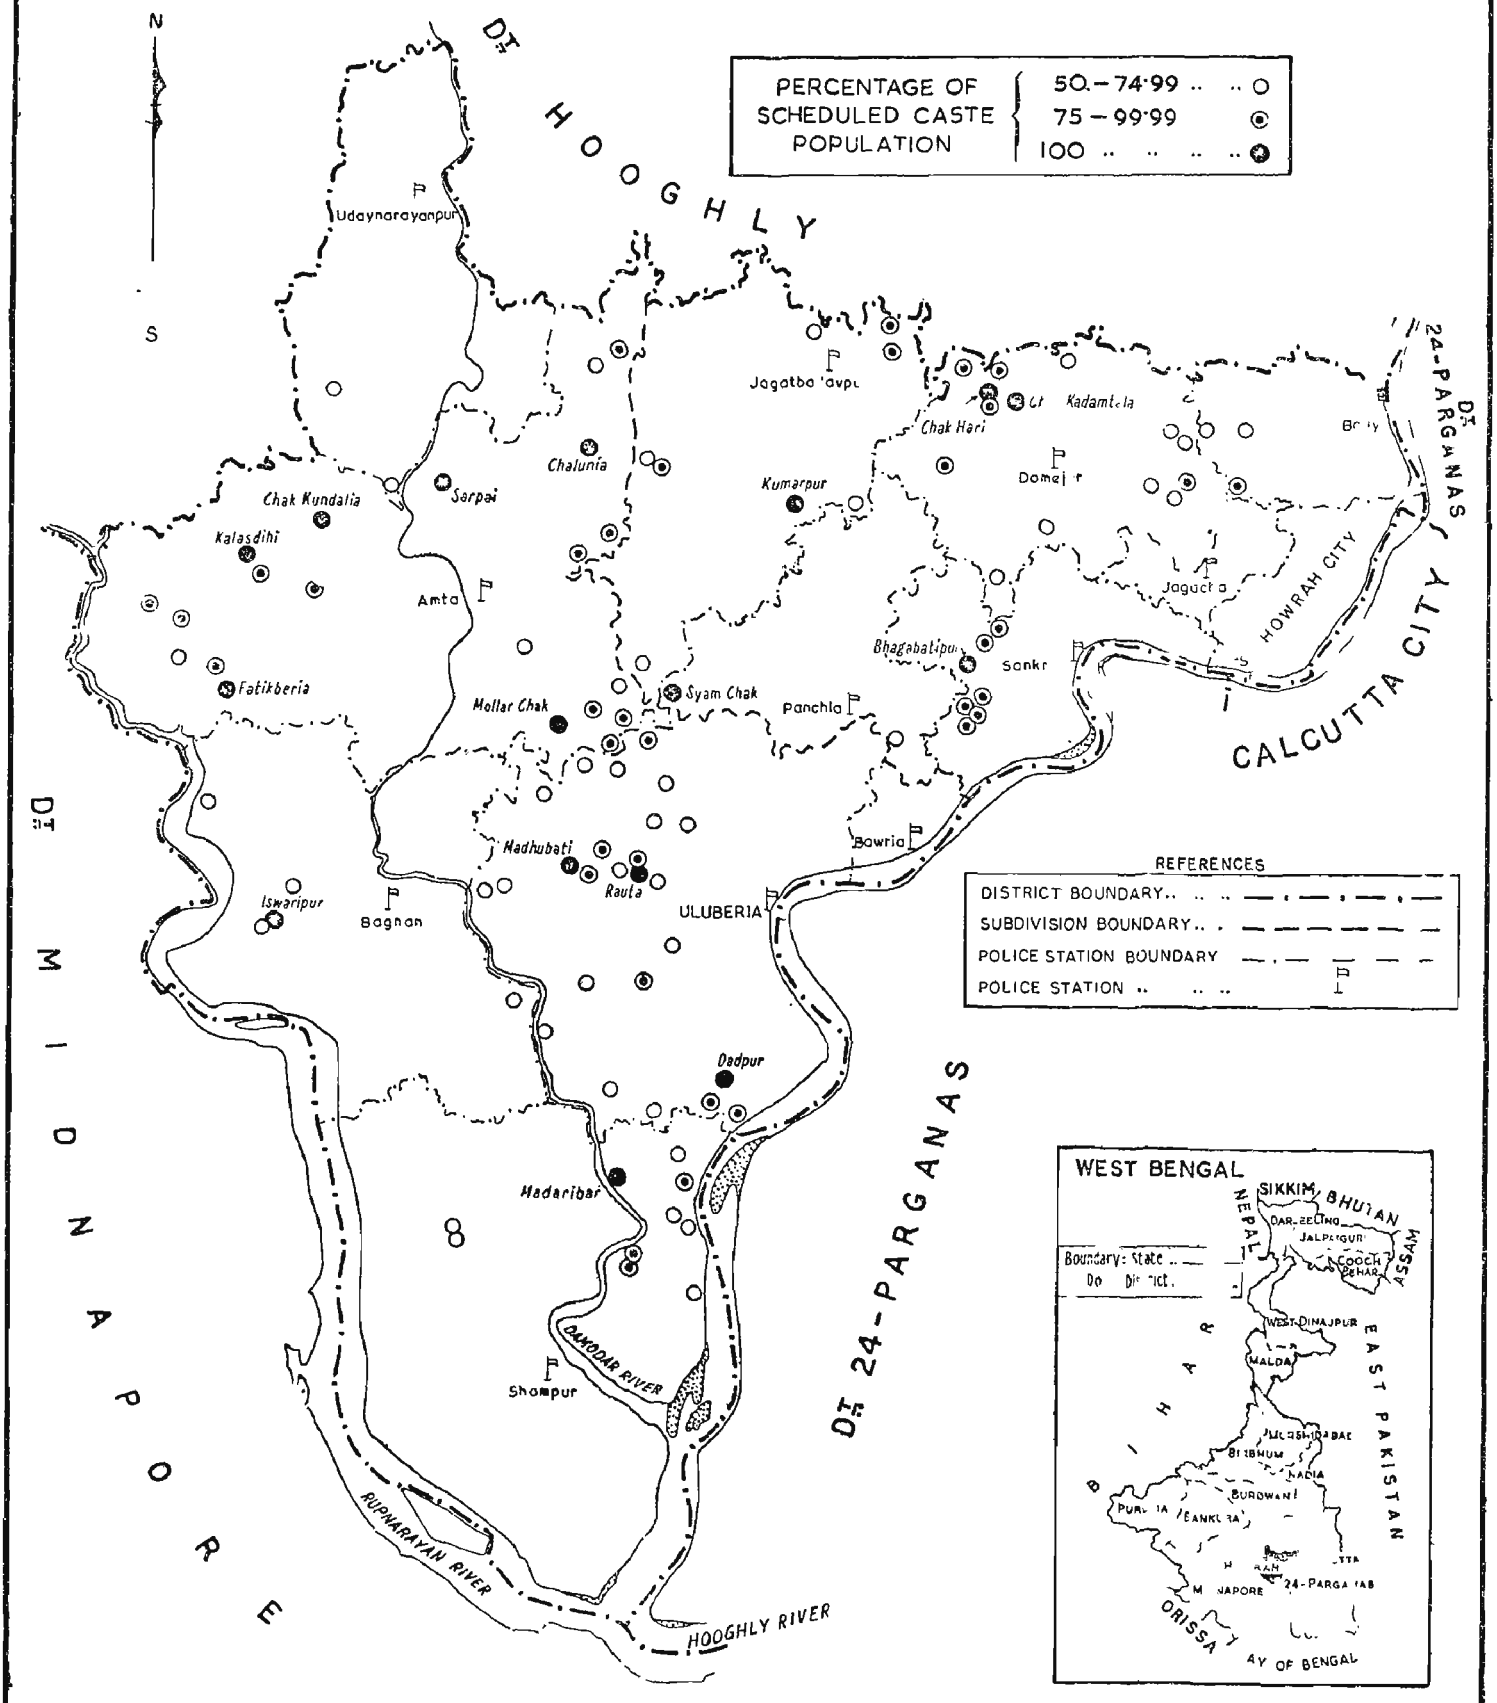

2.04 per cent of the women workers among the inmigrants are engaged as cultivators and 1.41 per cent of them as agricultural labourers. Amongst the male migrants, the percentage of workers engaged as cultivators and agricultural labourers are 0.48 and 0.85 respectively. So it is observed that in the agricultural sector, participation by the female migrants at work is higher than that of their male counterparts.

In household industries, female labour participants among the inmigrants are more pronounced than their male components. 5.08 per cent of the female migrants at work have been engaged in household industries, while this percentage among the migratorial male workers is only 0.63. Participation is least in mining and quarrying. Only 0.48 per cent of the total working inmigrants are engaged in mining and quarrying. 2.26 per cent of them are engaged in construction. In construction participation by female labour participants among the inmigrants has been to a lesser extent than that by their male components. While 2.31 per cent of the male migrants at work are engaged in construction, among the migratorial female workers this percentage is only 1.06. In transport and communications female participation is also least, only 2.23 per cent of them being engaged in this sector of industry. Male migrants at work are engaged in transport and communications by 12.55 per cent.

Nearly 3 male workers out of 20 male migrants at work in this district are found to be engaged in trade and commerce. A little less than 7 per cent of the migratorial female workers are engaged in trade and commerce. In other services the proportion of workers among inmigrants is quite high. 17.64 per cent of them are engaged in other services. In other services, proportion of female workers among inmigrants is much higher than that of their male workers. Amongst the female workers belonging to inmigrants, participation in other services is marked by a percentage of 36.78, while this percentage among the male migrants at work is only 16.81.

LOCATION OF VILLAGES PREDOMINANTLY INHABITED BY SCHEDULED CASTES, 1961

S. N. GANGULI.

SCHEDULED CASTES AND TRIBES

1. Scheduled Castes

From the first Indian regular Census of 1872 caste and tribe denominations of the population have been regularly recorded till 1941, though variations exist in the extent of detailed tabulation. 'Beverley's Report of 1872 is a pioneer and painstaking study of the castes'. In 1881 the statistics relating to 66 castes having a population of not less than hundred thousand were tabulated for every district of Bengal. In the Census of 1891 every caste having a population of more than one thousand in any district was tabulated down to the thana.

In 1901 Risley, then Census Commissioner of India, attempted for the first time to classify the Hindu castes according to their social standing. This according to Mitra (Preface to the Tribes and Castes of West Bengal, 1951), resulted in 'incidentally sowing the dragon's tooth of depressed and scheduled tribes and castes.' Risley's monumental 'Tribes and Castes of Bengal' was published in 1891, which, in fact, determined the fate of the next three Censuses. 'This apparently limitless and everwidening horizon was, however, circumscribed in 1911 with the confining of tabulation only to those castes which subscribed 50,000 or more to the population of the Province or 25,000 to the population of a district, and to those others of special local importance or ethnological interest.' The Census of 1921 seems to have paused for breath. In 1931, 141 castes and tribes were tabulated districtwise. In 1941, the scheduled castes were defined by the Government of India Orders of 1936 based on the Government of ndia Act, 1935. This list contained the names of 62 scheduled castes and 14 scheduled tribes but in the Census a total of 118 castes and 17 tribes, scheduled as well as unscheduled were tabulated down to the district. For the first time castes, as such, were not recorded in the Census of 1951. The caste or tribe of a person was entered if he belonged to the scheduled castes or scheduled tribes or backward classes.

The recording of castes for the general population was dispensed with in the 1961 Census also. The caste or tribe of a person was only entered in the individual slip if a person belonged to any scheduled caste or scheduled tribe, the names of which have been listed by the President of India as belonging to the scheduled castes and scheduled tribes in the appropriate order passed by him under the Constitution of India. A list of the scheduled castes and scheduled tribes for the State of West Bengal has been given in the Preface to the II A, General Population Tables, Census 1961, Volume XVI, West Bengal and Sikkim. In better fulfilment of the Constitutional responsibilities a more detailed tabulation of the data relating to the scheduled castes and scheduled tribes have been undertaken in this Census. The collective population of the scheduled castes and scheduled tribes for individual villages in any police station of the district have been shown in the Village Directory in Part III of this volume. Other tables of significance have been given in the SCT series in Part II A of this volume. The Census of India 1961, Volume XVI, Part VA, Special Tables for Scheduled Castes and Scheduled Tribes for West Bengal will give a more elaborate picture of the different aspects of the people belonging to the scheduled castes and scheduled tribes in the different districts of West Bengal.

1.1 Concentration of Scheduled Castes

The scheduled caste population inhabiting the district of Howrah comprise 14.71 per cent of its total population. This percentage is lower than the State average. In the State of West Bengal almost every fifth person belongs to a Scheduled Caste. In the rural sector of the district, 19.41 per cent of its people are scheduled castes as against the State rural average of 23.6 per cent. In the urban sector of the district, the percentage of scheduled caste population is almost the same as in the urban areas of the State. In the State only 7.9 per cent of the urban population are scheduled castes, whereas they make 7.79 per cent of the urban population of the district of Howrah. Of the total scheduled castes in the State as a whole, those living in this district account for only 4.35 per cent. This percentage is 3.79 in respect of rural areas and 9.55 in respect of urban areas.

Amongst the male population of the district 14.12 per cent are scheduled castes and amongst the females their percentage is 15.44. In the rural sector 19.25 per cent of the male population have returned themselves to be belonging to the scheduled castes and amongst the females their percentage is 19.57. In the urban areas of the district 7.71 per cent of the male population are scheduled castes, whereas amongst the females their percentage is 7.92. The male population amongst the scheduled castes of this district account for 4.42 per cent of the total male scheduled castes in the entire State of West Bengal. In case of females this percentage is 4.27

In the rural and urban sector the male population amongst the scheduled castes of this district account for 3.75 per cent and 9.96 per cent respectively of the total male scheduled castes in the rural and urban areas of the State. In the case of females in the rural areas they comprise 3.82 per cent and in the urban areas 9.00 per cent.

The scheduled castes are almost equally distributed among the two subdivisions of the district. In the Sadar subdivision of this district they account for 49.67 per cent of the district's total scheduled caste population. 50.33 per cent of the total scheduled castes of the district live in Uluberia subdivision.

Amongst the police stations maximum concentration of the scheduled castes is found in Uluberia police station in Uluberia subdivision. 16.09 per cent of the total scheduled castes of the district are found in Uluberia police station. Amta police station of Uluberia subdivision comes next in order of habitation of the scheduled castes in the district. This police station accounts for 13.19 per cent of the total scheduled castes of the district. The third position goes to Sankrail police station of the Sadar subdivision, where this percentage is 12.77. Domejur polic estation of Sadar subdivision ranks fourth accounting for 8.75 per cent of the total scheduled castes of the district. Nearly 51 per cent of the total scheduled castes of the district are accounted for by these four police stations. Shampur police station of Uluberia subdivision, Howrah City of Sadar subdivision and Jagatballavpur police station of Sadar subdivision each accounts for more than 7 per cent of the total scheduled castes of the district. Next in order comes Bagnan police station of Uluberia subdivision, where this percentage is 6.60. In Panchla and Bally police stations of Sadar subdivision, they comprise 5.83 per cent and 5.54 per cent respectively of the district's scheduled caste population.

4.59 per cent of the scheduled caste population of the district reside in Udaynarayanpur police station of Uluberia subdivision. In Jagacha police station of Sadar subdivision this percentage is 2.11. About 2 per cent of the district's total scheduled castes are found to live in Bawria police station of Uluberia subdivision. Sibpur police station of Sadar subdivision accounts for less than 1 per cent of the total scheduled castes of the district.

The following statement gives the percentage of scheduled caste population to total population of the police stations and other administrative units of the district of Howrah.

STATEMENT 13 1

District/Subdivision/Police Station	Percentage of Scheduled Castes
HOWRAH DISTRICT	**14.71**
Sadar Subdivision	*12.68*
Bally (Outside Howrah City)	10.76
Howrah city (including Howrah, Bantra, Malipanchghara, Golabari and parts of Sibpur and Bally Police Stations)	4.36
Sibpur (Outside Howrah City)	25.94
Jagacha	11.10
Sankrail	30.72
Panchla	18.79
Jagatballavpur	20.45
Domejur	20.61
Uluberia Subdivision	*17.47*
Bawria	14.00
Uluberia	23.82
Shampur	13.85
Bagnan	12.68
Amta	19.06
Udaynarayanpur	16.22

1.2 Strength of Individual Scheduled Castes

Bagdi or Duley forms the major scheduled caste in the district of Howrah. This caste forms 31 per cent of the total scheduled castes of the district. In the rural areas this caste accounts for 35.75 per cent of the total rural scheduled caste population of the district. Numerically Pod or Poundra comes next to Bagdi or Duley. In the villages of Howrah 14.92 per cent of the total rural scheduled castes of the district belong to the Pod or Poundra community. Next to the Pods or Poundras, Rajbanshis have the largest share among the rural scheduled castes of the district. In the rural areas of the district, 13.98 per cent of the total rural scheduled castes of Howrah are Rajbanshis. Namasudra and Kaora are next in order in the rural sector in terms of numerical predominance. They form 9.25 per cent and 6.57 per cent respectively of the total rural scheduled castes of the district. Next place goes to the Jalia Kaibarttas and they account for about 4.62 per cent of the total rural scheduled castes of the district. Numerically Dhobas or Dhobis and Chamars are next in order in the rural sector. They form 3.39 per cent and 2.35 per cent respectively of the total rural scheduled castes of the district. Tiyars, Karengas or Korangas, Sunris *excluding* Saha and Haris account for more than one per cent each of the total rural scheduled caste population. All other castes account for even less than one per cent of their total number in rural Howrah.

In the urban areas of the district of Howrah also Bagdi or Duley community forms the major scheduled caste. Bagdis or Duleys account for 13.61 per cent of the total urban scheduled castes of the district. Chamars occupy the next position. They account for 11.92 per cent of the total urban scheduled caste population. Next place goes to the Dhoba or Dhobi community and this caste accounts for 5.51 per cent of the total urban Scheduled castes of the district. Kaoras, Mehtors and Rajbanshis also account for more than 5 per cent each of the total urban scheduled caste population of the district. Pod or Poundra community comes next in position. This caste accounts for 4.91 per cent, Namasudras 4.26 per cent, Jalia Kaibarttas 2.94 per cent and Sunris *excluding* Sahas account for 1.29 per cent each of the total scheduled castes living in the towns of Howrah. All other castes account for even less than one per cent each of the total urban scheduled caste population of the district.

The statement below shows some selected individual scheduled castes as percentage of the total scheduled caste population in the rural and urban areas of the district separately.

STATEMENT 13.2

PERCENTAGE OF CERTAIN SCHEDULED CASTES TO TOTAL SCHEDULED CASTES FOR TOTAL, RURAL AND URBAN AREAS SEPARATELY

Name of Caste	Total	Rural	Urban
1 Bagdi or Duley	31.00	35.75	13.61
2 Chamar, Charmakar, Mochi, Muchi, Rabidas, Ruidas or Rishi	4.40	2.35	11.92
3 Dhoba or Dhobi	3.85	3.39	5.51
4 Hari	1.27	1.37	0.91
5 Jalia Kaibartta	4.26	4.62	2.94
6 Kaora	6.33	6.57	5.44
7 Karenga or Koranga	1.37	1.75	..
8 Mehtor	1.25	0.12	5.39
9 Namasudra	8.18	9.25	4.26
10 Pod or Poundra	12.77	14.92	4 91
11 Rajbanshi	12.09	13.98	5.17
12 Sunri *excluding* Saha	1.46	1 51	1.29
13 Tiyar	1.61	1.90	0.53

In the rural sector, maximum number of Bagdi or Duley population live in Amta police station where they account for 23.27 per cent of their total number living in the rural areas of the district. Jagatballavpur police station holds the next position as it accounts for the habitation of a little more than 14 per cent of the Bagdi population of the rural district. The third position goes to Uluberia police station where the Bagdis account for 13.20 per cent of their total number living in the villages of the district. In Domejur police station also they live in almost an equal proportion as that in Uluberia police station. Nearly 10 per cent of the Bagdis live in Udaynarayanpur police station.

Majority of the Pods or Poundras live in Sankrail police station where they form 26.11 per cent of their total number living in the rural areas of Howrah district. Uluberia police station occupies the next place as it accounts for the habitation of 21.50 per cent of the Pod or Poundra population of the rural district. Domejur police station's share of Pods or Poundras population is 16.59 per cent. A little less than 15 per cent of the Pods or Poundras live in the rural police station of Bally. In Shampur police station also they live in almost an equal proportion as that in Bally. 5.47 per cent of the total Pods or Poundras live in Panchla police station.

25.12 per cent of the Rajbanshi population are found in the rural police station of Amta, 11.78 per cent in Uluberia police station and 11.17 per cent in Sankrail police station. Domejur thana's Rajbanshi population form 10.56 per cent of their total number in the rural areas of the district. Next position of the Rajbanshi caste goes to Jagatballavpur and Bagnan police stations where they account for 8.97 per cent and 8.63 per cent respectively of their total number living in the villages of this district. The shares of Rajbanshi population of Panchla and Shampur police stations are 6.56 per cent and 6.30 per cent respectively.

Nearly 50 out of every 100 persons belonging to the Namasudra caste are found to live in the rural police station of Uluberia. In Bagnan police station they account for 21.81 per cent of their total number living in the rural areas of the district. Shampur police station holds the next position. 11.07 per cent of the Namasudra population live in Shampur police station. Amta thana's Namasudra population form nearly 6 per cent of their total number in the rural areas of the district. 4.68 per cent of the total Namasudras are found to live in Jagatballavpur police station.

Every fifth person belonging to the Kaora caste lives in Bagnan police station. 16.78 per cent of the Kaora population are found in Panchla police station. In Sankrail police station they form 12.76 per cent of their total number living in the rural areas of the district. About 12 per cent of the Kaoras are found in the rural police station of Amta. Shampur and Uluberia police stations each accounts for more than 8 per cent of their total

number living in the rural areas of the district. Jagatballavpur thana's Kaora population form 6.12 per cent of their total number in the rural district. Nearly 6 per cent of the total Kaoras live in Domejur police station.

Majority of the Chamars live in Jagatballavpur police station where they account for 17.77 per cent of their total number living in the rural areas of the district. Sankrail police station ranks second accounting for 15.87 per cent of their total number in the rural sector. Next position goes to Bagnan police station where they account for 12.74 per cent of the total Chamars of the rural district. In the rural police stations of Uluberia and Amta, they comprise 12.42 per cent and 10.82 per cent respectively of their total number living in the villages of Howrah. A little less than 10 per cent of the total Chamars live in Shampur police station.

28.75 per cent of the Jalia Kaibarttas of the rural areas of Howrah district are found in the police station of Amta. About 18 per cent of them are found in Shampur police station. In Bagnan police station, they comprise 14.05 per cent of their total number in the rural areas of the district and 13.21 per cent of them are found to live in Uluberia police station. A little more than 10 per cent of the Jalia Kaibarttas live in Udaynarayanpur police station.

In the urban sector, as has already been seen, scheduled caste population mostly live in the district headquarters town of Howrah. In the case of individual castes, Chamars, Dhobas, Doms, Haris, Jalia Kaibarttas and Mehtors are mostly found in Howrah Municipality. Majority of the Kaoras live in the urban areas of Sankrail police station where they account for 63.38 per cent of their total number living in the towns of Howrah district. Maximum number of Namasudra population live in the urban areas of Uluberia police station. In the urban areas of Sankrail police station, the Pod or Poundra population form 77.74 per cent of their total number living in the urban areas of the district. Tiyars are mostly found to live in the urban areas of Bally police station where they comprise 80.77 per cent of their total number living in the towns of Howrah district. Maximum number of Rajbanshi and Sunri castes live in the urban areas of Sankrail police station.

1.3 Sex Ratio

1961 Census returns have shown a fair proportion of sexes amongst the scheduled castes in the district of Howrah. Amongst the general population of Howrah for every one thousand males, number of females is 808, but amongst the scheduled caste population the sex ratio is 884. In the rural sector the proportion of sexes amongst the scheduled caste population is higher than that amongst the general population of the district. While it is 955 amongst the scheduled caste population in the rural areas of the district, it is 940 amongst the general population. For every one thousand scheduled caste males residing in different towns of Howrah, there are 662 females, whereas amongst the general urban population there are 644 females to one thousand males. Most of the scheduled caste population are engaged in the agricultural sector and in manufacturing Industry.

The proportion of sexes, while studied for the individual scheduled castes in the district, shows that the Kaoras have more women than men. They have 1,242 females for every one thousand of their male population. In the rural areas for every one thousand of their male population there are 982 females. But an unusual preponderance of females among the Kaora caste is found in the towns of Howrah. In the urban areas the proportion of sexes among the Kaoras is 4,340 females for 1,000 males.

The Bagdi or Duley shows a higher proportion of sexes than the district average. The Bagdis have 984 females for every one thousand of their male population. In the rural areas this caste has an even sex-ratio, for every rural Bagdi man there is a woman. In the urban areas the proportion of sexes among the Bagdis is 844 females for 1,000 males.

Dhobas or Dhobis show a higher proportion of female sex than the district average. In this community there are 926 females for one thousand of their male population against the district average of 884. In the rural areas the sex ratio of Dhobas or Dhobis is 1,116 and in the urban areas it is 602.

Haris have more women than men. They have 1,106 females for every one thousand of their males. In the rural areas this caste has also more women than men. In the rural sector there are 1,303 females of this caste for every one thousand of their male population. But in the towns of Howrah, female Haris live in a far lesser proportion than their menfolk where the sex ratio is only 430.

Jalia Kaibarttas also have more women than men They have 1,022 females for every one thousand of their males. Females Jalia Kaibarttas also outnumber their male counterparts in the villages of Howrah, their proportion being, 1,140 females to one thousand males. In the urban areas there are only 534 females of this caste for every one thousand of their males.

Namasudras show a better sex ratio in the rural area than in the urban areas. In the former case it is 950, while in the latter it is 405.

Female Rajbanshis outnumber their males in the district and also in its rural areas. There are 1,049 females of the Rajbanshi caste for every one thousand of their males in the district. In the different villages of Howrah, there are 1,091 females for every one thousand of their male population. In the urban sector, the sex ratio of this caste is only 711.

Sunri *excluding* Saha caste shows a higher proportion of sexes than the district average. In the rural sector this caste has more women than their menfolk. Sunris *excluding* Sahas have 1,124 females for every one thousand of their male population in the rural district. But in the towns of Howrah females of this caste are very much outnumbered by their menfolk, where the sex ratio is only 310.

1.4 Literacy

The scheduled castes of Howrah have not given a fair account of themselves in so far as the attainment of literacy and education is concerned. They seem to be quite lagging behind others in the district in taking up education. This district has been seen to be one of the most advanced parts of the State from the view point of progress of literacy and education. In 1961 Census 369 persons for every 1,000 of its population have passed the test for literacy in the district. But amongst the scheduled caste population the state of literacy is even worse. Only 162 persons out of 1,000 belonging to the scheduled castes could come out successfully in the literacy test laid down in 1961 Census. Amongst the male population 48.41 per cent have been shown as literate in the district. Amongst the male scheduled castes the percentage of literates is only 24.51. Amongst the female population 22.67 per cent have passed the test for literacy in the district. But amongst the scheduled castes, female literacy portrays even a gloomier picture. Only 68 amongst 1,000 of their womenfolk have been enumerated in the Census of 1961 as literate.

In the rural sector 15.67 per cent of the Scheduled castes are literate. Amongst the scheduled caste males living in different villages of Howrah, the percentage of literates is 24.64, while for general male population it is 43.81. Amongst the women belonging to the scheduled castes and living in the rural areas of the district, literacy is seen to be confined within only 63 out of every one thousand of their total number.

In the urban areas of the district 47.58 per cent of the population are literate, while this percentage for scheduled castes in the urban areas is only 18.20. The percentage of male literates among scheduled castes living in the urban areas is 24.13, whereas for general male population it is 54.16. Amongst the womenfolk 9.25 per cent of the scheduled castes living in the towns of Howrah district, are seen to be literate while their percentage for general women is 37.37 for the urban sector of Howrah.

The statement given below shows the comparative statement of percentage of literates amongst the general population and the scheduled caste population in the total, rural and urban areas separately.

STATEMENT 13.3

		Percentage of Literates		
		Persons	Males	Females
Total Population	Total	36.91	48.41	22.67
	Rural	29.65	43.81	14.58
	Urban	47.58	54.16	37.37
Scheduled Castes	Total	16.22	24.51	6.83
	Rural	15.67	24.64	6.29
	Urban	18.20	24.13	9.25

In the rural areas of the district of Howrah, the Sunri *excluding* Saha has been found to be the most literate caste. 496 per *mille* of their total number in the rural areas of the district are found in the 1961 Census as literate. Amongst their males, literacy is more pronounced. 626 for every 1,000 of their male population are found to be literate. Amongst their females also literacy is quite high. 381 for every 1,000 of their female population are literate. Namasudras come next in order of literacy in the rural sector. The percentage of literates for this caste is 23.76. Their males are more advanced in this respect, 38.42 per cent of them being literate. The percentage of literates among the female Namasudras is 8.33. Literacy is also equally marked amongst the Pods or Poundras living in the rural areas of the district. 23.67 per cent of their total number have been found to be literate. Amongst their male population, the percentage of literates is 33.02. Amongst their females, the percentage of literates is 10.28.

Members belonging to Jalia Kaibartta and Dhoba or Dhobi come next in so far as the attainment of literacy is concerned. In the former case, the percentage of literates is 18.71, 25.00 for their males and 13.19 for their females. In case of the latter community

it is 18.69, for their males it is 30.29 and for their females it is 8.30. The Haris are the next major literate community in the rural areas of the district. The percentage of literates amongst this caste is 17.39. Amongst their males, the percentage of literates is 15.92. But their females are more advanced in this respect, 18.52 per cent of them being literate. Turis hold the next position to Haris in attainment of literacy and education in the rural sector. 15.38 per cent of Turis living in the villages of the district are found to be literate. Their males are more advanced in this respect. 6 out of 10 males of this caste are literate. For their females, the percentage of literates is only 10.64. The next literate community in rural areas of the district are the Rajbanshis. 13.53 per cent of their total number have been found to be literate. Their males are more advanced than their females in respect of literacy. While 25.09 per cent of their males are found to be literate, for their females, the percentage of literates is only 2.92. The Bagdis come next in order of literacy in the rural sector. A little more than 11 per cent of their total number living in the rural Howrah, are found to be literate. Their males are more advanced than their women in respect of literacy. 18.04 per cent of their males are literate, while their literate womenfolk are only 4.35 per cent. The Kaoras follow next in the rural areas of this district. 10 per cent of the Kaora community have passed the test for literacy laid down in 1961 Census. The Kaora males are more advanced in this respect, 17.39 per cent of them being literate, while literate womenfolk are only 2.53 per cent. The Mehtors hold the next position in attainment of literacy in the rural sector. The percentage of literates amongst the Mehtors is 9.35. For their males it is 13.81, but for their females the extent of literacy is very poor, only 1.03 per cent of them being literate. In the case of the Chamar community, 8.11 per cent of their total number living in the different villages of Howrah, have passed the test for literacy. Males of this community are more advanced than their womenfolk in this respect. 13.77 per cent of their males are literate, while the extent of literacy amongst their females is below 1 per cent.

In the urban areas of the district of Howrah, maximum literacy is found amongst the Turis. 625 for every 1,000 of their population are found to be literate. Amongst their males this proportion is 758 and amongst their females it is only 20. Every 3 out of 10 Namasudras living in the towns of Howrah district have been found to be literate. Percentage of literates amongst their males is 37.30 and amongst their females it is 13.42. The Sunri *excluding* Saha castes hold the next position in attainment of literacy and education in the urban sector. 27.90 per cent of their population are literate. Amongst male Sunris in the urban sector 29.59 per cent are found to be literate and amongst their females it is 22.45.

The Jalia Kaibarttas come next in this respect. In the urban areas of this district, 23.60 per cent of their total number are literate. Percentage of literates amongst their males is 24.59 and amongst their females it is 21.73. Next position goes to the Dhoba or Dhobi caste in order of literacy in the urban sector. The percentage of literates for this caste is 19.23. Amongst their males, 20.88 per cent are found to be literate and amongst their females, the percentage of literates is 16.50.

Amongst the Bagdi or Duley community, 17.94 per cent of their population in the urban sector of this district are literate. Their males are more progressive in this respect, 23.90 per cent of them being literate, while their literate females are only 10.88 per cent. The Pods or Poundras in the urban areas of the district are also found to follow the Bagdis very closely in the attainment of literacy. 17.51 per cent of them are literate. Almost every fifth man of this caste is literate. Amongst the females, the percentage of literates is 7.79. The Rajbanshis come next in order of literacy in the urban areas of the district. 15.82 per cent of their population have passed the test for literacy. Their males are more advanced in this respect, 22.23 per cent of them being literate, while their literate women are only 6.81 per cent. In the case of Mehtor and Chamar communities, the extent of literacy is seen to be more than 13 per cent of their total number living in the towns of this district. Males of those castes are more quick than their females in taking up of education. 20.91 per cent of male Mehtors and 19.69 per cent of male Chamars have been found to be literate, while the percentages of literates amongst their females are 2.96 and 3.94 respectively. Amongst the Haris, nearly 12 per cent of their total number living in the urban areas of Howrah are literate. The Kaoras living in the urban areas of the district have not been able to show an appreciable extent of literacy. Only 51 persons for every 1,000 of their population are found to be literate.

1.5 Economic Activities

Labour participation is a little higher amongst the scheduled castes than the general population in the district of Howrah. While for every one thousand of general population of Howrah, 309 are workers, among the scheduled castes this proportion is about 310. In the rural areas participation by scheduled castes at work is seen to be higher than the general population

Male component of the scheduled caste labour participants is much higher than the corresponding female component. Amongst every one thousand male scheduled castes in this district 548 are actively engaged in any sort of productive occupation, while among their womenfolk only 41 per *mille* are engaged as workers. The proportion of both male and female workers amongst scheduled castes in the district is higher than that amongst general population. Participation by scheduled caste females at work is more pronounced in the urban areas than in the rural areas. Amongst the scheduled caste females living in the villages of Howrah, the percentage of workers is only 3.52, while amongst the scheduled caste females living in different towns of the district, the percentage of workers is 6.43. In the urban sector of Howrah, amongst general female population, the proportion of female workers is 3.28 per cent. In the urban areas as a whole, labour participation is also lesser among the general population than that among scheduled caste population. In case of general population, percentage of workers in the urban areas is 36.88, while for the scheduled castes, this percentage is 39.41. Participation by male scheduled castes in the urban areas is also higher than that of general male population. In case of general male population, percentage of workers is 58.53, while for the scheduled castes this percentage is 61.24.

Labour participation amongst the scheduled castes is more pronounced in the primary sector than that amongst the general population in the district of Howrah. For every one thousand of general workers, 143 are engaged as cultivators and 95 as agricultural labourers. Amongst the scheduled castes 203 for every one thousand of their working population are engaged as cultivators. The scheduled caste agricultural labourers form a significantly higher proportion than the general workers. 200 scheduled caste workers for every one thousand of their working population are agricultural labourers. In the rural areas of the district, 274 to every 1,000 of their working population are engaged as cultivators and 265 per *mille* as agricultural labourers.

In household industries participation is less pronounced amongst the scheduled castes than the general population. Only 2.88 per cent of the scheduled caste workers are engaged in household industries, while this percentage among general population in the district is 3.24.

Manufacturing industries have a significant role in the economic activities of the population of this district. It has already been observed that more workers of Howrah are engaged in manufacturing industries. 36.07 per cent of the general workers of the district are engaged in manufacturing industries. Among the scheduled castes, only 27.23 per cent of their working population are absorbed in manufacturing industries In trade and commerce also participation is higher amongst the general population than the scheduled castes. 6.08 per cent of the scheduled caste workers are seen to be engaged in trade and commerce, while this percentage among general population in the district is 12.17. In the urban sector 7.37 per cent of the scheduled caste workers are engaged in trade and commerce. But participation is more pronounced amongst the women scheduled caste workers than the general female workers in trade and commerce in this district. In trade and commerce 24.97 per cent of the female scheduled caste workers are engaged in this district, while this percentage for general female workers is 13.08.

In other services participation by scheduled caste workers has been to a lesser extent than the general workers of the district. While 14.60 per cent of the total workers of Howrah are engaged in other services, among the scheduled caste workers this percentage is only 13.44. Female participation of scheduled castes in other services is also much below the participation by the general women workers of the district. 263 for every 1,000 working scheduled caste women are engaged in other services, against the figure 368 for general women workers. In the urban sector 17.16 per cent of the scheduled caste workers are engaged in other services. Amongst the female workers belonging to scheduled castes, participation in other services is marked by a percentage of 36.76 in the urban areas of the district.

Amongst the individual major scheduled castes of the district, it is seen that those belonging to Bagdi, Namasudra, Pod or Poundra. Rajbanshi and Tiyar communities are primarily engaged in agriculture. 26.66 per cent of the Bagdi workers are engaged as agricultural labourers and 33.16 per cent of them as cultivators. Participation by the Bagdi caste in household industries has been seen to be very poor. 11.07 per cent of the Bagdi workers are engaged in manufacturing industries. Nearly 4 per cent of them are engaged in trade and commerce. 15.40 per cent of the Bagdi workers are seen to be engaged in other services. Amongst the female Bagdi workers every fourth is engaged in trade and commerce. 27.06 per cent of the Bagdi women workers are found to be engaged in other services. In the urban sector, nearly 14 per cent of the Bagdi workers are engaged as agricultural labourers. 43.05 per cent of the Bagdi workers

living in the urban areas of the district are found to be employed in manufacturing industries. In other services nearly 19 per cent of the Bagdi workers living in the towns of the district are engaged. Amongst their females workers in the urban sector 46.15 per cent, 26.37 per cent and 23.08 per cent are seen to be engaged in other services, in trade and commerce and in manufacturing industries respectively.

Participation by the Chamar caste in the agricultural sector has been seen to be very poor. 9.85 per cent of the Chamar workers are engaged in household industries. Participation by the Chamar caste in manufacturing industries is very marked. 65.20 per cent of the Chamar workers are seen to be engaged in manufacturing industries. In other services their participation is marked by a percentage of 8.34 only. In the urban sector 71.69 per cent of the Chamar workers are engaged in manufacturing industries. 10.09 per cent and 9.77 per cent of the Chamar workers living in the urban areas of the district are engaged in transport and in other services respectively. Amongst their females 83.25 per cent of the workers living in different towns of the district are engaged in manufacturing and 10.35 per cent are engaged in other services.

12.62 per cent of the Dhoba workers are engaged as cultivators and 8.53 per cent of them as agricultural labourers. In manufacturing industries 26.69 per cent of the Dhoba workers are engaged. 44.73 per cent of them are seen to be engaged in other services. In the urban sector participation in manufacturing industries is marked by a percentage of 49.58. In other services 40.92 per cent of the Dhoba workers living in the urban areas of the district are seen to be employed. Amongst their females 86.42 per cent of the workers living in the urban areas of the district are engaged in other services.

30.69 per cent of the total Kaora workers are engaged as agricultural labourers and 9.58 per cent of them as cultivators. 5.67 per cent and 16.97 per cent of the Kaora workers are seen to be engaged in household industries and in manufacturing industries respectively. In other services 22.19 per cent of them are engaged. In the urban sector 44.65 per cent of the Kaora workers have been seen to be employed in manufacturing industries. Amongst their females 28.58 per cent of the workers living in different towns of the district are engaged in trade and commerce and 44.64 per cent are engaged in other services.

39.08 per cent of the total Pod or Poundra workers are engaged as agricultural labourers and 17.58 per cent of them as cultivators. In manufacturing industries participation by the Pod workers is marked by a percentage of 31.12. In the urban sector, workers of this community are proportionately better engaged in manufacturing industries. 72.64 per cent of the Pod workers living in the urban areas of this district are seen to be engaged in manufacturing industries. Amongst their females 67.92 per cent of the workers living in different towns of the district are engaged in manufacturing industries and 20.76 per cent are engaged in trade and commerce.

A little more than one-fourth of the total Tiyar workers are engaged as cultivators and 37.61 per cent of them as agricultural labourers. Only 1.80 per cent of the Tiyar workers are seen to be engaged in other services.

The Namasudras and Rajbanshis are mostly engaged as cultivators. 35.27 per cent of the total Namasudra workers are engaged as cultivators. As cultivators 39.84 per cent of the Rajbanshi worker are seen to be engaged. Amongst the Namasudras 13.67 per cent of the workers have been engaged as agricultural labourers while amongst Rajbanshis 17.22 per cent of the workers have been so employed. The manufacturing industries have employed more of the Namasudras than the Rajbanshis. 25.66 per cent of the Namasudra worker are seen to be engaged in manufacturing, while only 11.62 per cent of the Rajbanshi workers are engaged in manufacturing. Participation by both the castes in household industries have been seen to be very poor. 9.35 per cent of the Rajbanshi workers are engaged in trade and commerce. Amongst the Namasudras this percentage is only 4.31. Amongst the Rajbanshis, female workers are more engaged in trading. 65.54 per cent of the female Rajbanshi workers are engaged in trade and commerce, while amongst the female Namasudras, 27.91 per cent of the workers have been so employed. 9.51 per cent of the total Namasudra workers and 4.80 per cent of the total Rajbanshi workers are seen to be engaged in other services. The female Namasudra workers are more engaged in other services than the female Rajbanshi workers. 22.67 per cent of the female Namasudra workers are seen to be engaged in other services. while amongst the female Rajbanshi workers this percentage is only 9.28. In the urban sector, participations by both the castes are more marked in manufacturing industries. 36.37 per cent of the female Namasudra workers and 35.71 per cent of the female Rajbanshi workers living in the urban areas of this district are engaged in trading. In the urban sector the other services have employed more women workers of the Rajbanshis than the female Namasudra workers. 57.15 per cent of the Rajbanshi women workers

living in the urban areas of the district are engaged in other services, while amongst the female Namasudra workers this percentage is only 27 27.

2. Scheduled Tribes

In the district of Howrah 6,111 persons have returned themselves as belonging to fourteen different types of scheduled tribes. Of them 316 persons have been recorded as belonging to the scheduled tribes, but they could not be classified in any particular category. The scheduled tribes of this district thus make a small fraction of the total population of the district accounting for only 0.30 per cent of the total inhabitants of Howrah. 0.32 per cent of the villagers of Howrah belong to the scheduled tribes. In the urban sector the scheduled tribes form only 0.27 per cent of the total urban population of the district, their absolute number being only 2,202. The scheduled tribes of the State of West Bengal make 5.88 per cent of the total population of the State. In the rural areas of the State the proportion of scheduled tribe is 7.60, while in the urban sector it is as low as 0.56. Thus the proportion of scheduled tribes to total population of Howrah is much lower than that in the State as a whole.

Scheduled tribes of Howrah account for 0.30 per cent of the total scheduled tribes in the State of West Bengal. In the rural areas they account for 0.19 per cent of the total rural scheduled tribes in the State. In the urban areas they account for 4.58 per cent of the total urban scheduled tribes in the State.

Amongst the male population of the district 0.32 per cent belong to scheduled tribes and amongst the females the percentage of scheduled tribes is only 0.27. In the rural sector scheduled tribe males account for 0.37 per cent of the total male population living in the villages of Howrah district. The proportion of rural female scheduled tribes is only 0.27 per cent of the total rural females of Howrah. In the urban areas of the district 0.26 per cent of the male population belong to scheduled tribes and amongst the females, the percentage of the scheduled tribes is only 0.27. The male scheduled tribes of this district account for 0.35 per cent of the total scheduled tribe males of the State and the female scheduled tribes living in Howrah district form only 0.24 per cent of the total scheduled tribe women in the State of West Bengal. The male scheduled tribes of the rural district account for 0.23 per cent of the total scheduled tribe males in the rural areas of the State and the female scheduled tribes living in the rural areas of the district form only 0.16 per cent of the total rural scheduled tribe females in the State. In the urban sector, the male scheduled tribes of the district account for 4.79 per cent of the total scheduled tribe males in the urban areas of the State and the female scheduled tribes living in the towns of the district comprise 4.30 per cent of the total scheduled tribe women in the urban areas of the State of West Bengal.

Preponderance of scheduled tribe population is observed in the Sadar subdivision which alone accounts for 84.70 per cent of the total tribal population of the district. The rest of the tribes (i.e. 15.30 per cent) are found in Uluberia subdivision. Sankrail police station of Sadar subdivision alone accounts for 21.49 per cent of the total tribal population. Next comes Bally police station of Sadar subdivision which accounts for 15.95 per cent of the total scheduled tribes of the district. In Domejur police station of Sadar subdivision also they live in an equal proportion as that of Bally police station. The tribal population of Jagacha police station accounts for 12.49 per cent of their total number in the district. Jagatballavpur police station occupies the next place. Here 11.08 per cent of the total tribes of the district are found to inhabit. In Howrah city of Sadar subdivision, they comprise 5.76 per cent of the total number of scheduled tribes in the district. 3.94 per cent and 3.78 per cent of them are found in Uluberia and Bawria police stations of Uluberia subdivision respectively. Udaynarayanpur police station of Uluberia subdivision accounts for 3.19 per cent of their total number living in the district. The rest are distributed over other five police stations of this district. In the urban areas, the group of towns located in Sankrail police station alone account for 34.60 per cent of the total urban tribal population of the district. The urban areas of Bally police station form 29.11 per cent of their total number living in the towns of this district. Howrah City accounts for 15.99 per cent of the total scheduled tribes living in the urban areas of the district. The group of towns located in Bawria police station account for nearly 9 per cent of the total urban tribal population of the district.

2.1 Distribution of Individual Tribes in different Administrative Units

Santals mostly live in the Sadar subdivision which alone accounts for 70.98 per cent of the total Santal population of the district. The rest of the Santal communities (i.e. 29.02 per cent) are found to live in Uluberia subdivision. In Sadar subdivision they mostly live in Sankrail police station where they form 24.10 per cent of their total number in this district. The next position

goes to Bally police station. 17.69 per cent of the Santals are found to live in Bally police station. Jagatballavpur police station holds the third place. In this police station they account for 15.74 per cent of their total number living in this district. In Uluberia subdivision Santals mostly live in Bawria and Uluberia police stations where their percentage is 9.99 and 9.30 respectively. In Domejur police station of the Sadar subdivision 4.89 per cent of the Santals are found to live. A little more than 4 per cent of the total Santal population are found to live in Amta police station. 3.72 per cent of them live in Jagacha police station and 3.07 per cent live in Panchla police station.

Oraons also mostly live in Sadar subdivision. A very few of them are found to live in Uluberia subdivision. 99.74 per cent of the total Oraon population are found to live in Sadar subdivision and the rest (i.e. 0.26 per cent) are found to live in Uluberia subdivision. In Sadar subdivision they mostly live in Domejur police station where they form 39.18 per cent of their total number living in this district. 30.31 per cent of the Oraons live in Sankrail police Station. In Jagacha and Bally police stations their percentage is 12.30 and 10.08 respectively. In Jagatballavpur police station they account for 4.28 per cent of their total number in this district. 2.27 per cent of the Oraons are found to live in Howrah city and 1.32 per cent live in Panchla police station. In Uluberia subdivision the Oraon communities are found to live only in Uluberia and Udaynarayanpur police stations where their percentages are very poor.

81.06 per cent and 18.94 per cent of the Munda population are found to live in Sadar and Uluberia subdivisions respectively. In Sadar they mostly live in Jagatballavpur and Jagacha police stations where they form 21.63 per cent and 21.04 per cent respectively of the total Munda population of the district. Next position goes to Udaynarayanpur police station of Uluberia subdivision where Mundas make 17.25 per cent of their total number in this district. In Bally and Sankrail police stations their percentage is 10.07 and 9.37 respectively. Domejur police station comes next. In this police station they make 7.98 per cent of the total Munda population of the district. In Howrah city and Sibpur Mundas form 5.48 per cent and 4.99 per cent respectively of their total number living in this district.

Cent per cent of the Ho population live in Sadar subdivision of Howrah district. They are distributed among two police stations of the Sadar subdivision. Majority of the Ho population are found to live in Bally police station where they make 96.89 per cent of their total number in this district. The rest of the Ho population (i.e. 3.11 per cent) are found to live in Jagacha police station.

Koras also mostly live in Sadar subdivision. 78 per cent of their population are found to inhabit this subdivision. 66 per cent of their total number are found to live in Bally police station. In Bagnan police station of Uluberia subdivision Koras make 15 per cent of their total number living in this district. In Jagacha police station their percentage is only 7.

Lodhas mostly live in Uluberia subdivision which alone accounts for 52.50 per cent of the total Lodha population of the district. In Shampur police station, all Lodha communities of Uluberia subdivision are found to live. This police station also accounts for 52.50 per cent of the total Lodha population of the district. The rest of the Lodhas (i.e. 47.50 per cent) are found to live in the Sadar subdivision. In Sadar they mostly live in Jagacha police station where they form 38.75 per cent of their total number living in this district. In Howrah city and Sankrail police stations of Sadar subdivision their percentage is 3.75 and 5.00 respectively.

2.2 Strength of Individual Scheduled Tribes

Santals form the major scheduled tribe in the district of Howrah. They account for 37.83 per cent of the total tribal population of the district. The next major tribe in the district are the oraons. They form 30.99 per cent of the total tribal population of the district. Mundas account for 16.41 per cent of the total scheduled tribes living in the district. The Ho and the Maghs form 2.63 and 2.29 per cent respectively Koras account for 1.64 per cent of the total tribal population of the district. The Lodha communities form 1.31 per cent of the total number of scheduled tribes residing in the district of Howrah.

In the urban areas of the district, Santals also form the major scheduled tribe. They account for 47.46 per cent of the total urban tribal population of the district. Next to the Santals are the Oraons. They account for 17.89 per cent of the total scheduled tribes living in the urban areas of the district. In the case of the Ho and the Mundas, both of them occupy the third place amongst the urban tribal population of Howrah. Each of them accounts for 7.08 per cent of the total urban tribal population of the district. Koras account for 3.50 per cent of the total number of tribal population living in the different towns of Howrah. The statement below shows

the percentage of certain selected scheduled tribes to the tribal population of the district in the total, rural and urban areas separately.

STATEMENT 13.4

PERCENTAGE OF CERTAIN SELECTED SCHEDULED TRIBES TO TOTAL SCHEDULED TRIBES FOR TOTAL, RURAL AND URBAN AREAS SEPARATELY

Name of Tribe	Total	Rural	Urban
1 Ho	2.63	0.13	7.08
2 Kora	1.64	0.59	3.50
3 Lodha, Kheria or Kharia	1.31	1.97	0.14
4 Magh	2.29	3.58	..
5 Munda	16.41	21.67	7.08
6 Oraon	30.99	38.37	17.89
7 Santal	37.83	32.41	47.46

2.3 Sex Ratio

The tribals of this district have even fewer women than the persons belonging to different scheduled caste. For every one thousand of male scheduled tribe population in the district there are only 671 scheduled tribe females. The sex ratio in the rural areas amongst the tribal population is much lower than that observed amongst the scheduled caste population in the rural areas of the district. In the rural areas the sex ratio amongst the scheduled tribe population is only 672. In the urban areas for every one thousand tribal male population there are only 669 females.

The proportion of sexes amongst the Santal tribe of this district is seen to be fairly good. There are 936 females to every one thousand male Santals in the district. In the rural areas the proportion of sexes amongst the Santals is seen to be very good. For every one thousand of male Santals there are 995 females in the rural areas of the district. In the urban areas the sex ratio amongst the Santals is 869. The sex ratio is very low amongst the Oraons. In case of the Oraons for every one thousand of their male population there are only 472 females. In the rural sector the sex ratio amongst the Oraons is a little better. There are 527 females to every one thousand male Oraons in the rural areas of the district. Amongst the Mundas there are only 567 females for every one thousand males in the district. In the rural sector the sex ratio amongst the Mundas is also better. For every one thousand of male Mundas, there are 604 females in the rural areas of the district. The sex ratio is very low amongst the Oraons and Mundas in the Urban sector of the district. The sex ratio for Bhumij tribe is only 381. Amongst the Koras there are only 235 females for every one thousand males.

2.4 Literacy

The scheduled tribes of Howrah have given a very poor account of themselves so far as the attainment of literacy and education is concerned. Only 72 of the scheduled tribes for every one thousand of their total population in the district have been able to pass the Census enumeration test laid down for literacy in 1961 Census. The position of female literacy among the scheduled tribes is all the worse. Female education amongst the tribal population of this district seems to be a far cry. In the rural areas, only 73 of the scheduled tribes for every one thousand of their total rural population are found to be literate. In the urban sector 69 persons are found to be literate for every one thousand of the total tribal population living in the towns of Howrah. Literacy amongst the male population living in the district is seen to be fairly good. The percentage of literates amongst the tribal males is found to be 9.87 in the district. Male literacy also in the rural sector is, slightly better than that in the urban areas of the district. Amongst this the male population living in the villages of this district the percentage of literates is found to be 10.44 and in the urban sector this percentage amongst males is only 8.87. Only 31 amongst every one thousand of the tribal women in this district have been recorded in the 1961 Census as literate. Amongst the tribal women living in the urban areas of the district, 3.85 per cent are found to be literate. In the rural sector the percentage of female literacy is only 2.67. The statement given below shows the comparative statement of the percentage of the literates amongst the general population and the tribal population in the total, rural and urban areas of the district.

STATEMENT 13.5

		Percentage of Literates		
		Persons	Males	Females
Total Population	Total	36.91	48.41	22.67
	Rural	29.65	43.81	14.58
	Urban	47.58	54.16	37.37
Scheduled Tribes	Total	7.15	9.87	3.10
	Rural	7.32	10.44	2.67
	Urban	6.86	8 87	3.85

In the rural areas Mundas seem to be the most literate community of the district. 7.79 per cent of the Mundas living in the rural areas of the district are literate. Their males are more advanced than their females in respect of literacy. 10.80 per cent of the male Mundas could come out successfully in the literacy test laid down

in 1961 Census, while amongst the Munda women, percentage of literates is only 2.82. Next to them Santals are the most literate tribe. 5.76 per cent of the Santals are literate. Their males are also more advanced in this respect. 10.39 per cent of the male Santals living in the villages of the district are found to be literate. Amongst their females the percentage of literates is only 1.11. Amongst the Oraons, literacy is limited only to 5 per cent of their population living in the villages of the district. In the urban sector Mundas also are found to be the most literate community of the district. 7.05 per cent of the Mundas living in the urban areas of the district are literate. Their males are more advanced in this respect. 8.93 per cent of the male Mundas living in different towns of Howrah district are found to be literate and amongst their females the percentage of literates is only 2.27. Next to Mundas, Oraons are the most literate tribe in the urban sector. 5.08 per cent of the Oraons living in the urban areas of the district are literate. The Oraon women are more advanced than their male counterpart in this respect. Amongst the Oraon women, 5.62 per cent of their total number living in the urban areas of the district are found to be literate, while amongst their males, the percentage of literates is only 4.92.

2.5 Economic Activities

Labour participation is more pronounced amongst the tribal population. 65.21 per cent of the total tribal population have been shown as workers in 1961 Census. The male component of the scheduled tribe labour participants is higher than the corresponding female component. 78.12 per cent of the tribal male population are actively engaged in any sort of productive occupation, while amongst their womenfolk only 45.97 per cent are engaged as workers. In the rural areas 67.13 per cent of the tribal population are workers. Their males are also more advanced in this respect. 78.83 per cent of the tribal males living in the rural areas of the district are workers and amongst their females, the percentage of workers is only 49.71. In the urban sector participation by male tribal population is more pronounced. Nearly 76.88 per cent of the male scheduled tribes living in different towns of Howrah district are found to be workers and amongst their females, the percentage of workers is only 39.30.

The tribal workers have a significant role in the field of manufacturing industries of Howrah district. 54.43 per cent of the tribal workers are engaged in manufacturing industries. The tribal women workers seem to be better employed in manufacturing industries. 70.03 per cent of the tribal female workers are so engaged. In the urban sector 67.82 per cent of the tribal workers are engaged in manufacturing industries. Amongst their male workers 64.20 per cent are engaged in manufacturing, but amongst the females this proportion is significantly higher (78 39 per cent).

Next, to the secondary sector, the primary sector absorbs more tribal workers. 18.84 per cent of the total tribal workers are engaged as agricultural labourers. As agricultural labourers the tribal male workers are much higher in proportion than the females. 23.10 per cent of the tribal male working population are engaged as agricultural labourers, while amongst the female workers 8.07 per cent are agricultural labourers. 3.71 per cent of the tribal working population are seen to be engaged as cultivators. In other services 14.20 per cent of the tribals are seen to have been engaged in the district. In the urban sector 14.77 per cent of the working tribes are engaged in other services. Amongst the tribal male workers the participation is seen to be of the extent of 15.09 per cent and 13.83 per cent of the tribal female workers living in the urban areas of the district are engaged in other services. 5.32 per cent of the tribal male workers living in different towns of Howrah district are seen to be engaged in transport and communication services. A little less than 3 per cent of the tribal male workers living in the urban areas of the district are seen to have participated in trading. 4.69 per cent of the tribal male workers living in this district are found to be engaged in construction.

Amongst the individual scheduled tribes, it is seen that majority of all the tribal workers except the Bhumij and Munda tribal workers, are engaged in manufacturing industries. 59.84 per cent of the Santal workers are engaged in manufacturing industries. The Santal women labour participants as manufacturing industrial workers are higher than their male counterparts. 70.27 per cent of the Santal women workers are engaged in manufacturing industries, while amongst the Santal male workers 53.89 per cent are engaged in this category. 10.50 per cent of the Santal workers are agricultural labourers and 7.69 per cent of them are cultivators. 17.38 per cent of the Santal workers are seen to be engaged in other services. In the urban sector also the Santal workers are mostly engaged in manufacturing. 81.37 per cent of the Santal workers living in the urban areas of the district are engaged in manufacturing. In manufacturing industries participation by the Santal women workers is more pronounced than that of their male components. Cent per cent of the Santal women workers living in different towns of Howrah district are engaged in manufacturing

while, amongst their males 73.13 per cent are so engaged. 15.88 per cent of the Santal workers living in urban areas of the district are found to be engaged in other services. Amongst the Oraons 60.34 per cent are engaged in manufacturing industries. 20.69 per cent of them are agricultural labourers. Only 2.16 per cent of the workers belonging to this community are cultivators. 11.27 per cent of the Oraons workers are engaged in other services. In the urban sector 51.41 per cent of the Oraons workers are engaged in manufacturing. Their female labour participants in manufacturing form a higher proportion than their male workers. 67.95 per cent of the Oraon female workers living in the towns of Howrah district are found to be engaged in manufacturing, while amongst their male workers 46.74 per cent are so engaged. 24.86 per cent of the Oraon workers in the urban areas are agricultural labourers and only 3.11 per cent of them are cultivators. 9.32 per cent and 8.19 per cent of the Oraon workers living in the urban areas of the district are engaged in other services and in construction respectively. 43.69 per cent of the Munda workers are agricultural labourers, 32.49 per cent of them are engaged in manufacturing and 9.30 per cent are engaged in other services. In the urban sector, participation by the Munda women workers in manufacturing is more pronounced than that of their male workers. 87.50 per cent of the Munda female workers living in the urban areas are engaged in manufacturing, while the percentage of their male workers is only 50 per cent in this category. 23.33 per cent of the Munda workers in the urban areas are engaged in trading and 14.45 per cent of them are absorbed in transport and communication services. All the Kora tribal workers of the district are seen to have actively participated in only two sorts of productive occupation. Majority of them are engaged in manufacturing industries. 86.75 per cent of the Kora workers are engaged in manufacturing and the rest (*i.e.* 13.25 per cent of the Kora workers) are engaged in other services. In other services the participation by the Kora female workers is more pronounced than that of their male components. 55.56 per cent of the Kora female workers are found to be engaged in other services, while amongst their males, the percentage of the workers is only 8.11. In the urban sector cent per cent of the Kora workers are engaged in manufacturing. 25 per cent of the Bhumij workers are agricultural labourers and also 25 per cent of them are cultivators. Majority of the Bhumij workers are engaged in manufacturing industries. 43.75 per cent of the Bhumij workers are found to be engaged in manufacturing. Only 6.25 per cent of them are engaged in other services. In the urban sector, the Bhumij workers are mostly engaged in manufacturing. 87.50 per cent of the Bhumij workers living in different towns of the district are absorbed in manufacturing. The rest of them living in the urban areas (*i.e.* 12.50 per cent of the Bhumij workers) are found to be engaged in other services. Only two sorts of productive occupations have engaged the Ho workers of the district. The Ho workers are moslty engaged in other services. 94.74 per cent of the Ho workers are seen to have participated in other services and only 5.26 per cent of them are engaged in transport and communication services. Cent per cent of the Ho women labour participants are absorbed in other services. Also cent per cent of the Ho women workers living in the urban areas of the district are found to be engaged in other services. Amongst the Lodha communities, majority of the total workers are engaged in other services. 69.23 per cent of them are engaged in other services. 94.74 per cent of the Lodha women workers are engaged in other services. 23.08 per cent of the Lodha workers are absorbed in manufacturing. 14.29 per cent of the Lodha male workers are engaged in trading. In the urban sector, cent per cent of the Lodha workers are engaged in manufacturing industries.

Appendix I

GAZETTEER

AMTA—A village in the north-east of the Uluberia subdivision, situated on the left bank of the Damodar river, 30 miles from Howrah by rail and 26 miles by road. It is connected with the latter place by the Howrah-Amta Railway, of which it is the terminus. Amta may be regarded for practical purposes as consisting of a group of villages about a mile and a half long north to south and a mile broad. It contains a Munsif's court, a sub-registry office, police station, post office, charitable dispensary, a High English School founded by the late Pitambar Chakravarti, with a public library attached, and a Public Works Department bungalow. Several of its roads are brick-paved. It is protected from the Damodar floods by a high Government embankment, and from floods in the upland basins by a *takavi* embankment built along the left bank of the Madaria *Khal*.

Amta has long been an important centre of trade. Formerly it contained many salt and coal depots, being an entrepot for salt brought from Midnapore and coal brought from the Raniganj coalfield. The Damodar then formed a broad highway of commerce, bearing hundreds of cargo boats; a memorial of this time still exists in the name *bondar*, *i.e.*, port , given to a part of the river bank. The railways have killed the river-borne trade in salt and coal; but, on the other hand, the trade in paddy and straw, carried partly by boats and partly by rail, has flourished, and there are also large exports to Howrah of jute, vegetables and fish. Brown country paper used to be manufactured here, but this industry has been crushed by the pressure of competition.

Among Hindus the place is best known for a temple dedicated to Melai Chandi, a goddess mentioned in *Chandi*, a poem written by Kavikankan more than 300 years ago. Tradition says that her shrine was originally at Jayanti, a place on the other side of the river, about a mile from its present site. It has a Bengali inscription in two lines on the outside at a height of about ten feet above the plinth. Owing to frequent coats of whitewash, it is somewhat illegible, but is said to ascribe the building of the temple to a Karmakar in the year 1056 of the Bengali era, *i.e.*, 300 years ago. The temple had a roof of the usual Bengali type. The image is in stone, 3½ feet high, with a vermilion-painted face. In the same enclosure stands another temple of Siva with a roof of the Bengali style of architecture, which was built at the expense of the late Babu Madanmohon Datta of Hatkhola, Calcutta. The temple has a valuable endowment (*debottar*) of about a thousand *Bighas* of land, a part of which is occupied by a bazar, the largest in the district outside Howrah. The temple has been thoroughly renovated recently as a result of which little of the old structure is visible.

There are several important villages with High English Schools in the jurisdiction of Amta thana, such as Raspur, Jaypur, Panpur, Jhinkra and Narit, the home of the late Pandit Mahesh Chandra Nyayaratna. Other places which may be mentioned are Pandua with the ruins of a fort on the Kana Nadi, which was the home of the wellknown poet Bharat Chandra Rai, whose ability won for him the title of Gunakar, *i.e.*, the mine of talents (1712-1760 A.D.).

In the Census of 1961 it has been declared a non-municipal urban area.

ANDUL—A village in the Sadar subdivision, situated on the right bank of the old Saraswati river, 4 miles west by road of Howrah town. It is connected with Andul station on the South Eastern Railway by a road a mile and a half long. Speaking generally Andul may be taken as including Mahiari, (Mauri) and several other villages, and thus covers an area of about a square mile and a half. Andul itself has a High English School and a cosiderable daily bazar, while a post office is situated at Mahiari where an important *hat* is held, the chief articles sold being paddy, cocoanuts, etc. At the latter place there is a high brick tower with five stories, about 165 feet in height, the top of which can be reached by a long series of steps inside. This tower is one of several erected in the early days of British Rule for semaphore signalling before the introduction of the electric telegraph. Another neighbouring village, Argoria, was once noted for its fine cotton *dhuties*.

Andul is of local importance owing to its being the headquarters of well-to-do families, such as the Malliks and Mitras of Andul and the Kundu-Chaudhuris of Mahiari. The founder of the Mallik family was Gaur Charan Mallik, who settled at Andul when the district was under Muhammadan rule. It has, also gained urban status in 1961.

BAGNAN—Village and headquarters of a thana in the Uluberia subdivision, situated 12 miles from Uluberia and a quarter of a mile from the South Eastern Railway station of the same name. It is situated on the Orissa

Trunk Road, and contains a High English School and post office. Two miles to the east, on the other side of the Damodar, is Mahishrekha, which was for twenty years the headquarters of the subdivision, until it was removed to Uluberia in 1883-84. Traces of its former importance are found in a ferry, a post office and a large Public Works Department bungalow. Excellent snipe shooting can be had here. Other noticeable villages are Panitras and Mugkalayan with High English Schools and Agunshe.

BALLY (Bali)—A town in the Sadar subdivision, situated on the right bank of the Hooghly. It forms a continuation of Howrah City northwards up to the Bally *Khal*.

The name is evidently derived from the accumulations of sand (*bali*) deposited by the river. It is an old place, mentioned in *Chandi*, a poem composed by Kavikankan 350 years ago, and in Bengali poems of the 17th and 18th centuries; it also appears in Rennell's Atlas (Plates VII and XIX). It was a stronghold of Brahmanism, having several *tols* and being inhabited by many *Rarhi Brahmans*. The almanacs issued by its Acharyas or astrologers were very much in vogue before the days of printing. Tradition relates that some of its Brahmans stood round the scaffold on which Nand Kumar was hanged in 1775, and, to quote from Macaulay's essay on Warren Hastings, horrified at the execution of their fellow Brahman "Fled with loud wailings towards the Hooghly and plunged into its holy waters, as if to purify themselves from the guilt of having looked on such a crime." They then, so the story runs, returned to Bally and took a vow never to set foot in the city which had been polluted by the haging of a Brahman. It is said that this oath was religiously observed for many years, but, according to an article written in 1848, "the necessities of trade and other causes have long since rendered their resolution nugatory".

Bally formed a part of the Howrah Municipality until 1882-83, when Bally, Belur, Barrackpore and a part of Ghusuri were formed into a distinct municipality under the name of Bally with an area of about two square miles. Its area now is 3.06 square miles. It is now a big industrial town with many big workshops and small factories.

BELUR—Belur is the headquarters of the Ramkrishna Mission, a society established for the propagation of the orthodox Hindu faith but with a modern outlook.

Sri Ramkrishna Paramhansa occupies a place of honour amongst the religious leaders of the world and his simple parables are unique in bringing home spiritual truths to the mind.

A *Math* was founded at Belur in 1897 by the disciples of Ramkrishna, and a fair is held there every year to celebrate the anniversary of his birth in February. The place attracts on Sundays a large number of visitors from Calcutta.

A magnificent temple has been recently built at Belur at a great cost. This has been made possible by the munificence of two American ladies, Miss Helen Rubel and Mrs. Anna Worcester who made a princely donation of six and a half lakhs of rupees for the purpose. The breadth of the shrine is 109 feet and its length (along with the prayer hall) is 233 ft. On a marble pedestral in the shrine is a marble statue of Shri Ramkrishna in the familiar *asana*. The prayer-hall is 152 ft. long, 72 ft. wide and 48 ft. high. It is now the biggest temple in West Bengal.

DOMJUR—A village in the Sadar subdivision, situated about 9 miles by road and 10 miles by rail (Howrah-Amta) from Howrah. It is an old place on the bank of the Saraswati, being shown in Rennell's Atlas (Plate XIX). The village is the headquarters of a police station and has a post office and a District Board bungalow. It is a centre for the jute and rice trade of the neighbourhood, and exports a considerable quantity of milk to the towns.

The thana of which it is the headquarters is densely populated, and contains several important villages. On the bank of the Saraswati are Baluti and Jhapardah with High English Schools, and Makardah at which a large *mela* is held on the fifth day of the *Holi* festival in March. West of the stream are Narna with a large *mela* held on the Charak Sankranti day in April; Rajapur (or Dakshinbar) on the drainage channel of the same name, with a railway station and a canal bungalow; and Begri with a large weekly *hat*.

GHUSURI—A quarter in the northern part of Howrah City and in the southern part of Bally, containing jute and cotton mills, jute presses, rope works and an old Buddhist temple.

HOWRAH- The headquarters of the district, situated on the right bank of the Hooghly opposite Calcutta in 22°35′ north latitude and 88°21′ east longitude. The municipality, as defined by a Government notification, dated 17th

January, 1884, covers an area of about 10 square miles, and is nearly 7 miles long and 1½ to 2½ miles wide. In 1961 it had a population of 512,598, the largest in any town in the State outside Calcutta, there being no less than 46,056 persons per square mile. In 1872 the population was returned at 84,069, and the increase is due chiefly to the immigration of labourers attracted by the numerous factories and other industrial concerns in Howrah, Calcutta and their neighbourhood.

The city is entirely of modern growth. It has been evolved from a congeries of villages accreting to the central villages of Howrah; and traces of the original villages still survive in the different names of the quarters (*paras*) into which the city is still divided, in spite of the western nomenclature of streets and lanes. For example, along the river bank there are the old *paras* of Ghusuri, Salkia, Howrah, Ramkristapur, Sibpur, Shalimar and Bator; and further inland are Bantra, Khurut, Kasundi, Santragachhi, etc.

The earliest details of the town are found in an application made by the English in 1714 to the Emperor Farrukhsiyar for a grant of a number of villages near Calcutta. The list mentions (1) Salica (Salkia), (2) Harirah (Howrah), (3) Cassundeah (Kasundi, west of Khurut), (4) Ramkrissnopoor (Ramkristapur), and (5) Batter (Bator), with an aggregate rental of Rs. 1,450. The desire to obtain land on the Howrah side of the Hooghly was natural enough, for apart from its close proximity to Calcutta, there were "docks made for repairing and fitting their ship's bottoms, and a pretty good garden belonging to the Armenians." The concession was granted, but the English could not avail themselves of it owing to the refusal of the zemindars to sell their rights; and the lands continued under Mughal rule for nearly half a century more. In 1750, Howrah is said to have been "a line of mud banks reeking with malaria, corpses in all stages of decomposition floating up and down the stream by the dozen, jungle lining the shore, the abode of the snake and alligator."

This is most probably the reason why this part of the river bank is shown as blank in Valentijn's map, and in the various old charts of the river Hooghly. In the Pilot Chart of Bowrey (1688) no villages are entered on this side of the Hooghly, but in that of 1703, jungles, indicated by ten trees, are shown above Sumatra Point (the modern Shalimar Point) and next "Simple Tom's Tree" near the present Ghusuri. In 1767 we find a proposal put forward by the Civil Architect, Mr. Fortnum, to have a hospital established at Howrah. The proposal is referred to as follows in the Consultation of March 1767: "The Buxey lays before the Board an extract of a letter which he has received from the Civil Architect pointing out two places on the opposite side of the river to built an Hospital upon the one opposite Surman's Gardens, and the other opposite the Town, but recommending the former as the most eligible spot. Point Sumatra, opposite Surman's Gardens, is the most proper spot for an Hospital from its being a wholesome situation and contiguous to the River, by which the Sick may be easily transported to it and better supplied with necessarys." The Board accepted this recommendation and directed the Civil Architect to prepare a plan and estimate. Fortnum submitted a detailed plan for the erection of a hospital on Point Sumatra (the present Shalimar Point) with an estimate amounting to 5 lakhs, but reported "Notwithstanding I attended the Sarcar sent down by the Fuzdar of Hughley and marked out the bounds of the spot (four months ago), nothing has been done towards clearing of the riotts' Hutts, on the contrary a number of others since that time have been put up. Eventually, however, the scheme was abandoned, apparently because it was too ambitious and too expensive for the straitened resources of Bengal at that time."

A few years later, Salkia became a centre of trade, with docks and roperies, and in Rennell's Atlas, Plate VII (October 1779) and Plate XIX (August 1780), we find "Solkee" or "Solkey" printed in large letters and shown as a place from which several roads radiated, one starting north-west *via* Chanditala to Burdwan, a second westwards *via* Makardah to Adampur, and a third south to thana Muckwa and Sankrail. "Seebpur" and "Bathore" are also shown, but, curiously enough, not Howrah. "Howra ghaut" appears, however, in a map of Calcutta and its environs prepared from Upjohn's survey in 1792 and 1793, together with "Ramkissenpore's Gt.," "Sulkhia Ghat" and "Sulkia Point". This map also has the following entries. In Salkia there are two lanes marked "Rope Walk", in Howrah proper there are three entries, *viz.*, "Burial Ground", "Orphans of Private Educated" (indicated by three towers), and to the South "Hospital". Inland, to the west of an unnamed road, which is evidently the modern Grand Trunk Road, there are "Mosulman's Burial Ground", and, a little south of it but on the east of the road, "Former Practising Ground of the Bengal Artillery", from which the modern name Chandmari is derived. This interesting map shows other roads and houses, but does not name them.

A proclamation dated 10th September 1794, evidently based on Upjohn's survey, laid down the boundaries of Calcutta Town. According to it, the river Hooghly

was included within the metropolis, its western boundary running from "Colonel Robertson's garden called Jackapoore, immediately opposite to the mouth of the brook called Chitpore Nulla or Baugbazar Nulla", and then along the low water-mark of the river up to "the south-east point of Major Kyd's garden" but "excluding the said garden and the village of Sheebpore", and also "the Ghauts of Ramkisnopore, Howrah and Sulkeah". Major Kyd was the founder of the Botanic Garden, and his private garden was contained in the grounds of Shalimar House, now occupied by a ropework.

From other sources we learn that docks and roperies existed in Salkhia and Ghusuri, and there were two docks, one opposite Fort William and the other a mile below its. Distilleries were also started, one belonging to a Chinaman in "Sulky" being advertised for sale in the *Calcutta Gazette* in 1784; while the present court houses are said to have been built in 1767 for a rum distillery. The Hooghly records also mention the existence of cotton screws at Salkhia. Gardens, belonging mostly to Armenians, had been laid out among the houses and fields, to which the residents of Calcutta came for a change; and, according to Walter Hamilton, there was an extensive teak plantation above the Botanic Garden. The Europeans lived chiefly along the river bank in Salkhia and Ghusuri, and later in Howrah and Ramkristapur. The natives lived inland, round the present Khurut Road, which is still known as *Purani Sahar, i.e.*, the old town, and in Sibpur including Bator. Howrah was at this time a dumping ground for the Brahmani bulls of Calcutta which roamed about in such numbers as to become a nuisance, while the houses and gardens were infested by bands of monkeys.

Dacoities were common, the dacoits hiding themselves in the paddy fields and jungle, and committing depredations by night in armed bands. Their detection was rendered difficult by the league which is known to have existed between the dacoits and police officers; for the sessions records contian the names of many *chaukidars* among the convicted dacoits, while the district records show that several *darogas* were degraded or dismissed on suspicion of complicity.

Among the earliest public institutions in Howrah were the Royal Military Orphanage, the cemetery attached to it, the Hospital to the south of the school, and the salt godowns. The school for soldiers' orphans was located in 1785 in a large house, known as "Levett's house and garden", which was built about 1767 and was originally a rum distillery. Mr. Levette had taken a lease of Howrah village, but found it so unprofitable, that in 1785 he begged the Board of Revenue to allow him to relinquish his title and to pay the rent in future to the zemindar. His request was granted in August 1785. In the meantime, his house, which had a compund extending over no less than 160 *bighas*, was sold to the Orphan Society for Rs. 65,000. The premises were occupied by the Orphanage till 1815, and were subsequently divided into three portions, one being allotted to the Custom House Officers, a second to the Magistrate of the 24-Parganas to serve as a periodcal court, and the third to the clergy of Bishop's College in consideration of the services they rendered by taking services in the Church. The Civil Court of Salkhia was transferred to the second portion, and later the Magistrate's Court, when a separate Magistrate was appointed in 1843. In 1851 the clergy of Bishop's College vacated their portion, and in 1859 the Customs Office was also removed. Since then the building has been in sole possession of the Criminal, Revenue and Sessions Courts.

The cemetery occupied a part of the Orphan School compound on the north of these buildings. The oldest inscription in this cemetery is on the tomb of Mr. Henry Ackland, Secretary to the Orphan Society for eight years, who died in 1791, and the next oldest is an epitaph to Mr. J. Wynne, who died in 1799. The hospital shown in Upjohn's survey was removed in 1828 to a double-storeyed house at the Howrah Ghat and remained there till 1852, when the site was acquired by the railway.

Among other early institutions may be mentioned Bishop's College and the churches. The foundation stone of the former was laid by the Bishop of Calcutta, Bishop Middleton, in December 1820, and it was opened in 1824. The first Church of England church was built, at the instance of the Principal of Bishop's College, by private subscriptions and a small Government grant, on five *bighas* of land separated from the Orphan School premises. It was finished in 1831 and consecrated under the name of St. Thomas' Church. The Roman Catholic Church in Cullen Place was built in 1832 by the Revd. Father Paul de Gradoli at a cost of Rs. 40,000 realized entirely by subscriptions, and was consecrated under the name of the "Church of Our Lady of Happy Voyage." The earliest church, however, was one built in 1821 by Mr. S. Statham, the first Baptist resident missionary; when the site was acquired by the railway, a new chapel was built, in 1865, at the junction of Dobson's Lane with King's Lane.

Howrah, which Bishop Heber described in 1823 as a place "chiefly inhabited by ship-builders", and which

in 1848 was referred to as "the Wapping of Calcutta inhabited chiefly by persons connected with the docks and shipping", began to expand rapidly in the middle of the 19th century. Not only did the docks increase in size and in number, but other large industrial concerns were started, such as engineering yards, sugar factories, flour mills, and, after the sixties of the 19th century, cotton mills, jute mills and jute presses. The selection (in 1850) by the East Indian Railway authorities of Howrah as the terminus of their line and the construction of the bridge over the Hooghly gave an immense impetus to its development, which in recent years has been further facilitated by the entry of the Bengal-Nagpur Railway, now South-Eastern Railway by the opening of the two light railways, and by the starting of steamer services.

The Zila School was opened in 1845 for native boys, and the St. Thomas' School in 1864 for European boys. The Bishop's College was replaced in 1880 by the Engineering College, now the centre of high technical education in West Bengal. The Howrah General Hospital was started in 1861, and is one of the largest hospitals in West Bengal outside Calcutta.

The city is roughly divisible into two parts, the river bank and the portion further inland, which are separated from each other by the Grand Trunk Road. The former contains the more stately residences, offices and other buildings of buisness firms, and the latter the congested town. Howrah proper lies nearly midway; and its centre bounded by Grierson Road on the north, Telkalghat Road on the south, the river on the east, and the Grand Trunk Road on the west, forms the focus of commercial life. Except for a small part to the south in the possession of John King and Co., the whole of its river frontage is occupied by the railway station and goods-sheds. Then comes the long overbridge ending in the Buckland Road, with the Magistrate's residence and the Civil Court on the east, and various other public buildings on the west, *viz.*, the post office, the municipal office, the old church and cemetery, the criminal courts, the police reserve lines, and the hospital. The rest of the land is kept open, except for the Railway Institute in the north-western corner and the new church, the Zila School and the District Board office in a corner on the south. The portion left open may be regarded as the chief, if not the only, lung of the city, there being space for cricket, football, hockey and lawntennis, and for the pitching of tents in the cold weather for circuses or other entertainments.

From the Hooghly bridge northwards along the river front extend a series of docks with the salt godowns in the middle. Above them come other works, between the Grand Trunk Road and the river, etc., roperies, timber yards, engineering works and oil mills, ending at Ghusuri in cotton mill. and jute presses. At the extreme north end, houses begin to thin out, and fields with gardens appear. South of Burn & Co's yard, a considerable area has been reclaimed from the river by the Port Commissioners and is crowded with godowns for storing rice and molasses. To the west of the reclaimed chars are 46 bighas of land acquired by Government in 1907. Beyond them lie a row of small sheds, in which is held the Tuesday hat of Ramkristapur, said to be the greatest mart for handlooms cloths in Lower Bengal. Further south are found various factories such as flour mills, jute mills and presses, timber yards etc. until Shalimar Point is reached with the South-Eastern Railway goods yard and wagon ferry. On the river bend come other factories, roperies and paint works ending in the large compound of the Engineering College at Sibpur.

The river and the Grand Trunk Road form the two main thoroughfares the greatest congestion of traffic taking place on the Grierson Road leading to the Hooghly bridge. The river bank is similarly crowded with cargo boats, which load or unload an immense quantity of goods between Banda Ghat at Salkhia and Sibpur Ghat, and with small boats ferrying passengers to and from Calcutta or vessels in the river. The river frontage is lined with iron *ghats*, long jetties and busy dock yards, having a background of tall buildings and grimy chimneys. The Grand Trunk Road presents a similar busy scene with rows of small shops and several large markets, and carries a heavy traffic to and from the railways, the factories, the shops, and private houses.

On the west of the Grand Trunk Road live the majority of the population. The land gradually slopes away from the river bank, the lowest level being reached near Shalimar. Ghusuri is 20 feet, while Santragachhi and Shalimar are only 12 feet above mean sea-level.

The outer fringe of the town is thinly peopled, being mostly occupied by low fields intermixed with gardens and villas. A good deal of the town drainage finds its outlet into these low lands; and when owing to heavy rain the swamp level rises, the drainage is checked and the roads flooded. In September 1900, the swamp level rose to 13 feet above mean tide level, and for days together water stood on most of the roads, causing considerable inconvenience and damage.

JAGATBALLAVPUR- A village in the Sadar subdivision, situated on the left bank of the Kana Nadi, 16 miles from

Howrah. It contains a police station, a post office, a High School, and a small District Board bungalow. Among noticeable villages in the thana, of which it is the headquarters, are Bargachhia, a railway junction with a five-storeyed tower of brick, 165 feet high, clearly one of those erected nearly a century ago for long distance semaphore signalling; Adampur, with the remains of a fort, and old place shown in Rennell's Atlas (Plate VIII); Paintal, one of the largest villages in the district; Balia, with an old temple liberally endowed by the Burdwan Raj with some two thousand *bighas* of land, a place which probably gave its name to the *pargana;* and on the west bank of the Kana Nadi, Nabasan, once well known for its fine cloth, and Maju, a railway station with a High School.

James and Mary Sands—A dangerous shoal in the river Hooghly, situated in 22° 14′ N. and 88° 5′ E. between the confluence of the Damodar and Rupnarayan rivers. The origin of the shoal was apparently due to changes in the course of the two latter rivers. As explained in the introductory essay, the main stream of the Damodar formerly flowed along what is now the Kana Doamodar (or, as Europeans called it, the Jan Perdo, "a river for great ships") which had its outfall by the modern Sijberia *Khal* abore Uluberia. Gradually the main stream was diverted to the present channel, and thus brought close to the Rupnarayan, the distance between the two being reduced from 23 miles to 6½ miles. The Rupnarayan again had its south-western channel silted up, and discharged all its silt-laden water by the eastern mouth. The angles at which both river debouch into the Hooghly, are favourable to the deposit of silt, which the close proximity of the two mouths nearly doubled. The result was that extensive shoals were formed, and their mobility, with the strong eddies set up, tended to make navigation dangerous.

These shoals and eddies were noticed as far back as the latter half of the 17th century. In the diary of Streynsham Master, under date 8th and 10th September, 1676, we find an entry:—"This evening with the tide of flood we got into that part of the river Ganges that come from Hughly. At the mouth of the said river there's 18 or 19 fathoms water without, but eight or nine within, but it shoals gradually shelvingwise, so that oftentimes ships and vessels are turned or winded round by it for a good space of time, but seldom receive damage thereby (as afterwards I saw one further up the river soe winded), but we coming near upon a high water got in without such winding, and they happen at the first of the flood and last of the ebb" Thomas Bowrey also speaks of having been caught in September 1676 in an eddy off "the shoals of the river Tombolee (where the river is most crooked)," that being an old name for the Rupnarayan. He described his experience as follows:—"It happened at that time for the space of half an hour to be slack water, but then the fresh came down like a bore and hurried up away into a most impetuous eddy, when in a moment our ship turned round so often and quick with all that not one of us could stand to do any thing. One cable broke, and the other swum like to a piece of wood". From the above description it is clear that shoals had been formed by the fourth quarter of the 17th century.

The shoals appear under the present name "James and Mary Sands" in the Pilot Chart of 1703. The name is evidently derived from that of a ship (called after James II and his Queen Mary of Modena), which was lost here in September, 1694. "The Royal James and Mary arrived in Ballasore Road from the West Coast in August .....but coming up the river of Hughly on the 24th September, she fell on a sand on this side Tumbolee point and was unfortunately lost, for she immediately oversett and broke her back, with the loss of four or five men's lives".

The sands, which are three miles long and a third of a mile in width, occupy the centre of the river Hooghly, leaving channels on either side, known as the Eastern and Western Ghat.

LILUAH—A village in the Sadar subdivision, situated three miles from Howrah. It contains a police station, but is better known for the extensive carriage workshops and goods-yards of the Eastern Railway. Many garden houses have been built in the neighbourhood in recent years by Marwaris and others; and a great part of the surrounding land, which was formerly covered with reeds and low jungle, has been brought under cultivation.

MAHIARI—*See* Andul.

MANDALGHAT—A village in the Uluberia subdivision, situated on the left bank of the Rupnarayan opposite Tamluk. It must have been a more important place formerly, for it gave its name to the *pargana,* while the Damodar river was often called River Moundleghat, *e.g.*, in the Pilot Chart of 1703. Mandalghat appears in the *Ain-i-Akbari* as a *mahal* of *Sarkar* Mandaran with a revenue of 906,775 dams, and is mentioned by Valentijn, who says:—"Calcutta, Mondelghat, and some other places below, supply most of the wax and hemp that we require". The *pargana* is low-lying and was repeatedly flooded by the Damodar in the early British period, until protected by embankments.

SALKHIA—Northern part of Howrah City, containing docks, Government salt godowns, salt crushing mills, jute presses and engineering and iron works.

SANKRAIL—A large village in the Sadar subdivision, situated below the junction of the Saraswati with the Hooghly, about seven miles by river from Howrah, and two miles from Andul station on the south-Eastern Railway. From its position commanding the two rivers, it was formerly a place of some importance. It was mentioned by W. Schouten in 1664, by Charnock in his diary, dated August 24th, 1690, and by Sir John Goldsborough under the form "Sea Crowle" in 1693; and it also appears in Rennell's Atlas (Plates VII and XIX). The only event, however, of historical interest attaching to it is that in 1715 the Portuguese seized a British vessel in the Sankrail Reach.

SANTRAGACHHI—A large village adjoining Howrah city on the west and partly included in the municipal area. The village gives its name to the junction of the branches of the S. E. Railway which run to Howrah and Shalimar, but is nearer to Ramrajatala station. It has a large railway yard. At Ramrajatala, a quarter of Santragachhi, a large *mela* is held in April and May and is attended by large numbers. It is called the *Barwari mela* because its cost is met by private subscriptions. The place is noted locally for its cocoanuts and yams (*ol*).

SHALIMAR—A part of Howrah City lying along the Hooghly close to Sibpur. It contains rope-works and the goods yards of the S. E. Railway. A century ago it was a country retreat for European residents of Calcutta. Here Colonel Kyd, the founder of the Indian Botanic Garden, had a house and a garden, which, it is said, was intended to be a miniature of the Shalimar garden and pleasure ground laid out at Lahore in 1667 by Ali Mardan Khan, the celebrated engineer of Shah Jahan. Colonel Kyd died here in 1793, and the house was occupied by Sir John Royds, a Judge of the High Court, till his death in 1817, and after him by James Sutherland, a nephew of Henry Thomas Colebrooke, Shalimar Point was formerly known as Sumatra Point.

SIBPUR—The south-western suburb of Howrah City containing the well-known Indian Botanic Garden, and, north of it, the Engineering College. The latter occupies the buildings and the site selected by Bishop Middleton, the first Bishop of Calcutta for Bishop's College. The site was then "a wilderness of high grass, creeping shrubs and stagnant pools", but was considered suitable on account of its distance from the distractions of Calcutta. The object of the College was to be "the education of Christian Youth in sacred knowledge, in sound learning, and in the principal languages used in this country in habits of piety and devotion to their calling, that they may be qualified to teach among the heathen". In other words, it was to be a Missionary College for India.

The Governor-General, the Marquis of Hastings, presented 62 *bighas* of land on the east of the Botanic Garden, and liberal grants of money were given by the British and Foreign Bible Society and by the Church Missionary Society. The foundation stone was laid in 1820, and the college opened in 1824, the first Principal being Dr. William Hodge Mill. Subsequently, the grounds were extended further to the east by the free gift of a piece of ground on the banks of the Hooghly by Sir Charles Metcalfe; while in 1826 the Governor-General, Lord Amherst, at the special request of Bishop Heber, assigned a further space of 48 *bighas* on the bank of the Hooghly for the demesnes and out-offices of the college. Bishop Heber took particular interest in the college, which he wished to be not merely an ecclesiastical seminary, but a college from which "India would derive her parochial clergy, her professors of the liberal sciences, her philosophers, her well-educated merchants, gentry and statesmen". The college flourished for nearly half a century, but in 1872 there was "only one tutor with about half a dozen students". In 1880 the land and buildings were acquired by Government and utilized for the Civil Engineering College.

Its architect was William Jones, whose sympathy for Indians, and knowledge of their language and customs, earned for him the name of Guru Jones. He came out to India in 1800 and for 10 years worked as a mechanic. In 1810 he is described in the directory as a manufacturer, and next year as the proprietor of a canvas manufactory at Howrah. It was there that he first established himself to any advantage, and to his energy and example may be in a great measure attributed the prosperity of that city. When an expedition was about to be despatched in 1811 for the capture of Java, and its departure was impeded by the want of cartridge paper, Mr. Jones came to the assistance of Government. His mechanical skill enabled him to set up a little paper manufactory, from which he furnished all the paper that was requisite, closing his new works as soon as the object of the expedition was accomplished. Four or five years subsequently, Jones accidentally, discovered, the existence of coal in Burdwan, and with characteristic ardour determined to open mines. "It is chiefly in reference to our

Indian coal, and in contemplating the vast benefit which Jones' labours have conferred on India, that his claim to the highest rank among her benefactors rests". His last public engagement was the building of Bishop's College, which he undertook in some measure from his desire to promote every objects of public utility, but also because he aspired to the honour of erecting the first Gothic edifice in India. His active and useful life was brought to an abrupt close in the month of September, 1821, in consequence of a fever contracted while superintending the building, which proved fatal in three days, "It will," wrote Bishop Middleton, "still be his monument."

Considerable additions have been made to the college since its acquisition by Government in 1880. The most interesting building is the chapel begun by Jones, which contains memorial tablets erected to Bishops Middleton, Heber and Wilson, and to four *alumni* of the college who were killed during the Mutiny of 1857. One of these, named Cockey, was at the college in 1846 at the same time as another distinguished pupil, the Bengali, poet Michael Madhusudhan Dutt. It is now the premier Engineering College in the State.

SHAMPUR—A large village on the right bank of the Damodar, chiefly inhabited by Kaibarttas. It has a police station, a sub-registry office, a post office, a ferry, a charitable dispensary and a District Board bungalow. Within its jurisdiction lie Sasati, with a High English School, a ferry and an Irrigation Department bungalow on the Rupnarayan; Fort Mornington on the mouth of the Rupnarayan in the village of Makrapathar; and Pichhalda, two miles north. north-west of Fort Mornington with a *hat*. Sasati is shewn in Rennel's Atlas (Plate VII), while Pichhalda is still older being shewn in the oldest maps existing, *viz.*, those of Gastaldi (1561), De Barros (1623) and Blaev (1650). In De Barros' Die Asia, printed in 1552, it is said, "Ganga discharges into the illustrious stream of the Ganges between the two places called Angeli and Picolda in about 22 degrees". It is also mentioned in the biographies of Chaitanya as the place where he crossed the river; and from its position, just above the junction of the Rupnarayan and the Hooghly, it must have been an important village.

ULUBERIA—The headquarters town of the subdivision of the same name, situated on the right bank of the Hooghly river, in 22°28′ N. and 88°7′ E. It is 19 miles distant by river from Howrah and 20 miles by rail, and is accessible by boat, steamer and rail. The Orissa Trunk Road and the High Level Canal to Midnapore also start from this town, and there is a station on the south-Eastern Railway at a short distance from it. The town, which is protected from the river by a high embankment, is rural in character and has no features of interest. Before the railway was extended to it Uluberia was a place of some importance, for pilgrims passed through it on their way to and from Jagannath, and there was a large bazar to meet their wants. It still has a considerable trade in rice and fish, especially mango-fish and *hilsa*. In 1903 it was constituated a municipality; but in April 1907, the municipality was abolished as unsuitable to local conditions, and the place was made the headquarters of an Union. It has the usual subdivisional offices. The name is probably derived from *ulu* (a kind of grass) and *bere* (fence), the *ulu* grass growing in abundance round the town. The derivation "Abode of Owls" given by Sir William Hunter is fantastic and improbable.

This little river side town has an interesting history. It first came into prominence in consequence of Charnock's war with the Bengal Nawab. The first campaign was concluded by an agreement between Charnock and the Nawab's Bakshi Abdul Samad, by which the former handed over Hijili and was permitted to proceed to Chutanati and to demand a new *farman* with twelve conditions. Charnock accordingly proceeded on 17th June, 1687 "with half the fleet to Ulleberrea and Little Tanna". One of the twelve conditions was that the English should be allowed to establish themselves at Uluberia, besides keeping their Factory of Hooghly. This condition was granted by the Nawab in a *parwana* or order from Dacca, dated 21st July 1687. It was also tentatively approved by the Court of Directors, who on 27th August 1688, wrote:—"Your town of Ulabarreah, we understand, hath depth of water sufficient to make Docks and conveniences for the repairing of any of our biggest ships, and is a healthful place, and therefore we have added a Paragraph to our letter to our Generall that, if he can obtain a Phiramaund from the Mogull for our holding that place fortified with the same immunities and privileges we hold Fort St. George, we will be therewith content, without looking further, or being at any new charge in contending for any other fortified settlement in Bengal.....We hope you may so manage that place or Town of Ullaberreah which you have articled for, that it may in time become a famous and well-governed English Colony."

The truce, however, was a hollow one, and, as the war continued, the Bengal Council with all their shipping had ultimately to retire to Madras. In the meantime, Charnock and other members of the Council changed their minds, and in reply to the above letter of the Court

wrote from Madras under the date 30th September. 1689: "In our General Letter by the Beaufort and our diaries of that Yeare, wherein wee have laïd downe Our reasons for the altering Our Opinion about Ullaberreah and pitching on Chuttanutte as the best and fittest up the River on the Maine, as we have since experienced, and likewise been sattisfyed that Ulubarreeah was misrepresented to Us by those sent to survey it." Uluberia thus never became "a famous and well-governed English Colony". It continued, however, to be a place of some importance for it is shewn in the Pilot Charts of 1688 and 1703 and in Rennell's Atlas (Plates VII and XIX).

Within the jurisdiction of the Uluberia thana there are several important villages, *e.g.*, Phuleswar, Sijberia at the mouth of the Rajapur Drainage Channel with a canal bungalow; and Nunti with plantations of betel leaf, wellknown in the Northern India for its fine flavour. All the early maps shew below the present Uluberia, a place named Pisacol, which may have given its name to pargana "Pechacolly" on the other side of the river, one of the original 24-Parganas. There is no trace or this village in the maps published after the middle of the 17th century. The Pilot Charts of 1688 and 1703 show a village Rangamatte, a name which still survives in the Rangamete *Khal* opposite Mayapur Magazine. Valentijn's map shows another village Basanderi, which is also mentioned by Alexander Hamilton:—"Basundri and Tresinddi.. .....are on that river, which produce the greatest quantities of the best Sugars in Bengal". It probably gave the name to the large pargana of Balia Bassendhari, which formed a portion of the Burdwan zemindari, while a small part of it was included in Lord Clive's zemindari of the 24-Parganas.

Appendix II

NOTES ON SOME TEMPLES IN HOWRAH DISTRICT

by

DAVID MCCUTCHION

For architectural style and decoration, the temples of Howrah are an extension of those predominating in the adjoining district of Hooghly. The favourite type is the *at-chala* (hut style with tower duplicate), which at its most developed has a porch on to columns with three archways and a facade fully decorated with terracottas: Ramayana and other mythological scenes above the archways, scenes of contemporary life along the base with Krishnalila frieze above them, small panels depicting gods, goddesses, avataras, sadhus, dancers, doorkeepers and the like rising either side and continuing across the top, and small blocks of similar subject matter in threes at the outer edges. Much less common is the *nava-ratna* (nine-pinnacled) type. Other traditional designs are rare in temples of any importance, and I have come across no single or twin *bangla* (elongated hut with gable ends) type at all. The temples of interest that remain are mainly from the second half of the 18th century, although a few survive from the 17th. The art of terracotta decoration seems to have died out earlier than in the adjacent areas of Hooghly and Midnapore, and produced no 19th century school: at Penro-Basantapur in Amta P.S. on a temple dated 1791 the terracotta style is already extremely degenerate. Subsequently stucco is employed, or large statuary of brick and mortar under the new European influence (*e.g.* on the Bareshwar Siva temple at Kushberia near Amta). At the same time flat-roofed temples with European decorative features became common. All temples are of brick, though fragments of stone lintels, etc. from earlier periods may be found (*e.g.*, at Jaypur or Khariap in Amta P.S.) In some temples, as at Radhapur or Baradabarh in shampur P.S., the wooden doors to the shrine are carved with figures in similar style to the terracottas. Two local museums, at Panitras (Sarat Smriti Sangrahasala) and Nabasan (Anandaniketan Kirtisala) contain terracotta plaques from temples that have since disappeared.

Amta Police Station:

GARH BHABANIPUR—The former temple of Gopinath now stands abandoned and overgrown in the fields to the West of the village. The facade on the East has fallen, so that nothing remains of its former terracotta decoration. It had a central chamber, with two side chambers, front verandah, and upper storey; presumably the original design was a large at-chala or nava-ratna. It is said that the terracotta figures incorporated in the modern entrance archway of the rebuilt Maninath temple came from the old Gopinath temple.

SINGTI—Small at-chala temple of Lakshmi-Janardan, with terracotta panels above the archway only, depicting scenes from the life of Krishna. The temple is in a ruinous condition. In better condition nearby is a similar at-chala temple of Sitala, with Ramayana and other Puranic scenes above the archway. The Lakshmi-Janardan temple is dated 1699 sakabda (c. 1777 A.D.), and the Sitala temple would presumably date from the same period. Both temples are in worship.

ASANDA—Large nava-ratna temple of Sridhar, with facade fully decorated in rather crude style. Apart from the usual Battle of Lanka, the archway panels includes some curious subject matter. The temple was built in 1711 sakabda (c. 1789 A.D.), and is in a somewhat neglected condition. A salagram (Narayansila) is in worship.

JHIKIRA—The adjacent villages of Jhikira and Rautara have the richest collection of decorated temples in Howrah district, extending over a period of about a century. (1) At-chala Damodar temple of the Mandal family, dated 1699 sakabda (c. 1769 A.D.). The fully decorated facade has most of its terracottas intact, including a complete Krishnalila frieze, with scenes of upper class and military life below: among them may be seen riders on camels and horses, a European boat protected by soldiers, a raja being carried in a palanquin, another reclining with his hookah, horsemen spearing deer, and so forth; the archway panels have lively battle scenes centering on Rama's fight with Ravana. (2) At-chala Sitanath temple in Kararpara, dated 1705 sakabda (c. 1783 A.D.): similar decoration, but the base friezes are more damaged. The archway panels include a variety of Ramayana scenes, and the battle of Chandi with Sumbha and Nisumbha on the left; beneath the Krishnalila frieze, there is a vigorous hunting scene with Europeans along the base on the right. In this, as in the temple of the Mandal family, a salagram is in worship. (3) Navaratna temple of Sridhar: this was either built or renovated in the 19th century, and has incized geometrical and floral plasterwork above the archways. (4) At-chala Syam-Sundar temple of the Mallik family, dated 1613 sakabda (c. 1691 A.D.)—the oldest temple in the village.

This has neither archway panels nor Krishnalila frieze, but interesting hunting and processional scenes along the base, especially depicting the early Europeans and their ships. The temple contains a blackstone Krishna, eight-metalled Radha, and salagram called Damodar. (5) Nava-ratna temple of Garh Chandi, dated 1717 sakabda (c. 1795 A.D.). The local people claim this is a repair date and that the original structure goes back to the time of Husain Shah; the temple was renovated in 1940 and thickly whitewashed. A single row of weak rounded terracottas runs round the facade. A painted wooden image of Garh Chandi, seated fully dressed with one hand up and the other down, is in worship, along with two pots. (6) At-chala temple of Jay Chandi, dated 1672 sakabda (c. 1750 A.D.). The temple is at present whitewashed, with no decoration apart from scattered lotus medallions and terracotta plaques of Ganesa, Durga, and Kartikeya; the original decoration may have been removed when the temple was repaired in 1894. The image is similar to that of Garh Chandi, with a crown. (7) At-chala temple of Damodar in Paschimpara, dated 1698 sakabda (c. 1776 A.D.). Fully decorated facade, with Ramayana above the archways; and unusual feature is that the Krishnalila and social scenses do not extend the whole length of the base, but only at the bottom left and right. Among the latter (bottom left) is a curious scene in which two prisoners are brought struggling frantically before a raja seated with his hookah. The details of the terracottas have been blurred by recent colouring. (8) Nearby nava-ratna temple of Syamsundar: this was renovated some ten years ago, and now offers little of artistic interest; it is decorated with stucco figures. In both these temples of Paschimpara a salagram is in worship.

RAUTARA—(9) At-chala Sitaram temple of the Ghose family, dated 1622 sakabda (c. 1700 A.D.). Fully decorated facade with Ramayana and other Puranic scenes above the archways, and Krishnalila along the base; below the life of Krishna are interesting depictions of the 17th century. Europeans—riding on horses or elephants, walking accompanied by a servant, shouldering their rifles, hunting, or sailing in their big flat-bottomed boats. Sitaram is worshipped in the form of a salagram, along with a blackstone Krishna (Gopinath), brass Radhika, two more salagrams named Sridhar and Lakshmi-Janardan, and Durga, Kali, Mahadev, etc. (10) Nearby at-chala temple of Damodar in Keranibati, built in the Bengali year 1123 (c. 1716 A.D.) according to the owner. Its only decoration is scattered lotus medallions, and it has recently been whitewashed. The object of worship is a coconut on a pot. (11) At-chala Damodar temple of the Ray family, dated 1684 sakabda (c. 1762 A.D.). Fully decorated facade, with Krishnalila and contemporary scenes along the base, and Ramayana above the archways. Nearby is an at-chala dolmancha, the columns of which are also decorated with mythological subject matter. The main object of worship is a salagram, but coconuts on pots representing Manasa, Sitala, and Chandi are also under worship in the same temple.

AMARAGARI—There are two fairly large at-chala temples in this village, with fully decorated facades. The older one is the temple of Gaja-Lakshmi, dated 1651 sakabda (c. 1729 A.D.). This has neither Krishnalila frieze along the base, nor Ramayana scenes above the archways: the archway panels are filled with tight scrollwork, while rows of geese and cattle run along the base above the usual hunting and processional scenes, with European boats at the base of the columns. The image has been removed to the adjacent house, and the temple is now used for storing straw. More fully decorated with figures is the temple of Dadhimadhab, dated 1686 sakabda (c. 1764 A.D.). This has particularly vigorous hunting and processional scenes along the base, mainly depicting the Europeans, including their sea-going vessels. All three panels above the archways are given over to the Battle of Lanka, while the usual Krishnalila frieze runs along the base above the sahibs. A salagram is in worship. Both these temples are approaching a ruinous condition, with trees growing on the roofs.

JAYPUR—The oldest temple in this village is the at-chala temple of Motilal Dharma, which was built in 1606 sakabda (c. 1684 A.D.) according to Binoy Ghose in his *Paschimbanger Sanskriti*. It is reported to have been fully decorated with terracottas, most of which had fallen off, before it was rebuilt a few years ago—a process which destroyed its original architectural form and left only a single row of the original terracottas on the left side. The temple of Sridhar in Jaychanditola is a larger at-chala design, dated 1704 sakabda (c. 1782 A.D.). The facade is fully decorated with terracottas in the weak rounded style which developed towards the end of the century: they can hardly be seen properly through the half washed-off whitewashed. A salagram is in worship. Two more temples of interest in Jaypur have been renovated and whitewashed: the temple of Lakshmi-Janardan, a double-storeyed flat-roofed design, built in the Bengali year 1112 (c. 1705 A.D.) by Kaliram Ray according to Sri Binoy Ghose; and the Jaleshwar Siva temple, and at-chala design with a char-chala porch.

GAJIPUR—There are a number of temples in this village, only two of which are of any artistic interest. The

Govinda temple of the Mazumdar family, like the Lakshmi-Janardan temple of Jaypur, is another instance of the two-storeyed flat-roofed design, dated 1636 sakabda (c. 1718 A.D.), not to be confused with the 19th century flat-roofed temples built under European influence. The upper storey was for removing the image to safety in times of flood. The facade is decorated with large lotus medallions in square panels, and two isolated plaques of Rama and Ravana above the central archway. A blackstone Krishna and eight-metalled Radhika are under worship. Nearby to the north-east is the ruin of an at-chala Siva temple, dated 1697 sakabda (c. 1775 A.D.). Something of the terracotta decoration still remains on the East and South facades: scrollwork in the archway panels, and a row of avataras above on the south.

MAHISHAMURI—At-chala temple of Bhubaneshwari, dated 1601 sakabda (c. 1679 A.D.). A rare instance of a fully decorated 17th century facades: Battle of Lanka in the archway panels, Ramayana frieze bottom left, Krishnalila frieze bottom right, processional scenes beneath, and the full complement of side panels and groups at the edges. Unfortunately, frequent renovation (there are five date plaques) has entirely destroyed the artistic and much of the historical value of this temple: large plaster figures have been introduced, enamel paint has been applied to the terracottas blurring the edges and eliminating the detail, and the whole has been thickly limewashed in a variety of garish colours. A blackstone Krishna and eight-metalled Radhika are in worship.

Bagnan Police Station:

MELLAK—Massive at-chala temple of Madan Gopal, dated 1573 sakabda (c. 1651 A.D.). On a base 28 by 34½ feet and over 40 feet high, this is the largest as well as the oldest temple still in worship in Howrah district. The facade is sparsely decorated, mainly with lotus medallions, and there are no base friezes, but a narrow series of plaques runs above the archway panels: these are badly worn, and depict gods, goddesses, avataras and battle scenes. The centre archway panel has two small plaques of Rama pursuing Maricha. A blackstone Krishna and Radha are in worship; a pre-Muslim Vishnu image stands in the porch. Small trees are growing on the roof, which is starting to crumble.

KALYANPUR—Situated in a private courtyard is a large nava-ratna temple of Damodar, dated 1708 sakabda (c. 1786 A.D). The three archway panels depict (centre) Battle of Lanka, (right) Krishnalila, (left) social and erotic scenes, including husking rice and a barber at work; there are no bottom friezes. More than one salagram and pots are in worship. The temple is in a crumbling condition. A hundred yards or so to the East is a flat-roofed temple of Kali, dated 1744 sakabda (c.1822 A.D.). Here the traditional terracotta decoration has entirely disappeared, replaced above the arches by floral plasterwork with birds. Both inside the porch and on the outer walls are fixed large, almost life-size terracotta figures—probably inspired by British statuary. A stone image of Kali on a blue jackal is in worship.

Shampur Police Station:

SULTANPUR—Char-chala temple of Khatiyal Siva, dated 1588 sakabda (c. 1666 A. D.). The temple has been frequently renovated and much of the facade cemented over, but the archway panel is intact, depicting the pursuit of Maricha by Rama; as at Mellak these two plaques are set amidst scattered flower-heads, and a series of rampant lions eating lotuses runs round the archway. The temple is small, and houses a linga.

Jagatballavpur Police Station:

JAGATBALLAVPUR—The most extensively decorated temple is the at-chala Siva temple of the Pal family, dated 1686 sakabda (c. 1764 A.D.). This has the usual battle scenes above the archways, and Krishnalila above hunting and processional scenes along the base. It has recently been coloured pink, white, and blue. About 100 yards East along the same road is another recently renovated at-chala Siva temple, with the battle of Lanka in the single archway panel. Another smaller at-chala temple with the Battle of Lanka above the archway and no further terracotta decoration, apart from lotus medallions and large dwarapalas, is in Shasthitola and appears to belong to the late 18th century. Nearby is a larger at-chala temple, dated 1724 sakabda (c. 1802 A.D.), with scattered lotus decoration, dedicated to Mahandresvara Siva.

Many more temples decorated with terracottas are reported from Jagatballabhpur P.S., especially in the area round Patihal and Bargachhia.

PART II

A. CENSUS TABLES AND B. OFFICIAL STATISTICS

A. CENSUS TABLES

Explanatory Notes

This part contains 44 tables presenting the 1961 Census data for the district. Most of the tables present materials for each police station and some tables present data for each town. The figures for the district as a whole have been given first followed by the figures for a subdivision and the police stations under a subdivision. The police stations in a subdivision have been arranged according to the location code number assigned to a police station for the purpose of the 1961 Census.

The tables presented in this part do not however cover the whole range of Census statistics pertaining to the district. The tables on migration and certain other topics have not been included in this volume for want of space. Those will be found in the West Bengal Census Table Volumes.

The following paragraphs will give a brief account of the tables included in this volume. A detailed note on each of the tables has been given in respective census publications containing 1961 Census Tables. Definitions adopted for certain terms often used in census parlance have been given in Appendix I to this note.

A—Series

General Population Tables

There are, in all, four General Population Tables and three Appendices in this series. But only two tables *i.e.*, A-I and A-III have been selected for presentation in the District Census Handbook.

Table A-I

This table presents area, density, number of villages inhabited and uninhabited separately, number of towns, occupied residential house and total population with sex break-up. These data have been shown down to police station and each town separately under each police station having such town.

The Director of Land Records and Surveys, West Bengal was unable to furnish the revised area figures of the territorial units for the 1961 Census. In absence of the figures furnished the State Survey Department, area figures for different territorial units had to be computed for the purpose of Census from the various available sources. Area figures mostly were taken from the last published Jurisdiction List for the *mauzas*.

The area of a town administered by the Municipal Commissioners was obtained from the civic authority concerned. For non-municipal towns, the area figures were obtained by adding up the area figures of the constituent *mauzas*. The density figures in the Table A-I have been calculated on the computed area figures.

Occupied Residential House meant the occupied Census-house. All Census-houses used wholly or partly as dwellings including a parlour or sitting room, a kitchen, which were located in structures auxiliary to the main house were counted as occupied Census-houses, but cowsheds, grain-gollas etc., though auxiliary to the main house, were excluded.

Table A-III

This table gives an account of the distribution of inhabited villages for the district and each police station in accordance with the size of population which has been broadly classified by seven groups i.*e.*, less than 200, 200-499, 500-999, 1,000-1,999, 2,000-4,999, 5,000-9,999 and 10,000 and above.

B—Series

(i) General Economics Tables

The B-Series tables show the distribution of population by economics activity co-related with sex, age and educational level. The classification by economic activity has been made first by workers and non-workers and then the workers have been further classified into nine broad Industrial Categories.

In the 1941 and earlier Censuses, religion was adopted as the basis on which primary sorting and tabulations were done. The population classified by religion and sex, thus obtained, was given in the village statistics. In the 1951 Census Economic Classification substituted the classification based on religion. For this purpose population was divided into eight Livelihood Classes and in each livelihood class the self-supporting persons and their dependents were included. At the 1961 Census the concept of dependency was abandoned for Economic Classification of population and the concept of work was adopted.

The workers in the nine Industrial Categories shown in the Primary Census Abstract conform to the industry divisions as given in the Standard Industrial Classification as follows:

Category		Industry Division
I	Cultivator	Minor Groups 000, 001, 002, 003 and 004 from Division O
II	Agricultural Labourer	
III	In Mining, Quarrying, Livestock, Forestry, Fishing, Hunting, Plantations, Orchards and allied activities	Division O except Minor Group 000 to 004 and Division 1 (unless carried on in household level)
IV	At Household Industry	Division O except Minor Group 000 to 004, Divisions 1, 2 and3 (it carried on in household level)
V	In Manufacturing other than Household Industry	Division 2 and 3 (unless carried on in household level)
VI	In Construction	Division 4
VII	In Trade & Commerce	Division 6
VIII	In Transport, Storage and Communications	Division 7
IX	In Other Services	Divisions 5, 8 and 9

Definitions of Workers and Non-workers have been given in Appendix I.

Table B-I and B-II

Table B-I is the basic economic table of 1961 Census. It shows the distribution of persons into nine broad Industrial Categories of workers and non-workers, with sex break-up under each category. This table also shows the distribution of the population into four broad age-groups under each category. The data have been presented for the district and each police station with rural-urban break-up. Table B-II which shows similar figures for the towns has been combined with Table B-I and entries for each town have been shown under the police station where it is situated.

Table B-III

This table has been prepared in two parts *i.e.*, B-III Part A and B-III Part B, of which the former relates to urban areas and the latter to rural areas. In both the parts each of the nine categories of workers and non-workers have been cross-tabulated by literacy and educational levels with sex break-up. The figures have been presented down to the police Station and town.

Table B-IV

This table shows the distribution of workers engaged in household industry and non-household industry, trade, business, profession or service by sex, industrial divisions, major groups (Appendix II) and by status of employment *i.e.*, "Employer", "Employee", "Single Worker" and "Family Worker" (Appendix I). In the case of workers engaged in household industry the status of their employment has been classified into two *i.e.*, "Employee" and "Others".

The figures have been presented for the working population except cultivators and agricultural labourers of rural and urban areas separately down to police station.

Table B-V

This table gives the Occupational Classification (Appendix IV to this note) of persons who are working in non-agricultural sector. In this table data have been shown for rural and urban working population engaged in non-agricultural sector separately with sex break-up, by occupational group. The figures have been presented down to police station.

Table B-VI

This table presents the distribution of workers except those engaged in agricultural sector into occupational division and further they have been classified by four broad age-groups and age not stated, and by educational levels. This table shows the figures of urban areas for the district as a whole and each of the towns having population of 50,000 and above in the district.

Table B-VII Part A

This table presents workers engaged as cultivators, agricultural labourers and at household industry classified by the nature of their secondary work as cultivators, agricultural labourers and at household industry by sex. The figures have been shown for rural and urban working population separately down to police station. Figures have been presented by major groups of industries in the case of the district and in the case of police stations figures have been shown only against the divisions of the Standard Industrial Classification.

Table B-VII Part B

This table furnishes the distribution of workers engaged principally in non-agricultural and non-household industry in accordance with their secondary work at household industry only. These workers have further been classified by sex, industrial divisions and major groups. These figures have been presented down to police station.

Table B-VIII Part A

This table accounts for the distribution of unemployed persons of age 15 and above who are seeking employment for the first time and who were employed before but now out of employment by broad age-groups. They have further been classified by sex and educational levels. This part relates to only the urban population and has been shown for the total urban population of the district as a whole and each of the towns having population of 50,000 and above in the district.

Table B-VIII Part B

This part of the table contains the same material as that contained in Part A. The difference is that this part shows the figures for the rural population only down to police station. Further classification of the educational levels beyond matriculation has not been shown for the rural unemployed persons and the classification by age-groups has also not been done.

Table B-IX

This table shows the distribution of all the non-working population by broad age-groups as in Table B-I. They have further been classified by sex and eight different types of activity of non-workers (for definition of different types of activity see the Appendix I). The figures have separately been shown for rural and urban population and down to police station.

(ii) Household Economic Tables

Tables B-X to B-XVII account for the economic activity of a household as unit. The related figures have been compiled and tabulated from the data extracted from the entries of the Household Schedules on the basis of 20 per cent Sample. These tables have been prepared in the Mechanical Tabulation Unit of the office of the Registrar General of India, New Delhi. The figures of different tables relate to the number of households engaged in cultivation or household industry or both, size of land or interest in land cultivated and/or the household industry conducted by the household and the number of family workers and/or hired workers engaged in either of the two activities separately or together.

C—Series

Social and Cultural Tables

Table C-I

This table gives the composition of the members in a household. Sample households have been classified by size, composition by family and non-family members, and by economic activity. The households engaged in cultivation have been further classified by size of land holding. This table is of sociological interest indicating, as it does, the strength of the joint family system. The material of this table has been collected from the Hosuehold Schedules on the basis of 20 per cent Sample and the table has been prepared in the Mechanical Tabulation Unit of the office of the Registrar General of India, New Delhi. The figures have been presented for total, rural and urban households for the district only.

Table C-II

This is a very important demographic table. This table gives an account of distribution of rural and urban population separately by sex, age-groups and marital status. The entire population in 0-9 years age-group has been treated as never married and as such no other classifications have been shown against them. This table will give the readers an idea about the trend of variations in the proportions in the various marital status conditions over the last ten years. The figures have been presented down to police station.

Table C-III Part A

This part of the Table C-III relates to the total population of both the rural and urban areas. This table shows the distribution of the population by sex, age-groups and educational levels. The figures have been presented down to district only.

Tables C-III Part B and Part C

These two parts contain the same data as contained in Part A. Only difference is this that Part B deals with the urban population, while Part C deals with rural population. Again in regard to educational levels more detailed educational classifications have been adopted in the case of urban area than those in rural area. In Part B figures have been presented for the total urban population of the district as a whole and each of the towns having population of 50,000 and above in the district. Part C represents the population down to police station.

Table C-V

This table presents the distribution of population by sex and mother-tongues. There are as many as 50 mother-tongues spoken in this district. The figures have been shown for rural and urban areas separately down to police station.

Table C-VII

This table shows the distribution of population for rural and urban areas separately by sex and religions. The population has been classified into 6 main religions arranged alphabetically and the population belonging to other religions have been shown together under "Other Religions". There is another classification which describes "Religion not stated". The figures have been presented down to police station.

Table C-VIII Part A

This table presents the distribution of the scheduled caste population by sex, industrial categories of workers and non-workers and by literacy. The figures for the rural and urban scheduled caste population have been shown separately down to police station. This Table is considered important from the view point of the classification of scheduled caste population into various economic activities.

Table C-VIII Part B

This table contains the same distribution and presentation of data as in C-VIII Part A. This part relates to only scheduled tribes.

SCT—Series

Special Tables for Scheduled Castes and Tribes

Table SCT-I Part A

This table gives an account of the distribution of the scheduled caste population by sex and industrial categories of workers and non-workers. The entire scheduled caste population belong to as many as [52] castes arranged alphabetically. Persons who returned themselves as belonging to scheduled castes without specifying the names of the castes have been shown under "Unclassified". There is another interesting classification of special occupations *i.e.*, "Tanning and currying of hides and skins" and "Scavenging". The figures have been presented for rural and urban areas separately down to police station.

Table SCT-I Part B

This table contains the same distribution and presentation as in Part A. This table relates to scheduled tribes which are as many as [15] in numbers in this district and arranged alphabetically. There is no column for the special occupations in this part.

Both these parts are interesting as they give detailed information about individual castes and tribes.

Tables SCT-III Part A(i) to Part B(ii)

These tables show the distribution of the scheduled caste or scheduled tribe population by name of caste or tribe, sex and educational levels for rural and urban areas separately down to district only.

Tables SCT V Part A and Part B

These tables show the distribution of the households belonging to scheduled castes and tribes engaged in cultivation showing their interest in land and size of land. The figures have been collected from the household schedule on the basis of 20 per cent Sample. These tables have also been prepared in the Mechanical Tabulation Unit of the office of the Registrar General of India, New Delhi. The figures have been presented for rural areas only for the district level. Part A of the table relates to the scheduled castes and Part B to the scheduled tribes.

Table SC-I

This table shows the distributuion of the scheduled caste population by sex, by 3 main types of activities, non-working and educational levels. Other types of activity have been clubbed together and shown under "Others". The figures have been presented for rural and urban areas separately only for the district.

Table ST-I

This table gives an account of the distribution of the scheduled tribe population by name of tribe, mother-tongue, bilingualism and by sex. The figures have been presented only for the district.

Table ST-II

This table corresponds to SC-I in respect of the manner of distribution and presentation execpt in that distribution by educational levels has not been shown. It relates to scheduled tribes.

Industrial Establishments

This table accounts for the distribution of different industrial establishments returned in the Housing Census of October, 1960 as carried on in Census house(s) by villages and towns under each police station separately. The nature of industry has been indicated by the minor groups of the Standard Industrial Classification (Appendix II). Number of such industrial establishments has been put within brackets against each minor group. The data have been collected from the Houselists prepared during the house-numbering operation.

APPENDIX I

Definitions

Census House:

A census house is a structure or part of a structure inhabited or vacant, or a dwelling, a shop, a shop-*cum*-dwelling or a place of business, workshop, school, etc., with a separate entrance.

If a building has a number of flats or blocks which have separate entrances of their own and are independent of each other giving on the road or a common-staircase or a common courtyard leading to a main gate, they will be considered as separate census houses. If within an enclosed or open compound there are separate buildings then each such building will also be a separate census house. If all the structures within an enclosed compound are together treated as one building then each structure with a separate entrance should be treated as a separate census house.

Census Household:

A household is a group of persons who commonly live together and would take their meals from a common kitchen unless the exigencies of work prevented any of them from doing so.

Literacy:

A person who can neither read not write or can merely read but cannot write in any language was treated as illiterate. A literate is a person who can both read and write with understanding. The test for reading is ability to read any simple letter either in print or in manuscript with felicity. The test for writing is ability to write a simple letter.

If the person can both read and write and has also passed a written examination or examinations as proof of an educational standard attained the highest examination passed to denote the educational level attained by him was recorded.

Mother-tongue:

Mother-tongue is language spoken in childhood by the person's mother to the person or mainly spoken in the household. If the mother died in infancy the language mostly spoken in the person's home in childhood was taken as mother-tongue. In the case of infants and deaf mutes the language usually spoken by the mother was written.

Worker:

The basis of work will be satisfied in the case of seasonal work like cultivation, livestock, dairying, household industry, etc., if the person has had some regular work of more than one hour a day throughout the greater part of the working season. In the case of regular employment in any trade, profession, service, business or commerce the basis or work will be satisfied if the person was employed during any of the fifteen days preceding the day on which the household was visited for enumeration. Persons temporarily incapacitated from work at the time of Census enumeration due to illness or other causes are also treated as Workers. An under-trial prisoner in prison during the Census enumeration is also treated as worker if he did some productive work before he was apprehended. Convicts in a prison or long term inmates of hospitals or mental institutions, are not however treated as Workers. Work includes not only actual work but effective supervision and direction of work. Persons under training as apprentices with or without stipend or wages will be regarded as working. An adult woman who is engaged in household duties but doing no other productive work to augment the family's resources should not be considered as working. Persons like beggars, pensioners, agricultural or non-agricultural, royalty, rent or dividend receivers, who may be earning an income but who are not participating in any productive work should not be treated as working. A public or social service worker who is actively engaged in public service activity or a political worker who is also actively engaged in furthering the political activity of his party will be regarded as a Worker.

Status of Employment:

(i) An *Employer* is a person who has to employ other persons in order to perform the work. That is to say, such a person is not only responsible for his own personal work but also for giving work to others in the business. But a person who employs domestic servants for household duties or has subordinates under him in an office where he is employed by others, is not an employer, even if he has the power to employ another person in his Office on behalf of his own employer or employers.

(ii) An *Employee* is a person who usually works under some other person for salary or wages in cash or kind. There may be persons who are employed as managers, superintendents, agents, etc., and in that capacity employ or control other worker on behalf of their own employers. Such perosns are only employees, as explained above, and should not be regarded as employers.

(iii) A *Single Worker* is a person who works by himself but not as Head of household in a Household Industry. He is not employed by any one else and in his turn does not employ anybody else not even members of his household except casually. This definition of a *Single Worker* will include a person who works in joint partnership with one or several persons hiring no employees, and also a member of a producers' co-operative. Each one of the partners or members of such producers' co-operatives should be recorded as 'Single Worker'.

(iv) A *Family Worker* is a member who works, without receiving wages in cash or kind, in an industry, business, or trade conducted mainly by members of the family and ordinarily does at least one hour of work everyday during the working season. Such an industry should be on a scale larger than what has been covered in 'Household Industry' whether run at home or away from home in town or village and even away from village in rural area and should ordinarily be in the nature of a recognised partnership, joint stock company or registered factory. For the purpose of this definition members of a family may be drawn from beyond the limits of the household by ties of blood or marriage. The family worker may not be entitled to a share of the profits in the work of the business carried on either by the person or head of the household or other relative.

Members of the household who help solely in household duties should not be treated as family workers.

Household Industry:

A Household Industry is defined as an industry conducted by the Head of the household himself and/or mainly members of the household at home or within the village in rural areas and only at home in urban areas. The industry should not be run on the scale of registered factory. Thus the main criterion for a Household Industry is the participation of one or more member of a household in rural areas. In the Urban areas the industry should be confined to the house.

A Household Industry should relate to production, processing, servicing, repairing or making and selling of goods. It does not include professions such as pleader or doctor or barber or waterman or astrologer.

APPENDIX I—*contd.*

Non-workers:

All persons who are not workers are non-workers. They should fall under any one of the following categories:

1. Full time student or child attending school who does no other work.

2. A person engaged in unpaid home duties (like housewife or other adult female).

3. Any dependent, including an infant or child not attending school or a person permanently disabled from work because of illness or old age.

4. A retired person who is not employed again, rentier, person living on agricultural or non-agricultural royalty, rent or dividend or any other persons of independent means for securing which he does not have to work and who does no other work.

5. Beggars, vagrants or independent women without indication of source of income and others of unspecified source of existence.

6. A convict in jail or an inmate of a penal, mental or charitable institution.

7. A person who has not been employed before but is seeking employment for the first time.

8. A person employed before but now out of employment and seeking employment.

APPENDIX II

STANDARD INDUSTRIAL CLASSIFICATION

Major Group (Code)	Description	Minor Group (Code)
	Division 0—Agriculture, Livestock, Forestry, Fishing and Hunting	
00	*Field Produce and Plantation Crops*	
	Production of cereal crops (including Bengal gram) such as rice, wheat, jowar, bajra, maize	000
	Production of pulses, such as arhar, moong, masur, urd, khesari, other gram	001
	Production of raw jute and kindred fibre crops	002
	Production of raw cotton and kindred fibre crops	003
	Production of oilseeds, sugarcane and other cash crops	004
	Production of other crops (including vegetables) not covered above	005
	Production of fruits and nuts in plantations, vines and orchards	006
	Production of wood, bamboo, cane reeds, thatching grass etc.	007
	Production of juice by tapping plams	008
	Production of other agricultural produce (including ffuits and nuts not covered by Code No. 006 and flowers) not covered above	009
01	*Plantation Crops*	
	Production of tea in plantation	010
	Production of coffee in plantation	011
	Production of rubber in plantation	012
	Production of tobacco in plantation	013
	Production of ganja, cinchona, opium	014
	Production of other plantation crops not covered above	015
02	*Forestry and Logging*	
	Planting, replanting and conservation of forests	020
	Felling and cutting of trees and transportation of logs	021
	Preparation of timber	022
	Production of fuel including charcoal by exploitation of forest	023
	Production of fodder by exploitation of forests	024
	Production of gums, resins, lac, barks, herbs, wild fruits and leaves by the exploitation of forests	025
	Production and gathering of other forest products not covered above	026
03	*Fishing*	
	Production of fish by fishing in sea	030
	Production of fish by fishing in inland waters including the operation of fish farms and fish hatcheries	031
	Production of pearls, conch, shells, sponges by gathering or lifting from sea, river, pond	032
04	*Livestock and Hunting*	
	Production and rearing of livestock (large heads only) mainly for milk and animal power such as cow, buffalo, goat	040
	Rearing of sheep and production of wool	041
	Rearing and production of other animals (mainly for slaughter) such as pig	042
	Production of ducks, hens and other small birds, eggs by rearing and poultry farming	043
	Rearing of bees for the production of honey, wax and collection of honey	044
	Rearing of silk worms and production of cocoons and raw silk	045

Major Group (Code)	Description	Minor Group (Code)
	Division 0—Agriculture, Livestock, Forestry, Fishing, and Hunting—*contd.*	
04	*Livestock and Hunting*—contd.	
	Rearing of other small animals and insects	046
	Trapping of animals or games propagation	047
	Production of other animal husbandry products such as skin, bone, ivory and teeth	048
	Division 1—Mining and Quarrying	
10	*Mining and Quarrying*	
	Mining of coal	100
	Mining of iron ores	101
	Mining of gold and silver ores	102
	Mining of manganese	103
	Mining of mica	104
	Mining of other non-ferrous metallic ores	105
	Mining of crude petroleum and natural gas	106
	Quarrying of stone (including slate), clay, sand, gravel, limestone	107
	Mining of chemical earth such as soda ash	108
	Mining and quarrying of non-metallic products not classified above such as precious and semi-precious stones, asbestos, gypsum, sulphur, asphalt	109
	Division 2 and 3—Manufacturing	
20	*Foodstuffs*	
	Production of rice, atta, flour etc. by milling, dehusking and processing of crops and food-grains	200
	Production of sugar and syrup from sugarcane in mills	201
	Production of indigenous sugar, gur from sugarcane or palm juice and production of candy	202
	Production of fruit products such as jam, jelly, sauce and canning and preservation of fruits	203
	Slaughtering, preservation of meat and fish and canning of fish	204
	Production of bread, biscuits, cake and other bakery products	205
	Production of butter, ghee, cheese and other dairy products	206
	Production of edible fats and oil (other than hydrogenated oil)	207
	Production of hydrogenated oils (Vanaspati)	208
	Production of other food products such as sweet-meat and condiments, muri, murki, chira, khoi, cocoa, chocolate, toffee, lozenge	209
	Beverages	
21	Production of distilled spirits, wines, liquor from alcoholic malt, fruits and malts in distillery and brewery	210
	Production of country liquor	211
	Production of indigenous liquor such as toddy, liquor from mahua, palm juice	212
	Production of other liquors not covered above	213
	Production of aerated and mineral water	214
	Production of ice	215
	Production of ice cream	216
	Processing of tea in factories	217
	Processing of coffee in curing works	218
	Production of other beverages	219

APPENDIX II—*contd.*

STANDARD INDUSTRIAL CLASSIFICATION

Major Group (Code)	Description	Minor Group (Code)
	Division 2 and 3—Manufacturing—*contd.*	
22	*Tobacco Products*	
	Manufacture of bidi	220
	Manufacture of cigars and cheroots	221
	Manufacture of cigarette and cigarette tobacco	222
	Manufacture of hookah tobacco	223
	Manufacture of snuff	224
	Manufacture of jarda and other chewing tobacco	225
	Manufacture of other tobacco products	226
23	*Textile—Cotton*	
	Cotton ginning, cleaning pressing and baling	230
	Cotton spinning (other than in mills)	231
	Cotton spinning and weaving in mills	232
	Cotton dyeing, bleaching	233
	Cotton weaving in power looms	234
	Cotton weaving in handlooms	235
	Manufacturing of khadi textile in handlooms	236
	Printing of cotton textile	237
	Manufacturing of cotton nets	238
	Manufacturing of cotton, cordage, rope and twine	239
24	*Textile—Jute*	
	Jute pressing and baling	240
	Jute spinning and weaving	241
	Dyeing and bleaching of jute	242
	Printing of jute textile	243
	Manufacture of other products like rope, cordage from jute and similar fibre such as hemp, mesta	244
25	*Textile—Wool*	
	Wool baling and pressing	250
	Wool cleaning and processing (scouring)	251
	Wool spinning and weaving in mill	252
	Wool spinning other than in mills	253
	Wool weaving in power loom	254
	Wool weaving in handloom	255
	Embroidery and art work in woollen textile	256
26	*Textile—Silk*	
	Spinning and weaving of silk textile in mill	260
	Dyeing and bleaching of silk	261
	Spinning of silk other than in mills	262
	Weaving of silk textile by power loom	263
	Weaving of silk textile by handloom	264
	Printing of silk textile	265
	Manufacture of silk cordage, rope and twine	266
27	*Textile—Miscellaneous*	
	Manufacture of carpet and all other similar type of textile products	270
	Manufacture of hosiery and other knitted fabrics and garments	271
	Embroidery and making of crepe lace and fringes	272
	Making of textile garments including raincoats and headgear	273
	Manufacture of made up textile goods except wearing apparel such as curtains, pillow cases, bedding materials, mattress, textile bags	274
	Manufacture of waterproof textile products such as oil cloth, tarpaulin	275

Major Group (Code)	Description	Minor Group (Code)
	Division 2 and 3—Manufacturing—*contd.*	
27	*Textile—Miscellaneous*—contd.	
	Manufacture and recovery of all types of fibres for purposes of padding, wadding and upholstery filling	276
	Manufacture of coir and coir products	277
	Manufacture of umbrellas	278
	Processing and manufacture of textile products not covered above	279
28	*Mnufacture of Wood and Wooden Products*	
	Sawing and planning of wood	280
	Manufacture of wooden furniture and fixtures	281
	Manufacture of structural wooden goods (including treated timber) such as beams, posts, doors, windows	282
	Manufacture of wooden industrial goods other than transport equipment such as bobbin and similar equipment and fixtures	283
	Manufacture of other wooden products such as utensils, toys, artwares	284
	Manufacture of veneer and plywood	285
	Manufacture of plywood products such as tea chest	286
	Manufacture of boxes and packing cases other than plywood	287
	Manufacture of materials from cork, bamboo, cane, leaves and other allied products	288
	Manufacture of other wood and allied products not covered above	289
29	*Paper and Paper Products*	
	Manufacture of pulp from wood, rags, waste-paper and other fibres and the conversion of such pulp into any kind of paper and paper board in mill	290
	Manufacture of pulp from wood, rags, waste-paper and other fibres and the conversion of such pulp into any kind of paper and paper board handmade	291
	Manufacture of products, such as paper bags, boxes, cards, envelopes and moulded pulp goods from paper, paper board and pulp	292
30	*Printing and Publishing*	
	Printing and publishing of newspapers and periodicals	300
	Printing and publishing of books	301
	All other types of printing including lithography, engraving, etching, block making and other work connected with printing industry	302
	All types of binding, stitching, sizing and other allied work connected with binding industry	303
31	*Leather and Leather Products*	
	Currying, tanning and finishing of hides and skins and preparation of finished leather	310
	Manufacture of shoes and other leather footwear	311
	Manufacture of clothing and wearing apparel (except footwear) made of leather and fur	312
	Manufacture of leather products (except those covered by Code Nos. 311, 312), such as leather upholstery, suitcases, pocket books, cigarette and key cases, purses, saddlery, whip and other articles	313

APPENDIX II—*contd.*

STANDARD INDUSTRIAL CLASSIFICATION

Major Group (Code)	Description	Minor Group (Code)
	Division 2 and 3—Manufacturing—*contd.*	
31	*Leather and Leather Products*—contd.	
	Repair of shoes and other leather footwear	314
	Repair of all other leather products except footwear	315
32	*Rubber, Petroleum and Coal Products*	
	Manufacture of tyres and tubes	320
	Manufacture of rubber footwear	321
	Manufacture of rubber goods used for industrial purpose	322
	Manufacture of all kinds of other rubber products from natural or synthetic rubber including rubber raincoat	323
	Production of petroleum, kerosene and other petroleum products in petroleum refineries	324
	Production of coaltar and coke in coke oven	325
	Manufacture of other coal and coaltar products not covered elsewhere	326
33	*Chemicals and Chemical Products*	
	Manufacture of basic industrial chemicals such as acids, alkalies and their salts not elsewhere specified	330
	Manufacture of dyes, paints, colours and varnishes	331
	Manufacture of fertilizers	332
	Manufacture of ammunition, explosives and fireworks	333
	Manufacture of matches	334
	Manufacture of medicines, pharmaceutical preparations, perfumes, cosmetics and other toilet preparations except soap	335
	Manufacture of soap and other washing and cleaning compounds	336
	Manufacture of turpentine, synthetic, resin and plastic products and materials (including synthetic rubber)	337
	Manufacture of common salt	338
	Manufacture of other chemicals and chemical products not covered above (inclucing inedible oils and fats)	339
34	*Non-metallic Mineral Products other than Petroleum and Coal*	
	Manufacture of structural clay products such as bricks, tiles	340
	Manufacture of cement and cement products	341
	Manufacture of lime	342
	Manufacture of structural stone goods, stone dressing and stone crushing	343
	Manufacture of stonewares other than images	344
	Manufacture of stone images	345
	Manufacture of plaster of paris and its products	346
	Manufacture of asbestos products	347
	Manufacture of mica products	348
35	Manufacture of earthenware and earthen pottery	350
	Manufacture of chinaware and crockery	351
	Manufacture of porcelain and its products	352
	Manufacture of glass bangles and beads	353
	Manufacture of glass apparatus	354
	Manufacture of earthen image, busts and status	355
	Manufacture of earthen toys and artwares except those covered by Code No. 355	356
	Manufacture of glass and glass products except optical and photographic lenses and glass products covered above	357
	Manufacture of other non-metallic mineral products not elsewhere specified	359
36	*Basic Metals and their Products except Machinery and Transport Equipment*	
	Manufacture of iron and steel including smelting, refining, rolling, conversion into basic forms such as billets, blooms, tubes, rods	360
	Manufacture including smelting, refining of non-ferrous metals and alloys in basic forms	361
	Manufacture of armaments	362
	Manufacture of structural steel products such as joist, rail, sheet, plate	363
	Manufacture of iron and steel furniture	364
	Manufacture of brass and bell metal products	365
	Manufacture of aluminium products	366
	Manufacture of metal products (other than of iron brass, bell metal and aluminium) such as tin can	367
	Enamelling, galvanising, plating (including electroplating) polishing and welding of metal products	368
	Manufacture of sundry hardwares such as G.I. pipe, wire net, bolt, screw, bucket, cutlery (This will also include the manufacture of sundry ferrous engineering products done by jobbing engineering concerns which cannot be classified in major groups 36, 37, 38 and 39)	369
37	*Machinery (All kinds other than Transport) and Electrical Equipment*	
	Manufacture and assembling of machinery (other than electrical) except textile machinery	370
	Manufacture and assembling of prime mover and boilers, other than electrical equipment such as diesel engines, road rollers, tractors	371
	Manufacture of machine tools	372
	Manufacture of textile machinery and accessories	373
	Manufacture of heavy electrical machinery and equipment such as motors, generators, transformers	374
	Manufacture of electric lamps and fans	375
	Manufacture of insulated wires and cables	376
	Manufacture of all kinds of battery	377
	Manufacture of electronic equipment such as radio, microphone	378
	Manufacture of electric machinery and apparatus, appliances not specified above	379
38	*Transport Equipment*	
	Manufacture, assembling and repairing of locomotives	380
	Manufacture of wagons, coaches, tramways and other rail road equipment other than that covered by Code No. 363	381

APPENDIX II—*contd.*

STANDARD INDUSTRIAL CLASSIFICATION

Major Group (Code)	Description	Minor Group (Code)
	Division 2 and 3—Manufacturing—*concld.*	
38	*Transport Equipment*—contd.	
	Manufacture and assembling of motor vehicles of all types (excepting motor engines)	382
	Manufacture of motor vehicles engine parts and accessories	383
	Repairing and servicing of motor vehicles	384
	Manufacture of bicycles and tricycles and accessories such as saddle, seat frame, gear	385
	Building and repairing of water transport equipment such as ships, boats and manufacture of marine engines	386
	Manufacture and repair of air transport equipment including aeroplanes, aeroengines	387
	Repairing of bicycles and tricycles	388
	Manufacture of other transport equipment not covered above such as animal drawn and hand drawn vehicles	389
39	*Miscellaneous Manufacturing Industries*	
	Manufacture of optical instruments and lenses, ophthalmic goods and photographic equipment and supplies	390
	Manufacture of scientific, medical and surgical instruments and equipment and supplies	391
	Assembling and repairing of watches and clocks	392
	Manufacture of jewellery, silverware and wares using gold and other precious metals	393
	Manufacture and tuning of musical instrument	394
	Manufacture of stationery articles not covered elsewhere such as pencil, penholder, fountain-pen	395
	Manufacture of sports goods	396
	Manufacture and repair work of goods not assignable to any other group	399
	Division 4—Construction	
40	*Construction*	
	Construction and maintenance of buildings including erection, flooring, decorative constructions, electrical and sanitary installations	400
	Construction and maintenance of roads, railways, bridges, tunnels	401
	Construction and maintenance of telegraph and telephone lines	402
	Construction and maintenance of waterways and water reservoirs such as bunds, embankments, dam, canal, tank, tubewells, wells	403
	Division 5—Electricity, Gas, Water and Sanitary Services	
50	*Electricity and Gas*	
	Generation and transmission of electric energy	500
	Distribution of electric energy	501
	Manufacture of gas in gas works and distribution to domestic and industrial consumers	502
51	*Water Supply and Sanitary Services*	
	Collection, purification and distribution of water to domestic and industrial consumers	510
	Garbage and sewage disposal, operation of drainage system and all other types of work connected with public health and sanitation	511

Major Group (Code)	Description	Minor Group (Code)
	Division 6—Trade and Commerce	
60	*Wholesale Trade*	
	Wholesale trading in cereals and pulses	600
	Wholesale trading in vegetables, fruits, sugar, spices, oil, fish, dairy products, eggs, poultry and other foodstuff (not covered elsewhere)	601
	Wholesale trading in all kinds of fabrics, and textile products such as garments, hessian, gunny bag, silk and woollen yarn, shirtings, suitings, hosiery products	602
	Wholesale trading in beverages, such as tea (leaf) coffee (Seed and powder), aerated water	603
	Wholesale trading in intoxicants such as wines, liquors	604
	Wholesale trading in other intoxicants such as opium, ganja, etc.	605
	Wholesale trading in tobacco, bidi, cigarettes and other tobacco products	606
	Wholesale trading in animals	607
	Wholesale trading in straw and fodder	608
61	Wholesale trading in medicines and chemicals	610
	Wholesale trading in fuel and lighting products such as coke, coal, kerosene, candle	611
	Wholesale trading in toilets, perfumery and cosmetics	612
	Wholesale trading in metal, porcelain and glass utensils, crockery, chinaware	613
	Wholesale trading in wooden, steel and other metallic furniture and fittings	614
	Wholesale trading in footwear	615
	Wholesale trading in tyres, tubes and allied rubber products	616
	Wholesale trading in petrol, mobil oil and allied products	617
	Wholesale trading in other household equipment not covered above	618
62	Wholesale trading in bricks, tiles and other building materials	620
	Wholesale trading in wood, bamboo, cane, thatches and similar products	621
63	Wholesale trading in paper and other stationery goods	630
	Wholesale trading in agricultural and industrial machinery equipment and tools and appliances other than electrical	631
	Wholesale trading in electrical machinery and equipment like motor, battery, electric fan, bulb	632
	Wholesale trading in all kinds of transport and storage equipment	633
	Wholesale trading in skins, leather and fur	634
	Wholesale trading in clocks, eye glasses, frames	635
	Wholesale trading in hardware and sanitary equipment	636
	Wholesale trading in scientific, medical and surgical instruments	637
	Wholesale trading in precious metals and stones, gold and silverwares and jewellery	638
	Wholesale trading in all goods not covered above	639
64	*Retail Trade*	
	Retails trading in cereals, pulses, vegetables, fruits, sugar, spices, oil, fish, dairy products, eggs, poultry	640

APPENDIX II—*contd.*

STANDARD INDUSTRIAL CLASSIFICATION

Major Group (Code)	Description	Minor Group (Code)
	Division 6- Trade and Commerce- -*contd.*	
64	*Retail Trade-* -contd.	
	Retail trading in beverages such as tea (leaf), coffee (seed and powder), aerated water	641
	Retail trading in intoxicants such as wines, liquors	642
	Retail trading in other intoxicants such as opium, ganja, etc.	643
	Retail trading in tobacco, bidi, cigarettes and other tobacco products	644
	Retail trading in fuel such as coke, coal, firewood and kerosene	645
	Retail trading in foodstuffs like sweetmeat condiments, cakes, biscuits, etc.	646
	Retail trading in animals	647
	Retail trading in straw and fodder	648
65	Retail trading in fibres, yarns, dhoti, saree, readymade garments of cotton, wool, silk and other textile and hosiery products: (this includes retail trading in piece-goods of cotton, wool, silk and other textiles)	650
	Retail trading in toilet goods, perfumes and cosmetics	651
	Retail trading in medicines and chemicals	652
	Retail trading in footwear, head-gear such as hat, umbrella, shoes and chappals	653
	Retail trading in tyres, tubes and allied rubber products	654
	Retail trading in petrol, mobil oil and allied products	655
66	Retail trading in wooden, steel and other metallic furniture and fittings	660
	Retail trading in stationery goods and paper	661
	Retail trading in metal, porcelain and glass utensils	662
	Retail trading in earthenware and earthen toys	663
	Retail trading in other household equipment not coverd above	664
67	Retail trading in bricks, tiles and other building materials	670
	Retail trading in hardware and sanitary equipments	671
	Retail trading in wood, bamboo, cane, bark and thatches	672
	Retail trading in other building materials	673
68	Retail trading in agricultural and industrial machinery equipment, tools and appliances	680
	Retail trading in transport and storage equipments	681
	Retail trading in electrical goods like electric fan, bulb, etc.	682
	Retail trading in skins, leather and furs and their products excluding footwear and head-gear	683
	Retail trading in clock and watch, eye glass, frame	684
	Retail trading in scientific, medical and surgical instruments	685
	Retail trading in precious stones and jewellery	686
	Retail trading in musical instruments, gramophone record, pictures and paintings including curio dealing	687
	Book-selling	688
	Retail trading in goods unspecified	689

Major Group (Code)	Description	Minor Group (Code)
	Division 6—Trade and Commerce—*concld.*	
69	*Trade and Commerce Miscellaneous*	
	Importing and exporting of goods and commodities	690
	Real estate and properties	691
	Stocks, shares and futures	692
	Providents and insurances	693
	Money lending (indigenous)	694
	Banking and similar type of financial operation	695
	Auctioneering	696
	Distribution of motion pictures	697
	All other activities connected with trade. and commerce not covered above, including hiring out of durable goods such as electric fan, microphone, rickshaw, etc.	699
	Division 7—Transport, Storage and Communications	
70	*Transport*	
	Transporting by railways	700
	Transporting by tramway and bus service	701
	Transporting by motor vehicles (other than omnibus)	702
	Transporting by road through other means of transport such as hackney carriage, bullock cart, ekka	703
	Animal transporting by animals such as horses, elephant, mule, camel	704
	Transporting by man such as carrying of luggage hand cart driving, rickshaw pulling, cycle rickshaw driving	705
	Transporting by boat, steamer, ferry, etc. by river, canal	706
	Transporting by boat, steamer, ship, cargo boat by sea or ocean	707
	Transporting by air	708
	Transporting by other means not covered above	709
71	Services incidental to transport such as packing, carting travel agency	710
72	*Storage and Ware Housing*	
	Operation of storage such as warehouses	720
	Operation of storage such as cold storage	721
	Operation of storage of other type	722
73	*Communications*	
	Postal, telegraphic, wireless and signal communications	730
	Telephone communications	731
	Information and broadcasting	732
	Division 8- -Services	
80	*Public Services* (This does not include Govt. Quasi-Govt. or local body activities, other than administrative, in such fields as transport, communications, information and broadcasting, education and scientific services, health, Industries, production, construction, marketing and operation of financial institutions each of which is classified in the appropriate industry groups)	
	Public service in Police	803
	Public service in administrative departments and offices of Central Government	80

APPENDIX II—*concld.*

STANDARD INDUSTRIAL CLASSIFICATION

Major Group (Code)	Description	Minor Group (Code)
	Division 8—Services—*contd.*	
	Public service in adminisrtative departments and offices of quasi-government organisation, municipalities, local boards, etc.	805
	Public services in administrative departments and offices of the state Governments	809
81	*Educational and Scientific Services*	
	Educational services such as those rendered by technical colleges, technical schools and similar technical and vocational institutions	810
	Educational services such as those rendered by colleges, schools and similar other institutions of non-technical type	811
	Scientific services and research institutions not capable of classification under any individual group	812
82	*Medical and Health Services*	
	Public health and medical services rendered by organisations and individuals such as by hospitals, sanatoria, nursing homes, maternity and child welfare clinic as also by hakimi, unani, ayurvedic, allopathic and homœpathic practitioners	820
	Veterinary services rendered by organisation and individuals	821
83	*Religious and Welfare Services*	
	Religious services rendered by religious organisations and their establishments maintained for worship or promotion of religious activities, this includes missions, ashrams and other allied organisations	830
	Religious and allied services rendered by pandit, priest, preceptor, fakir, monk	831
	Welfare services rendered by organisations operating on a non-profit basis for the promotion of welfare of the community such as relief societies, redcross organisation for the collection and allocation of contributions for charity	832
84	*Legal Services*	
	Legal services rendered by barrister, advocate, solicitor, mukteer, pleader, muhurie, munshi	840
	Matrimonial services rendered by organisations and individuals	841
85	*Business Services*	
	Engineering services rendered by professional organisations or individuals	850
	Business services rendered by organisations of accountants, auditors, book-keepers or like individuals	851
	Business services rendered by professional organisations or individuals such as those of advertising and publicity agencies	852
	Business services rendered by professional organisations or individuals such as of those renderd by news-agency, newspaper correspondent, columnist, journalists, editors, authors	853
	Division 8—Services—*concld.*	
86	*Community Services and Trade and Labour Associations*	
	Services rendered by trade associations, chambers of commerce, trade unions and similar other organisations	860
	Services rendered by civic, social, cultural, political and fraternal organisations such as ratepayers association, club, library	861
	Community services such as those rendered by public libraries, museums, botanical and zoological gardens, etc.	862
87	*Recreation Services*	
	Production of motion picture and allied services such as processing, editing, etc.	870
	Recreation service rendered by cinema houses by exhibition of motion pictures	871
	Recreation services rendered by organisations and individuals such as those of theatres, opera companies, ballet and dancing parties, musicians, exhibitions, circus, carnivals	872
	Recreation services rendered by indoor and outdoor sports by organisations and individuals including horse, motor, etc., racing	873
88	*Personal Services*	
	Services rendered to households such as those by domestic servants, cooks	880
	Services rendered to households such as those by governess, tutor, private secretary	881
	Services rendered by hotels, boarding houses, eating houses, cafes, restaurants and similar other organisations to provide lodging and boarding facilities	882
	Laundry services rendered by organisations and individuals, this includes all types of cleaning, dyeing, bleaching, drycleaning services	883
	Hair dressing, other services rendered by organisation and individuals such as those by barber, hair-dressing saloon and beauty shops	884
	Services rendered by portrait and commercial photographic studios	885
89	*Services (not elsewhere classified)*	
	Services rendered by organisations or individuals not elsewhere classified	890
	Division 9—Activities not adequately described	
90	Activities unspecified and not adequately described including activities of such individuals who fail to provide sufficient information about their industrial affiliation to enable them to be classified	900
	Fresh entrants to the Labour Market	999

APPENDIX III

LIST OF COMMON HOUSEHOLD INDUSTRIES WITH THEIR INDUSTRIAL CODE NUMBER

Industrial Code Number	Household Industry
Major Group 00—Field Produce and Plantation Crops	
005.1	Production of Vegetables
005.2	Production of roots etc., not included above
006.1	Production of fruits and nuts in plantation, vines and orchards
006.2	Production of copra (from coconuts)
007.1	Production of thatching grass
007.2	Production of wood, bamboo, cane reeds, etc. (excluding thatching grass)
008.1	Production of juice (neera) by tapping coconut trees
008.2	Production of juice by tapping other palms like date, palmyra n.e.c.
009	Production of other agricultural produce (including fruits and nuts not covered by 006 and flowers) not covered above
Major Group 01—Plantation Crops	
013	Production of tobacco in plantation
015.1	Pan Cultivation
015.2	Plantation Crops except tea, coffee, rubber, tobacco, ganja, cinchona, opium and pan
Major Group 02—Forestry and Logging	
023.1	Production of charcoal
023.2	Production of other fuels by exploitation of forests
024	Production of fodder by exploitation of forests
025.1	Production of kathha
025.2	Production of Lac
025.3	Production of gum
025.4	Production of resins, barks, herbs, wild fruits, berries and leaves etc. n.e.c.
026	Production and gathering of other forest products not covered above
Major Group 03—Fishing	
030	Production of fish by fishing in sea
031	Production of fish by fishing in inland waters and ponds including fish farms and fish hatcheries
032	Production of pearls, conch, shells, sponges, sea herbs, corals etc., by gathering or lifting from sea, river, pond
Major Group 04—Livestock and Hunting	
040.1	Rearing of goats for milk and animal power
040.2	Rearing of buffaloes for milk and animal power
040.3	Rearing of cows for milk and animal power
040.4	Rearing of camels and other big domestic animals
040.5	Production and rearing of livestock mainly for milk and animal power n.e.c.
041.1	Sheep breeding and rearing
041.2	Production of wool
042.1	Rearing and production of pigs and goats (mainly for slaughter)
042.2	Rearing and production of other animals (mainly for slaughter) n.e.c.
043.1	Poultry keeping and production of eggs
043.2	Rearing and production of ducks, hens etc. and other small birds *e.g.* pigeons, parrots, peacock, maina etc.
044.1	Bee keeping for production of honey and wax
044.2	Collection of wax and honey
045	Rearing of tassar/eri/mulberry and other silk worms and production of cocoons and raw silk
046.1	Dog breeding, rearing of rabbits and guinea-pigs
046.2	Rearing of other small animals and insects n.e.c.
048.1	Collection of bones
Major Group 04—Livestock and Hunting—*contd.*	
048.2	Manufacture of glue from animal carcasses
048.3	Manufacture of gut
048.4	Production of other animal husbandry products such as skin, ivory, teeth and hair etc.
Major Group 10—Mining and Quarrying	
107.1	Extraction of chalk
107.2	Quarrying of lime-stone
107.3	Stone and slate quarrying
107.4	Quarrying of sand, clay, gravel etc. n.e.c.
Major Group 20—Foodstuffs	
200.1	Production of flour by village chakkies or flour mill by grinding wheat, maize, gram etc.
200.2	Hand pounding of rice by Dhekhi or Ukhal
200.3	Production of rice by milling, dehusking and processing of paddy by rice mill
200.4	Grinding of chillies, turmeric etc.
200.5	Production of pulses
200.6	Parching of grains
200.7	Production and processing of other crops and food grains n.e.c.
202.1	Gur and Khandsari making from sugarcane and palm
202.2	Production of bhoora and candy
202.3	Production of jaggery from coconut and palmyra juice (neera)
202.4	Production of other indigenous products from sugar and jaggery n.e.c.
203.1	Manufacture of achar, pickles, chutney and murabba
203.2	Production of sauce, jam and jelly
203.3	Processing of cashew nut
203.4	Manufacture of kokam products
203.5	Fruit preservation (canning of fruits)
203.6	Making of dried vegetables
203.7	Production of other fruit products and preservation of fruits n.e.c.
204.1	Slaughtering, preservation of meat and fish and canning of fish
204.2	Fish currying or curing and salting (currying applies more to skin and hide)
205	Production of bread, biscuit, cake and other bakery products
206	Production of butter, cream, ghee, cheese, chhana, khowa and other dairy products
207	Oil pressing ghani, kolhu or by small machines
209.1	Confectionery
209.2	Making of sweet-meats, laddu, peda, barphi, batasa etc.
209.3	Sattu, bhunja, papar, barri, danauri, tilauri, sewai, apalam etc.
209.4	Making of chura or chira, muri, murki, khoi
209.5	Making of chat
209.6	Making of dalmot, chanachur (jor) garam, rewari etc.
209.7	Making of other food products for residuary snacks
209.8	Production of other food products like cocoa, chocolate, toffee, lozenge
Major Group 21—Beverages	
210.1	Manufacture of vinegar from coconut juice (neera)
210.2	Manufacture of distilled spirits, wines, liquor from alcholic malt, fruits and malts in distillery and brewery
211	Production of country liquor from material obtained from sources other than trees and shrubs
212.1	Production of indigenous liquor such as liquor, toddy neera, from mahua and palm trees
212.2	Production of other indigenous liquors from other materials from trees and shrubs
214.1	Production of mineral water

APPENDIX III—*contd.*

LIST OF COMMON HOUSEHOLD INDUSTRIES WITH THEIR INDUSTRIAL CODE NUMBER

Industrial Code Number	Household Industry
Major Group 21—Beverages - *contd.*	
214.2	Production of aerated water such as sodawater, lemonade, etc.
215	Production of ice
216	Production of ice cream, ice-candy or kulphimalai, milk-shake etc.
218	Grinding of coffee
219.1	Preparation of sharbats and squashes
219.2	Preparation of jeerapani
219.3	Production of other beverages n.e.c.
Major Group 22—Tobacco Products	
220	Manufacture of bidi
221	Manufacture of cigars and cheroots
223	Manufacture of hookah tobacco
224	Manufacture of snuff
225	Manufacture of jerda, kimam, khaini and other chewing tobacco
226	Manufacture of other tobacco products n.e.c.
Major Group 23—Textile—Cotton	
230	Cotton ginning, cleaning, carding, pressing and baling
231	Cotton spinning (by charkha and takali)
233.1	Dyeing of cloth (cotton) and yarn
233.2	Bleaching of cloth (cotton) and yarn
233.3	Tie and dye (bandhani) of cloth and yarn
234	Cotton cloth weaving in powerlooms
235	Cotton cloth weaving in handlooms
236	Manufacture of khadi textile in handlooms
237	Printing of cloth (cotton)
238.1	Making of fishing net
238.2	Making of mosquito net
238.3	Making of other nets
239.1	Making of sacred thread
239.2	Making of thread, rope, cordage and twine (cotton)
Major Group 24—Textile—Jute	
240	Jute pressing and bailing
241	Jute spinning and weaving of mats, asanis etc.
242	Dyeing and bleaching of jute
244.1	Making of rope and cordage, out of hemp
244.2	Making of rope and cordage, out of jute
244.3	Making of rope by palm fibre
244.4	Making of rope by date palm fibre
244.5	Making of fibre, sunn-hemp fibre
244.6	Making of other products from jute and similar fibres such as hemp, mesta
Major Group 25—Textile—Wool	
250	Wool baling and pressing
251	Cleaning, sorting, carding, scouring and processing of wool
253	Spinning of wool by charkha or takali
254	Weaving of woollen cloth in powerloom such as blankets, asanis etc.
255	Weaving of woollen cloth in handloom such as blankets, rugs, pashmina, thulma, gudma, etc.
256.1	Embroidery with various colours, combinations of various threads and art work in woollen textile
256.2	Shawls (with traditional borders)
Major Group 26—Textile—Silk	
261	Dyeing and bleaching of silk
262.1	Spinning of tussar, other than in mills
262.2	Spinning of eri, other than in mills
262.3	Spinning of silk, other than in mills n.e.c.
263.1	Weaving of Traditional silk (Atlas) by powerloom
263.2	Weaving of tussar by powerloom
263.3	Weaving of eri by powerloom
263.4	Weaving of silk and artificial silk in powerloom n.e.c.
264.1	Weaving of mashru, himroo, brocade, kinkhab by handloom
264.2	Weaving of silk and artificial silk in handloom n.e.c.
265	Printing of silk textile
266.1	Goaf making
266.2	Making of silk cordage, rope and twine n.e.c.
Major Group 27—Textile—Miscellaneous	
270.1	Making of durries
270.2	Making of carpets and druggets
270.3	Manufacture of other similar textile products n.e.c.
271.1	Making of hosiery goods such as banyans, socks, sweaters, mufflers etc.
271.2	Making of nalas and azarbands
271.3	Making of parandas and chootelas
271.4	Manufacture of hosiery and other knitted fabrics and garments n.e.c.
272.1	Embroidery and making of phulkari
272.2	Making of jari thread, zardoshi
272.3	Traditional embroidery
272.4	Patchwork embroidery
272.5	Lace garland making
272.6	Making of fringes and crepe laces
272.7	Making of kargota, main garlands, shell garlands etc.
272.8	Making of other embroidery products n.e.c.
273.1	Making of cap, hat, and other head-gear
273.2	Traditional garments
273.3	Chrochet work (bora caps)
273.4	Making of textile garments including rain-coats and head-gears n.e.c.
274.1	Weaving of khes, bed covers, curtains, pillow case and table-cloth, cloth bags etc.
274.2	Making of newar
274.3	Manufacture of other made-up textile goods like mattress, quilt, rezai etc. n.e.c.
275	Manufacture of water proof textile products such as oil cloth, tarpaulin etc.
276.1	Making of namda felt
276.2	Making of suzani (padded quilts)
276.3	Processing of coconut fibre for upholstery
276.4	Handicraft articles made of flax and fibre
276.5	Manufacture and recovery of all types of fibres for purposes of padding, wadding and upholstery filling n.e.c.
277.1	Manufacture of coir matting, cactus fibre for ropes and rope making from coconut fibre
277.2	Making of brush, broom etc. from coconut fibre
277.3	Coir spinning
277.4	Coconut curing
277.5	Other allied products of coir industry n.e.c.
278	Manufacture and repair of umbrellas
279.1	Making of daura (thread) batua, cotton thread, buttons
279.2	Manufacture of dolls and toys (rags and cotton)
279.3	Manufacture of other textile products not elsewhere classified
Major Group 28—Manufacture of Wood and Wooden Products	
280	Sawing, planing and milling of wood
281	Manufacture of wooden furniture and fixtures
282	Manufacture of structural wooden goods (including treated timber) such as beams, posts, doors, windows
283.1	Carpentary works concerned with repairs of agricultural implements (wood)

APPENDIX III—*contd.*

LIST OF COMMON HOUSEHOLD INDUSTRIES WITH THEIR INDUSTRIAL CODE NUMBER

Industrial Code Number	Household Industry
	Major Group 28—Manufacture of Wood and Wooden Products—*contd.*
283.2	Manufacture of wooden industrial goods other than transport equipment such as bobbin and similar equipments and fixtures
284.1	Lacquerware (if on wood)
284.2	Manufacture of wooden utensils, artware and decorative wooden boxes (patras)
284.3	Manufacture of wooden toys
284.4	Sandal wood and other wood carving
284.5	Bead making from wood
284.6	Sawdust and plaster figure making
284.7	Marquetry boxes (inlay work)
284.8	Manufacture of photo frames and framing of photo paintings etc.
284.9	Manufacture of other wooden products n.e.c.
285	Manufacture of match splinters, plywood and veneers
287	Manufacture of boxes and packing cases other than plywood
288.1	Making of box from moonjgrass
288.2	Making of rope mats etc. from moonj and sawai grass and making of cadjar for thatching purposes
288.3	Making of mats, handfans and umbrellas from palm leaves
288.4	Making of sirki, moora and chhaj
288.5	Making of baskets and broomsticks
288.6	Making of donas (drone) and pattals (patravali) from leaves
288.7	Caning of chairs
288.8	Making of chicks, cuscus-tatti and fans, sticks and poles from bamboo
288.9	Manufacture of other articles from leaf, cane, bamboo, cork and other allied products n.e.c.
289.1	Making of sticks and poles from wood
289.2	Making of wooden kharaus and other wooden sandals
289.3	Making of artwheels
289.4	Manufacture of other wood and allied products n.e.c.
	Major Group 29—Paper and Paper Products
291	Manufacture of pulp and paper by hand
292.1	Making of envelopes and paper bags
292.2	Papier mache articles
292.3	Making of kite
292.4	Paper decoration for homes
292.5	Making of card-board boxes and cards
292.6	Making of paper toys
292.7	Making of paper flowers etc.
292.8	Manufacture of other paper products from paper, paper board and pulp n.e.c.
	Major Group 30—Printing and Publishing
301	Printing and publishing of books
302.1	Printing works, printing of handbills, invitation cards etc.
302.2	Lithography, engraving, etching, block making, type cutting and other work connected with printing industry
303	Book binding, stitching, sizing and other work connected with book binding industry
	Major Group 31—Leather and Leather Products
310.1	Flaying, processing of hides and skins including taxidermy
310.2	Currying, tanning and finishing of hides and skins preparation of finished leather

Industrial Code Number	Household Industry
	Major Group 31—Leather and Leather Products *contd.*
310.3	Stuffed animals
311.1	Making of leather boots, shoes or chappals (slippers, sandals)
311.2	Making of Poola shoes
311.3	Manufacture of other footwear n.e.c.
312	Making of clothing and wearing apparel (except footwear) made of leather and fur
313	Manufacture of leather products such as leather upholstery, suit cases, pocket-books, cigarette and key cases, purses, saddlery, whip, acquaducts (Kos), charsa and other articles
314	Repair of shoes, chappals and other leather footwea.
315	Repair of all other leather products except footwear
	Major Group 32—Rubber, Petroleum and Coal Products
320	Vulcanising tyres and tubes
321	Manufacture of chappals from torn tyres and other rubber footwear
322	Manufacture of rubber products from natural and synthetic rubber including rain-coats, oil cloths, waterproof cloths etc.
	Major Group 33—Chemicals and Chemical Products
331.1	Manufacture of dyes, paints, colours, abir, sindoor, varnish etc.
331.2	Manufacture of indigo
332	Manufacture of fertilizer (including from bones)
333	Manufacture of fireworks and other explosive such as *Pataka* etc.
334	Manufacture of matches
335.1	Manufacture of incense and perfumes
335.2	Manufacture of Agarbatti
335.3	Manufacture of rose water
335.4	Manufacture of powder, snow, cream, bindi, tikali, hair oil and nail polish
335.5	Manufacture of kumkum and hinglo
335.6	Manufacture of mascara and kajal
335.7	Manufacture of medicines (ayurvedic, unani etc.) and pharmaceutical preparations
335.8	Manufacture of perfumes, cosmetics and other toilet preparations n.e.c.
336.1	Manufacture of soap and washing soda
336.2	Manufacture of other washing and cleaning compounds n.e.c.
337.1	Manufacture of plastic toys
337.2	Making of plastic buttons
337.3	Manufacture of other plastic goods
337.4	Making of celluloid goods
337.5	Manufacture of turpentine, synthetic resin and other materials n.e.c.
338	Salt production
339.1	Manufacture of ink including fountain pen ink
339.2	Making of candles
339.3	Making of tooth powder
339.4	Making of boot polish and inedible oils etc.
339.5	Manufacture of other chemicals products n.e.c.
	Major Group 34-35—Non-metallic Mineral Products other than Petroleum and Coal
340.1	Making of bricks
340.2	Manufacture of roofing tiles
340.3	Manufacture of other clay products n.e.c.
341.1	Manufacture of cement door frames and sanitary fittings

APPENDIX III—*contd.*

LIST OF COMMON HOUSEHOLD INDUSTRIES WITH THEIR INDUSTRIAL CODE NUMBER

Industrial Code Number	Household Industry
	Major Group 34-35—Non-metallic Mineral Products other than Petroleum and Coal—*contd.*
341.2	Manufacture of cement jali and tiles
341.3	Making of cement statues
341.4	Making of cement products n.e.c.
342.1	Manufacture of lishu
342.2	Manufacture of lime
343.1	Stone carving
343.2	Marble carving
343.3	Granite carving
343.4	Manufacture of other structural stone goods, stone dressing and stone crushing n.e.c.
344	Making of chakki, chakla, silaut, lorha, jainta, utensils and other articles from stone
345	Manufacture of stone images and toys
346.1	Making of images from soap stone
346.2	Manufacture of images, toys and other articles of plaster of paris
348.1	Mica splitting
348.2	Manufacture of mica products, including mica grinding
350	Making of earthenware such as pottery, etc.
351	Manufacture of crockery
353.1	Making of glass bangles
353.2	Making of glass beads
353.3	Manufacture of bead garlands (where making of garlands is undertaken at the place of manufacture of beads) (also see 399)
354	Manufacture of laboratory glass apparatus
355	Making of clay models, earthen images, busts and statues
356.1	Making of earthen toys and artware
356.2	Decorative ceramics
357	Manufacture of glass and glass products except optical and photographic lenses
	Major Group 36—Basic Metals and their Products except Machinery and Transport Equipment
360.1	Re-rolling of M. S. Rods
360.2	Manufacture of iron and steel including smelting, refining, rolling, etc. such as billets, blooms, tubes, rods n.e.c.
362	Manufacture of arms and weapons and their repair service
364	Manufacture of iron and steel furniture
365.1	Making of utensils of brass and bell metal
365.2	Making of brassware
365.3	Making of bottom part of hookah from brass and bell metal
365.4	Making of brass and bell.metal ornaments
365.5	Making of other brass and bell metal products n.e.c.
366.1	Making of aluminium utensils
366.2	Making of other aluminium products n.e.c.
367.1	Making of tin utensils
367.2	Making of articles from tin sheets
367.3	Copper utensils
367.4	Bronze works including bronze images, medals and articles of alloys
367.5	Manufacture of other metal products (excluding iron, brass, bell metal, aluminium) n.e.c.
368.1	Lacquerware (if on metal)
368.2	Nickel plating and electroplating
368.3	Engraving, embossing, polishing and welding of metal products
368.4	Enamelling and galvanising of metal products

Industrial Code Number	Household Industry
	Major Group 36—Basic Metals and their Products except Machinery and Transport Equipment—*contd.*
368.5	Plating and electroplating of metal n.e.c. including silverplating, goldplating, E. P. N. S. etc.
369.1	Manufacture of agricultural implements such as ploughshare, khurpi, kudal etc.
369.2	Manufacture of light engineering goods including bolts and screws
369.3	Making of iron utensils (*e.g.* buckets etc.) and articles from iron sheets
369.4	Making and repairing of locks and trunks
369.5	Cutlery
369.6	Manufacture of pins
369.7	Manufacture of scales, weights and measures
369.8	Foundry Industry (including blacksmithy)
369.9	Manufacture of other sundry hardwares such as G.I. pipe, wire net etc., n.e.c.
	Major Group 37—Machinery (All kinds other than Transport) and Electrical Equipment
370	Manufacture of mechanical water pumps, tube well pumps, air pumps etc.
372	Manufacture of small machine tools and machine parts
373	Manufacture of sewing machine parts
375	Repairing and servicing of fans
376	Manufacture of insulated wires
377.1	Manufacture of storage batteries
377.2	Manufacture of charging batteries
377.3	Manufacture of other batteries n.e.c.
378	Repairing and servicing of radios
379.1	Manufacture of domestic electrical appliances
379.2	Repairing and servicing of electrical apparatus, heaters, oven etc.
	Major Group 38—Transport Equipment
382	Manufacture of body of trucks and buses including carpentary and joinery work involved
384	Repairing and servicing of automobiles
385.1	Manufacture of cycle parts and accessories such as saddle, seat frame and gear etc.
385.2	Manufacture of rickshaw parts
386	Manufacture of boats and barges
388	Repair of cycle and rickshaw
389	Manufacture of animal drawn and hand drawn vehicles such as bullock cart, tamtam, lagadi, palaki cab, wheelbarrow, handbarrow etc.
	Major Group 39—Miscellaneous Manufacturing Industries
390.1	Repair of spectacles
390.2	Manufacture of small photographic equipment
390.3	Manufacture of optical and photographic equipment n.e.c.
391	Manufacture of scientific goods
392	Repairing and servicing of watches and clocks
393.1	Inlay work with ivory and brass
393.2	Goldsmithy
393.3	Manufacture of jewellery, silverware and wares using gold and other precious metal and precious and semi-precious stones
393.4	Silver artware, including silver repousse work on copper (such as in Tanjore) and silver images
393.5	Silver filigree industry
393.6	Manufacture of gold and silver leaves

APPENDIX III—*concld.*

LIST OF COMMON HOUSEHOLD INDUSTRIES WITH THEIR INDUSTRIAL CODE NUMBER

Industrial Code Number	Household Industries
Major Group 39—Miscellaneous Manufacturing Industries—*contd.*	
393.7	Gold covering work (fancy jewellery)
393.8	Bidriware industry
393.9	Manufacture of jewellery, silverwares etc., n.e.c.
394	Manufacture, repairing and tuning of musical instruments such as harmonium, tabla, sitar, bansuri etc.
395.1	Manufacture of chalk pieces
395.2	Making of slate and slate pencil
395.3	Making of rubber stamps
395.4	Manufacture of fountain pen parts
395.5	Manufacture of other stationery articles such as pencils, penholders etc.
396.1	Manufacture of deshi sports goods such as lezzim and dumbells
396.2	Making of rubber balls and ballons
396.3	Manufacture of other sports goods n.e.c. bats, rackets, balls etc.
399.1	Making of tikka and cowdung cakes
399.2	Making of beads from conch, shells and horn goods
399.3	Making of traditional objects such as Orissa, Mysore and Tanjore paintings etc.
399.4	Making of lac bangles
399.5	Making of buttons (bone, shell, ivory)
399.6	Making of gangavan (making of wig from human hair)
399.7	Making of garlands from flowers, camphor, sandal wood shavings, seeds and other materials, like beads etc.
399.8	Repair of petromax lights etc.
399.9	Making and repairing of goods n.e.c.

NOTE:

n.e.c.—not elsewhere classified

APPENDIX IV

NATIONAL CLASSIFICATION OF OCCUPATIONS

Divisions and Groups

0 Professional, Technical and Related Workers

00 Architects, Engineers and Surveyors
01 Physicists, Chemists, Geologists and other Physical Scientists
02 Biologists, Veterinarians, Agronomists and Related Scientists
03 Physicians, Surgeons, and Dentists
04 Nurses, Pharmacists and other Medical and Health Technicians
05 Teachers
06 Jurists
07 Social Scientists
08 Artists, Writers and Related Workers
09 Draughtsmen, and Science and Engineering Technicians, n.e.c.
0X Other Professional, Technical and Related Workers

1 Administrative, Executive and Managerial Workers

10 Administrators and Executive Officials, Government
11 Directors and Managers, Wholesale and Retail Trade
12 Directors, Managers and Working Proprietors, Financial Institutions
13 Directors, Managers and Working Proprietors, Other

2 Clerical and Related Workers

20 Book-keepers and Cashiers
21 Stenographers and Typists
22 Office Machine Operators
28 Clerical Workers ,Miscellaneous
29 Unskilled Office Workers

3 Sales Workers

30 Working Proprietors, Wholesale and Retail Trades
31 Insurance and Real Estate Salesmen, Salesmen of Securities and Services and Auctioneers
32 Commercial Travellers and Manufacturers' Agents
33 Salesmen, Shop Assistants and Related Workers
34 Money-Lenders and Pawn-Brokers

4 Farmers, Fishermen, Hunters, Loggers and Related Workers

40 Farmers and Farm Managers
41 Farm Workers
42 Hunters and Related Workers
43 Fishermen and Related Workers
44 Loggers and other Forestry Workers

5 Miners, Quarrymen and Related Workers

50 Miners and Quarrymen
51 Well Drillers and Related Workers
52 Mineral Treaters
59 Miners, Quarrymen and Related Workers, n.e.c.

6 Workers in Transport and Communication Occupations

60 Deck Officers, Engineer Officers and Pilots, Ship
61 Deck and Engine-Room Ratings (ship), Barge Crews and Boatmen
62 Aircraft Pilots, Navigators and Flight Engineers

6 Workers in Transport and Communication Occupations—contd.

63 Drivers and Firemen, Railway Engine
64 Drivers, Road Transport
65 Conductors, Guards and Brakesman (Railway)
66 Inspectors, Supervisors, Traffic Controllers and Despatchers, Transport
67 Telephone, Telegraph and Related Telecommunication Operators
68 Postmen and Messengers
69 Workers in Transport and Communications Occupation, n.e.c.

7-8 Craftsmen, Production Process Workers, and Labourers not Elsewhere Classified

70 Spinners, Weavers, Knitters, Dyers and Related Workers
71 Tailors, Cutters, Furriers and Related Workers
72 Leather Cutters, Lasters and Sewers (except Gloves and Garments) and Related Workers
73 Furnacemen, Rollers, Drawers, Moulders and Related Metal Making and Treating Workers
74 Precision Instrument Makers, Watch Makers, Jewellers and Related Workers
75 Tool Makers, Machinists, Plumbers, Welders, Platers and Related Workers
76 Electricians and Related Electrical and Electronics Workers
77 Carpenters, Joiners, Cabinet Makers, Coopers and Related Workers
78 Painters and Paper Hangers
79 Bricklayers, Plasterers and Construction Workers, n.e.c.
80 Compositors, Printers, Engravers, Book-Binders and Related Workers
81 Potters, Kilnmen, Glass and Clay Formers and Related Workers
82 Millers, Bakers, Brewmasters and Related Food and Beverage Workers
83 Chemical and Related Process Workers
84 Tobacco Preparers and Products Makers
85 Craftsmen and Production Process Workers, n.e.c.
86 Testers, Packers, Sorters and Related Workers
87 Stationary Engine and Excavating and Lifting Equipment Operators and Related Workers
89 Labourers, n.e.c.

9 Service, Sport and Recreation Workers

90 Fire Fighters, Policemen, Guards and Related Workers
91 House Keepers, Cooks, Maids and Related Workers
92 Waiters, Bartenders and Related Workers
93 Building Caretakers, Cleaners and Related Workers
94 Barbers, Hairdressers, Beauticians and Related Workers
95 Launderers, Dry Cleaners and Pressers
96 Athletes, Sportsmen and Related Workers
97 Photographers and Related Camera Operators
99 Service, Sport and Recreation Workers, n.e.c.

X Workers not Classifiable by Occupation

X8 Workers Reporting Occupations Unidentifiable or Unclassifiable
X9 Workers not Reporting Occupation

NOTES :

† Bawria Police Station excludes an urban population of 27,980 (16,926 Males and 11,054 Females) which is included in Uluberia Town Group under Bauria (N.M.), Burikhali (N.M.) and Fort Gloster (N.M.) Towns. It also excludes area, number of towns and occupied residential houses of respective towns.

‡ Uluberia Police Station excludes an urban population of 38,319 (22,489 Males and 15,830 Females) which is included in Uluberia Town Group under Chengail (N.M.), Uluberia (N.M.) and Banitabala (N.M.) Towns. It also excludes area, number of towns and occupied residential houses of respective towns.

1. The Sq. Km. and density figures of urban areas of Police Station/Subdivision/District/State are worked out using the area figures corrected up to 2 places of decimal obtained by adding the areas of towns in respective units and not using to the area figures given in the table. In addition to this the area figures relating to Sq. Km. are further adjusted to make the Police Station/Subdivision/District/State totals tally.

2. Towns treated as such for the first time in 1951 Census which continue as towns in 1961 Census are shown with asterisk (*) on their left.

3. Towns treated as such for the first time in 1961 are printed in italics.

4. The following abbreviations have been used for the status of a town :

M	Municipality
N.M.	Non-municipal Town

TABLE A-III—VILLAGES CLASSIFIED BY POPULATION

District/Subdivision/Police Station	Total number of inhabited villages	Total Rural Population			I—Villages with less than 2,000 population												II—Villages with a population of 2,000—9,999						III—Villages with a population of 10,000 and above

NOTES :

1. Towns treated as such for the first time in 1951 Census which continue as towns in 1961 Census are shown with asterisk (*) on their left.
2. Towns treated as such for the first time in 1961 are printed in italics.
3. The following abbreviations have been used for the status of a town.
   - M.C. Municipal Corporation
   - M. Municipality
   - N.M. Non-municipal Town.

TABLE B-XIV—SAMPLE HOUSEHOLDS ENGAGED ONLY IN HOUSEHOLD INDUSTRY CLASSIFIED BY PRINCIPAL HOUSEHOLD INDUSTRY IN ALL AREAS—*Contd.*

(Based on 20% Sample)

Part B—Households classified by Minor Groups of Principal Household Industry

Code No. of Indian Standard Industrial Classification	Household Industry Minor Group (Description)	Number of Households		
		Total	Rural	Urban
1	2	3	4	5
	HOWRAH DISTRICT			
	ALL INDUSTRIES	1,313	1,096	217
006.1	Production of fruits and nuts in plantation, vines and orchards	1	1	..
031	Production of fish by fishing in inland waters and ponds including fish farms and fish hatcheries	6	6	..
032	Production of pearls, conch, shells, sponges, sea herbs, corals etc., by gathering or lifting from sea, river, pond	1	1	..
040.2	Rearing of buffalo for milk and animal power	1	..	1
040.3	Rearing of cows for milk and animal power	18	9	9
043.1	Poultry keeping and production of eggs	1	1	..
200.1	Production of flour by village chakkies or flour mill by grinding wheat, maize, gram etc.	1	1	.
200.2	Hand pounding of rice by Dhekhi or Ukhal	29	28	1
202.1	Gur and Khandsari making from sugarcane and palm	3	3	..
203.1	Manufacture of achar, pickles, chutney and murabba	1	1	..
205	Production of bread, biscuit, cake and other bakery products	4	2	2
206	Production of butter, cream, ghee, cheese, chhana, khowa and other dairy products	3	3	..
207	Oil pressing ghani, kolhu or by small machines	7	6	1
209.2	Making of sweet-meats, laddu, peda, barphi, batasa etc.	7	5	2
209.4	Making of chura or chira, muri, murki, khoi	1	..	1
216	Production of ice cream, ice-candy or kulphimalai, milk-shake etc.	1	..	1
219.3	Production of other beverages n.e.c.	1	1	..
220	Manufacture of bidi	91	75	16
231	Cotton spinning (by charkha and takali)	18	13	5
233.3	Tie and dye (bandhani) of cloth and yarn	1	1	.
235	Cotton cloth weaving in handlooms	120	117	3
238.1	Making of fishing net	16	16	..
238.3	Making of other nets	15	12	3
239.1	Making of sacred thread	1	1	.
239.2	Making of thread, rope, cordage and twine (cotton)	1	1	..
244.2	Making of rope and cordage, out of jute	1	1	.
244.3	Making of rope by palm fibre	1	1	.
244.4	Making of rope by date palm fibre	1	..	1
271.1	Making of hosiery goods such as banyans, socks, sweaters, mufflers etc.	2	..	2
272.2	Making of jari thread, zardoshi	16	10	6
272.8	Making of other embroidery products n.e.c.	4	2	2
273.1	Making of cap, hat, and other head-gear	1	1	..
273.2	Traditional garments	370	275	95
277.2	Making of brush, broom etc. from coconut fibre	1	1	..
279.2	Manufacture of dolls and toys (rags and cotton)	1	..	1
281	Manufacture of wooden furniture and fixtures	2	1	1
282	Manufacture of structural wooden goods (including treated timber) such as beams, posts, doors, windows	2	1	1
284.3	Manufacture of wooden toys	1	..	1
284.9	Manufacture of other wooden products n.e.c.	33	27	6
288.2	Making of rope mats etc. from moonj and sawai grass and making of cadjar for thatching purposes	2	2	..
288.3	Making of mats, handfans and umbrellas from palm leaves	28	27	1

(Based on 20% Sample)

Part B—Households classified by Minor Groups of Principal Household Industry

Code No. of Indian Standard Industrial Classification	Household Industry Minor Group (Description)	Number of Households		
		Total	Rural	Urban
1	2	3	4	5
	HOWRAH DISTRICT			
288.4	Making of sirki, moora and chhaj	12	12	..
288.5	Making of baskets and broomsticks	24	24	..
288.9	Manufacture of other articles from leaf, cane, bamboo, cork and other allied products n.e.c.	33	31	2
289.2	Making of wooden kharaus and other wooden sandals	1	1	..
291	Manufacture of pulp and paper by hand	2	2	..
292.1	Making of envelopes and paper bags	5	3	2
292.8	Manufacture of other paper products from paper, paper board and pulp n.e.c.	5	5	..
310.2	Currying, tanning and finishing of hides and skins preparation of finished leather	1	1	..
311.1	Making of leather boots, shoes or chappals (slippers, sandals)	40	34	6
313	Manufacture of leather products such as leather upholstery suit cases, pocket-books, cigarettes and key cases, purses, saddlery, whip, acquaducts (Kos), charsa and other articles	2	2	..
314	Repair of shoes, chappals and other leather footwear	6	6	..
321	Manufacture of chappals from torn tyres and other rubber footwear	1	..	1
331.1	Manufacture of dyes, paints, colours, abir, sindoor, varnish etc.	1	1	..
333	Manufacture of fireworks and other explosives such as pataka etc.	1	1	..
335.7	Manufacture of medicines (ayurvedic, unani, etc.) and pharmaceutical preparations	1	..	1
336.2	Manufacture of other washing and cleaning compounds n.e.c.	1	1	..
337.3	Manufacture of other plastic goods	1	1	..
340.2	Manufacturing of roofing tiles	1	1	..
350	Making of earthenware such as pottery, etc.	138	131	7
355	Making of clay models, earthen images, busts and statues	10	9	1
357	Manufacture of glass and glass products except optical and photographic lenses	2	1	1
365.1	Making of utensils of brass and bell metal	2	1	1
365.5	Making of other brass and bell metal products n.e.c.	1	1	..
366.2	Making of other aluminium products n.e.c.	1	1	..
368.3	Engraving, embossing, polishing and welding of metal products	1	..	1
368.5	Plating and electroplating of metal n.e.c. including silverplating, goldplating, E.P.N.S., etc.	1	..	1
369.1	Manufacture of agricultural implements such as ploughshare, khurpi, kudal etc.	13	13	..
369.4	Making and repairing of locks and trunks	80	76	4
369.8	Foundry Industry (including blacksmithy)	19	16	3
388	Repair of cycle and rickshaw	2	2	..
392	Repairing and servicing of watches and clocks	1	1	..
393.2	Goldsmithy	52	35	17
393.8	Bidriware industry	1	1	..
394	Manufacture, repairing and tuning of musical instruments such as harmonium, tabla, sitar, bansuri etc.	2	2	..
399.1	Making of tikka and cowdung cakes	4	1	3
399.2	Making of beads from conch shells and horn goods	8	8	..
399.6	Making of gangavan (making of wig from human hair)	1	1	..
399.7	Making of garlands from flowers, camphor, sandal wood shavings, seeds and other materials, like beads etc.	8	7	1
399.9	Making and repairing of goods n.e.c.	13	10	3

(a) Household engaged neither in cultivation nor in household industry
(b) Household engaged in household industry only
(c) Household engaged in cultivation

NOTE : The heads of households are shown as less than the total number of households in some areas on account of the fact that some enumerators had apparently not indicated any person as the head of household in the 'Population Record' where the conventional head of household was absent from the household at the time of enumeration and had not been enumerated in that household.

NOTE : The Death Rate is the annual death rate per 1,000 of the same sex calculated on the population of 1951.

* Relates to the period 1951-58.

† Rates have been calculated on per thousand of live and still births.

PART III

VILLAGE DIRECTORY

This Directory renders an account of each Village and each Town

THE VILLAGE DIRECTORY

Explanatory Note

The Village Directory renders an account of each village, entered on the Jurisdiction on the Lists for each Thana maintained by the Directory of Land Records and Surveys, West Bengal. For villages included in town figures are given for the town and not for the separate villages which it contains. In case of a municipal town figures are presented separately for each ward. It gives the Jurisdiction List number, name, area of the village, number of Occupied Houses, Census Households, Total Population, Scheduled Caste and Scheduled Tribe Population, number of literates, and workers classified into the following nine Industrial Categories of Workers and Non-workers :

I	As Cultivator
II	As Agricultural Labourer
III	In Mining, Quarrying, Livestock, Forestry, Fishing, Hunting, Plantations, Orchards and allied activities.
IV	At Household Industry
V	In Manufacturing other than Household Industry
VI	In Construction
VII	In Trade and Commerce
VIII	In Transport, Storage and Communications
IX	In Other Services
X	Non-workers

These basic data are presented police stationwise first for the rural portion and next for urban portion in this directory. A notional map of the police station has been given at the beginning of the Village Directory of each police station showing the Jurisdiction List number of each village and the location of town, if any, and an inset map of the district has also been given to show the location of the police station in the district. The population of a village has been indicated by varying size of dots. The location of Primary and Secondary Schools, Primary Health Centres, Hospitals and Post Offices in village has been indicated by different symbols. An alphabetical list of villages has been given facing each thana map. This list shows the Jurisdiction List number of each village and the names of the villages arranged alphabetically and its population in 1951 and in 1961. The thana map and the alphabetical list together facilitate location of any village in the Village Directory as well as on the spot.

A village, as a general rule, is the revenue survey *mouza*. The uninhabited *mouzas* and the *mouzas* that have been completely merged in urban areas have been indicated accordingly. In respect of the villages which are partly included in urban areas and partly outside the limits of a town, the particulars for the portion included in urban area have been clubbed together with the particulars furnished for the corresponding town and for the portion lying outside the town limits *i.e.*, included in the rural area, the data have been shown in the Village Directory against the corresponding *mouzas*. The area figures of the villages have been obtained from the 1951 Census Handbook. The total area for any Police station shown below each Primary Census Abstract has been taken from Table A-I given in Part IIA of this volume.

The area of the municipal towns has been presented according to the figures available from the respective municipalities. The area in respect of the non-municipal towns has been computed from the area figures of the constituting *mouzas*.

For the definition of a Worker and Non-worker and detailed description of nine Industrial Categories of workers, the Explanatory Note to the Primary Census Abstract and other economic tables in Part II of this Volume may be referred to.

Symbols will frequently be seen against a village or town. They will indicate that the institutions offering the particular facilities which the symbol denotes is situated within the village or town. These facilities are shown by symbols as explained below against the name of village and town :

(a) Schools :
P = Primary Schools
H = High Schools

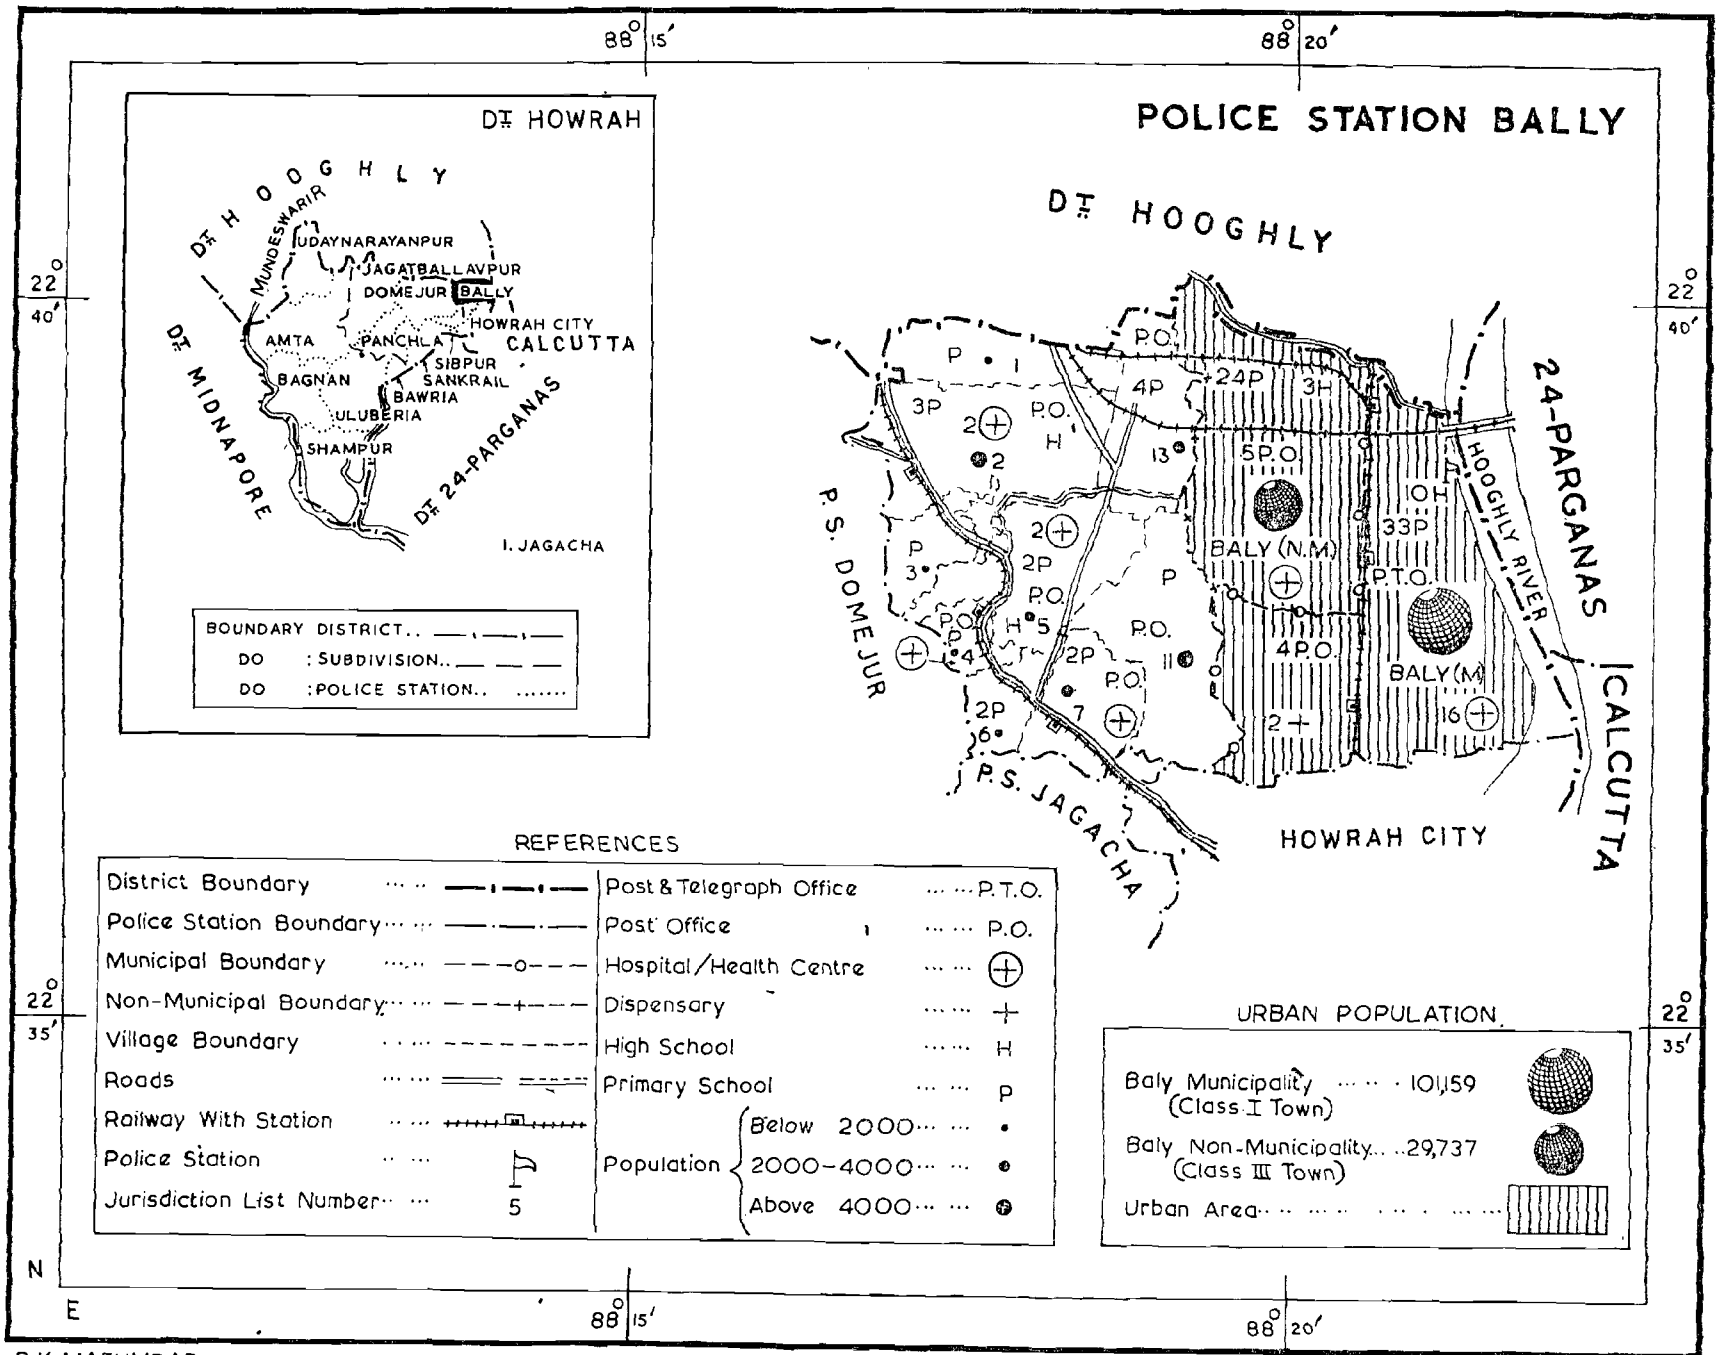

(b) Medical facilities :
D = Dispensaries
Rhc Rural Health Centres
Hos Hospitals
Mcw Maternity and Child Welfare Centres

(c) Post Office :
Po Post Office

(d) Electricity :
E Electricity

(e) Library :
L Library

Where figures like 5P or 2H or 2Hos *etc.*, occur they denote that the *mouza* or the town has five Primary School or two High Schools or two Hospitals *etc.*
