10.	*Census Abstracts of Small-Scale Industries*	... ...	377—379
	I. Distribution of Small-Scale Industries Establishments in Villages and Wards.		377
	II. Employment in Textile Establishments for Census Tracts	...	378
	III. Employment in Non-Textile Establishments for Census Tracts	...	379
11.	*Index of Non-Agricultural Occupations*	....	380—391

LAKHIMPUR

INTRODUCING THE DISTRICT

The district of Lakhimpur covers an area of 4,068 sq. miles. It is bounded on the north by Mishmi Hills, Abor Hills; on the west by Darrang and Balipara Frontier Tract; on the south by Sibsagar and Tirap Frontier Tract and on the east by Mishmi Hills and Tirap Frontier Tract. It consists of two subdivisions, Dibrugarh and North Lakhimpur; the former consists of the following thanas:—Dhemaji, Dibrugarh, Tinsukia, Doom Dooma, Digboi, Bordubi, Moran, Jaipur and Margherita, and the latter Bihpuria, North Lakhimpur and Dhakuakhana. It has four towns, Dibrugarh, North Lakhimpur, Doom Dooma, and Tinsukia, being the headquarters of their respective thanas. The district headquarters are at Dibrugarh, while North Lakhimpur is the headquarters of North Lakhimpur subdivision.

Lakhimpur consists of a broad plain lying on either side of the Brahmaputra, bounded on three sides by hills. To the south these hills are only a few thousand feet above the level of the sea, and their sides are for the most part clothed in dense tropical forest. They lie in tumbled ridges, sharply serrated at the summit, and sloping steeply to the valleys with which they are intersected, and each of the main ridges is buttressed with spurs thrown out on either side. The hills that shut in the eastern end of the valley are considerably higher, and, on a clear day, the view to the north and east is bounded by a continuous chain of snowy peaks, which if low in comparison with the giants of the Himalaya, attain at any rate the altitude of Mont Blanc. Along the north the nearer ranges are generally high enough to conceal the eternal snows beyond. North of North Lakhimpur, there are points in this chain which are nearly 10,000 feet above the level of the sea, but a little to the east of the Subansiri the level falls, and the outer hills are not more than two or three thousand feet in height. This, however, is not for far, and the level quickly rises to six or seven thousand feet near the gorge of the Dihang.

South of the Brahmaputra the plain is fairly high, and a broad belt of country along the foot of the hills is clothed in dense evergreen forest. Creepers spread in every direction over the larger trees, knitting them into one great mass of foliage, and drop down here and there in graceful coils and loops. The forest is dense with bamboos, plantains, palms and huge tree ferns; and the creeping cane, its sharp spikes hidden by its beautiful green leaves acts as an effectual check on any one who lightly tries to penetrate these sylvan fastnesses. In the centre of the district much of the forest has been felled, and the plain is covered with fields of waving rice, or with stiff tea bushes ranged in rows with mathematical precision, and pruned down with equal accuracy to the save level. The planter's bungalow, the factory, and the cooly lines stand out above these even rows of shrubs. The drainage of the country is carried off in small streams and jans which feed the larger rivers, and there are comparatively few swamps and bhils even in the neighbourhood of the Brahmaputra.

North of that great river the condition of affairs is somewhat different. A large portion of the country is still covered with tree forest, the level of the land is lower, and there are more bhils and marshes; while much of the country is exposed to inundation in the rainy season and is covered with dense masses of grass and reeds, ranging from ten to twenty feet in height. The general effect is extremely picturesque. In the foreground are to be seen fields of waving rice, of a vivid green during the summer season, but changing to a rich gold as harvest time draws near. Round the edges of these rice pathars are groves of

slender palms, broad-leaved plantains, and feathery bamboos, which conceal the cottages of the cultivators, while further back is often to be seen the dark green line of the primeval forest. The view is bounded to the north by the bluest of blue hills. In the far distance to the east there are ranges of high hills, whose peaks are covered with snow, and whose rocky sides are flecked with gleaming white. At all seasons of the year the country looks fresh and cool and green. The trees in the forest never lose their leaves, while the roads are often carpeted with grass, and bordered with ferns that recall the lanes of Devonshire.

Mountain System : Although Lakhimpur is surrounded on three sides by mountains, almost the whole of the area included within the Inner Line consists of a flat and level plain. An out-lying spur of the Naga Hills stretches from the Disang river through the south of the Jaipur and Tipling mauzas, and the Inner Line near Margherita has recently been thrown back to the Tirap, so as to include a few of the lower ranges of the Naga Hills. But apart from these mountains and a few isolated hills in the Makum and Buri Dihing mauzas there is nothing to break the even level of the plain.

River System : The principal river of Lakhimpur, as of every other district of the Assam Valley, is the Brahmaputra, but in this district it possesses a peculiar interest from the fact that it is here that it passes out of the regions of geography and its true course becomes to some extent a matter of uncertainty. Hindu tradition describes the river as rising in the sacred pool of Brahmakund, some three or four days' journey east of Sadiya; but the river that flows from the east has been followed far beyond the Brahmakund to the Rima Valley, where it is known as the Zayul. The Brahmaputra is supposed to be identical with the Sangpo of Tibet, which rises in 31° 30′ north and 82° east, near the upper waters of the Indus and the Sutlej, a little to the east of the Manasarowar lakes. The Sangpo being denied an outlet towards Burma in any direction, makes its way through the Himalayas by a channel, which is the Dihang which is the largest river that falls into the Brahmaputra from the north. Even at this distance from the mouth, the Brahmaputra is an enormous river. In the cold weather the main channel shrinks to more moderate dimensions and is surrounded on either side by sandy flats or beds of reeds and grasses. In the rains, the river stretches itself to an enormous extent over the marshy country on either side and, when in flood, the distance between one bank to the other is very great. Between its main banks, there is a wide sandy strath in which it oscillates from side to side, throwing out here and there divergent channels which, after a time, rejoin the parent stream or may be silted up. The waters of the rivers are heavily surcharged with suspended matter and the smallest obstruction in the current is liable to give rise to an almond-shaped chapari, but the next flood may wash this chapari away or may increase its size by fresh deposits of sand, covered with reeds and jungle grass in a few seasons. These operations of alluvium and diluvium are continually being carried on in a gigantic scale by the Brahmaputra.

The principal rivers which fall into the Brahmaputra in Lakhimpur are, from the north bank, the Digaru, Diphu and Kundil, which fall into it east of Sadiya, the Dibang, the Sesseri, the Dihang, the Subansiri, the Ranganadi and the Dikrang. On the south bank it receives the Noa Dihing, the Dibru and the Buri Dihing. The Dibang, with its tributary the Dikrang, the Sesseri and the Dihang can be described in general terms. They debouch upon the plain through gorges of great natural beauty, the current is swift, the bed of the river full of snags and boulders and the scenery through which they make their way extremely picturesque. The Subansiri is believed to rise far up among the mountains of Tibet and enters the plains of

North Lakhimpur at Dalangmukh through a gorge of singular beauty. Before falling into the Brahmaputra, the Subansiri collects nearly all the drainage of the North Lakhimpur subdivision, the principal tributaries on the left bank being the Sampara and the Koran. The Koran has two considerable tributaries, the Dhol and the Sisi, which flows past Dhaknakhana. On the right there is the Ghagar with its various tributaries, the Kadam and several minor streams. The Rangapani and the Dikrang flow from the Dafla hills into the Luhit. South of the Brahmaputra the most important river is the Buri Dihing, which rises in the Patkai range and flows a tortuous course with a generally westerly direction till it falls into the Brahmaputra, after a course of about 150 miles. Its principal tributaries are, on the right bank, the Digboi, the Tipling, the Tingrai and the Sesa; and on the left bank the Tirap and the Namsang, After leaving the hills, it flows past Margherita, Jaipur, Naharkatiya and Khowang; and during the last part of its course, forms the boundary between the Lakhimpur and Sibsagar districts.

Lakes and Marshes: South of the river the level of the country is fairly high and in the settled tracts there are not many bhils or marshes of importance. North of the Brahmaputra there is a heavy local rainfall to be carried off, and the rivers are liable to be swollen by the drainage of the hills through which they make their way into the district. Much of the country also lies comparatively low and the water tends to collect in the lower levels and basins. Some of these bhils are extremely picturesque. In the centre lies the actual sheet of water, surrounded as a rule by a stretch of the richest pasture in which the cattle can graze knee-deep in the cold weather, while the whole is enclosed by a wall of elephant grass and reeds. The surface of the lake is dotted over with islets and clumps of flowering grasses. The most important bils south of the Brahmaputra are the Garukhuti bhil in Jamira mauza, the Chaparu and Kawamari bhils in Larua, and the Romai bhil in Madarkhat. North of the river there is the great Kani bhil in the Sisi mauza, the Pabhamari and Bangalmari bhils in Dhemaji, the Bhimpara bhil in Kadam and various other smaller sheets of water.

Geology: The district consists of a wide alluvial plain composed of a mixture of sand and clay in varying proportions, and surrounded on three sides by hills belonging to the tertiary period.

Climate and Rainfall: There is no district in the Assam Valley and probably few in the plains of India in which the climate is more endurable than it is in Lakhimpur. In October the rains stop and the temperature begins to fall. During the four succeeding months the climate is delightful. The total rainfall during this period in Dibrugarh only just exceeds 6", the sky is clear, the sun though bright has little power, and the air is cool and pleasant. Fogs sometimes hang over the country in the neighbourhood of the Brahmaputra but they help to keep the country cool. In March and April copious showers prevent the temperature from rising. From June to September is the only really unpleasant portion of the year. During these four months, nearly 72" of rain falls at the headquarters station, the air becomes saturated with moisture and the damp heat becomes trying indeed. As in other parts of the Assam Valley, the rainfall is much heavier near the Himalayas than it is in the centre of the district. At Pathalipam it is 168 inches in the year, and at the subdivisional station of North Lakhimpur it is 128 inches. At Dibrugarh it drops to 114 inches, and anywhere between Sadiya and Margherita it is only about 100 inches.

Storms and Earthquakes: Lakhimpur is seldom visited by violent and destructive storms, though an interval of dry weather in the rainy season is often closed by a thunder-shower, which at once relieves the oppressiveness of the atmosphere. Hailstorms sometimes do damage, especially to tea gardens, but are very local in their sphere of action. The rivers occasionally overflow their banks, but the area liable to inundation is generally well known, and is accordingly avoided by the cultivator, and the crops do not often suffer serious injury. Shocks of earthquake are felt from

time to time, but there is no record of serious damage ever being done, and even the great earthquake of 1897 left this district practically unscathed. Lakhimpur, however, was not so lucky in the case of the Great Assam Earthquake of August, 1950. It has suffered terribly from this cataclysm of nature, the effects of which will be felt by future generations in years to come.

THE FORESTS OF LAKHIMPUR DISTRICT

Forests: There are about 627 sq. miles of Forest Reserves in the District and about 2,086 sq. miles of unclassed State Forests, containing patches of fairly valuable forests. These latter areas are gradually dwindling with the progress of settlement and cultivation. Preliminary Notification in connection with proposals for further reservation of approximately 41 sq. miles had been published.

The forests are scattered all over the District but the most valuable forests are concentrated in the southern and eastern portion of the District. The forests in the North Lakhimpur Sub-division are mainly along the foot hills, the Inner Line forming the northern boundary of the Reserves.

The forests in the North Lakhimpur Sub-division are rather poorly stocked and the main marketable species are Hollock (Terminalia myriocarpa), Sia Nahor (Kayea assamica), Uriam (Bischoffia javanica), Outanga (Dillenia indica), Nahor (Mesua ferrea), Ajhar (Lagerstroemia flosreginae). The Reserves in this area have so far not been worked as local population obtains its requirement from the U. S. F's contiguous to villages and town-ships and difficulty of transport makes it uneconomic to work the forests for export. Very large quantities of Semul are found scattered all over the sub-division and these are worked for supply to the Assam Match Factory at Dhubri.

In the Dibrugarh Sub-Division, the economically most valuable forests occur to the South and the east of the Railway line from Naharkatiya to Saikhowaghat via Tinsukia and Makum, the main marketable species being Hollong (Diperocarpus macrocarpus), Hollock (Terminalia myriocarpa), Makai (Shorea assamica) and Nahor (Mesua ferrea). In areas to the north and the west of this line, the most valuable species is Ajhar (Lagerstroemia flosreginae) while Hollock (Terminalia myriocarpa) occurs in patches in the Dibru Reserve. Other common species in this area are Uriam (Bischofia javanica) and Outanga (Dillenia indica). Jutuli (Altingia exulsa) also occurs in patches.

The forests of this District produce annually an average revenue of approximately Rs. 11,00,000/- while the average expenditures approximately Rs. 3,50,000/-, thus yielding an annual surplus of Rs. 7,50,000/-. The revenue is mainly derived from sale of timber, of which Hollock, Makai and Semul form the bulk while other sources of revenue are :- (1) Cane (2) Thatching grass (3) Elephant Mahals (4) Fisheries (5) Patidol (6) Ekra and Nal (7) Land revenue from forest villages.

Timber finds its uses in this District in the following forms :—

(1) As Sawn timber :— Hollock and Ajhar are the two species favoured by the local population as well as in tea Gardens for constructional purposes. A fair quantity of Hollong planks are also finding its way into Calcutta as shuttering timber.

(2) As sleeper :— The Naharkatiya Sleepers Treating Plant treats about 400,000 Cft. of sleepers of Hollong, Hollock and Jutuli species for the Railway.

(3) For Match Industry : Approximately 2,000 tons of Semul is supplied from this District for the Assam Match Factory at Dhubri.

(4) For Plywood Industry:—Approximately one million sets of Tea boxes, made out of Hollong, Hollock and Makai are manufactured in this District in the three Veneer Mills. Large quantities of logs for veneering purposes are also being supplied to Plywood mills in Calcutta as well as in Cooch-Behar.

This district contains the largest number of Sawmills in Assam, well over twenty, testifying to its industrial progress.

Cane occurs in Reserves as well as in the U. S. F's and this finds a local market in the Tea Gardens for making baskets and an export market in Pakistan as well as in the Tea Gardens of North Bengal.

Thatching grass occurs in the Brahmaputra Chaparies and is consumed locally, mainly in Tea Gardens.

Elephants are captured every year in Kheda and Mela Shikars, some of these are retained in the District for use in timber haulage and some are exported, mainly to Behar.

There are a large No. of Bheels in the Reserves which are sold annualy as fisheries.

Patidol occurs in low lands all over the District both in Reserves and the U. S. F's; this is partially marketted locally and there is an export market also to Pakistan and Calcutta.

There is one Wild Life Sanctuary in the North Lakhimpur Sub-division, known as Pabho Gama Reserve; this has been constituted mainly for the preservation of Wild Buffaloes in the area. Other wild life in the District are elephants, tigers, bison, and deer. During the winter, the Chars in the Brahmaputra are visited by large numbers of ducks. The area of this sanctuary is approximately 18 sq. miles.

The Forest Department has created 3,108 acres of plantation in the District, principally of Hollock and has over 10,000 acres of Hollong-Nahor forests under a scheme of assisted natural regeneration. Regeneration on a large scale has commenced in this District only from the early thirties but effort in this direction had to be stopped for the duration of the War.

There are about 5,250 bighas of land in the Reserve Forests under cultivation by Forest villagers.

Fauna: Wild animals are numerous and include elephants, rhinoceros, bison, buffalo, tigers, leopards, bears, wild pig and different kinds of deer of which the principal varieties are the sambar, the barasingha or swamp deer, the hog deer and the barking deer. Elephants are fairly common, especially near the hills, and when the crops are ripening do much damage unless the numbers of the herds are regularly kept down. The method usually employed for hunting the elephants is that known as mela shikar. Mahouts, mounted on staunch and well-trained elephants, pursue the herd which generally takes to flight. The chase is of a most arduous and exciting character. The great animals go crashing through the thickest jungle and over rough and treacherous ground at a surprising pace and the hunter is liable to be torn by the beautiful but thorny cane brake, or, were he not very agile, to be swept from his seat by the boughs of an over hanging tree. After a time, the younger animals begin to flag and lag behind, and it is then the opportunity of the pursuer comes. Two hunters single out a likely beast, drive their elephants one on either side and deftly throw a noose over its neck. The two ends of the noose are firmly fastened to the kunkis, as the hunting elephants are called, and as they close in on either side, the captured

animal is unable to escape, or to do much injury to his captors, who are generally considerably larger than their victim. The wild elephant is then brought back to camp where it is tied up for a time and gradually tamed.

Herds of wild buffoloes are found north of the Brahmaputra and wild bulls often serve the tame cows that are kept by the Nepalese.

HISTORY

There are good reasons for supposing that centuries ago eakhimpur formed part of the territory of a civilized prince, who was overthrown by the Chutiyas, a tribe who are still found in large numbers at the Eastern end of the Assam Valley.

The Chutiyas : Of the early history of the Chutiyas not much is known, but they are believed to be members of the great Bodo race, and to have entered the plains from the north-east. In course of time, one Bibar attained a certain measure of supremacy over the neighbouring villages and the process begun by the father was carried on still further by the son. He extended his influence over the wild tribes, assumed the title of Lord of the Hills and descending into the Valley of the Brahmaputra at the head of his followers, defeated a king called Bhadra Sen, founding Ratanpur as his capital. The Chutiya leader assumed the name of Ratnadwaj Pal. He consolidated his power, excavated tanks, built temples and constructed a line of forts along the frontier. He is known as the builder of Sadiya (the place where the corpse was given), where the body of his dead son was received by him from the Court of the King of Gaur where he was left for education.

When the Ahoms entered Assam in 1228 A. D., the Chutiyas were established at Sadiya and were masters of the country as far west as the Disang river. The two powers continued to live in a state of intermittent conflict, which assumed an acute form at the beginning of the 16th century. The Chutiyas at first met with a considerable measure of successes, but they soon met reverses at the hands of the Dihingia Raja. The administration of Sadiya was then entrusted to an Ahom noble.

The Ahoms : Let us now briefly review the history of the Ahoms who preceded the British in the sovereignty of the district and of Assam. They were a Shan tribe from the kingdom of Pong in the upper valley of the Irrawaddy. The unsuccessful claimant to the throne left the capital with his friends and followers and after wandering about for some years, crossed the Patkai, and in 1228 A.D. settled down at the foot of the Naga Hills in the country which now forms the districts of Sibsagar and Lakhimpur. When Sukapha, the first Ahom king, arrived in 1228 A. D., he found the Chutiyas ruling in the north and the Kacharis in the south. The Ahoms first overthrew the Chutiya kingdom at Sadiya and afterwards the Kachari kingdom at Dimapur, as described above. The early history of the Ahom Dynasty contains few incidents likely to attract the attention of the historian except a chronological list of their successive rulers. The first noteworthy Ahom king was Suhunmung, or the Dihingia Raja (1497-1539), who conquered the Chutiyas and the Kacharis and was no less successful in his dealings with the Muslims and Koches. The Muslims sent two expeditions up the Brahmaputra Valley, but neither met with much success and the leader of the second, a Pathan named Turbuk, was killed in 1532 A. D. with most of his followers on the banks of the Bhareli, which was the western boundary of the Ahom Kingdom.

His successor, Sukampha, enjoyed the throne for nearly 60 years (1552-1611), but he was unable to withstand the victorious armies of the Koch King Nara Narayan, who occupied Gargaon and extorted tribute from him. The triumph of the Koches were, however, but short-lived and about

1614 A. D. Bali Narayan, the grandson of Sila Roy, Nara Narayan's brother, was compelled to apply to the next Ahom king Suchengpha of Protap Sing for help against the Muslims. The war dragged on in Lower Assam with varying success, but in 1637, the Nawab of Dacca sent up an overwhelming force which carried all before it. The Ahoms were driven out of Kamrup, and a treaty was made under which the Barnadi was accepted as the frontier between the Muslim and Ahom territory. Sutumla or Joydwaj Sing who ascended the throne in 1654 took advantage of the confusion that ensued on account of the deposition of Shajahan and drove the Muslims out of Kamrup and Goalpara. For a short time, the Ahoms were in possession of the whole of the Valley of the Bramaputra. Mir-Jumla, the Nawab of Dacca, was not the man to brook such aggression on the territory of the Moghal empire and in 1662, he started with a large force for the conquest of Assam. No resistance was offered to the Muslims during the initial stages of their march and they occupied the fort at Jogighopa, Srighat and Pandu near Gauhati, Gauhati itself; and Kajali on the western frontier of Nowgong, without striking a blow. Mir Jumla occupied Gargaon itself, the capital of the Ahoms. The subsequent history of Mir Jumla's expedition is not unlike that of Napolean's ill-fated eruption into Russia; rain and fever did for the Ahoms what frost end snow did for the Russians. After March, the rains set in with a severity exceptional even in this rainy land, converting the country into one huge swamp, rendering military operations impossible; and disease made havoc of the Muslims crowded together in their water-logged camps. The commencement of the cold season enabled Mir Jumla to resume offensive operations but the determination of his followers not to remain another rainy season in Assam was so strong that he patched up a peace with Joydwaj Sing and retreated down the Valley of Brahmaputra. Mir Jumla himeelf did not survive the failure of his expedition and died on the river about a mile from Dacca. By 1667, however, the Ahoms had again established themselves at Gauhati. Godadhar Singh (1681-85) was the first Ahom king to definitely annex Kamrup to his territories from the Muslims, but the zenith of the Ahom power was reached in the reign of his successor Rudra Singha (1695-1714), who founded a new capital at Rangpur and waged successful war against the Rajas of Cachar and Jaintia. He was the first of the Ahom kings to publicly adopt Hinduism. His son Sib Sing, whose name has come down to posterity as the excavator of the great tank on which the present subdivisional headquarters of Sibsagar stands, built the Rudreswar Temple at Gauhati in the memory of his father's death. By the middle of the 18th century, the Ahom power, however, began to decline. Lakshmi Sing's reign (1769-1780) was signalised by the outbreak of the Moamaria insurrection; after initial successes, the Moamarias were defeated and very cruelly dealt with. He was succeeded by his son Gaurinath (1780-95) in whose regin the Moamaria insurrection broke out anew with increased violence. At first the king's troops met with some measure of success and orders were issued outlawing the rebels and authorising any person to kill any Moamaria he might meet, regardless of time place, sex or age. According to the Ahom Chronicler, "the villagers thereupon massacred the Moamarians with their wives and children without mercy." The rebels in their turn were not slow to make reprisals; they plundered the country on every side and "the burning villages appear like a ball of fire". The ordinary operations of agriculture were suspended, no harvest could be raised and famine killed those whom the sword had spared. "The price of a katha of rice raised to one gold mohur and men starved in crowds under the trees, forsaking their wives and children."

In 1786, Moamaria rebels under Bharat Singh inflicted a decisive defeat upon royal troops and took the capital, Rongpur, by storm. The desolation of the country brought about by the Moamarians is thus described by the Ahom Chronicler. "The Mataks harried the temples and the idols of the gods and put to death all the sons and daughters of our people. For a great length of time, our countrymen had no home, some took shelter in Bengal some in Burma, some in the Dafla hills and others in the fort of the Bor Gohain who was fighting

the Mataks for years and months together." In 1792, a small British force under the command of Captain Welsh was sent to the assistance of the Ahom King, who reoccupied Rongpur in 1794 after a decisive victory over the insurgents. Some after, Gaurinath died and was succeeded by his son Kamaleswar Singh in whose reign the country remained in a state of great disorder due chiefly to the attacks of the Daflas. He was succeeded by his brother, Chandra Kanta Singh, in 1809. The Bor Phukan or Viceroy of Gauhati incurred the suspicion of the Bura Gohain or Prime Minister and fled to Burma via Calcutta. At the beginning of 1816, the Burmese army crossed the Patkai, reinstated the Bor Phukan ; but shortly after their withdrawal, Chandra Kanta was deposed and Purandar Singh appointed in his stead. The banished monarch appealed to the Burmese, who, in 1818, returned with a large force and replaced him on the throne. They soon, however, made it clear that they intended to retain their hold in Assam. The Burmese were guilty of gross atrocities during their occupation of the country, burning and plundering villages. Assam groaned under the oppression and lawless tyranny of the Burmese, whose barbarous and inhuman policy depopulated the country of its more than one half of the population, which had already been thinned by successive civil wars and Moamaria insurrections. Chandra Kanta fled to Goalpara and from British territory began a series of abortive attempts to recover his lost kingdom. In the mean time, however, causes of quarrel arose between the British and the Burmese and in 1824 war was declared by British Government and a force sent up the Valley of Brahmaputra. The Burmese evacuated Gauhati without striking a blow, such fighting as there was taking place in the district of Sibsagar and Nowgong. Rongpur was occupied in 1825 and in the following year, by the treaty of Yandaboo, Assam was ceded to the East India Company. The above is but a brief account of the rise and fall of the Ahoms.

For the first few years after the expulsion of the Burmese, the administration of the remote and jungly tracts, which now constitute the prosperous district of Lakhimpur, was entrusted to the semi-independent chiefs whom the British found in possession of the country. In 1833, the experiment was tried of placing the portion of the valley lying between the Dhansiri and the Dihing south of the Brahmaputra, and between Bishnath and Sadiya on the north bank, under Raja Purandar Singh. The Raja was accorded the position of a protected prince, was entrusted with full civil powers, and was required to pay an annual tribute of Rs. 50,000 to Government. This experiment, however, did not prove useful. Complaints and charges were raised against this administration on every side and the country north of the Brahmaputra was left unprotected—the Daflas carrying off women and children and holding them to ransom, with impunity. Purandar Singh's territory, however, was resumed in 1838. Apart from the economic development of the district mainly due to the growth of tea industry, it is largely connected with the relations with the frontier tribes the Singphos, the Mishmis, the Abors, the Khamtis, the Passi Meyongs, the Miris, the Daflas, the Ankas and the Nagas (including the Namsangias and the Bordurias).

POPULATION

The public health of the district has greatly improved, cholera and small-pox etc. though not unknown, have become very uncommon, whereas malaria, the public enemy No. 1 of the Indian villages, is also decreasing in its strength. The economic and demographic history of the district is uneventful except the Great Assam Earthquake of August, 1950, which did more damage here than in any other plains districts of Assam. The floods which followed did almost greater damage than the earthquake. Appendix III at the end of the Report gives a fuller description of the havoc caused by the earthquake. Suffice it to say here

that the earthquake has done enough damage to the topography of this district from which it will take centuries to recover.

The population of this district now stands at 1,078,157 exceeding that of Nowgong and Darrang only ; however if we compare the population of different plains districts of Assam without taking into account the recent heavy influx of refugees in certain districts, Lakhimpur will surpass not merely Nowgong and Darrang but also Goalpara and Cachar. It will then become the third largest plains district in Assam, The population of the district has increased by 186,225 against 170,640 in the previous decade. After Nowgong, Kamrup and Cachar, this is the fourth largest overall increase registered among the plains districts of Assam and exceeds its increase in the previous decade even if we ignore the increase of 13,965 contributed by the displaced persons.

The population of Lakhimpur has increased at the rate of 20.9% over its 1941 population against 23.7% in the previous decade. As in the overall increase, Lakhimpur stands fourth in this respect also among all the districts of Assam Plains Division, exceeding Kamrup, Sibsagar and Goalpara. In the previous decade it surpassed not merely Sibsagar and Goalpara but Cachar also though Kamrup had forged ahead of it having registered the highest rate of percentage increase of any district during that decade. Its main decennial growth rate during the last and the previous decades comes to 18.91 and 21.16.%

Consistently in line with its postion during the last four censuses, Lakhimpur occupies the last place regarding density (265) among the plains districts of Assam, which is lower by 13 than that of Goalpara with its huge forest reserves and unhealthy Eastern Duars. This should not for a moment be taken to mean that the density of Lakhimpur has not increased during the last 40 years. Actually its density has very nearly doubled itself from 144 in 1921 to 265 in 1951, which is an advance of 46 over that of 1941 and of 88 over that of 1931. The density of the district is lowest in the north, particularly in Dhemaji (75), Dhakuakhana (173) and North Lakhimpur (176). A glance at the map will show that the densest part of the district is a central belt consisting of the police station of Moran (425), Tinsukia (459) and Doom Dooma (399). Among the thanas on the north bank of the Brahmaputra, Bihpuria alone has density exceeding 300. On account of the forest reserves and hills, the density of Digboi and Margherita is still low, 207 and 180 respectively though they are the chief centres of the petroleum and coal industry of the State. Density is highest not in the headquarters thana as might be expected but in Tinsukia which is situated right into the heart of the subdivision and in the middle of the district tea belt. The overall density of the district is as low as 265, the lowest in Assam, largely because the North Lakhimpur subdivision on the north bank of the Brahmaputra along with the Dhemaji thana of Dibrugarh subdivision, have densities as low as 183 and 75 respectively. Actually Dhemaji thana with its 444 sq. miles occupying 11.01% of the total area of the district is the only police station in the entire Plains Division of Assam to have a density as low as 75. Their density in 1941 was even lower, 153 for North Lakhimpur subdivision and only 67 for Dhemaji thana. No wonder that the overall density of Lakhimpur is the lowest in the Assam Plains Natural Division.

Lakhimpur is made up of two subdivisions : North Lakhimpur and Dibrugarh, of very dissimilar characters. Dibrugarh in the south is more suitable for tea, without which indeed it would be a howling waste. North Lakhimpur is too low-lying and subject to floods, to be an attractive area for the tea planters and it is generally only in the neighbourhood of the hills that land well above flood level is found. North Lakhimpur has few tea gardens and no industrial

concern of any importance and is in fact one of the most backward plains subdivision in the whole State of Assam. Dibrugarh subdivision, with the exception of the Dhemaji thana on the north bank of the Brahmaputra, on the contrary has been aptly described as a vast tea garden. It contains within itself the only two major industries of Assam except tea, viz. petroleum and coal mines in Digboi and Margherita thanas. As may be easily expected, majority of the population of this subdivision are foreigners or of foreign descent. Dibrugarh subdivision is in fact the largest tea district in Assam, whose very life and prosperity depends on the prosperity of the tea industry. Dibrugarh subdivision has increased at the rate of 21·2% which is greater than 19.8 of North Lakhimpur subdivision. This is the reverse of the tendency exhibited by the two subdivisions in the two decades previous to the last one when North Lakhimpur on account of the influx of immigrants showed an increase of 34.3% in 1931-41 and 25% in 1921-31 against only 20.8% and 23.1% of Dibrugarh in the same decades. As can be expected from what we have seen above, Dibrugarh subdivision has a far greater density, 308, than North Lakhimpur, 183. The density of Dibrugarh subdivision has increased by 54 over that of the previous decade while North Lakhimpur has registered an increase of only 30 during the last 10 years.

Every thana has shared in this high percentage rate of increase registered by Lakhimpur. The highest rate of increase has been registered by Digboi thana, 33.7%, closely followed by Dibrugarh, 28.6%, and Bihpuria, 28.3%. Joypur, 28·8%, and Tinsukia, 28.7%, are two other thanas which have registered large increases, the small Margherita thana too having 23.8% to its credit. The lowest percentage increase of all has occurred in Dhakuakhana thana, 4.8%, but Doom Dooma does not lag far behind it with its small increase of only 4.9%. Even Dhemaji on the north bank has registered a two-figure increase of 11.7%. Excepting these three thanas no other portion of this district has shown a lesser rate of increase than 18·3% of Bordubi thana.

Subsidiary Table I (i) shows that no portion of the district has a density higher than 600 and above. Lakhimpur is the only plains district in Assam which has as large as 11.01% of its area (446 sq. miles of Dhemaji thana) in the density group under 100. Actually the density of Dhemaji thana as we have seen already is only 75 per square mile. Again Lakhimpur is the only district in this natural division excepting Goalpara which has another large slice of its territory, 11.68%, in the density group 100-150. This is Dhakuakhana thana of North Lakhimpur sub-division, which has a density of 113 in the present census, an advance of 5 per square mile over the previous one. Again 14.10% of its area has a density higher than 150 but less than 200. This is the North Lakhimpur thana. Thus as large as 36.79% of the total area of the district has a low density of 200 or below inhabited by only 17.37% of its people. It means that the remaining 82.63% of its population has to squeeze itself in 63.21% of its area, 11.63% of the population of Tinsukia thana remaining content with occupying only 6.86% of the area. The largest percentage both of its area (4993). and of its population (65.55) falls in the density group 300-450, Margherita thana with its 6.42% of the area of the district being only other police station to fall into the middle density group of 200-300. From the point of view of population growth this picture is an advance over its counterpart of 1941 when there was no area at all with a density higher than 450, Tinsukia thana then still remaining within the middle density group of 300-450. In contrast with the 1951 figure of 6·42% of the area and 5.25% the population under the middle density group of 200-300, the 1941 Census had as large a slice as 35% of the area and 42.97 of the population in this group; the density group 300-450 was correspondingly smaller containing in 1941 only 17.99% of the area and 30.86% of the population as against 49.93% of the area and 65.55% of the population in the present census. Thus at the present census 22.62% of the population of the district live in as large a portion of the district as 43.21%, whereas the

remaining 77.38% of the people has to squeeze itself into 56.79% of the area only—a position nearly similar to that revealed by 1941 figures.

Displaced Persons.—13,965 displaced persons were censused in Lakhimpur, contributing an incresse of 1.6% over the 1941 population of the district. Only 2,959 displaced persons were counted in the urban tracts consisting of the towns of North Lakhimpur, Dibrugarh, Doom Dooma and Tinsukia, the remaining 11,006 being all censused in the rural area of the district. The rural area of North Lakhimpur subdivision has gained only 1,304 by their arrival. The four remaining rural tracts, Dibrugarh-Dhemaji, Tinsukia-Bordubi, Doom Dooma-Digboi-Margherita and Joypur-Moran, being responsible for 1,261, 5,369, 1,725 and 1,347 displaced persons respectively. This heavy increase of 172,260 shown by Lakhimpur is not only due to natural growth but largely to the pouring in of Muslim immigrants from East Bengal, especially Mymensing, in the North Lakhimpur subdivision during the War (and before the advent of the Congress Ministry in Assam). North Lakhimpur with its large areas cultivable waste in the chapari of the Brahmaputra offer a very good scope to this hardy land-hungry people from across the border. Another principal source of increase is the tea garden immigration which is the heaviest in this most important of all tea districts of the State.

The possibilities of increase in population by East Bengal immigration and tea garden labourers is not yet exhausted. Even if circumstances are normal leading to a cessation of this stream of Hindu refugees from East Pakistan, this district is likely to reveal again a heavy increase in the coming decade.

INTRODUCING THE STATISTICS

In the past, village statistics for each district used to be printed after the Census, giving the population of each village and showing the distribution of communities and of literate persons. In view of the importance of the 1951 Census, at which in addition to the usual population data, valuable information was collected concerning the social and economic life of the people, it was dicided to publish a District Census Handbook containing the more important Census abstracts and tables.

The primary Census Abstract gives the details of each village by the 8 Livelihood Classes. There are five general population tables of the 'A' Series, three economic tables of the 'B' Series, five household and age (sample) tables of the 'C' Series, seven social and cultural tables of the "D" Series and one table 'E' giving summary figures for the district and tahsils. As far as possible, these tables furnish district data with break-up for Census tracts within the district.

At the 1951 Census, the economic classification was substituted for the classification based on *religion*. The people have been divided into two broad livelihood categories, namely the agricultural classes and the non-agricultural classes. There are four agicultural classes defined as below :—

I. Cultivators of land wholly or mainly owned and their dependants.

II. Cultivators of land wholly or mainly un-owned and their dependants.

III. Cultivating labourers and their dependants.

IV. Non-cultivating owners of land, agricultural rent receivers and their dependants.

concern of any importance and is in fact one of the most backward plains subdivision in the whole State of Assam. Dibrugarh subdivision, with the exception of the Dhemaji thana on the north bank of the Brahmaputra, on the contrary has been aptly described as a vast tea garden. It contains within itself the only two major industries of Assam except tea, viz. petroleum and coal mines in Digboi and Margherita thanas. As may be easily expected, majority of the population of this subdivision are foreigners or of foreign descent. Dibrugarh subdivision is in fact the largest tea district in Assam, whose very life and prosperity depends on the prosperity of the tea industry. Dibrugarh subdivision has increased at the rate of 21·2% which is greater than 19.8 of North Lakhimpur subdivision. This is the reverse of the tendency exhibited by the two subdivisions in the two decades previous to the last one when North Lakhimpur on account of the influx of immigrants showed an increase of 34.3% in 1931-41 and 25% in 1921-31 against only 20.8% and 23.1% of Dibrugarh in the same decades. As can be expected from what we have seen above, Dibrugarh subdivision has a far greater density, 308, than North Lakhimpur, 183. The density of Dibrugarh subdivision has increased by 54 over that of the previous decade while North Lakhimpur has registered an increase of only 30 during the last 10 years.

Every thana has shared in this high percentage rate of increase registered by Lakhimpur. The highest rate of increase has been registered by Digboi thana, 33.7%, closely followed by Dibrugarh, 28.6%, and Bihpuria, 28.3%. Joypur, 28·8%, and Tinsukia, 28.7%, are two other thanas which have registered large increases, the small Margherita thana too having 23.8% to its credit. The lowest percentage increase of all has occurred in Dhakuakhana thana, 4.8%, but Doom Dooma does not lag far behind it with its small increase of only 4.9%. Even Dhemaji on the north bank has registered a two-figure increase of 11.7%. Excepting these three thanas no other portion of this district has shown a lesser rate of increase than 18·3% of Bordubi thana.

LAKHIMPUR

Errata to 'POPULATION' of 'Introducing the District'

Para. 8 of Page No. X.

'The Largest parcentage both of its area (4993) and of its .....group 800-450', and 'Incontrast with the 1951 figure of 6·42% of the area and 5·25% the population.....of 200-300',

These above lines are Corrected as—'The Largest percentage both of its area (49·93) and of its population (65·55) falls in the density group 800--450',

and 'In Contrast with the 1951 figure of 6·42% of the area and 5·25% of the population under the middle density group of 200-300',

higher than 600 and large as 11.01% of its ctually the density of akhimpur is the only slice of its territory, akhimpur sub-division, nile over the previous than 200. In contrast with the 1951 figure of 6·42% of the area and 5.25% the population under the middle density group of 200-300, the 1941 Census had as large a slice as 35% of the area and 42.97 of the population in this group; the density group 300-450 was correspondingly smaller containing in 1941 only 17.99% of the area and 30.86% of the population as against 49.93% of the area and 65.55% of the population in the present census. Thus at the present census 22.62% of the population of the district live in as large a portion of the district as 43.21%, whereas the

There are similarly four non-agricultural classes defined as persons including dependants who derive their principal means of livelihood from :—

V. Production other than cultivalion.
VI. Commerce.
VII. Transport.
VIII. Other services and miscellaneous sources.

The above eight classes have been referred to as livelihood classes.

Each of the above eight livelihood classes has been divided into three sub-clases with reference to the economic status as below :—

(i) Self-supporting Persons ;
(ii) Non-earning Dependants ; and
(iii) Earning Dependants.

(i) A 'Self-supporting Person' is one who earns an income in cash or kind sufficient at least for his own maintenance.

(ii) A 'Non-earning Dependant' is a person who has no income of his own either in cash or in kind.

(iii) An 'Earning Dependant' is a person who earns a regular (not casual) income not sufficient even for his own maintenance. It includes seasonal income also.

All self-supporting persons are, ordinarily, economically active. But there are certain classes and groups which constitute an exception to this rule. These are mentioned below :—

(i) All self-supporting persons of Agricultural Class IV.

(ii) The following groups of self-supporting persons who are included in Non-Agricultural Class VIII, and derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity) :—

(a) Non-working owners of non-agricultural property,
(b) Pensioners and remittance holders,
(c) persons living on charity and other persons with unproductive occupations, and
(d) Inmates of penal institutions and asylums.

Economically active persons engaged in industries and services are classified in economic table B-III into the ten divisions and 88 subdivisions mentioned above, and are further divided into three sections, namely :—

(i) Employers,
(ii) Employees, and
(iii) Independent Workers.

A person should be treated as an 'Employer' only if he has necessarily to employ any person in order to carry on the business from which he secures his livelihood, provided that employee is regularly employed and derives his Principal Means of Livelihood by such employment. Part-time or casual employment which does not provide the Principal Means of Livelihood of the employee should not be taken into account. A person employing a cook or other seavants for domestic services is not an employer.

An 'Employee' is a person who ordinarily works under some other person for a salary or wage in cash of kind, as the means of earning his livelihood. Managers, Superintendents, Agents etc. and all Government servants should be recorded as employees only even though they may have power of employing or appointing subordinate officers or assistants.

An 'Independent Worker' means a person who is not employed by anyone else and who does not employ anybody else in order to earn his livelihood.

The Age (Sample) tables were prepared from the original enumeration slips by taking a ten-per-cent sample in accordance with the following instructions of the Registrar General, India.

The 'D' Series social and cultural tables include Toble D-V relating to the displaced persons giving particulars about their arrival into India. Table D-VI gives details of the non-Indian nationals and Table D-VII is designed to show the distribution of educated man-power among the different livelihood classes.

Important population data for the district and the tahsils have been summarised in Table 'E' which also gives the classification of the people by livelihood classes.

The main Report of the 1951 Census for the States of Assam, Tripura and Manipur will be found in two parts entitled "Census of India 1951—Volume XII—Assam, Manipur and Tripura". Part I, contains an analysis of the statistics collected and Part II, statistics arranged in different tables for the States, their natural divisions and districts.

In addition to these Volumes there are National Registers of Citizens prepared for every village and ward and maintained in manuscript giving important census details for each person. Thsse registers are preserved as permanent records in the district headquarters.

From the data collected at the Census of the Small-scale Industries, three tables were prepared which are included in the District Census Handbook, giving village or wardwise distribution of small-scale industrial establishments, employment in textile establishments for Census tracts and employment in non-textile establishments for the same tracts.

While the accuracy in respect of the details actually recorded by the Enumerators during the Census of the Small-scale Industries has been reported to be good, the District Officers were of the view that there was tendency towards under-enumeration of the establishments, due to the failure of the enumerating staff to make *intensive efforts to discover all establishments* within the areas allotted to them. The figures in the tables for the Small-scale Industries should, therefore, be regarded as *illustrative* of the nature of small industries prevalent in the different parts of the district and should not be relied upon as giving *accurate number* of specific type of establishment in different localities.

INSTRUCTIONS FOR TABULATION OF VILLAGE NOTES

The important information for every village was separately recorded on printed forms and has been incorporated in columns 3 and 4 Primary Census Abstract using the symbols given below :—

1. *Floods*—If it is liable to flood of any category,
2. *Epidemics*—For entries like Cholera, Small-pox, Kala-azar, Malaria, *write* Ch, Sp, Ka or Mal. For all other epidemics mentioned in this column, enter it in full.
3. *Water Supply*—
   - A—The village has a source of water supply provided by the Government or Local Board.
   - B—Natural sources of supply like rivers and bils.
   - C—Private supply.
   - D—Acute scarcity.

Underlined, it will indicate that quality of drinking water is bad.

4. *Medical Facilities*—

(a) The village has a Local Board or Government regular dispensary within 5 miles radius.

(b) There is no regular dispensry but a public Health Dispensary within 5 miles radius.

(c) There is no dispensary but a private qualified doctor within 5 miles radius.

(d) No medical facilities of any sort.

5. *Educational Facilities*—

1.—Served by a Local Board or Government School within 2 miles radius.

2.—Served by a Private Venture School only within 2 miles radius,

3—No educational facilities of any kind (Mission Schools have been generally treated as private schools although in some areas where they get grant-in-aid they have been shown as Government Schools by Enumerators).

CENSUS TRACT—SAMPLE POPULATION AND DISPLACED PERSONS

Census statistics of the urban and rural population can be studied in various ways. The results of such studies in comparing the conditions and characteristics of the urban and rural people in the matter of births, deaths, sex composition, sanitation, levels of living etc. would be of great value in economic planning and development of social welfare work in the State and its different parts.

Each district was, therefore, divided for purposes of the Census into a number of rural and urban tracts according to the size of the population.

Preparatory to the sorting and tabulation of census information, rural and urban areas of a district were grouped into Census Tracts on the basis of instructions issued by the Registrar General of India, with the approval of the Registrar General of India the following rural and urban tracts were formed in the case of

Rural,

Tract No. 44. Bihupuria, North Lakhimpur, Dhakuakhana

45. Dhemaji, Dibrugarh.

46. Tinsukia, Bordubi.

47. Doom-Dooma, Digboi, Marghritea.

48. Moran, Jaipur.

Urban.

10. Dibrugarh, Tinsukia,
Doom-Dooma & North Lakhimpur towns.

In several Tables the term "Sample Population" has been used. This sample was drawn according to the following instruction of the Registrar General of India. Enumeration was done on pads of 100 slips each, a slip containing the record of an individual.

"Break each pad and stack the slips of the pad; and "cut" the stack as in a card game. Place the lower portion above the upper portion and then deal the slips into the pigeon holes. You should deal the slips into pigeon holes *in the order* of 1, 2, 3, 4, 5, 6, 7, 8 and 9 successively. All the time, you should watch the slips of 'Displaced Persons'. If you come across any slip of a displaced person deal it in the pigeon hole separately labelled for

'Displaced Persons'. Thus there were three bundles ; (i) General Slips i. e. Slips combined for holes labelled for 1, 2, 3, 4, 5, 6, 7, 8 and 9 (ii) Sample Slips i.e. Slips in the hole marked 'S' and (iii) Displaced Persons.

Hence it will be seen that the sample is not a sample of the total population but of the latter excluding the 'Displaced Population'.

The check factors for the sample population are :—

1,000 S/G Rural Total	=	111
1,000 S/G Urban Total	=	111
1,000 S/G District Total	=	111

A 'Displaced Person' was defined by the Registrar General of India as follows :—

"A 'Displaced Person' means any person who has entered India having left or being compelled to leave his or her home in Western Pakistan on or after the 1st March, 1947 or his/her home in Eastern Pakistan on or after the 15th October. 1946 on account of civil disturbances or the fear of such disturbances or on account of the setting up of the two Dominions of India and Pakistan."

PRIMARY CENSUS ABSTRACT

Number and name of District = 10 Lakhimpur

Number and Name of Thana = 10.1 Bihpuria
