PREFACE

The District Census Handbooks of the 1971 series are being published in three parts divided into two volumes. The first volume consisting of parts 'A' (Village & Town Directory) and 'C' (Primary Census Abstract) has already been brought out. The second volume is part 'C' which presents the census tables of 1971 and the administrative and developmental statistics. It has been divided into three sections. The first section gives a brief resume of the demographic changes that have taken place in the district during the past decades. The second section presents the census tables and also some data based on the Village & Town Directories and obtained from the computer. The third section is a compilation of various administrative and developmental statistics.

The scheme of the present series of the District Census Handbooks followed broadly the pattern of its predecessors of 1961 and 1951. For various reasons, however, the original plan of 1971 could not be adhered to in full and some departures had to be made especially with regard to the first and third sections of this volume. It has not been possible to collect all the administrative statistics as originally planned inspite of our best efforts and we have to prune the list and publish whatever is available. We sincerely regret that the section is incomplete to this extent. In the first section also we had to confine ourselves to a brief review of the demographic changes only in the district, based almost solely on census data and left out the developments in the economic, social and cultural spheres.

It is regretted that the volume could not be brought out earlier. For various reasons printing has been generally slow and halting and some other census publications of the 1971 series have also been held up. But for the sincere efforts made by the printers, M/s. Print & Crafts, this volume also would have been delayed further.

The present volume completes the District Census Handbook of Malda and is the first volume to be published containing Part 'C'.

I am immensely grateful to Shri Bhaskar Ghosh, Director of Census Operations, West Bengal, who had very ably conducted the 1971 census in the state, for allowing me the opportunity of compiling the present series of the District Census Handbooks. I gratefully recall the advice and guidance which I had from him all through.

I am indebted to Dr. B. K. Roy Barman, formerly Deputy Registrar General and Shri N. G. Nag, Assistant Registrar General in the Social Studies Division of the office of the Registrar General, India, for the help and co-operation extended to me in compiling the Handbooks. I also extend my respectful thanks to Shri R. B. Chari, formerly Registrar General, India and Shri P. Padmanabha, the present Registrar General for the kind advice and encouragement all through the work. My thanks are also due to shri K. K. Chakravarti, Assistant Registrar General (Census) for the help extended to me all along for completion of the

Census tables presented in this volume. My colleague in the West Bengal Directorate, Shri Sukumar Sinha, Deputy Direcior helped me with valuable suggestions. I am thankful to him.

I owe much to Shri P. R. Haldar, Tabulation Officer for helping me with a competent first draft of the 'demographic profile'. Shri M N. Sarkar, Investigator and his devoted assistants in the Central Tabulation Unit completed with commendable speed the census tables and checked and rechecked the data presented in the volume. The Printing Section and the District Census Handbook Unit of the Directorate, under the able guidence of Shri D. Sen, Investigator worked tirelessly to bring out the volume. Many other colleagues in the Directorate have worked hard for months on to see through the publication. I shall remain ever grateful to them all.

My thanks are also due to Shri S. Bhattacharyya of Messrs. Print & Crafts and his staff for the excellent printing of the volume.

March, 1979

M. C. DATTA.

MALDA AT A GLANCE

SECTION A

ANALYTICAL REPORTS

Malda—A DEMOGRAPHIC PROFILE

Introduction

Malda is one of the smallest districts of West Bengal in terms of area as well as population. It is also one of the few districts where demographic changes have been slow and almost insignificant through the decades.

The district is inhabited by a population of 1,612,657 of which 827,706 are males and 784,951 are females as per 1971 census. The population is distributed in the rural and urban areas in the ratio of 96 : 4. Not only is the degree of urbanisation or the proportion of urban to total population very low in the district, the small urban population of 68,000 only is also confined to the twin towns of English Bazar (61,335) and Old Malda (6,691). The former is the headquarters of the district administration and the latter an old derelict town which has lent its name to the district.

Malda is the southernmost district of the compact geographical region commonly known as North Bengal. If the entire North Bengal region has been a backward and neglected area, Malda is the most backward of all the districts in the region from all points of view. The district is dependent entirely on agriculture and is without any industrial activity of any importance. Agriculture again had been almost primitive with low productivity inspite of a part of the district being served by the *Ganga* and its tributory, the Mahananda. Production of raw silk and the seasonal cash-crop of mangoes are the only two special features of the economy of the district. Although it is only about 300 kilometers away from Calcutta it was, until recently an isolated and closed district with hardly any link with the southern neighbours across the *Ganga*. It is only with the opening of Farakka barrage in 1972 that a direct road link with the State capital and the central plains has been established. It was no wonder that the economy of the district languished with a lethargic and near-primitive agriculture and the people had been at a low level of subsistence. Urbanisation was inconsequential and insignificant. The growth of the town of English Bazar was due more than anything else to the location of the district headquarters. Trade and Commerce have of course flourished in the town to serve the rural market all around. With the construction of the National and State Highways and other arterial roads since the first five year plan there has been a fairly good development of the road transport system which has resulted in a number of areas of concentration of population especially at the thana or police station headquarters. But the economy has still remained mainly and basically agricultural without any diversification and the few areas of concentration of population have also retained their rural look and character. The low proportion of the urban to the total population over the decades is, in fact, an indicator of the stagnation in the economy of the district.

Growth of Population

The demographic changes which have occurred during the last few decades in the district have to be viewed in the above background. The growth of population has been anything but spectacular in Malda ever since the turn of the present century. This is in sharp contrast with the position in the neighbouring district of West Dinajpur and in districts like Cooch Behar to further north or Nadia or 24-Parganas to the south. As already stated, the district had a small population of 1.61 million only in 1971 which was 31.98% more than the population of 1.22 million a decade back. The rate of decadal growth for the district was fairly impressive and considerably above the growth rate for the State of West Bengal (26.87%). But it

was far below the growth rate recorded by its northern neighbour West Dinajpur (40%). District like Cooch Behar (38·67%) Nadia (30·14%) and 24-Parganas (34.53%) etc. have all registrede higher rate of growth than Malda during the decade. An important feature which is common to these districts is the borders which they have with Bangladesh. In-migration from across the international borders has been an important component of the growth of population in districts like West Dinajpur, Cooch Behar, 24-Parganas and Nadia. But somehow the role of such in-migrants has never been predominant in the case of Malda either in 1961-71 or in the preceding decades. The following statement which shows the decadal percentage variation of population in Malda during the last seven decades since 1901 will be illustrative.

Statement I
Percentage decade variation in Malda, 1901-1971.

Decade	Percentage variation of Population		
	Total	Rural	Urban
1	2	3	4
1901-11	+15.72	+16.07	+ 3.80
1911-21	— 1.77	— 1.69	— 4.81
1921-31	+ 4.99	+ 4.75	+14.44
1931-41	+17.19	+16.61	+38.06
1941-51	+11.05	+10.44	+29.37
1951-61	+30.33	+29.78	+44.44
1961-71	+31.98	+31.89	+33.95

The district started with a fairly high rate of growth (15.72%) in the first decade of the century. Following the general trend in the state, the district registered a negative growth in the next decade 1911-21 which witnessed the epidemic decimating the population in most of the districts. The decline in the population in Malda was, however, of a lesser order than in the state as whole : —1.77% in the former as against—2.9% in the latter. In the next decade there was a perceptible recovery, the rate of growth having again gone up to +4.99% in the district. The upward trend continued in 1931-41 the when growth rate reached a considerably high level of 17.19% partly due to the infamous Bengal famine of 1943 and partly because of some out-migration consequent on the partition of the province of Bengal the rate of growth in the district came down to a relatively low figure of 11.05% only in 1941-51. It shot up abruptly to the high level of 30.33% in the next decade which was in keeping with the upsurge in the population of the State as a whole and in many of its districts during the period. It is during this period that the international borders played a part for the first time in bringing about a basic change in the composition of the population of the district, about 65,000 persons born in Pakistan being counted in the district in the census of 1961. Quantitatively, the number of the in-migrants was not very significant but it was nevertheless the beginning of the process which has continued during the sixties. Another important factor which contributed substantially to the rise in growth rate during the fifties was the return flow of persons who had out-migrated from the district in the earlier decade. The exact nature of quantum of the phenomenon has not been assessed. But there is no denying the fact that it had an important role in pushing up the rate of growth during the decade. The high growth of 1951-61 has been maintained in the last decade. Malda is in fact, the only district in West Bengal besides West Dinajpur and Purulia where the rate of growth in 1961-71 has been higher than in 1951-61.

Urbanisation and growth in urban and rural areas

The district, as already indicated, is almost entirely rural. The degree of urbanisation or the proportion of urban to rural population is very low (4.2%); it is in fact the lowest in the State. English Bazar and Old Malda are the only two urban centres since the district was carved out in 1947. Unlike in other districts no new town has come up during all these decades. This is an indication of the state of the economy of the district which has remained almost entirely dependent on agriculture. The foregoing statement indicates further that the rate of growth in the two urban areas has not also been significantly higher than in the rural areas

except during the thirties. In the last decade the urban growth rate (33.95%) is just 2 per cent points above the rural rate (31.89%). This is an unusual phenomenon and is unique to Malda only.

Of the two towns English Bazár has, however, grown somewhat fast all along. In the first year of the century it had a population of 13,667. The population is 61,335 according to 1971 census—an increase of 348.78% during the last seventy years. Old Malda, on the other hand, has added a bare 78.76% to its number during the same period, the population having gone up from 3,743 in 1901 to 6,691 in 1971. It is only during the last inter-censal decade that Old Malda recorded a higher rate of growth (36.97%) than English Bazar (33.63%). The growth rate in the latter fell short of the rural rate even.

Distribution and growth of population in the police stations

Distribution of population among the police stations is somewhat uneven in the district. Statement II shows the distribution at the police station level. Percentage decade variation during 1961-71 has also been indicated in the statement.

Statement II

Growth of population in police stations of Malda, (1961-71).

	Name of Police station	Population 1961	Population 1971	Percentage Decade variation
1	Harishchandrapur	136,682	177,333	+29.74
2	Kharba	137,441	177,905	+29.44
3	Ratua	151,899	195.161	+28.48
4	Gajole	94,505	143,426	+51.77
5	Bamangola	47,805	66,773	+39.68
6	Habibpur	87,494	113,170	+29.35
7	Malda	52,475	71,077	+35.45
8	English Bazar	131,377	182,996	+39.29
9	Manikchak	98.610	126,715	+28.50
10	Kaliachak	283,635	358,101	+26.25

Population appears to be distributed in a rather uneven manner in Malda. All the Police Stations except two have population of more than a lakh each. In Bamangola the population was 66,773 only whereas in Kaliachak it was 358,201, the second largest for any Police Station in West Bengal. Endowed with a rich fertile alluvial soil and, consequently, a prosperous agriculture, Kaliachak is not only the largest and most populous Police Station in the district, it has also the highest density among the rural Police Stations. On the other hand, it recorded the lowest rate of growth (26 25%) during the last decade—an indication that it has, with the present state of development, reached a point of saturation, both in terms of absolute numbers and density, which inhibits further growth of population by way of in-migration. The Police Station has in fact recorded relatively low growth rates during the last few decades. Besides, Malda and English Bazar, Gajole and Bamangola are the only two Police Stations where the growth rate exceeded the district average during the last inter-censal decade. Gajole, in particular, recorded a tremendous growth of 51.77% which is obviously due to large scale in-migration. Connected by National Highway 34 with Malda on the one hand and with Siliguri (District Darjeeling) on the other, Gajole is conveniently located in the heart of the district. It is also connected with Buniadpur (West Dinajpur) and other important places in and outside the district and is traversed by a network of roads. It has naturally attracted in-migrants in large numbers. Gajole proper has grown into a semi-urban area with a population of over 17,000 and come to be recognised as a potential growth centre.

Density of population

Density of population is relatively low in Malda, being only 434 to the square kilometre as against the State average of 504. Pressure of population on land is nevertheless considerably high especially as land is almost the only resource on which the people of the district depend for their livelihood. The district accounts for 3.64 of the total population of West Bengal whereas it comprises 4.23 per

cent of the land area of the State. It is common knowledge that the entire tract of land north of the *Ganga*, comprising the districts of Malda, West Dinajpur, Jalpaiguri, Cooch Behar, Darjeeling and commonly known as North Bengal, is a region of high growth and low density. Density is, however, not too low in Malda as compared to other districts in the region. Moreover, industrialisation has so long made little headway in the district and urbanisation is at a very low level. The density figures for the district, therefore, practically reflects the density in its rural areas. The situation is somewhat different even in the backward districts like Cooch Behar and West Dinajpur.

The degree of urbanisation is very low in the district, but the density of population in its urban areas is quite high (8,644). It is, in fact, second only to Calcutta (30,276) and far higher than the urban density for the State as a whole (5,628/km^2). In the town of English Bazar the density is as high as 13,247 to the square kilometre. The twin town of Malda is, in comparison, a thinly populated area with 2,065 persons km^2.

Density in the rural areas of the district is 417 only. There is, however, a wide variation in density among the police stations as will be evident from the following statement.

Statement III

District/Police station	Density of population/km^2		
	Total	Rural	Urban
1	2	3	4
Malda Police Stations	434	417	8644
Kharba	483	483	..
Harishchandrapur	457	457	..
Ratua	490	490	..
Gajole	279	279	..
Bamangola	324	324	..
Habibpur	285	285	..
Malda	314	288	2,065
English Bazar	718	486	13,247
Manikchak	401	401	..
Kaliachak	668	668	..

In Gajole, the Police Station with the highest rate of growth, density was at the lowest (279) among the police stations. Interestingly, Kaliachak, the largest police station, had the highest density of 668 persons to the square kilometre. Kaliachak had in fact the highest density for any rural Police Station in North Bengal. Apart from its flourishing agriculture, rearing of silk has also contributed to the prosperity of the police station and the concentration of population in it. Population is relatively thin in Police Stations like Bamangola, Habibpur and Malda. It is not always that a correlation can be established between growth rate and density. But the police stations with low densities in Malda are found to have actually registered high growth rates during the last decade. It is as much due to the relatively low pressure on land—and land is the only resource the people can fall back upon in the region—as to the fortuitious factor of heavy in-migration from across the international borders. In any case these police stations have shown a capacity to absorb substantial additions to their population though their agrarian economy could hardly provide for anything better than a subsistence level of living. It has also to be borne in mind that the combination of low density and high growth rate of population in these areas can hardly be taken to be an indicator of potential for economic growth. In the absence of any infrastructural facilities except for a little of transport and communication the area has little scope for development unless some special efforts at the Governmental level are directed towards it.

Sex ratio

In 1971 Malda had a population of 1,612,657 comprising of 827,706 males and 784,951 females which gives a sex ratio of 948. For the State as a whole the ratio was much lower at 891. Sex ratio or the number of females per 1,000 males in the district has been continuously on the decline ever since the turn of the century. The over-all situation in West Bengal is somewhat different. As in case of Malda and most other districts the ratio was

since 1901 in the State. The downward trend was reversed for the State since 1951 when the ratio coming down at varying pace from decade to decade started climbing upward. It is a coincidence, innocent but interesting, that exactly 13 points have been added to the sex ratio of the State every decade after 1941. From 852 in 1941 the ratio went up to 865 in 1951, to 878 in 1961 and 891 in 1971. The district of Malda, however, has registered a continuous and steady downward trend since 1901.

There is yet another point of contrast between the State and the district. As the statement below will indicate, the sex ratio was above unity in Malda in 1901, being 1,007 per 1,000 males. In 20 years it came down to 991 in 1921 and is sliding downward ever since. The figure for the district has nonetheless been far above the State average in all the census years.

Statement IV

Census year	Number of females per 1,000 males	
	West Bengal	Malda
1	2	3
1901	945	1,007
1911	925	1,004
1921	905	991
1931	890	989
1941	852	883
1951	865	966
1961	878	965
1971	891	948

The changes in the sex ratio have evidently been of a much lower magnitude in Malda as compared to the whole of the state between 1901 and 1971. The reasons are obvious. Unlike in case of the State the district has hardly been affected by any large scale in-migration (except for the settlement of the Shershabadi as in Kaliachak and adjacent areas) which might disturb the ratio unduly. The decline in the ratio in the district is of the same nature as in the country as a whole, caused mainly by natural factors.

The sex ratio of the district has also behaved differently in the rural and urban areas. This will be borne out by the following statement.

Statement V

Sex ratio in rural and urban areas of Malda 1901-71

Census year	Sex Ratio		
	Total	Rural	Urban
1	2	3	4
1901	1,007	1,012	854
1911	1,004	1,008	861
1921	991	996	802
1931	989	995	814
1941	983	988	827
1951	966	971	853
1961	965	969	873
1971	948	951	896

The sex ratio in the rural areas of the district came down continuously from decade to decade since 1901. The urban areas, however, presented an interesting contrast—the ratio was rising steadily in the towns since the turn of the century except for a sharp fall recorded in 1921. From 854 in 1901 the urban sex ratio reached the fairly high figure of 896 in 1971 which is contrary to the trend in the urban areas of the State in general. Between 1901 and 1911 it rose only slightly to reach 861 in 1911. It came down steeply to 802 in 1921 due mainly to the abnormal situation created by the apedemic that decimated the population in this and many other districts. Durning the next decade it recovered a little reaching 814 in 1931 and did never look back again. The figure in 1971 for the towns of the district (896) is above the total sex ratio for the State as a whole (891). This is an index of the nature of the urban growth in the district : growth based essentially on the tertiary sector of the economy, on services and commercial activity. It is also an indication of the recent trend of the settlement of the rural neo-rich in the urban areas.

Age distribution and sex ratio

Sex ratio when related to the age distribution of the population may provide a more meaningful

picture of the demographic situation of a given area. The statement below which gives the age distribution for the State as a whole and for the district of Malda will be instructive.

Statement VI

Distribltion of population by age group : West Bengal and Madras, 1971

Age-Group	Percentage of Total Population	
	West Bengal	Malda
1	2	3
0-14	42.89	47.14
15-19	9.23	9.10
20-24	7.64	6.65
25-29	7.58	6.96
30-39	12.49	12.02
40-49	9.05	8.00
50-59	5.57	4.86
60 +	5.30	5.23
Age not stated	0.15	0.04

The proportion of infants and children (age-group 0-14) in Malda (47.14%) is substantially above the proportion for the State as a whole (42.89%). The proportion in the working age group 15-59 is correspondingly low in the district, being 47.59% only (excluding "Age not stated") which indicates a heavy burden of dependency for the working population. The district, as already emphasized earlier, is almost entirely dependent on agriculture, the growth rate of population has been considerably higher than the State average and although the high growth rate is attributable partly to immigration the rate of natural growth has also been considerably high in the backward district. The high proportion of children and infants in the population is in the circumstances a natural corollary of the steady and steep rise in the population which again may lead to a further rise in the proportion of the young population. In this respect Malda is in the company of districts like Murshidabad, Cooch Behar and West Dinajpur. As in Malda the proportions of the population in the young age-group in these districts are very high, being 47.92, 47.59 and 46.35 percent respectively the other demographic and economic conditions there were also largely similar to Malda's.

We may at this stage have a look at the sex ratios by age-groups which may be of help to appreciate the trend in the ratio and its likely impact on the future growth of population in the district. The sex ratios by age-groups for the State and the district of Malda are shown below.

Statement VII

Sex ratio by age-groups (1971), West Bengal and Malda

Age-group	Sex ratio	
	West Bengal	Malda
1	2	3
0-4	1,019	1,071
5-14	944	938
15-19	848	908
20-24	915	935
25-29	883	1,011
30-39	820	936
40-49	696	797
50-59	786	810
60 +	992	1,084

For the State as a whole the sex ratio is adverse to females for all age-groups except 0-4. The ratio exceeds unity (1,019) in age group 0-4 and comes down steadily and rapidly to 944 in 5-14 and to 848 in 15-19. Marriage being almost universal for girls and that, too, at a younger mean age of about 15, the low ratio of 848 in the young and early child-bearing age group 15-19 may be indicative of high mortality among young mothers. After a short recovery in the age-group 20-24 the ratio comes down steeply to 696 in the late child-bearing age of 40-49. It moves up again until it attains almost parity (992) in the old age 60 plus.

The general pattern of the ratio in Malda follows closely the pattern of the State. But there are significant points of departure also. In the age group 0-4 the ratio exceeds unity quite appreciably (1071) in the district. Unlike in the state, the ratio

is above unity in the age-groups 25-29 and 60 plus also in Malda. The gain in the sex ratio in the old age group 60 plus is almost universal in all districts. So it is in case of 25-29. But significant trends are discernible in the pattern of the sex ratio in Malda. The overall ratio for the total population has no doubt been moving downward in the district. But with the existing highly favourable sex-ratio among infants and not too low ratios in the higher age-groups and the very favourable sex ratio (1011) in the important age group 25-29 the overall sex ratio is likely to improve in the district and the downward trend observed till now may be slowed down, if not reversed, in the coming decades. The likely gain in the sex ratio along with the present age-structure will make for continued natural growth of population in the district inspite of the efforts of the family planning programmes.

Literacy and Education.

Malda is the most backward of all districts in West Bengal from the point of view of education and literacy. Only one in every 5 persons or 20.96% of the population of district (excluding age-group 0-4) was literate in 1971. The level of literacy in the State as a whole is not also too encouraging, 38.86% only of the population being returned as literate in the last census. The dismal picture in Malda is only an index of the inadequacy of the efforts made so far in the field of education in the State as a whole and in the district of Malda in particular. The statement below will immediately point to the extremely slow pace at which literacy has progressed in the hapless district.

Statement VIII

Percentage of literates—West Bengal and Malda, 1901-71

Percentage of literates

Census year	West Bengal			Malda		
	Persons	Males	Females	Persons	Males	Females
1	2	3	4	5	6	7
1901	9.83	17.86	1.21	4.41	8.64	0.24
1911	10.82	19.12	1.69	5.46	10.57	0.39
1921	12.28	20.99	2.48	5.51	10.28	0.70
1931	12.65	20.41	8.75	3.78	6.82	0.72
1941	19.71	29.33	8.29	8.61	14.77	2.48
1951	24.42	34.14	12.74	11.68	18.16	5.04
1961	34.46	46.57	20.27	16.63	25.73	7.08
1971	38.86	49.57	25.56	20.96	29.95	11.25

Two striking points emerge from the statement. The first is that literacy had been at a very low level in the State as well as in the district of Malda until 1941. The rate of growth of literacy was also extremely slow all through. During the first thirty years of the century since 1901 the literacy rate for the State went up by about 3 per cent points only as it crept upward from 9.83% in 1901 to 12.65% in 1931. For Malda the situation was still worse during the period as if to confirm its "Backward" status. From the very poor and nominal rate of 4.41% in 1901 literacy in the district slided backward to 3.78% in 1931. It was only in 1941 that the literacy rate for the State looked up a little and reached the modest level of 19.72%, the decadal increase between 1931 and 1941 being of the order of 7 per cent points. The year 1931 may be treated as a watershed in the growth of literacy in Malda

also. During the decade following the census of 1931 the rate of literacy in the district was more than doubled and reached close to the 10% mark in 1941. The exact percentage was 8.61, a not-too-poor level by the standard of the time. During the last three decades since 1941 again the literacy percentage has doubled both in the State and in Malda. In Malda the increase is actually a little more than 100 per cent. But the relative position of the district as also the absolute percentage figures of literacy for it is disheartening. As set out at the beginning of the section, the district has a poor literacy rate of 20.96% only, the lowest for any district in the State.

The second remarkable feature is that female literacy, which has always been much lower than the literacy among males, has made some impressive progress during the last seven decades in the State as also in this particular district. The male-female differantial in literacy is still considerable. It may still take decades to close down the gap between the two sexes but the rate at which female literacy has progressed is remarkable indeed. For West Bengal literacy rate among females climbed to the fairly impressive level of 25.66% in 1971 from the very low level of 3.75% in 1931. As already indicated, the year 1941 saw the first break-through, though in a minor way, in female literacy and the rate for the State doubled in a span of ten years and reached 8.29% in 1941. The same thing happened in Malda, the female literacy rate crossing the "one per cent" mark for the first time and recording 2.42% in 1941. The rate has gone up further no doubt, but it is still in a distressingly low level of 11.25% only in 1971.

Literacy among urban and rural populations

If the male-female differential in literacy is quite substantial in the district the difference in the level of literacy among the rural and urban population is still more wide. 18·84% of the rural people of Malda were recorded as literate in 1971 as against 67.03% of the urban people. The rural-urban differential among females again is so big that rural females hardly stand any comparison with their urban-sisters. Literacy among women in the villages is still below the 10% mark (it is 9.13%, to be precise) whereas in the towns as much 58.80% of the women are literate. The urban women are not, in fact, far behind urban males which is a measure of the rapid strides taken by the district in the field of women's education at least in its towns. It is at the same time an indication of the backwardness of the district as a whole and of the leeway the district has to make up in this respect. The following statement will illustrate the position.

Statement IX

Literacy among rural and urban population, 1971

Unit		Urban			Urban		
		Persons	Males	Females	Persons	Males	Females
1		2	3	4	5	6	7
West Bengal	..	30.63	42.27	18.05	62.25	68.19	54.11
Malda	..	18.84	27.87	9.13	67.03	74.29	58.80

It is interesting that total urban literacy in the district is considerably higher than the State average (62.25%). This is true not only for total literacy but for female literacy also. If anything, it does bring into focus the extent to which the rural areas of the backward district has been neglected and the lopsided manner of the implementation of the educational programmes.

Literacy being one of the important indicators of the quality of the human resources, the district is apparently at a disadvantage so far as formal education of the people is concerned. It has to be borne in mind, however, that the district has a good stock of traditional skills which include weavers, blacksmiths, handicraftsmen and which may stand it in good stead as the district launches on a programme of rural development.

Having discussed the basic demographic aspects we may turn our attention now to the religious composition of the people and also to a discussion on the weaker sections of the society, namely, the scheduled castes and scheduled tribes.

Religion

As in the State as a whole Hinduism and Islam are the two main and predominant religions in Malda accounting for 99.76% of its total population. Malda is one of the few districts in the State where the proportion of the Muslims is quite substantial and is not far below that of the Hindus. In 1971 the Hindus numbering 695,504 and constituted 56.63% of the population of the district. The Muslims formed 43.13%. The Christians 3,492, Sikhs (136), Jains (191) and Buddhists (51) made up the remaining 0.24% of the population.

From 1961 to 1971 the proportion of the Hindus in the total population went up from 53.64% to 56.63%. Correspondingly the proportion of the followers of Islam came down to 43.13% in 1971 from 46.18% in 1961. The Muslims, no doubt, account for a high proportion of the total population of the district as compared to the State average of 20.46%. But their growth rate in the district during the last decade (23.14%) was much below the growth rate of all Muslims throughout the State. The Hindus, on the other hand, have recorded a rather rapid growth of 39.34% over the same period. The decennial growth rates of the different religious communities in the district are shown in the statement below.

Statement X

Religious groups		Population (1971)	Percentage to total population		Decential growth rate 1961-71 (%)
			1971	1961	
1		2	3	4	5
Hindus	..	913,283	56.63	53.64	39.34
Muslims	..	695,504	43.13	46.18	23.24
Christians	..	3,492	.22	.17	71.18
Sikhs	..	136	.01	Negligible	189.36
Buddhists	..	51	Negligible	Negligible	940.00
Jains	..	191	.01	.01	124.71

Obviously, the Christians and others are an insignificant minority in the district. Among these minor religions the Christians are the only group which is found to have added substantially to their numbers during the last decade.

As already stated, the large growth of the Hindus obviously is in indication of the extent of inmigration from across the Indo-Bangladesh borders. The decennial growth of the Muslims, however, approximate to the natural growth only. Migration into or out of the district appears to have had little effect on the size of the community. The religious composition of the population of the district is thus found to be undergoing a slow change which may, in its turn, bring about some changes in the demographic characteristics of the population in the district.

Scheduled Castes and Scheduled Tribes.

The proportion of Scheduled Castes and Scheduled tribes in a population may be taken to be an indication of its backwardness especially in the eco-

nomic sphere, for the Scheduled castes and scheduled tribes are almost synonymous with economic backwardness. Generally speaking, the higher the population of these weaker sections in a community the more backward the community is. As much as 24.59% or 1 in every 4 persons in Malda belongs to a Scheduled Caste or Tribe. This is approximately equal to the proportion of these backward communities in the total population of the State (25.62%). It is no wonder that Malda is lagging behind most other districts from the point of economic, social or educational development.

265,697 persons or 16.48% of the population of Malda were recorded as members of Scheduled castes in 1971. This is as against a Scheduled caste population of 163,433 in 1961. The decadal growth of the Scheduled Castes, therefore, comes to 62.57% which is about double the general growth rate of 31.98%. In the preceding decade the rate was 19.84 only as against the total growth of 30%. The sudden spurt in the rate of growth of the Scheduled castes in the decade may be attributed mainly to their preponderance among the in-migrants from across the international borders. As we shall elaborate later in the section, most of the major groups among the Scheduled castes (e.g. Namasudra, Chamar, Pod, etc.) recorded tremendous increase in numbers during the decade. Backward as they are economically, socially and culturally, and being tied to the soil for generations, the Scdeduled castes (as also the Scheduled tribes) are all to be found in the rural areas of the district as in most parts of the State. The statement that follows will show that the Scheduled castes are mainly concentrated in some of the Police Stations like Bamangola, Habibpur, Gajole and Malda.

Statement XI

Proportion of Scheduled castes in total population in the Police Stations and their growth rate (1961-71)

population	Percentage of Scheduled Cast in total population (1971)	Percentage decadal growth of Scheduled Castes (1961-71)
1	2	3
Harishchandrapur	12.86	31.73
Kharba	11.93	81.88
Ratua	10.56	61.51
Gajole	29.93	106.07
Bamangola	48.17	94.70
Habibpur	40.70	81.82
Malda	29.19	72.17
English Bazar	11.59	40.54
Manikchak	12.71	44.90
Kaliachak	6.10	33.82

Bamangola and Habibpur are the two Police Stations which are dominated the most by Scheduled castes, their proportions being as much as 48.17% and 40.70% respectively. In Malda and Gajole also their proportions are quite heavy, being 29.19% and 29.93% respectively. It is significant that the decadal growth of the Scheduled castes varied between 72.17% (Malda) and 196.07% (Gajole) in these Police Stations. In fact, in all the Police Stations of the district except Harishchandrapur (31.73%), Kharba (31.88%), and Kaliachak (33.82%), the Scheduled castes registered very high rates of growth the lowest being 40.54% in English Bazar.

Major Scheduled Castes.

The Rajbanshis, Namasudras and Tiyars are the first three important Scheduled castes of the district in terms of mumerical strenght. The castes which have a population of 5,000 or more according to 1971 census are enumerated below. The growth rate of the castes during the last inter-censal decade has also been shown in the statement.

Statement XII

Major scheduled castes of Malda, 1971

	Name of Caste		Population 1971	Population 1961	Growth rate (%) (1961-71)
	1		2	3	4
1	Rajbanshi	..	50,693	38,443	31.87
2	Namasudra	..	24,060	10,448	130.28
3	Tiyar	..	20,221	12,750	58.60
4	Chamar, Charmakar, Muchi, Mochi or Rishi	..	16,447	7,116	131.13
5	Bind	..	14,498	12,290	17.79
6	Jalia Kaibarta	..	11,660	2,633	352.84
7	Pod or Poundra	..	9,634	4,004	140.61
8	Paliya	..	9,241	6,008	53.81
9	Lohar	..	8,871	2,320	282.37
10	Dhopa or Dhobi	..	7,695	4,168	84.62
11	Jhalo Malo or Malo	..	6,878	4,831	42.37
12	Nunia	..	6,738	2,935	129.57
13	Dosadh, or Dusadh (including Dhari or Dharhi)	..	6,281	3,120	101.31
14	Hari	..	6,092	6,346	4.17

The Rajbanshis with a population of 50,693 in 1971 is the largest group and accounts for about a fifth of all scheduled castes in the district. They are more than the combined numerical strength of the next two major castes, namely, the Namasudras (210-60) and Tiyars (20,221). The Rajbanshis were the largest community in 1961 also. But the Tiyars who were the second largest group in 1961 have yielded that position to the Namasudras. They have come to occupy the third position now. The Chamars (16,447), Binds (14498) and Jalia Kaibartas (11,660) are the other three communities whose numbers exceed 10,000 each.

But the important fact that is revealed by the statement is that all the mojor castes except three recorded tremendous increases in their numbers during the last decade. For the Rajbanshis, the most numerous group, the growth rate (31.98%) was very close to that of the total population (31.98%.) The Binds registered a low growth of 17.97% only. The third exceptional group is the Haris whose numbers dwindled by 4.17% for apparently inexplicable reasons. The Jalia Kaibartas and Lohars, on the other hand, added as much as 342.84% and 282.37% to their respective numbers during the decade. Five other communities recorded more than 100% increase each during the period. They are the Namasudras (130.28%), Chamars (131.13%), Pods (140.61%), Nuniyas (129.57%) and Dosadhs (101.31%.) This unusual increase in a period of ten years is hard to explain especially as some of these communities had registered such big growth rates in the preceding decade as well. Under enumeration in the earlier censuses may be one of the possible explanations for the huge growth observed in the 1971 census. Part of the phenomenon may also be attributed to the preponderance of these castes among the in-migrants from beyond the international borders. It has to be noted here that there had been a fairly large scale in-migration into the North Bengal districts during the disturbed period of the early sixties and, again, during

and immediately after the Bangladesh turmoil on the eve of the 1971 census.

Scheduled Tribes—distribution and growth rate

130,715 persons were enumerated as scheduled tribes in Malda in 1971. They constitute 8.11 per cent of the population of the district and account for 5.16 percent of the total scheduled tribes population of the state. As everywhere else in the state, the scheduled tribes of the district are also essentially based in the rural areas, a handful of 57 only residing in a town (namely, English Bazar) .

The scheduled tribes are distributed in all the police stations of the district except Manikchak and Kaliachak. As the statement below will illustrate, the tribals are concentrated mainly in the police stations of Habibpur, Gajole and Bamangola, Incidentally, these are also the areas which have the heaviest concentration of the scheduled castes in the district.

Statement XIII

Distribution of scheduled tribes in police stations, 1971

Police Station	Population of scheduled tribes	Percentage of scheduled tribes in total population
	2	3
Harischandrapur	4,370	2.46
Kharba	7,250	4.08
Ratua	1,535	0.79
Gajole	40,987	28.58
Bamangola	18,109	27.12
Habibpur	42,460	37.52
Malda	12,886	18.13
English Bazar	5,052	1.67
Manikchak	64	.05
Kaliachak	2	0.00

Between them the three police stations of Gajole, Habibpur and Bamangola account for over a lakh or about four fifths of the scheduled tribe population of the district. In the police station of Malda also the scheduled tribes are found in huge numbers (12,886) constituting about a fifth of the total popolation.

There are ten scheduled tribes in all in the district. But the Santals with a population of 90,385 are the predominant Community and account for 69.07% of the total scheduled tribe population. The next important tribe are the Oraons (10,325). The statement below shows the numerical strength of the five major scheduled tribes in the last two censuses and their decadal growth.

Statement XIV

Major scheduled tribes of Malda and their growth (1961-71)

Name of tribe	Population		Decadal growth
	1961	1971	1961-71
1	2	3	4
All tribes ..	..	130,715	31.34
Santal ..	84,207	90,285	7.22
Oraon ..	4,783	10,325	115.87
Kora ..	2,478	8,378	238.10
Munda ..	1,583	5,264	243.38
Malpaharia ..	1,182	4,654	293.74

The five major tribes listed above account for about 90% of the total scheduled tribes population of the district. All of them except the Santals have recorded phenomenal increase in their numbers which appear to be intrguing. While the over-all growth of the scheduled tribes (31.34%) just fell short of the growth rate of the total population of the district (31.98%) the Santals added only 7.22% to their numbers during the last decade. It has to be noted here that the growth rate of the Santals for the State as a whole have also been abnormally low (14.79%) during the decade. Further, some of the other major tribal communities enumerated in West Bengal have, on the other hand, registered very high growth rates which are hard to explain. For example, the Bhumijes grew by 85.59% in the state the Koras by 50.87% and the Mahalis by 67-28%. The Koras of Malda have also recorded more than 200% increase while the growth rate of the Malpahariyas of the district almost touched the 300% mark.

Incomplete or vague returns by the members of the community may perhaps explain the low growth of the Santals to some extent. As regards the other tribes it is possible that they were consciously returning the correct tribe names in 1971. It is also possible that some of these communities had identified themselves as belonging to the tribe that was the strongest and most influential and vocal, i. e. the Santals in the earlier census but have now consciously declared their true identity. The abnormal and enormous growth of these tribes may also be attributed partly to the in-migration which is known to have occurred especially in the early sixties in the region.

There is no reason to believe that the fertility behavour of the scheduled castes or tribes is much different from what it is among the total population either in Malda or in the State. The sex ratios among them are also almost at par with that of the total population in the rural areas. (The scheduled castes and scheduled tribes being mostly confined to the rural areas, the sex ratio of the total rural population is more relevant for comparison). The age distribution among these communities is also of the same pattern as in the total population. Therefore, there is apparently no reason why the rate of natural growth of the scheduled castes or tribes should differ much from what it is in the total population. One can, therefore, reasonably say that migration has been the main factor which brought about the phenomenal growth of some of the tribal communities. But in absence of detailed data on migration communitywise nothing definite can be pronounced.

Literacy among scheduled castes and scheduled tribes.

It is not in the demographic characteristics but in the social, cultural and economic spheres that the scheduled castes and tribes differ materially from the general population. Apart from the various social disabilities, economic poverty and lack of education are the two scourges that have plagued these communities for ages. We may now have a look at the level of education among the scheduled castes and tribes now, leaving aside the economic question for a later section.

Scheduled Castes

The rate of literacy among total population (including age-group 0-4) was 33.20% in the State as a whole in 1971, the same for the scheduled castes was 17.80% only. In Malda the respective figures were 17.61% and 13.49%. As the statement below will indicate, the progress of literacy among the scheduled castes of Malda has been of almost the same order as in the whole of the state.

Statement XV

Percentage of literates among total population and scheduled castes—1961 and 1971.

Unit	Total population		Scheduled Castes	
1	2	3	4	5
	1971	1961	1971	1961
West Bengal	33.20	29.28	17.80	13.58
Malda	17.61	13.79	13.49	10.51

It is also apparent that relatively speaking, the levels of literacy among the scheduled castes and the total population in Malda are not as unduly divergent as in the state as a whole. This goes to confirm the overall backwardness of the district. During the last inter-censal decade the scheduled castes of the district have gained about 3 per cent points in literacy. But the scheduled caste literacy in the district is still about 4 per cent points below the same at the state level. It could not be otherwise, for even total literacy in Malda (17.61%) is, in fact, lower than the literacy amongst all scheduled castes of the State 80% (17.61%)

Scheduled Tribes

Literacy among the scheduled tribes was at a still lower level (8.92%) in 1971 for the state of West Bengal. In Malda the rate (7.58%) was a little lower than the state average. The following statement shows the level of literacy among scheduled tribes sexwise and also the progress made during the last decade.

Statement XVI

Precentage of literatures among scheduled tribes in Malda, 1961 and 1971

Unit	1971						1961					
	Total population			Scheduled Tribes			Total population			Schedulec Tribes		
	Persons	Males	Females	Persons	Males	Females	Persons	Males	Females	Persons	Males	Females
1	2	3	4	5	6	7	8	9	10	11	12	13
West Bengal	33.20	42.81	22.42	9.92	14.49	3.09	29.28	40.08	16.98	6.55	11.90	1.76
Malda	17.61	25.45	9.347	7.58	12.77	2.29	13.79	21.47	5.84	4 17	7.52	0.71

The statement will immediately draw attention of the readers to the appalling state of literacy among the scheduled tribes. Not only is literacy distressingly low it has also progressed at a snail's pace during the last decade. For the state as a whole the rate of literacy has crept up slowly to 8.92% in 1971 from 6.55% in 1961. In Malda the pace has been relatively faster. From 4.17% in 1961 it has gone upto 7.58% in 1971. But a remarkable achievement is observed in the sphere of women's education. In 1971 not even 1 in 100 was literate among the scheduled tribe women. But in 1971 the rate of female literacy has reached 2.29% which testifies to the efforts made in the field in the recent years.

It is also significant that total literacy has moved upward in the district much faster among all women than among all males during the decade 1961. Male literacy went up by 4 per cent points only during the period from 21.47% in 1961 to 25.45% in 1971. But the increase in case of women was quite impressive, the rate having almost doubled during the same period, from 5.84% in 1961 to 8.34% in 1971. The performance of the seventies will show if there has actually been a break-through in female education in the district.

Economic activities

The economy of the district dspends almost

entirely on agriculture. While agriculture is the mainstay of the people, mango and mulberry plantations and the traditional cottage based industries add a bit of variety to the economy. There is, of course, trade and commerce which is dominated mostly by small low income traders and the services to make for a small tertiary sector also. With a small per capita income of Rs. 221.30 only (in 1062-63 at current prices) and little resources besides land, the district is one of poorest in the state and has no large scope for development in the near future. A summary view of the present state of economic activities in the district as revealed by the census of 1971 may be had from the following paragraphs.

Labour participation

Out of a total population of 1.61 million and 0.44 million were returned as workers in the district in 1971. The participation rate (i.e. proportion of workers to total population) for the district was, therefore, 27.09%. The participation rate was a little higher for the state as a whole (27.91%). It was at an appreciably higher level in the preceding census of 1961 both for the State and the district, being 33.16% and 82.79% respectively. The fall in the rate is universal in the country and is believed to be due largely to a change in the concept of a "worker" between the two censuses. But even without going into the details of the definitional changes and the effect thereof, one can reasonably say that the slow growth of employment opportunities relative to the growth of population had also a role to play in pulling down the rate.

It is significant that the rate of participation in the rural areas of the district (27.19%) was somewhat higher than that in the urban areas (24.83). At the State level the situation is just the reverse, the urban participation rate being 30.12% as against the rural rate of 27.19%. In case of Malda the higher rural rate only emphasizes the dominant role of agriculture in the economy. It also indicates that the rate of generation of jobs in the urban areas failed to keep pace with the growth of urban population.

Participation rate among the sexes

As in West Bengal as a whole, participation rate among females in the district is very low. The rate was 3.42% in Malda as against 4.43% in the State. It was again lower in the rural areas than in the towns, being 3.42% and 4.21% respectively. At the state level, however, the participation rate among rural females (4.58%) was higher than among their counterparts in the towns (3.92%).

The participation rates in the urban and rural areas of West Bengal and Malda with sexwise break-up are shown in the following statement.

Statement XVII

Participation rates in Malda and West Bengal, 1971.

		1961			1971		
		Total	Rural	Urban	Total	Rural	Urban
District	Total	32.79	33.03	27.36	27.09	27.19	24.83
Malda	Male	53.37	53.68	46.55	19.54	49.82	53.41
	Female	11.46	11.71	5.38	3.41	3.38	4.21
West	Total	33.16	32.67	34.66	27.91	27.19	30.12
Bengal	Male	53.98	53.47	55.38	48.83	48.48	49.80
	Female	9.43	10.62	5.12	4.43	4.58	3.92

Participation rates in police stations

The rate of participation varies within a narrow range among the police stations of the district as will be seen from the statement below.

Statement XVIII

District/ Police Station	Partipation rate		
	Total	Rural	Urban
Malda	27.09	27.19	24.83
Kharoa	26.53	26.53	—
Ratua	25.71	25.71	—
Harishchandrapur	26.53	26.53	—
Gajole	28.20	28.20	—
Bamangola	28.97	28.97	—
Habibpur	28.82	28.82	—
Malda	29.34	29.79	24.93
English Bazar	27.67	29.11	24.82
Manikchak	27.52	27.52	—
Kaliachak	26.13	26.13	—

The rate reaches the highest, 29.34%, in Police Station Malda. In the rural areas of the police station the rate is as high as 29.79% but it is 24.93% only in its urban areas. Ratua, an entirely rural police station, has the lowest rate of participation (25.71%). It is significant that the proportion of workers to total population is on the high side in the police stations which have considerable concentration of the tribal population as in Gajole (28.20%), Habibpur (28.82), Bamangola (28.79%) and Malda (29.67%). In the prosperous police station of Manikchak also the participation rate (27.52%) is higher than the district average. It has to be noted, however, that the variations between the police stations are hardly of much significance, for all the police stations of the district are almost at the same level of development.

Sectoral distribution of workers

Looking at the distribution of workers in the different sectors of the economy the agricultural sector, comprising of categories I—Cultivator and II—Agricultural Labourer of the National Industrial classification, is found to account for about four-fifths of the total workers in the district. The exact percentage of workers engaged in agriculture was 79.53. The primary sector which consists of Agricultural (Categories I and II), Livestock, Forestry, Fishing etc. (Category III) and Mining Quarrying (Category IV) accounts for 82.07% of total employment. The secondary and tertiary sectors provide the remaining employment, their respective shares being 6.30% and 11.63%. The distribution of workers in the nine industrial categories is shown in the following statement at the district and the police station levels.

Statement XIX

Distribution of workers in industrial catagories as percentage of total workers in Malda, 1971

District/ Police station	Total (T) Rural (R) Urban (U)	Percentage of workers to total population	I Cultivator	II Agricultural labourers	III Livestock forestry fishing	IV Mining and Quarrying	V(a) Household industry	V(b) Other than Household industry	VI Construction	VII Trade and Commerce	VIII Transport Storage and Communications	IX Other services

	U	24.82	1.36	2.29	1.36	.05	3.69	9.44	6.04	25.06	11.31	38.90
Manikchak	Entirely Rural	27.52	43.19	41.00	2.84	.01	4.22	.95	.62	2.64	.48	4.75
Kaliachak		26.13	30.72	39.68	5.50	.02	7.57	3.02	2.24	3.94	2.70	4.66

A total of 436,873 persons were returned as workers in the census of 1971 in the district. The number was 400,729 in 1961. There was, therefore, an absolute increase of about 36,000 only in the working force between the two censuses which worked out to a decadal increase of 9% only. The growth of the working population of the district (31.98%). But what is more important is the shift in the distribution of the workers as between the different sectors of the economy that has occurred during the-ten year period.

Out of a total working population of 436,873 in the district 199,142 or 45.59% were engaged as cultivators (category I) in 1971. Agricultural labourers (category II) numbered 148,279 and accounted for 33.94% of the workers. Agriculture alone thus engaged about 3,4700 or approximately four-fifths of the workers in 1971 as against 257,000 in 1961. The share of the agricultural sector in the total employment has suddenly gone up from 64.25% in 1961 to 79.53 in 1971. This is a very significant change and quite difficult to explain. Not only has agriculture come to occupy a more dominant position the composition of the agricultural sector itself is also found to have undergone a significant change. Whereas the proportion of agricultural labourers to total workers shot up in 1971 to 33.94% from a low figure of 14.41% only in 1961, that of cultivators recorded a fall of 4 per cent points since 1961. This indicates that the proportion of persons owning land and cultivatingit themselves or through hired labourers has come down during the decade in the district while the proportion of those who work on land for wages only has gone up two and half times. In absolute terms, the number of cultivators in 1971 was about the same as in 1961, the respective figures being 199,142 and 199,654. But the agricultural labourers numbered about a lakh more in 1971 than in 1961. It has to be mentioned, however, that an upsurge in the number and proportion of agricultural labourers was observed throughout West Bengal and in most other states of the country in 1971. For the whole of West Bengal the proportion of cultivators has come down from 38.50% in 1961 to 31.97% in 1971 and the percentage of agriculturtural labourers moved up from 15.30 to 26.46 during the same period. The sharp variation in the proportions of agricultural labourers and cultivators has naturally attracted the attention of scholars and administrators everywhere. Attention of land by small and marginal cultivators due to adversity, natural calamity etc., the new entrants in rural labour market joining and swelling the ranks of the agricultural labourers because of lack of employment opportunities in the non-agricultural sector, a short-term increase in demand for agricultural labourers because of modernization of agricultural methods by way of improved seeds, multiple cropping etc., the agrarian movement of the sixties and the consequent conscious attempt on the part of a number of people to call themselves landless labourers are considered to be some of the reasons behind this important change in the rural sector as revealed by the census 1971. To these may be added another important factor, namely, the change in the definition of a worker as adopted in 1971 as also the method of categorisation of workers by labour—time disposition. In the absence of any special study it is difficult to guess what the probable reasons might be for the very sharp changes observed in Malda. It has to be noted, however, that the increase in the absolute number as also the proportion of agricultural labourers has been exceptionally high in Malda and it is one of the highest for any district in the State.

As the primary sector added to its importance the secondary and tertiary sectors suffred a corresponding set-back in the district, the combined share of the two sectors having come down to 17.93% only in 1971 as against 33.92% in 1961. Categorywise Housenold industry, category V(a) has suffered the worst. It returned a total of 13,099 workers only in 1971 which was just about a fourth of the number reported in 1961. The only plausible explanation for such a steep decline of the sector may be that most of the household industry workers, who admittedly work only part-time, were not recognised this time as workers by the district application of the

criteria fixed for "main activity" and labour-time disposition Manufacturing other than household industry, category V(b), however, is seen to have gained in strength as it returned 10,459 workers in 1971 as against 7832 in the preceding census. Categories VI--Construction, VII—Trade and commerce and VIII—Transport etc, have similarly recorded small upward movement in terms of number as well as proportion of workers engaged. But paradoxically again, the share of category IX—Other services has come down to less than a half of what it was in 1961. "Other services" employed only 26,786 workers in 1971 which came to 6.13% of the total workers. The following statement presents a comparative picture of the sectoral distribution of workers in the two census years.

Statement XX

Number and percentage of workers in industrial categories in Mlada, 1961 and 1971

Year	I	II	III	IV	V(a)	V(b)	VI	VII	VIII	X
1961	199,654	57,728	8,220	*	51,326	7,832	2,441	14,225	4,185	55,118
	(49.82)	(14.41)	(2.05)		(12.81)	(1.95)	(0.61)	(3.56)	(1.04)	(13.75)
1971	199,142	148,279	10,926	161	13,099	10,459	3,956	16,447	7,618	26,786
	(45.59)	(33.94)	(2.50)	(.04)	(3.00)	(2.39)	(.91)	(3.76)	(1.74)	(6.13)

The distribution of workers among the sectors in the rural areas is almost the same as in the district as a whole except that the share of the primary sector is a little larger (85.07%) and the secondary and tertiary sectors account for a correspondingly lower percentage of the total employment (5.77% and 9.16% respectively). In the urban areas, on the other hand, the tertiary sector predominates, claiming about three-fourths (or 73.27%, to be precise) of the total workers. In the tertiary sector, again, the services (category IX) occupy a dominant position and account for 37.18% of the total urban employment. The share of category VII Trade and Commerce is 24.89%. The secondary sector is relatively unimportant and accounts for 19.39% only of urban workers. In fact, industrial activity in the district is minimal. In the urban areas also industries do not fare much better and engage only 13.66% of the urban workers. The bulk of non-household industrial workers of the district is of course to be found in the urban areas. The share of non-household industries in total urban employment was 9.46%, the absloute number being 8,860.19 the rural areas of the district non-household industries employ a small number of 1,599 workers only. The position is reversed in case of household industries and the villages account for 12,390 out of 13,099 workers engaged in the sector in the district.

At the police station level the sectoral distribution of workers follows, by and large, the pattern for the district without any appreciable variation.

The economy and infrastructure

Having reviewed the demographic and economic characteristics as revealed by census data we may now have a look at the state of the economy and the future prospects of development in the district.

State of agriculture

It is evident that the economy is dependent almost entirely on agriculture. Moreover, dependence on agriculture is on the increase as revealed by the census of 1971. It has been observed already that the proportion of workers engaged in the agricultural sector has gone up considerably during the

last inter-censal decade from 64.23% to 79.53%. Agriculture is, again, more extensive than intensive. Nearly three-fourths or (74.6%, to be precise) of the total land of the district was under crops in 1971-72. The land use pattern in the district in the year is shown below.

Statement XXI

Category of use	Area (acres)	Percentage of total area
Total geographical area	888,832	100.0
Net area sown	662,875	74.6
Area under irrigation	68,783	7.7
Double cropped area	200,000	22.5
Area under forest	7,366	0.8
Homestead, waste land etc.	218,591	24.6

The ratio of net area sown to total geographical area for Malda is one of the highest in the State for any district and has reached the optimum already leaving little scope for further extension of cultivation. Only 7.7% of the total area or just above 10% of the net area sown has irrigation. Scientific methods are still to make any headway and even with about a fourth of the net sown area under double cropping the district is deficient in rice, the staple food of the people.

Paddy is the principal grown in three broad varieties, namely, *Aus*, *Aman* and *Boro*. The next important crop is wheat. The following statement will indicate that the net sown area has been extending in the district over the years and paddy and wheat are claiming the major share of the new areas brought under the plough.

Statement XXII
Cropping pattern in Malda

Principal crop	Area sown (000 acres)			
	1959-60	1968-69	1959-60	1970-71
1 Paddy :	476	499	529	527
(a) *Aus*	147	179	111	170
(b) *Aman*	302	294	318	325
(c) *Boro*	27	26	28	32
2 Wheat	8	24	26	40
3 Maize	36	9	19	23
4 Pulses (including grains)	189	118	126	126
5 Jute and *mesta*	73	21	60	58
6 Mustard etc.	45	28	26	26

The estimated production of *Aus*, *Aman* and *Boro* paddy in 1973-79 was 60,000, 10,000 and 40,000 tonnes respectively. As already stated, inspite of the substantial addition to the acreage under paddy the district does not produce enough of rice to feed its people and has to depend on imports from outside. Yield of paddy per hectare was 978 kgs. only in the district in 1968-69 which was about 300 kgs. less than the average yield of West Bengal (1,292 kgs.).

Food-grains having gained the status of cash crops in recent years and due to the concerted drive for extension of wheat cultivation in the state wheat his made rapid studies in Malda as in many other districts. The acreage under wheat increased rapidly from 8,000 acres only in 1959-60 to 24,000 acres in 1968-69. It reached as much as 40,000 acres 1970-71. Yield per hectare has also gone up progressively during the period from year to year. In 1968-69 it was 687 kgs. in Malda as against 2,000 kgs. in the State. It has to be mentioned incidentally that the yield of wheat in the district was about 50% higher than the all-India average (1,169 kgs.) in the year.

Jute is another important cash crop of the district, an area of about 58,000 acres being under the crop in 1970-71. The acreage has, of course, come down considerably during the last decade. Jute is not a very successful crop in the district and the quality of the crop is not uniformly good, quality jute being grown in the low-lying lands of police station Gazole only. Kaliachak, Harischandrapur and Kharba are the other areas where jute is grown quite extensively.

Oilseeds including mustard, maize and vegetables are the other main field produce of the district.

Mango orchard

Besides agriculture, mango orchards and mulberry plantation are the two very important features of the economy of Malda. Mangoes, of which *Fazli* is the most well-known and important variety, are

grown almost throughout the district except the area called "*barind*". English Bazar is the largest producer of the fruit followed by Ratua, Harischandrapur, Kaliachak, Malda and Kharba. The acreage under mango and the production in the recent years are shown below.

Statement XXIII

Year	Acrage	Production (000 tonnes)	Utilisation at greed stage (000 tonnes)	Export out of the district (000 tonnes)
1	2	3	4	5
1958	44,000	Not available	Not available	Not available
1968	44,600	82.5	7.5	57.3
1969	45.000	50.5	5.6	37.4
1970	55,000	25.0	1.5	21.0
1971	45,000	50.0	5.0	34.5

The importance of mango in the conomy may be gauzed by the quantum of export to other districts. About 70% or more of the total production are exported out of the district even in the lean years when production falls due to climatic conditions. A good year and a bumper crop naturally bring prosperity to a large section of the population. While the owners of the orchards make money the poor people also benefit, for they have the unwritten right to the windfalls. The fruit also provides about a meal a day to a large number of the poor people during the season.

Mulberry plantation

Mulberry plantation extented over an area of about 12,000 acres in area 1971 which was nearly 90% of the total area under the crop in the state (13,400 acres). It is a unique source of income for the district. The crop provides the base for the sericulture industry in West Bengal. In Malda alone there are about 25,000 families rearing silkworms which feed on mulberry leaves.

Household and non-household industries

Industry plays a very minor role in the economy of Malda and remained almost stagnant during the last decade As the census data discussed earlier showed, an insignificant percentage of 5.39 only of the workers of the district was engaged in "Industries". Household industries employed 2.39% of the workers and non-household industries, 3.00%. There was in fact a sharp decline in the number of workers engaged in industries during the last decade (1961-71) The total of industrial workers came down to 23,000 only in 1971 as against 59,000 in 1961. As already explained, the decline in this as in some other sectors may be ascribed largely to the change in the concept of "worker" in the census of 1971. But it is hardly possible to explain the whole of the decline by this single factor. There has no doubt been an absolute decline in the household industrial activity during the decade which is reflected in the dwindling numbers of industrial workers. This is corroborated to some extent by the estimates of the Bureau of Applied Economics and Statistics, West Bengal. An estimate of the various industrial activities in 1965-66 may be had from the following table which is based on data compiled by the Bureau.

Distributian of industrial units of Malda (1965-66).

Statement XXIV

Sl. No.	Industry graoup	Number of units		
		Non-factory sector	Factory sector	Total
1	Food manufactures	5,580	3	5,583
2	Boverage	130	..	130
3	Textiles	1,430	..	1,430
4	Footwear and other wearing apparel, made-up textile goods, leather and leather products	1,590	..	1,590

Statement XXIV—*contd.*

Sl. No.	Industry group	Number of units		
		Non-factory sector	Factory sector	Total
5	Wood and cork except furniture	1,220	..	1,220
6	Furniture and fixture	20	..	20
7	Paper and paper products, printing, publishing and allied industries	10	..	40
8	Rubber products, chemicals and chemical products	10	..	10
9	Structural clay products	130	1	131
10	Glass and glass products, pottery, earthware and non-metallic mineral products.	300	..	300
11	Basic metal industries, metal products, machinery except transport equipment and technical machinery	810	..	810
12	Electrical machinery, apparatus and appliances	10	..	10
13	Transport equipment	80	..	80
14	Jewellery and related articles	500	..	500
15	Miscellaneous manufacturing industries	2,090	..	2,090
		13,940	4	13,940
	Total number of workers	24040	Not available	Not available

The table shows only four industrial units in the factory sector. The number of units in the non-factory sector and the total of industrial workers as in the bove estimates (which, incidentlly, did not differ much from the 1971 census figures) reveal that industrial activity is mostly on a very small scale, the average employment per unit being less than 2. Household or traditional cottage-borne industries play the prominent role in the scence. Amongst these sericulture ranks the first and is followed by cotton handloom weaving, dehusking of paddy, carpentary, blacksmithy and oil *ghani*. etc. Mango-processing is also an important seasonal activity with about 10 organised units employing nearly 50 persons each for 100-120 days a year.

Infrastructure facilities

Malda is a poor district in more senses than one. It is poor in all resources other than land. Forest resources are practically non-existent being almost in the plantation stage. Livestock is numerous but undeveloped. Irrigation is marginal. Minerals are absent except for minor minerals like sand and river-bed boulders. But above all, infrastructure facilities on which industrialisation depends, are also in a poor state of development. It is no wonder, therefore, that modern industries are almost non-existent in Malda.

The infrastructure facilities as are available in the district are discussed below in brief.

Power

(i) The installed capacity is 4.1 M.W. from two power stations at Old Malda and English Bazar. The district also receives power to the extent of 5 M. W from the Barauni Thermal Power Station under contract with the West Bengal State Electricity Board which is the

only supplier of power. There were 12 sub-stations for supply of electricity. Another sub-station was under construction at Gazole. Per capita consumption of power was 3.7 KWH and industrial consumption, 1.8 KWH in 1971-72. The respective figures for the state in the year were 1,060 KWH and 74.1 KWH. Agriculture is claiming more power for its deep tubewells etc.

The rural electrification programme has extended to 194 villages spread over the police stations of Gazole, Bamangola, Habibpur Harischandrapur and Ratua. The, total demand for power in 1970-71 was 6 MW only. Bnt the supply has been inadequate and unsatisfactory even for this low level of demand. At the end of the decade the position may worson further as the demand is estimated to be 12 M. W. by them.

Transport system

Seven out of ten police stations of the district are covered by railways. The police stations which have no railways are Manikchak, Kharba and Bamangola. With the opening of the rail-cum-road bridge over the Farakka Barrage the district has been connected by direct rail link with Calcutta and movements of goods has become easier. The district is also connected by rail with Siliguri (North Bengal) and Katihar (Bihar), the two important trading centres of the northern region. Railway coverage for the district was 3.4 km. per 100 km^2 of area in 1970-71.

Roads

Malda is served by a faily extensive network of roads which runs for 1,453 km. This gives 403 km of road per 1,000 km^3 area. National Highway 34 which connects Calcutta with Siliguri passes through the district. The length of the Highway within the district is 65 km. There are two State Highways also, one connecting Englishbazar with Manikchak (34 km.) and the other linking Gazole with Buniadpur in West Dinajpur (19 km.). A programme of construction of 74 km. of new village roads was taken up for the fourth plan period (1969-74).

(iv) **Waterways**

The rivers Mahananda, Tangan and Kalindi are navigable during the monsoons. Ferry services across the Ganga at Rajmahal-Dhulian-Khejuriaghat had an important system till the end of the last decade. After the opening of the Farakka barrage link Dhlian-Khejuriaghat ferry has lost much of its importance. The Rajmahal-Manikchak service, however, continues to handle about 5,000 tonnes of goods.

(v) **Communications**

The district was served in 1971 by 224 post offices of all categoreis of which 16 had telegraph facilities. Telephone facilities were provided at 11 places including Old Malda and English Bazar and other important places like Gazole, Harischandrapur etc. Telephones covered 8 out of 10 police stations

(vi) **Medical facilities**

The importance of medical facilities and public health measures in relation to the quality of human resources can hardly be over emphasized. In 1971-72 the district had a total of 512 beds for indoor treatment in its district hospital and 17 primary and subsidiary health centres. There were 18 more health centres without any bed.

(vii) **Educational facilities and technical skill**

It has been the misfortune of the district that it has the lowest rate of literacy in the State Extension of education deserves priority in any plan of development of the district. The number of educational institutions as in 1970-71 are shown below.

Statement XXV

Category of Institution	Number	Enrolment of students
a) Colleges (general)	4	3,150
b) Schools		
i) Higher Seeondary	11	4,150
ii) Multipurpose	25	14,388
iii) High	34	10,585
iv) Junior High	86	8,947
v) Prmary	1,056	104,145
vi) Junior Basic	131	22,145
vii) Pre-primary	2	281

There were 7 technical institutions with a little more than 500 seats of which the break-up is shown below :—

Category	Number	Number of seats
i) Technical instituie for diploma course (English Bazar)	1	120 (L.C.E. 60 L.M.E. 30 L.E.E. 30)
ii) Industrial Training Institute (English Bazar)	1	320
iii) Mahila Silpa Vidyapith (English Bazar)	1	35 (Tailoring 15 weaving 15 Block printing 5)
iv) Training-cum-Production	2	40 (Jute spinning and weaving 40)
v) S. I. S. I. Extensi on Centre	1	10 (Carpentary 5 Blacksmithy 5)
vi) Peddie Silk Reeling Institute	1	6

Besides the above there are two junior teachers training colleges and a B. T. college. The Live Register of the Employment E xchange showed the availability of skilled personnel as in the following table in 1970.

Statement XXVI

Trade	Number of persons registered
Industrial and Supervisory ..	166
Skilled and semi-skilled ..	556
Electrical ..	3,137
Educational ..	10
Domestic ..	4,674
Unskilled ..	375
Others ..	..
Total ..	8,918

(viii) Credit facilities

Apart from loans advanced directly by the Govt. under the State Aid to Industries Act there are branches of the commercial Banks the Co-operative Banks which extend credit facilities by way of working capital to entrepreneurs. The United Bank of India functions as the leading Bank in the district with three branches at Malda, Habibpur and Kaliachak The State Bank of India has branches in

Malda and Harishchandrapur and pay offices at Chanchal, Gazole and Samsi. The District Central Co-operative Bank also functions from its branches at English Bazar, Malda, Harischandrapur and Chanchal. With a paid-up share capital of Rs. 9.5 lakhs the bank plays a leading role in co-operative banking. It advanced a total of about Rs. 250,000 to Industrial Co-operatives during 1967-72, the bulk of the advance Rs. (200,000) going to rice milling. The State Bank of India extended loans to the extent of Rs. 416,000 during 1969-71. The industries benefitted included manufacture of R. C. C. pipes (Rs. 350,000), radio repairing and assembly, and furniture making. Evidently, the banks are yet to come forward in a big way to the aid of industrial expansion in the district.

(ix) **Marketing Centres**

There are about 100 daily and weekly markets *(hats* in the district dealing mostly with agricultural commodities and articles of domestic consumption. English Bazar is the main wholesale and retail market catering to the needs of the entire district for all types of commodities. Chanchal and Samsi and the important markets for jute. Gozole and Harishchandrapur are also coming up as important trading centres.

There is as yet no planed effort for development of an industrial area in the district. A few industrial units which have been established during the sixties and in the first couple of years of the present decade are all due to individual efforts. It is agreed in all quarters that in order to initiate the process of industrialisation in the district it is imperative to develop industrial areas by providing the essential facilities like power, water supply developed plots credit facilities etc., in a planned manner in some selected places which may serve as centres of growth.

Conclusion

With the return of stability in the neighbhuring country and virtual elimination of the disturbing influence of in-migration, the district is, from the deographic point of view, poised for a period of even and stable growth. The effort made for family welfare and control may start giving results in the eighties or near about. The growth of population may, as a result, stabilise at a relatively lower level than in 1971. From the economic point of view the district is yet to achieve a break-through and may continue to suffer from the various disadvantages and disabilities as at present. It will surely take long for the district to raise itself from the present level of poverty and backwardness. The programme of integrated rural development which has been launched appears to be a step in the right direction. and may, if properly implemented, quicken the pace of development in the district.

SECTION-B

Notes:

Appendix I to Table A-I—"Statement Showing 1971 Territorial Units constituting the present set up" has not been produced as there has been no jurisdictional change in the district during 1961-71.

** The population of Ratua Police Station in the district of Malda includes the population of the five tolas of the *mauza* Gobindapur (Thana No. 349 of Katihar Revenue Thana) on the Bihar-West Bengal border. West Bengal claimed these tolas as they had all along been administered as parts of West Bengal. It was decided by the Registrar General that census in these tolas would be taken by the West Bengal authorities without prejudice to the claims of either Government, pending final settlement of the issue between them.

† These are constituents of English Bazar Urban Agglomeration which spread over English Bazar and Malda Police Stations. Consolidated figures of English Bazar Urban Agglomeration are given in the *Annexure* of table A-1.

			1971		4.63	61,335	+15,435	+33.63	32,382	28,953

Notes:

1 Appendix I to Table A-IV "New towns added in 1071 and towns in 1961 declassified in 1971" has not been produced as neither any new town has been added nor any town in 1961 has been declassified in 1971 in the district.

2 Explanatory Notes of Appendix I to table A-IV has not been produced as no new town has been added in 1971 in the district.

3 List A of Appendix I to table A-IV "List of places with a population under 5,000 treated as towns for the first time in 1971" has not been produced as no place in the district has been treated as town in 1971.

4 Appendix II to Table A-IV "Changes in area and population of towns between 1961 and 1971 reason for changes in area" has not been produced as no town in the district has undergone any change in area.

SECTION-C

NON-CENSUS TABLES

LIST OF TABLES ON ADMINISTRATIVE, WELFARE AND DEVELOPMENTAL STATISTICS
MALDA DISTRICT

Sl. No.	Table reference number	Title	
1	1.01	Minimum and maximum temperature by month during 1961-71 at various stations (for which data are available from the Director General of Meterological Survey of India/Director General of Observatories)	
	1.02	Rainfall statistics—district and taluk average in mm. by months and years	
3	2.01	Major events of the decade (1961-70)	N.A.
4	3.102	Length of roads (by nature of materials) as maintained by Public Authorities. (a) P. W. D. and other Govt. Deptts. and (b) Local Bodies	
5	3.103	Major roads, 1970	
6	3.104	Village roads 1970 (for Hilly district and districts under developed from the point of view of transport and communication)	
7	3.106	Polymetric table of distances (in km.) of towns, markets and other important places on the national highway	N.A.
8	3.107	Polymetric table of distances (in km.) of towns, markets and other important places on the district road	N.A.
9	3.108	Bus routes, 1970	N.A.
10	3.110	Circuit Houses / Inspection Bunglow / Travellers Bunglow / Tourist Home / Youth Hostel maintained by P. W. D. Ministry of Tourism and Civil Aviation, Local Bodies etc	
11	3.111	Railway Stations in the District, amenities provided and distance from district and State headquarters (New Railway Stations opened during the decade may be shown by asterisk mark)	N.A.
12	3.201	Sources of irrigation	N. A.
13	3.202	Irrigation projects with particulars of capacity and water spread areas 1970	N.A.
14	3.203	Gross area (by crops) Irrigated (in acres)	N.A.
15	3.206	Towns and Villages connected by electricity	
16	3.401	Banks and their branches, 1970	
17	3.501	Medical and Public Health Institutions	
18	3.501(a)	Hospitals/Dispensaries and related statistics, 1970	
19	3.502	Medical and para-medical personnel	
20	3.504	Public Health Activities (Vaccination, Malaria control, B. C. G.)	
21	3.506	Drinking Water	
22	3.506(a)	Towns/Villages by sources of drinking water as in 1969-70	

LIST OF TABLES ON ADMINISTRATIVE, WELFARE AND DEVELOPMENTAL STATISTICS
MALDA DISTRICT

Sl. No.	Table reference Number	Title	
23	3.506(b)	Details of Implementation of protected water supply schemes during the decade (1961-70)	N.A.
24	3.601	Primary, Secondary, Higher Secondary and other non-Collegiate Educational Institutions together with the strength of pupils	N.A.
25	3.601(a)	Primary, Secondary, Higher Secondary and other non-Collegiate Educational Institutions together with the strength of teachers	N.A.
26	3.602	Collegiate and technical institutions (including Arts, Science, Commerce, Industrial Schools, Fine Arts, Architecture, Agriculture, Music & Dance etc.) together with strength of teachers and students	N.A.
27	3.603	Students appeared and passed in High/Higher School Leaving/Matric Examination	N.A.
28	3.604	Library and Reading Room facilities in the district	N.A.
29	3.706	Newspapers, magazines and periodicals published in the district	
30	3.707	Printing Presses	
31	4.101	Land use pattern as in 1969	N.A.
32	4.102	Single and Double cropped area	N.A.
33	4.103	Area and out-turn of principal crops	
34	4.104	Crop and irrigation	N.A.
35	4.108	Total Rural and Urban population per 100 acres of area under food-grains and net area sown during last five decades	N.A.
36	4.109	Density of cultivators and agricultural labourers per 100 acres of net area sown in 1951, 1961 and 1971	N.A.
37	4.110	Rainfall, area sown and irrigated, density in 1970	N.A.
38	4.114	Agricultural tools and implements (Give local names by the side of English equivalent in each case)	
39	4.201	Livestock and poultry	N.A.
40	4.202	Animal husbandry and poultry farms managed by Govt. Deptts., co-operatives, public institutions (e.g. agricultural university)	N.A.
41	4.204	Veterinary instititions	
42	4.207	Livestock morbidity/mortality by diseases	
43	4.302	Fishing centres, landing places and number of fishing boats according to size as on 31. 3. 1970	N.A.
44	4.401	Forest area by category of control	N.A.
45	4.404	General progress of afforestation (000 Sq. Km.)	N.A.
46	4.405	Forest Coupes	N.A.
47	4.406	Major and minor forest products	N.A.
48	4.501	Mines	N.A.
49	4.503	Plantation, Plant—Tea/Coffee/Rubber/others (specify)	N.A.
50	4.702	Joint stock companies as on 31. 3. 70	
51	4.703	Ware-house and cold storage	N.A.
52	4.704	Hats and markets	

LIST OF TABLES ON ADMINISTRATIVE, WELFARE AND DEVELOPMENTAL STATISTICS
MALDA DISTRICT

Sl. No.	Table reference Number	Title	
53	4.705	Number of shop-cum-residence, business and commercial houses in 1970 (on basis of houselist)	N.A.
54	5.101	Land revenue/Rent Demand and collections	
55	5.102	Land tenure system and reform, 1950-70	N.A.
56	5.103	Consolidation of holdings	N.A.
57	5.104	Survey and settlement operations during the decade (1961-70)	N.A.
58	5.105	Ceiling on holdings	N.A.
59	5.108	Distribution of holdings by size group as on (latest available figures)	N.A.
60	5.303	Number of co-operative societies, numbership, share capital, working capital, loans advanced and loans recovered by co-operative societies	N.A.
61	5.401	Family Planning Centres	
62	5.502	Convicts by nature of crime, age-group and education in 1970	N.A.
63	5.601	Civil Justice	
64	5.701	Machinary for maintenance of law and order—Police Station/Out posts in the district	N.A.
65	5.702	Strength of Police force in the district during 1961-70	N.A.
66	5.703	Jails	N.A.
67	5.901	Excise and Motor spirit tax	N.A.
68	5.902	Receipt of Sales Tax, Entertainment Tax and Stamps	
69	6.101	Local bodies and organs of democratic decentralisation	
70	6.102	Composition of Zilla Parishads/District Board/Panchayat Samity/Gram Panchayat/ Municipality/Municipal Corporation	
71	6.103	Receipt and expenditure of Zilla Parishad/District Board	
72	6.104	Receipt and expenditure of Panchayat Samities yearwise 1961-1970	
73	6.106	Receipt and expenditure of Gram Panchayats	
74	6.202	Income & expenditure of Municipalities yearwise

Excerpts from District Gazetteer, Malda published in 1969

History of the District as an Administrative Unit—In ancient times the district was situated in the country of Pundravardhana. In the fifth century B. C. *Panini* mentions a city named Gaudapura in eastern India, and it would not be unreasonable to identify this Gaudapura with the city of Gauda, the ruins of which are now situated partly in the district of Malda and partly in the district of Rajshahi in East Pakistan. Pundravardhana, and with it Gauda, formed a part of the Maurya Empire. In the Gupta age, Pundravardhana was a *bhukti* or administrative division of the Empire. Sasanka, who ruled over Bengal at the same time at which Harsavardhana flourished, was known as the Lord of Gauda. The kingdom of which Sasanka was the king appears to have disintegrated after his death, because the noted Chinese traveller, Hiuen Tsang, who visited Bengal immediately after his death, noted existence of four kingdoms in Bengal. One of these kingdoms was that of Pundravardhana and the district of Malda, judging from its geographical situation, must have been included in it. It is difficult to trace the history of the district during the years intervening between the death of Sasanka and the rise of Gopala. Gopala was a man of Varendri, a tract of country situated between the Ganges and the Karatoya. During the reign of the Pala kings the city of Gauda attained great splendour. This position of Gauda was maintained during the reign of the Senas. In fact, the Pala and the Sena kings bore the title of Gaudeswara. The fortunes of Gauda were temporarily eclipsed after the conquest of Bengal by Muhammad Bakhtyar Khalji as he made Devkot—the modern Bangarh in the district of West Dinajpur—his headquarters. The fortunes of Gauda were resorted during the reign of Ghiyas-ud-din Iwaz Khalji who re-transferred the capital to Gauda. Gauda continued to be the capital city of Bengal, except for some brief intervals, even during the reign of Muslim Sultans, some of whom have been referred to as Gaudeswara in Bengali poems. The city was plundered by Sher Shah during his war with Mahmud Shah, the last independent Sultan of Bengal, and it never recovered its former glory after he went away. It is true that after Humayun drove out Sher Shah from Bengal, he made Gauda his headquarters for some time, but the city was again abandoned immediately after he left Bengal. The city was re-occupied during the Governorship of Muni'm Khan, but that occupation ended in disaster as a severe epidemic broke out which killed off the residents by the hundreds. Gauda ceased to be a capital from that time, its place being taken first by Tanda, which was situated 15 miles south-east from the towns of Malda, and then by Rajmahal. It is not possible to ascertain the administrative details relating to the district during the Mughal period except the fact that there was a *Quazi* appointed by Akbar stationed at Gauda and that the *Sarkar* of Jinnatabad which formed a major portion of the district was one of the *Sarkars* in the *Subah* of Bengal. It is also known that during the reign of Aurangzeb and the viceroyalty of Shaista Khan, the district of Malda formed a part of the *jagir* of Shaista Khan. A *krori* or revenue official was also stationed at Old Malda. The district was probably controlled from Rajmahal.

The district of Malda came into existence under the British informally only in 1813, although the East India Company obtained the Diwani of the *Subah* of Bengal, Bihar and Orissa from Emperor Shah Alam in 1765. During the intervening period the district had been parcelled out between the districts of Dinajpur (old), Rajshahi, Murshidabad and Purnea. The posting of a Joint Magistrate and Deputy Collector in 1813 was necessitated by the heavy incidence of crimes in certain thanas of the districts of Purnea, Dinajpur and Rajshahi. The thanas which were then placed in charge of the Joint Magistrate and Deputy Collector were

(1) Sibganj, (2) Kaliachak, (3) Bholahat, (4) Gurguribah of the Purnea district, the thanas of (5) Malda and (6) Bamangola of the district of Dinajpur (old), and the thanas of (7) Rohunpur and (8) Chuppye of the district of Rajshahi. The newly formed district was included in the Bhagalpur Division. A treasury was established at Malda in 1332, from which year the separate existence of the district is usually dated but it was only in 1859 that a Magistrate and Collector was placed in charge of the district. In 1875 the district boundaries were notified. 65 villages from Murshidabad and 237 villages from Dinajpur were transferred to this district. In 1879 the district was transferred from the Judgeship of Dinajpur to that of Rajshahi. Up to 1876 the district formed part of the Rajshahi Division of the undivided Province of Bengal and between 1876 and 1905 the district formed part of the Bhagalpur Division which was then in Bengal. In 1905 the district was transferred from Bhagalpur Division to Rajshahi Division on the formation of the Provinces of Eastern Bengal and Bihar. In 1912, when the partition of Bengal was annulled, it was included in the Rajshahi Division till August 1947. On the 15th August, 1947, the fate of the district was undecided, it having not been clearly indicated by Sir Cyril Radcliffe whether the district would go to Pakistan or would remain in India. On the 17th August, 1947, when the details of the award of Sir Cyril Radcliffe were published, it was found that the district would be partitioned, the thanas of Sibganj, Nawabganj, Bholahat, Nachol and Gomostapur being transferred to Pakistan. The district as it exists today came into existence as a result of a notification issued by the Government in September, 1947. A slight modification in the award of Sir Radcliffe was made at one point by the Bagge Tribunal in 1950.

Subdivision and Thanas—The district does not contain any outlying subdivision. The Sadar Subdivision is conterminous with the district. The district is divided into the Police Stations of (1) Englishbazar, (2) Kaliachak, (3) Malda, (4) Habibpur, (5) Ratua, (6) Manikchak, (7) Kharba, (8) Harishchandrapur, (9) Gajol and (10) Bamangola.

Places of interest in the district : excerpts from the District Gazetteer, 1969

English Bazar or Malda—It is the headquarters town of the district. The name English Bazar is derived from its old name of Englezabad. The first factory of the East India Company was built at the town of Old Malda in 1680 A.D. In December that year 15 *bighas* of land was purchased on the other side of the river, at a distance of about 2 miles (3.2 km.) from the town of Old Malda, from the local zemindar, Raja Rai Chowdhury for three hundred rupees. The plot of land was situated by the river Mahananda in the village of Mucdampore. A new factory was built on this plot of land. This new factory became the principal factory in the course of time and the settlement that sprang round it was given the name Englezabad by the English themselves. The town of English Bazar is now commonly known as Malda and the real town of Malda is now known as Old Malda. In 1771, Mr. Thomas Henchman who was the Commercial Resident at Malda erected in that fort. Portions of the town near the factory are known by names such as *Lakrikhana* (wood-yard), *Murgikhana* (fowl-yard) and similar names showing the original use to which the land was put.

Being the headquarters town of the district, it contains the District Judge's Court, the offices of the representatives of the various departments in the district and the Jail. A number of the houses in the town was built by the bricks taken from the ruins of Gauda and some of them are faced with curved stone contained from the same source. The town of English Bazar was constituted into a Municipality in 1889. The population acoording to the Census of 1961 was 45,900. There is an embankment along the bank of the Mahananda to prevent the flooding of the Town.

Gauda—The ruins of the city of Gauda are situated on an old channel of the Ganges in 24.52′ N. and 88.10′.E., miles (16·1 kms) south-west of English Bazar from which it is reached by a macadamised road. Gauda was the capital of Bengal for several centuries. A Gaudapura has been mentioned by *Panini*. The products of Gauda have been mentioned in the *Arthasastra* of Kautilya. The country of Gauda was known to the author of *Kamasutra*. Gauda first attained eminence as a city during the reign of the Pala Emperors of Bengal. From the time of Devapala and possibly from that of his father, Dharmapala, the Pala Emperors were known by the title of Gaudeswara. The city of Gauda might have been the Gangia Regia mentioned by Ptolemy, as it is known that in ancient times the city of Gauda was on the river Ganges.

During the reign of Lakshmanasena, Gauda came also to be known by the alternative name Lakshmanavati or Lakhnawati. Gauda was the capital of Bengal during the reign of Sultan Ghiyasud-din Iwas Khalji in 1220 A. D. In the reign of Shams-ud-din Ilyas Shah the capital was no longer at Gauda but at Pandua. Sultan Jalal-ud-din, the son of Raja Ganesh is supposed to have re-transferred the capital to Gauda. Ala-ud-din Husain Shah made Ekdata the capital for some time but Gauda appears to have again become the capital of Bengal as we find Sher Shah sacking the capital city of Gauda during the reign of Sultan Ghiyas-ud-din Mahmud. Sher Shah not only plundered the city but also is supposed to have set fire to it. During the reign of the Karrahi Sultans, the capital appears to have been shifted to Tanda. Muni'm Khan, Akbar's General, attempted to revive the city by staying in it with his forces but the damp unhealthy old buildings of the long deserted city brought about an epidemic of which his officers and men died in hundreds. Humayun during his short occupation of the city of Gauda had renamed it Jinnatabad or the heavenly city.

The ruins of Gauda as are now extant are those which have till now withstood the ravages of time and the systematic spoliation over a number of years not only by priyate persons but even by the State. It appears from the Fifth Report that not only did the Nawabs of Murshidabad take away bricks of Gauda but they charged the zemindars the cost of carriage of the bricks. According to grant, this impost or *abwab* amounted to eight thousand rupees a year. The ruins of Gauda went on suffering depredations, and even after the coming of the British, the undertakers in Calcutta used to bring down stones from the ruins of Gauda for ornamenting graves in Calcutta. The latest descriptions of the ruins of Gauda are those to be found in the book "Memoirs of Gaur and Pandua" by Khan Sahib M. 'Abid' Ali Khan, edited and revised by H. E. Stapleton in 1930. Descriptions of some of the old structures etc. amidst the ruins of Gauda are reproduced below from that book. For a complete description of the ruins, the reader is referred to that book.

"The Fortifications of Gaur.—The city of Gaur was completely surrounded by a high earthen rampart, the top of the wall or embankment being covered with buildings. There were innumerable buildings within the town, which commanded a magnificent view of the Ganges on which it stood. On the eastern side there was a double embankment flanked by a deep moat about 150 feet in breadth. The principal street ran from north to south. The western part of the town was open, the Ganges being counted sufficient to prevent any inroad of the enemy from that side. There were openings in the north and south embankments for the egress and ingress of the citizens."

THE *Bardwari*, OR GREAT *Sona* (GOLDEN) Mosque, AT RAMKELI

["Erected by Sultan Nasrat Shah in 932 A. H. (1526 A.D.).] "This mosque is a massive rectangular building of brick, faced with stone. 168 feet by 76 feet, with turrets at the corners. It is the largest of all the ancient monuments in Gaur. Immediately in front, to the east, is a courtyard 200 feet square, with arched gateways each $38\frac{1}{2}$ feet by $13\frac{1}{2}$ feet—in the middle of the three sides. The eastern Entrance Gate has been carefully resorted...Inside the mosque are three long aisles divided by massive stone pillars with a corridor running along the whole length of the building. In front are eleven arched openings, each measuring five feet eleven inches in breadth. There are other openings at the north and south ends. The building was roofed by forty-four small hemispherical domes; of these eleven domes of the corridor still exist and were repaired under the direction of Lord Curzon. There are few carvings left. As is clear from the following inscription, it was built by Sultan Nasrat Shah in 932 A. H. (1526 A. D.). In Francklin's time the inscription appears to have been in its proper place, but it has now disappeared. The Tughra letters were about nine inches in length. As Cunningham notes, the vacant panel over the middle doorway from which the stone slab containing the inscription has been removed measures five feet two inches in length by two feet one inch in breadth.

"The following is a translation of the inscription recorded by Francklin :—'The Prophet (on whom be the blessing of Allah and peace) has said : "He who builds a mosque, for him Almighty Allah will provide a house in Paradise". This *Jami Mosque* was erected by the great and illustrious Sultan, son of the Sultan, Nasirudduniya waddin Abul Muzaffar Nasrat Shah Sultan, son of Husain Shah Sultan, son of Saiyid Ashraf al-Husaini-May Allah perpetuate his kingdom and rule, and elevate his power and dignity – in the year 932' (A. D. 1526). "Origin of the name *'Sona Masjid'*—Cunnigham mentions that Francklin was much puzzled over the popular name of *Sona Masjid* and started a strange theory that as it bears no marks whatever of gold, its name must have originated from the bulkiness of the materials used and the expense of its erection. Local people, however, do not call bulky things golden, but name them after the real or supposed amount of the cost, as in the case of the Eklakhi Mausoleum of Pandua, the Naulakhi Palace at Lahore, etc. The fact is that the domes were actually gilded and so

much of the surface was ornamented in this way that under the rays of the sun or moon it looked like a mosque built entirely of gold hence the name *Sona Masjid*. It is true that no gilding is now visible, but there is a universal tradition amongst the people to this effect, and we know that the *Chhoti Sona Masjid* at Firuzpur ...must have received its name for the same reason, as Creighton remarks that 'the remains of gilding upon it is still visible and may account for the epithet of Golden given to, this and the former edifice'. Some gilding in fact still re-mained on the Small Golden Mosque as late as 1879 when Gen. Cunningham made his tour.

THE FIRUZ OR Firozah, MINAR

[The Tower of Firuz Shah,
or the 'Turquoise Tower'.]

This Minar is about a mile to the south of the *Baradwari* Mosque and outside the fort. The tower has no inscription to record the date of its erection; but Francklin found a fragment of an inscribed stone at Guamalti bearing the name of a king Saifuddin which, he seems to have believed, was originally attached to this tower. In this he was supported by Cunningham, owing to the fact that the size of the lettering as given by Francklin agrees with the height of the panel above the door of the Minar : but Cunningham identified the builder of the tower with Saifuddin Hamzah Shah (1412 A.D.) instead of with Saifuddin Firuz Shah (1486 A.D.). Fergusson, on architectural grounds, also preferred an earlier date than the end of the 15th century. In the neighbourhood, the tower is known by the name of *'Pir Asa Mandir'* and *'Cheragdani'*, the former name being thought by Cunningham to be a corruption of Firozah, and that the name simply indicates that it was originally faced by blue tiles. Some say it was built for the purpose of calling the *Azan* for prayers, while others consider it was a watch-tower. To the writer it appears to be a pillar of Victory, like the Qutub Minar of Delhi and similar towers at Koil, Daulatabad and elsewhere.

"**Description**—The tower is about 84 feet high and 62 feet in circumference. There is a spiral staircase of 73 steps leading up to the top chamber. Judging by old sketches and photographs, one would suppose that the top chamber of the tower was originally roofed with a dome. Francklin, while visiting Gaur in 1810, saw a broken dome. Daniells' illustration of this tower (drawn in 1795 A.D.) as well as Creighton's very beautiful coloured drawing also indicate that the tower had a cupola. When, however, the repairs were carried out a few years ago the existence of the dome appeared to the Archaeological authorities too doubtful to warrant restoration, and the top was finished off with a flat roof ".

"The tower is a polygon of twelve sides for three-fifths of its height and circular for the remaining two-fifths. It is supposed that the basement of the tower was originally faced with polished stones in the form of steps all round; but considering that the rough stonework at the base was originally below the ground and that the tower was built on a hillock, the Archaeological Department suggested strengthening the base with earthwork and turfing it over, so that it might look like a mound and this suggestion was carried out in 1911....

Tradition has it that when the tower was completed, the king went to see it. The mason in charge of the work boastingly declared that he could have built a much higher tower than that.

'The King ; 'Why then did you not do so ?'

"The Mason : 'I could not find sufficient materials.'

'The King : 'Why did you not ask for them ?'
'As the mason made no reply, the king in a paryxmso of rage ordered him to be thrown down from the top of the tower which was immediately done ; and thus the mason lost his life. On descending from the tower the Sultan ordered his favourite peon Hinga to go instantly to Morgaon. The Peon dared not ask the King the object of his errand to Morgaon—so furious was the royal face. On reaching Morgaon he was deeply meditating as to why he had been sent there, and while moving here and there in an agita-

ted mood he met with a Brahmin youth named Sanatan. This lad he accosted, saying the Sultan had sent him there, but with what object he did not know as the Sultan had not informed him nor had he had the hardihood to ask the Sultan. Sanatan heard from Hinga everything that had transpired the before Hinga's departure from the royal presence and forthwith came to the conclusion that, under he circumstances which led to the sending of Hinga to Morgaon, possibly the Sultan had in mind the engaging of skilled masons who abounded in those quarters. Following this hint, Hinga took masons from Morgaon and presented himself to the King, who, by this time, was cool-headed enough to wonder how Hinga could know his purpose, seeing that nothing had been told him. On being asked by the Sultan to explain matters, Hinga disclosed the clue given him by Sanatan, whereupon the Sultan praised Sanatan and made him an officer of the Court at Gaur. With the help of the masons brought by Hinga the Sultan improved the tower still further."

THE *Qadam Rasul*, OR FOOT-PRINT OF THE PROPHET

[Date of construction of the building 937 A.H. (1531 A.D.) Builder's name Sultan Nasrat Shah]

"This relic is contained in a one domed square building, situated within the enclosoure of the Fort to the east of the Palace. The total dimensions are 68 feet 3 inches by 49 feet 10 inches, the main chamber being 25 feet by 15 feet and the walls 5 feet thick. There are verandahs on three sides, 9 feet wide. 'The front of mosque is incorrectly given with a straight parapet in Creighton's Plate No. XI, whereas it is slightly curved in the Bengali fashion, as may be seen in Ravenshaw's photograph, plate No. XII. In front there are three arched openings supported on massive stone pillars. The walls are of brick, very highly ornamented, the whole face being divided into panels by bands of moulding .... At each corner there is an octagonal of tower 1 foot 5 inches face. This is crowned by a single stone pillar or minaret, whose diameter is only 1 foot 5 inches, equal to one face of the tower' (Cunningham.....). The building is after the later Muhammadan style. It was erected by Sultan Nasrat Shah, the son of Sultan Husain Shah, in 937 A. H. (1513 A. D.)..."

"*The Foot-print of the Prophet.*—Inside the building under the dome, there is a small carved pedestal of black marble, intended to receive a stone representation of the foot-print of the Prophet Muhammad. This latter was formerly at Pandua in the *Chilla Khana** of Shah Jalaluddin Tabrizi. It was removed by Husain Shah to Gaur in a beautiful wooden box-table, formerly inlaid with good and silver work, which is still preserved in this building.

"During the reign of Nawab Sirajuddaula the foot-print of the prophet was carried off to Murshidabad, but was restored to its pl ce by Mir Ja'far. It is now in the custody of two brothers, Zinnat *Mulla* and Faraz *Mulla* of Mahdipur. They keep it in their house for safety, and when any visitor comes, they put it in its proper place inside the building. The reason is said to be that the foot print was once stolen but was subsequently recovered by the police.

"It is said that the foot-print of the Prophet was first brought by a Saint called Makhdum Jahangasht from Arabia. He brought also the *Jhanda* (heraldic device mounted on a staff) which is still preserved in the shrine of Hazrat Shah Jalal at Pandua.

"*The Mausoleum of Fath Khan.*—This is inside the enclosure of the *Qadam Rasul* and is a plain builing shaped like a thatched shed.** Fath Khan was the son of Dilir Khan. A tradition regarding him is to the following effect :—

"The Emperor Aurangzib, suspecting that the

* A place of seclusion where a Saint generally passes forty days in meditation.

** The room is 23 feet 9 inches by 13 feet, and the outer dimensions of the building are 30 feet 8 inches by 21 feet 5 inches.

local Saint Shah Ni'matullah was advising Sultan Shuja' to wage war against him, sent an officer called Dilir Khan to Gaur to cut his head off. The Saint, 'however, had not given such advice, nor had he ever intended to do so. When Dilir Khan arrived at Gaur with his two sons, one of them (Fath Khan) vomited blood and died on the spot. This so alarmed Dilir Khan that he only paid his respects to the Saint. On the matter being reported to Aurangzib, the Emperor thereafter trusted the Saint."

"TAMALTOLA AT RAMKELI"

"The small village called Ramkeli which lies midway between the *Baradwari Masjid* and the Piyasbari Bungalow, deserves a visit from any one who halts at the bungalow or is making a tour round the ancient buildings of Gaur that are to be found in the vicinity. It was here that Chaitanya the great religious reformer of Bengal, arrived in the month of *Jelh* (June) on his way to Brindaban during the reign of Sultan Huasain Shah, and halted for a few days at a place in the village now famous as Tamaltola. The *tamal* tree under which he sat is still in existence, between four *kelika-damba* trees, and it is said that this was spot at which not only did the Sultan's Brahmin Ministers, Rup and Sanatan, become Chaitanya's disciples, but Sultan Husain himself had an interview with the Master.

"The trees are now surrounded by a raised platform (*chabutra*), and on this an inscribed tablet has recently (1929) been erected showing Chaitanya sitting in meditation. There is also a footprint in stone of the Master's feet. Besides, the larger N × S tank (about 800 feet by 300 feet) called Rup-Sagar ....., there are also four small tanks to the north and south of the *chabutra* which are called by the names of *Syama Kunda, Radha Kunda, Lalita Kunda* and *Bisakha Kunda*—it is said after the names of similar tanks at Brindaban. Local tradition states that these four tanks at Tamaltola were excavated by Jiv Goswami, the nephew of Rup and Sanatan."

"THE GREAT SAGAR DIGHI"

"This enormous tank lies about six miles south-west of English Bazar on the north of the road leading to the *Ganga Snan* or bathing *ghat* on the Bhagirathi—the former bed of the Ganges at Sadullahpur, and it is nearly one mile long by half a mile broad ; the actual water measures 1,600 yards by 800 yards. The length is from north to south, proving its Hindu origin. It had six masonry *ghats* or landing places, each 60 yards in breadth, four of which faced each other on the east and west banks, while there was also one at each of the north and south ends. These are now only distinguished by the mass of bricks and stones accumulated over their sites and by the more gradual slope of the bank towards the water's edge. This great work is said to have been commenced in the reign of Lakhan Sen about the middle of the 12th century A. D.* It is now full of weeds, but is still a beautiful sight ; while the water is pure and sweet up to the present day."

Old Malda—The municipal town situated on the left bank of the Mahananda at its confluence with the Kalindri. Population of the town was 4,885 in 1961. Old Malda was the most important town in the district prior to the coming of the British in 1680. With the establishment of the town of English Bazar the importance of the town of Old Malda began to wane, and by the time the district of Malda came into existence the decline had almost become complete. The new town of English Bazar has not only deprived the town of Old Malda of its importance but has also usurped its name, English Bazar being now known popularly as Malda, and it is to differentiate the old town of Malda from this new Malda that it is now referred to as Old Malda.

Old Malda being a town of some antiquity cantains some buildings erected long ago. The most important of such buildings is the Jami Mosque. It is "a comparatively modern-looking building, built partly of carved brick and partly of stone ; but if it is the *Jami Masjid* referred to in the ins-

* *Vide* Ravenshaw's *Gaur* p. 6.

cription now ever Shah Gada's shrine, it may go back to at least the time of the Husaini Kings. The mosque is 72 feet long by 27 feet wide, and it has two domes and one big arched vault. The two side chambers are 16 feet square and the central hall is 22 feet by 18 feet. There are eight minarets at its corners and it has a gateway in front. From the inscription over the doorway it would seem that the mosque was built (or repaired) in Akbar's time in 1004 A. H. (1596 A. D.). The reading and translation of the inscription* are as follows :

> "This place of worship became known in the world and was called in India by the name of Ka'aba. As it was the second Ka'aba, the date was disclosed from the invisible world (by the sentence) *Baitullah al-haram Ma'sum.*'**

> The numerical (abjad) values of the individual letters of this phrase total 1004 which gives the *Hijra* year (or 1596 A. D).

> "There are stone lintels at the entrance gate of this mosque evidently taken from Hindu buildings at Pandua or Gaur—which are finely carved in a very similar fashion to a stone lintel in the Calcutta Museum.

> "The arrangements that formerly existed for supplying water for ablution are' also noteworthy. After water was drawn in buckets from the well in the compound it was poured into a reservoir just to the north of the well. This reservoir had 5 copper spouts on the northern side-possibly with taps or plugs—by which water could be supplied at will to the Faithful before *Namaz.*

> "On a bastion in the S. W. corner of the mosque courtyard there is a building (with the remains of a flight of stone steps leading up to it from outside) which is said to have been formerly used as a *Madrasah* : and possibly there was a corresponding room at the N. W. corner as well. Behind these to the west of the mosque are two other enclosures which were used as graveyards. There are about fifty graves altogether. It is said that the graves of the male members of the builder's family are on the north-west side and these of the women members on the south-west side."

The next important structure which merits visit is the tower at Nimasarai. This tower stands at the confluence of the Kalindri and the Mahananda rivers, on the opposite side of the latter to Old Malda. The upper portion of the tower is no longer in existence. The lower portion is still standing and it is studded on the outside with stone projections resembling elephant's tusks.

The *Phuti Masjid* derives its name from the cracks it developed during an earthquak. It was constructed by one Khan Muazzan Ulugh Sher Khan in the year 900 A. H. (1495 A. D.)

Pandua—It is situated at a distance of 11 miles (17.7 km.) from English Bazar on the road to Balurghat. It was for some time the capital of Bengal during the reign of Muslim Sultans. It was also known as Firuzbad at that time. There are extensive ruins in and aronnd Pandua.

ANTIQUITIES OF PANDUA

"Of the ramains of old buildings, tanks, etc., at Pandua, the following are the most important and in the best state of preservation :-

1. The Bari Dargah
OR SHRINE OF SHAH JALAL
A.—Description of the Buildings

"The Bari Dargah consists of the *Jami Masjid* (in the northern part of whieh is the original *Chilla Khana* of the Saint) and other buildings dedicated to the memory of Hazrat Shah Jalal Tabrizi, who was possible also the patron Saint of Sylhet. The original shrine at Pandua may have been erected by Sultan 'Alauddin Ali Shah at the instance of

* Text of inscription not reproduced—*Editor.*
** The saved and protected House of *Allah.*

the Saint in 1342 A.D.....as the retangular pillars of the mosque are of a singularly severe character and—unlike what is seen in other buildings at Pandua, *e.g.*, the Adina Mosque—all use of materials from Hindu temples seems to have been avoided in the original building.

"The actual compound containing the buildings is situated 200 or 300 yards away from the main Devkot road, but the existence of a *Salami Darwazah* on this road points to the possibility of other buildings having formerly existed on either side of the narrow path that runs in a south-easterly direction from the *Salami Darwazah* to the present main compound.

"On entering the compound through a small gateway, an isolated building, containing the grave of Chand Khan (who erected the *Bhandar Khana* .. ..) with those of his wife and son, is seen in the further south-east corner. Opposite to Chand Khan's tomb is a short passage leading into the inner compound, and on the north side of this passage is the stone lattice work of which an illustration is given in ... .. On emerging from the passage, the *Jami Masjid* is seen in front, with the *Lakhan Seni Dalan* immediately to the left on the northern bank of a small tank. To the right lies Haji Ibrahim's tomb, and the *Bhandar Khana* (which includes the Saint's second *Chilla Khana* at the western end), while the *Tannar Khana* is round the corner to the north-east, immediately to the east of the *Bhandar Khana.*"

"B—The Jami' Masjid '

" .....the original mosque is said to have been erected by Sultan 'Alauddin' Ali Shah in 1342 A.D. on the spot where Hazrat Shah Jalal used to sit for meditation. The Saint's seat was formerly enclosed with silver railings. The mosque was repaired in 1075 A. H. (1664 A. D.) by Shah Nimatullah of Firuzpur, Gaur .. ..The Jhanda (heraldic device in copper) of Makhdum Jahaniyan Jahangasht ('World Roamer'), as well as an ancient banner are still preserved in this building.

"C—*The Bhandar Khana* **or Store House**"

"This building was erected by Chand Khan in 1084 A, H. (1673 A. D.), and appears to be only a continuation eastwards of an older building that contained the second *astanah* (place of meditation) of Shah Jalal. The local story as to why two *astanahs* were provided is that when his *Pir*, Shaikh Shihabuddin Suhrawardi, visited Pandua. Shah Jalal made him sit on his own seat inside the mosque, and that after the *Pir* left, the Saint had another astanah erected a short distance to the north-east as he did not feel it possible again to use the seat that had been occupied by his preceptor. The entire building (including the *astanah* room to the west) is 62 feet 4 inches long, 30 feet 6 inches wide and 15 feet 10 inches high....."

F—*The Salami Darwazah*, **or Entrance Gate**

"This gateway stands on the right hand side of the main road. The gate proper is 22 feet long and 7 feet 9 inches wide. In front of this is a platform where, it is said, the Saint used to sit and perform his devotions. This gateway is built of brick and stone. The roof of the gate has recently been rebuilt in a wrong way by the *daroga* of the shrine and thus the flat roof is now changed into a hut-shaped one. *Allah, Shah Jalal* is written in Arabic characters on the stone lintel of the gate. "Close by, to the south of this gate, is a very old *nim* tree. Rumour goes that it has grown out of a *dantwan* (twig) with which the Saint cleansed his teeth."

5. THE ADINA MOSQUE

"This celebrated mosque was built by Sikandar Shah, between 766 and 776 A.H. (1364—1374 A.D.) Though partly in ruins, it is the most remarkable existing example of Muslim architecture of that period. It is a quadrangular building consisting of cloisters, which surround a central area of the same form. It extends $507\frac{1}{2}$ feet from north to south and $285\frac{1}{2}$ feet from east to west. On the east side, through which the building is entered by an insignificant door, the cloisters are 38 feet wide. and have 3 aisles. The total space is subdivided by means of transverse brick walls and stone pillars into 108 squares, each of which was once covered with a small dome. The northern and southern sides are

constructed on the same pattern, but, being shorter, had only 39 and 51 domes respectively in each. The western range of cloisters, being 64 feet in breadth, had 5 (instead of 3) aisles. but as the centre is occupied by the Nave of the mosque the number of domes on this side was only the same as that of the eastern cloister. *viz.*, 108. The number of domes covering the cloisters was therefore 306 in all. The height of all these cloisters was about 20 feet, including a broad ornamented cornice. Towards the quadrangle they opened inwards with arches, which corresponded to the squares.* On the outside to the north east, and south, there are many small windows. highly decorated with carved tiles disposed in arches. The western wall except for four small doors, and a window high up in the Central Hall, is devoid of openings, but inside there are the usual niches towards which the worshippers turned their faces when at prayer. Many of these are polished and highly carved. In the southern wing of the western cloister where the common people worshipped, the niches correspond to the 18 rows of arches which form the cloisters. The northern wing of the same cloister only differs in so far as it contains, next to the Central Hall, a raised platform called the *Badshahka-Takht,* which will be described later. This is supported upon thick columns about eight feet high. The adjacent wall contains three niches and two doors, which are minutely carved and ornamented with passages from the *Quran.* These doors communicate directly with a room on the same level called by the name of Sikandar's Chamber. This is 42 feet square and was formerly covered by nine domes. The outer front of the west side, though rendered irregular by the projection of Sikandar's Chamber, is the best preserved portion of the building, and is highly ornamented. The western wall, up to a height of 11 feet is of stone, but above this is brickwork subdivided into minute sections and most elaborately carved. The doors on this side, which are of stone, are the parts which have been executed in the best taste."

* These cloisters have nearly all fallen down and only fases of the dowble row of columns and portions of the inside are standing taday.

General Cunningnam's remarks on the absence of any Entrance Gateway to the Adina Mosque

"The most remarkable feature about this great masjid is the total absence of any entrance gateway. There are two small doors in the back wall, but these are mere posterns or private entrances for the convenience of the King and the *Mullahs,* There is also a small arched opening in the middle of the east side, which was no doubt intended for public use; but this is a simple doorway or passage through the walls, unmarked by any projecting wings or rising battlements. The real public entrance I believe to have been at the south-east corner of the cloisters, where the three archways at the eastern end of the south cloisters are left open, so that the people would enter at once into the south and the east cloisters from the outside. As this arrangement utterly spoils the symmetry of the building, it was most probably an after-thought when the single small door in the middle of the east side was found utterly insufficient'. .."

"6. THE 'PALACE' AREA

"A short distance to the south-east of the Adina Mosque an embanked area of ground is to be found which, local tradition states was the site of the palace of Sikandar Shah. As will be seen later, this however probably dates back, in Muhammadan times, to at least the reign of Shamsuddin Ilyas Shah (1339-1358 A. D.), while there are also clear indications that the area in question (as well as that further to the north and north-east) was the headquarters of Hindu sovereignty—possibly from a very early period. The site was first described in 1808 by Dr. Buchanan Hamilton, and his vivid account will now be quoted from his *Description of Dinajpur* (*ed, cit* , pp. 47 and 48) by way of introduction to what is, historically, the most important area of the ancient city of Pandua."

Dr. Buchanan Hamilton's Description

"About a mile east from Adinah is a ruin called the Satasgurh, or sixty towers, which is said to have

been the palace of the king. On penetrating the woods and reaching this place, I was much disappointed, as except the high name, I could find nothing worthy of a royal residence. The remains consist of a tank about 120 yards in length and 80 in breadth. The bank formed by throwing out the earth has been surrounded by a brick wall, in one place entire. and 16 feet high. This wall seems to have included many buildings, which from the bulk of the ruins, seem to have been most considerable at the two ends. At the N. W. corner is a small building which, contains an arched chamber in the centre, communicating with several smaller ones, by which it is surrounded. These communicate only with the central room, from whence there is a passage to an antichamber in front. Some appearance of pipes in the walls, and the general structure of the building, confirm the opinion of the natives that this was bath. The north end of the tank seems to have been lined through the whole of its length by a narrow gallery supported by arches, from whence stairs led down to the water, and within the gallery there appears to have been a row of small chambers ; but these are now almost entirely choked with rubbish. At a little distance from the S. E. corner of the tank, and without the wall, is another ruin like that of the bath. which probably served for the same purpose. A cylindrical cavity, lined with brick, which descends from the top of the building to a considerable depth, and which is about 10 feet wide, served in all probability to give a supply of water. Very few stones have been employed in these buildings and such as have been used are quite plain. Two large blocks of uncut gray granite are lying on the surface of the ruins. Some of the bricks are coated with green enamel."

"About half way between Adinah and Satasgurh is an earthen rampart, with a ditch on its west side which probably is part of a fortification that may have surrounded the palace.

"The tank at Satasgurh has its greatest length extending from north to south, and therefore has undoubtedly been the work of Hindu ; and in fact both Hindus and Muhammadans agree in attributing its construction to a Pandu Raja, who lived a long time ago and communicated his name to the place. He is very remarkable as having been the father of Yudhisthir, who, according to legend, was sovereign of India in the commencement of this age, about 5,000 years ago. The country then belonged to Virat one of the adherents of the family of Pandu, and according to tradition, this part was under the immediate management of a certain Kichak, to whose sister Virat was married. It is possible, that during some rebellion, or disputed succession, Pandu may have been compelled to retire from Hastinapur, and to take refuge in friendly tarritory. Peruya, it must be observed, is a corrupt vulgar name, and the true. appellation of the city is said to be Panduya of Pandoviya."
