DISTRICT CENSUS HANDBOOK

PART A AND B

LOWER SUBANSIRI DISTRICT

ARUNACHAL PRADESH is a thinly populated hilly tract lying roughly between the latitudes 26° 28′ N and 29° 31′ N and the longitudes 91° 30′ E and 97° 30′ E on the north east extremity of India, comprising roughly of 83,743 kilometre squares of area, bordering the international boundaries of Bhutan, Tibet, China and Burma. The Pradesh is known to be rich in flora, fauna, power and mineral potential.

When the 1971 Census was taken in Arunachal Pradesh, the area was known as the North East Frontier Agency (NEFA) in short which was constitutionally a part of the State of Assam. At that time NEFA was directly administered by the President of India through the Governor of Assam as his agent, who was assisted by an Adviser. The Office of the Adviser to the Governor of Assam was situated at Shillong, the former Capital of the Assam State now the Capital of Meghalaya.

On 21st January, 1972 NEFA was given the status of a Union Territory under the provision of the North-Eastern Areas (Reorganisation) Act, 1971, (8 of 1971) and placed under the charge of a Chief Commissioner with his headquarters at Shillong.

When NEFA became a Union Territory in January, 1972 and renamed as Arunachal Pradesh, Itanagar was selected as its Capital.

On 15th August, 1975 Arunachal Pradesh got its own elected Legislative Assembly and simultaneously the Chief Commissioner was replaced by Lt. Governor, assisted by a Cabinet of Ministers, to run the Government of this newly formed Union Territory.

FOREWORD

The District Census Handbook (DCH), compiled by the Census Organisation on behalf of the State Governments is one of the most valuable products of the Census. The District Census Handbook is constantly referred to by planners, administrators, academicians and researchers. It is *inter alia* used for delimitation of constituencies, formulation of local level and regional plans and as an aid to District administration. The District Census Handbook is the only publication which provides Primary Census Abstract (PCA) data upto village level for the rural areas and wardwise for each city or town. It also provides data on infrastructure and amenities in villages and towns, etc.

The District Census Handbook series was initiated during the 1951 Census. It contained important census tables and Primary Census Abstract for each village and town of the district. During 1961 Census the scope of the District Census Handbook was enlarged and it contained a descriptive account of the district, administrative statistics, census tables and a village and Town Directory, including P.C.A. The 1971 District Census Handbook series was planned in three parts. Part-A related to Village and Town Directory, Part-B to Village and Town Primary Census Abstract and Part-C comprised analytical report, administrative statistics, district census tables and certain analytical tables based on Primary Census Abstract and amenity data in respect of villages. However, in some states it was confined to district census tables and in a few cases altogether given up due to delay in compilation and printing.

While designing the format of 1981 District Census Handbook series some new features along with the restructuring of the formats of Village and Town Directory have been attempted. At the same time, comparability with the 1971 data has also been kept in view. All the amenities except power supply in the village have been brought together in the Village Directory with the instruction that in case an amenity is not available in the referent village the distance in broad ranges from the nearest place where the amenity is available may be given. The restructuring of the format of the Village Directory and incorporating more exhaustive data on infrastructure aspect particularly in relation to amenities and landuse pattern is expected to further meet the need of micro level planning for rural-areas. It is expected to help not only in local area planning but regulating the provision of goods and services as well so as to minimise the regional imbalances in the process of development.

2—8 RGI/ND/84

A few new items of information have also been introduced to meet some of the requirements of the Revised Minimum Needs Programme. Such new items of information as adult literacy centres, primary health subcentres, and community health workers in the village have been introduced in the Village Directory with this objective in mind. The new item on approach to the village is to have an idea about the villages in the district which are inaccessible. A new column, "total population and number of households" has been introduced to examine the corelation of the amenities with the population and number of households they serve. Addition of two more appendices listing the villages where no amenities are available and according to the proportion of Scheduled Caste and Scheduled Tribe population to the total population has also been made with this view in mind.

The formats of the Town Directory have also been modified to meet the requirements of the Minimum Needs Programme by providing information on a few new items. A new statement on civic and other amenities in slums in Class-I and Class-II towns (Statement-IV-A) has been introduced with this objective in mind. It is expected that this will help the planners to chalk out programmes on provision of civic amenities for the improvement of slums. The columns on Scheduled Castes and Scheduled Tribes population in Statement-IV relating to civic and other amenities and adult literacy classes/centres under educational facilities in Statement-V area also added *inter alia* with this view. A significant addition is class of town in all the seven statements of the Town Directory. The infrastructure of amenities in urban areas of the country can be best analysed by taking the class of towns into consideration. The addition of the columns on civic administration status and population in a few statements also serves this purpose.

The format of the Primary Census Abstract for the villages and towns has been formulated in the light of changes in the economics and other questions canvassed through the individual slip of 1981 Census.

In order to avoid delay in publication of 1981 District Census Handbook series it has been so designed that Part-A of the volume contains village and Town Directory and Part-B, the Primary Census Abstract of villages and towns including the Scheduled Castes and Scheduled Tribes Primary Census Abstract upto Tehsil/Town levels. At the beginning of the District Census Handbook a detailed analytical note supported by number of inset tables based on Primary Census Abstract and non-census data in relation to the infrastructure has been introduced to enhance its value. The district and

tehsil/police station/CD Block etc., level maps depicting the boundaries and other important features have been inserted at appropriate places, to further enhance the value of the publication.

This publication is a joint venture of the State Government and the Census Organisation. The data have been collected and compiled in the State under the direction of Shri M.B. Rai, IAS, the Director of Census Operations, Arunachal Pradesh on behalf of the State Government which has borne the cost of printing. The task of planning, designing and coordination of this publication was carried out by Shri N.G. Nag, Deputy Registrar General (Social Studies) of my Office. Dr. B.K. Roy, Deputy Registrar General (Map) provided the technical guidance in the preparation of the maps. Data received from Census Directorates have been scrutinised in the Social Studies Division at the headquarters under the guidance of Shri M.M. Dua, Senior Research Officer. I am thankful to all who have contributed in this project.

NEW DELHI
the 26th April, 1982.

P. PADMANABHA
Registrar General, India

5. For the preparation of manuscripts for nine districts that existed at the time of 1981 Census this Directorate received wholehearted cooperation from the Secretary, Supply and Transport, all Heads of Departments, all district Heads of Departments, Extra Assistant Commissioners, Circle Officers, CPWD and PWD of Arunachal Pradesh Government. I am grateful to them all for their valuable contribution. Also, I am grateful to the Geological Survey of India, Shillong for providing valuable information on the "Minerals and Mining" existing in all the districts of Arunachal Pradesh, to the Indian Council of Agricultural Research, Shillong for exhaustive notes on their agricultural activities in Arunachal Pradesh, and to the All India Radio for giving us information on the programmes broadcast by them on various aspects of socio-economic and cultural activities in Arunachal Pradesh sponsored by both Arunachal Pradesh Government and Central Government.

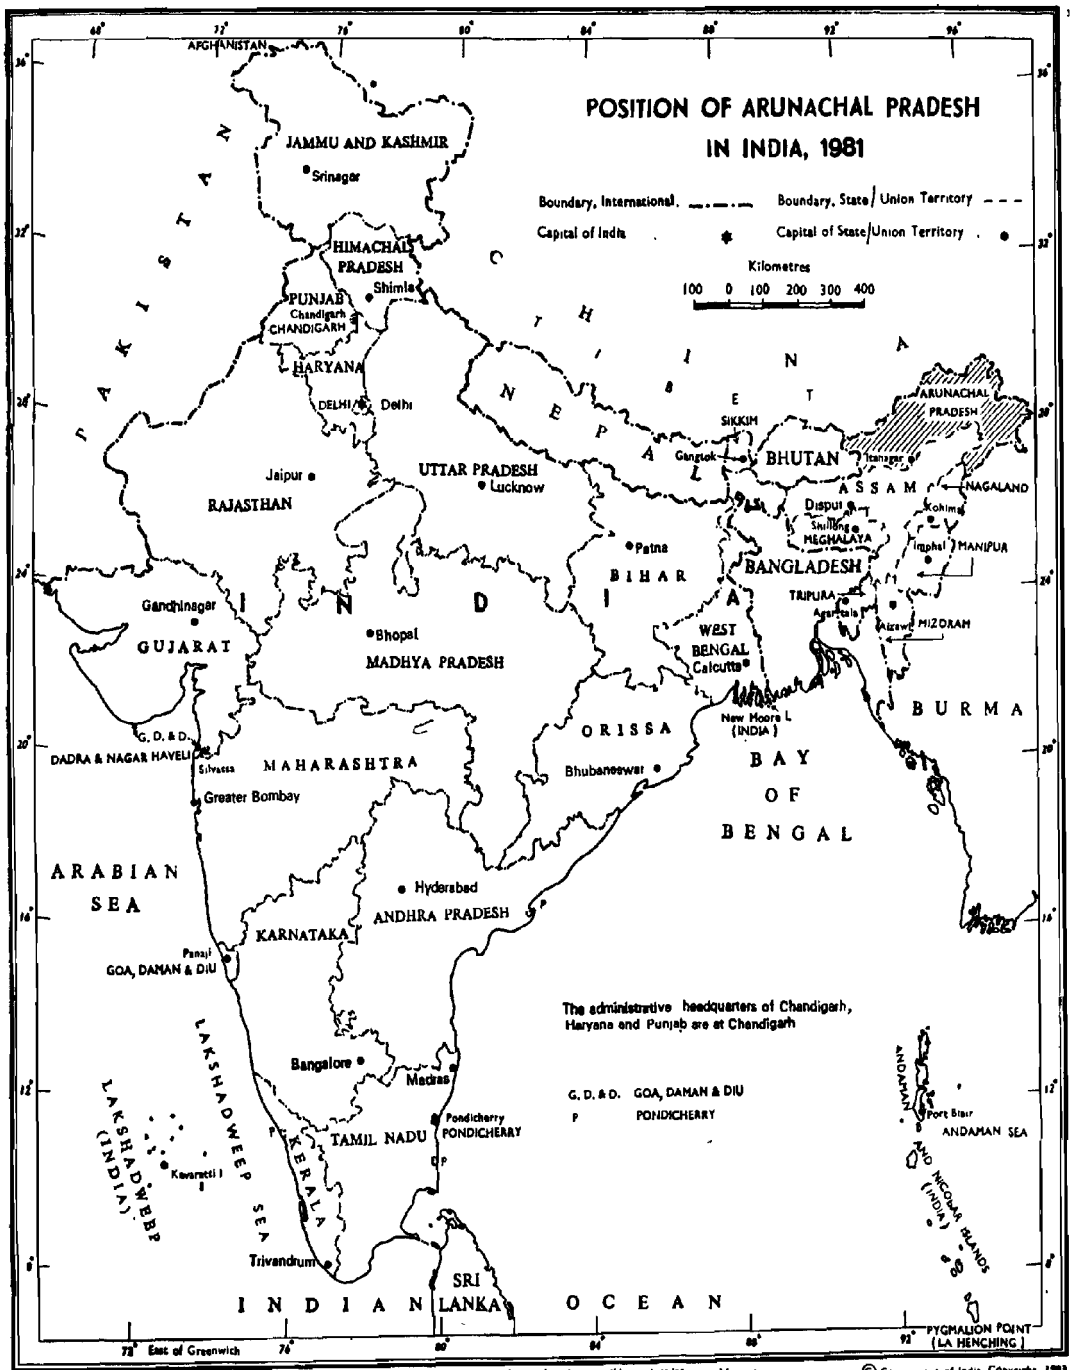

6. In this Directorate Statistical Assistants and Computors worked very hard in preparing various tables and writeups of nine District Census Handbooks under the close supervision of S/Shri A.K. Paul, Asstt. Director of Census Operations (T), I.N.Gohain and A. Roy Choudhury, Investigators. S/Shri D.B. Rai, Computor, A.C. Paul, Senior Steno, S.K. Lama, Junior Steno, B. Das Gupta, U.D. Clerk and Taru Takar, L.D. Clerk helped in typing out fair copies of all manuscripts for nine districts. In 1981 Census quite a large number of maps have been incorporated in the District Census Handbooks. The Ferro Typer, Draftsman and Artist took pains to complete the ardous task of preparing the maps in time under the close supervision of Shri D.N. Ram, Cartographer. Shri A.K. Paul, A.D.C.O. (T) took the responsibility of the overall guidance in preparing the maps. I am grateful to them all.

7. Lastly, I cannot but express my gratefulness to Shri P. Padmanabha, Registrar General and Census Commissioner of India for his valuable instructions and guidance in writing this District Census Handbook.

M. B. RAI,

SHILLONG
the 15th March, 1983.

Director of Census Operations,
Arunachal Pradesh, Shillong-3.

Based upon Survey of India map with the permission of the Surveyor General of India.

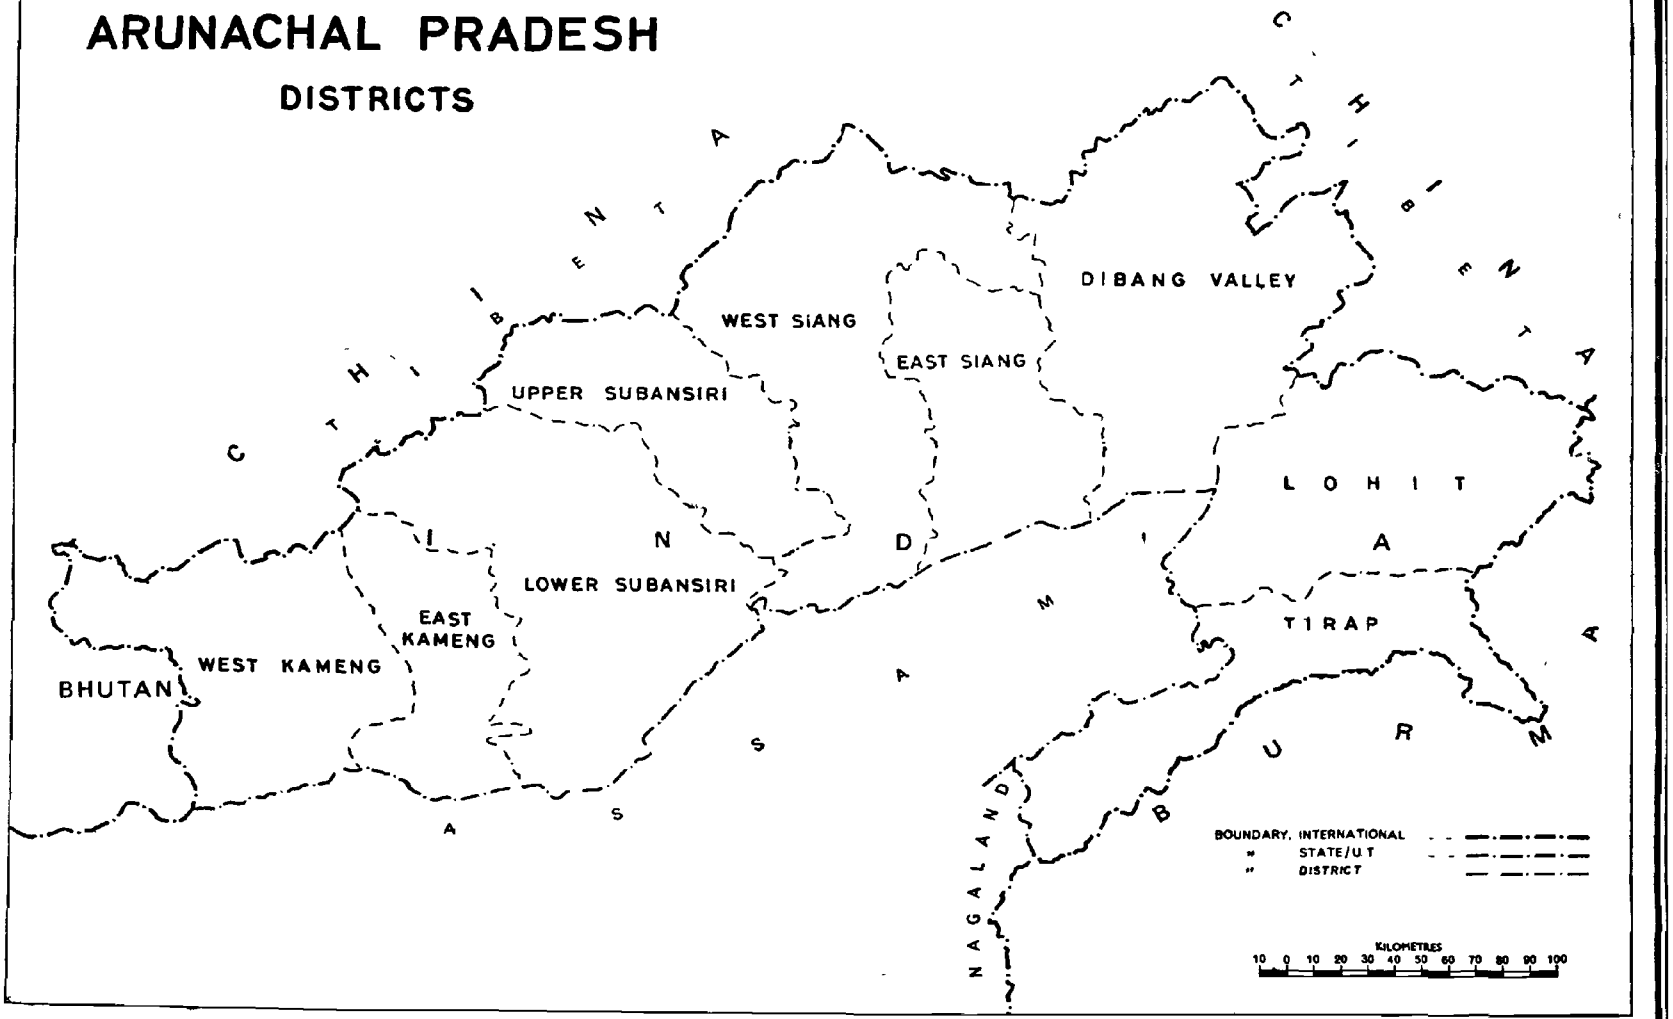

The territorial waters of India extend into the sea to a distance of twelve nautical miles measured from the appropriate base line.

The boundary of Meghalaya shown on this map is as interpreted from the North-Eastern Areas (Reorganisation) Act, 1971, but has yet to be verified.

ANALYTICAL NOTE

3—8 RGI/ND/84

ANALYTICAL NOTE

CENSUS CONCEPTS—RURAL AND URBAN AREAS

In all the censuses throughout the world the dichotomy of rural and urban areas is recognised and the data are generally presented for rural and urban areas separately. But a common definition for the concept of rural areas or urban areas cannot be applicable to all countries or, for that matter, even within the same country. Inspite of this fact it would be better to know the census concepts of rural and urban areas before coming to the analysis of actual data.

As in the previous censuses the 1981 Census data are presented by rural and urban areas. The basic unit for rural area is the revenue village which has definite surveyed boundaries. The revenue village may comprise of several hamlets but the entire village is one unit for the presentation of data In unserveyed villages within forest areas, each habitation area with locally recognised boundaries within each forest range officer's beat is treated as one unit. Again a census village may also be basically defined as a 'tract of land' which is an administrative rather than a demographic entity.

The situation is, however, different in Arunachal Pradesh. In Arunachal Pradesh, cadastral survey has not been done so far and revenue system in the village has not been introduced as yet As such each area with locally recognised boundaries is considered as a village. Thus a village in Arunachal Pradesh may comprise of even one house/household only and, in fact, there are such villages. The identity of the existence of certain habitation as a separate village or otherwise is determined generally on the basis of how the local administration has accepted the existence of these habitations. In the case of hamlets and the migrated part or parts of village bearing the same name of original village, (i.e. both the old and new villages are found to be known by the same name), the identity of the places is determined by the decision of the local administration only. A hamlet recognised by local customs and traditions may be treated as a separate village if the local administration decided to do so and in that case it is treated as a census village. So also the old and new villages bearing the same name of the old village are treated as separate census villages if it is decided so by the local administration even if both the units are treated as same village by the local traditions and customs; but in such case the local people keep the identity of these villages by using 'Old' and 'New' before and after the names of the villages or by suffixing 1 or 2 to the name of the village as the case may be e.g. Old Shehung and New Shehung or Shehung 1 and Shehung 2.

In Arunachal Pradesh there may be some special cases of isolated and scattered habitations in the notified forest areas, which may or may not be included in the custom and tradition bound villages. Such habitations in some cases form a well defined forest village. But those of such habitations which were not accepted as 'forest villages' till census enumeration were treated as one unit and as one 'Census village'.

As regards urban area it has very often been commonly vindicated that an urban area should be determined not only on the basis of defined demographic characteristics but also on the basis of the level of infrastructure facilities The urban area may be defined in a more meaningful way in terms of the level of infrastructure development and the availability of amenities in a given area. But criterial based on such considerations have not been adopted in defining an urban area in India. The census organisation is, however, working on the feasibility of arriving at criteria based on such factors for identifying urban areas through some scheme, but in 1981 Census the conventional definition has been adopted. For the purpose of maintenance of comparability and administrative convenience at large, the definition of an urban unit which was adopted in 1971 Census had been followed. This definition, in fact, has been adopted since 1951. Broadly speaking the definition of an urban area as adopted in 1981 Census is as follows :—

(a) All places with a municipality, corporation, cantonment board or notified town area committee, etc.

(b) All other places which satisfy the following criteria:

  (i) a minimum population of 5000,

  (ii) at least 75% of male working population engaged in non-agricultural pursuits; and

  (iii) a density of population of at least 400 persons per sq. km. (1,000 persons per sq. mile).

The urban criterion of 1981 varies slightly from that of 1961 and 1971 Censuses in that the males working in activities such as fishing, logging, etc were treated as engaged in non-agricultural activity, and therefore, these contributed to the 75% criterion in 1961 and 1971 Censuses, whereas in the 1981 Census these activities are treated as on par with cultivation and agricultural labour for the purpose of this criterion.

In the marginal cases such as project colonies, areas of intensive industrial development, railway colonies, important tourist centres etc. the decision as to whether these places were to be classified as urban or rural was considered mostly depending on the local circumstances The classification of such cases were made by the census directorates in consultation with the office of Registrar General, India.

Two distinct types of urban units are conspicuous from the definition of the urban area. The first type of urban unit includes those units which satisfy criterion (a) by virtue of statutory notification, and for census purpose these areas are referred by the nomenclature as adopted in the relevant notification Those units which satisfy the criterion (b) belong to the other type of urban units. These units are classified as urban units for census purpose only and are referred to as such in order to distinguish them from the statutory towns under criterion (a). Those urban areas under criterion (b) may continue to be included in the list of revenue village where these are in existence. However, for the convenience of the readers relevant cross references are generally made in the census records for identification of such cases.

As in the case of rural areas, the situation in Arunachal Pradesh is different in the case of urban areas also. The local administrative, economic and social milieu pose a difficulty in following the above criteria in toto for recognition of a place as urban area. During 1961 Census the whole of Arunachal Pradesh was treated as rural For 1971 Census also, no place was found to be under municipality, town committee, etc. Same was the case in 1981 Census. As such there is no place in Arunachal Pradesh so far which satisfies the criterion (a). On the other hand, save and except two places (i.e. Old Itanagar and New Itanagar in Lower Subansiri District), the criterion (b) was also not satisfied till 1981 Census, by any of the villages even though it was observed that many places, specially the district and subdivisional headquarters, had developed distinct urban characteristics where large majority of people pursued non-agricultural activities. It was, therefore, decided that inspite of the smallness of the population or less density of population, the district and subdivisional headquarters having a population of more than 2,500 (in 1961) should be declared as urban areas on an empirical basis for the purpose of 1971 Census. Accordingly four such places were declared as urban area in 1971 namely, Bomdila (Headquarters of the Kameng District at present West Kameng District), Along (Headquarters of the Siang District at present West Siang District), Pasighat (Headquarters of the Pasighat subdivision of the Siang District at present Headquarters of the East Siang District) and Tezu (Headquarters of the Lohit District). These urban areas have been continued as urban areas Over and above, two more units namely, Old Itaganaga and New Itanagar which had satisfied all conditions of criterion (b), have been declared as census towns for the purpose of 1981 Census.

Before finalising the list of urban and rural areas the marginal cases for consideration of urban areas were examined by the Registrar General, India. The list of urban areas, which is generally referred to as the town list, was then prepared by this directorate and simultaneously a list of villages was also prepared. These lists in fact form the basic frame for the organisation of the census operations.

Urban units or towns are divided into the following six classes for the purpose of analysis:

Class	Population
I	100,000 and above
II	50,000 to 99.999
III	20,000 to 49,999
IV	10,000 to 19,999
V	5,000 to 9,999
VI	Less than 5,000

Class I town with a population of over 100,000 is also termed as a city. By convention, urban areas with a population of a million and above are often referred to as metropolitan areas. This terminology is adopted in all the census publications. The population size of the towns of Arunachal Pradesh being very small 5 of the 6 towns are in Class V and the remaining one in Class VI and that is Bomdila town of West Kameng District.

CENSUS HOUSE

A Census House is a building or part of building having a separate main entrance from the road or common courtyard or staircase, etc. Used or recognised as a separate unit. It may be occupied or vacant. It may be used for a residential or non-residential purpose, or both. If a building has a number of flats or blocks which are independent of one another having separate entrances of their own from the road or a common staircase or a common courtyard leading to a main gate, they are considered as separate Census Houses. If within large enclosed area, there are separate buildings owned by different persons, then each such building is also considered as a separate House. If all the structures within an enclosed compound are together treated as one building then each structure with a separate entrance is treated as a separate Census House.

HOUSEHOLD

A household is a group of persons who commonly live together and would take their meals from a common kitchen unless the exigencies of work prevented any of them from doing so. There may be a household of unrelated persons or having a mix of both. Examples of unrelated households are boarding houses, messes, hostels, residential hotels, rescue homes, jails, ashrams, etc. These are called 'Institutional Households'—There may be one member household, two members household or multimembers households. For census purpose each one of these types is regarded as a 'household'.

SCHEDULED CASTES

The castes which are Scheduled in Assam under "the Scheduled Castes and Scheduled Tribes Lists (Modification) Order, 1956", (Part II of Schedule I) are treated as Scheduled Castes in Arunachal Pradesh. There are as many as sixteen different categories of Scheduled Castes in Assam which are also treated as Scheduled Castes in Arunachal Pradesh.

Districtwise list of Scheduled Castes with their demographic and other aspects will be published in a separate publication.

SCHEDULED TRIBES

In the Presidential Order of 1956, it is said that all the tribes of the Agency are to be treated as Scheduled Tribes At paragraph 2 of Part II of Schedule III of the Order, an illustrative list of the tribes of Arunachal Pradesh is provided. It has also been mentioned that the Presidential Order is illustrative and not exhaustive with respect to the tribes of Arunachal Pradesh. There were one hundred and ten different categories of Scheduled Tribes in Arunachal Pradesh in 1971 Census whereas in 1961 Census the number was eighty only. In 1981 Census the number of Scheduled Tribes has exceeded one hundred and ten.

Total number of tribes may vary from census to census because of the fact that the list of the tribes of the Presidential Order of 1956 is an open one, and according to the procedure of census enumeration the census enumerators are to record the name of the tribe as returned by the respondent without entering into any alteration or argument provided the persons for whom the information is recorded are the aborigines of Arunachal Pradesh. Another possible reason may be attributed to the growing consciousness for the identity of their individual groups or sects.

LITERATE

A person who can both read and write with understanding in any language is taken as literate. A person who can merely read but cannot write, is not literate. It is not necessary that a person who is literate should have received any formal education or should have passed any minimum educational standard. All children of the age of 4 years or less have been treated as illiterate even if the child is going to a school and may have picked up reading and writing a few odd words.

WORKERS AND NON-WORKERS

For the purpose of census, basically the population have been divided into two broad groups, namely, Workers and Nonworkers on the basis of the activity of the people.

Workers have been defined as those who have participated in any economically productive activity during the last one year preceding the date of enumeration. Such participation may be physical or mental in nature. Work involves not only actual work but also effective supervision and direction of work.

It has not always been possible to clearly define who is an economically productive worker and to what extent. The concept of worker, therefore, has varied from census to census. At each census, on the advice of the data users and economic experts, the concept was sought to be improved upon to give what was expected to be a more correct picture of the economic activity of the people. In the 1951 Census, a significant change was made in the presentation of census data. Prior to 1951 Census religion was adopted as the basis for broad classification of population. In 1951 Census, economic classification substituted the classification based on religion and it has been continued till 1981 Census; but then the criteria such as duration of economically productive activities and some other relevant factors to determine the economically active population varied from census to census. The means of livelihood approach was adopted from 1901 upto 951 From 1901 to 1921 the expressions used were "Workers" and "dependents". In 1931, the concept used were "earner", "working dependent and non-working dependent". In 1951 the categories were "Self Supporting Persons", "earning dependents", and "non-earning dependents". In 1961 and 1971, however, there was a shift to the labour force approach according to which a person was treated as "Worker" if his activity during the reference period was productive work. Thus from 1961 the concept of workers and non-workers came into being. The difference in the concepts in 1961 and 1971 Censuses is summarised below:—

(a) 1961 Census :

"Workers"=main workers + Marginal workers.

"Non-workers"=Non-workers

(b) 1971 Census :

"Workers"=Main workers".

"Non-workers" = Marginal workers + Non-workers.

The consequence of such conceptual changes is not far to seek. The number of persons classified as worker at the national level in 1971 was 175 0 million, which was less than the number of workers (182.5 million) on 1961 Census. This obviously led to a loss of some comparability of the data with those collected at different censuses. In order to obviate these drawback, at the 1981 Census it was considered desirable to obtain, as far as possible, a detailed profile of the working characteristics of the population without losing possibility of some comparability, at least with the 1961 and 1971 results. The basic concept of workers and non-workers at the 1981 Census can precisely be explained as shown below:—

Workers = Main workers + Marginal workers

Non-workers = Non-workers.

Workers have been further classified into three categories viz. Main workers, Workers having secondary work and Marginal workers

MAIN WORKERS

A main worker is that person who has worked 182 days or more or in other words worked for six months or more during last one year prior to the date of enumeration. The reference period of work is the one year preceding the date of enumeration. Certain types of work, such as, agriculture, household industry like gur making, etc. are carried on either throughout the year or only during certain seasons or at

different parts of the year, depending on the local circumstances. In such cases the broad timespan of the working period or season preceding the enumeration is only to be considered Main workers are further grouped into 4 broad categories according to their main activities viz. cultivators, agricultural labourers, those engaged in household industry and other workers. These terms are explained below:

CULTIVATOR

For the purpose of the Census a person was considered as a cultivator if he or she was engaged in cultivation by himself/herself or by supervision or direction in his or her capacity as the owner or lessee of land held from private persons or institutions for payment in cash, in kind or share. Cultivation involves ploughing, sowing and harvesting and production of cereal and millet crops, such as wheat, jowar, bajra, ragi etc, and pulses, raw jute kindred fibres crop, cotton etc., and other crops such as sugarcane, ground-nuts, tapioca etc Cultivation, however, does not includes fruit growing, vegitable growing or keeping orchards or groves or plantation of tea, coffee, rubber, and other medicinal plants and as such a person who grown these crops cannot be classified as cultivator.

AGRICULTURAL LABOURER

A person who works in another person's land for wages in money, in kind or share is regarded as an agricultural labourer. He or she has no risk in the cultivation but he or she merely works in another person's land for wages An agricultural labourer has no right of lease or contract on land where he/she works.

If such a labourer is involved in growing such crops which are not included in cultivation, such as, fruit growing, vegetable growing or keeping orchards or groves or plantation of tea, coffee, rubber etc. and other medicinal plants, he/she is not treated as agricultural labourer.

HOUSEHOLD INDUSTRY

Household Industry is defined as an industry conducted by the head of household himself/herself or by the members of the household at home or within the village in rural areas, and only within the precincts of the house if the household lives in urban areas. The larger proportion of workers in a household industry should consist of members of the household including the head. The industry should not be run on the scale of a registered factory which would qualify for registration or has to be registered under the India Factories Act It should involve production, processing, servicing or repair of articles (not on the scale of registered factory).

OTHER WORKERS

All workers, i.e., those who have been engaged in some economic activity during the last one year, who are not cultivators or agricultural labourers or not engaged in Household Industry, are "other workers". The type of workers that come under this category include factory workers, plantation workers, those in trade, commerce business, transport, mining, construction, political or social work, all government servants, municipal employees, teachers, priests, entertainment artists, etc. In effect, all those who work in any field of economic activity other than cultivator, agricultural labourer or household industry, are "other workers"

WORKERS HAVING SECONDARY WORK

A main worker may have some secondary work in addition to main work He is categorised as a worker having secondary work. He is, therefore, basically a main worker. In order to classify those workers who are having secondary work, the work of the main workers other than their main work is recorded. A person whose main work is shown as, say, a Government Office or in another establishment, also attends to cultivation by his direct supervision or undertakes some tuition work, this will be shown as his/her secondary work. A person's main work may be cultivation and his secondary work may be money lending. Again main activity may be agricultural labourer and secondary factory labourer and so on and so forth.

MARGINAL WORKERS

The concept of the marginal workers has been introduced for the first time in the 1981 Census. A marginal worker is that person who has worked any time in the year proceeding the enumeration but has not worked for a major part of the year, i.e., for 183 days or in other words 6 months or more during last one year prior to the date of enumeration.

NON-WORKERS

Non-workers may be defined as those who have not participated or have been unable to participate in any economically productive activity during the last one year preceding the date of enumeration. The non-workers may again be categorised under seven broad heads. These are explained below:

(i) Household-duties

This cover all persons who are engaged in unpaid home duties and who do not other worker or have not done any work at all during the last one year.

(ii) Students

This will cover all full time students and children attending school.

In most houses; the daughters help in the household work though they are studying full time. In such cases we are more interested in finding out if they are students, and if they are, they have been recorded as student and not as "engaged in household duties".

(iii) Dependents

This category includes all dependents such as infants or children not attending school or a person permanently disabled from work because of illness or old age.

Dependent will include even able bodied persons who cannot be categorised in any other category of non-worker but are dependent on others. However, if such a person who is dependent on others for subsistence is seeking work, he or she will be categorised as other non-workers

(iv) Retired Persons or Rentiers

A person who has retired from service and is doing no other work, i e. not employed again in some economic activity for some part of the year, or a person who is a rentier or living on agricultural or non-agricultural royalty, rent or dividend, or any other persons having an independent means of earning an income for which he/she does not have to work, will come under this category.

(v) Beggars etc.

This covers beggars, vagrants or those persons without a indication of source of income and also those with unspecified sources of subsistence who are not engaged in any economically productive work.

(vi) Inmates of Institutions

This covers convicts in jails or inmates of a penal, mental or charitable institutions, even if persons are compelled to do some work, such as, carpentry, carpet weaving, vegetable growing etc., in such institutions. But in the case of the under trial prisoners in a jail, for the work he/she was doing before he/she was apprehended is recorded for their work or economic activity. Similarly, a person temporarly in a hospital or similar institution is categorised according to the kind of work he/she was doing before he/she was admitted into the hospital or institution But for a long trial prisoner, or convict in a prison, or for a long term inmate of penal or charitable or mental institution, the person's previous work is not recorded but he/she is treated as non-workers under the category of 'Inmates of Institutions. A person is considered "for long term" if he or she is in such a institution for 6 months or more

(vii) Other Non-Workers

This includes all non-workers who may not come under any of the above mentioned six categories but who are looking for work A boy or girl who has completed education or has stopped studying and is looking for work comes under this category. A person who is merely spending his/her time at home as a dependent and is not doing any work and is not seeking any work, however, comes under dependent. A person irrespective of age and whether educated or not, if he or she reports that he or she is not engaged in any other activity but is seeking work comes under this category.

It may be noted that this category includes only those who do not fall into any of the other categories of non-workers discussed earlier.

The figures under different categories of non-workers are, however, not indicated in the table presented in this publication, the total figures of non-workers are only reflected.

BRIEF HISTORY OF THE DISTRICT AND THE DISTRICT CENSUS HANDBOOK

Formation of the district

1914 is a land mark in the history of the district. This year the western section of the North East Frontier Tract was constituted. It was placed under the charge of the Political Officer who had his headquarters in Assam. Later on this section was renamed as Balipara Frontier Tract. Prior to 1914 this area was a part of Lakshimpur district in Assam. 1946 is another important year when the Balipara Frontier Tract was divided into two administrative jurisdictions. One was Sela Sub-Agency and the other was Subansiri area. 1954 marks the renaming of the Subansiri area as the Subansiri Frontier Division. Subansiri Frontier Division was renamed as the Subansiri District in 1964. The district was further bifurcated into two districts in accordance with Gazette Notification No Law/Legn 12/79 dated May 13, 1980. These two districts are Lower Subansiri and Upper Subansiri. Daporijo has been declared as the district headquarters of Upper Subansiri District and Ziro, which was the district headquarters of erstwhile Subansiri District, has remained as the Headquarters of newly constituted Lower Subansiri District with four Subdivisions namely. Ziro, Koloriang, Sagalee and Capital Complex Subdivision.

At the time of taking 1971 Census, the area covered by this district formed a part of the North-East Frontier Agency which was a constitutional part of the State of Assam. The agency was directly administered by the President of India through the Governor of Assam as his agent. In 1972, the agency was made into a Union Territory and renamed as Arunachal Pradesh A Chief Commissioner with his headquarters at Shillong, was made the Administrator of this new Union Territory. On the 15th day of August, 1975, Legislative Assembly was constituted in the Union Territory of Arunachal Pradesh with the Chief Minister and a Cabinet of four Ministers to assist the Lt. Governor appointed on the same day as the Administrator of Union Territory. The headquarters of the Union Territory was shifted to capital site at Itanagar in Lower Subansiri District in the year 1974.

The Panchayat Raj was introduced in the district with the North-East Frontier Agency, Panchayat Raj Regulation, 1967 Under this regulation (1) the gram sabhas exist at the village level, (2) the Anchal Samities cover the levels of blocks, (3) the Zilla Parishad operates at the district level and (4) the Agency Council (later on renamed as Pradesh Council in 1972 when the council was renamed as Arunachal Pradesh) operates at the Agency level The Agency Council/Pradesh Council, however, had lost its existence with the formation of Legislative Assembly in the Union Territory. The regulation provides for effective participation of the people in the administration of the Union Territory through the institutions set up under the Panchayat Raj scheme. The Anchal Samities and the Zilla Parishads function as advisory bodies only. The Gram Sabhas or the Village Councils have, however, some administrative power within certain limitations.

The district of Lower Subansiri has been divided into four Subdivisions, namely Ziro, Sagalee, Koloriang and Capital Complex Subdivision. The Ziro Sub-division is placed directly under the charge of Lower Subansiri District. Capital Complex Subdivision is under the charge of Additional Deputy Commissioner while Koloriang is manned by an Assistant Commissioner, and Sagalee is manned by Extra Assistant Commissioner. The lowest unit of administration is a circle which is looked after by a Circle Officer or an Extra Assistant Commissioner. A Circle is defined as a group of villages and not as a territorial unit. Area figures below the level of the district are not available. The villages have their own customary administrative system in the form of traditional village councils The Assam Frontier (Administration of Justice) Regulations, 1945 authorities the Village Councils to settle all civil matters and certain criminal matters falling within their jurisdiction. However, for all matters, the Deputy Commissioner and some other Administrative Officers have jurisidiction under the supervision of the Assam High Court who holds the appellate and the revisional authority. Of late the district administration runs with the assistance of Civil Police after the establishment of Police Department. But since the Department is very new the number of Police Personnel is not sufficient to cover large areas This however, does not adversely affect the administration of justice because of the wide powers given to the village councils. In certain cases, however, Administrative Officers are required to be assigned with the duties of prosecution.

At the time when 1981 Census was taken, following was the administrative set up of the district:—

District Headquarters	Ziro
Subdivision	Circle
ZIRO	1. Ziro
	2. Palin
	3. Raga
	4. Tali
	5. Kimin
SAGALEE	1. Sagalee
	2. Doimukh
	3. Balijan
	4. Mengio
CAPITAL COMPLEX SUB-DIVISION	1. Old Itanagar
	2. New Itanagar
KOLORIANG	1. Koloriang
	2. Sarli
	3. Damin
	4. Nyapin

As regards composition of the people and their history, it may be mentioned that the district is predominantly inhabited by the Scheduled Tribes of Arunachal Pradesh. The Scheduled Tribes population of the district accounts for 77.77% of the total population of the district. Among them the major tribes are Apatani, Bangro, Hill Miri, Mikir, Sulung, Tagin and Nishang group includes Nishang Nishi, Bangni and Dafla. The history of all these tribes including their migration, material and social culture and other aspects have been vividly discussed in the District Census Handbooks of 1971 Census in respect of Subansiri District. It is, therefore, felt not necessary to repeat the same in this volume. A separate note on the change in their material and social culture and other aspects, however, needs a detailed and thorough study which is beyond the purview of this publication

The District Census Handbooks

The District Census Handbook is an innovation of the 1951 Census. Prior to 1951 Census, publications and report contained data upto Tehsil/Sub-Tehsil Town and District level. Micro level data i.e., statistical data for smaller Territorial Units—villages in rural areas and enumerators blocks in urban areas were not published in any census report. With the rapid development and socio-economic changes in the society, necessity of data at Micro level was felt considerably by the Government, Economists, Scholars and various data using agencies. With a view to make available these statistics at micro level, selected census data were given in the District Census Handbooks of 1951 Census and as such these handbooks contained important census data as well as general information relating to history, physical aspects geology, archaeology, climate, rainfall, administration, medical, public health, education and literacy, agriculture and cooperation industries, local bodies, places of interest etc relating to particular district

The District Census Handbooks of 1961 Census underwent complete transformation and attempts were made to make them more comprehensive and informative.

In 1971 Census, efforts were made to make available both census and non-census data in a uniform manner with an enlarged perspective. The District Census Handbook of 1971 Census had been split-up into three parts namely, Part A, Part B and Part C. Part A was comprised of Town and Village Directory while Part B contained Urban Block/Village-wise Primary Census Abstract and Part C—included Admnistrative Statistics and Report.

District Census Handbooks of Arunachal Pradesh were brought out for the first time in the 1971 Census when the full fledged census was also taken in Arunachal Pradesh for the first time. Arunachal Pradesh being a Union Territory having less volume of data Part A and B of the District Census Handbooks were combined in one volume for convenience.

In the 1981 Census the District Census Handbook is divided into two parts only as follows:—

Part A — Comprising Town and Village Directory as it was in 1971 Census.

Part B — Consisting of (i) District Primary Census Abstract, Circle level, (ii) Circlewise Primary Census Abstract (a) village level and and (b) town level (within town wardwise) and (c) Appendix to Primary Census Abstract showing Urban Blockwise total Scheduled Castes and Scheduled Tribes population and (iii) Primary Census Abstract for Scheduled Castes and Scheduled Tribes at circle level.

Part A and B of the District Census Handbook has been combined in one volume as it was done in 1971 Census. There is no third part of the District Census Handbook in the 1981 Census. It has been experienced during 1971 Census that collection of administrative statistics pertaining to various departments take unusually long time and consequently this part of publication is inordinately delayed. It has, therefore, been decided not to go in for the administrative statistics. In any case the information would be available to the data users in the publication of the concerned statistical bureaus/departments.

This volume

This particular volume will present Part A and Part B of the District Census Handbooks pertaining to Lower Subansiri District of Arunachal Pradesh. Besides Village and Town Directories, Urban and Rural Primary Census Abstract and Primary Census Abstract for Scheduled Castes and Scheduled Tribes, attempt will be made to cover various aspects in this volume in order to present a representative overall picture of the district in a comprehensive manner. The highlights of the multifarious aspects intended to be dealt with in this volume are indicaed below:—

(i) Various census concepts

(ii) Brief History of the District and the District Census Handbook

(iii) Scope of Village Directory, Town Directory Statements and P.C.A.

(iv) Physical aspects highlights on the changes in the jurisdiction of the district during the decade including its boundaries and any important event on geographic or geophysical aspect.

(v) Major characteristics of the district particularly in relation to the economic resources, namely, forestry, minerals and mining, electricity and power, land and landuse pattern, tenancy, agriculture, animal husbandry, fishery, industry, trade and commerce, transport, road communication etc

(vi) Major social and cultural events, natural and administrative developments and miscellaneous activities of note during the decade

(vii) Brief description of places of religious, historical or archaeological importance in villages and places of tourist interest in towns of the district.

SCOPE OF VILLAGE DIRECTORY, TOWN DIRECTORY STATEMENTS AND PRIMARY CENSUS ABSTRACT (PCA)

Village Directory

The format of the Village Directory is also on the pattern canvassed in 1971-Census except for a few additional columns. The column on total population and number of household is added to facilitate analysis of Village Directory data. The column on approach to village is to know the no. of inaccessible villages in a district.

A feature of the format for 1981 Census is its restructuring. All the amenities except power supply in the village have been brought together with the idea that in case any amenity is not available in the village the name of the nearest circle if in the same district, or the name of the nearest district if in the same state or other state where it is available and its distance from the referrent village is mentioned.

NA (not available) has been given in column-3 (total area of village), column-15 (area under forest), column-17 (area under dry rice cultivation), column-18 (area under Jhum cultivation) because these non-census data supplied by the district authority for these columns are purely based on eye estimation. As such, considering the fact that rough eye estimated data (no cadastral survey on land is done so far in Arunachal Pradesh) will not serve any useful purpose, it has been decided not to furnish these data.

Column-9 (day or days of the market/hat) has been left blank (dash only) in some cases where markets or hats are not held in the region.

Town Directory Statements

The Town Directory consists of seven statements. All these are almost similar to those adopted for 1971 Census. The introduction of a few columns in the statements are with a view to facilitating analysis of the data A significant addition is class of town in every statement. The infrastructure of amenities and facilities available in urban area can best be analysed by taking the class of town into consideration. The additions of the column on civic administration status in statements III and IV and population in statements IV, V also serve the same purpose vis-a-vis the respective statements particulars on municipal finance in statement III in respect of towns in Arunachal Pradesh are not available because there is no separate budget head on municipal finance. There is no statutory or non-statutory bodies managing the civic administration of the town in Arunachal Pradesh. The roads, buildings and other civic amenities are maintained by the Central Public Works Department. Statement IV-A is applicable only for class I and class II towns. No town of Arunachal Pradesh falls under these categories. As such, these statements (III & IV-A) are excluded.

The column on Scheduled Caste and Scheduled Tribe population in Statement IV and adult literacy classes/centres in statement V are equal to the Minimum Needs Programme of the Planning Commission.

Again, if the fire fighting service as in statement IV and medical and educational facilities as in statement V are not available in the town, the name of the nearest town if in the same district, or the name of the nearest district if in the same state or other state where available alongwith its distance from the referrent town is given. This is again a new feature of 1981 Census as it is necessary to identify the areas with no specific facility in every district.

Primary Census Abstract (PCA)

The Primary Census Abstract is an adjunct of the series will give basic information occupied residential houses, number of households, total population, scheduled castes and schedule tribes population, literates, main workers, cultivators, agricultural labourers, workers in household industry and other workers, marginal workers, non-workers and in respect of each area unit upto the circle and town. The Urban/Village Primary Census Abstract provides this information for each village and each urban ward.

An appendix is presented in the case of Urban Primary Census Abstract which contains basic population data block-wise in each urban area. This may be of use to the administrative and election authorities in the urban areas.

PHYSICAL ASPECTS HIGHLIGHTS ON THE CHANGES IN THE JURISDICTION OF THE DISTRICT DURING THE DECADE INCLUDING ITS BOUNDARIES.

In 1971 Census Arunachal Pradesh consisted of five districts. During 1981 Census till Houselisting Operations same districts continued which were in existence during 1971 Census. Arunachal Pradesh Government created four more districts under the Arunachal Pradesh re-organisation of districts Act, 1980, so during enumeration we had altogether nine districts. As a result of re-organisation of the district, Subansiri District was bifurcated into two districts, i.e., Lower Subansiri and Upper Subansiri. Changes affected due to bifurcation of the district, particularly in regards to physical aspects, is reflected below:

Subansiri District before bifurcation	Present position of Lower Subansiri District
1. Subansiri District is a mountaineous tract in Arunachal Pradesh which covers approximately 14,797 kilometre squares of area. This district lies approximately between latitudes 26° 53′ N and 18° 23·5 N and longitudes 92° 41′ E and 94° 22′E	1. Lower Subansiri District is a mountaineous tract in Arunachal Pradesh which covers approximately 13,010 square kilometre of area. This district lies approximately between latitudes 26° 55′ N and 28° 21′ N and longitudes 92°40′ E 94°21′ E.
2. It is bounded by Tibet to the North, Siang District to the East, Assam State to the South and Kameng District in the West.	2. It is bounded by Upper Subansiri to the North Siang to the East, Assam State to the South and East and West Kameng to the West.

Forest

In Arunachal Pradesh the life of the local tribal population is very closely linked with the forests. The people enjoy customery rights recognised under the Assam Forest Regulation over collection of minor forest produce for their bonafied domestic requirements For house construction purposes, each family is entitled to a 300 cft. of round timber tree of loyality etc. Besides, other benefits enjoyed by the people are:

(i) Permits for trees for trade purposes are issued only to local people in order to improve their economy and inculcate business skills.

(ii) 7½% concession in the award of leases and contracts pertaining to forestry and other works.

(iii) Preferential treatment in the matter regarding issue of licenses for forest based industries.

(iv) Preference in employment in the Government. Plantation is done under different Scheme. The up-to-date figure of Lower Subansiri District under different Schemes as follows.—

Afforestation upto 1981-1181 3 hect.

Artificial Plantation upto 1981-5922.75 hect.

Moreover, there are some other scheme of plantations, such as cash crop plantation, Social Forestry Plantation Scheme, etc.

Forest has a great part to play for the economic and commercial development. It is a good source of revenue, on 1980-81 out of 674 88 Lakhs of the State revenue forest department alone gave 383.22 lakhs revenue. The contribution of Lower Subansiri District is 12.84 Lakhs. Forest occupies 61.67% of the total geographical area of the Union Territory. The total forest area of the Union Territory is 51540 Km^2 and reserved forest area is 11934.71 $Km.^2$ The total forest area of the Lower Subansiri District is 5876 Km^2 and reserved forest areas is 1635.38 Km^2. Basing on the forest produces many saw mills, veneer mills have came up. There is proposal for the establishment of a paper mill as the raw material for this is available in this Union Territory.

Forest has promising future for the development of forest based industries. Government has taken various steps to establish forest based industries by issuing licenses, permits and the financial aid to bonafide persons through the Industry Department.

MINERAL RESOURCES

Geological Survey of India has been engaged in geological investigation in this remoted part of India since the inception of this Department by organising expeditous. But despite sincere efforts, so far only 16,000 Sq. Km area has been covered by geological mapping on all scales. Hence, a vast area still remains terra icognita. In course of geological investigations, the geological Survey of India has located quite a few mineral occurrence in the areas so far investigated.

Physical succession, as seen in NW-SE section is given below The geology of both the districts viz., Lower and Upper Subansiri is more or less same except that the Territories are presented only in the Subansiri District.

The foothill zone, i.e., the Siwalik hills, rising to maximum altitudes between 1600 and 1700 metres runs in NE-SW direction. Maximum width of the hills is about 20 Km. North of the Siwalik hills, the outer lower Himalayan hills follow the same trend. It consists of the rocks ranging from Pre-cambrian to Permian age. Further north of the lower outer Himalayan hills is the Great Himalaya. The rocks of this area are not well known. But it is expected that Precambrian schists, migmatites and granitic intrusive of Sela group of Kameng may be present in this region.

The Daporijo crystellines, Potin and Khetabari formations are considered to form a thrust sheet overlying the younger rocks of cambrian to Devonian age. The Khetabari schists etc. structurally, underlie the potin formation but the former is considered younger than the latter. The Gondwana rocks are thrust over the rocks of the quarternary age.

MINERAL OCCURRENCE

(i) **Arsenopyrite.** Arsenopyrite associate, with quartz veins in the shared quartz it is known to occur near the confluence of kale and Ranga rivers.

(ii) **Beryl.**—Sporadic Occurrences of whits bery crystals are known in the pegmatite veins near Yachali about 69 Km. of Kimin-Ziro road.

(iii) **Coal.**—A few uneconomic occurrences in the form of lenses of crushed, semi-euthracitic coal within carbonaceous slates have been reported from the Dikrang and Ranga valley. A 0.3 m. thick "peat' occurs near Sore Village on the right of Kale river.

(iv) **Clay.**—Thin clayey zones in terraces material are noticeable upstream of pitapol along Ranga valley. It is impure gray coloured clay.

Base metals.—The mineral potentiality of polymetallic (cobalt, nickel, copper and zinc) suplhite mineralisation in the Ranga valley near Potin is being investigated by the Geological Survey of India. The mineralized zone is aboue 3 Km. long and about 300-800 meters wide. The mineralisation is in the form of stringers, patches disseminations. Pyrrhotite, chalcopyrite and pyrite constitute to form this polymetallic sulphide mineralisation.

Pyrite. –In the grey silvery mica schists, sulphide mineralisation containing chiefly pyrite with rare chalcopyrite and specks of malachite and azurite has

been noticed within 32 Km. from Ziro towards Tamenon Ziro—Daporijo metalled road.

Mica.—The pegmatite in granite near Ziro, Pitapol and Potin contain small highly crumpled, fractured and strained biotite and muscovite books The occurrences are uneconomic.

Dolomite.—A massive dolomite band of about 1000 m. thickness has been reported from Tali and Muri areas

ELECTRICITY AND POWER

(1) Potentiality of Hydel/Thermal Power.—The accelerated development scheme in Arunachal Pradesh has opened a fresh thinking of power generation from small diesel operated generator sets of capacity less than that of 100 KW to Hydro Electric Scheme Acute shortage ranging from 50 KW to 2000 KW of fossil fuels and crude oil in this area compels one to search for other modes of power generation. Arunachal Pradesh is not lacking the water potentialities which it gets either from prolonged monsoon rains or from melting of snow in high altitudes. If harnessed properly it can supplement the entire anticipated power demand of the nation. At present Micro Hydel Schemes are feeding all districts in small transmission and distribution net works Now the electricity is being used from domestic lighting purposes to formation of small scale industries like timber Saw Mills, Rice mills, Modernised poultry farms, Dairy farms, Oil expellers etc.

(2) The Scheme for Generation of Power present and future.—In Lower Subansiri District, Mai Hydel Project Ph-I has installed capacity upto 2500 KW and recently commissioned Ph-II has got 1500 KW installed capacity which is more than sufficient for this District. Other districts also have sufficient Hydro Electric generating capacity for urban and rural areas. But for future electrification of large number of villages in the district this is not sufficient hence investigation works on Hydel Projects in various circles is going on to at least install ten more Micro-Hydel Projects in remote hilly areas like Tali, Koloriang, Sarli, Huri, Mechuka, Tuting, Tameng etc.

(3) The Scheme for Electrification and its implementation in both Rural and Urban Area.—Village Electrification Scheme provides L.T. supply to the consumers for domestic purposes only. District headquarters and townships utilise most of the energy generated for electric lighting, ventilation, heating and operating small gadgets.

Brief Note on Land and Land use Pattern and Tenancy

At present neither there is any land tenure system nor any tenancy laws in existance in Arunachal Pradesh. Land is being used by the people under customary laws either individually or collectively.

Land reform measures are being introduced for a change in the existing system and for proper implementation of land administrations. Efforts are being made for cadastral survey of land and preparation of land records

A draft land settlement and land reform bill is submitted to the Government of India for approval in order to introduce the same in the Legislative Assembly for proper legislation Only after the enforcement of the proposed Act the title deeds under regular 'Patta' can be issued to the land holders granting rights on the individual land holdings.

AGRICULTURE

Agriculture is the main occupation of the inhabitants of this district. The main crops grown in the district area paddy, maize, millets, kochu. Staple food is rice and maize.

The scope of development in agriculture is divided into two heads.

(a) **Agriculture.**—There is scope for terraces on gentle slopes and wet rice cultivation in lower belt with improved agriculture practices.

(b) **Horticulture.**—There is scope for horticulture plantation on slopes near to the roads. Roads are being constructed in important areas. Temperate and sub-tropical fruits are grown in the district.

Where permanent cultivation is not sufficient jhum cultivation is being done by the farmers. Mixed cropping is done in jhum fields. The farmers are becoming aware of the adverse effects of jhuming and therefore they are gradually reducing jhum cultivation and adopting permanent cultivation, extensively.

The following schemes are being taken up by the Government for the increase of permanent agriculture.

(a) **Land Development.**—The land development works are being done by the Rural Works Department on gentle slopes The farmers are convinced with better result of permanent cultivation so they are also doing land development works themself where possible

(b) **Minor Irrigation Channel.**—Minor irrigation channels are being constructed by the Rural Works Department to irrigate the developed land.

(c) **Inputs.**—The following inputs are being supplied by the Department of Agriculture on 50% subsidy for better cultivation:—

(i) Seeds of high yielding varieties of paddy, potato, mustard, wheat etc.

(ii) Manures and Fertilizers.

(iii) Free Service of Plant Protection.

(iv) Sample Tools and Implements

(d) **Horticulture.**—Assistance is being given by the department of Agriculture for establishment of people's horticulture gardens Seedlings are also being provided on 50% subsidy

The farmers are coming forward for different schemes and they are showing positive response.

Veterinary & Animal Husbandry

Livestock plays an important role in the Socio-economic life and development of the people of Arunachal Pradesh. In rural areas, the economic status of a family is assessed with the number of animals especially Mithun a family possesses. Meat is the staple food for the people. Recent census revealed that each family has an average cattle 2 Nos. Pig 3 Nos., Sheep and Goat 1 No., Poultry 7 Nos.

In comparison to other parts of the country the potentiality of livestock rearing found to be congenial due to high rainfall and abundance natural green grasses all over the State.

Taking into consideration of the above facts, the Animal Husbandry activities are divided mainly into 3 aspects:

1. Animal Health,
2. Livestock Development and Production,
3. Education and Training.

1. Animal Health Coverage

For effective animal health coverage, Veterinary Aid-Centres at village level, Dispensaries at Block level are functioning.

Till the end of the year 1981-82. 12 Veterinary Dispensaries were set up in different places of Lower Subansiri District as mentioned below:—

1. Doimukh, 2. Sagalee, 3. Ziro, 4. Palin, 5. Koloriang, 6 Hutı, 7. Raga, 8. Tali, 9. Nirjuli, 10. Nyapin, 11. Ziro and 12. Yazali.

In addition to above 8 (eight) Veterinary Aid-Centres were set up in the following places:—

1. Kimin, 2. Nyapin, 3. Mengio, 4. Ziro, 5. Balijan, 6. Sarli, 7. Boa-Simla, and 8. Yangte.

2. Livestock Development and Production.

In view of vastness of the territory and abundant green pasture available, there is ample scope for the development of livestock in Arunachal Pradesh. Perspectively basing on traditional Animal Husbandry practices already in vogue the Union Territory has been divided into 3 main zones.

1. Foot hill areas covering altitudes of 500 to 3000 feet occupying nearly 30% of the total area is conducive for rearing of cattle, pig, poultry and goats.

2. Broad valley and plateau ranging from 3000 to 6000 feet, covering nearly 35% of the total area is conducive for rearing hill cattle, mithun, sheep, and poultry.

3. The third upper belt having the altitude of 6000 to 11000 feet covers area of 35% of the total area suitable Animal Husbandry practices in this area include sheep, yak, zo-zomo etc.

Keeping in view the rainfall and adoptability of different climatic zones as described above, emphasis has been laid on extensive cross-breeding programme to improve the local livestock for more production of milk, meat, eggs etc.

Cattle Development

On cattle development, besides distribution of breeding bulls in villages so far 9 cattle up-grading centres have been set up in the following places of Lower Subansiri District with the objective to up-grade the local cattle population. Cattle up-grading centres have been set up in 1. Doimukh, 2. Joram, 3. Yazali, 4. Palin, 5. Raga, 6. Talo, 7. Kikila, 8. Balijan and 9. Deed.

Besides, a Cattle Breeding Farm one at Ziro and another at Nirjuli with the objective to produce cross-breed stock have also been set up in the district.

The bulls produced in these farms are distributed to the people for further multiplication. Programme is to distribute more breeding bulls and set up more cattle up-grading centres in order to provide effective coverage of up-grading the local stock.

Poultry Development

One central poultry farm at Nirjuli has already been set up and 4 more Poultry Farms in the district have been set up. A few private poultry farms are also coming up through Government subsidy. Besides, one central hatchery attached to the Central Poultry Farm at Nirjuli has been approved. Besides, the above programmes poultry units on subsidy are distributed to the farmers under PLAN and IRDP schemes.

Piggery Development

Piggery has a great potentially in Arunachal Pradesh. It makes a staple food in day-to-day life of Arunachal Pradesh.

The Central Piggery Farm at Karsingsa has supplied exotic pigs to Assam, Meghalaya and Nagaland besides meeting the requirement of the State. The other farm, Regional Pig Breeding Farm, sponsored by North-Eastern Council is set up recently in Lohit District at Loiliang with 100 sows capacity.

Subsequent distribution of Exotic Pigs to the deserving farmers for cross breeding and multiplication have been taken up. A simultaneous subsidy programme on the kind basis is launched for this purpose in and around Loiliang Project.

Sheep, Goat and Wool Development

Sheep of Arunachal Pradesh have fine wool with a long staple length. Therefore, cross-breeding programme with Russian Merino is taken up. Performance of cross breed is better in terms of wool and

body weight. A sheep breeding farm with exotic Russian Merino Sheep has already been set up in West Kameng district. Of course there is no farm as such in Lower Subansiri District.

Other Livestock Development

1. **Yak.**—The high altitude area ranging from 6000 ft and above is suitable for rearing of Yak cross-bred (Zo-Zomo). The cross breed female (Zomo) are important from dairy point of view having higher percentage of fat content The livelihood of local inhabitants of this particular zone depends on milk products of these cross breeds. Therefore, emphasis has been laid on supply and multiplication of more cross-breds through deserving breeders of the locality.

2. **Mithun.**—Mithun is a rare animal reared by the farmers of Arunachal Pradesh. The Animal is Socio-economically important to the people of these areas.

A cross-bred female Mithun (Mithun male Siri Female) is potentially utilized as Dairy Animals having higher percentage of fat contents.

Feed and Fodder Development

Fodder development is another aspect which goes side by side with livestock development projects for producing the required seed materials and fodder slips for fodder production There are already 9 (nine) fodder farms set up in the territory. 3 (three) of these are in Siro Yazali and Nirjuli of Lower Subansiri District.

One Feed Mixing Plants at Nirjuli has also been set up for mixing and producing balanced feed for livestock.

Education and Training

1. Programmes envisaged under the scheme are award of stipends for Veterinary graduation of fill up the shortage of Veterinary Doctors.

2. In service course of Training for graduate and under-graduate staff.

3. To meet up the manpower shortage a school of Veterinary Science and Animal Husbandry has been started, for para Veterinarians temporarily at Gram Sevak Training Centre, Pasighat, and a first course of training was started with 25 trainees in February, 1981.

Another Training Centre to train the farmers on sheep shearing and grading has also been set up at Sangti in West Kameng District where every year 20 to 30 farmers are trained to acquaint them with modern technique of sheep shearing and wool grading.

Short term training programmes to acquint the farmers with various Livestock Development aspects are also carried out every year.

Co-operative Dairy Farming

Collection of milk from Dairy owners and subsequent distribution to the consumers has been started at Tezu, along with encouraging result.

FISHERY

Lower Subansiri District offers good scope for development of fishery and the people are increasingly coming forward to take up this industry as a subsidiary income.

This District can boost the unique position of paddy-cum-fish culture. Popum and Poma rivers situated within a radious of 20 KM. from New Itanagar is a virgin land for reverine fishery as and when road communication will be developed. These resources could be tapped to increase supply of fish.

Fish is one of the items of dietary to the people of this district. Fishing is also a ceremonial ritual both as a form of sports and traditional custom. To them the culture of fish in ponds or in other ways was quite unknown before the introduction of fishery department in this district.

1. Fishery activities started in this district since 1959-60 and have so far been concentrated to pond culture through villagers on payment of 50% subsidy by the Government against constructional cost. The villagers are supplied with fish seeds, feed and lime and gears and tackles at 50% subsidised cost.

The construction of domestic fish ponds by the villagers at 50% subsidy was first taken up during 1962-63 and till 1981-82 total number of 506 ponds of different specifications covering an average water area of approximately 20 hectares have been constructed.

Considering the geographical condition of this district an exotic variety of fish viz. com. carp Spp Cyprinus Carpio vart. Specularies (Mirror Carp) and connics (scale carp) have been introduced and found quite suitable. The villagers are enjoying the harvest from the ponds constructed upto 1979-80 and the average harvests have been estimated % 50 Kg. annually, from each productive pond.

So far approximately 4.5 lakhs of fish seeds have been distributed for stocking in the ponds. To cenater the demand of fish seeds a small Government Fish seed multiplication centre with an water area of 0.8 hectare was established at Gumto near Doimukh during 1974-75. But due to shifting of Arunachal Pradesh Capital at Itanagar this project has become a commercial farm for supply of table fish. The revenue receipts of the project from the inception reveals that this project is running satisfactorily.

Moreover, to make the fish seeds readily available to the interior villages like Koloriang, Huri, Nyapin etc. a small fish seeds nursery was established at Koloriang during 1976-77 with an water area of 0.1

hectare. This small fish seed nursery is also running satisfactorily and supplying fish seeds to the villages. Till 1981-82 approximately 1.5 lakhs of common carp fish seeds were produced and supplied. To meet the demand of table fish from the Government staff of Itanagar and public a natural beel was reclaimed during 1979-80 covering water area of 1.75 hectares.

Similarly another project was taken up during 1979-80 at Nirjuli with the idea to extend it upto 1.5 hectares.

One natural lake situated about 5 K.M. away from New Itanagar covering an area of 16 hectare was taken up by the department for the further improvement during 1975-76. Fish seeds of economic value viz., labeo rohita, catla catla, C. mrigala and com. carp were stocked in the lake during 1977-78 and it is found they are thriving and growing well. During 1981-82 approximate 1 Mt. of fish have been harvested and marketed at New Itanagar and Itanagar.

Further, to cater the demand of villagers for fish seeds, specially against paddy-cum-fish culture in Apatani Plateau which is a unique programme in this district, a high altitude fish seed farm has been sanctioned under NEC grant The farm is situated about 3 Km. away from Ziro towards Siro named Tarin. Rs. 22.78 lakhs was sanctioned for this farm for developing water area of 3 hectares in 4 (four) phases. The constructional works were being executed by the R.W. Department from the year 1980-81 and will be completed by 1983-84. It is expected to produce approximately 3 million of viable fish seeds from this farm annually.

The staff component of the farm is sanctioned as under:—

(1)	Farm Manager	1 No.
(2)	Fishery Demonstrator	2 Nos.
(3)	Office Assistant	1 No.
(4)	Fisherman-cum-Watchman	6 Nos.
(5)	Office Peon	1 No.
(6)	Driver	1 No.

Paddy-cum-fish culture in Apatani Plateau, Ziro

This is a unique pisciculture activity in Lower Subansiri District at Apatani plateau, Ziro. This programme was taken up by the fishery department during 1964-65 in Apatani plateau, Ziro with 23 plots of paddy fields covering in average water area of 10 acres and was found successful. From 1968-69 this programme was taken up intensively with successful achievement. During 1981-82 approximately 300 hectares of paddy fields were covered under this programme. Approximately 2 lakhs of com-carp fish seeds were distributed to the villagers on payment of full cost @ Rs. 100.00 per 1000 Nos. The actual harvest was estimated approximately at 24 Mt.

The main bottleneck in the field of fishery development activities in the district has been the acute shortage of technical field staff though the activities have been extended upto the border areas like Huri Sarli, Tali etc

INDUSTRY

The Arunachalees have a tradition of artistic craftsmanship which manifest through various products they produce. In the past years the emphasis was for revival and revitalisation of the traditional handloom, handicrafts and other industrial endeavours. The notable features were the establishment of craft-centres. Comprehensive production centres, extension of the sericultural programmes and establishment of small-scale industries.

The following area have been identified as Growth Centres for Small-Scale Industries.

(a) Doimukh

(b) Ziro

(c) Yazali

2. There is also scope for development of the following industrial units under small-scale industries:

(a) Forest Based Industries: (1)	Saw Mills, Wooden furniture, Cane & Bamboo furniture, Fifles buts, wooden electrical accessories, venner mill, Railway sleeper etc.
Agro-cum-plantation based Industries :	Bakery, Poultry, Cattlefeed, Atta, chaki, on extraction, Rice Mill, specices grinding chitranala, plantation, horticultural garden etc.
(b) Cottage Industries :	Handloom, Handicrafts, Knitting, Canes and Bamboo Industries, Tailoring etc.

In order to improve the economic condition of the local people and to sale their product, the Government is providing marketing facilities through the emporiums. The produce of the local people are being purchased and sold through emporium. The Government is providing working capital in this respect. Beside the marketing facilities, the Government is also distributing tools and equipments to the passed-out trainees/skilled men in different trades on 50% subsidy basis for improving the efficiency of the workers and for the expansion of the traditional craft.

There are seven Craft, Centres under Lower Subansiri District, which impart training in Blacksmithy, Carpentry, Knitting, Weaving & Bellmetal. The mechanised carpentry training is also being provided at Ziro craft centre in order to improve the efficiency of the workers in modern tools and equipments. The Government is also running the production wing to engage the passed-out trainees in the craft centre. The Government also provides incentives to the passed-out/skilled persons for establishing the Small-Scale Industries (SSI) Units by themselves.

TRADE AND COMMERCE

Ziro and Itanagar have brisk commercial activities the former catering the need of over 30,000 population. The Apatanis with their good business skill have also greatly added to the growth of trade and commerce in the district. Business is, however, mainly confined to articles of daily use.

There are 7 air fed stations with an annual tonnage of about 1,500. Land-fed places are covered by 27 fair price shops.

Trade in apple has started in a small way and until the means of communication are improved, trading will be mainly confined to articles of daily necessity only.

TRANSPORT AND COMMUNICATION

The District has a comparatively good system of road communication. This has been possible because of easy maintenance facilities. Further, the Apatanis have proved skilled drivers and mechanics. There are at present 14 daily services run by the State Transport Department, 4 Anchal Samities and 4 by Private Operators.

Major Social and Cultural Events

The district is predominently inhabited by the local Scheduled Tribes. People of other communities are outsiders who are temporarily staying there for their livelihood only. The local Scheduled Tribes, therefore, are only concerned with the major social and cultural events of the district. Social and cultural events are very much associated with their life. As such the social and religious life, the environments and other relevant aspects of the tribal people are also described in the following paragraphs alongwith the major social and cultural events for better understanding of their values and implications in the real social life of the people.

The Apatanis, and the Nishis are the main tribes inhabiting the Lower Subansiri District. The Nishis are also known by different names as the Nishangs or Nissis, in certain areas of Lower Subansiri District. All these tribes are having close relation in so far as their socio-economic aspects are concerned. Since time immemorial the tribes are maintaining their traditions and customs with great devotion. It is invariably seen that the Sun, the Moon, the Earth and the Natural elements around them play a vital role in their day to day activities which are supported by their social and religious norms.

It is with these factors in background that their important festivals are performed. The different festivals associated with the life of the people of the district are as follows:

The major festivals of the Apatanis are the Dree, Myokoh and Murung whereas the major festivals of the Nishis are the Sirom-Molo-Sochum, Nyckum and Yulo.

Dree.—It is the seasonal festival of joy and glee. It is celebrated every year, during the month of July (When plantation of all the crops are over) for the wellbeing of the seasonal crops like paddy, millet etc.

The season is marked by maturity of straw berries and cucumber which are the only two fruits utilised in the celebration of Dree by the children as well as elders of the society. In this community festival the children normally take maximum parts

Now a days this is being celebrated in a larger scale participation of both Administration (including festival grants and aids) and Local Tribal Community with the innovation of modern sports

Myokoh.—It is the most highly solemnised community festivals of the Apatani society. It is purely a religious ceremony which is observed for the general wellbeing of the whole Apatani society as well as the others.

It is celebrated every year during the month of March. For full participation of each and every Apatani, the whole Apatani villages of the plateau have been divided into three major groups— the first group consists of villages like, Hija, Duta, Mudang-tage, Bamin and Michi, the second group consists of Hong Village alone and the third group consists, Hari, Kalong, Tajang and Regu The actual solemnisation ceremony is conducted alternatively among the three major groups and the rest groups take full participation with the villages who actually perform the ceremonies. Those persons who stay away from own original village are to follow the ceremonies along with the people of his/her original village group.

The festival lasts for one month and is participated by each and every Apatanis with great enthusiasm, devotion and respect. The administration participation in this festival is almost nil till now, due to imposition of certain religous taboos. This is the only community religious festival which is respected by every Apatanis with great devotion and solemnity binds the whole Apatani society as one.

Murung.—It is a festival of abundant and richness of wealth. It is an individual family festival which is generally celebrated in the month of January every year.

Although this is an individual family festival, the entire Apatani as well as the other are also openly invited to take part with a liberty to eat & drink and enjoy freely.

It is being celebrated for the wellbeing of the individual family members alone, specially with a hope to be blessed with more wealth and prosperity for that individual family members.

Sirom Molo Sochum

The biggest festival of the Nishi is called Sirom Molo Sochum This festival is celebrated in the Nishi month of 'Ram Po-Lo' (December) every year. Before this festival all houses & granaries are rebuilt and all the crops like dry paddy, millet, maize are harvested & stored in the granaries. For the festival householders cook rice, meant and prepare rice-bear (apong) and entertain guests & receives blessings for more abundant crops next year. It is belived by the Nishis that the more the guests are satisfied with food & drink, the more crops will grow in the coming year.

On the day of the festival all good singers of the village sing old history of the Nishi people. In the song it is described that the God Nima Teni did not worship the goddess of crops & the goddess therefore non away to the land of summer (Dogo Dekani). But Nima Teni went to the land of the summer & entreated

the goddess of crops & ultimately married her. Nima Teni got all kinds of seeds from the goddess and learnt the method of cultivation from her.

"Prayers are offered to the goddess of crops requesting her not to go away, but to fill the granaries with crops. If some food-staffs disappears over night or foot prints of some animals are seen, then it is believed that, the goddess came to the people & the crops will be abundant. During this festival the people sing, dance & drink beer to celebrate it".

Nishi Nyokum

The month of August every year is the time for celebrating Nyokum or the worship of goddess of crops (Lakshmi) & other gods and goddess.

"On the first day before an alter with images & symboles of the gods & goddess, the priest start the puja by chanting prayers to the wis girls dance & Sing to propitiate the unseen god & goddess. The sing about abundant crops and good will, health and unity among all the people, joy & mutual co-operation, and piece and plenty every year."

"On the second and concluding day the villagers of the neighbouring villages perform their Puja in their villages and come in long procession. The sacrificial animals like dogs, pigs and chicken are either carried or hang in long bamboo-poles. On the arrival at the place of worship the people go round the alter chanting and the atmosphere seen to be surcharged with a feeling of devotion and godliness. The animals are sacrified to the Wis and after invocation of the blessings, the puja comes to a conclusion".

Yulo

The Nishis perform a number of religious ceremonies of which one called 'Yulo' is important. 'Yulo' is performed for the welfare of the Society. The ceremony is marked by a sacrifice of 'Mithuns' in which the priest collected the blood of the animals in a bamboo tube and hangs it in front of his house as a mark of distinction.

Administrative Participation

The people of all the areas both local and others including tribals and non-tribals irrespective of caste, clan and creed uniformly participate in the Dree festival of the Apatanis and the Sirom-Molo-Sochum. Nyokum and 'Yulo' festivals of the Nishi people. Which are celebrated in the circle Subdivision or district head quarters on a community basis. In case of Myokoh festival of the Apatanis the administration participation is completely nil since certain religious taboos are imposed in performing this worship (Puja). The Arunachal Pradesh Administration extend all possible help including financial aids, in the form of festival grants etc. to make this festival a success.

The publicity development plays an important role to make this community festival a success by providing public address equipment and organising cultural programmes alongwith the traditional songs and dances of the Apatani and Nishi people in their respective festivals.

Trends towards change and social change

Change is the law of nature. The social structure of a society is subject to incessant changes. Social change would usually mean the observable difference in any social phenomenon over a period of time. It can be inferred that social change refers to the modifications which take place in the life patterns of people, that is social change would mean variations of any aspects of social processess, social patterns, social interaction or social organisation. Simply it is a change in the institutional & normal structure of the society.

Social change occures in all societies, both of primitive as well as civilized societies. But the speed and extent of change may differ from society. Some changes occure rapidly while other slowly. As the process of social change of a society is an universal phenomenona. The different groups of population of Arunachal Pradesh are not exceptional in this respect. They have also been undergoing through a process of socio-cultural change, due to influence of various factors.

The Apatanis and the Nishis form of the major population groups in Lower Subansiri District of Arunachal Pradesh. Their society is also undergoing a process of socio-cultural change like other societies.

In the villages, the members of a clan live by forming clan cluster. The socio-cultural & socio-political life of that clan centre round the assembly platform. The process is gradually changing with the growth of population, the clans land in the village is not sufficient due to which some of the clan members have to shifted to some nearby areas, within the jurisdiction of the village and gradually some small villages are going to develop. The members of the newly formed villages identify themselves as a group of members of the original village, but not a clan member although the religious relation is continued with the members of original clan. While some of the villagers, mostly those who are educated and business minded, shift to nearby town. Specially in Apatani plateau, two such commercial centres have grown up one at Old Ziro and other at Ziro (Hapoli), the district headquarter. In those two places they build double storied hill type houses Assam type houses and R.C.C. buildings with modern amenties like electricity, water supply etc.

In the villages, the youths who are studying in school, usually prefer to live separately. They build a small house near the original parent house and some of them come to live with their relatives at township and study there.

The social change that is observed among the Apatanis and the Nishis are mainly due to the impact of modernization. The factor responsible for modernization and social changes are (a) Biological factor,

(b) Physical factor, (c) Technical factor, and (d) Cultural factor. The process of social change that occur among the Apatanis and the Nishis are due to impact of communication and transport, establishment of urban centres, introduction of improved technology and welfare measures, spread of education extension of medical care and other facilities.

Archaeology

In Lower Subansiri District there are certain important places of archaeological importance. Though excavation has not been uniformly carried out all over the district, in 1979 D.K. Duarrah reported three neolithic celts found from Damins, (Raga) circle of Lower Subansiri District. Two of these are ground axes & one is a working part of an axe.

A very old fort known as Ita fort falls within Itanagar, the capital of Arunachal Pradesh. It could be built between 1350 & 1450 A.D. during the period of Muslim invasions on Assam from the west & Ahom inroads from the east. The fort could be identified with mayapur of a local king Ramchandra alias Mayamatta and his son Arimatta.

BRIEF ANALYSIS OF THE VILLAGE AND TOWN DIRECTORY AND PRIMARY CENSUS ABSTRACT

Some inset tables based on Primary Census Abstract Village Directory and Town Directory are systematically placed in this chapter. Both census and non-census data are compiled in those tables in such a way that readers and data users will get almost all the important basic statistical figures of the districts in the inset tables. Inset tables, can be divided in three parts namely inset tables based on Primary Census Abstract data, Village Directory data and Town Directory data. There are as many as 19 (nineteen) inset tables. Table nos. 1 to 9 related to data based on Primary Census Abstract Table Nos. 11 to 15 related to data based on Village Directory Table Nos. 16 to 19 related to data based on Town Directory.

The Primary Census Abstract (PCA) has been compiled manually on a full count basis. Inset tables based on P.C.A. data mainly deals with different features of population of a area upto the Circle level. The main features are rural and urban break up of population, decadal changes of population, no. of villages in different population ranges, proportion of Scheduled Castes and Scheduled Tribes population to total population, literacy rates in different population ranges.

Table No. 1 to 9.—Table No. 1 depicts the rural and urban break up of population. The position of Lower Subansiri district among all districts of Arunachal Pradesh is 2nd in area and 2nd in population. 1981 Census counted 112,650 population in the district. Total rural population is 98,534 and they are spread over 770 inhabited villages Total urban population is 14,116 and they are distributed among two newly declared towns in Lower Subansiri District. The proportion of rural population to total population of the district is 87.47% and proportion of the urban population to total population is 12.53%. The average size of the population of the circles is 7510. Ziro Circle is having highest population 27409 which is more than triple the size of average population. Sarli circle is having the lowest number of population 2564. The proportion of male population to total population of the district is 45.29% and proportion of female population to total population is 42.18%. The most remarkable feature is that in Palin, Sagalee, Mengio and Nyapin Circle female population is more than male population whereas in all other circle male population is more than female population.

Table No. 2. indicates decadal changes in the distribution of population in the circles and in the district as a whole. In 1971 the population of Arunachal Pradesh was 467,511 and population of India was 547,949,809. In 1981 Census the population figure of Arunachal Pradesh is 631,839 and population of India is 685,184,692. The decadal variation of population of Arunachal Pradesh is 35.15 per cent and decadal variation of population of India is 25.05%. As such, it can be said that trend of increase of population in Arunachal Pradesh is more than the trend of increase of population of India as a whole. Now coming to the decadal variation of population of Lower Subansiri District is (+39.22) which is higher than the Arunachal figure (+35.15). When we look at circle figures of decadal variation at column '8' we find percentage decadal variation is highest in old Itanagar circle for rural population. The decadal variation of urban population can not be found for both Old and New Itanagar townships because both the places have been declared as Census towns during 1981 Census only. The decadal variation for rural population of Old Itanagar is 180.65 per cent followed by New Itanagar 148.73 per cent. These percentage are much higher percentage then average percentage (+39.22). The decadal variation for both Old and New Itanagar is significant because influx of population happen during last decade when Itanagar was selected as the Capital of Arunachal Pradesh in 1972 and gradually started shifting the headquarters from Shillong to Itanagar. The decadal increase of population in Tali Circle is 7.98 per cent which marks lowest among all the circle of lower Subansiri District.

The table No. 3 reflects the population size of the villages. Most of the villages are small in population, size. Out of total 770 villages in the District 669 villages are having average populations of below 200 i.e. 86.88 per cent of villages are having average population of below 200. There is only one village having population 5000—9999.

Table No. 4.—In Arunachal Pradesh there is no indegenous Scheduled Caste as such. Scheduled Caste population that were enumerated during the 1981 Census were either Government employees or they were inducted from outside for construction works by CPWD/RWD etc. The proportion of Scheduled Caste population to total population of the Union Territory is, therefore negligible. Table No. 4 also corroborates the above fact in respect of this district. The table shows that out of total 770 villages in the district 752 villages do not have any Scheduled Castes population. Other villages having Scheduled Caste population constitute only 2.34% of the total number of villages in the district, and this Scheduled Caste population are very scarcely scattered in as many as eighteen villages.

Table No. 5.—Scheduled Tribes are almost the sole inhabitants of the villages of Arunachal Pradesh. Other are very negligible figure in comparison to Scheduled Tribes population. This is same in this district, also as reflected in Table No. 5. All the villages of the district are having Scheduled Tribes Population.

Table No. 6.—Arunachal Pradesh is predominently inhabited by Scheduled Tribe population. Scheduled

Caste population and other non-tribal are quite insignificant. In the town, however, Scheduled Caste and other non-tribal population are more than their counterpart in rural area, because working population, particularly in public sectors located in urban area are mostly from other states of the country. The percentage of Scheduled Tribe population of Old Itanagar and New Itanagar towns are 24.90% and 18.54% respectively and percentage of Scheduled Caste population of New Itanagar and Old Itanagar town are 2.56% and 3.73% respectively.

Table No. 7.—The table gives literacy rates by population ranges of villages. It will be observed from the table that bigger the villages more is the literacy rate. This indicates that bigger villages are provided with more educational facilities. In this district as in Arunachal Pradesh maximum number of villages are small in population size. In Lower Subansiri District out of total 770 villages 669 villages are within the population range of below 200 and literacy rate in this range is 14.71% only. Literacy rate of Lower Subansiri District for rural area is 14.61. The literacy rate increased during last decade very rapidly.

Table No. 8 presents the literacy rate of town. The literacy rate of Capital complex of Arunachal Pradesh, the two newly declared towns of 1981 Census are 54.48 and 53.22 respectively. The rural literacy rate of Lower Subansiri District is 14.61 and average urban literacy rate 53.79. The relative position of the rural and urban literacy rate in Lower Subansiri District indicates that urban literacy rate is much above the rural literacy rate. As per literacy rate counted during 1981 Census the position of New Itanagar town is third and position of Old Itanagar town is 4th among all the towns of Arunachal Pradesh.

Table No. 9 shows in Palin, Sagalee, Mengio, and Nyapin circles female population dominated male population, whereas in all other circles of Lower Subansiri District male population is more than female population. Scheduled Caste population of the district is 0.52% to total population of the district. Old Itanagar Circle is having highest percentage (2.82%) of Scheduled Caste population closely followed by New Itanagar Circle (2.39%). The Concentration of Scheduled Caste population is more in urban area In New Itanagar town it is 2.56% and in Old Itanagar town it is 3.74%. It is because of the fact that in Arunachal Pradesh there is no indegenous Scheduled Caste as such. Alongwith other people they were inducted from outside mainly to urban area for construction works or as Government employees. Tali, Doimukh, Mengio, Sarli, Damin and Nyapin circle do not have any Scheduled Caste population. Scheduled Tribes population of the district is 77.77% of the total population of the district Mengio circle registers highest percentage (99.82%) of Scheduled tribe to total population of the circle. Kimin circle is having lowest percentage (29.77%) of Scheduled Tribe population. In rural areas of Old Itanagar the Scheduled Tribe population (38.23%) but in urban area it is (24.90%). The relative position of rural and urban Scheduled Tribe population does not vary much in case of Old Itanagar circle. In case of New Itanagar circle the position is altogether different. In rural area Scheduled Tribe population is 83.06% whereas in urban area it is only 18.54%.

As regards literacy, the percentage of literates to total population is 20.79% for Arunachal Pradesh as per 1981 Census. The percentage is 19.52% for Lower Subansiri District. Old Itanagar circle tops the list in having highest percentage (53.01%) of literates among all the circles of the district followed by New Itanagar circle (51.42%). It is because of the fact that urban literacy rate contributes greatly increase the total literacy rate of both Old and New Itanagar circle. The literacy rate of Nyapin circle is only 3.49%, which is the lowest among all the circles of the district.

Total main workers of the district is 52.80% to total population of the district. Among all the circles Tali circle is having highest percentage 56.57% of main workers and the lowest percentage is shared by Balijan circle having 42.09% of main workers. Female main workers dominated male main workers in Palin, Raga, Tali, Mengio and Damin circles. It is mainly because greater proportion of female members are engaged in agricultural works. As regards percentage of marginal workers, total workers, and non-workers to total population, Kimin and Raga circle do not have any marginal workers at all. Marginal workers in female folk is more in almost all the circles because generally female members engaged in agricultural activities for seasonally i.e. for less six months of the year only. Nyapin circle registers highest percentage (7.27%) of marginal workers. It is interesting to note that the percentage of female marginal workers of the district is almost 7 (seven) times more than that of the males counterpart. Tali circle is having highest percentage (65.57%) of main worker and also highest percentage (66.68%) of total workers. the circle obviously registers lowest percentage (33.32%) of non-workers percentage of workers in all the circles is within the range of approx. 45% to 66%, the percentage of male workers being in the range of about 50 to 72 per cent and percentage of female workers being within the range of about 10 to 68. So far the inset table (Table-1—9) based on Primary Census Abstract data have been discussed. The inset tables (Table No 10—15) based on Village Directory will now be discussed. Scope of Village Directory was discussed broadly in the preceding chapter. Inset tables on Village Directory data mainly deals with amenities availables in the villages such as distribution of villages having different amenities, proportion of rural population served by the different amenities, villages not having amenities but amenities available at different distance distribution of villages according to the distance from the nearest town and availability of different amenities, distribution of villages according to population ranges and amenities available, main staple food in the majority of villages in each circle.

History of the development of Arunachal Pradesh is of very recent past. Number and qualities of amenities available in the villages are lacking far behind in comparison to other developed areas of the country due to the fact that Arunachal Pradesh had a late start on development activities. Though considerable progress has been made during last decade yet it may take some more years to achieve national standard in all respects.

Table No. 10.—The table shows distribution of percentages of villages having different amenities. Percentage of villages having different amenities are worked out in relation to the number of inhabited villages in the circle. Ziro circle is the largest circle among all the circles of Lower Subansiri District There are as many as 99 villages in that circle. Out of 99 villages 26 villages are having educational amenities. The proportion of villages having educational amenities in Ziro Circle (26.26%) is the second highest in the district. The first position goes to Kimin circle (26.67%). So Sarli circle stand last in position (8.51%). So far as the district is concerned 17.69 percent of the villages are provided with educational facility of the one sort or the other.

The proportion of villages having medical amenities is the highest in Old Itanagar Circle, the percentage being 16.67 percent. In New Itanagar circle out of 7 villages no one is having medical amenity. Looking at the district as a whole, only 4.03% of villages get the benefit of medical service

Percentage on number of villages having drinking water facility is 100% in all the circles of Lower Subansiri District with the exception of Mengio circle where two out of 37 villages do not have drinking water facility. This shows drinking water facility of the one type or the other is available in almost all the villages of Lower Subansiri District. In most cases however, there are only natural water sources which cannot be treated as safe drinking water. Piped water supply as available in many of the villages is also not sufficient to meet the standard of sanitation.

Regarding post and telegraph facilities, Arunachal Pradesh is lacking far behind in comparison to other parts of India. In the circles of Lower Subansiri District Postal facilities are available only in the circle headquarter, except for Ziro Circle, where postal facility is available in the circle headquarter at Ziro as well as in the Yazuli village. But Balijan, Mengio and rural areas of New Itanagar Circle do not have any kind of postal facility. As far the district as a whole, only 1.95% of the villages are provided with postal facilities.

The position of markets/hats in Arunachal Pradesh in general and in this district in particular is very much disappointing. Out of total 770 villages only three villages of Kimin and Ziro circle are having market/hat. In fact markets/hats in practical sense (where almost all necessary consumer goods are available) is rarely held in Arunachal Pradesh. Communication difficulties, very thinly populated area and scattered settlements of the people are the most likely bottlenecks to develop market/hat in these areas. However, necessary arrangement for supply of consumer goods and other necessary articles to the villagers have been made by the Government through the shops maintain for control by the Government in almost all the circles headquarters. Besides, one of two regular small shops are available in a few big villages The concept of weekly or periodic market therefore does not appear to have much relevance in this district and in the territory at large.

Communication is the constant problem of Arunachal Pradesh as a whole and with no excepting to Lower Subansiri District. Though considerable progress has been made during last decade but still even most of the inhabited areas of the district are not yet approachable by vehicle. Only 2.99% of villages in the district are communicated by road transport which is the only means of communication in this district. Goods are carried to the interior places by porter but in case of inaccessable areas air dropping is the only means of supply of consumer goods. Kimin Circle is maintaining the highest percentage (26.67%) of villages having communication centres among all the circles of Lower Subansiri District. Old Itanagar circle comes next in position (33.33 percent). Twenty three villages of Doimukh, Kimin, Ziro, Old Itanagar and New Itanagar circle are provided with communication facilities

Approach to interior of Arunachal Pradesh is mostly by foot tract or foot path. Even where there are road communication these are mostly Kacha road. The proportion of Pucca road is very low. Among all the circles of Lower Subansiri District Old Itanagar circle tops the list in percentage (50 percent) of villages having pucca road. The next position comes to Kimin Circle (46.67 percent) Palin, Sagalee, Doimukh, Balijan, Tali, Mengio rural areas of New Itanagar, Sarli, Nyapin, Koloriang and Damin circles do not have any approach of pucca road. As regards district as a whole only 6.98% of the villages have approach by pucca road.

Coverage of power supply in Arunachal Pradesh is very much limited with no exception to Lower Subansiri District. Kimin circle has the highest percentage (46.67 percent) of villages having power supply followed by Ziro circle (66.52 percent) only 3 circles i.e. Raga, Kimin and Ziro circles have power supply and rest 12 circles of the district do not have power supply. In the entire district only 4.29% of villages are provided with the facility of power supply.

The Table No. 11 deals with percentage of rural population served by different amenities of education, medical, drinking water, post and telegraph, market/hat, communication, approach by pucca road and power supply.

Kimin circle has the highest percentage (85.81) of rural population served by the amenity of education among all the circles of the district. Ziro circle stands second in proportion (70.40 percent) followed by Doimukh circle (61.29 percent). Damin circle gets lowest position (23.07 percent) among all the circles

of the district. The proportion of rural population of the district served by the amenity of education is 47.43%.

72.44 percent of the population of Kimin circle is served by medical amenities which tops the list among all the circles of Lower Subansiri District. Doimukh circle ranks second (45.61 percent) followed by Old Itanagar Circle (42.23 per cent). The rural population of New Itanagar circle are not served by medical amenity. The proportion of other circles are very poor as reflected in the table, same is the case with the district as a whole (19.32%).

Cent percent of the rural population is served by the amenity of drinking water in all the circles except Mengio circle where 89.01 percent of population is served by drinking water amenity.

Among all the circles Kimin has the highest percentage of rural population (72.44 percent) is served by Post and Telegraph services. The position of Doimukh circle is second (45.61 percent) followed by Old Itanagar Circle (42.23 percent). Ziro Circle comes next in percentage being 22.91% of the population. The population of Balijan, Mengio and New Itanagar circle are not served by Post and Telegraph amenities. New Itanagar circle has, however these facility in New Itanagar town only. The courage of Post and Telegraph facility in the district as a whole is very low being 15.74% of the total rural population.

Table reflects that 72.44 percent population of Kimin circle are served by the amenity of market/hat and in Ziro circle 22.91 percent population are served by the amenity market/hat. Market/hats are not available in any another circles of this district.

Kimin circle is maintaining highest proportion (85.81 percent) of rural population served by the amenity of communication followed by Old Itanagar Circle (74.42 percent). There is no communication in Palin, Sagalee, Balijan, Tali, Mengio, Sarli, Nyapin, Koloriang and Damin circles in other words 75% of the circles or 54.68% of the rural population are devoid of the communication facility.

Kimin Circle holds highest percentage (89.95%) of rural population served by amenity of approach by pucca road followed by Old Itanagar Circle (88.80 percent). Next position gets ziro Circle (69.61%). Lowest proportion (19.90 per cent) is marked by Raga circle. Remaining 11 circles of the district do not have any approach by pucca road.

The coverage of power supply is highest in Kimin circle (88.78 percent) followed by Ziro Circle (66.52 percent). Next comes Raga Circle (12.26 percent). 75% circles of the district do not have power supply.

Table No. 12.—depicts distribution of villages where certain amenities are not available but availble at distance range of — 5 Kms., 5—10 Kms., 10 + Kms. — 5 Kms. indicates less than 5 Kms. 5—10 Kms. indicates distance in between 5—10 kms 10+ Kms. indicates distance is above 10 Kms.

Table indicates that in the district as a whole facilities namely education, medical, Post and Telegraph, market/hat and communication are not available in more than 75% of the villages. In case of educational facilities 634 such villages a large number that is 206 villages have the facility within a easy reach of less than 5 K.M. In most of the villages these are in respect of other facilities. These are available at a distance of beyond to 10 Kms. for most of the villages. Drinking water facility is however available almost all the villages except two villages in Mengio circle.

Table No. 13.—It would be interesting to note whether the distance of the nearest town from the village has any significance on the availability of the different amenities/facilities in the village. Keeping this in view, table no. 13 is designed to show the distribution of villages according to the distance from nearest town and availability of different amenities. Number of villages gradually increases with the gradual increase of distance range/villages from the nearest town The highest concentration of the village is seen beyond the distance range of 51 K.M. Out of 770 villages of the district 582 villages are lying at a distance of beyond 51 Kms. from the nearest town. It is observed that in respect of Post & Telegraph, Market/Hat, Communication, Approach by pucca road and power supply facilities, higher the distance range of the villages from the nearest town lower is the percentage of villages having these facilities. As regards education of and medical highest percentage of villages having these facilities are at a distance range of 16—50 K.M. As for the other ranges the percentage of the same gradually decrease with the gradual increase of distances. Drinking water is however available in all the villages except two villages in Mengio circle irrespective of the distance range of the nearest town.

Table No. 14.—The availability of different amenities also varies with the size of the population of the villages. The Table No. 14 clearly indicates this feature. The table for this district also indicates that the highest number of villages are in the smallest population range i.e. below 499. And higher the range of population lower is the proportion of villages. Just reverse is the case in respect of all the amenities except for drinking water which is available in almost all the villages. Percentage of villages having different amenities in different population ranges gradually increase with the increase of population size of the villages, or in other words bigger the population size, smaller is the proportion of villages and greater is the percentage of villages having different amenities.

Table No. 15.—It deals with the main staple food in majority of villages in the circle. It is seen that, rice constitutes the main staple food in all the circles of Lower Subansiri District. In many of the circles maize and millet and tasse in Sagalee circle particularly are also used as staple food along with rice. But these are generally either a supplement to rice or a substitute for rice for certain months of the year when the stock of the rice is insufficient or exhausted. Inset tables based on Village Directory data have been dis-

cussed in the preceding paragraph (Table No. 10—15). Now the third and last set of inset tables (Table No. 16—19) compiled from Town Directory data will be discussed. The main features covered in these tables are growth, density and sex-ratio of urban population in the district in relation to Union Territory, number of beds in medical institutions per 1000 population.

Table No. 16.—depicted growth, density and sex-ratio of urban population in the district in relation to the Union Territory. Old Itanagar and New Itanagar were treated as census town during 1981 Census only. As such, columns against 1951 and 1961 and 1971 have been kept blank. During 1981, percentage of urban population to total population of Lower Subansiri District is 12.53 and Arunachal Pradesh as a whole it is 6.56 which is almost half of the district percentage. Decadal percentage variation in urban population is + 139.63%. This fantastic variation is largely contributed by the census towns of Capital Complex.

Table No. 17.—There are only two census towns in Lower Subansiri District and these two towns are new towns They were declared as census towns during 1981 Census only.

Table No. 18.—Shows number of beds in medical institutions per 1000 population. New Itanagar town has 3 beds and Old Itanagar has 4 beds in the medical institutions per 1000 population.

Table No. 19.—deals with the most important commodities manufactured, imported and exported in the town. The capital complex towns are still in take off stage of development activities. Towns do not have much industrial activities cane, timber and Agar are the main items of exports. Import items are rice, wheat and salt.

SECTION I AND SECTION II

VILLAGE AND TOWN DIRECTORY

SECTION I

VILLAGE DIRECTORY

Note explaining the codes used in the village directory

The following codes have been used in the village directory to highlight the various amenities.

Education

Primary School	P
Middle School	M
Matriculation or Secondary	H
Intermediate/Junior College Pre-University	PUC
Adult Literacy Class	AC
Others	O

Medical

Hospital	H
Maternity and Child Welfare Centre	MCW
Primary Health Centre	PHC
Primary Health Sub-Centre	PHS
Dispensary	D
Community Health Worker	CHW
Others	O

Drinking Water

Tap Water	T
Well Water	W
Tube Well	TW
River	R
Fountain	F
Canal	C
Nallh/Stream/Spring	N/S
Others	O

Post and Telegraphs

Post Office	PO
Post & Telegraph Office	PTO

Communications

Bus Stop	BS

Approach to Village

Pucca Road	PR
Kuccha Road	KR
Foot Path	FP

Power Supply

Electricity for domestic purpose	ED
Electricity for all purposes	EA
Electricity for other purposes like Industrial, Commercial, etc.	EO

Remarks Column

N— Copies of the newspapers coming in the village

M— Motor Cycles/Scooters available in the village

C— Cars/Jeeps available in the village

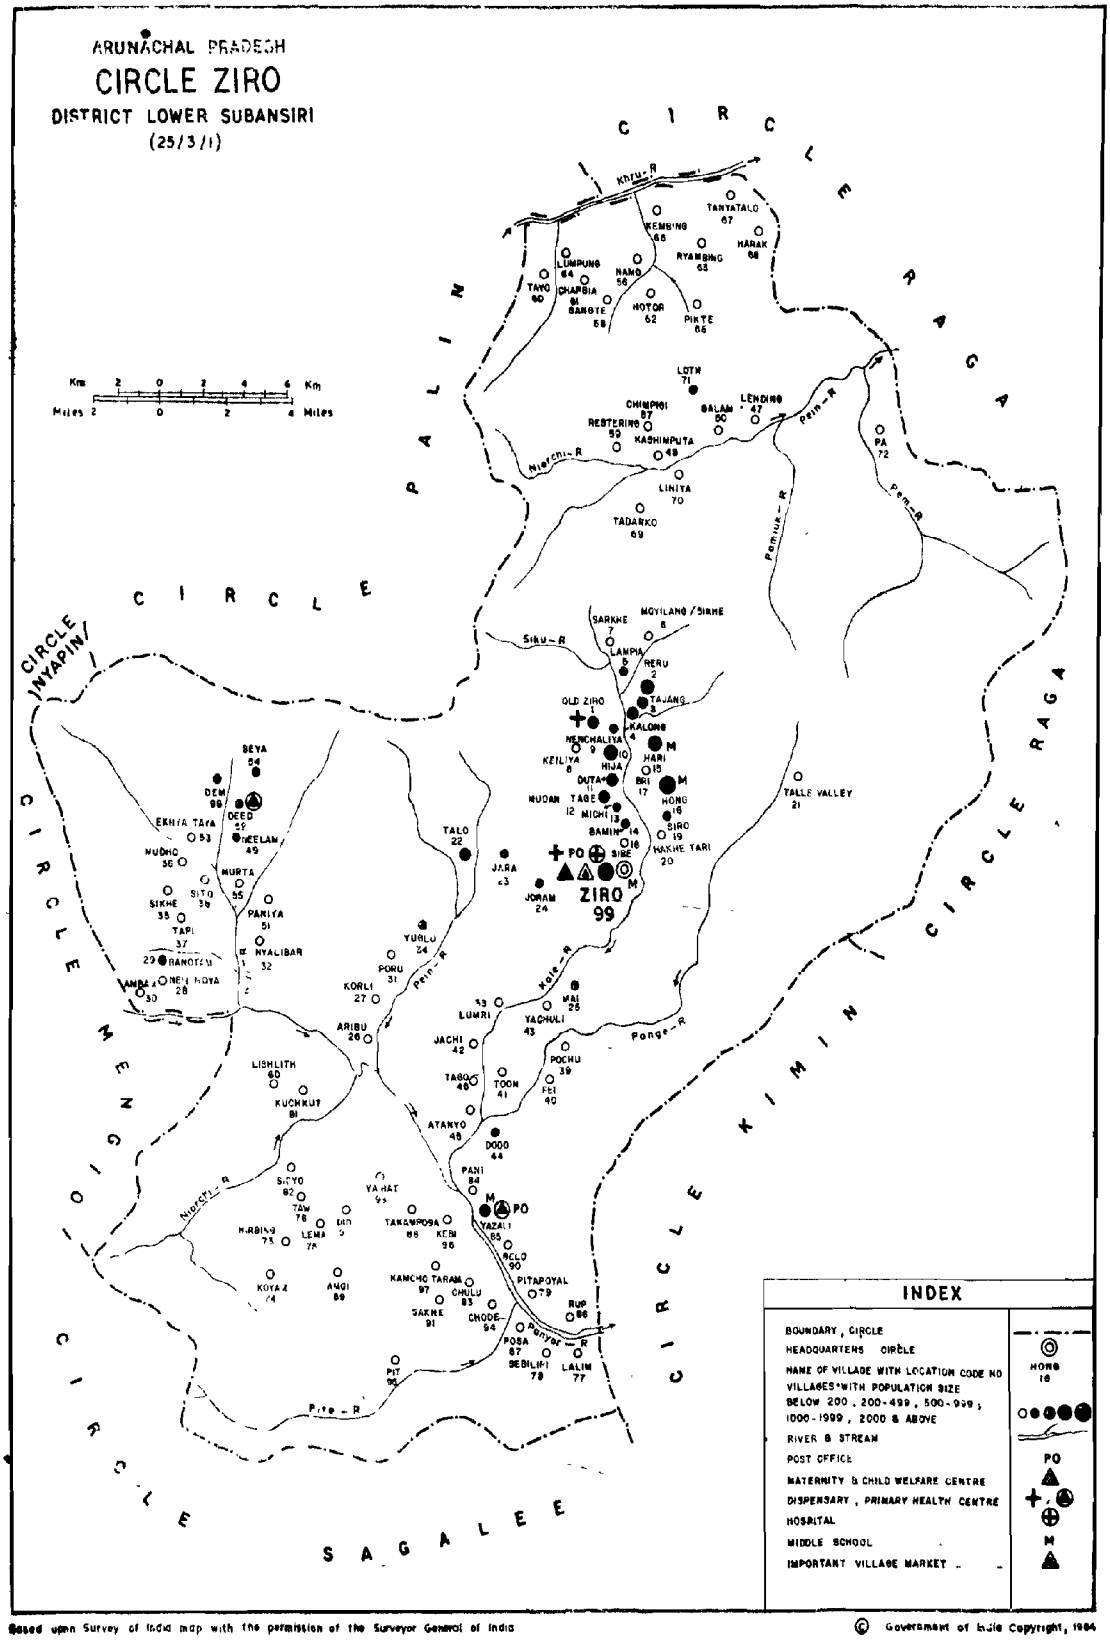

T— Tractors available in the village

Copies/nos of the above shown against the respective abbreviation.

If a village appeared in the list of villages 1971 in the different name or in different spelling the same is shown in bracket against the present name of the Village Directory for easy identification.

NA— Denotes information not available.

Educational Facilities					Number of recreational and cultural facilities				
Higher secondary/ Intermediate/ PUC (Pre-University College/ Junior College level)	Secondary/ Matriculation	Junior Secondary and Middle Schools	Primary Schools	Adult literacy classes/Centres, others (Specify)	Working women number of hostels with seats	Stadia	Cinema	Auditoria/ Drama/Community Halls	Public libraries including reading rooms
11	12	13	14	15	16	17	18	19	20
2	1	1	2	1	.	..	1	1	PL—1, RR—1

Following abbreviations are used for this statement:—

H—Hospital; D—Dispensary; FC—Family Planning Centre, TB—T B Clinic, HC—Health Centre; PL—Public Library; RR—Reading Room

Notes—

(1) Under column 4, the medical institutions whether Allopathic or Ayurvedic or Unani or Homoeopathic which are run by or aided by Government/Semi-Government and charitable institutions or social service agencies like the missioneries are only recorded.

(2) If an educational facility is not available in the town, the name of the nearest place if in the same district or the name of the nearest place and name of state if in other state where the facility is available is mentioned alongwith the distance of the place from Pasighat town

(3) In case composite Schools like Middle Schools with Primary Classes or Secondary Schools with Middle Classes, these are included in the number of Primary and Middle School respectively. For example, if in a town there are two Primary Schools and one Middle School with Primary Classes, the number of Primary Schools in the town may be given as 3 and that of Middle School as one even though there may be only three educational institutions. So also in case of Secondary or Higher Secondary Schools.
