of the Indian Administrative Service
Director of Census Operations, Karnataka

HMT WATCH FACTORY, TUMKUR

The picture on the cover represents a view of the HMT Watch Factory located in the outskirts of Tumkur City. This factory was established during 1978 with a total investment of Rs. 34.14 crores. Sophisticated and latest types of automatic machines and equipment are employed here to produce high quality watch components on a mass scale. Employment of automatic feeding devices, latest tooling processes and advanced planting methods are some of the salient features of the technology adopted for this factory. The project has been so designed as to provide regular employment to about 3,600 persons and produce 20 lakh watches in a year. Production of components and assembly of watches began quite soon and during the year 1979-80 the total number of watch sets despatched to assembly units amounted to 7.70 lakhs and 6.58 lakh watches were assembled at the assembly units. This factory symbolises the direction in which the industrially backward Tumkur district is likely to move in the decades ahead.

Based upon Survey of India map with the permission of the Surveyor General of India

The territorial waters of India extend into the sea to a distance of twelve nautical miles measured from the appropriate base line.

Primary Census Abstract	– Turuvekere Taluk	620-631

SUPPLEMENT

INTRODUCTORY NOTE		635-636
Statement I	– Total, Scheduled Castes and Scheduled Tribes Population in the Taluks and Towns of the District	637
Statement II	– District Primary Census Abstract for Scheduled Castes	638-639
Statement III	– District Primary Census Abstract for Scheduled Tribes	640-641
Statement IV	– Scheduled Castes and Scheduled Tribes Population (a) Village-wise and (b) Town-wise (within town ward-wise)	642-674
	Chiknayakanhalli Taluk	642-644
	Gubbi Taluk	645-648
	Koratagere Taluk	649-651
	Kunigal Taluk	652-655
	Madhugiri Taluk	656-659
	Pavagada Taluk	660-661
	Sira Taluk	662-664
	Tiptur Taluk	665-667
	Tumkur Taluk	668-671
	Turuvekere Taluk	672-674

SUPPLEMENT

Statement V	– Total, Scheduled Castes and Scheduled Tribes Population – Urban Blockwise	675-680
	Adityapatna (M)	675
	Chiknayakanhalli (M)	675
	Gubbi (M)	675
	Koratagere (M)	675
	Kunigal (M)	675-676
	Madhugiri (M)	676
	Pavagada (M)	676
	Sira (M)	677
	Tiptur (M)	677
	Tumkur (M)	678-679
	Turuvekere (M)	679
	Y.N. Hosakote (M)	680
Statement VI	– Description of boundaries and details of areas included in census enumeration blocks in the case of urban areas of the district :	681-717
	Adityapatna (M)	681
	Chiknayakanhalli (M)	681-684
	Gubbi (M)	684-686
	Koratagere (M)	687
	Kunigal (M)	688-691
	Madhugiri (M)	691-694
	Pavagada (M)	694-695
	Sira (M)	696-698
	Tiptur (M)	699-702
	Tumkur (M)	702-714
	Turuvekere (M)	714-715
	Y.N. Hosakote (M)	715-717
Statement VII	– List of villages arranged according to the proportion of (a) Scheduled Castes, and (b) Scheduled Tribes Population to the Total Population of the village concerned by ranges :	718-740
	Chiknayakanhalli Taluk	718-720
	Gubbi Taluk	720-722
	Koratagere Taluk	722-724
	Kunigal Taluk	724-726
	Madhugiri Taluk	726-729
	Pavagada Taluk	729-731
	Sira Taluk	731-733
	Tiptur Taluk	733-735
	Tumkur Taluk	735-738
	Turuvekere Taluk	738-740
	List of Scheduled Castes and Scheduled Tribes	741-742

FOREWORD

The district census handbook (DCH), compiled by the Census Organisation on behalf of the State governments, is one of the most valuable products of the Census. The DCH is constantly referred to by planners, administrators, academicians and researchers. It is inter alia used for delimitation of constituencies; formulatation of local level and regional plans and as an aid to District Administration. The district census handbook is the only publication which provides Primary Census Abstract (PCA) data upto village level for the rural areas and wardwise for each city or town. It also provides data on infrastructure and amenities in villages and towns etc.

The district census handbook series was initiated during 1951 Census. It contained important census tables and PCA for each village and town of the district. During 1961 Census the scope of the DCH was enlarged and it contained a descriptive account of the district administative statistics, census tables and a village and town directory, including PCA. The 1971 DCH series was planned in three parts. Part-A related to village and town directory, Part-B to village and town PCA and Part-C comprised analytical report administrative statistics, district census tables and certain analytical tables based on PCA and amenity data in respect of villages. However, in some States it was confined to district census tables and in a few cases altogether given up due to delay in compilation and printing.

While designing the format of 1981 DCH series some new features along with the restructuring of the formats of village and town directory have been attempted. At the same time, comparability with the 1971 data has also been kept in view. All the amenities except power supply in the village have been brought together in the village directory with the instruction that in case an amenity is not available in the referent village the distance in broad ranges from the nearest place where the amenity is available may be given. The restructuring of the format of the village directory and incorporating more exhaustive data on infrastructure aspect, particularly in relation to amenities and land-use pattern, is expected to further meet the need of micro-level planning for rural areas. It is expected to help not only in local area planning but regulating the provision of goods and services as well so as to minimise the regional imbalances in the process of development. A few new items of information have also been introduced to meet some of the requirements of the Revised Minimum Needs Programme. Such new items of information as adult literacy centres, primary health subcentres and community health workers in the village have been introduced in the village directory with this objective in mind. The new item on approach to the village is to have an idea about the villages in the district which are inaccessible. A new column, "total population and number of households has been introduced to examine the correlation of the amenties with the population and number of households they serve. Addition of two more appendices listing the villages where no amenities are available and according to the proportion of scheduled caste and scheduled tribe population to the total population has also been made with this view in mind.

The formats of the town directory have also been modified to meet the requirements of the Minimum Needs Programme by providing information on a few new items. A new statement on civic and other amenities in slums in Class-I and Class-II towns (Statement-IV-A) has been introduced with this objective in mind. It is expected that this will help the planners to chalk out programme on provision of civic amenities for the improvement of slums. The columns on Scheduled Castes and Scheduled Tribes population in Statement IV relating to civic and other amenities and adult literacy classes/centres under educational facilities in Statement V are also added *inter alia* with this view. A significant addition is class of town in all the seven statements of the town directory. The infrastructure of amenities in urban areas of the country can be best analysed by taking the class of towns into consideration. The addition of the columns on civic administration status and population in a few statements also serves this purpose.

The format of the primary census abstract for the villages and towns has been formulated in the light of changes in the economic and other questions canvassed through the individual slip of 1981 Census.

In order to avoid delay in publication of 1981 DCH series it has been so designed that Part-A of the volume contains village and town directory and Part-B the PCA of villages and towns including the Scheduled Castes and Scheduled Tribes PCA upto Tahsil/Town levels. At the beginning of the DCH a detailed analytical note supported by a number of inset tables based on PCA and non census data in relation to the infrastructure has been introduced to enhance its value. The district and Tahsil/Police Station/C D block etc., level maps depicting the boundaries and other important features have been inserted at appropriate places, to further enhance the value of the publication.

This publication is a joint venture of the State Government and the Census Organisation. The data have been collected and compiled in the State under the direction of Shri B. K. Das, the Director of Census Operations, Karnataka, on behalf of the State Government which has borne the cost of printing. The task of planning, designing and coordination of this publication was carried out by Shri N.G.Nag, Deputy Registrar General (Social Studies) of my office. Dr.B. K. Roy, Deputy Registrar General (Map) provided the technical guidance in the preparation of the maps. Data received from Census Directorates have been scrutinised in the Social Studies Division at the headquarters under the guidance of Shri M. M. Dua, Senior Research Officer, I am thankful to all who have contributed in this project.

NEW DELHI
26th April, 1982

P. PADMANABHA
REGISTRAR GENERAL,INDIA

PREFACE

The Registrar General and Census Commissioner of India has in his foreword to this series of publications, not only provided the reader with the historical background of the District Census Handbooks but has also explained at some length the scope and coverage envisaged for this country-wide project. As unifórmity in approach and comprehensiveness need of data are distinctive features of this series every attempt has been made to adhere to the concepts and definitions adopted in designing the formats. These volumes contain the salient results based on the data gathered at the actual census count and, in addition contain a wealth of other than census information in respect of villages and towns of the district. It is hoped that these volumes would go a long way to meet the ever increasing demand for the micro-level data in this era of planned development.

The district census handbook is divided into two portions : while Part A contains the village and town directory Part B confines itself to the primary census abstract. Since combining of these two parts and presenting the same in a single volume enhances the utility of the volume and also because the districts of the State are not so large as to render such single volumes unwidely in Karnataka, Part A and Part B of each district are being published together in a single volume. But, there is a major point of departure from the all-India pattern in so far as Karnataka is concerned. Owing to certain technical reasons all the particulars on Scheduled Castes and Scheduled Tribes proposed for publication in the DCHB as part of Primary Census Abstract and also the other derived statements have been pooled up separately and presented in the form of a Supplement. While such Supplements have been brought out as separate volumes in the case of Bidar and Mandya, in the case of the other districts this material also forms part of the single volume of the District Census Handbook and appears separately after Part B.

In the preparation of the district census handbooks the role played by the census organisation is that of data gatherer and the cost of publication is borne by the State Government. In accomplishing this task we have had the ready and whole-hearted cooperation of the staff at various levels of different departments of the State Government. For operational convenience the village directory was divided into two portions *viz.* that relating to area and land use pattern, and that relating to the amenities. The relevant formats were mailed to the Tahsildars and Block Development Officers respectively requesting them to furnish information on land use pattern and amenities. Much of the data so supplied by these field-level officers have been cross-checked with the data obtained from various departments and an attempt has been made to reconcile the dicrepancies as well.

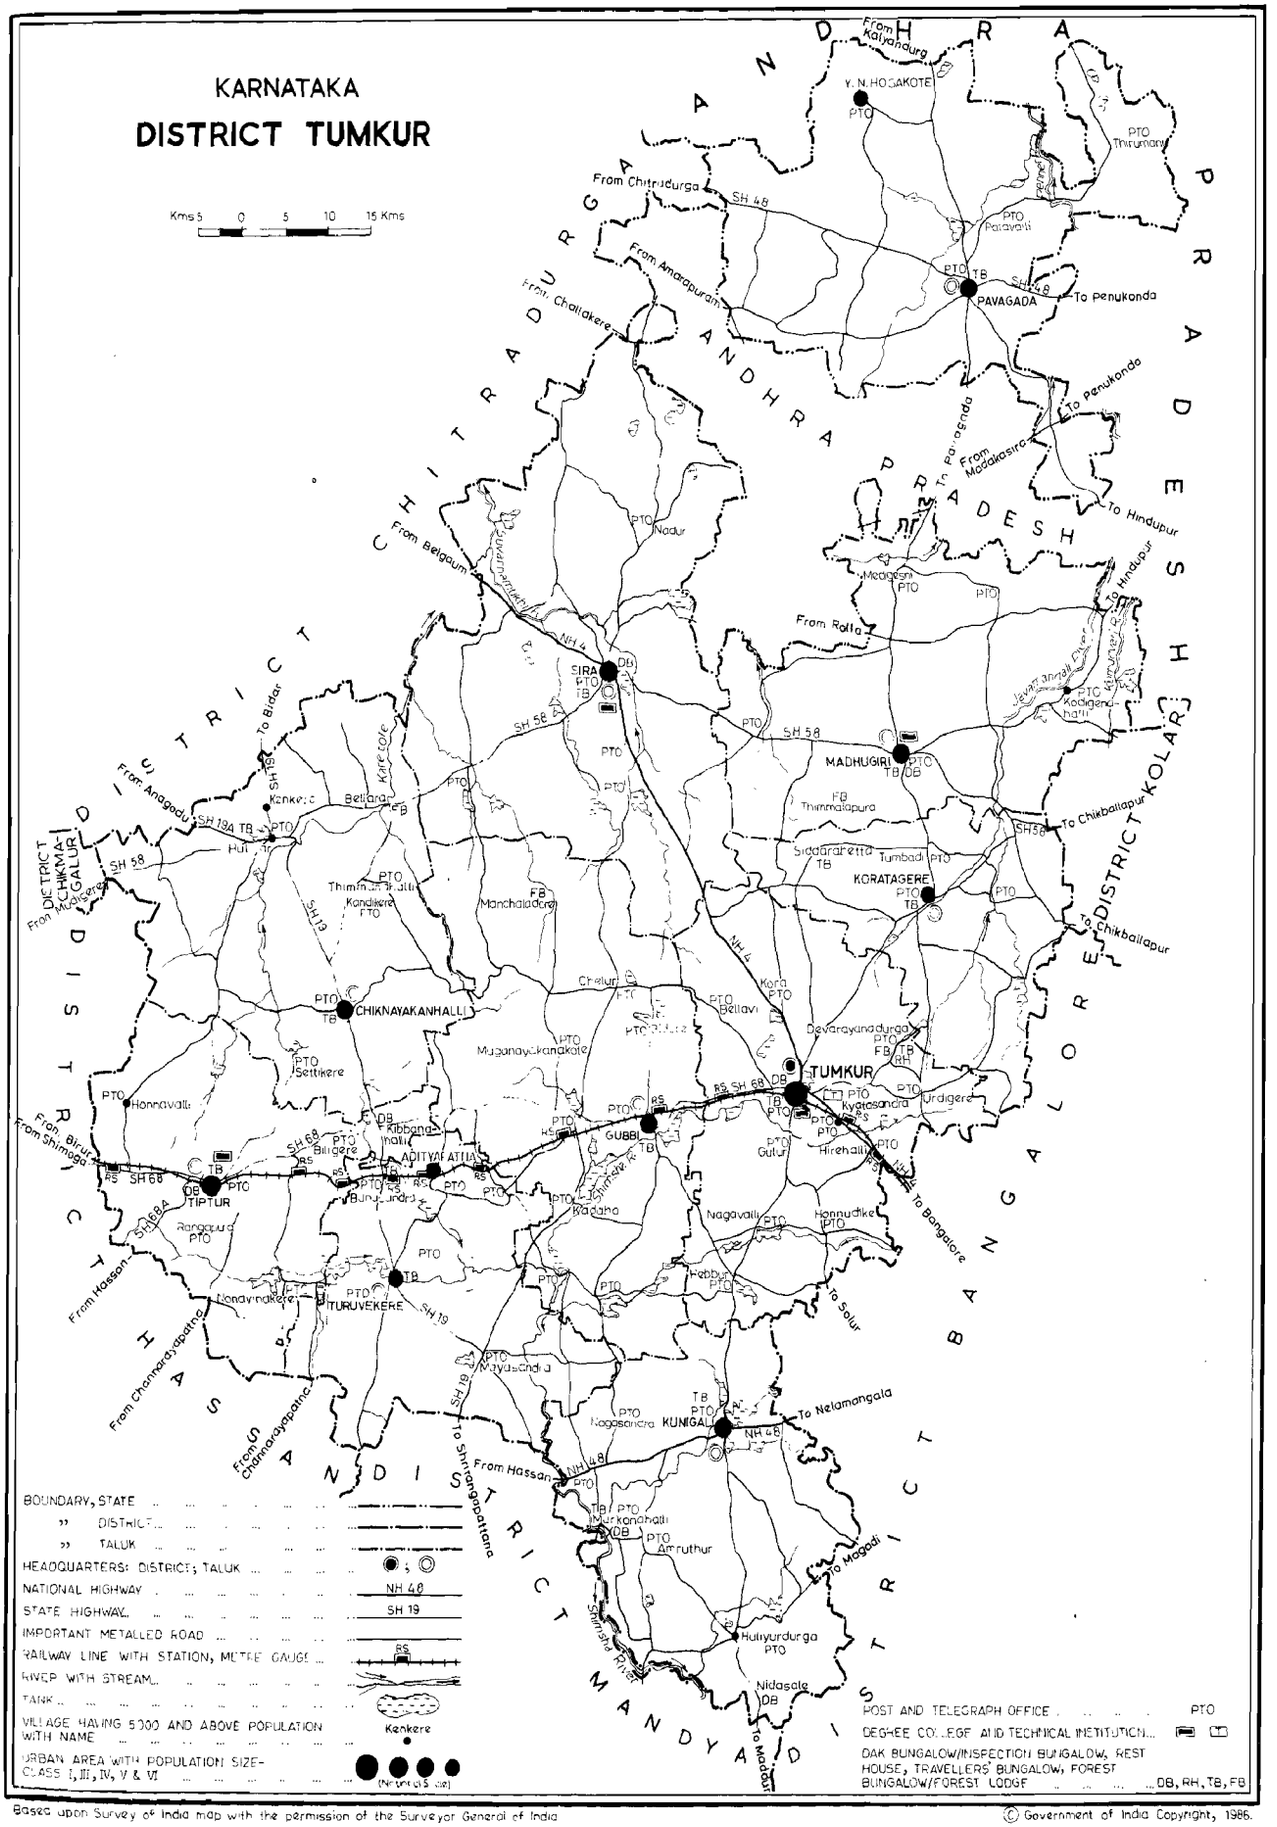

I take this opportunity to offer my grateful thanks to all the officers and officials who have been actively involved in the compilation and preparation of this volume.

I am deeply grateful to Shri. P. Padmanabha, I.A.S. the Registrar General, India for the benefit I have derived by way of guidance and advice. I also express my thanks to Dr. N. G. Nag, Deputy Registrar General (Social Studies), Dr. B. K. Roy, Deputy Registrar General (Map) and Shri M. M. Dua, Senior Research Officer.

Lastly, I am thankful to the Government of Karnataka for having agreed readily to bear the cost of publication of the district census handbook volumes. The Director, Printing, Stationery and Publications, Karnataka has evinced keen interest in bringing out these volumes.

B. K. Das
Director of Census Operations,
Karnataka

		Uninhabited	2,364	221
12. Number of Towns			281	12

ANALYTICAL NOTE

BRIEF HISTORY OF THE DISTRICT CENSUS HANDBOOK:

The District Census Handbook was first introduced at the 1951 Census to meet the ever increasing demand for micro-level data by administrators, planners, and other census data users. These series were primarily envisaged to replace the 'Part IV – Taluk Tables' and 'Part V – Village Tables' of the earlier censuses and to present the basic demographic and economic data at village level in the form of primary census abstract. In addition, these volumes were to contain a set of important census tables at taluk, town and district levels.

At the 1961 Census the scope of the volume was greatly enlarged by incorporating into it (i) a descriptive account of the district, (ii) a set of non-census tables dealing with administrative statistics of a decade, (iii) taluk and town level census tables on economic and socio-cultural aspects and (iv) the village and urban block level primary census abstract. In a somewhat general way information on the availability of certain basic amenities like drinking water wells and schools was also furnished.

The 1971 Census witnessed an overall improvement in the matter of data compilation as well as in presentation of the results. A countrywide uniformity in approach and a comprehensive coverage are the hall marks of this series of publications. The District Census Handbook was split up into three parts: i) Part A consisting of land use data on villages and data on amenities and services available in villages and towns compiled in the form of village and town directory, ii) Part B consisting of district, taluk, town, village and urban block level primary census abstract, and iii) Part C consisting of an analytical note based on census as well as the non-census data included in the volume, a set of tables depicting the administrative statistics in greater details, census tables at district, taluk and town levels besides a set of tables generated on the basis of villagewise census data and particulars on amenities. The main objective was to present a comprehensive and intelligible portrait of the district and an overall view of the results of a decade long developmental activities in the district. The publication programme too was phased out: Part A was planned to be released first to be followed by part B and then Part C which could be published only after the finalisation of various census tables that were to be included therein and analysed. In Karnataka, Part A and Part B were combined and published on time as a single volume for each district except in the case of Bangalore. Owing to reasons beyond control there has been an inordinate delay in the publication of Part C volumes.

The current volumes of District Census Handbook are thus the fourth in the series and at every succeeding census there has been an endeavour to enhance the utility of these volumes.

2. SCOPE OF 1981 DISTRICT CENSUS HAND BOOKS:

Regarding uniformity and comprehensiveness, the approach in 1981 is much the same as in 1971. The contents have been slightly enlarged and the formats too are restructured to some extent to meet the requirements of the data users. The District Census Handbook has been divided into two parts: i) Part A consisting of town directory and village directory and, ii) Part B consisting of District, taluk, town, village and ward level primary census abstracts besides the special PCA at taluk and town levels in respect of the Scheduled Castes and Scheduled Tribes. Compilation of administrative statistics has been abandoned altogether. Though divided into two parts, in Karnataka as a matter of fact both the parts are being presented in a single combined volume for each district. There is however a point of departure from the all India pattern: all particulars relating to Scheduled Castes and Scheduled Tribes are excluded from the main volume of the district census handbook and are presented districtwise in the form of a supplement.

i) *Town Directory :* In the town directory section there are 7 statements in all to furnish townwise information on aspects such as: growth history; physical aspects and location; municipal finance; civic and other amenities in towns; civic and other amenities in notified slums; medical, educational, recreational and cultural facilities and trade, commerce, industry and banking. As compared to the 1971 series the statement about religionwise population has been dropped and an additional statement has been introduced in respect of urban areas with a population of 50,000 and more to furnish some basic data on slums. This apart, there are a few more variations mainly by way of inclusion of a few additional columns in each statement to indicate the size class of the town, population and also civic administration status with a view to facilitating an easier grasp of the data. In statement I, provision has been made to indicate the decadal growth rates, area and density of population as in 1981 and the sex ratio observed at the three successive censuses. The introduction of additional columns has resulted in the elimination of 2 columns which in 1971 presented comparative information on functional classification of towns. Statements II and III are very much the same while in statement IV additional information on water storage system with capacity has now been provided. In addition, in case of non-availability of fire-fighting station in the town itself reference to the nearest place with that facility has been given. In statement V too in case of non-availability of medical and educational facilities in the town information on the nearest place with such a facility has been provided. An additional column in this statement presents information on working women's hostel. Statement VI has remained almost unchanged except in the explanation regarding the imports and exports concerning the goods which simply pass through the town.

The towns in the district are arranged serially on the basis of their names in an alphabetical order and assigned location code numbers starting from I. For presentation of data in the town directory statements the same order of the towns has been followed. The concept of urban agglomeration introduced in 1971, has been retained for use at the 1981 Census also. Where an agglomeration includes two or more independent towns, the names of the constituent towns are indicated in the correct sequence as per alphabetical arrangement of their names. But, the details to be furnished in the subsequent columns are skipped with a view to avoiding duplication. Instead, immediately after the name of the town, a cross reference is given by the legend "See.....Urban Agglomeration" printed within brackets. The name of the core town of the urban agglomeration too would appear at its correct sequence with the legend as above and immediately below that the same name with the additional title ".....Urban Agglomeration" appears again without bearing any serial number. Against this line the cumulative total for the urban agglomeration as a statistical unit are presented wherever such a procedure is relevant and meaningful. This line is followed by those relating to the constituent towns of the urban agglomeration starting with the name of the core city and followed by the others arranged in the alphabetical order of their names. This procedure is the same as that followed in 1971 and enables one to have a fairly good assessment of the data in relation to the smaller civic administrative units that form part of the large unit and also of the larger statistical unit itself simultaneously. In case there are outgrowths which are not 'urban' in their own right the particulars relating to such areas are merged with those relating to the concerned town and presented in the statement. Such towns having outgrowths are marked out by an asterisk mark and for all purposes the town includes not only its statutory limits but also all the outgrowths and together constitutes an independent statistical unit. In an appendix, the names of these outgrowths and the population thereof are furnished townwise. These outgrowths appear in the Village Directory also. However, in all such cases merely a legend to the effect that it is an outgrowth of such and such a town is recorded along the line instead of furnishing land use data and information on amenities. In the case of villages certain parts of which are regarded as outgrowth while the other parts are considered as rural the data relating to the outgrowth is included in the town directory statements and the data relating to the rest of the portion appears in the village directory. It may incidentally be mentioned that there are no such cases in Karnataka.

In statements II, III and VI where it is not relevant to combine the data for the urban agglomeration as a whole the legend 'see constituent units' is printed along the line instead of allowing the entire line blank.

ii) *Village Directory :* In the village directory the columns regarding the land use pattern are very much the same while those relating to amenities have been slightly modified. Unlike in 1971, this time if a village is not having a particular amenity then the distance range within which that amenity is available and may be availed of has been indicated. This enquiry is however confined only to the basic level under each category of amenity. In other words, if a village is not having any educational institution at all then the distance that one has to cover to reach the nearest place having a primary school is indicated in ranges of less than 5 Km., 5-10 Km and 10 + Km. If a village is however having a primary school no attempt is made to provide similar information in relation to middle school, high school and college level in a progressive manner. Similar procedure has been followed regarding medical, postal and communication facilities. Regarding weekly markets too, if the village is not the venue of such a market the distance to the nearest weekly market is indicated in ranges.

In the village directory an additional column has been introduced to indicate the population of the village as well as the number of households therein. This juxtapositioning of population and amenities data would help one to assess at a glance the adequacy or otherwise of the amenities available within or in the immediate neighbourhood of the village. Another change with regard to the area and land use data this time is that these figures are furnished not in acres but in hectares upto two places of decimal. One more notable addition is the provision to indicate information about the proximity of the public transport facility such as bus stop and railway station in respect of each village. In 1971 though information on railway station (i.e., if available within one Kilometre from the village) was furnished in addition to the general condition of the road to the village under the column for communication, there was no reference at all to bus transport facility. This time, in column about approach road the condition of the road that leads to or passes through the village is indicated. In the remarks column general information about the number of copies of newspapers circulating in the village as also about the number of different types of automobile vehicles available in the village is furnished.

In the case of uninhabited villages i.e., villages which have returned nil population at the 1981 Census, only the details in respect of land use are furnished and in the columns pertaining to amenities the word uninhabited has been printed. If there are any village that are regarded as outgrowths of an urban agglomeration, then neither the land use data nor the data on amenities is furnished in this statement. After the location code number and name of the village a legend indicates the name of the urban agglomeration of which that village is a part. Practically this administrative unit has lost its independent existence having been merged in another unit for statistical purposes. But if only a portion of a village is so

affected by inclusion in an urban agglomeration then information as may be relevant to the portion that has still remained in the rural fold as a village has been furnished in the village directory.

In order to facilitate easy reference, an alphabetical list of villages showing population figures according to the censuses of 1971 and 1981 is given in respect of each taluk. At the end, the following appendixes have also been included to provide an over all view of the district: talukwise abstract of amenities; list of inhabited villages not having any amenities; and land utilisation data for non-municipal towns if any.

iii) *Primary Census Abstract:* As at the two previous censuses this time also the Primary Census Abstract is presented villagewise in the case of rural areas. But, in so far as the urban areas are concerned the practice of furnishing data upto urban census enumerator's block level has been given up and the particulars are presented upto ward or division level only. Within the district the taluks are arranged in the alphabetical order of their names in English and covered one after the other in that order. For each taluk after furnishing the taluk level data with the rural-urban break up the villagewise details are furnished and this is followed by the data relating to towns in the taluk.

In the Primary Census Abstract format itself there have been certain changes. Though fresh columns have been introduced to cover a new category of workers viz, marginal workers, the total number of columns is reduced in view of the elimination of details regarding workers engaged in activities other than cultivation and household industries. There are now hardly 22 columns in the statement i.e., excluding those related to Scheduled Castes and Scheduled Tribes which however appear separately in the Supplement. The workers are classified into main workers and marginal workers and the main workers are further classified into one of the four categories viz, cultivator, agricultural labourer, worker in household industry and 'other' worker depending on the nature of work done and the sphere of economic activity.

In the case of urban agglomerations the same procedure as has been adopted for presentation of data in town and village directories has been followed. That is to say, the urban agglomeration is regarded as a single statistical unit and the aggregate figures obtained by the addition of details in respect of each constituent town and outgrowth are noted against the name of the urban agglomeration which in itself does not bear a location code number. In the section dealing with the Urban Primary Census Abstract the core town with its location code appears first carrying the legend: 'See.....urban agglomeration'. Immediately below that line the full name of the urban agglomeration appears and the aggregate figures for the urban agglomeration are furnished. This line is then followed by the constituent towns arranged in alphabetical order of their names along with their Location Code number and full details under various columns. If the core town or any other town for that matter were to have any outgrowths then the first line for the town would in fact be a sub-total as it includes data not only of the town but also of the outgrowths. Thereafter, the name of the town and its constituent outgrowths are given along with the relevant data.

In the rural portion of the Primary Census Abstract if an entire village were to form part of any urban agglomeration then only the name of the village is indicated along with the legend that this village is included in such and such urban agglomeration. In the case of villages partly included in an urban agglomeration details relating to only such portion as has remained under the rural category are given.

3. BRIEF NOTE ON CENSUS CONCEPTS:–

Census taking is a massive operation carried out in a short span of time with the active participation of a veritable army of enumerators. The reference moment for the 1981 census is the sunrise of March 1, 1981 i.e., the census provides a snap shot of the population of the country as it existed at the sunrise of March 1, 1981. Actual enumeration was spread over a period of 20 days from 9.2.81 to 28.2.81 followed by a revisional round up to 5.3.81 for updating of the population figures with reference to the sunrise of March 1, 1981. The questionnaire canvassed by the enumerators viz., the household schedule and individual slip are perforce brief in their wordings and this naturally implies the use of abstractions and concepts. With a view to ensuring uniformity in approach in understanding the various concepts and in properly eliciting and recording of the information, the enumerators and supervisory officers were imparted both practical and theoretical training intensively.

As a preliminary to the actual census the urban and rural areas were identified and listed out in respect of each administrative unit and thereafter geographical areas that could be conveniently covered by each census enumerator were carefully carved out to constitute the enumerator's blocks.

The second major step was the houselisting operation which was carried out in the State during May 1980. Thereafter, in order to adhere to the prescribed workload norms the actual census enumerator's blocks were carefully demarcated on the basis of the lay out sketches and notional maps prepared for the houselisting operations. The detailed information on households and population collected at the houselisting operations was also quite useful in this task of formation of census enumerators blocks. Definitions and explanations regarding the important census concepts are given in the following paragraphs.

i) *Urban areas:* The definition adopted in 1961 and adhered to in 1971 has by and large been retained for the 1981 census also. There is however a minor modification regarding the classification of fishing and forestry. These two activities have now been regarded as allied to agriculture unlike in the earlier censuses when these were treated as purely non-agricultural activities for working out the proportion of agricultural and other than agricultural workers. According to definition the urban areas include:

"1) All places with a Municipality, Corporation, Cantonment Board or Notified Town Area Committees etc.,

2) All other places which satisfy the following criteria :-

a) minimum population of 5,000

b) at least 75 per cent of male working population engaged in non-agricultural pursuits;

c) a density of population of at least 400 per sq. km. (1,000 per sq. mile)

d) all places which, though not satisfying the above criteria had pronounced urban characteristics".

Demarcation of urban areas was done at the preliminary stage itself. In the case of non-statutory towns the empirical test was applied on the basis of the population returns of the 1971 census and this was supplemented by consultation with the State Government authorities concerned. The changes such as declassification i.e., abolition of municipalities, constitution of new municipalities and such other civic bodies, coming up of large human settlements at construction sites and other centres, de-population of project areas and former labour camps etc., have all been considered while preparing the lists of urban areas. Urban areas with a population of 100,000 and more are called cities and the others are termed merely as towns.

ii) *Urban agglomeration:* This concept which in 1971 replaced the concept of town group has been retained for the 1981 census also. It has been observed that very often railway colonies, university campuses, port areas, military camps and large residential colonies etc., come up quite adjacent to but situated outside the statutory limits of cities and towns. Such areas may not by themselves qualify to be treated as towns. But, if they form a continuous spread with the town they are outgrowths of the town and deserve to be treated as urban. Such towns together with their outgrowths have been treated as one urban unit called 'urban agglomeration'. An urban agglomeration may consist of : a) A city with continuous outgrowth (the part of outgrowth being outside the statutory limits but falling within the boundaries of the adjoining village or villages); b) One town with similar outgrowth or two or more adjoining towns with their outgrowth as in (a); or c) A city and one or more adjoining towns with their outgrowths all of which form a continuous spread. It may further be noted that geographical contiguity with the statutory limits of the core town has been the main factor in determining whether or not a nearby satellite town or an outgrowth is to be included in the agglomeration. This is purely a statistical concept and for carrying out the actual census operations the administrative jurisdictions of the city or the towns concerned as well as the outgrowths situated in villages have been kept quite intact. The data have been pooled together only at the tabulation stage and presented in the combined form for the urban agglomeration as a whole and also severally for each one of the constituent units.

iii) *Rural areas i.e. Villages:* Areas which are not classified as urban according to the definition given above constitute the rural areas. The basic unit for rural areas is the revenue village which has definite surveyed boundaries. In the case of unsurveyed villages the boundaries as determined by the local usage have been adopted. The revenue village may consist of a single nucleated settlement or comprise of several hamlets i.e. human settlements or clusters of houses located at several places within the territorial limits of the village, or may be completely uninhabited. That is to say, the census village and the revenue village are identical in the matter of jurisdiction. However, there are a few exceptions to this general rule. These are for example:

1) When the main settlement of the village with or without the surrounding lands is constituted into an urban area the remaining tracts of the revenue village are collectively treated as a separate unit for purposes of census enumeration, i.e. the truncated portion itself is considered as an independent village in itself.

2) When outlying portions of certain revenue villages are incorporated into the limits of urban areas by notification, such areas, whether populated or not, are excluded from the revenue village concerned and for purposes of census operations the village boundaries are re-defined.

3) Revenue villages which are completely incorporated in the limits of urban areas or else, are submerged under reservoir projects but are still maintained in the jurisdictional lists of the survey and settlement authorities pending resurvey and such other procedures are taken note of as revenue villages but are omitted for census purposes. i.e. these are not treated as census villages. The names of such villages if any in a taluk are given at the end without serial number but with due remarks.

4) If there are forest areas that do not form a part of any of the revenue villages then such areas are identified clearly and the smallest administrative unit in vogue such as Forest Beat, has been reckoned as the census village. A forest range may consist of several such census villages.

5) For purposes of local administration such as collection of land revenue a single revenue village may sometimes be found to be sub-divided into two or more units. Instead of ignoring such divisions, occasionally each such unit gets reported as a separate independant

revenue village. In spite of efforts to eliminate such cases it is quite likely that a few may persist till the very late stage when necessary corrections cannot be carried out.

iv) *Census Enumerator's Block :* In urban as well as in rural areas the smallest unit adopted for enumeration is the Census Enumerator's Block. The town is generally divided into wards and divisions and wherever such units exists their distinctness has been retained. The geographical area comprised in each such ward or, the town in its entirety is constituted into several blocks in such a way that every bit of land stands included in one block or the other. If there were to be any islands then each island is treated as a separate unit and divided into one or more number of blocks as may be necessary. Generally in the urban areas each census enumerators block consists of about 130 households covering a population of about 650 persons. However, in view of the fact that each block should have clear cut boundaries recognisable on the field, smaller blocks have also been constituted. In constituting these blocks all the lands included in the statutory limits of the town are taken into consideration. In the case of non-municipal towns such as a Town Panchayat or a Group Village Panchayat the revenue limits of only that village which has been classified as a town on the basis of the empirical criteria have been considered as the boundaries of that census town. In other words, the panchayat jurisdiction and the census jurisdiction need not necessarily be identical in the case of non-municipal towns.

In the case of villages, irrespective of the population size every hamlet and every island has been constituted into a separate block. If the hamlet or the island is large the number of enumerator's blocks constituted therein may be two or even more. The work-load norm per block is 150 households with a population of about 750 persons and this generally applies to large nucleated settlements having more than this fixed limit and therefore require division into two or more blocks. In each village care has been taken to ensure that no bit of land belonging to that village is left out of consideration while constituting blocks. That is to say the entire revenue jurisdiction of the village is divided into blocks in such a way that even the agricultural lands that may not contain any houses or households stand included in one block or the other. In other words, enough emphasis has been laid to ensure complete coverage of the territorial jurisdiction of each village.

v) *Location code number :* Every State in the country, every district in the State, every taluk or Town in the district, every village in the taluk and every ward or division in the city or town and every enumerator's block in the village or town is assigned a number for operational ease, in a particular order. When these numbers are written side by side in the same order starting from the state and separated by an oblique line the identity of any particular census enumeration block can be known quite easily. The numbers assigned are in international numerals except in the case of towns in which case Roman numerals have been adopted. The states, the districts, the towns and the taluks are arranged in an alphabetical order of their names for assigning these numbers. Taluk maps showing the boundaries of various villages therein are quite essential since these provide the basis for assigning location code numbers to villages. For purposes of revenue administration the villages of a taluk are usually organised into a few circles or Hoblis and each unit will have a headquarters town or village. The identity of such units is maintained to the extent possible. Starting from the circle of which the taluk headquarter town or village happens to be the circle headquarter as well as the villages in its jurisdiction are serially numbered by proceeding in a clockwise direction i.e., in a concentric manner around the headquarter village or town, or in a serpentine manner starting from the north-west corner. After exhausting all the villages of the circle the next circle situated in the clock wise direction to the first one is taken up and commencing from the headquarter village all the villages within its jurisdiction are numbered. Thereafter, the next circle is taken up and in this manner it is ensured that all the villages of the taluk as well as any other analogous units such as islands, reserve forest tracts not included in any revenue village etc., if any, are assigned location code numbers. The numbering of villages runs continuously for the taluk through the different circles or *Hoblis.* Taluk maps showing the boundaries of various villages along with their corresponding location code numbers are also presented in these volumes for reference purposes.

vi) *Building :* A building is generally a single structure on the ground. Sometimes it is made up of more than one component unit which are used or likely to be used as dwellings (residences) or establishments such as shops, business houses, offices, factories, worksheds, schools, places of entertainment, places of worship, godowns, stores etc. It is also possible that buildings which have component units may be used for a combination of purposes such as shop-cum-residence, workshop-cum-residence, office-cum-residence etc.

vii) *Census House :* A Census House is a building or part of a building having a separate main entrance from the road or common courtyard or staircase, etc., used or recognised as a separate unit. It may be occupied or vacant. It may be used for a residential or non-residential purpose or both.

viii) *Household :* A Household is a group of persons who commonly live together and would take their meal from a common kitchen unless the exigencies of work prevented any of them from doing so. There may be a household of persons related by blood or a household of unrelated persons or having a mix of both. Example of unrelated households are boarding houses, messes, hostels, residential hotels, rescue homes, jails, *ashrams* etc.

These are called 'Institutional Households'. There may be one member households, two member households or multi-member households. For census purposes, each one of these types is regarded as a 'household'. If a group of persons who are unrelated to each other live in a census house but do not have their meals from the common kitchen, they would not constitute an institutional household. Each such person would be treated as a separate household. The important link in finding out whether there is a household or not is a common kitchen. There may be a household which does not at all have a house to live in and may temporarily dwell on the road-side, pavements, in humepipes, temples, mantaps, platforms etc, or move about from place to place resting underneath shade-bearing trees, pavements and verandahs of public or private buildings. Such households are for purposes of reference termed as Houseless Households.

ix) *Criteria for enumeration of a person in a particular household:*

a) All those who normally stay and are present in that household during the entire period of enumeration i.e., from February 9 to February 28, 1981 (both days inclusive).

b) Also those who are known to be normally residing and had actually stayed during a part of the enumeration period (February 9 to 28, 1981) but are not present at the time of enumerator's visit;

c) Also those who are known to be normally residing and are not present at the time of the enumerator's visit but are expected to return before February 28, 1981 and,

d) Visitors who are present in the household censused and are away from the place(s) of their usual residence during the entire enumeration period. For the purpose of enumeration, such visitors will be treated as normal residents of the household in which they are actually found during the enumeration period provided they have not been enumerated elsewhere.

x) *Literate :* A person who can both read and write with understanding in any language is to be taken as literate. A person who can merely read but cannot write is not literate. It is not necessary that a person who is literate should have received any formal education or should have passed any minimum educational standard.

xi) *Workers and Non-workers :* Depending upon the nature of his or her activity during the reference period every individual enumerated at the census is classified as either a worker or a non-worker. By definition, a worker is one who has worked, that is, 'participated in any economically productive activity'. Such participation may be physical or mental in nature. Further, work involves not only actual work but also effective supervision and direction of work. The reference period for determining whether a person is worker or a non-worker is the full year preceding the date of enumeration. The criterion is somewhat liberal and, even a person who has participated in the production of economic goods and services for a very brief period will be categorised as 'worker'.

Among workers however there are two categories:

a) *Main Workers:* Those who have worked for at least 183 days during the preceding year i.e., the entire reference period. (even though this may be in broken spells and in different occupations),

b) *Marginal Workers:* Those who have worked for less than 183 days during the entire reference period.

For both the categories of workers further details on the sector of economy in which they have worked, their occupation (that is, the actual nature of work done) and employment status (that is whether employer, employee, unpaid family worker or own account worker) have also been ascertained. The industrial classification of workers as adopted at the censuses of 1961 and 1971 has been retained at the 1981 census also. The industrial classification categories are: (I) Cultivators, (II) Agricultural labourers, (III) Workers in livestock, forestry, fishing, hunting, plantations, orchards and allied activities, (IV) Workers in mining and quarrying, (V) Workers in manufacturing, processing, servicing and repairs which are (a) run as household industry, (b) not run as household industry, (VI) Workers in construction, (VII) Workers in trade and commerce, (VIII) Workers in transport, storage and communication, (IX) Workers in other services. For purposes of presentation in the Primary Census Abstract however the details in respect of the main workers alone are considered and the industrial classification categories of III, IV, V(b), VI, VII, VIII, IX are pooled together and shown under the heading 'Other Workers'. The broad classifications therefore are: I–Cultivators, II–Agricultural labourers, V(a)–Workers at house hold industries, manufacturing, processing, servicing and repairs and, III, IV, V(b) and VI to IX–Other Workers. Explanations regarding the broad categories are given below:–

a) *Cultivators:* For purposes of the census a person is working as *Cultivator* if he or she is engaged either as employer, single worker or family worker in cultivation of land owned or held from Government or held from private persons or institutions for payment in money, kind or share. Cultivation includes supervision or direction of cultivation.

A person who has given out his or her land to another person or persons for cultivation for money, kind or share of crop and who does not even supervise or direct the cultivation of land will not be treated as cultivator. Similarly, a person working in another person's land for wages in cash or kind or a combination of both (agricultural labourer) will not be treated as cultivator.

Cultivation involves ploughing, sowing and har-

vesting and production of cereals and millet crops such as wheat, paddy, jowar, bajra, ragi etc. It is important to note that for certain reasons the growing of certain crops is not considered as agriculture. If a person is engaged in the growing of such crops he or she will not be considered as cultivator or agricultural labourer.

The growing of the following crops is considered as cultivation:

1. *Cereal and millet crops:* Paddy, wheat, jowar, bajra, maize, ragi, barley,gram, etc.
2. *Pulses:* Arhar, moong, masur, urd, kesari etc.
3. *Fibre crops:* Raw cotton, jute, mesta, sunhemp and kendred fibre crops.
4. *Oil seeds:* Sesamum, ground-nut, rape, mustard, linseed, castor, etc.
5. *Cash crops:* Sugar-cane

The growing of the following crops will not be considered as cultivation:

1. *Plantation crops:* Tea, coffee, rubber, tobacco, pepper, cardamom, etc.
2. *Edible nuts (Other than groundnut):* Walnut, almond, cashewnut, etc.
3. *Fruits:* Bananas, apples, grapes, mangoes oranges, etc.
4. Coconut
5. Ganja, Chinchona, opium, and medicinal plants.
6. Arecanuts.
7. Flowers.
8. Roots and tubers, chillies and spices (other than pepper and cardamom).
9. Vegetables.
10. Other crops not specifically included under cultivation.

b) *Agricultural Labourer:* A person who works in another person's land for wages in money, kind or share is regarded as an agricultural labourer. He or she has no risk in the cultivation. The agricultural labourer has no right of lease or contract on land on which he or she works.

c) *Household Industry:* Household Industry is defined as an industry conducted by the head of the household himself or herself and or by the members of the household at home or within the village in rural areas and only within the precincts of the house where the household lives in urban areas. The larger proportion of workers in a household industry would consist of members of the household including the head. The industry should not be run on the scale of a registered factory which would qualify or has to be registered under the Indian Factories Act.

d) *Other Workers:* The type of workers that come under this category include factory workers; plantation workers; those engaged in trade, commerce, business, transport, mining, construction, political or social work; all government servants; municipal employees; teachers; priests; entertainment artists, etc. In effect, all those who work in any field of economic activity other than as cultivators and agricultural labourers or in household industry are categorised as 'Other Workers'.

xii) *Marginal Workers:* Though similar classification is possible in respect of the marginal workers also the Primary Census Abstract does not aim to present these details. The total number of marginal workers alone is indicated sexwise. In respect of such persons answers on how they have engaged themselves mostly during the reference period have also been elicited. That is to say, the concept of main activity as adopted in the 1971 census is kept in view and, as in the case of non-workers, relevant details about their activity have been ascertained.

xiii) *Categories of non-workers:* Depending upon the manner in which the non-workers have engaged themselves for most of the time during the reference period they are classified into one or the other of the six categories, mentioned below, at the time of the enumeration itself. However the Primary Census Abstract does not furnish details according to the categories of non-workers but indicates the total number of non-workers by sex.

a) *Household duties:* This covers all persons who are engaged in unpaid home duties and who do no other work or have not done any work at all during the last one year.

b) *Students:* This will cover all full-time students including children attending school.

c) *Dependents:* This category includes all dependents such as infants, children not attending school, and persons permanently disabled from work because of illness or old age. Dependents will include even able-bodied persons who cannot be categorised in any other category of non-workers but are dependent on others.

d) *Retired persons or Rentiers:* A person who has retired from service and is doing no other work i.e., not employed again in some full time work or not engaged in some other work such as cultivation, business, trade, etc., or a person who is a rentier or living on agricultural or non-agricultural royalty, rent or dividend, or any other persons of independent means for securing which he or she does not have work, will come under this category.

e) *Beggars:* This will cover beggars, vagrants or cases such as persons without indication of source of income and those with unspecified source of subsistence

who are not engaged in any economically productive work.

f) *Inmates of Institutions:* This will cover convicts in jails or inmates of a penal, mental or charitable institution even if such persons are compelled to do some work such as carpentry, carpet weaving, vegetable growing, etc., in such institutions. But an undertrial prisoner enumerated in a jail would be recorded for the work he or she was doing before he or she was apprehended. Similarly, a person temporarily in a hospital or similar institution would be recorded for the kind of work he or she was doing before he or she was admitted into the hospital or institution. But, for a long-term undertrial prisoner or convict in a prison or for long-term inmates of penal or charitable or mental institutions, the person's previous work would not be taken into consideration. A person will be considered as 'Long-term' inmate if he or she is in such an institution for 6 months or more.

4. BRIEF HISTORY OF THE DISTRICT:

In accordance with the usual practice Tumkur district too has been named after its headquarter town. Tumkur is the anglicised form of *Tumakuru* which is itself a derivative of *Tummeguru*, the original name of the place. The present town has a history of just a couple of centuries and is said to owe its origin to Kante Arasu, a member of the Mysore royal family. The town does not have any historical relics to boast of, for even the traces of the fort, said to have been erected at the time of its founding, have already vanished completely. The area comprised in the district consists of a few places of great antiquarian interest and several places of historical importance. Sage Kadamba is believed to have had his hermitage near Kadaba in Gubbi taluk. On his way to Ayodhya after the conquest of Lanka, Shri Rama is said to have called on this sage at his hermitage for a brief sojourn during which, at the request of his spouse Sita, he ordered the river Shimsha to be dammed so as to form a large lake here. Sampige in Turuvekere taluk is identified with the ancient Champakanagara, the capital of Sudhanva of the Mahabharata period. The palaeolithic artefacts discoverd near Biligere and Kibbanahalli reveal that certain places of the district were inhabited by the pre-historic man. The district has a megalithic site also and this is located on a crest of the low ridge near Keralakatte village.

The district has not yielded any historical records belonging to the early dynasties of the South India such as the Banas, Satavahanas, Kadambas, Badami Chalukyas, etc., The earliest record discovered here, consisting of 5 copper plate grants ascribed to 400 A.D., belongs to the Gangas. The Gangas ruled over the southern and eastern districts of the State from the early years of the Christian era upto 1025 A.D. and obviously Tumkur district formed part of their kingdom. The district has yielded numerous inscriptions belonging to the period of Sri Purusha (725-758 A.D.) and several hero stones testifying to the battles that were fought between the forces of the Gangas and the Rashtrakutas. The last Ganga inscription found here is dated in 972 A.D. – the period when Satyavakya Nolamba Kulantaka, that is Marasimha III, was on the throne. Of the Rashtrakutas there are three inscriptions and one of these refers to Vimaladitya as the Adhiraja of the entire Ganga-mandala while another confirms the date and mode of death of Indra-raja, the last of the Rashtrakutas who passed away on 20th March 982 at Shravanabelagola. There are numerous inscriptions which apparently belong to the Chalukyas of Kalyana and these range from 1040 to 1200 A.D. However, these merely acknowledge the supremacy of the Chalukyas and are actually those of the Cholas and Hoysalas. During this period it may be noted, the Nolambas were the principal local rulers and their kingdom was known as Nolambavadi 32000. They had their capital at Henjeru which is identified with the Hemavati village on the northern border of Sira taluk. Nidugal of Pavagada taluk was one of their strongholds. The district has yielded several records relating to the Nolamba rulers such as Mahendra who is stated to have uprooted the Cholas, his son Nanniga and grandson Anniga or Bira Nolamba and Ahavamalla Nolamba. In about 974 A.D., the Nolambas were overrun by the Ganga king Marasimha III who earned the title Nolamba-Kulantaka. The Cholas who appear to have wielded supreme power in this region from 1000 A.D. to 1070 A.D. were over-run by the Hoysalas.

The earliest Hoysala inscription found in the district is dated in 1078 A.D. Hoysala king Vishnuvardhana is stated to have been in possession of both Gangavadi–96000 and Nolambavadi–32000. During the Hoysala supremacy also different tracts of this district were being administered by different local chiefs. For instance, an inscription dated in 1151 A.D. states that a chief named Guli Bachi was ruling Marugerenad in Kaidala near Tumkur. He built the temples of Gangeshvara, Narayana and Chalavarishvara at Kaidala. The Vijayanagara empire gradually absorbed the Hoysala dominions including this district. The earliest of the Vijayanagara inscriptions found in Tumkur district refers to the reign of Bukka Raya (1344–77 A.D.) and is dated in 1354 A.D.

During the 15th and 16 centuries, the Vijayanagara kings granted various tracts of lands to their vassal chiefs bearing different titles, in recognition of the services rendered. Some of the petty principalities already in existence were allowed to continue to administer their traditionally acquired territories. Among such feudatory principalities that arose in this district a mention may be made of those with their headquarters at Nidugal, Holavanahalli, Madhugiri and Hagalavadi.

The Nidugal chiefs were the descendants of Harati

Tippa Nayaka whose possessions were in the north-east of the Chitradurga district. One of the inscriptions found in Pavagada taluk describes him as ruling from Nidugal hill fort. He divided his territory among his seven sons. But on invasion of their share of the country by the Bijapur army, the descendants of the family retired to Nidugal fort under the leadership of Thimmanna Nayaka who had lost Dodderi. This family remained at Nidugal for a long time paying tributes to the Subedar of Sira. In 1761 A.D. when Sira was captured by Haidar Ali, the Nidugal chief also submitted himself to the conquerer and agreed to abide by the conditions imposed on him. This chief, Thimmanna Nayaka, was later compelled by Tipu Sultan to relinquish his rights over the territory. His sons were taken prisoners and lodged at Shrirangapattana where they were ultimately put to death by the British.

The Holavanahalli family was founded by Baire Gowda, said to be one of those that settled at Avati during the 15th century. This chiefdom was soon taken over by the chief of Magadi who gave it away to his own brother Ankana Gowda. The dispossessed chief joined the Sira court where he was well received and invested with an important command. His yonger son however sought the help of the chief of Doddaballapur who captured Holavanahalli and placed the administration in the hands of the Sanna Baiche Gowda. But within the next couple of years a Sira army attacked and captured Doddaballapur. The former chief, Baire Gowda, who had gone over to Sira court fell in the Siege and his eldest son Dodda Baiche Gowda was invested with the government of Holavanahalli with an increase of territory. Subsequent members of this family fortified Koratagere and extended their territories until they were finally dispossessed by Haidar Ali of Mysore.

The Madhugiri family or the Maddagiri line of chiefs arose in a similar manner and extended its territory over the northern parts of the district by fortifying Madhugiri, Channarayanadurga and such other strategic points. In 1678 A.D.,Madhugiri was captured by Dalavai Devaraja and the joint rulers named Rama Gowda and Timma Gowda were taken prisoners and conveyed to Shrirangapattana. However, they were later released and granted Midigeshi as an estate.

Founded by Erimada Nayaka, the Hagalavadi line of chiefs exercised power over a large portion of the present Tumkur district for nearly 300 years from 1478 A.D. The credit for expanding their territories goes to Sali Nayaka, the second ruler who captured Kandikere, Settikere, Honnavalli, Turuvekere and such other places of strategic importance and also founded Chiknayakanhalli. His grandson Mudiyappa Nayaka-I was also equally successful in extending his territories. The ninth ruler of this line, namely Mudiyappa Nayaka-II was a benign ruler who later gave up his throne to pursue his spiritual pursuits. His son, Mudduveerappa Nayaka, earned the title Jung Bahadur for having successfully resisted the onslaughts of Salabat Jung and Dilawar Khan. The twelth ruler Channabasappa Nayaka was captured and imprisoned by Haidar Ali at Shrirangapattana. Soon after his death in the prison the Hagalavadi Chiefdom was totally annexed to Mysore.

In 1638 A.D. under the command of Ranadulla Khan, the Bijapur army invaded the northern portions of this district. Along with the southern principalities of Doddaballapur, Bangalore, Kolar and Hoskote, Sira was placed under the charge of Shahji and for quite some time Malik Rihan was the governor of Sira. With the capture of Bijapur in 1686 A.D., Aurangzeb established the Moghul supremacy in this region. Sira was made the capital of a new province consisting of the seven *paraganas* of Sira, Basavapattana, Budihal, Doddaballapur, Hoskote, Kolar and Penukonda and was placed under the charge of a Subedar or Faujdar. Kashim Khan was the first Subedar and Dilawar Khan (1724-56) the last. During this period Sira and its neighbourhood assumed considerable importance as a seat of administration and received royal patronage. Sheikh Farid for instance built a big mosque. Rustum Jung, who earned for himself the title of Bahadur built a fort and a *petta.*

During the same period parts of this district came to be annexed by the wodeyars of Mysore in a phased manner as it were. In 1650 A.D. Kanthirava Narasaraja Wodeyar (1638-59) made a beginning by acquiring Hebbur in Tumkur taluk from *immadi* Kempe Gowda. By 1673 A.D., the kingdom of Mysore had been extended as far as Chiknayakanhalli in the north. This was followed by the conquests of Chikka-Devaraja Wodeyar (1673-1704). He is said to have captured Jadakanadurga (which he named after himself as Chikka–Devarayana Durga), Maddagiri, Midigeshi, Bijjavara, Channarayadurga and several other places. By the end of his reign except for Sira and its immediate surroundings, rest of the Tumkur district formed part of Mysore. These areas too were taken during the period of Haidar Ali on his conquest of Sira in 1761 and the annexation of Hagalavadi in 1776. With the fall of Tipu Sultan in 1799, this territory too passed into the hands of the British who restored it to the Wodeyars of Mysore, from which date the history of the district coincides with the history of the erstwhile Mysore State. During the reign of Krishnaraja Wodeyar III (1811-31), the State consisted of six Faujdaris and the present Tumkur district stood included in the Maddagiri i.e., Madhugiri, Faujdari. In 1834, these were reconstituted into four divisions and Tumkur became the headquarters of Chitradurga division which encompassed the areas now included in these two districts.

In 1863, Chitradurga division was broken up and while Chitradurga district was added on to Nagar divi-

sion, Tumkur area was attached to the newly formed Nandidurga division. Sira taluk was transferred from Chitradurga district to Tumkur in 1866. In 1879 all the divisions were abolished and in 1882 Chitradurga district was reduced to a Sub-division under Tumkur. However, in 1886, Chitradurga district was restored but Pavagada taluk was made a part of Tumkur district. The district consisted of 8 taluks named after Sira, Maddagiri, Pavagada, Tumkur, Chiknayakanhalli, Honnavalli, Kunigal and Kadaba. In 1886, Kadaba and Honnavalli taluks were named after Gubbi and Tiptur. In 1928 and 1938 the Sub-taluks of Koratagere and Turuvekere were elevated to the status of full-fledged taluks. Since then, but for the transfer of two villages to Madhugiri taluk from Madakasira taluk of Anantpur district, there have practically been no changes in the administrative divisions of the district. The taluks of the district are grouped into three revenue Sub-divisions with headquarters at Tumkur, Tiptur and Madhugiri respectively. The taluks of Tumkur, Gubbi and Kunigal constitute the Tumkur Sub-division, Tiptur, Chiknayakanhalli and Turuvekere constitute Tiptur Sub-division and the other four taluks of Madhugiri, Sira, Koratagere and Pavagada constitute the Madhugiri Sub-division. Tumkur district itself stands included in Bangalore division which is one of the 4 divisions into which the State is organised at present.

5. LOCATION AND PHYSICAL ASPECTS:–

Tumkur district is located in the eastern belt in the southern half of the State. Spanning an area of 10598 square kilometers this district lies between the latitudinal parallels of 12° 45' N and 14° 22' N and the longitudinal parallels of 76° 24' E and 77° 30' E. The shape of the district is somewhat irregular and has a peculiar feature in that the north-eastern portion is totally detached from the remaining areas of the district. This portion constituting Pavagada taluk is almost surrounded on all sides by territories belonging to Andhra Pradesh. But for the fact that on its western border for a very short stretch it touches Chitradurga district, Pavagada would have been an enclave territory. Tumkur district is bounded on the north by Anantpur district of Andhra Pradesh; on the east by the districts of Kolar and Bangalore; on the south by Mandya district and on the west and north-west by the districts of Hassan and Chitradurga. In the mid-west, Chikmagalur district too touches this district and shares a common border though only for a very short distance.

Tumkur district is surrounded on all sides by lands belonging to the neighbouring districts and has no natural boundary such as sea, river or mountain ranges on any side. The landscape consists mainly of undulating plains interspersed with a sprinkling of hills. To the east of Tumkur and north by Devarayana-durga there is a short stretch of hilly country intersected by cultivated valleys. Besides these, there are several hill ranges and isolated hills as well. While the western parts are occupied by long ranges of hills running in a south by south easterly direction the eastern parts are occupied by a narrow range of granitic hills running north and south. There are two parallel ranges running north to south and the first one of these in the eastern portion passes through Pavagada, Madhugiri, Koratagere and northern part of Tumkur taluk. The second range, mainly composed of schistose rocks, passes through the western parts of the district in the taluks of Chiknayakanhalli, Sira and Gubbi. There is another cluster of hills covering the middle and the southern parts of Kunigal taluk. In this zone the tree-growth is comparatively dense and trees tend to grow taller and stouter. The prominent hill peaks of the district are Devarayana-durga (1169 metres), Ramadevara-betta (1164 metres) Nijagal (1069 meteres) and Seetakal (1004 metres) in Tumkur taluk; Madhugiri-durga (1179 metres), Midigeshi-durga (1023 metres), Doddanaramangala (930 metres) and Byalya (874 metres) in Madhugiri taluk; Hutridurga (1112 metres), Hemagiri (925 metres), Rangaswami-betta (899 metres) and Huliyur-durga (831 metres) in Kunigal taluk; Kamana-durga (1060 metres), Nidugal (1131 metres) and Pavagada hill (904 metres) in Pavagada taluk; Channarayana-durga (1120 metres) and Koratagiri hill (867 metres) in Koratagere taluk; and Bommanahalli (938 metres) and Choudanahalli (800 metres) in Tiptur taluk. The watershed separating the river systems of the Krishna and the Cauvery may be defined by a line drawn from east to west touching Koratagere and Tiptur.

Shimsha, Jayamangali and Suvarnamukhi are the important rivers of the district. Shimsha has its origins in the southern portion of the Devarayana-durga hill range and flows in a general south by south-westerly direction cutting through the taluks of Tumkur, Turuvekere, Gubbi and Kunigal. After traversing a total distance of about 100 km this river enters Mandya district and finally joins the Cauvery. Enroute, this river feeds the large Kadaba tank and is itself enriched by the numerous streams that flow into it from several directions. Naga stream which joins it near Kallur and the Nagini stream that emerges from the Kunigal tank and merges with the river near Hanumapura are the streams that deserve a special mention. The waters of this river have been harnessed for purposes of irrigation by constructing a dam near Marconahalli in Kunigal taluk. This reservoir has an *atchkat* area of 4500 hectares. The Jayamangali river too originates in the Devarayana-durga hill range, but unlike Shimsha it emerges on the northern side of the hill at a gorage called Jaladagondi and consists of two distinct streams. It flows in a north by north-easterly direction, enters Madhugiri taluk where it is augmented by the incoming waters of Garudachala near Holavanahalli from the east and by the inflow of Suvarnamukhi near Kyasavara from the west. The total length of this river is 65 km and this is a tributary of the North Pinakini river.

Strange as it may appear it is a fact that Tumkur district contains two rivers bearing the same name. These may be called the Suvarnamukhi of the eastern belt and the Suvarnamukhi of the western belt respectively. The eastern Suvarnamukhi is a smaller stream with a course of about 25 km running through the taluks of Tumkur, Koratagere and Madhugiri. The river is formed by the confluence of streams, one of which has its origins near Devarayana-durga of Tumkur taluk and another has its origins near Kolikal State Forest of Koratagere taluk. The former stream flows in a northern direction while the latter, known as Doddahalla, flows in an easterly direction for a distance of about 15 km before uniting with the other stream near Rampura village. This Suvarnamukhi flows into the Jayamangali river near Kyasavara village and loses its identity thereafter. The western Suvarnamukhi is an important tributary of the Vedavati river. This too is composed of several streams, the chief stream having its origins near Badamuddanahalli village which is located south west of Channarayana-durga in Koratagere taluk. This stream flows north through the taluks of Koratagere and Madhugiri, traverses a distance of about 5 km in Anantpur district of Andhra Pradesh, turns west and enters Sira taluk near Madalur village. Thereafter it takes a west by north-westerly course across Sira taluk and near Adalur it is enriched by the incoming waters of Doddahalla from the south. This Doddahalla originates in the southern portion of Sira taluk. Another main stream which constitutes this river has its origin near Settikere in Chiknayakanhalli. This stream, Chikk Tore, takes a northerly course and cuts through Chiknayakanahalli. A dam has been built across this stream at Boranakanive to form a large reservoir which provides irrigation facilities to about 600 hectares of land. A few kilometres to the north-east this is joined by Kare Tore flowing in a north westerly direction near the Suvarnamukhi State Forest. It is from this place onwards that the combined stream gets the name Suvarnamukhi. Thereafter it continues to flow in the general north-easterly direction and is joined by the other branch of the Suvarnamukhi, which flows in from the east, near Hunasehalli in Sira Taluk. Finally this river joins the Vedavati near Kudalur in Hiriyur taluk of Chitrdurga district. The total distance traversed by this river in the district adds up to about 100 km.

North Pinakini flows through Pavagada taluk for a short distance. Likewise Kumudwati cuts through the eastern borders of Madhugiri taluk. Among the other streams, Nagini deserves mention. The Sankanpura Lake formed by the construction of an anicut across this stream as early as in 1901 irrigates about 250 hectares. Recently one more anicut has been built across this stream near the village Mangala.

The northern and the north eastern portion of the district covering the taluks of Madhugiri, parts of Koratagere and Pavagada taluks, is known for its *tala pariges* (springs) which provide water for irrigation also. Water obtained from these spring-heads is either conducted directly by narrow channels to the fields or else, large wells have been constructed so that water can be stored, lifted and channelised. The district is also known for its large number of tanks, most of which are important from the point of view of irrigation potential. It may be mentioned in passing that the *atchkat* area is more than 400 hectares in the case of 8 tanks and between 200 to 400 hectares in the case of another 36 tanks. Sira taluk has the distinction of having the largest number of tanks.

Geologically, Tumkur district is situated right on the archaen complex. The rock formations are represented by the crystalline schists, the granitic gneisses and the newer granites. The crystalline schists of this district, which form the southern extension of the well-defined Chitradurga schist belt of the Dharwar system, are the oldest members of the archaean complex. The schist belt which passes to the east of Chiknayakanhalli send out, near Banasandra, a branch that extends over 40 km. This narrow belt is composed of chloritic schists, micaceous schists, quartzites, limestones and ferruginous quartzites. In this belt, lens-shaped masses of grey trap occur between the villages of Bellara and Bukkapatna. These are basic and intermediate types of Volcanic rocks. Portions of the schist belt near Doddaguri exhibit clear evidences of sedimentation. The thin patches of schists scattered about in gneissic complex show evidences of repeated metamorphism. These schists are intensely altered and new minerals like diopside, hyperthene, garnet, cordierite, sillimanite and corundum have developed giving rise to several interesting rock types. A major portion of the district is covered by gneissic complex which is said to be composed of four major components; banded gneisses, granitic gneisses, gneissic granites and granites, and grano-diorites, diorites, inter-action diorites and other varieties. The younger granites, which are coarse-grained and porphyritic, constitute a well-defined narrow range of hills, which run north and south in the eastern portion of the district. Gold, manganese, sillimanite, asbestos, corundum, feldspar, garnet, quartz, ochres, clay, silver sand, soapstone and building as well as ornamental stones constitute the chief items of mineral wealth. The soils of the district are hard and poor in general. Red, gravelly, sandy, clay, loam, black soil, sandy loam and sandy clay are the main types of soil met with in various parts of the district.

About 4 per cent of the total area of the district stands classified as forests. The forest regions are found to a large extent on the lower slopes of hill ranges. The forests are mostly open and consist of mixed species varying from dry deciduous to throny bushes. Because of the scanty rainfall the trees are short, twisted, knotty and full of branches. The forests contain very few timber species and the wood that is generally available is fit for

use only as fuel. These forests have also been over-exploited since decades and the free grazing facility permitted therein has had an inimical effect on the natural and artificial regeneration. In the southern portion however there are forest tracts containing tall and well grown trees. By and large it may be observed that the soil, rainfall and climatic conditions are not quite favourable for the growth of rich and variegated vegetation. In the absence of adequate forest cover the district has very few species of wild animals. Tiger panther and cheeta have now totally outmigrated from these forests. Bear, wild boar, hyena, fox, spotted deer and rabbit are the important species of wild animals encountered in the district.

The climate of the district is quite agreeable and free from extremes. However, amongst the taluks, Pavagada which is located in the north-east is noted for its relatively hot climate. The year is usually divided into four seasons: summer from March to May; rainly season or south-west monsoon season from June to September; past-monsoon season covering the months of October and November and dry or winter season from December to February. Generally the period from March to May is one of continuous and steady rise in temperatures. The day temperature reaches a maximum of 41° C at times. April is the hottest month. During April as well as May there would be thunderstorms followed by heavy pre-monsoon showers, in almost all parts of the district. With the onset of the monsoon, the temperature drops appreciably and throughout the monsoon period the weather remains pleasant. After October the night temperature dips further. December is usually the coldest month, during which the minimum temperature would be as low as 9° C on certain days. Relative humidities are high during the monsoon period, moderate during the other months and comparatively low during the summer afternoons. Winds are generally moderate with some increase in strength during the monsoon months, especially June and July.

The average annual rainfall in the district is 687.9 mm. This amount of rainfall is subject to considerable fluctuations from year to year. Within the district itself the northern and the eastern regions receive comparatively lesser amounts of rainfall than their southern and southwestern counterparts. The average number of rainy days being 45, the number of rainy days varies between 35 in Pavagada located in the north-east and 54 in Tumkur which enjoys a central location. The precipitation during the south-west monsoon period usually accounts for 50 percent of the annual rainfall and remaining 50 per cent of rainfall is spread over the pre-monsoon months of April and May on the one hand and the northeast monsoon months of October and November on the other. The remaining months of the year are comparatively free from rains. September and October are the months which are noted for heavy rainfall. It is during this period that the innumerable tanks of the district receive large quantities of water and get filled to the brim. Delays in the onset of these rains, as also inadequate downpour during this period, quite often cause great anxiety and hardship to the farmers of the district. Certain parts of the district are known to be often afflicted by drought and scarcity conditions.

Administrative divisions and jurisdictional changes during the decade:

The district has not witnessed any changes in its outer boundaries during the decade. So also, within the district the boundaries of various taluks have remained unaltered. At the village level, it may be mentioned in passing, there is only one instance in Tiptur taluk in which a new village was constituted by redefining the boundaries of an erstwhile large village. As already indicated the district is divided into 10 taluks which are grouped into three revenue sub-divisions. According to the Directorate of Survey, Settlement and Land Records there are 2729 villages in the district. But, according to the list finalised for 1981 census, there are 2728 villages and 12 towns. This number is at variance in comparison to 2725, the number of villages listed out in 1971 census. In the following statement reasons for the variations noticed in certain taluks are set out. Against each taluk the number of villages included in the *hoblis* as also the number of towns therein are indicated.

Sl. No.	Taluk	Total number of villages according to the			Name of the Revenue circles or Hoblis and number of villages in each shown in bracket (1981 Census)	No. of Towns as per 1981 Census list	Reason for variations in the number of villages as shown in

6. MAJOR CHARACTERISTICS OF THE DISTRICT IN RELATION TO ITS ECONOMIC RESOURCES:

The economy of Tumkur district is mainly dependent on land, particularly agricultural land. This land-locked district is not blessed by any major river, nor is it rich in mineral and forest wealth. Amongst the rivers that either originate or flow through this district none traverses a distance of even a hundred kilometres. In spite of this drawback, with a view to providing assured irrigation facilities, dams have been built across these streams, notably at Marconahalli, Boranakanive, Sankanapura and Mangala. The aggregate extent of lands so irrigated however is quite small in relation to the total cultivated area. Nevertheless its contribution to the agricultural economy of the district may be regarded as significant. Like the other southern districts of the State, Tumkur is also known for its numerous tanks, of which quite a few stand classified as major tanks. These tanks are of immense use to the villagers and provide water for irrigation as well. Yet another major feature of the agricultural economy of the district is that a considerable portion of its lands lies in the coconut belt. Tumkur is in fact the foremost amongst the coconut producing districts of the State and, in addition, the coconuts produced here are known to be of a superior quality. Livestock rearing, industry, trade and commerce besides service occupations too contribute significantly to the economy of the district.

Gold, manganese, iron, corundum, limestone, granites quartz, soap-stone, china-clay and silver sand are the important minerals available in this district. The auriferous formation of the Bellara Gold Mining Block consists of a massive basic igneous rock penetrated by several quartz reefs of various dimensions exposed here and there as disconnected runs. Most of these reefs are gold-bearing and the deposits of the ore are estimated at a quarter million tonnes. Since the gold content in this ore has been proved to be low, large scale exploitation of these deposits is regarded as uneconomical. It would be of interest to know that at this ancient gold mining site a serious attempt was made to extract gold during the modern times also. In about 1900, that is, soon after the discovery of a few ancient workings in this region, one Mr.R.H. Morris obtained a licence to prospect over an

area of about 24 square kilometres. He transferred his interests to the Indian Mines Development Syndicate Ltd., which carried out extensive underground investigations. The Syndicate sunk three shafts to various depths on the eastern reef (Bellara Reef) and after considerable exploration discontinued the work towards the end of 1905. On another reef, called the Tank Reef, ten shafts were sunk. Several levels were also driven at various intervals and a few winzes too were sunk connecting the different levels. However, having found the operations quite uneconomical, the Syndicate finally abandoned the mine. The couple of hundred tonnes of quartz which had been taken out during the course of these operations were left stacked at the shaft-heads in an uncared condition for years. Some of the local people took advantage of this situation and started extracting gold surreptitiously. This was discovered in 1941. With a view to put an end to this, in 1943, the Geological Department itself took up the extraction of gold by washing the powdered pieces of quartz, the mine debris and the soil nearby. At the same time it was noticed that the Tank Reef contained a fairly rich zone of auriferous quartz. A proposal to recover gold from this known reserve was sanctioned by the State Government in 1944. The Geological Department soon started its operations by clearing and reconditioning the three old shafts which were sunk earlier by the Syndicate. About 300 to 320 ounces of gold were secured. At this stage a revised scheme for intensive operations was formulated. There were considerable delays and difficulties in securing the necessary machinery. In the meantime about 464 ounces of gold were obtained by continuing the work of washing the mine debris. In 1951 work was carried out in full swing and, by treating 3826 tons of ore, about 160 ounces of gold were obtained. In the following year the ore production amounted to 3285 tons yielding 330 ounces of gold. In 1953 several developmental schemes were drawn up and further mining operations were undertaken. But the production of ore was not encouraging and it was found that any further exploration would result in a heavy loss. At the behest of the Bellara Gold Mining Advisory Committee, M/s. John Taylor and Sons Ltd., of the Kolar Gold Fields conducted a study of this mining area and submitted a report which was quite discouraging. Thus, in 1954, the mining operations were completely closed down. Among the other minerals which are being exploited regularly, limestone, iron, manganese, fireclay and china clay are important. Limestone deposits are found near Doddaguni in Gubbi taluk, Kudure Kanive area and near Melanahalli village. The ore contains about 49 per cent calcium oxide and 2.8 per cent magnesia. The limestone deposits are estimated at 17 million tonnes in the area south west of Voblapur village alone, the total quantity for the district being nearly 50 million tonnes. The large scale availability of this raw material led to the establishment of a cement factory at Ammasandra in 1960. From then onwards limestone is being regularly mined by the company, namely Mysore Cements Ltd. Iron ore deposits to the tune of 48.5 million tonnes in all have been noticed at Karekurchi area, Janehar area and Abbigegudda area spanning the taluks of Chiknayakanhalli and Tiptur. The ore is partly lateritic and partly heamatitic and limonite. Part of the ore mined in this district is supplied to VISL Bhadravati and the rest is exported. The iron content of the ore is estimated at about 60 per cent. Manganese ore occurs in Janehar, Honnebagi, Narsihalli, Sondenahalli and Kudure Kanive areas of Chiknayakanhalli taluk and Karekurchi and Halyal areas of Tiptur taluk. This ore is also being systematically mined. Corundum deposits are spread over a length of about 65 km covering the taluks of Koratagere, Madhugiri and Pavagada. No active mining is being done at present except at Arasapura and Venkatapura areas of Koratagere taluk where ruby corundum is available. Clays suitable for the manufacture of bricks and tiles are found in considerable quantities in Kondli, Kotikal, Banasandra, Hulisandra, Gadabanahalli and Kibbanahalli areas. Availability of this raw material has given rise to half-a-dozen tile factories in the district. Quartz, dolomite, soapstone and moulding sand are also being mined in considerable quantities as may be seen from the following.

Name of mineral (ore)	Quantity (in tonnes) of ore extracted during the year		
	1978	1979	1980
1. Limestone	613771	574045	475706
2. Iron	23071	35950	14996
3. Manganese	12177	7260	9653
4. Quartz	33542	35849	27381
5. Dolomite	1472	1315	4759
6. Corrundum	50Kg	—	216Kg
7. Clay	9627	—	15347
8. Soapstone	—	1090	825
9. Moulding sand	1017	1284	4374

The area classified as forests constitutes about four percent of the total geographical area of the district. Amongst the taluks Gubbi and Chiknayakanhalli have relatively larger extents of forests while Turuvekere taluk has the least. These forests are of a poor quality. The flora of the forest is of the dry deciduous type of two orders, namely the higher and the lower. The higher type is found in the Madhugiri State Forest zone, and in the Bukkapatna, Tirtharampura, Manchaldore, Huliyur-durga and Devarayana-durga State Forest areas. *Karimatti, Jalari, Honne, Dindiga, Alale, Toramatti, Hunise, Teak and Sandalwood* are the species of trees found in the forests of the higher order.

The species of the lower order are found mainly in the forest areas of Pavagada taluk and these include *Kaggali, Pale, Kare, Bandre, Tangadi, Kakke and Chujjalu* trees. Barks of *Kakke* and *Tangadi* are useful in tanning industry. The other important minor forest produce include *alalekai, hunise hannu, maradi, beedi or tupra leaves and sitaphala*. During the year 1979-80 the quantity of sandalwood extracted in the district amounted to 36 tonnes valued at Rs. 4.21 lakhs. The value of the minor forest produce as well as firewood and fuel extracted was estimated at Rs. 2 lakhs. Efforts are now being made to improve the forest wealth of the district by afforestation and other schemes such as rehabilitation of degraded forests, soil conservation, agave planting, cashew development etc. Contribution from forest resources to the economy of the district is only marginal.

Cultivated land constitutes the mainstay of the rural economy. According to the latest land utilisation statistics forests occupy 4.2 per cent; land which is not available for cultivation in view of its being found to be barren and uncultivable or else put to non-agricultural uses accounts for 13.7 per cent; other uncultivated lands (excluding current fallows) such as permanent pastures (11.0 per cent), cultivable waste (6.7 per cent) and lands under miscellaneous trees and groves (2.1 per cent) together form as much as 19.8 per cent; the fallow lands constitute 12.5 per cent and the net area sown accounts for 49.8 per cent of the total geographical area of the district. The area under current fallows represents the land which has been already brought under the plough, but on which for one reason or the other crops have not been sown during that particular year or season. Thus, broadly speaking, about 62 per cent of the total area of the district may be regarded to have been brought under the plough and, as per the above details, there is another 6.7 per cent which can be made use of for growing crops. In quite a large proportion of this land crops are grown under rainfed conditions. These lands yield only one crop a year. A significant portion of the lands which are enjoying assured irrigation however yield two crops. The extent of lands sown more than once in a year forms about 3.25 per cent of the net area sown. There are four reservoirs, named after Marconahalli, Boranakanive, Sankanapura and Mangala besides there are about 1300 tanks quite a few of which are useful for purposes of irrigation. During the year 1979-80 the total area irrigated by all sources added up to about 72676 hectares. Out of this, while the area irrigated by tanks and wells formed 56.8 per cent and 42.4 per cent respectively the canals accounted for a meagre 0.5 per cent. A considerable extent of lands of the district is however found to be suitable for the cultivation of coconut which is a perennial crop.

As a result of the various land reform measures implemented during the past three decades all the cultivated lands are now held under the *raiyatwari* tenure. According to the agricultural census of 1976-77, there are in all 2.86 lakh land holdings covering a total area of 6.14 lakh hectares. Though the average size of a holding works out to 2.14 hectares, a preponderance of small and marginal holdings is noticeable. The following table, based on agricultural census, 1977, provides an idea regarding the pattern of distribution of land holdings in the district.

Size of holdings (Area in hectares)	Number and percentage of holdings		Extent of land held	
	No.	per cent	Hectares	per cent
Below 0.50	62344	21.79	18106	2.95
0.50–1.00	57421	20.06	42348	6.810
1.00–2.00	75566	26.41	115497	18.80
2.00–3.00	35249	12.32	83736	13.63
3.00–4.00	18725	6.54	62783	10.22
4.00–10.00	29734	1039	174743	28.45
10.00–20.00	5699	1.99	75518	12.29
20.00–50.00	1353	0.47	34841	5.67
50.00 & above	86	0.03	6738	1.10
Total	286177	100.00	614310	100.00

Since a major portion of the cultivable lands has already been brought under the plough and every decade is witnessing a substantial increase in population the pressure on land is mounting continuously in as much as agriculture alone can no longer sustain the economy of the district. Since the 1981 population of the district is 1,977,854 and the extent of cultivable lands held is 614310 hectares the per capita works out to 0.31 hectares.

Ragi is the most extensively cultivated food crop of the district. It is grown in all the taluks as a rainfed crop as well as an irrigated crop. The total area under ragi roughly constitutes one-third of the total cropped area. In the rural areas ragi is even now the main staple food. Paddy and jowar are the other two important crops and of these paddy is usually raised under irrigated conditions. In the taluks of Sira and Pavagada which contain considerable extents of lands that are not quite suitable for raising either ragi or jowar the villagers are accustomed to sow coarse millets such as *navane and haraka. Horsegram, tur and avare* are the important pulses grown all over the district. Sugarcane cultivation is of special significance in the taluks of Kunigal, Madhugiri and Sira. In fact, Kunigal taluk is a noted traditional centre of gur production. Coconut, groundnut, mulberry and chillies are the chief commercial crops. The taluks of Tiptur, Chiknayakanhalli and Turuvekere have large areas under coconut and this particular belt is

renowned for the production of coconuts of a superior quality which is rich in oil content. Tiptur is known all over the country for its copra. In so far as groundnut cultivation is concerned, the leading taluks are Pavagada, Sira and Madhugiri. Areca, tobacco, bengal gram and castor seeds are also raised in almost all parts of the district. An idea regarding the portion of lands sown with food and non-food crops may be had from the following details relating to two years.

Crops	Area under the crop			
	1978–1979		1979–1980	
	Extent	Percentage	Extent	Percentage
I Food crops	406730	74.96	400609	73.18
(i) Cereals & millets	292060	53.83	29036	53.09
(ii)Pulses	96528	17.79	92058	16.82
(iii)Other food crops	18142	3.34	17915	3.27
II Non-food crops	135827	25.04	146781	26.82
(i)Oil seeds	127011	23.41	135626	24.78
(ii)Fibres	647	0.12	588	0.11
(iii)Others	8169	1.51	10567	1.93
Total	542557	100.00	547390	100.00

Animal husbandry is an important economic activity in all parts of the district. A large number of cultivators as a rule keep a pair of bullocks, a few cows and a couple of buffaloes. Agricultural operations like ploughing, inter cultivation, drawing water from *Kapile* wells, threshing of grains and transportation of manure to fields and produce to home are, as in the past, being carried out with the draught power provided mainly by the bullocks. Though the use of chemical fertilizers has now become a common feature the value of farmyard manure has not been undermined. Thus, cattle rearing still continues as an adjunct to agriculture. The predominant breed of cattle found in the district is the Hallikar breed. Though there are no cattle breeding farms requisite measures like mass castration of all scrub bulls, artificial insemination, supply of stud-bulls of good breed etc., have been taken up by the Animal Husbandry and Veterinary Department to improve the existing breeds of cattle. Buffaloes are not put to yoke but are sold away at a tender age. Sheep-breeding, rearing of goats and poultry keeping are also of considerable importance. A Sheep-Breeders' Association has been functioning in the district since 1947. Similarly, with a view to developing poultry farming, a Poultry Extension Centre has been functioning since 1961 at Tumkur. An idea regarding the livestock wealth may be had from the following data based on three successive cattle censuses.

Category	Number of livestock heads (in thousands) as per cattle census of		
	1966	1972	1977
1. Cattle	647.8	564.7	625.4
2. Buffaloes	162.5	175.5	200.8
3. Sheep	766.7	670.9	584.5
4. Goats	288.9	306.8	235.3
5. Poultry	552.1	602.2	637.3

The Kunigal Stud Farm is the oldest stud farm in the country and the stock bred in this farm have earned a well-deserved name throughout the country. The farm covers an area of about 150 hectares which is divided into 25 paddocks of different sizes containing plenty of nourishing grass. The Bangalore Turf Club has been managing this farm since about a decade. Of late, dairying is receiving greater attention in rural as well as in the urban areas. There are farm coolers at Tumkur and Sira for procuring milk from the surrounding areas for onward transportation to the Bangalore Dairy.

The numerous minor and major tanks as well as the four large reservoirs provide ample scope for the development of inland fisheries. A variety of fishes such as *gende minu, arja, bilchi, katla, godle, baleminu, meesegirlu, kutchu, korava, havu minu, chavale, sasalu, and seegdi* are found in these tanks, The water-areas suitable for fish culture are being stocked with quick-growing varieties of fishes, like *catla, rohu, mrigal* etc. Fishing is done by means of dragnets, gill nets, cast nets, prawn nets, long line and plunge baskets. Fishing activity is confined mainly to the members of the Besta community. A fairly good concentration of fishermen is found in the villages and towns with major tanks and for most of them fishing is a subsidiary occupation. A fish farm is being maintained at the Marconahalli reservoir where adequate arrangements have also been made to demonstrate the use of improved fishing gear. During 1970-80, the estimated fish catch amounted to 894 tonnes valued approximately at Rs. 44.70 lakhs. Among the taluks Gubbi alone accounts for a little more than 50 per cent of this total fish yield.

Tumkur district ranks amongst the industrially backward districts of the State. But for one cement factory which came up a couple of decades ago and the recently established watch factory the district does not have any large scale industry to boast of. A reference has already been made about the gold mining industry which proved infructuous. The availability of limestone, clay and sand in large quantities prompted the State Govern-

ment during the 50's to think in terms of setting up a State-owned cement factory at Ammasandra village of Turuvekere taluk. However, in deference to the suggestions made by the Planning Commission the project was assigned to the private sector and soon a private mine owner came forward to undertake this venture. The Mysore Cement Limited was thus incorporated on 13 May 1958 and an industrial license was issued in July 1959. The certificate of entitlement to start the business was issued on 12th October 1959 and the foundation for the construction of the factory was formally laid on 27 November 1960. The first cement plant of the factory, with a capacity of 100,000 tonnes of cement per annum started production in October 1962. The company originally entered into an agreement with the Kaiser Engineering Overseas Corporation which participated in the equity share capital of the company as well. In 1964 the management and secretarial responsibilities were taken over by M/s. Kaisers as the private mine owner Shri P. K. Sarangapani Mudaliyar withdrew from business. In January 1966, Messrs. Kaisers handed over the management of the company to Messrs. Birla Brothers who immediately expanded the capacity of the factory to two lakh tonnes of cement per annum. Subsequently, the capacity has been further expanded in order to meet the ever-growing demand for cement. Since its very inception the factory is producing cement by the dry process which is considered economical in its requirements of water and fuel. The factory employed about 1250 persons on regular basis and produced about 4 lakh tonnes of cement valued at Rs. 13.35 crores during the year 1979–80.

The H.M.T. watch factory at Tumkur was established during 1978 with a total investment of Rs. 34.13 crores. Sophisticated and latest types of automatic machines and equipment are employed here to produce high quality watch components on a mass scale. Employment of automatic feeding devices, latest tooling processes and advanced planting methods are some of the salient features of the technology adopted for this factory. The project has been so designed as to provide regular employment to about 3600 persons and produce 20 lakh watches in a year. Production of components and assembly of watches began quite soon and during the year 1979–80 the total number of watch sets despatched to assembly units amounted to 7.70 lakhs and, 6.58 lakh watches were assembled at the assembly units. The establishment of this prestigious factory at Tumkur has provided the much needed boost to the industrial economy of the district.

Apart from the two major industries, one of which is dependent upon the locally available raw materials and the other solely on regular imports. Tumkur district has a couple of units bordering on the medium-sized category and a considerably large number of small scale industrial units. Handloom weaving and sericulture too deserve a special mention, for these two have not been much adversely affected by the trends of modernisation but have continued to retain their traditional importance. Groundnut has all along provided the necessary base for the working of numerous oil mills in different parts of the district though the main concentration is in Tumkur town. Tiptur and a couple of other taluks are noted for the production of copra, the bulk of which is usually exported to traditional North Indian centres. However, copra of an inferior quality called *Kantu* is locally utilised to produce coconut oil which is found very useful as a raw material in the manufacture of soaps and hair oils. These oil mills are mainly met with in Tiptur town. Another important oil seed produced in the district is the castor seed and extraction of oil thereof is of considerable significance in the rural as well as the urban areas. In the paddy and sugarcane belt, particularly of the taluks of Kunigal and Gubbi, the agro-based industries of paddy hulling, ricemilling and gur making also contribute their mite to the industrial economy. Coir and coco-brooms are the prominent industries supported by the coconut gardens. There are several saw mills and furniture workshop. So also there are factories producing match splints. Tumkur town is noted for the manufacture of *balapa* (slate pensil), silk ribbons, fried gram as well as a variety of agricultural implements and equipment. In this as well as the other towns and also a few large sized villages enjoying roadside location there are several general engineering workshops, automobile repair workshops etc. Beedi rolling is an important activity in the towns of Sira, Tumkur and Tiptur. During the year 1979-80 the total number of factories registered under the Factories Act and the total number of persons employed therein stood at 62 and 3802 respectively.

Handloom weaving provides livelihood, mostly as a subsidiary occupation, to a significant proportion of households. Cotton, silk and woollen weaving are prevalent to an almost equal extent. The important cotton weaving centres are Halepalya near Tiptur, Gubbi, Kallur and Somalapura of Gubbi taluk, Mavinakere of Turuvekere taluk, Y.N. Hoskote and Gangasagara of Pavagada taluk. Sarees, dhoties, *chaddars* and bed spreads are the items produced here. Silk weaving is concentrated mainly in Gubbi, Kallur, and Chelur of Gubbi taluk; Halepalya, Kotanayakanahalli and Nonavinakere of Tiptur taluk; Chiknayakanhalli and Kadenahalli of Chiknayakanhalli taluk; Krishnapura in Pavagada taluk and, to some extent, in Tumkur proper. The requisite raw materials are obtained from Bangalore and, to a large extent the products, namely silk sarees with lace borders, are also marketed mostly at Bangalore. In recent years there has been a significant spurt in the number of power looms in this district also. Weaving of *Kambli* (Coarse woollen rug) is a traditional occupation of a section of the Kuruba community. This industry is spread out in several villages and towns of the taluks of Sira, Madhugiri, Pavagada and Chiknayakanhalli. A few prominent centres are Chiknayakanhalli, Bevinahalli, Hagalavadi, Ittigadib-

banahalli, Y.N. Hoskote and Ganganaghatta. The *Kamblis* produced in the district are generally exported to the *malnad* districts. Handloom weaving industry has been adequately covered by the co-operative movement and the weavers as well as the societies have all along been receiving financial assistance, technical guidance as well as marketing services from the Khadi and Village Industries Board and other governmental and semi governmental agencies.

Tumkur district is known for its sericulture industry. Mulberry cultivation and silk-worm rearing are practised as a subsidiary occupation by a considerable number of farmers in Kunigal taluk and to a little extent in the taluks of Tumkur, Gubbi and Turuvekere. Kunigal taluk occupies a pride of place as a seed area for the pure Mysore race of silk-worms. An idea regarding the growing importance of sericulture may be had from the following data relating to three years namely 1977-78, 1978-79 and 1979-80.

	1977–78	1978–79	1979–80
1. Area under mulberry (in hectares)	1334	1749	3676
2. Number of grainages	8	11	12
3. Number of licensed silk-worm rearers	7952	9656	11168
4.Cocoons produced (in lakh Kg.)	7.4	14.3	NA
5. Number of silk filatures (other than government)	126	170	NA
6. Quantity of silk produced (other than that in Govt., filatures)(in Kg.)	14244	61836	NA

With a view to providing suitable factory accommodation and modern facilities to the industrialists the government has established industrial estates at Tumkur and Sira. Since Tumkur is classified as an industrially backward district the entrepreneurs are entitled to several concessions and subsidies. The effects of efforts at rapid industrialisation are however yet to manifest. One of the main factors that has all along been inhibiting the industrial growth of the district appears to be the proximity of Bangalore city, especially in the case of Tumkur, the district headquarter town.

Trade and commerce as well as the transport sectors are substantially contributing to the economy of the district. Tumkur, Tiptur, Sira and Madhugiri are the prominent business centres. Tiptur is famous for its copra market and enjoys the distinction of having the earliest regulated market of the district. It is connected by rail to Arsikere railway junction and the distance is hardly 25 km. The town lies on the State Highway which connects Bangalore and Shimoga and passes through the prominent centres like Tumkur, Gubbi, Arsikere, Tarikere and Bhadravati. The Regulated Market at Tiptur was established in 1949. Besides copra and coconut, the other commodities covered under the regulations are seegu (coco-palm fronds and the broom sticks made out of their rceds), jaggery and oil seeds. Tumkur Regulated Market came into being in 1952 and this covers the commodities like groundnut, arecanut, tamarind, gur, soapnut, edible and non-edible oil seeds, cereals and pulses. The next market to be establised in the district was the one at Sira in the year 1956. This practice of setting up markets was followed up in the subsequent years too and now the district has as many as 16 Regulated Markets (including sub-markets) to serve the needs of the farmers and the traders located in various parts of the district. The value of turn over in these regulated markets during the year 1978-79 added up to Rs. 33 crores. The co-operative movement has also had its beneficial impact on the district's economy. As in 1979-80, there were in all 1090 co-operative societies with a total membership of 4.7 lakhs. The number of agricultural and industrial co-operatives being 271 and 134 respectively, these had a membership of 2.11 lakhs and 15 thousands respectively. In addition to 10 PLD banks at the rate of one such unit per taluk, there were 21 co-operative banks serving different areas. As regards to the commercial banks it may be mentioned that there were 83 offices at the end of 1979-80.

Tumkur district is enjoying railway communication facilities since about a hundred years, for it was in August 1884 that the railway line from Bangalore to Tumkur was opened for traffic. The railway line which connects Bangalore with Poona and Bombay on the one hand and Bhadravati and Shimoga on the other covers a distance of 98 km in Tumkur district and passes through Gubbi and Tiptur besides Ammasandra near which the cement factory has now been set up. As in 1979-80 the district had a total road length of 3752 km which gives an average of 35 km per every hundred square kilometres of its area. The Bangalore-Poona National Highway passes through Tumkur and Sira while the Bangalore-Mangalore National Highway passes through Kunigal. The total length of the national highways in this district adds up to 105 km. Tiptur and Gubbi are the prominent centres that are located on the Bangalore-Honavar State Highway. From the point of view of road communication facilities Pavagada taluk appears to be the most backward. Almost all the important centres including the small towns are enjoying good road transport facilities. The two national highways and the Bangalore-Honavar State Highway are noted for their heavy traffic. All the taluk headquarter towns have direct buses to Bangalore, the State capital. Since all the bus routes in the district are not nationalised, private companies are providing bus transport facilities on several routes.

In summing up it may be mentioned that agriculture is the backbone of Tumkur district. The rainfall is somewhat scanty in the northern and eastern sectors and is also quite undependable. So much so, certain parts of

the district are prone to suffer from conditions of scarcity arising out of failure of rains. The district is some what fortunate, for a considerable portion of it lies in the coconut belt and coconut is an important cash crop and a raw material for certain agro-based industries. The southern and western portions have irrigation facilities to an appreciable extent. Industrially Tumkur is backward. It is only during the last decade that a positive step towards industrialisation in the modern sense of the term has been taken by commissioning a watch factory. Household industry, sericulture, small scale industry, trade and commerce as well as transport and services have continued to maintain their relative importance in the overall economy of the district.

7. MAJOR SOCIAL AND CULTURAL EVENTS, NATURAL AND ADMINISTRATIVE DEVELOPMENTS DURING THE DECADE:

The district has not witnessed any major social and cultural events during the last decade. There have not been any major administrative developments either. The social and cultural life of the people has been quite placed throughout the decade. In the field of industrialisation the major addition is the establishment of a modern watch factory at Tumkur. As in the other parts of the district and the State in this district too several developmental programmes were sponsored by the Government and duly implemented. During the latter half of the dacade the twenty point economic programme was vigorously implemented and large sections of the economically weaker community were benefitted to a considerable extent. As in the past, during this decade also fairs and festivals were held at various places throughout the district with the traditional pomp and gaiety.

8. BRIEF NOTES ON PLACES OF RELIGIOUS, HISTORICAL OR ARCHAEOLOGICAL IMPORTANCE IN VILLAGES AND PLACES OF INTEREST IN TOWNS:

1. CHIKNAYAKANHALLI TALUK

I. L.C. No. 5 Honnebagi : On a hill nearby there is the Ranganatha temple which has some unique features. The priest of this Vaishnava temple is a Veerashaiva (Lingayat) and it is the members of this community who take the leading part in conducting the annual car festival of Ranganatha. The Timmappa temple of Dugudihalli is also likewise patronised by the Lingayats.

II. L.C. No. 7 Dabbeghatta: The village has a *trikutachala* temple which belongs to the 13th century A.D. The three cells enshrine three lingas the names of which have been mentioned as Hoysaleshvara, Brahmeshvara and Macheshvara in one of the inscriptions discovered near this temple. However the temple is now known as the Mahalingeshvara temple. The village contains a number of tombs of bulls which were dedicated to the local temples in the past. The local Marula Siddeshvara temple is also of some importance.

III L.C. No. 40 Settikere : The village is known for its Yoga-Madhava temple. This is a *trikutachala* temple of the Hoysala style and its main cell is adorned with a beautiful stone tower. The three metre high seated figure of Yoga-Madhava is rich in ornamentation and is regarded as a rare specimen. The Ranganatha temple which is older than that of Yoga-Madhava is also of some architectural importance.

IV L.C. No. 44 Voderahalli : *In front of the local* Shantamallappa temple there is a fine lamp-pillar which is about 13 metres high. The village has, in its north-west, a shrine dedicated to Henjerappa – a deity that represents Bhairava the principal deity worshipped at Henjeru in Madakasira taluk of Andhra Pradesh.

V. L.C. No. 58 Godekere : The village is known for its shrine dedicated to Guru Siddarameshvara and the annual fair held under its auspices every November.

VI. L.C. No. 63 Pankajanahalli : The Mallikarjuna temple of this village is a fine Dravidian structure of large proportions. The *linga* enshrined here is said to be a conglomerate of 101 smaller lingas. The mahadwara of this temple is a fine piece of art. The temples of Ranganatha and Virabhadra are also noteworthy.

VII. L.C. No. 76 Kuppuru : The village is noted for its tomb shrine of saint Marula Siddeshwara and also for the annual *jatra* and cattle fair which come off during February.

VIII. L.C. No. 136 Huliyar : Inscriptions of the Chalukyan period and such other relics available here indicate that Huliyar was an *agrahara* town in the past. The Ranganatha temple here is basically of the Hoysala period, especially in so far as *garbha griha* is concerned. The idol which is about 150 cm high is beautifully carved. The Malleshwara temple is a small but neat Chalukyan structure. During the 16th century Huliyar formed part of the possessions of the Hagalawadi Chiefs and later on became a part of the province of Sira. The village has a *virakta matha* also.

IX. L.C. No. 150 Maruhole : This village has some fine *mastikals* or *sati* stones. One of these depicts a man holding a sword in the right hand with the point turned towards the ground and the left hand on his waist. His wife wears a crown with flames, holds a lime in her right hand and a mirror in the left. Another *mastikal* shows a richly ornamented couple in an almost similar representation.

X. L.C. No. 174 Doddabidare : The Ishwra temple at this place has, in its *navaranga*, several figures such as Saraswati, Mahishasuramardhini, Umamaheshvara

etc., among which a two-armed Durga and a fine Naga stone deserve special notice. The main object of worship in the Pate linga temple is 101 small stones of irregular shape each representing a linga. In front of this temple there is an open *mantapa* containing a rough stone which is pointed as the *pate* (that is *patala*) linga.

XI. L. C. No. 189 Yalanadu : The Siddharameshvara Temple of this village is a noted, large Dravidian structure having two *mahadwaras* – one on the east and the other on the south. It is believed that Siddharama, a Veerashiva preceptor performed penance here. The main object of worship in the temple is an ant-hill which is decorated and given the appearance of a linga. The temple has a *Bilva-vriksha-vahana* in the shape of car, adorned with painted images. The village has temples dedicated to Lakshmi, Revanasiddheshvara, Hariyappa and Kariyamma besides a Veerashaiva *matha* of the Renuka Sampradaya, known as *Shrimadarasikere Yelanadu Samsthana.*

XII. L. C. No. 193 Kandikere : The village has the ruins of a fort surrounded by a moat. The Gopalakrishna temple with a beautiful idol, about 150 cm high, and the Shantinatha *basti* deserve notice. At some distance to the north-west of the village-site there are the ruins of a Siva temple and a *matha*. Near this place a large number of tombs of temple bulls are also found.

2. GUBBI TALUK

I. L. C. No. 89 Kadaba : The village takes its name from Kadamba rishi who is believed to have had his hermitage here on the banks of the Shimsha river and to have honoured Rama during the latter's sojourn here on his way back to Ayodhya. Sage Kadamba is believed to have set up the idol of Rama for worship. The temple dedicated to Rama is a large Dravidian structure with a *gopura* and a fine Garuda pillar in front. However, this temple does not contain the idol of Rama as, it is believed to have been destroyed or taken out by the invading Muhammadens. The tower over this cell, it is said, was subsequently struck by a lightning and was thus destroyed. The temple has 3 cells in a row-the middle cell enshrines Janardhana while the cells on the north and the south enshrine the idols of Yoga Narasimha and Venugopala. The local Kailaseshvara temple appears to be a much older structure and has a lamp pillar which is about 7 metres high and has a frame work at the top for placing lamps. The temple faces south though the linga itself faces the east. The north outer wall has a slab on which the figures of an elephant and its rider armed with a goad are found engraved. The bund of the tank also has a similarly engraved large slab. At the eastern outlet of the tank there is a temple dedicated to Hanuman and to its east there is a fine *Uyyalekamba* in the form of a gate. Kadaba is one of the five settlements of Hebbar Shrivaishnavas that were founded during the times of Ramanujacharya. In the Tamil inscriptions this place is referred to as Dasharatha Rama – Chaturvedi – mangalam. An inscription dated in 1696 A.D. found at Rampura nearby is of considerable interest as it throws some light on the ideas about public health which the villagers entertained in those days. This inscription states that at a meeting the villagers decided that no corpse should be buried within an arrow shot of a well that had been newly sunk and any one violating this ruling would be punishable with excommunication.

II. L.C. No. 152 Nittur : This is a place of historical importance and in an inscription dated in 1126 A.D., it has been referred to as the southern Aihole, the navel of Gangavadi 96000 and the crest-jewel of the Heruhe-nad. The Shantishvara *basti* here is a Hoysala structure of the 12th Century and consists of a *garbhagriha, a sukhanasi, a navaranga and a mukha mantapa* and contains beautiful sculptures. The main object of worship in the temple dedicated to Mariyamma, the village Goddess, is an ant-hill.

III. L.C. No. 202 Muganayakanakote : This was once a strongly fortified place with a flourishing market. It is said that when this place was besieged by the forces despatched by Parashu Ram Bhau, the local inhabitants destroyed the market and defended the fort for about two months by which time the attacking Marathas abandoned the siege and retired.

IV. L.C. No. 232 Hagalawadi : This was once the headquarters of a line of chiefs known as the Hagalavadi Paleyagararu. Who held sway over large tracts of lands presently included in this district, for nearly three centuries from 1478 A.D.,

3. KORATAGERE TALUK

I. L.C. No. 31 Hulikunte : The village has an artistically well executed (and inscribed) *sati* stone. The slab consists of 3 panels. The top panel has, between the sun and the moon, two cobras with a male figure in a standing posture. The middle panel has a linga in the centre flanked by couples with folded hands on both sides. The bottom panel has a standing couple with an intervening sword, and the female figure holding a mirror in the left hand and a lime in the right. On either side of this couple is a female figure on horse back, holding a mirror in one hand and lime in the other.

II. L.C. No. 44 Nagenahalli : The village has a cave temple of Gutte Mallappa and, close to it, there is large slab containing a fine figure of Hanuman.

III. L.C. No. 45 Hanchenahalli : A hill nearby is known as urugutte. The village has the ruins of a fort and a *mastikal* which, the villagers believe, represents *Vyasana tolu*. This *sati* stone showing an arm and a hand projecting from an upright post has the figures of a couple

sculptured below.

IV. L.C. No. 48 Holavanahalli : Situated on the banks of the Jayamangali river, this village was formerly known as Koramapura and was being ruled by a chief named Holava Gauda. It is said that when Baire Gauda of Avati or one of his descendants proposed to establish a fort and a *pete* (bazar) at this place the local people insisted that the town should be named after their former ruler Holava gauda. This was accepted and the name duly changed to Holavanahalli. This was a place of considerable importance during the paleyagar period. The *brindavana* of Raghavendra Swamy here is one of the oldest and is held in high reverence by the people of the neighbourhood.

V. L.C. No. 50 Akki Ramapura : The Venkataramana temple in this village is a large structure, built in the Dravidian style of architecture, with a gopura and prakara. This temple is said to have been renovated during the reign of Haidar Ali. The structure bears some features of saracenic style also.

VI. L.C. No. 106 Kyamenahalli : The village is well known on account of the annual festival held in honour of Anjaneya swamy. On this occasion a cattle fair is also held and this happens to be one of the biggest cattle fairs held in the district.

VII. L.C. No. 195 Channaraya-durga : This village has the remnants of a beautiful fort atop a massive rocky hill which rises to an altitude of 1120 m above the mean sea level. These fortifications are ascribed to the Madhugiri chief Channappa Gauda (mid 17th century). Later it was captured by Komaraiya, a general of the Mysore Raja and its name was also changed to Prasannagiri. For a brief period the fort was occupied by the Marathas also and from them it was taken back by Tipu Sultan. At the entrance there are inscriptions of the Maratha Generals Pant Pradhan and Madhava Rao and in the latter inscription dated in 1766 A.D. the hill is called Chandrayadurga. At the foot of the hill there is a fine cave temple, which is known as Murari Matha and has a pair of *Padukas* as the chief objects of worship. The two samadhis found here are said to be those of the desciple of Murari Swamy.

VIII L.C. No. 198 Mallekavu : The village has a cave temple enshrining a linga. At the foot of this linga there is a small well formed by a perennial spring and this forms the source of the stream known as *Siddhara-Bettada-halla.*

IX. L.C. No. 212 Navilakurke : A fine *mastikal* (*sati* stone) found here depicts a couple standing side by side in a dancing pose as an indication of their joyful mood after their re-union in heaven. Flames are shown as emanating from the head of the female figure.

4. KUNIGAL TALUK

I. L.C. No. 53 Kottagere : This was known as Sridharapura during the time of the Hoysala king Vishnuvardhana and contains the several historical relics including inscriptions. The Kotteshvara temple, now mostly buried, is an ancient Dravidian structure. Local tradition states that this was founded by Kottappa who by the favour of some Bairagis acquired immense treasure after killing a seven-hooded serpent. He is also said to have built the tank at this village. The ruins of a Jaina *basti* of the 12th century and of another temple with the figures of Surya and Bhairavi are the other objects of interest in this village.

II. L.C. No. 94 Hutridurga : Also known as Dodda betta, this is a fortified hill at an altitude of 1112 metres MSL. From the foot of the hill to the summit there are as many as 8 gateways. From the summit one can have a panoramic view of the surrounding country. The hill top is known as Shankara Kumbhi and has a temple dedicated to Shankareshvara and a spring called *dodda done*. The village is situated on the first elevation and has the temples of Adinarayana, Veerabhadra and Anjaneya.

III . L.C. No. 135 Huliyur-durga : The founding of village and the fortifications of the hill commanding it are attributed to Kempe Gowda the chief of Magadi. The hill is a solid mass of almost perpendicular rock. The ascent is rather very difficult and the hill has the peculiar appearance of an inverted cup. The hill has a number of springs, ruined houses, granaries, powder magazines, remnants of palaces, *durbar* hall etc. At the second gateway from the foot there is the shrine of Ganapati carved on a boulder. To the west of the hill there is the Gopalakrishna temple which has well-worked pillars in the *navaranga*. Hemagiri, another hill nearby, has the temple of Mallikarjuna on its summit and on its western slope is the shrine of Varadaraja where the object of worship is a round stone which is believed to have sprouted forth from the ground (*Udbhava murthy*).

IV. L.C. No. 191 Amrutur : This seems to have been an *agrahara* town, known as Veera Narasimhapura and Atakur in former days. The Channakeshava temple here is a Dravidian structure of the 16th century. The Someshvara or Chandramauleshvara temple near a tank which is also of the 16th century enshrines an *udbhava* linga and has a good lamp pillar which is about 14 metres high. Behind this temple there is an *Uyyale Kamba* (swinging arch) about 5 metres high. The Pattaladamma temple here has several painted strucco figures of which two, seated in the middle represent Pattaladamma and Lakshmi. The annual festival in honour of this goddess which comes off in the month of *Vaishakha* (April-May) is an important event in this neighbourhood.

V. L.C. No. 236 Kodavathi : The village is noted for

its Lingayat *Matha* which is situated in a cave and is known as *gavi matha*. Legend has it that this cave is connected by a sub-terranean channel with the *Pattalaganga* of Kelaganagavi-matha at Shivaganga. There are a few *gadduges* (tombs) close to this *matha* and of these, the one representing Channaviraswamy is held in high reverence.

VI. L.C. No. 252 Yediyur : The Siddhalingeshvara temple here is a large Dravidian structure facing north. It enshrines the *gadduge* (tomb) of Tontada Siddalinga swamy, a celebrated Veerashaiva preceptor and author of the 15th century, whose main Kannada literary work is said to be *Shatsthala Jnanasaramrita*. Yediyur is an important place of piligrimage which attracts devotees all through the year. The annual car festival of Siddhalingeshvara which comes off during the bright half of *Chaitra* (March-April) is a major event. Close to this temple there is a Veerashaiva *matha* and there is one more Veerashaiva *matha* at some distance thereto. The village has a dilapidated temple enshrining Varadarajaswamy.

VII. L.C. No. 296 Kaggere : This village is believed to be the place where Tontada Siddhalingaswamy used to sit for his meditations. The spot has been sanctified by erecting a temple thereon and, under the auspices of this temple, Siddhalingaswamy *jatra* is celebrated every year during *Phalguna* (Feb-March).

5. MADHUGIRI TALUK

I. L.C. No. 8 Siddapura : The village has the remnants of a fort which, according to an inscription found in the village, was built in 1593 A.D. by Mahanada-prabhu Chikkappa Gowda of Bijavara during the reign of the Vijayanagara king Venkatapathi Raya I. There is a Veerashaiva *matha*, known after Balaradhya presumably the preceptor of Chikkappa Gowda.

II. L.C. No. 73 Basmangi Kaval : On the summit of this fortified hill Bhasmangeshvara temple is situated. This place which was originally fortified with walls of mud and stone by Budi Basavappa Nayaka was captured by Haider Ali in 1768. The old fort was then dismantled to make way for a superior structure of stone and brick. Ruins of a mahal which was built by Haider Ali are also seen here.

III. L.C. No. 147 Medigeshi : The village is located at the eastern base of Medigeshi durga, a fortified hill. The fort is said to have been erected by Nagareddi, a local chief, and named after his wife who had very long hairs touching her heels. Later it was taken by Chikkappa Gowda the chief of Madhugiri. In 1761 it was reduced by Haider Ali and then the place was also under the occupation of the Marathas for a brief period before it was recovered by Tipu Sultan in 1774. Under the Muhammaden government, Medigeshi was the residence of an Asoph and afterwards it was the headquarters of a taluk for a short period. The fort has seven gates leading to the summit of the hill which contains the remains of granaries, dome like structures for storing oil and ghee, powder magazines and also *dones* or springs. There is, on the summit, a fine mosque with two minarets at the sides and an ornamented parapet all round the roof. Nearby there is a Hanuman temple also. The Venkataramana temple in this village which is similar to the one at Madhugiri is said to have been built by the local chief Nagareddi. The Malleshwara temple here is also of some importance.

IV. L.C. No. 165 Sravanagudi : There are about a dozen inscribed *viragals* (hero-stones) in this village. Besides there is an uninscribed *viragal* which depicts a hero in the arms of celestial nymphs and a tiger pouncing on a bull.

V. L.C. No. 212 Haleitakaloti : The Anjaneya temple of this place enshrines a beautiful idol. To its left there is a stone slab on which a female figure is carved. This figure is supposed to represent a *Dombara* woman (Tumblers and Jugglers) who fell from a pole and died.

VI. L.C. No. 213 Doddadalavatta : The Lakshminarasimha temple of this village is a large structure in Dravidian style with an extensive *prakara* and a lofty *mahadwara* surmounted by a *gopura*. The chief object of worship is believed to be an *Udbhava murti* and this is in the form of a small round stone adorned with a crown. The car festival which comes off in the month of July is an important event that attracts a large number of devotees.

VII. L.C. No. 233 Kodigenahalli : Located on the banks of the Jayamangali river, this village is noted for its temples dedicated to Dandina Maramma (the village goddess) and Lakshminarasimha.

VIII. L.C. No. 265 Sravandanahalli : The village has an inscription of Nolamba King Ponnera (8th century A.D.). There is an uninscribed *viragal* also.

6. PAVAGADA TALUK

I. L.C. No. 19 Chikkanayakanahalli : The hill, known as Bangaranayakana betta, near this village has a temple that enshrines a pillar (about 4 metres high) on the sides of which the figures of a conch and a discus are engraved. An iron lamp is fixed at the top of this pillar. The pillar represents the deity popularly called Kambada-raya in the region. Ruins of several buildings can be seen on the hill.

II. L.C. No. 30 Gundlahalli : The village has an ancient large tank, named Akalesamudra. The fine sluice has a discus and a conch carved out of black stone fixed at the sides. Two inscriptions are found engraved

on a rough boulder on the bund of the tank. There is one more tank called Chikka kere and on its bund an Ishwara temple has been built. The *prakara* of this temple has unique stone slab about 2.7 metres high with several curves in the form of a snake. The Anjaneya temple enshrines a large idol of the god, about 3 metres high.

III. L.C. No. 34 Nidigal : Also known as Nidugal-durga this fortified hill formed part of the Nolamba kingdom. Later it came into the possession of the Cholas and was then taken by Hoysala Ballala II. Subsequently this was held for brief periods by the Nidugal chiefs and the Harati chiefs from whom it was captured by Tipu Sultan. The hill has three distinct elevations and the ascent is very steep and difficult as there are no steps to help the climber. According to an inscription found on the hill, the hill was named Nidugal (lofty peak) because it reached the skies and, according to another dated in 1487 A.D., this fort was the most impregnable of all the hill-fortresses in the Karnataka country. There are several lines of fortifications known as *Kaleshvara kote, Bhairavana kote, Are kote, Nagareshvara kote* etc., and a number of gates known as *Natanura-bagilu, Singarada-bagilu, Seemalayyana-diddi* etc. There are the ruins of a palace besides of the granaries and powder magazines and *dones*. On the summit is a small ruined temple of Basava built by chief Hottenna Nayaka in 1653 A.D. and close to it there is an iron lamp which is lighted once a year or more often in fulfillment of the vows undertaken by the people of the surrounding villages. A little lower down is the *Kalahastishvara* temple, which had its linga set up by Rama and was renovated by Harati chief Timmanna Nayaka in 1670. Close by there are three pieces of canon. The ruined Nageshvara temple near a pond known as Hokkarne was, according to an inscription dated in 1115 A.D. founded during the reign of Jagadekamalla II. An under ground canal supplies water to the Hokkarne pond. Of the temples at the foot hills, mention may be made of the Saravadeshvara temple. According to an inscription this was built in 1681 A.D. and the god named after Saravad, a village in Bijapur district said to be the birth place of the progenitor of the Harati family. The village has the tomb shrine of Mirza Hussain Vali and, under its auspices *urus* is held every year.

7. SIRA TALUK

I. L.C. No. 86 Seebi : Formerly known as Sibur and Harihara Rayara Pura this was once an *agrahara* town. The village is noted for its Narasimha temple under the auspices of which an annual festival is held every year in the month of *Magha*. The temple has architectural peculiarities of four periods. The ten *avataras* of Vishnu, *leelas* of Shiva and scenes from Mahabharata and Ramayana are depicted in mural paintings on the beams and ceilings of the *mukha mantapa* and the ceilings of the *mahadwara*. In this temple God Narasimha is in the form of a *Saligrama*. It is said that this temple was extensively renovated by Faujdar Karnika Nallappa and his brothers.

8. TIPTUR TALUK

I. L.C. No. 67 Honnavalli : The village derives its name from Honamma, the tutelary goddess who, in a vision, is said to have directed Someshvara the chief of Haranahalli to build this town. The Lakshmi Narayana temple at this place belongs to the Chola period and contains some beautiful carvings.

II. L.C. No. 130 Aralaguppe : The village is renowned for its Channakeshava temple, a fine building in Hoysala style containing several well-carved friezes and wall decorations. The *garbhagriha* is surmounted by a well-carved tower. Attached to the south wall of this temple stands the Ugra Narasimha temple. The Kalleshvara temple here appears belongs to the 9th century. The *navaranga* has a well carved doorway with Gajalakshmi on the lintel and a row of dwarfs on the pediment. The central ceiling with nine panels is of remarkable workmanship with *Ashta-dikpalakas* supported by four good pillars, with a most elegantly carved Tandaveshvara in the middle and four doubled up and hanging figures of flying *Gandharvas* in the four directions. The village has 4 more temples which belong to the period of the Gangas and resembles the temples at Talakad.

III. L.C. No. 171 Nonavinakere : This is a place of considerable antiquity and happens to be one of the five settlements of the Hebbar Shrivaishnavas set up during the times of Ramanujacharya. The Beterayaswamy temple here is a large Dravidian structure enshrining a fine figure of Srinivasa. There is an image of Koneri Iyengar the founder of this temple on a pillar as well as a few relievo figures of several chiefs and their queens on other pillars. The temple has several stone and metallic figures of Alvars and Sages. The Gopalakrishna temple is of an earlier period and is a *trikutachala*, the three cells of which enshrine the idols of Keshava, Yoga-Narasimha and Venugopala. The village has five Shiva temples with the deities known as Shanteshvara, Nonabeshvara, Choleshvara, Kalleshvara and Garigeshvara. The earliest temples in the district are to be met with here.

IV. L.C. No. 173 Vignasanthe : The Lakshminarasimha temple of this village is quite large and is of fine workmanship. According to an inscription this temple was built in 1286 A.D. by three brothers Appayya, Madhava and Gopala who were generals of the Hoysala king Narasimha III. In this *trikutachala* temple it is only the cell in the west that has a vestibule and a stone tower, of exquisite workmanship with remarkable floral carvings. The main cell enshrines a fine idol of Keshava about 1.5 metres high, supported by a consort on each side, having serpentine scroll with fine lace-work and ten *avataras* on the *torana*. The other two

cells enshrine Lakshminarasimha and Venugopala. The Balalingeshvara temple is a plain Hoysala structure with a stone tower adorned with four figures one over the other in four directions and a Hoysala crest in front. The Banashankari temple has a mutilated figure of the goddess seated in *sukhasana* and endowed with eight hands some of which are broken. The Bhairava shrine has a panel carved with two goddesses.

V. L.C. No. 231 Albur : This village has several inscription stones including two artistically executed *Viragals*. One of the *Viragals* found near the Shiva temple is dated in 1395 A.D. and is sculptured with caparisoned horses and elephants. The other *viragal* found in a field is adorned with sculptures in several panels among which top one depicts a hero seated on a throne and borne on two elephants.

9. TUMKUR TALUK

I. L.C. No. 44 Maralur : The Rama temple here has a stone panel depicting a horseman holding a spear in his uplifted right hand with two male figures to his rear and five female figures to his fore. The semi-circular top of the panel is artistically executed with scroll work.

II. L.C. No. 59 Heggere : The village has 3 Shiva temples, 2 Jaina *basadis* and a *mastikal*. Amongst the temples, Kalleshvara temple is the largest and the Galgeshvara temple is the most ornate. The Parshvanatha *basadi* is a fine specimen of Hoysala architecture built in 1160 A.D. During the reign of Narasimha I by Maha Samanta Govideva in memory of his deceased consort. It is remarkable for its simplicity and elegance.

III. L.C. No. 69 Devarayana-durga : This is a fortified hill situated amidst picturesque scenery. It consists of three elevations and on the lowest one there is the Lakshminarasimha temple. Near a spring, known as *Ane-done*, there are the remains of the tomb of an elephant. In fact, this place was originally known as Ane-biddasari i.e., the precipice where the elephant had a fatal fall and then as Jadakandurga after a chief and finally acquired the present name after its capture in 1696 A.D. by Chikka Devaraja Wodeyar of Mysore. The large tank named Bukkasamudra was formed during the early Vijayanagara period by putting up an embarkment across the gorge which is the source of Jayamangali river. The remains of this embarkment and the ruins of the ancient town can still be traced. The Narasimha temple built in Dravidian style is attributed to Kanthirava Narasaraja I and an inscription indicates that this was got repaired in 1858 by Krishnaraja Wodeyar III. The annual fair at this place comes off in April and is an important event that attracts a large number of people. The Hanuman temple nearby is said to be much older than the Lakshminarasimha temple and the deity Sanjivaraya is represented in a standing posture with folded hands. The middle elevation has a large cave with the figures of Rama, Sita and Lakshmana and two springs known as Rama-*tirtha* and Dhanush-*tirtha*. On the third elevation there is the Kumbhi-Narasimha temple consisting of *garbha griha*, a *sukhanasi*, a *navaranga* and a *mukhamantapa*. There are three sacred ponds called Narasimha-*tirtha*, Parashara-*tirtha* and Pada-*tirtha*. Higher up there is a shrine of Garuda and a large boulder called Divigegundu. Near this hill there is a small natural spring of pellucid water, known as Namada Chilume, which fills and over flows a mortar cut in the rock. On the slope of the hill there is the jalada-gondi gorge which is the source of Mangali stream. Higher up, the stream Jaya issues forth from another spring Jaya-*tirtha* and these two streams unite at the foot of the hill forming the Jayamangali river. This hill is also the source of the river Shimsha.

IV. L.C. No. 197 Hebbur : This is an old village said to have been founded by two brothers Hale Gowda and Timme Gowda and named Hebbuli from the circumstance that a bullock when attacked by a tiger here counter-attacked the tiger and drove it off. The cattle owners of the place pursued and killed the tiger and then the fort was built with the approval of the Vijayanagara king. The village has a branch of the Sringeri *matha* and the temple of Minakshiamma in which a Shri Chakra has been etched and consecrated in front of the idol of the goddess.

V. L.C. No. 328 Gulur : Gulur is associated with Siddhaveerannacharya the author of *Shoonya sampadane* and *Anadi Veerashaiva Sangraha*. This village is renowned for its huge Ganesha, about 2.5 metres high, which is made every year in clay for being worshipped over a period of 30 days and then immersed in the local tank. The *Jatra* comes off on the third day of *Margashira* (December) and during the entire month the devotees throng the village. The Ganesha temple however enshrines a small idol which is worshipped every day.

VI. L.C. No. 331 Kaidala : Formerly known as Kridapura this was the capital of a petty chiefdom – Local legend has it that the renowned sculptor Jakanachari belonged to this place which he left on taking up assignments under the Hoysala kings. However he left behind his family and some time after his departure his son Dankanachari was born. Engrossed in work Jakanachari could not return home for several years during which his son grew into an young man and an accomplished sculptor as well. Dankanachari then set out in search of his father and the encounter between the father and the son, who had not seen each other at all, took place at the Channakeshava temple under construction at Belur. As fate would have it Dankanachari pointed out a blemish in one of the carved figures which was not accepted by the artist, namely Jakanachari. In the test that ensued the son was proved correct and in pursuance of his challange Jakanachari had his right arm

cut off. Subsequently Jakanachari was directed in a vision to dedicate a temple to Keshava at Kridapura. Accordingly he returned home along with his son, completed the temple and had his right arm restored by the Divine Grace. Henceforth the place came to be known as Kaidala. i.e. the restored hand.

The Channakeshava temple here is a large Dravidian structure with a *mahadwara* surmounted by a tower. The Channigaraya idol, about 1.55 metres high stands on a high pedestal facing west. One of the pillars here has a figure of a man, standing with folded hands, and this is said to represent the celebrated sculptor Jakanachari. The Gangadhareshvara temple contains inscriptions stating that this temple and the Narayana temple were built in 1150 A.D. during the reign of Hoysala king Narasimha by a chief named Gule Bachi. In this temple there is a stone railing all round the *navaranga* on which elephants and flowers are carved.

10. TURUVEKERE TALUK

I. L.C. No 64 Sulekere : The village has a small Ishvara temple, built in the Hoysala style, enshrining a fine figure of Bhairava set up near the linga. The outer walls have only pilasters and the *garbhagriha* is surmounted a small tower. The Veerabhadra temple has four sculptured pillars depicting scenes such as the Arjuna's fight with Shiva, hunter Kannappa in front of a linga, etc. Another sculpture worth noticing is an ingenious combination of an elephant and a bull with only one head for both.

II. L.C. No. 67D Hosahalli : The Kalleshvara temple here is a Hoysala structure consisting of a *garbhagriha* a sukhanasi and a *navaranga*. The *navaranga* doorway is well-carved and that of the *sukhanasi* has perforated screens at the sides. In the Hosahalli-amma temple a painted stucco figure represents the goddess.

III. L.C. No. 85 Sampige : This place is identified as the Champakanagara, the capital of Sudhanva, of whom an account is given in the Jaimini Bharata. The village has a fine temple dedicated to Venkataramana.

IV. L.C. No. 125 Mayasandra : The temple of Mayamma, the tutelary goddess of the fishermen community of *Gangamatha*, is located in the centre of the tank bund. The village has a temple dedicated to Kollapuradamma. On a hillock nearby there is the temple of Mahadeshwara under the auspices of which an annual *jatra* and cattle fair are held. At Ramasagara which is also nearby there is the Varadaraja temple which is of the Hoysala period. This has a well carved idol of Varadaraja and close to it there is a linga also.

V. L.C. No. 192 Benakanakere : The idol in the local Anjaneya temple has been carved out of a thick inscribed stone of the Hoysala period.

VI. L.C. No. 227 Goni Tumkur : The Ishvara temple here is built in Hoysala style of architecture. The village has three worn-out *viragals* belonging to the Hoysala period.

VII. L.C. No. 233 Kadasur : The village is known for its Bhairava temple which enshrines a fine idol, about a metre high, endowed with four hands – the upper ones holding a trident and a drum and the lower ones holding a sword and a decapitated head.

PLACES OF INTEREST IN TOWNS

Among the twelve towns of the district none is a recognised tourist centre. With the exception of Adityapatna, the other towns are of some local or regional historical importance and have certain relics like ancient temples, forts, hero stones and inscription stones. Of these, Sira is perhaps the most notable town, for it was a seat of administration for quite a long period. *Adityapatna* is a new town that has come up at the site of a large scale cement factory and here the factory itself is the chief object of interest. *Chiknayakanhalli* derives its name from a chief of the Hagalavadi family and is noted for its Rameshvara temple which is a large Dravidian structure. The town has another large Dravidian temple enshrining a beautiful idol of Venkataramana. This temple stands on a terrace like the Hoysala temples and its *navaranga* has four pillars sculptured with peculiar figures like the elephant and a bull with a common head and such other combinations of animals. *Gubbi* is regarded as a holy place known as Amaragonda Kshetra. According to tradition, Gosala Channabasaveshvara, Amaragonda Mallikarjuna, Mallanarya and such other Veerashaiva preachers lived here during the 15th and 16th centuries. It is said, two sparrows which used to attend the discourse sessions and listen to the exposition of *puranas* by poet Mallanarya at the local Mallikarjuna temple, fell dead on the final day as soon as the exposition was completed. These birds believed to be of divine origin, were then buried in the temple precincts and tombs were raised thereon. Thenceforth the place came to be known as Gubbi, the Kannada word for a sparrow. Mallanna, a lineal descendant of Amaragonda Mallikarjuna and the author of *Ganabhashya Ratnamale* flourished here towards the close of the 15th century. His grandson Mallanarya wrote *Bhava Chintaratna* and *Veerashaivamruta Purana* in verse in 1513 and 1530 A.D., respectively while his disciple Prabhuga wrote *Chudanasthana* and *Vibhagrajasthana* in about 1520 A.D. His son Shantesha wrote Tontada Siddheshvara Purana in 1561 A.D. Thus, from the point of view of growth and development of Veerashaiva literature Gubbi enjoys an unique place. The town is known for its ancient Malleshvara temple which enshrines Dakshinamurti, Parvati and Veerabhadra. The Gubbiyappa or Channabasaveshvara temple has the *Gadduge* (tomb) of Channabasavayya, a Veerashaiva teacher who lived here during the period of

25891

Mummadi Honnappa Gowda the Paleyagar of Hosahalli. This temple has a beautiful ornamental tower and the annual festival held here in honour of Gubbiyappa attracts a large gathering. A mention may be made of the temples of Ohilappa, Janardhana and Byatarayaswamy besides that of Baila Anjaneya situated near the town. Chidambara Ashrama founded in 1940 is maintaining a *Veda Vidya mandira* and is a place of Socio-cultural interest. *Koratagere* was founded by one of the Holavanahalli chiefs and the ruins of the fort of his times, which was dismantled by Tipu Sultan, now constitute the main object of interest here. Besides,in the town there are a few fine *mastikals.* On the summit of the hill nearby there is the Basava temple and enroute, in the middle portion of the hill, the cave shrine of Gangadhareshvara is situated. *Kunigal,* referred to in inscriptions as Kunigil or Kuningil was the chief town of an area known as Kunigil-nadu and, in an old Kannada record dated in 785 A.D. Ganga king Sivamara is mentioned as its governor. The Kunigal fort is attributed to Veera Kambala Raya and is believed to have been built in 1290 A.D. Later, it came into the possession of the Magadi Chief who enlarged the town and the fort. Near this town the three rivers Nalini, Nagini and Kamala join together and this spot is regarded as very sacred. According to a legend, Nriga Chakravarti, a king from north India was cured of leprosy by taking a bath at this spot and in gratitude he constructed the large tank here. The Narasimha temple which in fact enshrines Janardhana, has a rare four-armed figure of Garuda holding a discus, a conch, a serpent and a *kalasha.* The other temples of interst here are those of Someshvarae, Padmeshvara, Venkataramana and Shivarameshvara. Kunigal is famous for its stud-farm. *Madhugiri* is surrounded by hill on all sides and the town proper is situated at the northern base of the hill of the same name. The large temples of Venkataramana and Malleshvara standing side by side are of considerable interest here. They are similar in plan, are built in Dravidian style and have lofty towers. The chief attraction here is the fort which is regarded as one of the finest forts in the State. It is built on a hill consisting of one huge mass of rock. The original fortifications are ascribed to Raja Hera Gowda. In about 1678, after a long siege, this place was captured by Dalavai Devaraja. Decades later, Haider Ali increased the fortifications. But, the town was plundered by the Marathas in 1791. There are several gates leading to the top of the hill and there are numerous springs. On the top of the hill there is the Gopalakrishna temple (which, however, does not have any idol now) and there are several other relics of the past. For instance near Bhimana-*done* spring is a fine figure of Hanuman with an inscription to its left informing that this Hanuman was consecrated and the *done* was constructed in 1646 A.D. by Mummadi Chikkappa Gowda. The Mallinatha *basadi* which adjoins the fort wall has a good *manasthambha.* Close to the town there is a Veerashaiva *matha* known as *Gurammana-matha,* a tomb shrine of Shivalingaswamy and caves known as sadhu-*gavi, Meke-gavi,* Siddheshvaragavi etc. *Pavagada* town too contains historical relics like a fort, a few inscriptions, an unfinished mosque etc. An inscription found on the hill discloses that the fort was built in 1405 by Gopanna, a general under Vijayanagara king Devaraya I. The hill consists of numerous gigantic boulders and on the top of the hill are the Sultan-Bateri and the Subbaraya's Bateri. The Bettada-Anjaneya temple situated in the lower reaches of the hill is a well-carved figure about 2 meters high. *Sira* town and the fort thereof are attributed to Rangappa Nayaka, a chief of Ratnagiri. Before the fort was completed, this region was conquered by Ranadulla Khan, the general of Bijapur sultan. Malik Hussain the newly appointed governor completed the fort and enclosed the town with mud walls. This fort is built on a plain and is surrounded by a moat on the outside. The brick and masonry battlements with holes for musketry and openings for cannon appear to be the additions during the reign of Haider Ali and Tipu Sultan.

All the major Muslim monuments in the district are to be found at Sira since it was the head-quarters of a province first under the Mughals then under the Bijapur Sultans and finally under Haider Ali and Tipu Sultan. The Jumma Masjid and the Dargah of Malik Rihan are fine structures in the saracenic style. This mosque, built in 1696 A.D., is ascribed to Shaik Farid Saheb whose tomb (as also that of his brother and sister) is located within the premises of the mosque. This *dargah* has a big tomb with four black minarets at the corners over the roof. There is another *dargah* called *Chinnada gori* as this has a golden finial and contains the tomb of a Fakir named Farid Ulla Shah who is said to have come from Bijapur and performed penance here till ant-hills grew around him. The *Idgah* here is in the typical Bijapur style. Ibrahim Roza which contains several tombs has the appearance of a Hindu monument, except for the minarets. The ancient Gopalakrishna temple now enshrines an idol of Hanuman and the original idol of Gopalakrishna is said to have been installed in the Narayana temple. The main object of worship in the Durga temple is an ant-hill. *Tiptur* town has a few inscription stones, the ancient Kalleshvara temple and a few somewhat modern temples dedicated to Mallikarjuna, Kashi Vishveshvara, Kannika Parameshvari, Saibaba etc. The Kempamma temple is also of ancient origins and under its auspices a largely attended *jatra* is held every year. *Tumkur* town is believed to have been established by one Kante Arasu of the Mysore royal family and it is said the walls of the fort which was then constructed has now been levelled. This place is now the most populous town of the district and is the chief administrative, commercial and business centre. The largest and the most ancient temple in the town is that Lakshmikanthaswamy. This is a Dravidian structure and appears to have been constructed during the early Vij-

ayanagara days, for near the *navaranga* entrance there is an inscription, dated in 1560 A.D., which records the grants made to the temple by Jagannatha Maha Arasu, a subordinate of the Vijayanagara king. Though the town does not have any places of tourist interest within its limits it does have a few such places in its vicinity. The famous Siddhaganga Kshetra is one such centre which lies hardly 5 km to the east of the town. On a hillock, there is the temple of Siddhalingeshvara and right in front of it there is a natural spring which is held sacred by the devout. At the foot of the hill renowned Siddhalinga Matha is located. This is a religious institution of the Veerashaivas which has promoted the cause of higher education by establishing several educational institutions in recent decades besides maintaining a *Gurukula* type institution for teaching Sanskrit. It has been the tradition of this *matha* to offer food to all the piligrims every day. The annual fair held in honour of Siddhalingeshvara lasts for seven days and attracts a very large number of people from far and near. The Ramadevara-betta which is about 1200 metres MSL with an extensive plain surface and another hill called Mandaragiri or Basti-betta are also located within a radius of 5 km from the town. Kaidala and Devarayana-durga which are of tourist interest are quite nearby. *Turuvekere* was an *agrahara* town known as Sarvajna-Srivijaya-Narasimhapura and founded by Sovanna Dannayaka, a general of Hoysala king Narasimha III. During the 16th century this town appears to have been captured by the Hagalavadi chiefs and then fortified by the erection of an outer fort. The town has yielded a few inscription and contains three fine temples of the Hoysala period. The large recumbent bull carved in black stone found in front of the Gangadhareshvara temple is a fine piece of sculpture. The Beteraya temple and also that of Channigarayaswamy have some inscriptions and well carved figures.

9. BRIEF ANALYSIS OF DATA :

Population and Growth Trends

According to the 1981 census the total population of the district is 1,977,854 comprising 1,008,522 males and 969,332 females. During the last decade there has been an addition of 350,133 persons. In absolute terms this increase is equal to the population of two medium-sized taluks of the district. In 1971, the average population of a taluk worked out to 162,772. When viewed in relation to this average also it may be stated that, population wise, two more taluks have been added to the district. The decadal growth rate of population works out to 21.51 per cent – a rate which is lower than the overall average for the State.

A review of the trends in the growth of population over the past 80 years reveals that Tumkur district has always registered a positive growth. Even during 1911-21, when the population of the State as a whole declined by 1.09 per cent mainly on account of the outbreak of influenza in an epidemic form throughout the State, Tumkur district witnessed an addition of population to the extent of 5.10 per cent. During the earlier decade of 1901-11 also the growth rate in Tumkur (10.02 per cent) was very much higher than the overall average of 3.60 per cent for the State. The gap between these two growth rates got considerably narrowed down during the period 1921-31 : while the district registered a growth rate of 11.10 per cent the State experienced growth at the rate of 9.38 per cent. Between 1931-41, the district failed to keep up its former pace of growth and the decadal growth rate, namely 10.73 per cent fell short of the State average of 11.09 per cent. This trend of a relatively slow growth was however reversed during decade that followed, when the population of the State and district increased at the decadal rates of 19.36 per cent and 20.46 per cent respectively. This reversal was of a purely temporary nature as is evident from the fact that during each one of the three succeeding decades Tumkur district has consistently displayed population growth at a rate which is significantly lower than the State average. The gap between the two rates has been increasing from decade to dacade. During the three successive decades of 1951-61, 1961-71 and 1971-81 while the total population of the State increased by 21.57 per cent, 24.22 per cent and 26.75 per cent that of the district grew by 18.76 per cent, 19.04 per cent and 21.51 per cent respectively. If the entire period of 80 years is considered it is noticed that the district has a slight edge over the State-average, for the overall growth rates for the district and the State are 194.34 per cent and 184.46 per cent respectively. The steady trends witnessed in the earlier decades are however no longer noticeable. The proximity of Bangalore metropolitan area seems to have cast a negative influence on the recent growth trends.

During the latest decade the district has displayed a comparatively low growth rate. When the 19 districts are arranged in a descending order of their growth rates, Tumkur takes the sixteenth place. Taluk-level data show that in 5 out of the 10 taluks, the growth rates are much lower than the district average of 21.51 per cent. Amongst the taluks, Pavagada has the highest growth rate of 26.90 per cent and this is closely followed behind by Tumkur (26.88 per cent). This phenomenon of higher growth is due to the relatively large scale accretions to the rural population of Pavagada taluk on the one hand and the urban population of Tumkur taluk on the other. In the case of Kunigal taluk the growth rate is only 15.79 per cent, the lowest rate for any of the taluks of the district. In the taluks of Madhugiri and Turuvekere also the growth rates are quite low. The factors that have direct or indirect influence on population growth of any area or region are quite numerous and have to be taken into consideration if one were to attempt a deeper analysis of the phenomenon.

The growth trends in the rural and urban sectors show that in accordance with the general pattern in the

State and the country, in Tumkur district too the urban population has increased at a high rate – a little more than twice the rate noticeable in the case of rural population. The decadal growth rates for the rural and urban sectors of the population of the district are 18.68 per cent and 42.85. Both these figures are comparatively less than the corresponding averages for the State which are 19.07 per cent and 50.65 per cent respectively. In the rural areas of different taluks, the growth rate is seen to vary between 14.29 per cent in Kunigal taluk and 24.83 per cent in Pavagada. The growth rates are below-average in Turuvekere (15.84 per cent), Madhugiri (16.76 per cent) and Tumkur (16.91 per cent). In the case of urban areas the growth rates vary between 19.41 per cent in Chiknayakanhalli taluk and 54.19 per cent in Tumkur taluk. Both these taluks contain one town each and while Chiknayakanhalli is a small town located in the interior, Tumkur is the most populous town of the district and is a prominent urban centre enjoying locational and other advantages. The urban growth rates noticed in the taluks of Sira (51.18 per cent) and Turuvekere (48.31 per cent) are fairly high. Of these, Sira is a noted trading centre and Turuvekere taluk has the industrial town of Adityapatna within its limits.

Villages and Towns:

The rural population of the district is scattered unevenly in 2506 inhabited villages which are organised into 10 taluks. In the matter of population, as also the number of villages, there is no uniformity amongst the taluks. The average number of villages being 251, the average rural population per taluk comes to 170,557. In terms of number of inhabited villages, Tumkur taluk is the largest (357) and the place next to it is held by Gubbi (312). Pavagada which has only 138 villages is the smallest taluk. Including Pavagada, in 6 out of the 10 taluks, the number of villages is less than the average. Population-wise also, Tumkur is the largest taluk. Madhugiri which has only 285 villages is the second most populous taluk and Gubbi holds the fourth place. Koratagere happens to be the taluk with the lowest population. When expressed in terms of percentages it is noticed that Tumkur and Madhugiri contribute as much as 13.22 per cent and 11.50 per cent to the rural population of the district. On the other hand the population of Koratagere forms only 7.03 per cent. The population of Pavagada taluk which has the smallest number of villages (5.51 per cent) however constitutes 9.48 per cent of the rural population. The share of the taluk's population in the total is more than 10 per cent in 5 taluks, between 9 and 10 per cent in 2 taluks, between 7 and 9 per cent in 2 other taluks and just around 7 per cent in the case of the remaining taluk.

The average population of an inhabited village of the district is 681. This figure is seen to vary between 526 in Koratagere and 1171 in Pavagada taluk. In Tumkur taluk which is the most populous and also the largest taluk in terms of villages as well, the average population is 632. A size group distribution of the villages of the district shows that 51.12 per cent of the villages are small villages with less than 500 inhabitants each. Those with a population in the range of 500 to 1999 form another 44.13 per cent. Tumkur is thus characterised by the predominance of small and medium sized villages. Hardly 6 out of the 2506 villages have more than 5000 inhabitants each and there is none with a population of 10,000 or more. In terms of geographical area also, especially if the inhabited villages alone are considered, the villages of the district are very small. The average area of an inhabited village is 397 hectares. Amongst the taluks, while Pavagada gives out the highest average of 961 hectares, Tumkur has the least average of 269 hectares. In 7 taluks including Tumkur, the average area is less than 400 hectrares and it is 445 hectares in Chiknayakanhalli. Small villages, both in terms of area and population are thus a characteristic feature of Tumkur district.

The urban population of the district is distributed in 12 towns belonging to 10 taluks. Pavagada and Turuvekere have two towns each and the others have one town each. Tumkur is the most populous town and Adityapatna is the smallest. The average urban population of a taluk comes to 27,228. It is only in three taluks that the urban population exceeds this average. The contribution of Koratagere taluk to the urban population of the district is only 2.97 per cent whereas that of Tumkur is as high as 39.91 per cent. Amongst the towns, Tumkur has a population exceeding one lakh and is thus a Class I city; none of the towns belongs to Class II category (50,000–99,999); two are Class III towns (20,000–49,999); 5 are Class IV towns (10,000–19,999); 3 are Class V towns (5000–9999) and only one belongs to Class VI (below 5000) category. The single Class I town itself accounts for 39.91 per cent of the urban population of the district and the remaining 60.09 per cent is shared amongst the rest as follows: Class III : 21.35 per cent; Class IV : 28.59 per cent; Class V : 9.03 per cent and Class VI : 1.12 per cent. It may be noticed that the population growth during the decade has enabled Tumkur, Sira and Gubbi to move upwards from Class II to Class I, Class IV to Class III and Class V to Class IV respectively. The addition of population has not resulted in any shift in size-group classification of the remaining 9 towns. The foregoing details highlight the importance of small towns in the district.

Trends of Urbanisation:

In Tumkur district the urban-dwellers constitute 13.77 per cent of the total population. This proportion is very low in comparision to the overall average for the State which is 28.89 per cent. The proportion of urban population to the total is an index of urbanisation and higher the proportion greater is the degree of urbanisation. When examined from this point of view Tumkur district ranks as the least urbanised district of the State.

In 1971 too Tumkur was the least urbanised district and the proportion of urban population to the total stood at 11.71 per cent as compared to the State average of 24.31 per cent. Over the decades, however, as in the State and the country as well, in Tumkur district too the urban content in the population is moving upwards. In 1951, as against the State average of 22.95 per cent, in Tumkur district the urban-residents formed 9.19 per cent of the population. This proportion moved up to 10.16 per cent in 1961 even though in the State as a whole there was a slight decline (22.33 per cent). The district is getting more and more urbanised with the passage of each decade even though one has to concede that the rate of such urbanisation is quite low. One of the reasons for this phenomenon is that the district has not witnessed any major changes in its economic profile and has started moving towards large-scale industrialisation only very recently. There has not been any addition to the number of towns during this decade. In fact, for a long period the district had only 10 towns and each one of these was the headquarters of a taluk. The commissioning of a cement factory resulted in the emergence of a new township prior to the 1971 census and, much earlier, Y.N. Hoskote of Pavagada acquired urban status consequent on its being constituted into a municipality.

Amongst the taluks, Tumkur is the most highly urbanised taluk, for in this case the urban component is as high as 32.51 per cent. Tiptur taluk (17.40 per cent) ranks next and is followed by Sira (12.91 per cent). With a proportion of only 5.84 per cent, Gubbi is the least urbanised taluk. Pavagada and Turuvekere have two towns each and inspite of this fact the urban component in the population of these two taluks come to 11.95 per cent and 8.12 per cent only. Since there are 2506 inhabited villages and 12 towns the ratio of towns per hundred villages comes to 0.48. Since Pavagada taluk has only 138 villages and 2 towns this ratio works out to 1.45 – the highest for any of the taluks of the district. Pavagada is followed by Turuvekere which has a ratio of 0.89. At the other extreme lies Tumkur taluk (0.28). Though Tumkur taluk is the most highly urbanised taluk of the district from the point of view of the strength of the urban component in the total population, if the above-stated ratio is also reckoned as an indicator of urbanisation Tumkur slides down to the last place. Measurement of urbanisation is quite a complex proposition and requires consideration of several factors.

Density of Population:

In Tumkur district there are 187 persons per square kilometre. This density figure is lower than the State average of 194. When the 19 districts of the State are arranged in a descending order of their density figures, Tumkur holds the ninth rank. Mandya, Bangalore and Kolar are the districts which are situated to the south, south-east and east of Tumkur district. These three districts are very densely populated (Bangalore : 618, Mandya : 286, and Kolar : 232). On the other hand the districts which are located towards the west and north west have comparatively lower densities, namely Hassan : 199 and Chitradurga : 164. In 1971, the density of population in Tumkur stood at 153 – a figure identical with the average density for the State. In 1971 too, Tumkur district held the ninth rank. Though there has been a substantial increase in the density of population in Tumkur district it does not seem to be a matter of any special significance, for almost all the districts of the State have been affected by this phenomenon equally and the relative position of Tumkur has remained unchanged.

Amongst the taluks, Tumkur has the highest density of 326 and this is followed by Tiptur taluk (223) and then by Kunigal (213). The high density in Tumkur is due to the high urban component in its population and also larger concentrations of people in its numerous villages which are relatively more fertile and have irrigation facilities to a greater extent. In the case of Pavagada taluk located in the northern portion of the district where rainfall is scanty and dry farming is predominant the population density is seen to be 135, the lowest average returned by any of the taluks of the district. The position of Sira taluk is almost similar to that of Pavagada, for in this taluk too there are only 138 persons per square kilometre. Though Chiknayakanhalli taluk is situated in the rich coconut belt and Gubbi too has large tracts of coconut and areca gardens and wet lands the density of population in these two taluks is much below the district average, being 154 and 164 respectively. If density figures for rural areas of the taluks are examined it is noticed that it varies between 120 in Pavagada taluk and 223 in Tumkur taluk. The average density for the rural areas of the district is 162 and this figure is considerably higher than the State average of 140. When examined with reference to the State average it is noticed that Pavagada (120) and Sira (121) are the only taluks which do not measure up to this standard. The density figures returned by Chiknayakanhalli (141) and Gubbi (155) are lower than the district average. Next to Tumkur, Kunigal taluk has the highest density of 195 and this is followed by Tiptur taluk (185). The urban areas of the district are more densely populated than the rural areas and this is true in the case of each and every taluk within the district. The average density in the urban areas of the district works out to 5127. This figure is higher than the State average of 2914 and when the density figures of the 19 districts of the State are examined Tumkur is seen to rank below two districts only, namely Bangalore (7520) and Chitradurga (7432). Within the district, 5 out of the 10 taluks have above-average densities and while Tiptur has the highest density of 8656 Turuvekere taluk has the least density of 2402. In Tumkur, the density is 7093 – a figure which is less than that returned by Tiptur only. Townwise data shows that Pavagada town has the lowest density (2197) while Y.N. Hosakote – a small town of Pavagada taluk – has the second highest density (7903).

Adityapatna the smallest town of the district has a density of 2455.

A distribution of the 2506 villages by density ranges indicates that about 5 per cent are very densely populated and have more than 500 persons per square kilometre. In another 35 per cent, the densities are quite high being in the range of 201–500. There are also a few villages which are sparsely populated : a density of 10 persons or even less is noticeable in 2.87 per cent and in another 2.47 per cent of the villages the densities range between 11 and 20. In a general way it may be observed that Tumkur district consists of villages having low (13.96 per cent), medium (34.84 per cent) and high (21.99 per cent) densities and a significant proportion of villages which are very thickly populated and villages that are very thinly populated with reference to their geographical areas. Villages enjoying road side location and having a larger proportion of wet and garden lands tend to have high to very high densities.

Sex Ratio:

According to the 1981 census the sex ratio for Tumkur district is 961, that is, there are 961 females for every thousand males. This figure is very close to the average sex ratio of 963 for the State. When the districts of the State are arranged in the descending order of sex ratio, Tumkur occupies the 9th place. In 1971, the sex ratio for Tumkur district was identical with the State average, namely 957 and this district shared the 10th place with Uttar Kannad. In all the earlier decades, it may be noted, Tumkur district has consistently returned a sex ratio which is slightly lower than the State average. In accordance with the general trends Tumkur district also contains a higher proportion of males in its urban population. Except at the 1901 census, at all the other censuses the sex ratio for the rural areas of the district has been higher than that for the urban areas. In 1901, while the sex ratio for the rural areas was 984 that for the urban areas stood at 1000. Since then these figures have gradually declined and reached the present level of 969 and 912 respectively. The sex ratio figures for the rural and urban areas of the district are lower than the corresponding averages for the State which are 978 and 926 respectively.

Sex ratio is not quite the same in all the taluks of the district. Taluk level data reveal that it lies between 935 in Tumkur taluk and 996 in Kunigal taluk. To some extent the low sex ratio observed in Tumkur taluk may be attributed to the high degree of urbanisation i.e. the high urban component in its total population. Pavagada taluk has 2 small towns within its limits but contains a relatively low urban component. In this case too the sex ratio is very low, namely 942. Though Turuvekere taluk also has 2 towns but contains a still lower proportion of urban population it has the second highest sex ratio (993) amongst the ten taluks. If the sex ratio figures for the rural areas of various taluks are examined it is noticed that the sex ratio is the highest (998) in the taluks of Kunigal and Turuvekere, above the district average in Gubbi (978), Tiptur (972) and Chiknayakanhalli (970) and the least (945) in Pavagada. Tumkur taluk displays a relatively low sex ratio of 958 – a figure which is however more than that returned by Pavagada and Madhugiri. In the case of urban areas only, the sex ratio varies between 888 in Tumkur taluk and 976 in Kunigal taluk. Apart from Tumkur, Tiptur is the only taluk with a sex ratio (889) lower than the district average. These two taluks account for a large proportion of the urban population of the district and have consequently pulled down the average sex ratio for the urban areas of the district itself. Next to Kunigal, Koratagere taluk has the highest sex ratio of 953 and this is followed by Chiknayakanhalli (947). Town-level particulars reveal that while Kunigal town has the highest sex ratio of 976, Adityapatna, the small industrial town in Turuvekere taluk, has the lowest sex ratio of 853. It may be incidentally mentioned that in 1971 in this town which was then much smaller in population size there were only 768 females per thousand males.

Literacy:

In Tumkur district the literate constitute 36.92 per cent of the total population. This general literacy rate is lower than the State average of 38.76 per cent and when the 19 districts of the State are arranged in a descending order of literacy rates Tumkur occupies the 10th rank. The general literacy rate varies between 26.53 per cent in Pavagada taluk and 47.45 per cent in Tiptur taluk. In Tumkur, the most highly urbanised taluk of the district, the literacy rate is 44.93 per cent and this is lower than the rate given out by Tiptur taluk only. In 6 out of the 10 taluks of the district the general literacy rate is lower than the district average. Even though Sira taluk has a Class III town within its limits the proportion of literates in its population is quite low (30.84 per cent).

The rural-urban break up shows that as elsewhere in Tumkur district also the urban literacy rate is much higher than the rural literacy rate. This observation is true in respect of each and every taluk of the district. The literacy rates for the rural and urban areas of the State are 31.05 per cent and 56.71 per cent respectively. The corresponding figures for this district are 33.31 per cent and 59.51 per cent. These rates are obviously higher than the averages for the State and in both the areas the district holds the eighth rank, even though when considered together it moves down to the tenth place. One of the reason for this phenomenon is the low urban component in the population of the district. The gap between the rural and urban literacy rates is the least in the case of Tiptur taluk and highest in the case of Madhugiri taluk. In Tiptur taluk 44.80 per cent of the rural population and 60.00 per cent of the urban population is literate. On the other hand in Madhugiri taluk the literacy

rates for the rural and urban areas are 30.84 per cent and 61.32 per cent respectively. In Tumkur taluk too the gap between the two rates (urban: 63.36 per cent and rural: 36.06 per cent) is highly pronounced. If the literacy rates for the rural areas of the taluks are examined it is noticed that while Tiptur tops the list (44.80 per cent) Pavagada holds the bottom-most place (23.41 per cent). This rate is fairly high in Chiknayakanhalli (39.63 per cent), Turuvekere (39.29 per cent) and Tumkur (36.06 per cent). The place immediately above that of Pavagada is held by Sira where the literates constitute 27.76 per cent only. In the case of the urban areas, the literacy rate varies between 49.56 per cent in Pavagada taluk and 63.36 per cent in Tumkur taluk. Though Tiptur taluk contains the second largest urban area within its jurisdiction the literacy rate noticed here (60.00 per cent) is lower than the rates returned by Turuvekere (62.78 per cent), Madhugiri (61.32 per cent) and Gubbi (60.48 per cent). Except in the case of Pavagada and Turuvekere in the case of the other taluks the urban literacy rate for the taluk happens to be the same as the literacy rate for the town bearing the name of the corresponding taluk. While the literacy rates in Pavagada and Y.N. Hosakote of Pavagada taluk are 53.29 per cent and 42.39 per cent respectively, the rates in Adityapatna and Turuvekere of Turuvekere taluk are 64.45 per cent and 62.22 per cent respectively. Amongst the towns the small but modern industrial town of Adityapatna has the highest literacy rate and Y.N. Hosakote a traditional small town which is noted for handloom weaving has the lowest rate.

Sexwise data show that in conformity with the general pattern, Tumkur district too displays a higher literacy rate amongst the males in all the areas. In the State as a whole, 48.81 per cent among males and 27.71 per cent among females are literate. The corresponding averages for the district are 48.24 per cent and 25.14 per cent. When the literacy rates in the taluks as such are examined, it is noticed that Tiptur tops the list with 58.39 per cent and this is followed first by Tumkur (55.00 per cent) and then by Turuvekere (53.85 per cent). In 6 out of the 10 taluks the male literacy rate is less than the district average. Sira with 42.51 per cent and Pavagada with 37.95 per cent have returned the lowest literacy rates. In the rural areas, the male literacy rate varies between 34.86 per cent in Pavagada taluk and 56.76 per cent in Tiptur taluk. In 5 out of the 10 taluks this rate is lower than the district (rural) average of 45.18 per cent. With a literacy rate of 47.72 per cent, Tumkur taluk ranks below Tiptur, Turuvekere and Chiknayakanhalli. Sira taluk ranks just above Pavagada and even in Kunigal taluk the literacy rate is quite low. In the case of the urban areas the male literacy rate varies between 60.18 per cent in Sira taluk and 69.70 per cent in Madhugiri taluk, and the average for the district is 66.83 per cent. In the urban areas the range of variation is comparatively small. In fact the difference is almost negligible in the case of 4 taluks where more than 69 per cent of the males are literate. Tiptur taluk has returned a rate which is lower than the district average even though it contains the second largest town of the district. Townwise details show that in Y.N. Hosakote of Pavagada taluk only 54.29 per cent of the males are literate. On the other hand in Adityapatna of Turuvekere taluk the literate among the males constitute as much as 71.52 per cent.

The average literacy rate for the female population of the district is 25.14 per cent. In this case too Tiptur and Pavagada take up the extreme positions : Tiptur tops the list with 36.01 per cent and Pavagada appears at the bottom with 14.42 per cent. In Tumkur taluk 34.17 per cent of the females are literate and this rate is low in comparison only to the rate observed in Tiptur taluk. Like Pavagada, Sira taluk too has a very low female literacy rate (18.61 per cent). In the rural areas of the different taluks the female literacy rate varies between 11.28 per cent and 32.50 per cent. As in the case of male literacy in this case too the taluks of Pavagada and Tiptur appear at the extremes. The female literacy in Tiptur taluk is almost thrice as much as that in Pavagada taluk. Chiknayakanhalli (28.07 per cent) ranks next to Tiptur and is followed first by Turuvekere (26.14 per cent) and then by Tumkur (23.88 percent). In the case of urban areas of the taluks, the female literacy rate varies between 37.80 per cent in Pavagada and 56.40 per cent in Tumkur. In Sira taluk also the literacy rate (42.38 per cent) is very low as compared to the district average of 51.48 per cent. The literacy rates are fairly high in the taluks of Turuvekere (55.62 per cent) and Tiptur (53.40 per cent). Townwise details show that the female literacy rate is the least in Y.N. Hosakote (29.60 per cent) and the highest in Adityapatna (56.17 per cent).

When the villages are grouped into population size classes and the literacy rates are examined for each such group a direct relationship seems to exist between population size and literacy rate. The literacy rate which is 27.79 per cent for the villages with less than 200 persons each gradually moves up to 47.95 per cent in the case of villages with 5000-9999 inhabitants each. The villages belonging to the intermediary population size groups of 200-499, 500-1999 and 2000-4999, give out a literacy rate of 31.79 per cent, 32.73 per cent and 35.59 per cent respectively. Generally, larger villages enjoy better educational facilities and offer a better atmosphere for learning besides providing greater opportunities to the children to attend the schools. However, mere size of the village alone cannot be regarded as the factor that determines the literacy rate. Other factors such as location, proximity to an urban centre, caste composition, levels of socio-economic development, attitude of the villagers towards education, especially female education etc., are also quite important in that each one of these factors exerts considerable influence on the literacy rate of any given area.

Economic Activity

At the 1981 census there has been a threefold classification of the population, namely main workers, marginal workers and non-workers. Nature of one's activity and extent of participation in economically productive work are the deciding factors for such a classification. Levels of economic development of different areas within the district, availability of opportunities besides willingness to work (especially amongst the women), social attitudes, initiative and entrepreneurship evinced in general etc., are the important factors that influence the pattern of distribution of the population under these three categories. Tumkur is essentially an agricultural district where though dry farming is predominant, there are considerable extents of lands which yield wet crops and also garden crops, chiefly coconut. Agriculture is labour intensive and also offers employment to seasonal workers.

Main Workers:

In Tumkur district the main workers constitute 36.22 per cent of the total population. This rate compares well with the average for the State, which is 36.76 per cent. Within the district however there are considerable variations at the taluk level and also between the rural and urban sectors and between the male and female segments of population. The proportion of main workers is the highest in Pavagada taluk (44.01 per cent), fairly high in the taluks of Koratagere (41.12 per cent) and Madhugiri (39.66 per cent) and the least in Turuvekere (31.20 per cent). In Tumkur, the taluk containing the most populous town of the district the main workers constitute 34.10 per cent. Though this figure is lower than the district average it is high as compared to the rates returned by Gubbi (32.62 per cent), Tiptur (32.53 per cent) and Turuvekere (31.20 per cent). Tumkur taluk, it may be incidentally noted, contains the largest number of inhabited villages and a very large rural population as well. It is perhaps for this reason that the proportion of main workers is on the high side. Pavagada taluk is relatively under-developed and is also known as a drought prone area where dry farming is predominant and the yields are poor. If the rural areas of the different taluks are considered separately it is noticed that the district average being 37.36 per cent, the proportion of main workers is the highest in Pavagada taluk and the least in Turuvekere (31.42 per cent). In Tumkur this proportion is 37.44 per cent and this happens to be higher than the rates returned by the taluks of Turuvekere, Gubbi (32.96 per cent), Tiptur (33.63 per cent), Kunigal (34.45 per cent) and Chiknayakanhalli (35.61 per cent). The proportion of workers is comparatively low in the coconut belt comprising the taluks of Tiptur, Turuvekere, Gubbi and Chiknayakanhalli. In the urban areas of the different taluks the proportion of main workers varies between 27.17 per cent in Gubbi and 34.91 per cent in Koratagere. In Tumkur taluk also the proportion is very low, namely 27.18 per cent. Tiptur (27.27 per cent), Madhugiri (27.93 per cent) and Turuvekere (28.73 per cent) are the other taluks which have returned a rate lower than the district average of 29.08 per cent. Townwise data reveal that amongst the 12 towns Y.N Hosakote has the highest proportion of main workers in its population (37.71 per cent) and Gubbi has the least such proportion. In Adityapatna 29.80 per cent of the population consists of main workers.

In the rural as well as the urban areas, the proportion of main workers amongst the males is considerably higher than that amongst the females. In the State as a whole, the male and female segments of the population respectively contain 53.90 per cent and 18.95 per cent of main workers. The corresponding averages for Tumkur district are 54.94 per cent and 16.74 per cent respectively. The gap between the work participation rates among males and females are noticeable in all the taluks, in the rural and the urban areas and a low female participation is almost an universal feature. In the rural areas of the district while 56.29 per cent of the males are main workers among females the main workers account for only 17.82 per cent. Roughly, for evey female main worker there are three male main workers. In the urban areas as the corresponding rates are 46.28 per cent and 9.76 per cent, there are roughly 5 male workers for every female main worker. This sexwise disparity reflects the prevailing social attitudes, namely, the role of man is that of the main bread winner and provider and the role of woman is that of a housekeeper engaged mainly in bearing children and looking after them and attending to all the domestic chores.

In the male segment of population of various taluks the proportion of main workers varies between 51.20 per cent in Tumkur and 57.14 per cent in Chiknayakanhalli. The rates returned by Koratagere, Madhugiri and Sira as well as Pavagada are fairly high. Apart from Tumkur, Turuvekere (54.43 per cent) and Kunigal (54.44 per cent) are the only taluks which have returned below average work participation rates. If the position in the rural areas is examined it is noticed that this proportion ranges between 54.59 in Tumkur Taluk and 57.69 per cent in Chiknayakanhalli. The average for the rural areas of the district being 56.29 per cent, the proportion falls short of this in the case of only 3 taluks besides Tumkur. These taluks are Turuvekere (54.85 per cent), Kunigal (55.67 per cent) and Gubbi (56.11 per cent). Koratagere taluk has the second highest rate (57.31 per cent) and is followed by Madhugiri and Sira. In the case of urban areas the taluks of Tumkur and Chiknayakanhalli take up the extreme positions. The average for the district being 46.28 per cent, in these two taluks the proportion of main workers comes to 44.43 per cent and 51.70 per cent respectively. The relative ranking of the other taluks get somewhat mixed up. For example Turuvekere which ranks immediately above Tumkur when the total

and rural areas are considered now moves up by six places. With a tally of 49.87 per cent this taluk holds the third place from the top i.e., appears after Chiknayakanhalli and Koratagere (50.72 per cent). Similarly Gubbi has a smaller proportion in comparison to Kunigal and Tiptur too has a below-average rate. Townwise details show that in the small town of Y.N. Hosakote the main workers among males constitute as much as 59.28 per cent. This proportion is not only the highest for any town of the district but also for the rural areas of any of the taluks. Adityapatna, the industrial township has returned a fairly high rate (51.43 per cent).

In the female segment of the population of various taluks the proportion of main workers varies between 7.81 per cent in Turuvekere taluk and 31.55 per cent in Pavagada taluk. The range of variation is indeed quite large and the average for the district is 16.74 per cent. Besides Pavagada, there are only three taluks with an above-average work participation rate. As in the case of male main workers in this case too these taluks are Koratagere (24.76 per cent), Madhugiri (22.24 per cent) and Sira (21.17 per cent). Chiknayakanhalli which has returned the highest proportion in respect of males, however, contains a very low proportion of main workers in its female population 12.81 per cent. Tumkur taluk (15.81 per cent) reflects a situation which is fairly close to the district average and this is because of the somewhat higher work participation rate noticed in the rural sector. When the rural areas of the taluks are considered the district average works out to 17.82 per cent. This rate varies between a minimum of 7.95 in Turuvekere taluk and a maximum of 34.03 per cent in Pavagada taluk. In Tumkur taluk, as already stated, this rate (19.54 per cent) is above–average. Koratagere, Madhugiri and Sira are the only other taluks with an above-average rate. Like Turuvekere, Gubbi (9.13 per cent) and Tiptur (9.62 per cent) too contain a low proportion of main workers. In the case of urban areas, the district average comes to 9.76 per cent. This proportion varies between 6.27 per cent in Turuvekere taluk and 18.30 per cent in Gubbi taluk. Pavagada taluk which holds the top-most place when the taluk as such and also the rural areas as such are considered now moves down to the fourth place. Likewise Madhugiri too has returned a fairly low figure (7.75 per cent). In 5 out of the 10 taluks including Tumkur and Tiptur as well as Gubbi, the proportion of main workers among females is well below the district average. Townwise particulars show that while in Adityapatna only 4.43 per cent of the female population consists of main workers in Y.N. Hosakote such persons constitute 21.97 per cent.

The relative importance of the main spheres of economy may be assessed from the pattern of distribution of main workers according to the four–fold classification, namely cultivators, agricultural labourers, workers in household industry and the residuary category of 'other workers'. In the State as a whole amongst the main workers the cultivators and the agricultural labourers form 38.27 per cent and 26.78 per cent respectively. The corresponding averages for Tumkur district are 58.49 per cent and 20.68 per cent. Agriculture covers cultivators and agricultural labourers as well. Thus, in Tumkur district, agricultural workers constitute 79.17 per cent and this figure is much higher than 65.05 per cent, the State average. Obviously Tumkur is a predominantly agricultural district. Household industry is also of some significance, for the workers in this sphere account for 3.45 per cent. This rate is however slightly lower than the State average of 4.10 per cent. That non-household industry, trade, commerce and service activities are of considerable relevance in the district is obvious from the fact that those engaged in such activities form 17.38 per cent. In the urban areas, especially in towns such as Adityapatna, Tumkur, Tiptur and Sira the other workers account for a very high proportion. The recent setting up of modern cement factory and the more recent event of starting of the HMT Watch Factory signify that the district is now poised for further industrial development which in due course would profoundly influence the work participation rate and also the distribution of workers by categories. At present however the district conforms to the general pattern of the traditional agricultural economy.

Marginal Workers :

Marginal workers also contribute significantly to the working force, especially in areas noted for agricultral economy. In the State such workers form 3.48 per cent of the population. But, in Tumkur district the marginal workers constitute 5.14 per cent of the population. The marginal shortfall noticed with reference to State average in the case of main workers is more than made good by this relative excess of marginal workers. Sex-wise break–up shows that the marginal workers form 0.74 per cent and 9.73 per cent of the male and female segments of the population. Further, as between the rural and urban areas, the former contain a larger proportion of marginal workers, namely 5.71 per cent as compared to 1.60 per cent in the urban areas.

At the taluk level, the proportion of marginal workers is as high as 7.86 per cent in Chiknayakanhalli. The taluks of Kunigal (7.30 per cent), Koratagere (7.03 per cent) and Tiptur (6.38 per cent) also have fairly high averages. This proportion is quite low in Pavagada (4.36 per cent) and happens to be the least (2.18 per cent) in Tumkur. The situation in Chiknayakanhalli and Koratagere may be attributed to the generally higher incidence of marginal workers amongst the males and females in the rural as well as the urban areas of the taluks concerned. On the other hand, in the case of Kunigal and Tiptur the main contribution to the total is from the female segment, particularly of the rural areas. The case of Pavagada is slightly different in that it is the female

population of the rural sector alone that contains a relatively high proportion of marginal workers. In Tumkur however, while the urban figures for both males and females are close to the averages for the district, the rural figures are extremely low. Sexwise details show that amongst the males, the highest proportion is reported from Koratagere taluk (1.42 per cent) and this is followed by Chiknayakanhalli (1.11 per cent) and Pavagada (1.04 per cent). In the taluks of Madhugiri and Tumkur this proportion works out to such low figures as 0.46 per cent and 0.43 per cent. Amongst the females this proportion varies between 14.84 per cent in Chiknayakanhalli and 4.05 per cent in Tumkur and the average is 9.73.

When the rural areas of the taluks are considered it is noticed that the taluks of Chiknayakanhalli (8.12 per cent), Kunigal (7.94 per cent) and Tiptur (7.38 per cent) as well as Koratagere (7.31 per cent) occupy the top four places while Pavagada (4.68 per cent), Gubbi (4.62 per cent) and Tumkur (2.58 per cent) appear at the bottom of the list. Sexwise particulars show that in the case of males, Koratagere taluk has the highest proportion (1.41 per cent) and Chiknayakanhalli ranks next to it (1.09 per cent). In Tumkur taluk the male marginal workers form just 0.33 per cent of the male population. Amongst the females the proportion of marginal workers is seen to vary between 15.36 per cent in Chiknayakanhalli and 4.93 per cent in Tumkur. The average for the rural areas of the district is 10.83 per cent. The taluks of Kunigal (15.26 per cent) and Tiptur (14.24 per cent) also have a high proportion of marginal workers.

In the case of the urban areas also Chiknayakanhalli taluk has the highest average (5.30 per cent) and this is followed by Koratagere (2.78 per cent) and Turuvekere (2.76 per cent). In Tumkur the marginal workers form 1.34 per cent and this figure is lower than the district average of 1.60 per cent for urban areas. However, amongst the 10 taluks, as many as 4 other taluks have returned much lower averages. These are Sira (1.16 per cent), Kunigal (0.65 per cent), Gubbi (0.60 per cent) and Madhugiri (0.40 per cent). Among the urban-resident males of different taluks the proportion of marginal workers varies between 1.57 per cent in Koratagere and 0.06 per cent in Kunigal. The district average comes to 0.70 per cent and, apart from Koratagere, only three taluks have returned above-average rates, namely Tiptur (1.44 per cent), Chiknayakanhalli (1.32 per cent), and Pavagada (1.31 per cent). Tumkur ranks next to Pavagada even though, in this case, the marginal workers account for a mere 0.62 per cent. Among the urban-resident females, on the other hand, the proportion of marginal workers is seen to vary between 9.49 per cent in Chiknayakanhalli and 0.72 per cent in Madhugiri. In Turuvekere, which ranks next to Chiknayakanhalli, this proportion works out to 5.16 per cent. This taluk contains two towns and while the proportion of female marginal workers in Adityapatna is only 1.43 per cent that in Turuvekere town is 6.34 per cent. In Pavagada taluk which too contains two towns the taluk average is 2.71 per cent and the proportions in the two towns of Pavagada and Y. N. Hosakote are 2.63 per cent and 2.85 per cent respectively.

As between rural and urban areas, the former offer greater opportunities to womenfolk to contribute their mite to the economy in the form of casual workers. During the peak agricultural seasons such as the sowing, transplanting, weeding and the harvesting season there would be a great demand for labour input and there would be the constraint of time also. Thus, in almost all the households of agriculturists, women and children become economically active, in the sense, they too take up work in the fields as part-time workers or as full-time seasonal workers.

Non-Workers :

Those who have not at all worked during the entire year under reference are classified as non-workers. In the total population of the State and of this district, the non-workers constitute 57.05 per cent and 58.64 per cent respectively. This group consists of the students, the dependants including those who are too young or too old to work and the disabled, the housewives attending exclusively to household duties and allied work of an unproductive nature etc. The categories of main workers, marginal workers and non-workers are complimentary to each other. Therefore in areas where the aggregate proportion of main workers and marginal workers is high the proportion of non-workers would be low. Thus, in urban areas, since the work-participation rate tends to be low the proportion of non-workers would be high. So also the male segment of population contains a larger proportion of workers in the rural as well as the urban areas. As a result, amongst the males the proportion of non-workers tends to be low. Amongst the females on the other hand there is a preponderance of non-workers, and this is particularly so in the urban areas. The sexwise details reveal that among the males and females the non-workers form 44.32 per cent and 73.53 per cent respectively. Talukwise data indicate that while Turuvekere taluk has the highest proportion of non-workers (64.09 per cent) and Gubbi comes next to it (62.99 per cent), Pavagada has the lowest average of 51.63 per cent. In the male segment of population of different taluks this proportion varies between 41.68 per cent (Koratagere taluk) and 48.37 per cent (Tumkur taluk). Likewise, amongst the females this proportion is seen to vary between 60.57 per cent in Pavagada taluk and 83.45 per cent in Turuvekere taluk.

The district average for the rural areas being 56.93 per cent, this proportion happens to be less than 50 per cent in only one taluk, namely Pavagada, and it is as high as 63.70 per cent in Turuvekere. Sexwise particulars

indicate that among males the proportion of non-workers varies between a narrow margin of about 4 points, namely 41.22 per cent in Chiknayakanhalli and 45.08 per cent in Tumkur taluk. In the female segment of the population however, the range of variation is much wider, for this proportion is seen to be 83.01 per cent in Turuvekere and 61.37 per cent in Koratagere. The average for the district is 71.35 per cent and Tumkur taluk has a rate which is slightly above this average. Gubbi (81.99 per cent) ranks next to Turuvekere and is followed by Tiptur (76.14 per cent). At the other end, Madhugiri (66.28 per cent) appears immediately above Koratagere taluk.

The situation in the urban areas of the district is slightly different in that the proportion of non-workers is higher than in the rural sector amongst the males as well as the females. The proportion of non-workers varies between a minimum 62.13 per cent in Chiknayakanhalli and a maximum of 72.23 per cent in Gubbi taluk. The district-average is 69.32 per cent. Madhugiri (71.67 per cent), Tumkur (71.48 per cent) and Tiptur (71.07 per cent) are the taluks which contain an above-average proportion of non-workers. Sexwise particulars show that the range of variation is relatively narrow in the case of males: 46.98 per cent in Chiknayakanhalli and 54.95 per cent in Tumkur. The proportion of male non-workers is fairly high in Gubbi (53.11 per cent), Madhugiri (53.49 per cent) and Tiptur (52.85 per cent). Amongst the 10 taluks as many as 6 have returned a rate which is lower than the district average of 52.62 per cent. In the case of females, though the district average is 87.64 per cent the proportion of non-workers varies between a minimum of 77.64 per cent in Koratagere and a maximum of 92.69 per cent in Gubbi. The taluks with an above-average rate of female non-workers are: Tiptur (91.57 per cent), Madhugiri (91.53 per cent), Tumkur (90.99 per cent) and Turuvekere (88.57 per cent). The urban areas present a varied picture of economy and in most of the towns non-agricultural activities such as trade, commerce and services are more important. Generally these sectors offer fewer opportunities to the womenfolk. Added to this, there are the social values which imbibe a feeling that home is the proper place for women.

Availability of different types of facilities in villages and towns :

Information has been furnished on this aspect in detail in the village and town directory statements and in a consolidated form in the appendix and the tables appearing at the end of this note. Regarding drinking water it may be mentioned that all the villages and towns of the district have some source or the other of water supply. It may however be added here that this question has not been examined in depth and factors such as sufficiency or otherwise, availability of water throughout the year, technical opinion about the potability of the available water etc., have not been probed into. Wells and tanks are the main sources of drinking water in most of the villages. Out of the 2506 inhabited villages, 1283 i.e. 51.20 per cent, have more than one type of water supply source and another 1154 i.e. 46.05 per cent, have drinking water wells only as the chief source. A few villages have been provided with taps and usually these villages would have a few drinking water wells and one or two tanks as well. Piped water supply facility is available in all the towns of the district.

Educational Facilities :

Out of the 2506 inhabited villages of the district as many as 2015 forming 80.41 per cent have at least one primary school each within their respective limits. Amongst the taluks, the proportion of villages with this facility varies between a minimum of 67.11 per cent in Koratagere taluk and a maximum of 94.20 per cent in Pavagada taluk. It may be incidentally noted that Pavagada taluk has the smallest number of villages. In Tumkur taluk which has the largest number of inhabited villages the coverage is 79.27 per cent only. Tiptur, Turuvekere and Kunigal rank among the fairly well served taluks. The aggregate population of the villages with educational facilities forms 96.00 per cent of the rural population of the district. From this point of view also the taluks of Koratagere and Pavagada occupy the extreme positions. While the proportion of rural population served is 90.97 per cent in Koratagere taluk that in Pavagada taluk is as high as 99.52 per cent. Tumkur (95.75 per cent), Madhugiri (95.04 per cent) and Gubbi (93.53 per cent) are the taluks where the proportion of population served falls short of the district average. Tiptur taluk (98.06 per cent) ranks next to Pavagada and is followed by Kunigal (96.79 per cent). Though Turuvekere taluk has a relatively higher proportion of villages with educational facilities (86.22 per cent) than Sira taluk (80.44 per cent) the proportion of rural population served here happens to be a little lower, namely 96.38 per cent, than in Sira taluk (96.86 per cent). Even Chiknayakanhalli, where only 79.28 per cent of the villages have schools, has a slight edge over Turuvekere (and also Tumkur), for the proportion of population served here is seen to be 96.48 per cent. Some of the taluks have a relatively larger number of villages each with a small population as a result of which even though the proportion of villages with educational facility tends to be low the proportion of population served would be fairly high. The average population of a village without educational facility is 98 in Pavagada taluk, 120 in Chiknayakanhalli taluk, 122 in Tiptur taluk and as high as 159 in Turuvekere taluk.

Several villages have more than one primary school each. As may be seen from the appendix, 2015 villages have 2554 primary schools in all. That is to say, the average number of primary schools per village with at least one school is 1.27 and if all the inhabited villages of the

district are considered the average moves down to 1.02. Middle schools, that is higher primary schools with facilities for handling V, VI and VII standards are functioning in 624 villages. In other words, 24.90 per cent of the inhabited villages have middle schools. As most of these villages have only one such school each the average per village with a middle school is seen to be 1.06. Generally, as the level of education increases the number of villages having that facility and also the number of such institutions get reduced. Thus, in the rural areas of the district high schools are functioning only in 129 villages (i.e. 5.14 per cent) and it is only three of these villages that have two schools each. Pre-university level educational facilities are available in 7 villages which are located in 5 out of the 10 taluks. Degree-level colleges are not reported from any of the villages of the district.

Amongst the 491 villages without educational facilities as many as 490 are situated in the close proximity of places having such facilities. In the case of these villages the distance to be covered to reach a nearest village or town with at least a primary school is less than 5 Km. The other village is located in the distance range of 5-10 Km with reference to such a facility. Amongst these 491 villages, as many as 260 (52.95 per cent) are quite far away from any urban centre, for these are located beyond a distance of 15 Km with reference to the nearest town. Out of the remainder, 188 (i.e.38.29 per cent) are situated at distances between 6 and 15 Km and only 43 (i,e,8.76 per cent) are still closer to a town. If the availability of educational facilities in the villages belonging to each distance range with reference to nearest town is examined it is noticed that the proportion of villages with schools moves down from 84.86 per cent in the case of those within the distance of 5 Km to 78.95 per cent in the case of villages located beyond 15 Km through 80.95 per cent in respect of those in the middle range of 6-15 Km. Thus, villages which are located nearer to towns enjoy better chances of being provided with educational facilities. Population size is also a vital factor that determines the availability of educational facilities in a village. All the villages having 2000 or more inhabitants each have educational facilities. This proportion moves down first to 99.09 per cent in the case of those included in the 500-1999 population range and then to just 62.45 per cent in the case of the more numerous villages with less than 500 inhabitants each. Institutions in the larger villages quite often cater to the needs of those residing in smaller villages of the neighbourhood. All the towns of the district have educational facilities from primary level to high school level and the important centres such as Tumkur, Tiptur and Sira have degree level colleges as well. Among the towns Y.N. Hosakote and Adityapatna which are very small in population size do not have facilities for pre-university level and Y.N. Hosakote does not have a high school as well. On the other hand, Tumkur the pre-eminent urban centre of the district, has a polytechnic institute and an engineering college in addition to several junior colleges, and degree colleges including a law college. Tiptur is also an important educational centre of the district.

Medical Facilities :

In Tumkur district, 141 out of the 2506 inhabited villages have medical institutions of one type or the other within their respective limits. The proportion of villages locally enjoying medical facilities to the total number of villages works out to 5.63 per cent. Amongst the taluks, Pavagada tops the list with a coverage of 15.22 per cent and is followed by Sira (11.11 per cent). It is only in two other taluks, namely Chiknayakanhalli and Tiptur, that the proportion of villages with medical facilities exceeds the district average. In Tumkur taluk, which incidentally has the largest number of inhabited villages, the proportion of villages with medical facilities happens to be just 3.36 per cent. The lowest proportion amongst the ten taluks is however noticeable in the case of Koratagere(3.07 per cent). Of the 141 villages with a medical facilities, 25 are in Sira taluk, 21 are in Pavagada taluk and the remaining 95 are spread over in the other 8 taluks. Koratagere taluk has the least number (only 7) of such villages.

The aggregate population of the villages with medical facilities forms 17.97 per cent of the rural population of the district. It is a known fact that the medical institutions located in a village or a town render service not only to the residents of that particular village or town but also to several others residing in surrounding villages. However, for purposes of comparison, the population of the village with the facility can be regarded as the population served by the facility. From this point of view it may be stated that 17.97 per cent of the rural population of the district is served by medical facilities. Taluk level details show that this proportion varies between a minimum of 11.55 per cent in Turuvekere and a maximum of 27.73 per cent in Pavagada taluk. In Sira taluk the proportion of population served is 27.07 per cent and as in the case of villages in this case too Sira ranks next only to Pavagada. The position of Tumkur (13.42 per cent) is better only in comparison to that prevailing in Koratagere (12.81 per cent) and Turuvekere (11.55 per cent). As between Tiptur and Chiknayakanhalli, it is the latter that has a better coverage, for, apart from Pavagada and Sira, Chiknayakanhalli is the only taluk where the proportion of population served (19.95 per cent) is higher than the district average. This measure depends largely on the population size of the village which is enjoying medical facilities. Out of these 141 villages, it is noticed, only 3 have less than 500 inhabitants each, 69 have a populaton in the range of 500 and 1999 and the other 69 have 2000 or more number of inhabitants each. There are 1281 villages with less than 500 inhabitants each. The proportion of villages with medical facilities to the total in this group works out to a meagre 0.23 per cent. In the case of 1106

villages which are slightly larger (500-1999), 6.24 per cent have been enjoying this facility. This proportion suddenly shoots up to 56.64 per cent in respect of the 113 villages belonging to the size-group 2000–4999 and then reaches 83.33 per cent in respect of the still larger villages. A substantial rise in the population of a village improves its chances of being provided with medical facilities. Further, the proximity of the village to a town is an important factor. Amongst the villages located within a radius of 5 Km from the nearest town, only 1.41 per cent have medical facilities. This proportion works out to 5.37 per cent and 6.80 per cent in respect of the villages located in the distance ranges of 6-15 Km and 16-50 Km respectively. Too close a proximity to a town is a disadvantage for the obvious reason that the institutions in the town are expected to serve the residents of nearby villages as well. Villages without medical facilities within their respective limits are far more numerous, namely 2365. The inhabitants of these villages depend upon the facilities available in nearby villages and towns. Out of these, 1551 (65.58 per cent) are located within a distance of 5 Km with reference to the nearest place with medical facilities and another 680 (28.80 per cent) are located in the distance range of 5-10 Km. Thus, it is only in the case of the remaining 5.62 per cent of these villages that the people have to cover a distance of more than 10 Km to reach the nearest place with some medical facility. Large villages somewhat away from towns and having good communication facilities enjoy better chances of being provided with medical facilities. All the towns of the district are enjoying medical facilities.

Postal Facilities :

In 21.47 per cent of the inhabited villages postal facilities are locally available. Amongst the 10 taluks, Pavagada tops the list with 39.13 per cent and is followed by Sira where 29.33 per cent of the villages are enjoying this facility. Turuvekere is the only other taluk where this proportion exceeds the district average. Even in Tumkur, the taluk which has the distinction of having the district-headquarters town, the proportion of villages with postal facilities works out to just 18.21 per cent – a figure which is higher than that noticeable in the case of only two taluks of the district, namely Chiknayakanhalli (18.02 per cent) and Koratagere (13.10 per cent). An apparent disadvantage in the case of Tumkur taluk is the fact that it contains the largest number of inhabited villages and a sizeable proportion of this is made up of very small villages. On the other hand Pavagada has the smallest number of inhabited villages. Though Koratagere taluk has almost an equal number of villages as compared to the second ranking taluk of Sira as well as Tiptur and Turuvekere, the proportion of villages served with postal facilities in this case happens to be the least. Out of the 1968 villages not having postal facilities, as many as 1909 (97 per cent) depend upon the facilities available at places which are situated within a radius of 5 Km and, amongst the rest, only one village depends on the facilities located at a place beyond the 10 Km range.

The aggregate population of the villages having postal facilities constitutes 46.93 per cent of the rural population of the district. From the point of view of population served also Pavagada taluk tops the list with a coverage of 60.87 per cent and is followed by Sira with 58.86 per cent. The taluks of Tumkur (37.72 per cent) and Koratagere (34.91 per cent) appear at the other end. The proportion of population served is lower than the district average even in Turuvekere taluk which ranks third from the point of view of the proportion of villages covered. Population size is an important factor in determining whether or not a particular village is to be provided with postal facilities. Larger the population greater are its chances. Data relating to Tumkur district also lend support to this generalisation. All the villages with a minimum population of 5000 and 92.92 per cent of those with 2000 to 4999 inhabitants each have postal facilities. In contrast, amongst those in the population range of 500-1999 and below 500 the proportion of villages with postal facilities works out to 35.99 per cent and a mere 2.26 per cent respectively. Though the distance to the village from an urban centre is a relevant factor there does not seem to be any direct or inverse relationship between the availability of postal facilities and the distance to the nearest town. Amongst the villages that are located within a radius of 5 Km from the nearest town, 25.35 per cent are having postal facilities locally. This proportion which drops to 19.76 per cent in the case of the villages belonging to the distance range of 6-15 Km, again moves up to 21.94 per cent in respect of the villages situated beyond the 15 Km range. A majority of the villages of the district belong to this last category. Postal and Telegraph facilities are available in all the towns.

Weekly Market Facility:

All the towns and most of the large and medium-sized villages have permanent shops dealing in essential consumer goods such as foodgrains, provisions, beedi, cigarettes, pan, arecanut, coconut, cloth etc. The number of such establishments however, varies considerably. In all the towns of the district, except Adityapatna, weekly shandies are being held since a long time as a regular feature. In the case of rural areas it is noticed that this weekly market facility is available in only 90 villages, that is in 3.59 per cent of the inhabited villages of the district. These villages are distributed amongst the 10 taluks in an uneven manner. While Pavagada taluk has only 3 villages with this facility, Gubbi has as many as 13 and this is followed by Turuvekere with a tally of 12 and Chiknayakanhalli as well as Madhugiri each having 11 such villages. The proportion of villages with this facility to the total in the taluk is seen to vary between 2.17 per cent in Pavagada and 5.33 per cent in Turuvekere. In view of the relatively large

number of inhabited villages that Gubbi taluk contains within its limits, even though as a taluk it accounts for the largest number of villages with weekly market facility, the proportion of villages with the facility works out to 4.17 per cent-a figure which is much lower than that returned by Turuvekere, Chiknayakanhalli (4.95 per cent) and Tiptur (4.44 per cent). In Tumkur taluk too, in view of the large number of villages it contains, the proportion of villages with weekly market facility is as low as 2.52 per cent.

The aggregate population of the 90 villages where weekly markets are held forms 12.56 per cent of the rural population of the district. From the point of view of rural population served, Chiknayakanhalli taluk takes a lead over Turuvekere as well as Gubbi and Madhugiri. The proportion of population served varies between a minimum of 4.44 per cent (Pavagada taluk) and a maximum of 19.74 per cent (Chiknayakanhalli). In Koratagere taluk the population served is quite low, namely 7.73 per cent. The position in Tumkur and Kunigal is only slightly better than that noticeable in the above mentioned taluks. The proportion of population served is fairly high in the taluks of Gubbi (16.57 per cent) and Madhugiri (16.65 per cent). In this matter also population size is a vital factor and larger the population greater the chance. Amongst the 90 villages with this facility only 3 (3.33 per cent) have less than 500 inhabitants each, 34 (37.78 per cent) belong to the size-group 500-1999 and 48 (53.33 per cent) have 2000-4999 persons each while the remaining 5, that is 5.56 per cent, have a minimum population of 5000 each. If the proportion of villages with the weekly market facility to the total in each population size class is examined it is noticed that the proportion is a negligible 0.23 per cent in the case of the small villages with less than 500 persons each and an impressive 83.33 per cent in respect of the very large villages with a minimum population of 5000. The disparity is very wide regarding the two intermediary size-groups also. As against 3.07 per cent in the case of the villages in the size-class of 500–1999 as much as 42.48 per cent of the villages belonging to the group 2000-4999 are enjoying the weekly market facility.

When the availability of this facility is examined with reference to the distance from the nearest town it is noticed that the proportion moves up from 1.06 per cent in the case of those within a radius of 5 Km to 4.45 per cent in respect of the larger number of villages that are located beyond the 15 Km range through 3.24 per cent in the case of the mid–distance range of 6-15 Km. Proximity to a town quite often appears to be a disadvantageous factor. Usually such villages depend on the facilities available in the nearby towns. These villages do not need a separate market, nor can they support an independent market.

Amongst the inhabited villages as many as 2416 do not have weekly market facilities locally and are therefore dependent on the facilities available at other villages and towns. The distance to be covered to reach the nearest place with such a facility varies considerably from village to village. A classification by distance ranges shows that it is beyond 10 Km only in the case of 272 villages, that is 11.26 per cent of the villages not having the facility. The distance lies in the range of 5 to 10 km in the case of 30.63 per cent of the villages and happens to be 5 Km or less in respect of the large majority of 58.11 per cent of the villages. In the present improved conditions of communication and transport a distance of upto 10 Km cannot be regarded as a major hurdle. In fact, because of the expansion of marketing activities in the rural areas, most of the medium-sized villages and even the small roadside villages now a days contain a few permanent shops dealing in the day-to-day necessities of the villagers. As a result the importance of the weekly market itself is now on the wane.

Communication Facility :

By communication facility is meant the availability of a bus stop and/or a railway station within the limits of the village concerned. Tumkur district does not have any navigable waterways. In so far as the railway communication is concerned it may be noted that the Bangalore–Miraj metre guage passes through this district and cuts across the taluks of Tumkur, Turuvekere, Gubbi and Tiptur. In the district as a whole, 911 villages are enjoying road and or railway communication facilities. These villages constitute 36.35 per cent of the total number of inhabited villages of the district. Roughly, every third village has some communication facility. There are considerable variations at the taluk level. Pavagada is seen to be the best-served taluk, for in this case, the coverage is as high as 58.70 per cent. In Chiknayakanhalli taluk which ranks next to Pavagada, the proportion of villages with the facility works out to 44.59 per cent only. Koratagere (44.30 per cent) and Tiptur (43.95 per cent) are the other taluks with an above-average rate. Amongst the ten taluks, Tumkur and Turuvekere occupy the last two places with a coverage of only 28.85 per cent and 26.67 per cent respectively. If the number of villages served by this facility as such is compared, Gubbi taluk (106) ranks first and is followed by Tumkur (103) while Pavagada (81) holds the seventh place and Turuvekere (60) occupies the last position. The total population of the villages with communication facilities forms 52.96 per cent of the rural population of the district. In this matter too there are large scale variations at taluk level. From this point of view also Pavagada taluk (69.79 per cent) holds the top-most place and the taluks of Turuvekere (42.67 per cent) and Tumkur (40.34 per cent) occupy the last two ranks. The proportion of population served is fairly high in the taluks of Koratagere (62.59 per cent) and Chiknayakanhalli (61.11 per cent) and comparatively low (46.59 per cent) in Kunigal taluk. As in the case of several other facilities in this case too population size is a vital factor. All the villages with a popula-

tion of 5000 plus and 82.30 per cent of those falling in the population size class of 2000–4999 are enjoying communication facilities. On the other hand the proportion of villages having this facility happens to be just 23.89 per cent and a fairly better rate of 45.75 per cent in the case of the villages belonging to size groups of below 500 and 500–1999 respectively. Evidently, larger villages enjoy better chances. When the availability of this facility is examined with reference to the proximity of the villages to towns it is noticed that the proportion happens to be the highest (40.85 per cent) in the case of villages which are located within a radius of 5 Km with reference to the nearest town. Amongst the villages in the distance range of 6–15 Km this proportion is 35.36 per cent. But as the distance increases beyond 15 Km limit, this proportion also moves up a little and reaches 36.11 per cent. Generally the bus stop or the railway station facility available in a particular village or a town serves several villages of the surrounding area, for the obvious reason that it is impracticable to provide such a facility in each and every village, especially in districts such as Tumkur which contain a very large number of villages of which quite a substantial proportion are small villages. Villages without communication facilities depend upon the facilities available in nearby villages and towns. Out of the 1595 such villages in this district as many as 1509, that is 94 per cent, are located within a radius of 5 Km with reference to the nearest place with a communication facility. The residents of 79 villages and 7 villages respectively have to traverse a distance of 5–10 Km and more than 10 Km to reach the nearest place with communication facility. All the 12 towns have bus route facility and the three towns of Gubbi, Tiptur and Tumkur have the railway station facility as well.

Approach Road :

Pucca approach road facility is available in 44.41 per cent of the inhabited villages of the district. Talukwise data reveal that this proportion happens to be the highest (57.25 per cent) in Pavagada, fairly high in Tiptur (53.36 per cent) and the least (30.45 per cent) in Gubbi. The position in Turuvekere and Tumkur may be regarded as fairly good since in these two taluks a little more than 50 per cent of the villages are enjoying this facility. Chiknayakanhalli, with a coverage of 34.68 per cent ranks amongst the poorly served taluks. The total population of the villages with a pucca approach road forms 57.70 per cent of the rural population of the district. In other words, 57.70 per cent of the rural population is sereved by this facility. Amongst the taluks, Tiptur takes the lead and is followed by the taluks of Koratagere, Pavagada and Turuvekere. The proportion of population served is the highest (69.65 per cent) in Tiptur and the least (45.70 per cent) in Gubbi. Though Pavagada ranks first from the point of view of villages covered, in terms of population served it takes the third place. The situation in Tumkur taluk is fairly close to the district average and is much better as compared to the position prevailing in Gubbi, Chiknayakanhalli and Kunigal. When the availability of this facility is examined with reference to the proximity of the village to a town it is noticed that the proportion of villages served decreases from 61.27 per cent to 37.98 per cent as the distance range increases from 5 Km radius to beyond 15 Km. In the case of the mid-distance range of 6-15 Km the proportion of villages served is seen to be 47.62 per cent. These details lend support to the view that proiximity to a town is a favourable factor. That is to say, villages which are nearer to towns enjoy better chances of being provided with pucca approach road facility. Population size is also a vital factor in this matter. All the villages with a minimum population of 5000 and, 82.30 per cent of the villages in the population size group of 2000–4999 have the pucca approach road fascility. On the other hand, amongst the villages with less than 500 inhabitants each hardly 32.71 per cent are enjoying this facility. It may be observed in a general way that villages which are located nearer to an urban area and also those that have somewhat larger number of inhabitants are more likely to be provided with pucca approach road facility.

Power Supply:

All the towns and 86.79 per cent of the inhabited villages of the district are electrified. Amongst the taluks, Madhugiri tops the list and is closely followed by Tumkur and Pavagada. The proportions of electrified villages to the total in these three taluks are seen to be as high as 99.30 per cent, 98.04 per cent and 97.83 per cent respectively. The coverage in Sira and Tiptur is also fairly good. On the other hand, in Turuvekere taluk power supply facility is available in only 65.33 per cent of the villages. Along with this, Chiknayakanhalli and Kunigal too may be regarded as the poorly served taluks. The proporton of rural population served in the district is 93.74 per cent. From this point of view also Madhugiri taluk (99.97 per cent) ranks first and is followed first by Tumkur (99.42 per cent) and then by Pavagada (99.39 per cent). Likewise, Turuvekere taluk appears at the bottom with a coverage of only 78.79 per cent of its population and Chiknayakanhalli (84.94 per cent) holds the place immediately above this taluk. The relationship between the number of villages electrified and the proportion of population served shows that in each taluk the few villages which are yet to be electrified are relatively small in population size. In the district as a whole, it may be noticed, all the villages with a minimum population of 5000 and 99.12 per cent of the villages in the population size-group 2000-4999 are enjoying power supply facility. This proportion slides down to 93.85 per cent in the case of the villages in the size-class 500–1999 and drops to 79.55 per cent in respect of the smaller villages with less than 500 inhabitants each. In this matter proximity of the village to a town appears to be a favourable factor. Amongst the villages located within the radius of 5 km from the nearest urban area 97.18 per cent are electrified. As the distance range increases the prop-

ortion of electrified villages declines gradually. In the case of villages belonging to the distance ranges of 6-15 km and 16-50 km the proportions of villages enjoying power supply facility are seen to be 89.26 per cent and 82.43 per cent respesctively.

On the basis of the foregoing analysis of data on the availability of amenities it may be summed up in a general way that the larger villages have an advantage over the smaller ones and in certain matters proximity to an urban area is an added advantage. Population size and availability of facilities are directly associated and favourably interact upon each other. The large villages function as service and trading centres in respect of several surrounding villages and gradually grow into small towns and attain urban status in course of time. The needs of the people living in larger groups receive greater and also immediate attention of the authorities concerned. The smaller villages on the other hand have to await their turn patiently and cannot hope to get certain facilities (example medical institutions) at all if they continue to remain small in populaton size.

BRIEF NOTE ON TOWNS:

There are 12 towns in Tumkur district and all these are municipal towns. Among them, Adityapatna which was known as Ammasandra Notified Area in 1971, is comparatively a new town. This place acquired urban status in 1971 and owes its origin to the cement factory located within its limits. In terms of population it is however a very small town. Amongst the rest, while ten towns have been enjoying urban status continuously from 1901, the other town namely Y.N. Hosakote, was classified as an urban area for the first time in 1951. Since then this place too has retained its urban status without any break. It may be stated in passing that for purposes of 1981 Census no new place has been classified as urban and at the same time none of the old towns has been declassified. For several decades, from 1911 to 1941 (including both), there were only ten towns in the district and the latest additions have been the ones referred to above. In 1901 however Tumkur district had as many as 18 towns and compared well with the districts of Bangalore and Mysore, both of which too had a tally of 18 towns.

An idea regarding the population growth trends in different towns over the decades may be had from a perusal of the data presented in Statement I of the town directory. The growth histories of towns do not conform to any definite pattern. Between 1901 and 1911, population declined in 6 out of the 10 towns. Tumkur, the most populous town of the district registered a negative decadal growth rate of 49.20 per cent. While the loss in population amounted to 15.13 per cent in Chiknayakanhalli, the second largest town, that in Gubbi the third largest town was of the order of 28.07 per cent. Amongst these six towns Pavagada had the lowest negative growth rate of 8.66 per cent. On the other hand, Sira witnessed a positive growth to the tune of 37.30 per cent and Turuvekere registered an increase by 15.09 per cent. During the decade that followed, population declined in the two towns of Turuvekere (–27.90 per cent) and Pavagada (–2.51 per cent). Five out of the 6 towns which had suffered a decline in the previous decade registered positive growth rates ranging between a mere 23.98 per cent (Chiknayakanhalli) and a spectacular 135.90 per cent (Tumkur). While in Kunigal and Tiptur the increase was of the order of 116.65 per cent and 70.33 per cent that in Gubbi came to 51.93 per cent. The other town which had a negative growth between 1901–1911, namely Pavagada, continued to suffer a decline between 1911–1921 also though the decadal rate worked out to a marginal 2.51 per cent. During this decade, Sira gained an insignificant 0.41 per cent and Turuvekere lost 27.90 per cent of its population. It was only in Madhugiri that the decadal growth rate (13.16 per cent) for this decade exceeded that of the previous decade (11.95 per cent). It may be recalled that in these early years of the century almost upto the early forties, fatal diseases like plague and cholera used to break out in an epidemic form quite frequently and that on such occasion, it was a common practice for the people to temporarily abandon their homes to dwell in sheds put up in fields and return after the fury abated. This would, to a large extent, explain the sudden drop in population followed by an equally dramatic increase. Between 1921 and 1931, all the towns except Koratagere witnessed an addition of population. The decadal growth rate varied between a nominal 2.80 per cent in Chiknayakanhalli and an impressive 75.46 per cent in Kunigal. In Tumkur, the growth rate was at a moderate level (27.73 per cent). During this decade Sira emerged as the second most populous town of the district and Chiknayakanhalli moved down to the third place. The decade that followed, namely 1931–41, witnessed a decline in the population of the towns of Madhugiri (75.11 per cent), Chiknayakanhalli (49.89 per cent) and Sira (1.41 per cent). Amongst the towns with a positive growth rate, Tiptur had the highest average (45.60 per cent) and this was followed by Pavagada (28.51 per cent). During this decade Tiptur emerged as the second largest town relegating Sira to the third place. Chiknayakanhalli moved down to the seventh place. The loss in the population of Madhugiri was so great that it became the smallest town of the district. This phenomenon was however of a purely temporary nature, for in the very next decade (1941–51), this town experienced an unprecedented growth (270.96 per cent) and recovered its poise. In Chiknayakanhalli also the growth rate was as high as 153.18 per cent. What was lost in the previous decade was more than made good during 1941–51. The remaining 8 towns also registered substantial additions and the lowest decadal growth rate was 16.58 per cent in the case of Gubbi. As between Sira and Tiptur, the former registered a growth rate of 79.23 per cent compared to 57.10 per cent of the latter and thereby recovered its earlier status as the second most populous town. The district headquarter town of Tumkur too

forged ahead with a growth rate of 64.43 per cent. After 1951, all the towns have been experiencing a steady and sustained growth as a result of the recent trends of industrialisation and modernisation of the economy. Factors such as the 'rural push' and the 'urban pull' have become quite active. During 1951–61, Madhugiri town retained the momentum of growth it had gained during the preceding dacade and the population of the town doubled itself. The severe loss suffered between 1931–41 was more than made good and if the 1931 population were to be regarded as the base year population, over the next 30 years period the population increased by 92.24 per cent, which implies an almost average decadal growth rate. This unique case apart, the decadal growth rates ranged between 33.52 per cent in Turuvekere and 16.40 per cent in Koratagere. The prominent towns of the district such as Tumkur, Tiptur and Sira as well as the small town of Pavagada experienced growth at an above-average pace. In Y.N. Hosakote which was classified as a town in 1951 the decadal growth rate was quite low (19.33 per cent). The same trend of low to moderate growth continued during 1961–71 as well. Pavagada town registered the highest growth rate 52.27 per cent and was followed by Tumkur (49.07 per cent) and Tiptur (45.21 per cent). The decadal growth rate was the least (11.64 per cent) in the case of Gubbi. The growth rate sharply declined in Madhugiri (25.21 per cent as compared to 108.18 of the preceeding decade) and Sira (18.76 per cent as compared to 26.48 per cent). In Koratagere, Kunigal and Y.N. Hosakote the decadal growth rate improved substantially. During the latest decade, namely 1971–81. Adityapatna the smallest town of the district has emerged as the town with the highest decadal growth rate (93.02 per cent) and Pavagada (60.32 per cent) ranks next to it. While Tumkur, Kunigal and Koratagere maintained the tempo of growth gained in the earlier decade and registered improved growth rates, Tiptur, Y.N. Hosakote and Chiknayakanhalli experienced growth at much lower rates. The higher growth rate at Adityapatna is due to the developments effected in the cement factory. In Tumkur the decadal growth rate is of the order of 54.19 per cent. The population of this town crossed the 100,000 mark and acquired the status of a city. In general it may be observed that in each town the population increases at a rapid rate during certain periods and this is followed by a period of moderate or even low growth. None of the towns of the district has displayed any decaying tendency. If the 1901 population of towns is taken as the basis for comparision with the current population it is seen that Kunigal which was the smallest town in 1901 has witnessed a tenfold increase and the towns of Tumkur and Tiptur rank next to it with a nine-fold increase. On the other hand in the case of Gubbi, the population has merely doubled itself in a period of 80 years. The position is slightly better in Chiknayakanhalli. The factors which promote population growth are quite numerous and these manifest themselves at different periods of time in different towns with varying intensity.

Ten out of 12 towns are administrative centres in that all these are taluk-headquarter-towns, 3 are sub-division headquarters and one of these 3, namely Tumkur is the headquarters of the district. Location of administrative offices has all along promoted the growth of population in these towns. Of the other two, Adityapatna is an industrial town located at a distance of 32 km from Turuvekere, the taluk headquarters. Y.N. Hosakote is a *hobli-headquarters* and a traditional town which is situated at a distance of 22 km from Pavagada, the taluk-headquarters. A distribution of the towns with reference to the road distances to the concerned sub-division headquarters shows that the distance is beyond 60 km in only one case (Y.N. Hosakote 72 km), between 30 and 60 km in 4 cases and 30 km or less in the case of the remaining 4 towns. With reference to district headquarters, it may be noticed that the distance ranges between 19 km in the case of Gubbi and 114 km in the case of Y.N. Hoskote. Amongst the rest, only one is at a distance of 30 km or less, 4 are located in the distance range of 30–60 km and the other 4 are situated in the distance range of more than 60 km. Though the district headquarter town of Tumkur lies in the eastern sector, it may be considered as centrally located in view of the north-south configuration of the district and its tapering western belt. As Bangalore district which contains the State Capital is adjacent to Tumkur district some of the towns are located quite close to Bangalore City. The road distance to Bangalore ranges between 70 km in the case of Tumkur (and also Kunigal) and 172 km in the case of Y.N. Hosakote. The distance is less than 100 km in 5 cases, between 100 and 150 km in another 5 cases and 150 km or more in the case of 2 towns. All the towns of the district have good locational advantages with reference to the State capital. With the exception of Adityapatna and Y.N. Hosakote which are somewhat off the main trunk road the rest of the towns are enjoying very good transport facilities and are directly linked with Bangalore. Kunigal is located on the National Highway connecting Bangalore and Mangalore. Tumkur, Gubbi and Tiptur are located on the Bangalore-Honavar Highway, from which the roads leading to Adityapatna, Turuvekere and Chiknayakanhalli branch off at Ammasandra cross and Kibbanahalli cross respectively. Sira is an important town on Bangalore-Poona National Highway. Tumkur is now a city having a population of one lakh or more and this happens to be the nearest city in respect of all the towns of the district. In so far as Tumkur itself is concerned, Bangalore is the nearest City. The influence of the metropolitan city of Bangalore is perceptible in all the towns. Bus route facility is available in the towns of Gubbi, Tiptur and Tumkur. Adityapatna is very close to Ammasandra railway station. The distance to the nearest railway station is below 20 km in the case of 2 towns, between 20 and 40 km in the case of 3 towns, between 40 to 60 km in the case of 2 towns and 60 km in the case of Y.N. Hosakote town. Comparatively speaking the towns of the district are enjoying very good communication facilities and this

comment is particularly relevant in respect of Tumkur, Gubbi, Tiptur and Sira as well as Kunigal and Madhugiri.

An idea regarding the scale of financial transactions of the municipalities governing the towns of the district may be had from the data furnished in Statement III of the town directory. True to expectations Tumkur, the most populous urban centre of the district tops the list with a tally of Rs. 3,533,700 under receipts and Rs.3,642,600 under expenditure. This is followed first by Tiptur and then by Sira the second and third largest towns. At the other extreme, this amount adds up to hardly sixty thousand in Adityapatna, the smallest town. In a general way it may be observed that the volume of transactions is directly associated with population size. The amount under receipts increases from Rs. 60,000 in the case of Class VI town to Rs. 3,533,700 in the case of Class I town through the averages of Rs. 369,200, Rs. 454,300 and Rs. 1,123,400 respectively in the case of Class V, Class IV and Class III towns. On the expenditure side too a similar picture is noticed : the average amount of expenditure increases from Rs. 54,800 to Rs. 3,642,600 from Class VI to Class I through Rs. 273,600, Rs. 413,240 and Rs. 103,300 respectively. It would be perhaps more appropriate to analyse the data on per capita basis in view of the large variations in population and volume of transactions. The per capita receipt ranges between Rs. 19.71 and Rs. 52.46 in Adityapatna and, Turuvekere respectively. In Tumkur, the largest town, this average is only 32.52. A grouping of the towns shows that the per capita exceeds Rs. 50 in Koratagere and Turuvekere; it exceeds Rs. 40 in Tiptur, ranges between Rs. 30-40 in the case of 5 towns and between Rs. 20-30 in 3 towns. On the expenditure side the relative positions of the towns get altered. The per capita expenditure is the least in Gubbi (Rs. 14.20) and the highest in Tiptur (Rs. 49.95). In Turuvekere and Tumkur this average works out to Rs. 40.41 and Rs. 33.52 only. In 3 out of the 12 towns the per capita expenditure is below Rs. 20; in another 3 towns it is in the range of Rs. 20-30, in 4 towns it ranges between Rs. 30 and Rs. 40 and it is more than Rs. 40 in 2 towns. This comparative analysis shows that even in the larger municipal towns the amounts realised by way of income and the amount spent annually for running the civic administration and providing various civic amenities are both quite small.

In almost all the towns local taxes constitute the main source of income. Receipts from taxes account for more than 75 per cent of the total receipts in 2 towns (Adityapatna and Kunigal); 50–75 per cent in 5 towns; 25–50 per cent in 4 towns and below 25 per cent only in Y.N. Hosakote. Revenue derived from Municipal properties and powers apart from taxation is nil in Adityapatna but quite substantial in several towns. The share of this head is as high as 42.82 per cent in Gubbi, 40.04 per cent in Madhugiri and 37.97 per cent in Y.N. Hosakote. In 6 of the remaining 8 towns, however, the proportion of receipts from this head is below 10 per cent. Government grants of different types too contribute to the municipal funds of almost all the towns and this too has now become an annual feature. The funds released each year varies considerably and depends upon projects sanctioned and taken up for implementation and several other factors as well. In Kunigal town for instance government grants accounted for 49.44 per cent of the total receipts during 78-79. On the other hand, this did not constitute even half a per cent in Pavagada. It is less than 5 per cent in 4 towns, between 5 and 10 per cent in 2 towns and between 10 and 15 per cent in 2 other towns. On the expenditure side general administration is a regular and recurring item. This head accounts for a mere 5.52 per cent in Tiptur and as much as 59.69 per cent in Gubbi. In 5 towns this proportion is below 20 per cent, lies between 20 and 40 per cent in 4 towns and exceeds 40 per cent in 3 towns. At times the salaries disbursed to staff assigned other than administrative work also gets included under this head and this results in inflated figures, as has perhaps happened in the case of Gubbi and 2 other towns reporting more than 40 per cent of total expenditure against this head. Public safety which generally includes expenses on road lighting too, accounts for a substantial proportion of the total expenditure. In Adityapatna however the amount spent is reported to be nil. Amongst the 11 towns, this proportion varies between 5.81 per cent in Pavagada and 22.53 per cent in Y.N. Hosakote. This proportion is 10.00 per cent or less in 4 towns, ranges between 10 and 15 per cent in Madhugiri and Turuvekere, 15-20 per cent in 3 towns and more than 20 per cent in the other two towns. Public health and conveniences which usually cover the expenses incurred for providing and maintaining drainage facilities etc., account for a sizeable proportion of the total expenditure in most of the towns. In the two towns of Kunigal and Y.N. Hosakote, though it may appear strange, the amount spent on this head is reported to be nil. Perhaps this amount stands included under general administration. These two apart, in Gubbi the expenditure is just 2.71 per cent. This proportion exceeds 40 per cent in 5 towns and ranges between 20 and 40 per cent in the other 4 towns. Public works is another item on which the expenditure is liable to large scale variation not only amongst the towns but even within the same town from year to year. The proportion of expenditure on this head ranges between 4.63 per cent in Tiptur and 23.99 per cent in Y.N. Hosakote and this is reported to be nil in two towns (Gubbi and Chiknayakanhalli). In all municipalities generally small sums of money are granted to public institutions and a few civic bodies are themselves maintaing such institutions (example nursery schools, dispensary etc). Expenditure on this head forms a small proportion of the total. These major heads apart there are several other items on which the civic bodies spend varying sums of money every year and these are all grouped under the miscellaneous category. This head is seen to account for as much as 56.04 per cent in Tiptur and between 20-30 per cent in 6 other

towns. A clearer understanding of the municipal finances is possible only by a more detailed analysis of the data, especially the data relating to at least 3 years.

Data on civic and other amenities in towns show that all the towns have pucca roads as well as Katcha roads and that some portions of these roads are under the maintenance of the State Public Works Department and some other portions are maintained by the municipality concerned. The road length varies considerably from town to town depending upon several local factors. In Tumkur, the largest and the most populous urban area of the district the total road–length is 272 Km. On the other hand, the total road length adds up to a mere 7 Km in the small town of Koratagere. Though Adityapatna is the smallest town in terms of population it has a greater road length namely 18 Km. Similarly in Y.N. Hosakote, which is the smallest town areawise, the total road length is 18 Km – a figure more than that reported for the towns of Chiknayakanhalli and Madhugiri. In 7 out of the 12 towns the total road length is in the range of 11-20 Km, in 2 towns it lies between 21-30 Km and it is 32 Km in Turuvekere town. In most of the towns of this district, which lies in the southern *maidan* region of the State, houses are built close to each other on either side of narrow streets to form compact nucleated settlements. It is only in larger towns that new extensions are coming up in recent years and that there has been an expansion of geographical limits of the built up area and the town as such. Since population, area and road length are subject to wide variations for comparative analysis ratios may be considered. Accordingly, if the road-length per 1000 population is examined it is found to vary between 0.72 in Kunigal and 6 in Adityapatna. This ratio is less than one in the towns of Chiknayakanhalli, Koratagere, Sira and also Tiptur. In the case of Tumkur the road-length per thousand population is 2.52 Km only. Likewise, the road-length per square kilometre of urban area varies between 3.44 in Pavagada and 17.75 in Tumkur. This ratio is more than 10 only in the two other towns of Adityapatna and Y.N. Hosakote. In summing up it may be observed that the district headquarter town, namely Tumkur which is also the pre-eminent urban centre of the district is comparatively well-served by road facility and the conditions in Adityapatna, an industrial township of a small size, are also quite good. The position in the traditional towns which belong to the smaller population category in particular is unimpressive.

Drainage facilities are available in all the towns mainly in the form of open surface drains, box drains, V or U shaped drains and or sylk pattern drains as well. Data on length of drains of different types have not been gathered. Amongst the 12 towns it is only the industrial town of Adityapatna and Tumkur city that are provided with sewerage facilities in addition to drainage facilities as mentioned above. Water-borne latrines have been reported from all towns except Y.N. Hosakote, in varying numbers. In Adityapatna and Tumkur most of these latrines are connected to the sewerage and a few have been provided with individual disposal systems such as septic tanks. In the other towns these flush-out latrines are connected to small tanks. In Y.N. Hosakote there are about a hundred pit-type (collecting well type) latrines. Except Tumkur, no other town has reported the existence of service latrines. The pernicious practice of removal of nightsoil by headloads is still prevailing in Tumkur. In this connection it may however be mentioned that the Municipality is not providing the scavenging services and that the old practice is still persisting because of the bilateral agreements subsisting between the landlords and the actual workers traditionally associated with such services.

Drinking water is being supplied through taps in all the towns of the district. Water is stored in overhead tanks, and the storage capacity amongst the towns varies between 18,000 litres in Y.N. Hosakote and 4,500,000 litres in Tumkur. The storge capacity is comparatively small in Turuvekere town also (59,090 litres). In Tiptur and Sira which are the second and the third most populous towns, the storage capacity is fairly large, namely, 1,023,000 litres and 455,000 litres respectively. It may however be recalled that the storage facility does not correspond to the quantity of water supplied to the inhabitants of the town everyday but refers to the capacity of the storage tank or tanks in the town. It is quite possible that the quantity of water actually supplied is much less or in some cases it may be one and a half to two times the storage Capacity. Further, there would be seasonal variations as well in this regard. On the basis of the data collected all that could be stated is that piped water supply facility is available in all the towns of the district. Fire-fighting services are not available in any town. In case of emergencies the towns of the district have to depend on such facilities available at places belonging to neighbouring districts. In the case of Tiptur as well as Turuvekere, Hassan is the nearest place (51 km and 76 km respectively) with the fire-fighting facility. Hindupur of Andhra Pradesh happens to be the nearest such place in respect of Madhugiri (37 km), Pavagada (60 km) and Y.N. Hosakote (82 km). In the case of the remaining 7 towns, Bangalore city is the nearest place with such a facility and the distance to the city ranges between 70 km and 134 km.

All the towns are electrified. The number of electrical connections to different categories of consumers varies from town to town and it may be generally noticed that the larger towns have a greater number of connections of each type. Thus, Tumkur city has the largest tally under all the headings namely, domestic, commercial, industrial and road-lighting and this is followed by Tiptur and Sira which are the second and third largest towns of the district. However, as between Sira and Madhugiri both of which are important centres of trad-

ing and commercial activities, Madhugiri the smaller town has a slightly larger number of commercial connections. Adityapatna, the smallest town, has the least number of connections under each category.

In Tumkur city, as in 1979, seven areas have been notified as slums in view of the poor housing conditions, congestion and bad sanitation besides the low level of economic condition of families inhabiting these areas. The population of these slum areas formed about 7.30 percent of the total population of the city and the geographical area as reported added upto 0.14 hectares only. The density of population in slums works out to 56,664 – a figure which is very high with reference to 7093 which is the average density for the city. Five out of the 7 slums have reported the availability of paved roads and 3 slums have been provided with some drainage facility also. All these slum areas do not have latrines of any type and the slum-dwellers in general resort to open fields nearby to answer the calls of nature. As regards water supply, it may be noticed, public taps have been provided in sufficient numbers in 5 out of the 7 slums. None of the houses in the slums is provided with electricity. Road-lighting facilities are also absent in six out of the seven slums. Obviously, the conditions in these slums are much below the minimum standards.

In Statement V, particulars regarding the availability of medical, educational and recreational facilities in towns are furnished. It may be seen from this statement that medical facilities are available in all the towns of the district. While Tumkur, Tiptur, Sira and Adityapatna have a hospital each, the other towns have either a primary health centre or a primary health unit. Family planning clinics are available in all the towns, mostly as a part of the local medical institution than as an independent unit. The bed-strength in the medical institutions in the town varies between a minimum of 4 in Y.N. Hosakote and a maximum of 325 in Tumkur city. The general hospitals at Tiptur and Sira have a bed-strength of 50 each. If the average number of beds per 1000 population of the town concerned is examined this ratio is seen to vary between 0.53 in Y.N. Hosakote and 3.29 in Adityapatna the smallest town. In the case of Tumkur, the prominent urban centre of the district the ratio is 2.99. Though Koratagere is a smaller town it has a higher ratio of 2.97 as compared to Tiptur (1.64) and Sira (1.81) the second and the third most populous towns of the district. The medical institutions in towns serve the inhabitants of the towns concerned and also cater to the needs of those residing in the surrounding villages. This comment is particularly applicable in the case of Tumkur which has the District Hospital.

All the towns have adequate educational facilities from the primary level upto the Pre-university level. It is only in the case of Y.N. Hosakote that the nearest junior college is located at a distance of 22 km. Tumkur is the prominent educational centre and has the largest number of primary schools, middle schools, high schools, junior colleges and also degree colleges. The city has a law college as also a polytechnic institute and an engineering college. Tiptur too is an important educational centre. The average number of schools per 10,000 inhabitants of the town varies considerably from town to town under each category. In the case of primary schools the ratio is seen to vary between 3.29 in Adityapatna and 6.67 in the towns of Turuvekere and Y.N. Hosakote. In Tumkur, the largest town, the ratio works out to 3.86 only. Koratagere, Chiknayakanhalli, and Madhugiri have a fairly high ratio. So also in the case of middle i.e., higher primary schools, the ratio varies between 2.08 in Pavagada and 4.45 in Turuvekere. In Y.N. Hosakote (3.99), Koratagere (3.71) and Tiptur (3.61) also the ratio is on the higher side. On the other hand in Tumkur it is quite low (2.39). As regards high schools, while Chiknayakanhalli has the lowest ratio of 0.64 and Gubbi appears next above with a ratio of 0.86, Adityapatna tops the list with 3.29 and this is followed by Turuvekere (2.22). In Tumkur this ratio is 1.56. Adityapatna which is the smallest town of the district has a junior college and the average per 10,000 inhabitants comes to 3.29 – a figure which happens to be the highest amongst the 12 towns. Though Tiptur and Sira are Class III towns each of these towns has only one junior college, and in these two cases the ratio works out 0.33 and 0.36 respectively. Similarly though Tumkur city has as many as 7 junior colleges, in view of its large population the ratio comes to 0.64. It may be observed in a general way that the strength of the students and the teachers tend to be relatively large in the case of the institutions of all types in larger towns. Degree level colleges are available in 4 out of the 12 towns. The colleges at Tumkur, Tiptur and Madhugiri happens to be the nearest such institution in respect of 3 towns in each case. The distance however lies in the range of 19 and 72 km. Bangalore is the nearest place with facilities for medical education and the road distance from the towns to this city ranges between 70 km and 142 km. Y.N. Hosakote is however nearer to Bellary (102 km) which too has a medical college. Tumkur has an engineering college as also a polytechnic and this happens to be the nearest place with such facilities in respect of all towns except Tiptur in which case Hassan is nearer.

Recreational facilities in the form of permanent cinema theatres are available in 7 out of the 12 towns. Tumkur the most populous town has 6 cinema theatres while Tiptur, the second largest town has 3 cinemas, Sira and Madhugiri have 2 cinemas each. Tumkur is the only town with a modern stadium. Similarly this is the only town with an auditorium. Though there are working women in the larger towns of the district, hostel facilities exclusively for such women, are not available in any of the towns. The facility of public library is available in 8 towns.

All the towns of the district are centres of trading and commercial as well as manufacturing activities. In

Adityapatna however, trading and commercial activities are not of much significance. The magnitude of transactions and also level of trade differ from town to town depending upon historical and several other factors. In Statement VI of the town directory particulars about three most important commodities are reported under the headings of import, export and manufacture. All the towns have reported one item or the other. The imports generally cover essential commodities like foodgrains and provisions, cloth as well as fertilizers, agricultural implements and certain raw materials for industries. If the data on the first most important commodity imported were to be tabulated, it is noticed that foodgrains are most important in 6 towns and in three other towns, jaggery, cloth and edible oils are reported. It is only in three towns the commodities which are used as raw materials are reported–tobacco leaf and powder in two towns and silk yarn in the other. Likewise, data on the most important commodity manufactured indicate that groundnut oil and beedies are important in three towns each and the following items have been reported by one town each : cement, soap, coir products, carded wool, coarse woolen rugs and silk fabrics. Cement is the main item produced at and exported from Adityapatna. The most important item exported happens to be copra and groundnut oil in the case of 3 towns each; coir products, jaggery, groundnut, silk fabrics and beedies in the case of each of the remaining towns. Banking facilities are available in all the towns. The number of bank offices varies between one in Adityapatna and 17 in Tumkur city. Tiptur the second most populous town has 7 banks and 5 other towns have 4 banks each. Agricultural as well as non-agricultural credit co-operative societies are functioning in each one of the towns of the district. The larger towns have a relatively greater number of such institutions. Most of the towns of the district are essentially traditional in character and have developed slowly over a long period of time. They are centres of revenue and general administration in respect of numerous villages in the neighbourhood and have also been discharging the functions as marketing and servicing centres. Manufacturing industry is on a low key and industrialisation in the modern sense of commissioning of large and medium sized industries has just begun. The proximity of Bangalore the pre-eminent industrial centre of the State to the towns of this district seems to have been one of the important factors that have impeded rapid industrialisation. Agricultural economy of the district too is at a subsistence level and certain tracts have the dubious distinction of being prone to suffer from the conditions of drought, scarcity and famine. It is only in recent years that the situation is changing for the better and towns have begun to prosper. Amongst the 19 districts of the State, Tumkur is the least urbanised and this position is likely to continue for some more time.

PART A — VILLAGE AND TOWN DIRECTORY

(i) SECTION I - VILLAGE DIRECTORY

(ii) SECTION II - TOWN DIRECTORY

VILLAGE DIRECTORY - AMENITIES AND LAND USE EXPLANATORY NOTE

As the title signifies the Village Directory aims to provide information on amenities and land use pattern in respect of each and every village with the reference period as the year 1979-80. In all there are 20 columns in this tabular statement and, out of these as many as 9 are allotted to amenities and services while another 5 are ear-marked for data on land use. The remaining columns are concerned about location code number and name of the village area and population, its proximity to an urban centre and, remarks. Since most of these column headings are concise and represent certain concepts, a column by column explanation is furnished herewith. This would enable the reader at the very outset to recognise the scope and appreciate the limitations of the data presented under various columns.

Column 1 : Location Code Number :-

The concept of location code numbers has already been explained in the Analytical Note. The location code number thus assigned to the village is entered in this column. This number, runs serially starting from 1 for every taluk and the data are presented for villages arranged in an ascending order of their location code numbers. If there are any villages in the taluk that are fully incorporated into the limits of any urban area or are completely submerged under the back waters of any reservoir but are continued to be borne on the jurisdictional lists of the Survey and Settlement authorities such villages are mentioned at the end without any location code number and in all such cases it may incidentally be pointed out, no further data except the name and the area are furnished in the statement. Similarly in the case of villages which are classified as outgrowths of towns, their names and area particulars alone are given treating at par with villages fully incorporated in urban areas.

Column 2: Name of Village :-

The name of the village corresponding to the location code number is given in column 1 is spelt out in English in this column. By and large the spelling adopted at the previous i.e. 1971 Census, have been retained even now. However, errors arising out of misreporting and misprinting if any in the 1971 District Census Handbooks have been taken note of and the correct spellings are now used. So also changes in village names duly effected by the concerned authorities with the sanction of the Government have been taken into consideration while finalising the spellings of village names for 1981 census purposes. Further, if the name of the village has now been spelt differently as compared to the spelling given in the 1971 District Census Handbook for whatever the reason the spelling as adopted in the 1971 District Census Handbook is also furnished within brackets below the present name of the village in the alphabetical list of villages for the convenience of the data user.

A little more explanation appears to be necessary about the places which appear in the list of towns as well as in the list of villages. This phenomenon occurs particularly in the case of Taluk and District Headquarter towns which, as revenue entities are geographically large villages. The main village site areas including the peripheral developed areas would have for long been incorporated into the urban limits without any change whatsoever in Survey and Settlement records. In the Original Survey records and also at the Resurvey, the entire village inclusive of all the lands that are incorporated into the urban limits continues to be shown as a regular revenue village. In other words the portion constituted into a town is not taken out from the parent village and formed into a separate and independent unit in the jurisdicational lists. Every civic body, be it a municipal corporation or a town municipality or a notified area or a sanitary board defines its own jurisdiction confining itself mostly to the built up area and the fringe areas for enforcing municipal rules and regulations. With the administrative and legal sanction of the Government which issues a notification in this behalf the civic body secures statutory rights for administering the local area so defined. The incorporated areas may at times cut across village boundaries and may comprise of portions belonging to the revenue jurisdiction of two or more villages. In some instances entire revenue lands of a village or of several villages are incorporated into the limits of a town in which case for purposes of census operations these villages lose their independent identity and are omitted in the list of villages of the taluk. But it is only in case of villages of which only certain portions are included in the town, especially those that contribute their names to the towns concerned that this apparent duplication of names occurs. In such cases the jurisdiction of the town is very clear and it covers only a portion of village which is constituted into an independent entity as urban for census enumeration purposes. The remaining area too is constituted as an independent unit under the rural category i.e. as a village. In order to distinguish this unique situation, the name of the village bears the suffix *Rural* within brackets in the census village lists. Division of the village into urban and rural components and the suffixing of the names is a special procedure adopted for census purposes only. That is to say, if one were to ask the Officers of the Survey, Settlement and Land Records whether in their lists there are villages such as say Bellary (Rural), Belgaum (Rural), Bijapur (Rural), Chamarajnagar (Rural),Magadi (Rural), Mandya (Rural), Mysore (Rural), Raichur (Rural) etc., the answer would be a definite 'no' and then they would say that there are villages of the same name but without the suffix Rural. Similarly in the village maps and other record pertaining to the above named places, the lands

that are incorporated into urban areas are also shown as part and parcel of the village concerned.

Column 3 : Total area of the village (in hectares)

The total geographical area of the village as per revenue records is furnished in hectares up to two decimal places. In Karnataka the basic records are still maintained in acres and *guntas* or acres and cents, that is the units of measurements which were first adopted at the time of the cadastral survey. After the introduction of the decimal system however the equivalents of these figures are also indicated in addition to the already existing entries in registers such as Akarband and Records of Rights. The area of each Survey number or part thereof is converted into hectares and ares and square yards too in some cases. Thus if these converted figures for each such small unit are added together for the village the resultant total area would normally be either less or more than the corresponding figures that one would derive by the addition of figures in acres-guntas/acres and cents and conversion of that into hectares and ares. For purposes of presentation in this statement the village level area and land use figures which were furnished in acres-guntas or acres-cents by the Revenue Officers have been converted into hectares and ares and these figures may not therefore be identical with the area as may be found entered in hectares and ares in the records of some of the villages. The marginal differences would be due to the factors explained above. Further, in the case of villages of which certain portions are incorporated into an urban area the extent thus categorised as urban has been deducted from the total geographical area of the revenue villages and for this reason the particulars presented here would not be in full correspondence with the total area of that revenue administrative unit as mentioned in the village records. If area figures are not available for any village the abberviation 'N.A.' is entered in this column and a note at the bottom of the page explains the reason thereof also.

Column 4 : Total Population and number of house-holds

The total population of the village according to 1981 census and the number of households therein are indicated in this column. In the case of villages with no inhabitants i.e. nil population, the word un-inhabited is written across the line.

Columns 5 to 10 : Amenities available (if not available within the village, a dash may be shown in the column and next to it in brackets. The distance in broad ranges, viz. –5 Km, 5–10 Km and 10 + Km of the nearest place where the facility is available may be given) :–

As the main heading for these columns suggest if the basic amenity covered under any of these columns were to be not available within the village then, instead of simply stating that fact, an attempt is made here to indicate the minimum distance (in ranges) that one has to cover to avail oneself of that specific facility located in a nearby village or a town. At the data collection stage the name of such nearest place having that amenity as also the distance thereto from the referent village have been ascertained to ensure a higher degree of reliability in reporting. The abbreviations made use of in these columns are explained below column by column.

Column 5: Education

All types of educational institutions functioning in the village irrespective of the levels of education offered, the medium of education and the status of the managing body are considered under this column. The abbreviations used to denote institutions with different levels of education are :

i) P : *Primary or Elementary School :* Schools providing education from I standard and upwards upto and inclusive of IV standard are classified as Primary Schools. This would also include junior basic schools if any.

For purpose of reporting, schools which provide education not merely from I to IV but also for higher standards, called composite schools for easy reference, are split up into different levels of education and counted as an independent unit under each such level.

ii) M : *Middle or Junior Secondary School :* Schools providing education from V standard and upwards upto and inclusive of VII standard are classified as middle schools. In Karnataka as a matter of fact the term middle school is no longer in vogue. Primary education itself consists of seven years of schooling and the first four years duration of this course is called *Lower Primary* and the next 3 year period is termed as *Higher Primary*. As mentioned above a Higher Primary School with I-VII standard is treated as two units i.e. one Primary School and one Middle School for accounting purposes.

iii) H : *Matriculation or Secondary School:* Schools providing education from VIII standard and upwards upto and inclusive of X standard are classified as High Schools. A composite school with I–X standard is treated as three separate units and counted separately under the category of Primary, Middle and High School.

iv) PUC : *Higher Secondary/Intermediate/Pre-University/Junior College:* Schools and colleges that provide education for the XI and XII standards or as is more common in Karnataka for the I and II year of the Pre-University Course, fall under this category. There are Higher Secondary Schools with VIII standard and upwards covering the XII standard and on the other hand there are also degree colleges which provide education for PUC I and PUC II year. These composite units are as explained earlier, split up into different levels for reporting purposes.

v) C : *College :* This would cover all eductional institutions that provide post PUC level education leading to University degree in any subject or combination of subjects and also post-graduate levels of education.

vi) I : *Industrial School :* Industrial Schools if any in the village are indicated by the abbreviation 'I'.

vii) TR : *Training School :* All types of Institutes that provide vocational and professional training are covered by this abbreviation.

viii) AC : *Adult Literacy Class/Centre :* This abbreviation is recorded in this column only if adult literacy classes were being conducted regularly in the village during the reference year.

ix) O : *Others :* All other types of educational institutions such as Sanskrit Pathasala, Urdu Madarasa, Makhtab etc., are included in this residuary category.

It is important to note that in this column whenever the number of institutions of a particular level or class exceeds one, only then the actual number is also reported immediately after the relevant abbreviation within brackets. That is to say the mere presence of an abbreviation without any numerical attribute signifies the existence of the facility, in at least one institution for which that abbreviation stands. The numerals indicate the number of institutions or units of that level or type.

As explained already if a village does not have any educational institution whatsoever then a dash(–) is entered and thereafter, within brackets, the minimum distance that one has to cover to avail oneself of the primary level of educational facility is indicated. The emphasis here is on the most basic need i.e., the minimum level. In other words, if the village has primary school, but not middle school or high school then no further information is furnished in respect of the proximity of a middle school and upwards. Similarly for a village with primary and middle schools but no high school or a college no further information is furnished in respect of the proximity of high school and college level facilities.

It may again be recalled that the concept of village covers the entire revenue jurisdiction of that unit and includes all the hamlets i.e. human settlements located therein.

Column 6 : Medical

The abbreviations used to denote the existence of medical institutions of different types in the village are:

H : Hospital
MCW : Maternity and Child Welfare Centre
MH : Maternity Home
CWC : Child Welfare Centre
HC : Health Centre
PHC : Primary Health Centre
PHU : Primary Health Unit
D : Dispensary
FPC : Family Planning Centre
TB : T.B. Clinic
NH : Nursing Home
RP : Registered Medical Practitioner
SMP : Subsidised Medical Practitioner
CHW : Community Health Worker
O : Others

If the number of institution of a particular type happens to be more than one then that number is also indicated immediately after the relevant abbreviation.

If the village does not have any medical facilities whatsoever then the minimum distance that one has to cover to secure the minimum level of medical facility is indicated here in distance ranges.

The abbreviation H which stands for hospitals implies the availability of facilities for the treatment of in-patients also. In several Primary Health Centres also such facilities do exist. Likewise Maternity Homes also entertain in-patients but then these are confined only to maternity cases. This apart in all other cases except private nursing homes arrangements exist for the treatment of out-patients only. In local parlance in certain areas however even a dispensary is referred to as a hospital and the clinic run by a private medical practitioner as a dispensary and a private nursing home as a hospital. This indiscriminate usage at times leads to confusion and in view of this every attempt has been made to eliminate such reporting errors.

All types of medical institutions, irrespective of the system of medicine practised therein are covered under this column without any attempt to provide a further break up by systems of medicine.

About the Community Health Worker it may incidentally be mentioned that it does not refer to workers in extension programmes like Malaria Surveillance Workers, Basic Health Worker, Auxiliary Nurse Midwife etc., but refers only to the paramedical personnel who have been specially trained *for dispensing medicines for minor ailments at the doorsteps of the patients.* This is an altogether new scheme and has not been introduced in Karnataka.

Column 7 : Drinking Water

Following are the abbreviations used to indicate the different sources of drinking water that are available in the village. These sources of drinking water supply may be public property or may even be owned by private persons and institutions. If there are two or more sources then all these sources are mentioned one after the other but separated by commas.

T : Tap	C : Canal
W : Well	L : Lake
TK : Tank	S : Spring
TW : Tube Well	N : Nallah/Stream
HP : Hand Pump	O : Others
R : River	NA : Information not available
F : Fountain	

If the village does not have any source of drinking water supply at all then, after a dash in this column, the distance range that one has to traverse to reach the nearest place with drinking water facility is indicated.

Column 8 : Post and Telegraph :-

In this column information on the availability of postal, telegraph and telephone facilities in the village is furnished using the following abbreviations.

PO	: Post Office
TO	: Telegraph Office
PTO	: Post and Telegraph Office
Phone	: Telephone connection

Telephone connection need not necessarily indicate the availability of a public call office in the village, for even private telephone connections to subscribers have been taken into considerations while filling up this column. If a village has postal as well as telephone facilities then both these amenities are mentioned. Likewise if there is a PTO and telephone connection then both the abbeviations are entered in this column. On the otherhand if the village is not having any of these facilities then a dash is noted and next to it the distance to the nearest place having the minimum facility of a post office is indicated in ranges.

Column 9 : Day or Days of the Market/Hat:-

The column refers to the weekly, bi-weekly markets i.e., the weekly shandy, held in villages with a view to cater to the needs of that village and more so to the needs of the inhabitants of several surrounding villages. In local terminology such a weekly market is called *Santhe* and is quite popular in Karnataka. In the case of villages which host such shandies the actual day on which the shandy takes place is mentioned and in all other cases a dash is entered and thereafter the distance to the nearest place with a weekly market is indicated in ranges as specified in the column heading. The place where such weekly market gathers may be located in the limits of an adjoining taluk or district. The important matter for consideration here is the geographical proximity. In some cases where the nearest town or a large sized village with a permanent market would serve the needs of the villagers, the distance ranges refer to such places with permanent markets only. In such cases obviously the nearest place where a weekly market it held would be very far away and will not be a matter of much significance.

Column 10 : Communication

For purpose of this column only the means of public transport namely bus, railway and water transport system if any are considered. If the village is served by any mode of such public transport the fact is indicated using the undermentioned abbreviations:

BS	: Bus Stop
RS	: Railway Station
NW	: Navigable Water way (including river, canal, backwaters)

If a bus stop or a railway station is located within the territorial jurisdiction of a village then that village is considered as being served by that facility even if that bus stop or railway station is somewhat solitary and is located at some distance from the village-site. If more than one type of communication facility is available then all the relevant abbreviations are mentioned in this column. If no such facility is available at all then a dash is entered and thereafter the distance to the nearest place with a communication facility is indicated in ranges.

Column 11 : Aproach to village

By approach to village is meant the type of road that leads to the village and this would indicate whether the village is accessible throughout the year or only during the fair season. The abbreviations used in this column are:

PR	: Pucca Road
KR	: Kachcha Road
NR	: Navigable River
NC	: Navigable Canal
NW	: Navigable Waterway other than river and canal if any
FP	: Foot path/Bridle path

If a village has a foot path or bridle path and also both pucca road and kachcha road then, only PR is recorded in this column as it would denote a higher level of facility of the same type. While kachcha road refers only to the unsurfaced mud road and term pucca road covers tar roads, cement roads water bound mecadum roads and metalled roads. But if in addition to either PR or KR the village has a waterway then information on the availability of a water way is also indicated.

Column 12 : Nearest town and distance

The name of the nearest town, that is any urban area as defined for purposes of the 1981 Census, and the distance thereto from the village are indicated in this column. The town mentioned here need not be located within that very taluk or the district or even the State for that matter. The main point for consideration here is the geographical proximity. The distance however is reckoned not as a 'crow flies' but by some land route or water way. Further, when there is a cross country footpath or a cart-track and a little more circuitiousroad from the village or its proximity to the town then the distance

by road is reported here in preference to the distance by foot-path or cart track. Similarly, when there are natural hurdles like unbridged rivers or streams the distance is furnished by the more circuitious route that the villagers would usually prefer. The information on distance is based on local enquiry by the reporting agency. If the town mentioned in this column belongs to another state then the name of that state is also indicated along with the name of the town and distance thereto.

Column 13 : Power Supply

If the village is electrified, that is if power is actually available, whatever may be the form of its use, then the village is regarded as enjoying this amenity of power-supply. If the supply is expressly restricted for say agricultural or any other specific purpose then this point is clearly stated by using a specific abbreviation. On the other hand if electricity is being supplied for all purposes without any reservations then information on various purposes is not separately mentioned. The abbreviations used in this column are:

ED	:	Electricity for domestic purpose only
E Ag	:	Electricity for agricultural purposes only
EO	:	Electricity for other purposes like industrial, commercial etc,
EA	:	Electricity for all purposes stated above.

Column 14 : Staple Food

Information on the staple food i.e., the cereals used by the majority population during the major portion of the year is furnished under this column. It may incidentally be mentioned here that no probing enquiries have been made to ascertain the exact situation in each and every village and that the details presented here are of a general nature. In several cases when it is not possible to determine the particular staple cereal, a combination, of major staple foodgrains is given.

Columns 15 to 19 : Land Use (i.e. area under different types of land use in hectares up to two places of decimal)

The Ministry of Food and Agriculture, Government of India has recommended to the State Governments the following classifications of land use pattern for the maintenance of records and for purpose of presentation here the same classification model has been adopted.

1. Forests,
2. Not available for cultivation,
   a) Lands put to non-agricultural uses,
   b) Barren and unculturable lands
3. Other uncultivated lands excluding fallow lands
   a) Permanent pastures and other grazing lands,
   b) Lands under miscellaneous tree-crops and groves not included in the net area sown,
   c) Culturable wastes
4. Fallow lands:
   a) Fallow lands other than current fallows,
   b) Current fallows.
5. Net area sown.

Column 15 of the Village Directory corresponds to category 1 i.e. forest, while columns 16 and 17 put together represent the cultivated lands and correspond to the combination of categories 4 and 5 above. Similarly columns 18 and 19 respectively correspond to categories 3 and 2 of the above classification. The data furnished here are based on the village records and pertain generally to the year 1979. The total of the area figures reported under these columns tallies with the total geographical area of the village as noted in column 3.

Column 15 : Forest

This includes all lands classed as forests under any legal enactment dealing with forests or administered as forests whether State-owned or private and whether wooded or simply maintained as potential forest land. Lands transferred to forest department for afforestation as also the class C and D lands transfered thus by the revenue department are also classified as forests. Within the forest area itself there may ocassionally be cultivated patches or else there may be grazing lands. But such areas too are shown under column 15 only as forests. If within an area classified as forest some specific extents of lands have been expressly assigned for regular cultivation and the records have not been set right pending formalisation of grants and related processes of survey and settlement then such cropped areas are shown under column 16 or 17 as the case may be and the remainder alone is shown as forest under column 15. The processes of regularisation of land grants and effecting relevant changes in the basic records of survey and settlement are somewhat protracted and time consuming. Therefore the information merely based on records is, in some cases at least, likely to be diffferent when compared with that based on the actual field situation.

Column 16 and 17 : Irrigated (by source) and Un-irrigated

These two columns cover all the agricultural lands and when added together would correspond to the net area sown plus the current and other fallows. The latter would imply all lands which were taken up for cultivation, but are temporarily out of cultivation for a period of not less than one year and not more than five years. All lands that are lying uncultivated as fallow for more than 5 years in succession are regarded as permanent fallows i.e., culturable waste and are covered under column 18. Area sown more than once during the same year, if any in the village, is counted only once under these columns. In column 16, a sourcewise break up of the irrigated area is furnished using the following abbreviations:

GC	:	Government Canal
PC	:	Private Canal

W	:	Well (without Electricity)
WE	:	Well (with Electricity)
TW	:	Tubewell (without Electricity)
TWE	:	Tubewell (with Electricity)
TK	:	Tank
R	:	River
L	:	Lake
Wf	:	Water fall
O	:	Others
T	:	Total

The concept of irrigation implies the existence of a source of water supply within a reasonable distance and an arrangement to regulate the supply of water according to the day-to-day needs of the crops raised in these fields. Naturally therefore all areas that are cultivated under purely rainfed conditions are treated as unirrigated. Though paddy is generally regarded as a wet crop, if it is raised purely as a rainfed crop as it very often is the case in heavy to very heavy rainfall regions, such areas are regarded as unirrigated for purposes of this column and shown under column 17. Similarly about garden crops, the area is considered for column 16 only if there is an element of irrigation. Sometimes it happens that the lands shown as dry and rainfed in the settlement records are in actual fact having irrigation facilities due to recent changes such as sinking of wells, introduction of lift irrigation or canal irrigation on commissioning of a project etc. In such a case the actual situation is taken note of and despite its classification as rainfed in the records the area concerned is treated as irrigated. Though rare, the opposite situation (where a plot of land originally shown as irrigated has ceased to enjoy that facility and is now yielding purely rainfed crops) is also met with and such a situation arises due to reasons such as breaching of tanks, drying up of irrigation wells and small tanks, defunct canal system and so on. The reporting agency has generally assessed the actual situation prevailing during the reference year 1979 while furnishing the data on irrigated lands. Regarding canal irrigation too it is the actual irrigated area and not the command area that has been reported here.

In column 17 the total extent of unirrigated lands, that is, dry lands cultivated as rainfed fields and the fallow lands put together is reported. As explained above, lands yielding rainfed paddy crop are considered as unirrigated.

Column 18 : Culturable Waste (including gauchar and groves)

This category includes all lands available for cultivation whether not taken up for cultivation or taken up for cultivation once but not cultivated during the past five years or more in succession. Such lands may be either fallow or covered with shrubs and jungles which are not put to any use. These may be assessed or unassessed and may be in isolated blocks or within cultivated holdings. Lands under thatching grass, bamboo bushes and other groves which are not included under orchards or forests are also included under this category. Further, this includes all grazing lands irrespective of whether they are permanent pastures and meadows or not. In several instances, lands that were at one time reserved for use as grazing fields and pastures and declared as assessed or unassessed wastes have over a period of time been brought under cultivation either fully or in parts as a result of gradual encroachments and also because of the Government policies regarding land grants. Thus, though in the records, the particular plot of land continues to be shown as a pasture the actual field situation would reveal that most of that land is actually under cultivation. In all such cases, to the extent possible, the actual field situation has been taken into consideration by the reporting agency.

Column 19 : Area not available for cultivation

In this column the total extent of land which is not available for cultivation in view of its being barren and unculturable as also that which is put to non-agricultural uses is reported. Mountains, deserts, rocky hills, quarries, ravines and the like as well as the lands that cannot be brought under cultivation except at a very high cost are included in the category of barren and uncultivable lands. The category of lands put to non-agricultural uses covers all lands occupied by buildings, roads, railways, parks and playgrounds, area under water viz., rivers, streams, canals, reservoirs, tanks, ponds etc., and land put to any other use which is apparently non-agricultural.

Column 20 : Remarks including any place of religious, historical or archaeological interest

Though the heading does not reveal, in this column, information of general interest has been provided by reporting the number of newspaper copies circulated in the village, number of motor cycles and scooters, number of cars and jeeps as well as the number of tractors available in the village. The following abbreviations are used:-

N	:	Newspaper copies circulating in the village
M	:	Motor cycles/Scooters available in the village
C	:	Cars/Jeeps available in the village
T	:	Tractors available in village

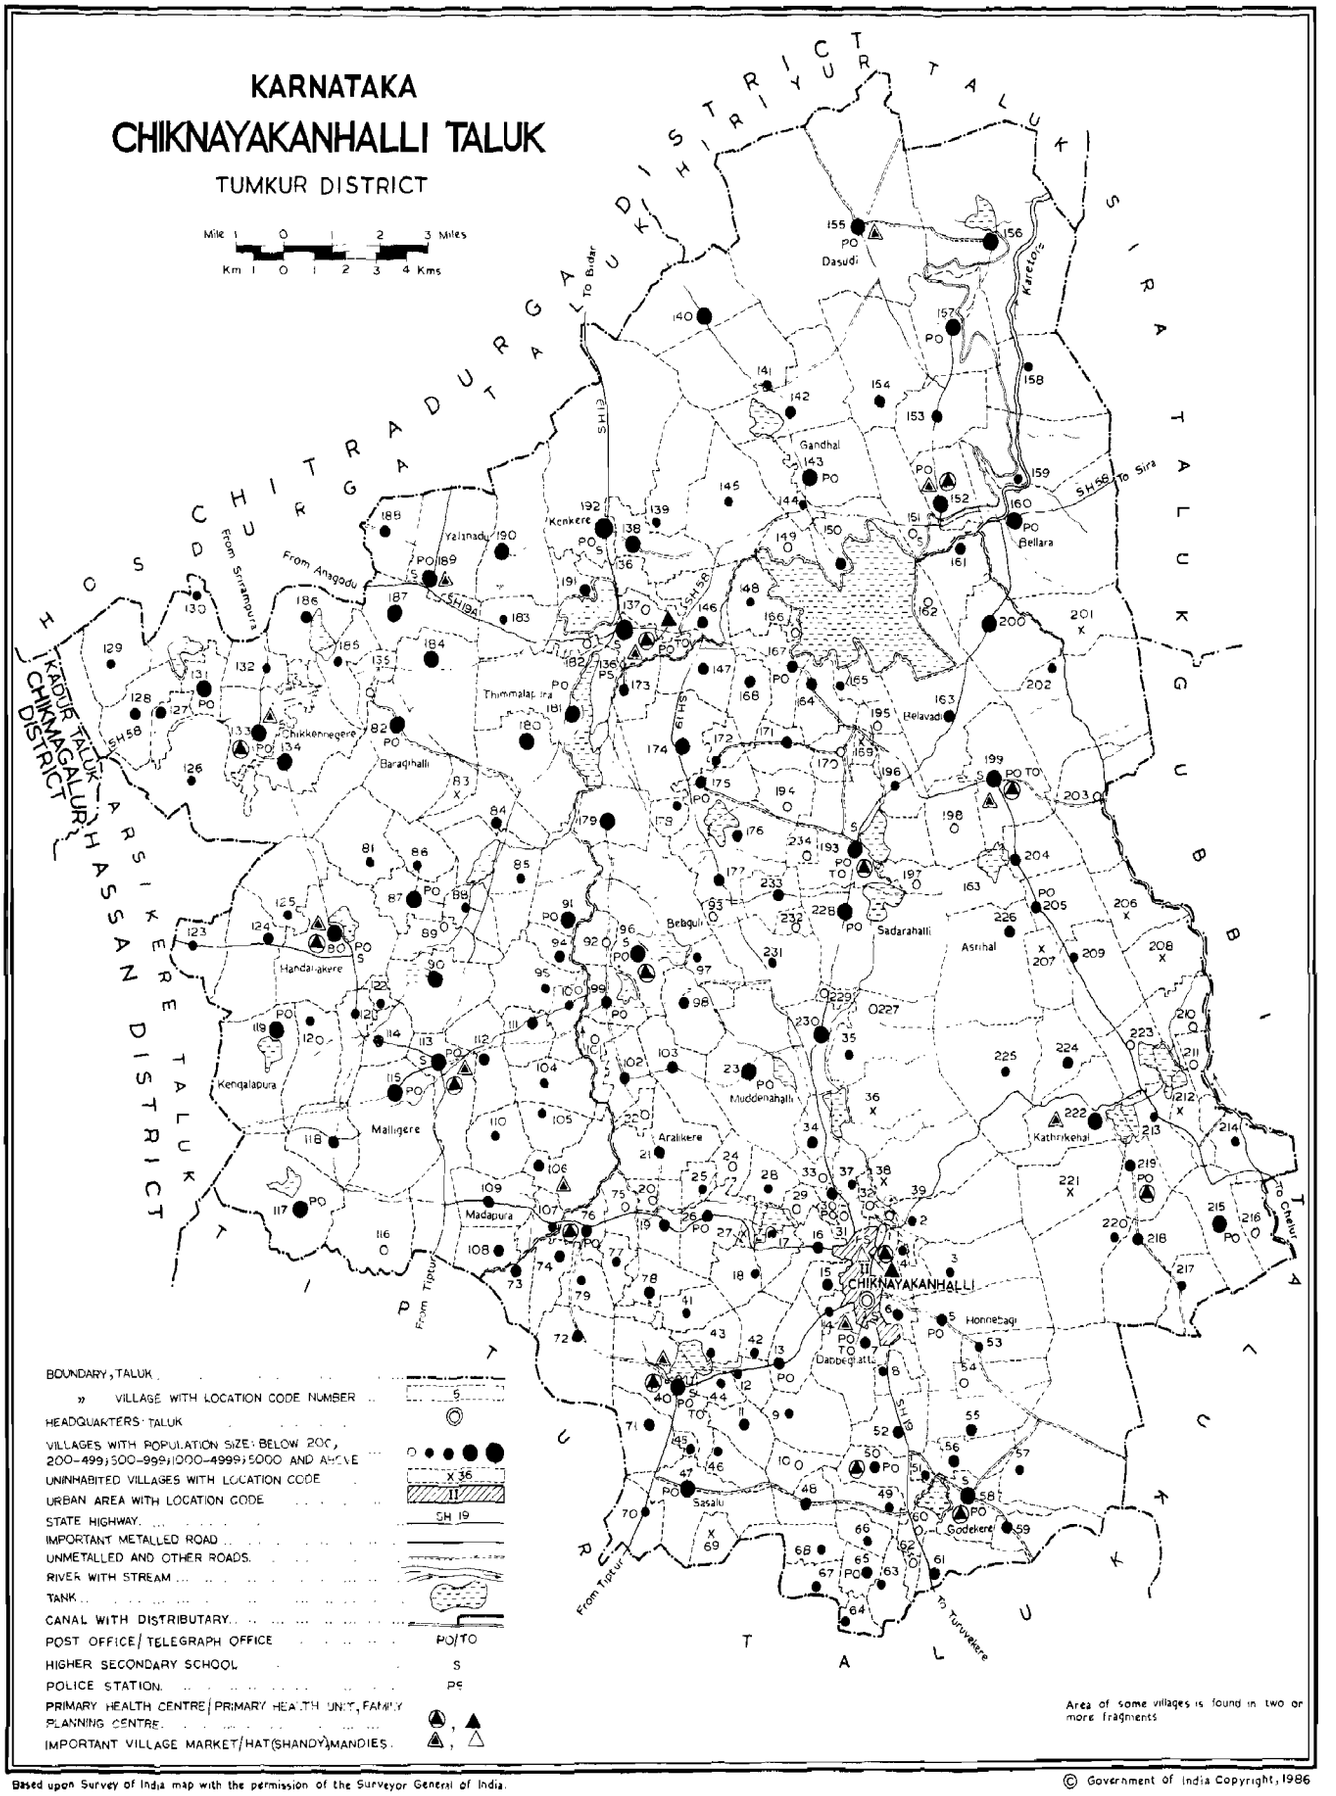

Immediately after the abbreviations the number of units is indicated to provide a quantitative index to the data furnished. If in a village there is nothing to report on this topic i.e., on any one or more of these items, then the concerned abbrevations are not entered at all. In other words, the abbreviation if found mentioned in this column is always followed by a numerical attribute.

It is necessary to note at this juncture that the information is based on what may be regarded as superficial oral enquiries by the reporting agency and may there-

fore be considered as a rough estimate at a given point of time i.e. during the year 1979–80. In the column a numerical reference has also been given along with the abbreviation A in respect of the notes, provided elsewhere in the volume, about villages having matters of particular religious, historical or archaeological interest to report. Such notes have generally been prepared on the basis of published material.

TOWN DIRECTORY

TOWN DIRECTORY

EXPLANATORY NOTE

Town Directory comprises of six tabular statements as applicable to all the towns and an additional statement regarding the slums, only in respect of towns with a population of 50,000 and above. These are numbered serially from I to VI and the additional statement bears the number IV A in view of the fact that it deals with the same type of information which is covered in statement IV. These statements contain several columns each with brief headings and for presentation of the data, abbreviations have also been made use of for the sake of brevity. These statements are taken up for consideration one by one and an explanatory note is given in respect of each column, with the exception of column 1 which refers to Serial Number and is self-explanatory.

STATEMENT I : STATUS AND GROWTH HISTORY

COLUMN 2 : CLASS, NAME AND CIVIC ADMINISTRATION STATUS OF TOWN :—

The class to which a town belongs is determined on the basis of its population at the 1981 census count and it is indicated in this column in roman numerals. The classification criterion adopted now is the same as that adopted for analysis and explanations at the earlier censuses. The towns are divided into six classes :-

Class	Population Size	Class	Population Size
I	100,000 and above	IV	10,000 to 19,999
II	50,000 to 99,999	V	5,000 to 9,999
III	20,000 to 49,999	VI	Below 5,000

The concept of urban agglomeration has been adopted for presenting the demographic data at the 1981 census also.But, in Karnataka, unlike in 1971, at this census quite a large number of villages have been recognised as out-growths of the core town or of one of its contiguous constituent towns. In determining the class however, the population of the core town alone is taken into consideration in these cases also. That is to say, the population returned by the geographical entity recognised as a census town, on the basis of the definitions adopted, alone is considered for this classification.

The middle component of this column heading refers to name of the town which does not need elucidation. Name of the town,as adopted in the official records, is reported here.

The civic administration status of the town as on 1.1.1980 is indicated immediately after the name of the town, within brackets. The abbreviations used for this purpose are as follows:-

C : Municipal Corporation
M : City Municipal Council
M : Town Municipal Council
CB : Cantonment Board
NAC : Notified Area Committee
SB : Sanitary Board
TP : Town Panchayat/Nagar Panchayat
P : Village Panchayat/Gram Panchayat
SA : Special Area

The Special Area in fact represents a case where there is no civic administrative body. These areas generally consist of townships or colonies purely under the administrative control of certain public sector factories or undertakings or under specific departments of the Government such as for example the State Public Works Department and the Power Corporation.

With a view to ensuring the fixity of boundaries of various administrative units, that is, to ensure that the frame for census taking once finalised with reference to a cut-off date remains unchanged till the completion of the census count the State Government had been requested not to order any jurisdictional changes and not to give effect to any changes in the civic administration status either. However due to more compelling reasons it is quite possible that in some exceptional cases such a change in civic administration status has taken place during the period 1.1.80 to 1.3.81. Such cases if any are indicated by providing a note at the bottom of concerned page.

COLUMN 3 : LOCATION CODE NUMBER :—

The significance as well as the importance of location code numbers has already been explained. Every town bears a distinct location code number consisting of 3 elements. The first element in this code structure indicates the State while the second and the third represent the numbers assigned to the district within the State and the town within the district. The numbers assigned to the towns in the district are all in roman numerals while those relating to the State and the district are in arabic numerals.

COLUMN 4 : NAME OF TALUK :—

In Karnataka the term taluk is very much in vogue though the designation of the Revenue Administrative Officer has for long been changed from Amildar or Mamlatdar to Tahsildar. The name of the taluk within the jurisdiction of which the town is located is indicated in this column. There are a few instances wherein a particular town straddles portions belonging to two adjacent taluks. In such a case the town is considered to belong to the Taluk that contains a major portion of the town.

In the statement such cases are marked out by an index and a note at the bottom of the page explains the correct situation.

COLUMN 5 : AREA (Sq. Kms) :— (Sq.Kms) :—

The geographical area of the town is furnished here in square kilometres upto two places of decimal. The

area figures reported at first by the concerned civic bodies etc., were examined with reference to the respective town boundary notifications and the relevant village maps as well as the charge maps prepared for the 1981 census operations with a view to ensuring greater accuracy. The final area figures as adopted for the 1981 census are reported here.

COLUMN 6 : NUMBER OF HOUSEHOLDS (1981) :-

The total number of households, including those consisting of institutional and houseless population, enumerated in the town at the 1981 census count is given here even though the same information appears again in the Primary Census Abstract. The purpose is to facilitate a better comprehension of the demographic situation, especially with reference to the population data presented in this statement.

COLUMNS 7 to 15 : POPULATION AND GROWTH RATE OF THE TOWN AT DIFFERENT CENSUSES FROM 1901 TO 1981 :—

The population figures for the town as returned at the decennial census from 1901 through 1981 are furnished under these columns in order to provide an insight into the history of growth of the town. If in any particular census year the referent town did not enjoy the urban status, that is, if that place was reckoned as a village for that census its population is not reported under the column concerned and a dash mark is indicated instead. In other words, the population figures are given here for the town only if it happened to be an urban area at that particular census year.

Thus, a glance at these columns reveals whether the referent town having been first classified as 'urban' has maintained that status continuously through the succeeding censuses or whether there have been subsequent declassifications. From column 8 onwards the decadal growth rates of the town are indicated within brackets below the population figures in order to permit an easier grasp of the decadal growth trends and to facilitate a comparative analysis. Population variations are quite often associated with changes in the jurisdiction of the urban area and sudden spurts are sometimes due to incorporation of fast developing fringe areas to the town or amalgamation of adjacent towns with the core town during the inter censal period. Such cases are marked out in the statement and explained by way of a note at the bottom of the concerned page.

COLUMN 16 : DENSITY (1981) :—

For every town the density of population per square kilometre is presented in this column. The density figures are determined with reference to the area of the town in Sq.Km upto two decimal places and the population returned at the 1981 census.

COLUMNS 17 TO 19 : SEX RATIO 1961 TO 1981 :-

Sex ratio is expressed as the number of females for every thousand males and is based on the sexwise distribution of the population returned at the census. For each town these figures are furnished for the 3 successive censuses. This information would provide an insight into the changing pattern of sex ratio in urban areas.

STATEMENT II : PHYSICAL ASPECTS AND LOCATION OF TOWNS 1979

COLUMN 2 : CLASS AND NAME OF TOWN :—

This column is the same as column 2 of Statement I and does not need any explanation. Unlike in Statement I here the civic administration status of the town is omitted.

COLUMNS 3 TO 5 : PHYSICAL ASPECTS :—

These columns deal with the rainfall and temperature data. It is common knowledge that meteorological observatories have not been established in each and every town, even though most of the towns do have rain-guages and due arrangements have been made to record the rainfall data all through the year. The Director General of Observatories has furnished data on rainfall, maximum and minimum temparature in respect of towns having observatories. These figures are standard normals based on the data for 30 years from 1931 to 1960, and are distinguished in the statement by placing an asterisk mark at the top right hand side of the figure. Information of this type is available only for a few towns.

In so for as the data on rainfall is concerned, for most of the remaining towns the particulars have been supplied by the local officers and cross-checked for acceptability with the data furnished by the State Bureau of Economics and Statistics. The rainfall figures are in millimetres and represent the annual average based on the actual figures relating to the preceding ten years. In cases of non-availability of even this type of information, the particulars relating to the nearest town are reported under this column with the distinguishing notation N being placed at the top right hand side of the figure.

In columns 4 and 5 information on temperature is presented in degree centigrade. As stated above the asterisk mark here indicates that the information has been furnished by the Director General of Observatories. Such information is not available for most of the towns. Instead of putting a dash in these columns for such towns the data furnished by the Director General of Observatories as pertaining to a town situated at almost the same altitude and in the proximity of the referent town are reported with the substitute notation N to denote that the data does not actually relate to the town and should therefore be regarded as very approximate.

COLUMNS 6 TO 12 : NAME OF AND ROAD DISTANCE FROM STATE H.Q; DISTRICT H.Q; SUB-DIVISION/TALUK H.Q; NEAREST CITY WITH A POPULATION OF 100,000 AND MORE; RAILWAY STATION; BUS ROUTE; NAVIGABLE RIVER OR CANAL (IF WITHIN 10 KMS) :-

The column headings are self explanatory and are intended to indicate the location of various important centres with reference to the town concerned. If the referent town itself happens to be mentioned in these columns the distance is recorded as 'O' (Zero) and in all other cases the road distances are given in kilometres. In column 8 the name of the sub-division to which the taluk (in which the town is located) belongs as well as the name of the taluk to which the town belongs are mentioned along with road distances in the same order one below the other. In column 9, the name of the nearest city with a population of 100,000 and more according to 1981 census and road distance thereto is mentioned in respect of each and every town even if the referent town itself has a population of 100,000 and more.

The proximity by road alone is taken into consideration for filling up this column and as such cities belonging to adjacent States also find an occasional mention in this column.

Column 10 refers to the nearest railway station and distance thereto by road. In a few cases though the name of the railway station is the same as that of the referent town the distance indicated is other than zero because of the fact that the station is actually located beyond the jurisdiction of the referent town.

In case the referent town is enjoying bus route facility (*i.e.* road transport) the name of the town is mentioned in column 11 and the distance is recorded as zero. Names of bus routes passing through or originating from the town are not indicated here. If there is a navigable river or a navigable canal at a distance of 10 kilometres or less from the referent town then the name of the river or the canal is indicated in column 12. To differentiate between a river and a canal the abbreviations (R) and (C) are made use of and the distance from the town to the navigable waterway is mentioned thereafter. It may incidentally be stated that in Karnataka there are very few navigable rivers and practically no navigable canals.

STATEMENT III : MUNICIPAL FINANCE 1978-79

As the title denotes, this statement deals with the actual income and expenditure of the civic body administering the town. An attempt has been made to present comparable data in the case of non-municipal towns like Panchayats and areas under the administration of public sector undertakings and the like. The data relate to the financial year 1978-79 and have been furnished by the local authorities concerned based on relevant records. It may also be stated here that no probing enquiries have been made and the particulars as reported by the civic bodies have been accepted after ensuring arithmetical accuracy.

COLUMN 2 : CLASS AND NAME OF TOWN :—

This is same as column 2 of Statement II and as such does not require any explanation.

COLUMN 3 : CIVIC ADMINISTRATION STATUS (IN 1980)

As explained under column 2 of Statement I, the civic administration status of the town as on 1.1.80 is indicated in this column using the same set of abbreviations.

COLUMNS 4 TO 10 : RECEIPT (IN Rs.'00) :-

The actual receipt realised by the civic body under various heads of income as well as the total for the year 1978-79 are indicated in hundreds in these columns. The opening balance for the year is not taken into account under any of these columns.

COLUMNS 11 TO 17 : EXPENDITURE (IN Rs. '00) :-

The actual expenditure incurred during the year is furnished here in hundreds. The various heads of accounts are grouped into 6 broad categories for each of which a separate column is provided. Public safety covers the expenses incurred for road lighting, destruction of rabid and stray dogs, besides that on fire fighting service. Similarly 'Public-Institutions' covers not merely the contributions made by the civic body to educational, medical and cultural institutions in the town but also the expenditure incurred for the maintenance of educational and such other institutions if any functioning under its direct control.

As in the case of receipt in the case of expenditure also the closing balance at the end of the year is not considered and therefore in almost all the cases the total receipt and the total expenditure are not balanced in this statement.

STATEMENT IV : CIVIC AND OTHER AMENITIES 1979

COLUMN 2 : CLASS AND NAME OF TOWN ;—

This is same as column 2 of statements II and III and does not need further explanation.

COLUMN 3 : CIVIC ADMINISTRATION STATUS :—

Explanation furnished earlier for column 2 of Statement I and column 3 of Statement III holds good for this statement also.

COLUMN 4 : POPULATION :—

The total population of the town according to 1981 Census is mentioned here with a view to facilitate a comparative analysis of the data.

COLUMN 5 : ROAD LENGTH (IN KILOMETRES) :—

Generally in a town it is the civic authority that is responsible for construction and maintenance of roads. The term road as used here includes streets also and while the unsurfaced mud and gravel roads are categorised as Kachcha roads, the surfaced roads are classified as Pucca roads. In most of the cities and towns the district roads and highways under the control of the

Public Works Department also pass through. The roads situated within the jurisdiction of the town and under the control of the civic authority are shown in one line against the code M and those under the control of the Public Works Department and the like are shown against the code 'PWD' in another line. In both the cases the road length is shown under two categories *viz.*, KR (Kachcha Road) and PR (Pucca Road) as defined above. In order to have an idea about the total length of all types of roads in the town therefore, all these figures are to be added together. In cases where it has not been possible to ascertain the full details by type of road and agency responsible for maintenance the combined road length alone is furnished.The road length is given in kilometres and fractions are rounded off to next integer.

COLUMN 7 : SYSTEM OF SEWERAGE :-

Generally sewerage system implies the network of mains and branches of underground conduits for the conveyance of sewerage to the final point of disposal. Sewers that carry only household and industrial wastes are called separate sewers while those that carry storm water from roofs, streets and other surfaces are known as storm water drains and those carrying both sewage and storm water are called combined sewers. In towns provided with such systems of underground sewerage also there would in addition be a surface drainage system to cover the areas not served by sewerage system and also to drain out excess rain water all over the town.

However in towns that are not provided with sewerage system, and such towns are far more numerous in the State, there would generally be open drainage system. Where even this system is not prevalent the householders would have made their own arrangements such as soak pits and cesspools. In this column therefore information is presented not only on sewerage system, but also on the drainage system. Like sewerage system, the drainage system is also of different types depending upon the construction material and also the shape of the drains. The two most important types of sewerage/ drainage system are reported under this column in the order of their importance in the towns using the following abbreviations.

S : Sewers
OSD : Open Surface Drains
BSD : Box Surface Drains
SD : Sylk Pattern Drains
PT : Pit System

The box surface drains are also open drains but are built of size stone masonry and are also called Pucca gutters. The sylk pattern drains too are open surface drains only. The open surface drains category thus covers the Kachcha drains involving mere earth-work and also the drains constructed from out of oblong granite slabs or, out of pre-fabricated cement concrete blocks which need only joining and cement pointing after being placed in position. These drains are of U shape, L shape or V shape and to the extent possible these details have also been provided under this column.

COLUMNS 8, 9 AND 10 : NUMBER OF LATRINES :—

Information on total number of latrines of different types as furnished by the concerned civic authorities is reported under these 3 columns. Both private and public latrines are covered here and the particulars in these columns and in column 11 are closely interlinked. The water-borne latrines include all types of flush-out latrines while service latrines refer to only those that are being serviced by manual scavengers either everyday or twice or thrice a week.

COLUMN 11 : METHOD OF DISPOSAL OF NIGHT-SOIL :—

The phrase disposal of night-soil is generally presumed to refer to the manner in which the garbage is finally disposed of by the civic body i.e. sale by public auction, used as manure etc. However, the main purpose of this column is to provide information on the method by which the night-soil is removed from the latrines, that is, the primary disposal of the human waste. A little elaboration on this aspect therefore appears to be necessary.

There are three systems of disposal of human waste, namely, (i) underground sewerage, (ii) sanitary water flush latrines with individual disposal systems like septic tank, leaching cesspool and collecting well, and (iii) dry type of latrines with manual scavenging.

The system of underground sewerage provides for the street sewerage with which are connected the sanitary latrines constructed in the houses having water closets and fitted with flushing cisterns (or hand flushing). Through this sewer the faeceal matter is transported without the need for scavenging. This system generally exists in cities and large towns besides industrial townships built and controlled by public sector undertakings and large companies and the like. Where the street sewer does not exist these sanitary water flush latrines are connected to a local septic tank with a subsoil dispersion system or a leaching pit. Where the liquid wastes from the water closet could be disposed off locally in a leaching pit, a septic tank with a soil dispersion system is constructed. This dispersion requires an optimum travel through the pores of the soil which render the harmful liquid bacterially innocuous by the slow process of filteration through the soil traversed.

Where the soil is impermeable, collecting wells are constructed and the sanitary water flush latrines are connected with them. These wells are cleared at periodic intervels by a suitable device. The dry type latrines are of service type from where the human excreta has to be removed by scavengers who move from house to house, in most cases carrying the night-soil as head loads on their head, or shoulders or in baskets with handles or in wheel barrows. This waste is then collected in bullock carts or trucks and transported to dumping grounds at the outskirts of the town.

It may be mentioned in passing that in Karnataka the practice of carrying night-soil by head loads has been discontinued with effect from 15.8.73 consequent on the issuance of a Government order in this behalf. However in a few cases the town dwellers have sought the intervention of the courts and have been able to secure the *status quo-ante* in respect of the scavenging services that were being provided by the civic body concerned till that date.

The abbreviations used in this column are the following, and if more than one system is prevailing the two most important types are indicated one after the other.

S : Sewerage
ST : Septic Tanks
WB : Wheel Barrows
B : Baskets (With handles)
HL : Head Loads

In case the town has latrines of other types that are neither of the sanitary type nor the service type this column does not apply at all and therefore a dash is entered.

COLUMNS 12 AND 13 : PROTECTED WATER SUPPLY : SOURCE AND CAPACITY OF STORAGE SYSTEM :—

The sources of water supply in the town are indicated by using the following four abbreviations :

T : Tap
W : Well
TK : Tank Water
TW : Tube Well/Hand Pump

Supply through the taps implies a primary source such as a river, stream, bore wells,curb wells, tank and reservoirs etc., which are of course not mentioned in this column. It may be incidentally stated that the term protected is used in a very liberal sense, and no attempt has been made to gather data on the methods of filteration and water purificatory treatment if any resorted to by the agency supplying water through pipes in the towns. The generally prevalent practice in most of the towns is to pump raw water into the storage tank or reservoir, treat it with bleaching powder and then distribute that water for consumption through pipes.

If there are more than 2 sources of water supply in the town the first two which are regarded as most important are mentioned in that order separated by a comma. In column 13, the systems of storage of water are considered and the two that are most important in the referent town are indicated in that order and after each entry the storage capacity is also mentioned in litres within brackets. The abbreviations used in this column are :

OHT : Overhead Tank
SR : Service Reservoir
IG : River Infilteration Gallery
BWP : Borewell Pumping System
PT : Pressure Tank

The term capacity has its usual meaning, namely, the capacity to store or contain. It may further be clarified that the storage capacity does not necessarily indicate the quantity of water supplied daily to the inhabitants of the town. In some of the towns due to the inadequacy of water supply at the primary source for most part of the year the normal utilisation of the storage capacity would be of the order of 50 to 60 percent only. On the contrary there are towns where water is pumped into the storage system and also distributed for consumption twice every day almost throughout the year and there are a few towns where the inlets and outlets of the storage systems would both be functioning simultaneously for most part of the day making it somewhat difficult to calculate the quantity of water supplied everyday under such a system.

COLUMN 14 : FIRE FIGHTING SERVICE:—

If fire fighting service is available in the town this fact is indicated by the word 'Yes' recorded in this column. In all other cases the name of the nearest place if in the same district or the name of the nearest district if in the same State or other State where such services are available is indicated along with the road distance in kilometres between the referent town and the place with fire-fighting service.

COLUMNS 15 TO 19 : ELECTRIFICATION (NUMBER OF CONNECTIONS)-DOMESTIC, INDUSTRIAL, COMMERCIAL, ROAD LIGHTING (POINTS) AND OTHERS :—

In columns 15 to 19 information about the number of electrical connections (installation) for different categories of consumers in the town is furnished. The definitions of the terms used in the column headings are as follows :-

(i) Domestic : Connections to residential houses, bungalows, clubs, hostels and hospitals run on non-commercial lines, charitable, educational and religious institutions are all included in the domestic category, A.E.H. i.e., All Electric Home connections are also categorised as domestic.

(ii) Commercial : This category includes all connections for the supply of electricity to commercial establishments such as wholesale and retail shops, offices and business houses, hotels, restaurants, tea stalls, photographic studios, X-ray installations, advertisements and exterior illumination, railway station, bus station, and the like.

(iii) Industrial : Power supply connections to industrial establishments are covered under this column. This would include small establishments such as powerlooms,

flour mills, roasting, grinding, wet grinding, repair workshops using power operated tools and the like.

(iv) Road Lighting : The total number of street lights being maintained in the town is mentioned here.

(v) Others : Connections to all categories other than those cited above are covered under this heading. This would include temporary connections, connections to pumpsets, water works and such other installations.

STATEMENT-IV A : CIVIC AND OTHER AMENITIES IN NOTIFIED SLUMS, 1979

This statement which may be regarded as an appendix to statement IV is confined to towns with a population of 50,000 and more i.e., class I and class II towns. Information on slums that are officially recognised as slums (even if those are not notified in some cases) is presented under 14 columns apart from column 1 which relates to serial number and column 2 which relates to name and class of town.

COLUMN 3 : NAME OF SLUM :—

The names of slums, if any, in the town are given in separate lines in the alphabetical order of their names.

COLUMN 4 : AREA OF SLUM :—

The geographical area of each slum is given in square kilometres up to four places of decimal.

COLUMN 5 : POPULATION OF SLUM :—

The population figures for this column are furnished by the civic authorities concerned. Slums as such have not been made independent units for census enumeration and as such 1981 Census data as applicable to the slums covered here are not available.

COLUMNS 7 TO 12 : SYSTEM OF SEWERAGE, NUMBER OF LATRINES AND METHOD OF DISPOSAL OF NIGHT SOIL :—

These column headings are same as those appearing in the statement IV and have already been explained. The information is furnished here for each slum separately. The main heading latrines is subdivided into those that are privately owned and those that are for common use of the community *i.e.,* public latrines.

COLUMN 13 : NUMBER OF TAP POINTS/PUBLIC HYDRANTS INSTALLED FOR SUPPLY OF PROTECTED WATER :—

The total number of public taps or hydrants if any in the slum is mentioned here.

COLUMNS 14 TO 16 : ELECTRIFICATION (NUMBER OF CONNECTIONS)

Total number of electrical connections in each slum provided for purposes of domestic use, road lighting and other than these two is reported separately under these three columns. The meaning of the terms used in the column heading has already been explained.

STATEMENT-V : MEDICAL, EDUCATIONAL, RECREATIONAL AND CULTURAL FACILITIES-1979

COLUMN 2 : CLASS AND NAME OF TOWN :—

This column is same as column 2 of statement IV and therefore calls for no further explanation.

COLUMN 3 : POPULATION :—

The total population of the town according to 1981 Census is noted in this column.

COLUMN 4 AND 5 : MEDICAL FACILITIES : HOSPITAL/ DISPENSARIES/T.B.CLINIC/HEALTH CENTRES/NURSING HOMES ETC., AND NUMBER OF BEDS IN MEDICAL INSTITUTIONS NOTED IN COLUMN 4 :—

The scope of these columns is confined to only such of the facilities that are offered by institutions run by or aided by government/semi-government or local bodies and charitable institutions or social service agencies like the missionaries. In other words, data on the facilities provided in the town by private doctors *i.e.* registered medical practitioners either individually or in establishments where they work in groups, are excluded from the purview of these columns.

The abbreviations used in column 4 are :—

H : Hosptial
D : Dispensary
PHC : Primary Health Centre
PHU : Primary Health Unit
FC : Family Planning Centre
TB : T.B.Clinic
NH : Nursing Home
O : Others

If there are two or more number of institutions of the same type then the number of institutions is also indicated within brackets immediately after the relevant abbreviations in the column.

Maternity homes, maternity and child welfare centres, leprosy clinics, chest clinics and veneral diseases clinic etc., if any are all included under the category of 'Others'. But even when a Family Planning Centre is attached to a hospital or a Primary Health Centre it is treated as an independent unit and counted separately.

If the town has hospitals and dispensaries providing facilities under different systems of medicine such as allopathic, ayurvedic, unani and homoeopathic then this detail too has been included using abbreviations such as : A for Ayurvedic, U for Unani and Hom for the Homoeopathic system. The allopathic institutions do not have any additional abbreviation. Thus, a mere H or D would mean that the reference is to allopathic

system; an entry "H (A-1,2)" would mean that 1 Ayurvedic hospital and 2 Allopathic hospitals are functioning in the town and an entry like "D (Hom-2,1, U-1)" would imply the existence of 2 Homoeopathic dispensaries, 1 Allopathic dispensary and 1 Unani dispensary.

If medical facility is not available in the town then the name of the nearest place where it is available if in the same district, and name of the district if in the same State or other State is mentioned here along with the distance in Kilometres shown within brackets.

The number of beds with which the medical institutions noted in column 4 are equipped is indicated in column 5.

COLUMNS 6 TO 15 :—

These columns provide information regarding the educational facilities available in the town and are considered stage by stage.

COLUMNS 6 TO 9 : ARTS/SCIENCE/COMMERCE COLLEGES (OF DEGREE LEVEL AND ABOVE); MEDICAL COLLEGES; ENGINEERING COLLEGES; POLYTECHNICS :—

Particulars of colleges in the town providing general education facilities at degree level are indicated in column 6 using the following abbreviations.

A : Arts only
S : Science only
AS : Arts and Science only
C : Commerce only
AC : Arts and Commerce only
ASC : Combined for all three categories : Arts, Science and Commerce
L : Law

If the number of colleges of any particular category is more than one then that number is also given within brackets against the abbreviation concerned. It may incidentally be mentioned here that the educational institutions with a vocational and professional content such as Pharmacy College, B.Ed., Agricultural College etc., are not covered under this but are shown included in the category of "Others" in column 10.

In columns 7, 8 and 9 the number of medical colleges, the number of engineering colleges and the number of polytechnic institutions are indicated.

In case the town does not have any of the colleges referred to in these 4 columns i.e., if the entry were to be a dash in any of these columns then the name of the nearest place with the facility along with the distance thereto is mentioned. If such a place is outside the district then the name and the distance to that place and if such a place is outside the State itself then the name of that State is mentioned in these columns. The same procedure is adopted regarding the other columns dealing with educational facilities.

COLUMN 10 : RECOGNISED SHORTHAND, TYPEWRITING AND OTHER VOCATIONAL TRAINING INSTITUTIONS :—

The term recognised would mean recognition by some statutory authority like the Educational Department, Commerce Department, Labour Department etc., of the Government or Semi-Government or autonomous bodies or public sector projects. The Teacher's Training Colleges, the Nursing College, the Pharmacy College, the College imparting education in Physical Education and the like are also shown under this column against the category of 'Others'.

SH : Shorthand
TYPE : Typewriting
Sh. Type : Shorthand and Typewriting
O : Others

If the number of institutions of any particular type is more than one that number is also indicated within brackets along with the abbreviation concerned.

COLUMNS 11 TO 14 : HIGHER SECONDARY/INTERMEDIATE/PUC (PRE-UNIVERSITY COLLEGE)/JUNIOR COLLEGE/SECONDARY, MATRICULATION, JUNIOR SECONDARY AND MIDDLE SCHOOLS AND PRIMARY SCHOOLS :—

Information about the number of schools of different types functioning in the town is furnished under these columns. All schools irrespective of the medium of education and the type of administering agency i.e., all those run by or aided by Government or local bodies, as well as the unaided institutions run by private management are considered here for reporting. If there are composite institutions such as a college providing education at degree level and also at Pre-University level then such institutions are split up into degree college and PUC (*i.e.,* Junior college) and separately counted as if they are independent units. Likewise, a composite Junior College which has facilities for providing education say from I to XII standard (*i.e.,* from Primary I standard upto PUC) would be regarded as representing one Junior College, one High school, one Middle School and one Primary School and each of these units would be counted and reported under the relevant column as if each unit was an independent institution in its own right. Similarly a school with I to X standard would get counted under Primary, Middle and High School categories and a composite School with I to VII standard would be considered under the primary school as also the Middle School category.

In Karnataka the term middle school is no longer in vogue as the primary education consists of 7 years of schooling leading to secondary level. However the first four classes (I-IV standard) are called *lower* primary classes and the next three are regarded as *higher* primary

classes. There are schools with only I to IV standards called LPS and also those with V to VII only (formerly middle schools) known as HPS and there is no difficulty in counting such institutions as separate primary and middle schools. But there are composite schools called Higher Primary Schools having I-VII standards and such schools have now been split up into one Primary and one Middle School for purposes of reporting under these columns of the Town Directory. This method of accounting is therefore different from a simple counting of schools in the town.

COLUMN 15 : ADULT LITERACY CLASSES/CENTRES AND OTHERS (SPECIFY) :—

If adult literacy classes are being run at regular centres in the town the number of such centres is indicated in this column by the side of the abbreviation AC. Gurukula, Madarasa (Arabic school) and such other quasi religious cum educational institutions if any in the town are also reported in this column under the category of 'Others'.

COLUMN 16 : NUMBER OF WORKING WOMEN'S HOSTELS WITH NUMBER OF SEATS :—

Though there are hostels meant for students in almost all the towns, very few have hostels meant for working women. In this column the number of only such hostels that are exclusively meant for working women only are reported along with the information on the number of seats i.e., its strength.

COLUMNS 17 TO 19 : RECREATIONAL AND CULTURAL FACILITIES-STADIA, CINEMA, AUDITORIA/DRAMA/ COMMUNITY HALLS :-

Column 17 relates to the number of stadia if any in the town. Ordinary play grounds which one usually comes across in towns and cities are excluded from the purview of this column. The term stadium is used in its strict sense to refer to those constructed at considerable costs and are under proper upkeep.

In column 18 the total number of permanent cinema theatres in the town is indicated. Touring talkies *i.e.,* cinema tents of a purely temporary nature are not taken into account for this column. If there are any auditoria, drama halls and community halls in the town the total number of such units is reported in column 19.

The number of public libraries and reading rooms are separately furnished by the side of abbreviation PL for Public Library and RR for Reading Room. Such facilities offered by educational and private institutions including those that are commercialised (called circulating libraries in local parlance) are not covered for reporting under this column.

STATEMENT-VI : TRADE, COMMERCE, INDUSTRY AND BANKING 1979

COLUMN 2 : CLASS AND NAME OF TOWN :—

This column is the same as column 2 of the preceding statement and therefore calls for no further explanation.

COLUMNS 3 TO 8 : NAMES OF THREE MOST IMPORTANT COMMODITIES IMPORTED AND NAMES OF THREE MOST IMPORTANT COMMODITIES EXPORTED :—

For purposes of these columns, commodities for which the town serves only as a transit centre by importing for the specific purposes of exporting the commodities *without any processing* are not considered either as imports or as exports. Agricultural and such other allied produce may be regularly brought into the town from the neighbouring villages and sold to commission agents and wholesalers at the regulated market for further export to areas outside the town. In such cases the produce that is brought into the town is not considered as import. On the other hand, if these items are mainly consumed within the town either as consumption goods or as raw materials by any manufacturing industry then the commodities would be regarded as imports. Thus the commodities imported are either locally consumed in the same form or else processed further and thereafter either consumed locally or exported to other centres. This restriction apart there is no limitation concerning the nature and quantity of the commodities that may be considered for reporting under these columns. Importance in a town is restricted basically to the few or several commodities that qualify for consideration either as imports or as exports. By and large the commodities reported under exports would coincide with the commodities reported as manufactured in the town because of the specific exclusion of transit goods. As a result, the image that some of the towns have built up over decades as traditional exporters of certain goods does not get reflected under these columns.

In these columns the importance of a commodity is reported in very general terms and decided upon in terms of the estimated volume of commodities transacted and is based on local enquiries by the civic authorities concerned.

COLUMNS 9 TO 11 : NAME OF THREE MOST IMPORTANT COMMODITIES MANUFACTURED.

The order of importance is determined broadly by taking into consideration the volume of the total output of the commodities or the scale of operation and for these columns too it is the civic authority that has furnished the information after local enquiries. All types of manufacturing and processing irrespective of the

sector to which they belong are considered and of these the three that are most important are reported.

COLUMN 12 : NUMBER OF BANKS :-

Information on this item has been supplied by the office of the Registrar General, India after ascertaining the details from the Reserve Bank of India. The data relates to the year 1979 and in conformity with the instructions issued in this regard, no attempt has been made to update the data. If a bank has two or more branches then each such branch is regarded as a separate Bank for computing the number of banks.

COLUMN 13 : NUMBER OF AGRICULTURAL CREDIT SOCIETIES :-

The total number of agricultural co-operative credit societies functioning in the town, irrespective of the type to which they belong (i.e., primary, service, multipurpose, agricultural produce marketing etc.) is reported under this column. In quite a large number of towns agriculture is an important means of livelihood for a number of persons and agriculturists of urban areas too have for long been influenced by the co-operative movement.

COLUMN 14 : NUMBER OF NON-AGRICULTURAL CREDIT SOCIETIES :-

Consumer co-operative societies which extend credit facilities to the members, and all other credit co-operative societies that cannot be classified as agricultural are considered for this column. Several groups of people belonging to specific categories might have formed co-operative societies to cultivate the habit of thrift and to make use of the benefit arising out of the encouragement given to the co-operative movement. All such co-operative societies are covered under this column.

PART B - PRIMARY CENSUS ABSTRACT

(i) DISTRICT PRIMARY CENSUS ABSTRACT

(ii) TALUKWISE PRIMARY CENSUS ABSTRACT

PRIMARY CENSUS ABSTRACT

EXPLANATORY NOTE

The Primary Census Abstract furnishes in a nutshell as it were, vital information on the basic demographic and economic composition of the population. This statement, referred to as PCA, comprising hardly 16 main columns, summarises the whole mass of data gathered at the Census. The smallest geographical unit with a defined boundary identifiable on the field that has been delineated for ensuring cent per cent coverage of area under the jurisdiction of various administrative divisions, is the *Census Enumerator's Block*. The details gathered in the household schedules and the individual slips in respect of each and every person enumerated in each such block have been meticulously tabulated to prepare this Primary Census Abstract. The tabulation has been done entirely by manual processing of the data at the Regional Tabulation Offices. The village PCA is derived from the Block PCA and in case of urban areas, the Block PCA has yielded the ward and Town PCA. In turn the Taluk (Rural) and Taluk (Urban) as well as Taluk (Total) PCA Statements are built up on the basis of Village-wise and Town-wise data. This process goes on until it yields the data for higher and higher administrative divisions culminating at the apex in the form of a single line statement for the country. The entire edifice thus rests on the information contained in the individual slips filled up by the enumerator.

In the pages that follow, the District Primary Census Abstract with the taluk level data giving rural-urban breakup is presented first. Thereafter for each taluk starting with Location Code No.1, the village level PCA and, within each taluk, wardwise PCA for each town are furnished. As already stated particulars relating to Scheduled Castes and Scheduled Tribes are omitted here. Though there are altogether 24 columns in the urban and village PCA statement, as many as 12 out of these are merely sub-columns to provide sexwise data. In essence therefore there are 12 columns only. Most of these column headings represent the census concepts and these have been explained in the Analytical Note. However, a brief description of the column headings is given here.

COLUMN 1 : LOCATION CODE NUMBER :—

The location code number assigned to the village or the town as the case may be is entered in this column.

COLUMN 2 : NAME OF VILLAGE/TOWN/WARD :—

The name of the village or the town as finally adopted for the 1981 census purposes is entered in this column. The towns and cities are quite often divided into smaller geographical segments called wards, mohallas or divisions for purposes of administration. Such units bear distinctive locality names or specific numbers. It is this name or the number of the ward or its equivalent unit that is mentioned here in the case of towns.

Irrespective of whether a town is divided into administrative wards or not every town is invariably constituted into territorial divisions for the conduct of civic elections. This delimitation of constituencies is done as an essential and preliminary process of civic elections scheduled to be held periodically. So, in some cases the name or number in this column refers to such territorial divisions and not to administrative divisions.

COLUMN 3 : AREA OF THE VILLAGE IN HECTARES AND OF TOWN IN SQUARE KILOMETRES :—

These area particulars have already been furnished in village and town directory portions. For the villages the area is reported here in hectares up to two places of decimal and for the towns, as also the wards or divisions thereof, the area figures are furnished in square kilometres upto two places of decimal. If the area figures are not available for any reason the abbreviation NA is entered in this column.

COLUMN 4 : OCCUPIED RESIDENTIAL HOUSES :—

A 'Census House' could be wholly residential or else completely non-residential according to the use to which it is put. All census houses enumerated as either wholly or partly residential at the time of the census count are added together to get the data for the block and from thence to derive the data for higher units. Houses found vacant at the time of the census count are not reckoned as occupied residential houses. The information for this column has been compiled from the Abridged Houselists.

COLUMN 5 : NUMBER OF HOUSEHOLDS :—

This information too is compiled from the Abridged Houselists. The actual total number of households including the normal, institutional and the houseless that were enumerated at the census count is mentioned in this column. Generally, the number of households in any unit would be equal or more than the occupied residential houses in that unit because of the houseless households that one may come across in that unit and also because of the occasional instances, of two or more households sharing a common census house.

COLUMNS 6, 7 AND 8 : TOTAL POPULATION (INCLUDING INSTITUTIONAL AND HOUSELESS POPULATION):—

The total population as on the reference date is furnished in column 6 while in the next two columns the

sexwise break-up is given. The institutional population refers to such of those who were enumerated in institutions like hostels, chummeries, hospitals, prisons etc. The houseless persons represent those enumerated on the night of 28th February at the places where they were found at that time, if they had not already been enumerated elsewhere.

COLUMNS 9 AND 10 : LITERATES :—

Sexwise break up of the total number of persons who are literate, irrespective of their levels of educational attainments and age, is given in these two columns. By definition a literate is a person who can both read and write with understanding in any language. It is important to note that by convention all children below 5 years of age are regarded as illiterate.

COLUMNS 11 TO 20 : MAIN WORKERS :—

These 5 pairs of columns deal with the *main workers*. Out of these, while the first pair provides only the total the other 4 pairs give out further break-up according to the sector of the economy in which these persons are working. The reference period for judging whether a person is a worker or not is the year preceding the day of enquiry. If a person had worked even for one day during this entire period he or she is entitled to be classified as a worker. If for any such worker the period of work is 183 days or more then that person is a *main worker*. On the other hand, if such period is less than 183 days then that worker is a *marginal worker*. In columns 11 and 12 the total number of main workers is furnished sexwise.

COLUMNS 13 AND 14 : CULTIVATORS (I) :—

These two columns give out the number of male and female workers who satisfy the conditions laid down in the definition of a cultivator. A cultivator may be an employer, a single worker or an unpaid family worker. Participation in work may be by way of physical labour or by way of supervision and direction. The lands cultivated may be owned by the household or taken on lease for payment of money or kind or share in the produce. Cultivation as already emphasised involves ploughing, sowing and harvesting and allied activities in the production of cereals and millet crops, pulses, raw jute and kindred fibres, sugarcane, tapioca and oil seeds.

COLUMNS 15 AND 16 : AGRICULTURAL LABOURER (II) :—

A person who works in another person's land for wages in money or kind or share and does not have any lease or contract on the land on which he or she works is an agricultural labourer. In this case too the crops grown on the lands are quite pertinent and the difference between a cultivator and an agricultural labourer lies in the fact that the former works on his own or leased in lands as an independent worker while the latter works for wages having no right whatsoever on the lands on which he works. The sex-wise break-up of such workers is given in these two columns.

COLUMNS 17 AND 18 : HOUSEHOLD INDUSTRY (V(a)) :—

Household industry belongs to the broad category of 'manufacturing, processing, servicing and repairs' and represents a particular sector therein. Household industry is generally conducted by the head of household himself or herself and or mainly by the members of the household, at home or within the village in the case of those dwelling in rural areas and only within the residential premises occupied by the household in the case of those living in urban areas. A person may be a labourer or a petty employee in the household industry run by some other household. By and large the household industry is carried on by individuals on a small scale with assistance of family members all of whom work as unpaid family workers and the entire earnings are treated as family income.

COLUMNS 19 AND 20 : OTHER WORKERS (III, IV, V(b), VI TO IX) :—

All the other workers who are main workers but are neither cultivators nor agricultural labourers nor engaged in household industry are covered under these two columns. This is a broad category, covering all those who are working in fishing, forestry, plantations, construction of roads, buildings etc., non-household manufacturing industries, trade and commerce, transport and storage and other services.

COLUMNS 21 AND 22 : MARGINAL WORKERS :—

Males and females who are workers but have worked to a marginal extent only during the reference year are reported under these two columns. Such workers,irrespective of the economic sector in which they work, are considered together and reported here.

COLUMNS 23 AND 24 : NON-WORKERS :—

Irrespective of age and sex all those who are not economically active are non-workers and a sexwise break-up of such persons is given in these two columns. The aggregate of the main workers, marginal workers and non-workers would be equal to the total population of that unit.

ooOoo

5. The area figures for the district given under column No. 4 against 'Total' represents "Geogtaphical Area" and have been furnished by the Surveyor General India. The figures for the urban areas are either those supplied by the concerned authorities of the towns or compiled in this Directorate on the basis of the records available pertaining to the delimitation of urban units. Area figures for Rural Areas are derived by subtracting the total urban area from the total area of the taluk/district. The total of the area figures of all the taluks in a district will not tally with the district figures (except for urban), because the former represents "Land use" area derived from the figures supplied by the Director of Survey, Settlement and Land Records in Karnataka.
6. Urban area given under column No. 4 for the taluks is the total of the area of respective individual urban units included under them rounded off to one place of decimal.

CHIKNAYAKANHALLI TALUK

SUPPLEMENT

INTRODUCTORY NOTE

This supplement to the District Census Handbook is devoted exclusively to the particulars relating to the Scheduled Castes and Scheduled Tribes. The District Census Handbook was first introduced at the 1951 Census to meet the ever increasing demand for micro-level data and since then this has remained the only census publication which gives out data at the village level in the case of rural areas and at the enumeration block level in the case of urban areas. The scope of this publication was enlarged in 1961 and also in 1971 so as to render it more useful by presenting in it a wealth of information on infrastructural facilities in villages and towns. The current volumes of the District Census Handbook are thus the fourth in the series and are marked by a greater degree of comprehensiveness and uniformity in approach. As compared to the 1971 series the village and town directory formats have been slightly modified. So also the Primary Census Abstract too has undergone certain changes. The previous practice of presenting the administrative statistics and the various district and taluk level tables has been given up. Apart from these general changes at the all India level, in so far as Karnataka is concerned, because of certain technical reasons all the particulars relating to the Scheduled Castes and the Scheduled Tribes envisaged for presentation in the District Census Handbook, have been pooled together and brought out in the form of a separate supplement.

These details are presented in the following sequence :—

Statement I : Total, Scheduled Castes and Scheduled Tribes population in the taluks and towns of the district. (These details form part of the General District Primary Census Abstract).

Statement II : District Primary Census Abstract — Scheduled Castes

Statement III : District Primary Census Abstract — Scheduled Tribes

Statement IV : Scheduled Castes and Scheduled Tribes population — (A) Villagewise and (B) Townwise (within town ward-wise) [These details form part of the Urban/Village Primary Census Abstract].

Statement V : Total, Scheduled Castes and Scheduled Tribes population — Urban Block-wise (This corresponds to the Appendix to Urban/Village Primary Census Abstract).

Statement VI : Description of boundaries and details of areas included in census enumeration blocks — in the case of urban areas of the district (corresponding to the annexure to the Appendix to the Urban/Village Primary Census Abstract).

Statement VII : List of villages arranged according to the proportion of (a) Scheduled Castes and (b) Scheduled Tribes population to the total population of the village concerned by ranges. This would correspond to Appendix IV A and B to the Village Directory.

Statement VIII : List of Scheduled Castes and Scheduled Tribes.

The concept of Scheduled Castes and Scheduled Tribes as evolved by the Government of India and embodied in the Government of India Act 1935 section 309 for the first time and standardised later on for the purposes of the Constitution of the Indian Republic has all along been adopted for purposes of census operation as well. 'Scheduled Castes', means such castes, races or tribes or parts or groups within such castes, races or tribes as are deemed under Article 341 (of the Constitution of India) to be the Scheduled Castes for purposes of the Constitution of India. No person who professes a religion different from the Hindu or the Sikh shall be deemed to be a member of a Scheduled Caste. Likewise, 'Scheduled Tribes' means such tribes or tribal communities or parts or groups within such tribes or tribal communities as are deemed under Article 342 (of the Constitution of India) to be the Scheduled Tribes for the purposes of the Constitution of India. Persons belonging to the Scheduled Tribes may profess any religion. Statewise statutory lists of Scheduled Castes and Scheduled Tribes were notified for the first time after Independence under the 'Constitution (Scheduled Castes) order 1950 and the 'Constitution (Scheduled Tribes) order 1950'. These orders have close links particularly with Article 46 of the Constitution which lays down that "The State shall promote with special care the educational and economic interests of the weaker sections of the people, and in particular, of the Scheduled Castes and Scheduled Tribes and shall protect them from social injustice and all forms of exploitation".

These lists have subsequently been modified, supplemented or amended from time to time. As a result of the re-organisation of the States in 1956 involving transfer of territories from one State to another, a major change became necessary in most of the States. Consequently the "Scheduled Castes and Scheduled Tribes (Modification) order 1956" was promulgated and the interests of these two sections of the society were adequately safeguarded. Twenty years later, in 1976, with the main objective of removing the area restrictions imposed within the States, the parliament enacted the Scheduled Castes and Scheduled Tribes order (Amendment) Act, 1976" (Act No. 108

of 1976 dated the 18th September 1976). The lists of Scheduled Castes and Scheduled Tribes notified thereunder as applicable to Karnataka State have been adopted for purposes of the 1981 census operations. Copies of these lists, in English as well as in Kannada, were supplied to each and every census enumerator and supervisor. Necessary instructions for filling up answers to the questions relating to the members belonging to the Scheduled Castes and Scheduled Tribes were also issued. The following points were emphasized by way of clarifications :

"If the person belonging to a Scheduled Caste or a Scheduled Tribe returns his/her caste or tribe by a synonym or generic name of a caste or tribe, it should be reckoned as a Scheduled Caste or a Scheduled Tribe only if the name finds a place in the list furnished to you. Similarly, if the answer to this question is in general terms like Harijan/Girijan or Achut/Adivasi, you should not reckon the person enumerated as belonging to a Scheduled Caste or Scheduled Tribe as the case may be. In such a case you should ascertain the name of the caste/tribe fully and if that name finds a place in your list, you should reckon the person as belonging to Scheduled Caste or Scheduled Tribe as the case may be. If a person is negligent and insists on calling himself/herself merely 'Harijan' or 'Achut' or 'Adivasi' or 'Girijan', as the case may be, or repeats the synonym or generic name or a caste or tribe, please tell him/her that his description is not adequate for census purpose and persuade him/her to give the actual name of the Scheduled Caste or Scheduled Tribe. If the person merely claims to be a Scheduled Caste or Scheduled Tribe, but says that he/she does not belong to any of the notified communities applicable to the area, as reflected in the list supplied to you, he/she will not be reckoned as belonging to a Scheduled Caste or a Scheduled Tribe".

Analysis of Census Results : As compared to the earlier lists of Scheduled Castes and Scheduled Tribes which formed the basis for census enumeration at the censuses of 1961 and 1971, there has been a substantial change in the lists adopted for the 1981 census. The area restrictions that were prevalent regarding numerous castes and tribes included in the lists have now been removed. Therefore the 1981 Census results cannot be straight away used for any comparative analysis of growth trends and such other factors unless one delves deeper into the historical, social, economic and demographic aspects of life of these two categories of the population. Such an analysis is beyond the scope of this volume and has therefore not been attempted here. Salient data about the distribution of the Scheduled Castes and Scheduled Tribes in rural as well as urban areas of the district as also the pattern of distribution in administrative units of different levels within the district are included in this slender volume in the form of tabular statements.

NOTE: @ Formerly Ammasandra Notified Area.

* Scheduled Tribe figures would appear to include high returns relating to certian communities with nomenclatures similar to those included in the list of Scheduled Tribes consequent on the removal of area restrictions.
