SIBSAGAR

DISTRICT CENSUS HANDBOOK

Edited
By
R. B. VAGHAIWALLA, I.C.S.,
Superintendent, Census Operations, Assam, Manipur and Tript

CONTENTS

1.	Introducing the District		i—xii
2.	Introducing the Statistics		xiii—xvii
3.	The Primary Census Abstract (showing distribution of population by Livelihood classes, number of occupied houses and small-scale industries in villages and wards).		1—109
4.	*A.— General Population Tables*		110—115
	I.—Area, Houses and Population		110
	II.—Variation in Population during fifty years		111
	III.—Towns and villages classified by population		112—113
	IV.—Towns classified by population with variation since 1901		114
	V.—Towns arranged territorially with population by livelihood classes		115
5.	*E.—Summary Figures for the District and Thanas*		116—121
6.	*B.—Economic Tables*		122—221
	I.—Livelihood Classes and Sub-Classes		122—127
	II.—Secondary Means of Livelihood	For Displaced persons	122—141
		For total population	142—157
		For Displaced persons	158—181
	III.—Employers, Employees and Independent Workers by Industries and Services, Divisions and Subdivisions.	For total population	182—205
		For Displaced persons	206—221
7.	*C.—Household and Age (Sample) Tables*		222—268
	I.—Household (size and composition)		222—223
	II.—Livelihood Classes by Age Groups	For Sample population	224—230
		For Displaced persons	231—238
	III.—Age and Civil Conditions	For Sample population	239—245
		For Displaced persons	246—251
	IV.—Age and Literacy	For Sample population	252—255
		For Displaced persons	256—259
	V.—Single Year Age Returns	For Sample population	260—268
8.	*D.—Social and Cultural Tables*		269—357
	I.—(i) Mother-Tongue		269—275
	I.—(ii) Bilingualism		276—293
	II.—Religion		294
	III.—Scheduled Castes, Scheduled Tribes and Anglo-Indians		295—296
	IV.—Migrants		297—312
	V.—Displaced Persons by district of origin and year of arrival in India		313—348
	VI.—Non-Indian Nationals		349
	VII.—Livelihood Classes, by educational standards		350—357
9.	*F. (i)—Tribes by Religion*		358—361
	(ii) Indigenous Persons Land Holding		362—367
10.	*Census Abstracts of Small-Scale Industries*		368—370
	I. Distribution of Small-Scale Industrial Establishments in Villages and Wards.		368
	II. Employment in Textile Establishments for Census Tracts		369
	III. Employment in Non-Textile Establishments for Census Tracts		370
11.	*Index of Non-Agricultural Occupations*		371—381

SIBSAGAR

INTRODUCING THE DISTRICT

Physical Aspects

The district of Sibsagar covers an area of 3454·2 sq. miles. On the north, it is bounded by the districts of Darrang and Lakhimpur, on the east by Lakhimpur, Triap F. T., Naga Hills and the Naga Tribal Area, on the south by the United Mikir & N.C. Hills District, Tirap F. T., Naga Hills and Naga Tribal Area, and on the west by the district of Nowgong and United Mikir & N.C. Hills. It has three subdivisions—Jorhat, Golaghat and Sibsagar. Jorhat subdivision consists of the thanas of Majuli, Teok, Jorhat, Titabar ; Golaghat consists of Bokakhat, Dergaon and Golaghat thanas and Sibsagar subdivision has Amguri, Sibsagar, Sonari, Nazira thanas. Jorhat is the district headquarter, while Golaghat and Sibsagar are the headquarters of the outlying subdivisions. After Nov. 17, 1951, its Mikir Hills Excluded Area has been separated to form the new district of the United Mikir N. C. Hills.

Sibsagar falls into three natural divisions. Throughout the whole of its course through Sibsagar, the Brahmaputra is bounded on the south by a belt of flooded lands varying from three or four to as much as seven or eight miles in width. The country in this part is covered with high reed jungle, interspersed with swamps and bils and magnificent stretches of rich fodder grass. There are few Assamese villages in this tract, and there is little cultivation except of summer rice, followed by pulse and mustard. Such inhabitants as there are, are Miris, whose houses are built on piles which raise them well above the level of the floods, or Nepalese graziers, whose buffaloes wander at will over the marshes and sandy churs.

South of this flooded tract and east of the Dhansiri, there is a wide and healthy plain lying between the Naga Hills and the Brahmaputra. It is the most populous and most important portion of the district in which there is hardly any jungle to be seen. On the lower land the staple crop is transplanted rice, while the higher levels have been planted out with tea. The landscape, as a rule, is one of rural plenty. On every side stretch fields of waving rice and on every side the view is bounded by groves of feathery bamboos and slender areca palms, in which the houses of the cultivators lie concealed. The Dhansiri is no longer the administrative boundary of anything more important than a mauza, but, as a matter of fact, it is the natural boundary of Upper Assam. East of that river is a broad fertile plain stretching right through Sibsagar and Lakhimpur to the Noa Dihing. The whole of this plain is very homogeneous in its features. It is healthy, populous and well cultivated, a country of prosperity and progress. West of the Dhansiri is Central Assam, a country of hill forest and marsh, inhabited by tribes of Bodo origin or by Assamese from the lower part of the valley. This country has only felt to a very modified degree the quickening effects of the great tea industry. The part of Sibsagar that lies west of the Dhansiri differs as much from the part east of that river as Nowgong does from Lakhimpur, or the Jaintia Hills from the Jaintia Parganas. The upper valley of the Dhansiri and of the Doiang is covered with dense tree forest which is almost entirely destitute of population. A wonderful view of this forest can be obtained from one of the outer ranges of the Naga Hills. North, east and west, as far as the eye can reach, there is nothing but a pathless wilderness of trees.

North of the Brahmaputra again the country is very different. North of Brahmaputra is the Majuli, a great island no less than 485 sq. miles in area, which is separated from Lakhimpur

by the Kerkutiasuti, at one time the main channel of the Brahmaputra and the Subansiri. Nearly all of the Majuli, lies too low for the cultivation of transplanted rice and the staple crops are summer rice and mustard. Much of the country is still under high reed jungle, and much under fine tree forest. It is a country of luxuriant vegetation, of light sandy soil, covered with fresh grass, of deep pools surrounded by umbrageous trees, of village paths and tracts bordered and carpeted with ferns.

Hills : Outside the Mikir Hills which have now been separated to form the district of the United Mikir and North Cachar Hills, the whole of Sibsagar is a level plain. Two small hillocks call for special mention, only on account of the associations with which they are connected. The Charaideo hill in the Dhopabar mauza was once the burial place of the Ahom Kings and the ruins of their tombs are still to be seen, though they were rifled of their treasures by the Muslim invaders of the 17th century. The Neghereting hill is a small eminence near the Brahmaputra, on which stands a temple sacred to Mahadeo.

River System : The whole of the drainage of the district ultimatety finds its way into the Brahmaputra. Even at this distance from the mouth, the Brahmaputra is an enormous river. In the cold weather the main channel shrinks to more moderate demensions and is surrounded on either side by sandy flats or beds of reeds and grasses. In the rains, the river stretches itself to an enormous extent over the marshy country on either side and, when in flood, the distance between one bank to the other is very great. Between its main banks, there is a wide sandy strath in which it oscillates from side to side, throwing out here and there divergent channels which, after a time, rejoin the parent stream or may be silted up. The waters of the river are heavily surcharged with suspended matter and the smallest obstruction in the current is liable to give rise to an almond shaped chapari, but the next flood may wash this chapari away or may increase its size by fresh deposits of sand, covered with reeds and jungle grass in a few seasons. These operations of alluvium and diluvium are continually being carried on in a gigantic scale by the Brahmaputra.

During its passage through the district, the Brahmaputra receives many tributaries from the south. On the extreme east is the Dihing, which, for the last few miles of its course, forms the boundary between Sibsagar and Lakhimpur.

Next is the Disang, which rises in the Naga Tribal Area, flows a north-easterly course, then turning westward finally empties itself into the Brahmaputra after a total course of 156 miles. Its principal tributaries on the right bank are the Diroi and Dimau and on the left bank the Taokak and Safrai.

West of the Disang is the Dikho, which rises right up in the Naga Hills, it enters the district south of Nazira, flows past Nazira and Sibsagar and falls into the Brahmaputra after a course of 120 miles. Its principal tributary in Sibsagar is the Darika, which flows a little to the north of Sibsagar Town and falls into the Dikho near its mouth.

The boundary between Sibsagar and Jorhat is formed by the Jhanzi, 71 miles in length, and which, like the other rivers, rises in the Naga Hills. Then comes the Disai, 81 miles in length, flowing past Mariani and Jorhat, and called Bhogdai in the lower part of its course. The Kakadanga forms the boundary between the subdivisions of Jorhat and Golaghat. All these rivers flow through deep channels and do not change their courses. The bottom is muddy, there is no foreshore and, unlike the Brahmaputra and its tributaries from the north, there is no alluvial or

diluvial action going on. The current as a rule is very slack, but like all streams rising in the hills, they are liable to sudden freshets.

The Dhansiri is the largest river in the district after the Brahmaputra and like the others, rises in the Naga Hills. On debouching on the plains it flows a northerly and easterly course between the Naga and the Mikir Hills down a valley which is for the most part covered with dense forest. It passes the town of Golaghat, then makes a bend towards the west and falls into the Brahmaputra opposite the western end of the Majuli. Its total length is 177 miles.

West of the Dhansiri, the only river of importance is the Diphlu, which, for a considerable portion of its course, flows parallel to the Brahmaputra. This is a phenomenon which is exhibited in a greater or less degree by almost all the rivers of the district, as the tendency of the drainage is to follow the levels of the country which naturally fall towards the west. Conspicuous instances of this are found in the Tuni and the Gela bil. The Tuni is situated in the Majuli, the Gela bil in the north of Golaghat; both of them are merely channels of the Brahmaputra, which take off from that river and rejoin it again at a point lower down in its course.

Bils and Marshes: The greater part of Sibsagar lies too high for the formation of lakes, *bils* or marshes, and the only ones of any size are situated in the Majuli and the flooded country south of the Brahmaputra. Even here, there are no sheets of water of any considerable size. As a rule, there are more or less some deep ponds, very long in proportion to their breadth, which are simply the remains of rivers that have changed their beds.

Geology: The plain is of alluvial origin and consists of a mixture of clay and sand in varying proportions, ranging from pure sand near the Brahmaputra to a clay so stiff as to be quite unfit for cultivation. The higher land is apparently the remains of an earlier deposit of alluvium. There are hot springs near Dimapur, about 10 miles from Golaghat, and lime is found in the vicinity.

Climate and Rainfall: Sibsagar, like the rest of Upper Assam, enjoys a cold winter and a cool and pleasant spring. In October, the rains begin to stop and the nights grow cool, but the real cold weather does not set in till the following month. In march, the thermometer begins to rise, but the copious rains of early spring prevent the development of a hot weather and it is no till June that the climate really becomes unpleasant. The air is then surcharged with moisture and the damp heat is very trying indeed. In the east of the district, the average rainfall varies from 90 to 95 inches in the year, but between the Dhansiri and the Jhanzi it is only about 80. The Dhansiri valley itself is, for Assam, unusually dry, and the average rainfall at Dimapur is less than 60 inches. November to February are the four dry months in the year; but the special feature in the rainfall of Sibsagar, as of other districts of Assam, is the heavy rain of April and May, at a time when precipitation in Northern India is at a minimum. Sibsagar is never visited by destructive hurricanes, but during the rains a spell of hot dry weather is often closed by thundershower, which immediately cools the air and on that account is extremely welcome.

Earthquake: Sibsagar, like the rest of Assam, is liable to earthquake and the chronicler of Mir Jumla's expedition describes the alarm produced among the invaders by one of those unlooked-for visitations of nature. The great earthquake of 1897 was distinctly felt and did considerable damage, though it was as nothing in comparison with the widespread havoc wrought elsewhere. The treasury at Golaghat was injured, some pillars in the engine house at the Jorhat Railway Station collapsed, some damage was done on the tea gardens and here and there short stretches of roads were shaken down to the levels of the rice fields. Even in Sibsagar the earthquake was a

distinctly singular experience and had it not been for the extraordinary violence of the shock between Gauhati and Sylhet, it would have taken rank as quite a serious seismical disturbance. The great Assam Earthquake of August 1950 did cause considerable damage to Sibsagar, though it was less than that caused in Lakhimpur or Mishmi or Abor Hills.

Fauna: In the more settled portions of the district, wild animals are becoming very scarce, though they are fairly common in the swamp that lies between the Mikir Hills and the Brahmaputra. The list includes elephants, rhinoceros, bison, buffalo, tigers, leopards, bears, wild pig and different kinds of deer, of which the principal varieties are sambar, barasingha, hog deer and barking deer. Elephants are usually hunted on the system known as mela shikar. The following is a brief description of the operations ;

Mahouts mounted on staunch and well-trained elephants pursue the herd, which generally takes to flight. The chase is of a most arduous and exciting character. The great animals go crashing through the thickest jungle and over rough and treacherous ground at a surprising pace, and the hunter is liable to be torn by the beautiful but thorny cane brake, or, were he not very agile, to be swept from his seat by the boughs of an overhanging tree. After a time the younger animals begin to flag and lag behind, and it is then that the opportunity of the pursuer comes. Two hunters single out a likely beast, drive their elephants one on either side, and deftly throw a noose over its neck. The two ends of the noose are firmly fastened to the *kunkis*, as the hunting elephants are called ; and, as they close in on either side, the captured animal is unable to escape, or to do much injury to his captors, who are generally considerably larger than their victim. The wild elephant is then brought back to camp, where it is tied up for a time and gradually tamed.

Rhinoceros live in the swamps near Kaziranga, and are now becoming scarce. They breed slowly and as the horn is worth more than its weight in silver and the flesh prized as food, they present a tempting mark to the native hunters. Steps have been taken to form the wide expanse of jungle near Kaziranga, which covers a total area of about 90 sq. miles, into game sanctuary. Bison are generally found in the Mikir Hills Tract. Small games include wild geese and duck snipe, jungle fowl, black and marsh partridge, pheasants and hares.

FORESTS

General: The Forest Division of Sibsagar comprises of 21 Reserves in all namely, Dilli, Sapekhati, Deroi, Abhoypur, Singphoe, Sola, Panidehingia, Geleki Tiru Hill, Disai, Valley, Hollongapar, Kakadanga, Doyang, Upper Daigurung, Lower Daigurung, Kaliani, Mikir Hills, Panbari, Kaziranga and the North Block of Number Reserves. The total area covered by all these Reserves is about 729 sq. miles, the bulk of its being situated on the southern side of the division. The smallest of the Reserves is the Sola Reserves is the Sola Reserve covering an area of 2½ sq. miles and the largest is Kaziranga stretching over an area of 164 sq. miles. The importance of Kaziranga is more as the Principal haunt of the world famous Rhinocerous unicornis rather than on account of its giving stock of timber.

The demand for land from amongst the landless and flood affected people in this district is very acute, and there is a constant cry from the public for deforestation of the existing Reserves. Forest Department strongly opposes anymore of desforestation but to share the burden of the Government to provide land to the landless and flood affected people. The cultivable land inside the Reserves have been surveyed and such lands have been established into Forest villages. During the

last two years the Forest Department have accommodated near about 1000 house-holds from amongst the landless and flood-affected people of the district as Forest villagers.

Unfortunately in recent years there were cases of encroachment inside the Reserves along the Naga Hills borders by the Naga and in the interior of the Reserves by the local people, but these cases were sternly dealt with. Encroachers have been evicted and wherever possible the encroached areas are being restocked under Taungya systems by the encroachers themselves.

Rights & Concessions : In the benefit of the local people rights and concessions are acceded to the adjacent villagers of almost each reserve. They vary from reserve to reserve. Some of the rights and privileges are the right of way through the reserves, fishing inside reserve only for the purpose of home consumption, grazing cattle, utilisation of the Forest Produce like Tokopat, Bamboos, Canes etc., hunting by dogs etc., and Jhum cultivation by Hill Tribes. The privilege of Jhum cultivation is being badly taken advantage of in recent times. Good Forests are being devastated in the name of Jhum Cultivation.

Forests : Three principal types are represented in the forests of this district, viz., (i) The Assam Tropical Evergreen type occurs in Dilli, Abhoypur, Geleki, Tiru Hills, Disai and Disai Valley Reserves. The important species found in the type of Forests are Hollong and Makai with Sam, Amari, Gonseroi, and different kinds of Sopas as the principal associates Hollock, Ajhar, Uriam etc., occur chiefly along the banks of the streams and low-lying areas. In the same Forests also occur Nahor, Morhal, Banderduma, Bhomora, Bonboguri, Dhuna, Hingori, Jam, Phulgamari etc., and various species of Bamboo in the middle storey.

(ii) The mixed Evergreen and deciduous type which spreads over the rest of the Reserves of the Division except Kaziranga Reserve. The principal species occurring in this type of forests are Hollock, Ajhar, Amari, Sam, Sopa, Bonsum, Bogipoma and Bhelu—the middle storey carries a large number of species of less commercial value.

(iii) The Savannah type is well represented in Kaziranga Reserve. This type contains various kinds of grasses, the chief of which are Ekra (Erianthus ravenae), Khagra (Saccharum spontaneum) and Nal (Phragmites Karka) which occur in low-lying area, while in higher grounds San grass (Imperata arundinaceae) predominates. Patches of Korol also occur here and there all over the area while Simul grows profusely in over-grazed areas (where fire does not generally get in) round about the Khutis along the bank of the Brahmaputra river. A belt of mixed evergreen forests also occurs along the bank of the Dipalu river which runs across the middle of the Kaziranga Reserve from south-east to north-west. This belt generally harbours the herds of wild elephants of the sanctuary.

Needs of the Population : The rural population consisting mostly of agriculturists, require materials for building houses, timber for making agricultural implements and dugouts, firewood etc including bamboos, Tokopat, Canes, bark of trees, ekra, reeds etc. Most of these requirements are met with from our reserves. The urban population besides their greatest need for firewood get good timber for constructional purposes and furniture from the reserves.

Several Tea Gardens in Sibsagar district get a large quantity of their firewood and thatch for roofing from our reserves.

Simul for match wood is available in fair quantity in the riverain forests for supply to the local Match Factory and the one at Dhubri. A sawmill at Golaghat is running from the time of

World War II. The question of granting a lease for establishment of an up-to-date plywood mill to utilise the virtually untapped plywood resources of a number of Forest Reserves principally of the species Hollong and Makai has been under Government consideration for some time. The reserves contain bils and swamps some of which have been treated as sanctuaries wherein fish, principally the Indian Carps can breed and multiply.

The average revenue from the forests of the district during the last 10 years is about Rs. 3,10,000 and the average expenditure about Rs. 1,90,000. When the proposed plywood mill is established it is expected that the revenue earnings from the forests would be considerably increased.

Kaziranga Wild Life Sanctuary: Sibsagar Division can boast of containing the world famous Kaziranga Wild Life Sanctuary which includes the whole of Kaziranga Reserve with an area of 164 square miles. This Sanctuary is practically the main home of Rhinoceros Unicornis (One horned Rhino) which is a rare animal in the world. Before Kaziranga Reserve was constituted into a Sanctuary, this rare animal was ruthlessly killed by people for its valuable horn, (the present price of a horn from a full grown Rhino is about Rs. 2,000/- to Rs. 3,000) and for its flesh which a section of the local people takes it as a sacred flesh. There was a time when this animal was in grave danger of getting extinct. The Government then declared the Rhinoceros as a protected animal and constituted its home in Kaziranga Reserve as a Sanctuary. Since then, this rare animal is multiplying and is on the increase. Over and above the Rhinoceros, the other animals which abound in this Sanctuary are the wild buffaloes, deer, a wild pig and elephants and also various species of birds.

During the recent past this Sanctuary is gaining more and more popularity. Hundreds of visitors from far and near came to visit this Sanctuary to see its wild lives in general and Rhinoceros in particular. The Forest Department is also on the alert to make more and more improvement for the Sanctuary by providing all facilities to the visitors of the Sanctuary and by adopting measures for the protection of the same.

Now-a-days there is a reasonably good and comfortable bungalow at Baguri to accommodate the visitors and 6 elephants to take the visitors to the interior of the Sanctuary. During the cold weather one can motor up along the fair weather road from the Trunk Road to the edge of the Sanctuary where he can get on the elephant to go inside the Sanctuary and it is very unusual that the visitors will ever return back without seeing at least a few Rhinoceroses. Majority of visitors used to see a number of Rhinoceroses, herds of wild buffaloes, and deer grazing in open places. At times one can approach a Rhino as near as 10 to 15 yds., and the Sanctuary elephants are trained enough to approach a Rhino at close range without fear.

To see the herd of wild elephants one will have to go more in the interior and may have to camp inside the Sanctuary for a night or two, but cases were not rare when visitors came across solitary elephants in the open 'beels'.

Though Rhinoceroses and wild buffaloes can be seen almost at any time of the year, but the best period of the year to visit the Sanctuary is from February to May when the high grass of the Sanctuary has been burnt and animals can be seen grazing all over the area. When the grass is high the Rhinos, wild buffaloes and other wild animals can only be seen in the open area surrounding the 'beels'. The only kind of the day to visit the Sanctuary is the morning and evenings. Generally in the day time the Rhinoceroses, either hide themselves under the shade of the grass or wallow in mudpools within the cover of tall grass.

Famous Zoos of the world are also requesting Assam Government to sell Rhinoceroses for their Zoos. Since 1946, 10 Rhinos have been sent to different Zoos, viz.,

London	Zoo	...	2
Cairo	,,	....	2
Chicago	,,	....	2
Switzerland	,,	...	2
Italy	,,	....	1
Bombay	,,	...	1

Bombay Zoo got the Rhino 'Lachit' as a gift from the Assam Government. The present price of a Rhino sold to the Zoos and delivered at Kaziranga Stockade after one month of capture is Rs. 15,000.

It is very encouraging to see that in recent years the public are getting more and more Sanctuary minded and they are showing keen interest for the protection of wild lives in the Sanctuary, but it is very sad to say that there are also unscrupulous 'shikaries' who still feel proud to declare that they have killed a number of deer in one night along the borders of the Sanctuary, and perhaps by poaching inside the Sanctuary. There is also a class of people who are still out to kill the Rhino for its horn. The wild animals of the Sanctuary appeal to the public of Assam for protection from the hands of these unscruplous people and also for protecting them from the most dreaded cattle epidemic.

The Forest Department is doing its best to give the animals the above protections. Staff are constantly patrolling on foot, on elephants and in boats, to stop the poaching. Last winter season the Forest Department with the help of the Director, Veterinary Department and the staff and students of the Veterinary College have immunized the village buffaloes and cattle living along the borders of the Sanctuary against the Rinderpest cattle disease, so that the disease may not spread amongst the wild animals of the Sanctuary.

Plantations : Forest plantation has been seriously started from the year 1920 with the idea of replacing the trees of less or no economic importance with more valuable species. Originally 20 acres were taken up for such plantation for a year, but at present it has gone up to 150 acres per year in different centres of plantation in the divisions. The most important species originally tried was Agar in "Tunnel Plantation" which gives the important minor forest produce of the division i.e., Agar Oil—the other important species put in all these Plantation are Sam, Sopa, Ajhar, Nahor, Amari Hollong, Hollock, Teak and Poma. In recent times "Morhal" which is a very fast growing and very good firewood species has been put in the Plantations for firewood purposes.

Besides plantations the natural forests have been aided by the Forest Department to regenerate the forest with species of economic importance like Nahot, Ajhar, Hollock, Hollong, Poma, Sopa etc. This led to transform the existing forests into better ones.

HISTORY

Early History : It is possible that Sibsagar formed part of the old Kingdom of Kamrupa. Bhagadatta enlisted levies in Upper Assam before he sailed with his troops down the Brahmaputa, only to fall on the field of Kurukshettra. The history of Sibsagar, however, is most concerned with the Bodos and the Shans.

THE KACHARIS

When the curtain on the history of Sibsagar, lifts, we find a large part of the district under the dominatian of the Kachari king of Dimapur. These Kacharis belong to the great Bodo tribe, which is found not only in the valley of the Brahmaputra but in the Garo Hills and in Hill Tippera far away to the south. They are thought to be a section of the Indo-Chinese race whose original headquarters are said to have been located in the inaccessible hills and valleys which conceal the sources of the Yang-tse-Kiang and Ho-ang-ho and seem to have gradually spread in successive waves of immigration over the greater part of what is now known as Assam. Originally, Rabhas, Meches, Garos, Lalungs, Bodo or North Bank Kacharis and Dimasa or the Kacharis of Cachar might well have been the members the same stock. They have gradually grown away from one another. At the time of the Ahom invasion in 1228 A. D., the Kacharis seem to have been a powerful tribe, occupying the valleys of the Kapali and the Dhansiri. The ruins ot their capital at Dimapur show that they had advanced a considerable distance on the path of civilisation. The history of the Kacharis in Sibsagar is but vague and fragmentary, as, unlike the Ahom, they have left no annals of their rule. They first went to war with the Ahoms in 1490 A. D., defeating the Ahom king Suhangpha, driving him across the Dikho. The Ahoms soon avenged this defeat when in 1536 A.D. Suhunmung, who was generally known as the Dihingia Raja advanced up the valley of the Dhansiri, killed the Kachari Raja, Detsung and sacked his capital Dimapur ; the headquarters of the kingdom were then removed to Maibbong in the North Cachar Hills and from there again to Khaspur in Silchar subdivision to the south of the Barail. The subsequent history of the tribe, however, forms part of the history of Cachar and is narrated in the District Census Handbook of that district, and not here, as it has little or no connection with the history of Sibsagar.

THE CHUTIYAS

At the time of the advent of the Ahoms, the Chutiyas, the other section of the Bodo tribe shared with the Kacharis the rulership of the Sibsagar district. Their early history is veiled in some obscurity, but there appears little doubt that thay were members of the great Bodo race, and entered the plains from the north-east. In course of time, one Bibar attained a measure of supremacy over the neighbouring villages. His son carried on the father's life work, extended his influence over the wild tribes and assumed the title of the Lord of the Hills. He descended into the valley of the Brahmaputra with his followers, defeated a king called Bhadrasen and founded Ratnapur as his capital. He assumed the name of Ratnadwaj Pal. He consolidated his power and is known as the builder of Sadiya ("the place where the corpse were given") where the body of his dead son was received by him from the Court of the King of Gaur, where he was left for education.

When the Ahoms entered Assam in 1228 A. D., the Chutiyas were established at Sadiya and were masters of the country as far west as the Disang river. The two powers continued to live in a state of intermittent conflict, which assumed an acute form at the beginning of the 16th century. The Chutiyas at first met with a considerable measure of successes, but they soon met reverses at the hands of the Dihingia Raja. The administration of Sadiya was then entrusted to an Ahom noble.

THE AHOMS

Let us now briefly review the history of the Ahoms who preceded the British in the sovereignty of the district and of Assam. They were a Shan tribe from the kingdom of Pong in the upper valley of the Irrawaddy. The unsuccessful claimant to the throne left the capital with his friends and followers and after wandering about for some years, crossed the Patkai and in 1228 A. D. settled down at the foot of the Naga Hills in the country which now forms the districts of Sibsagar and Lakhimpur. When Sukapha, the first Ahom king, arrived in 1228 A. D., he found the Chutiyas ruling in the north and the Kacharis in the south. The Ahoms first overthrew the Chutiya kingdom at Sadiya and afterwards the Kachari kingdom at Dimapur, as described above. The early history of the Ahom Dynasty contains few incidents likely to attract the attention of the historian except a chronological list of their successive rulers. The first noteworthy Ahom king was Suhunmung, or the Dihingia Raja (1497-1539), who conquered the Chutiyas and the Kacharis and was no less successful in his dealings with the Muslims and Koches. The Muslims sent two expeditions up the Brahmaputra Valley, but neither met with much success and the leader of the second, a Pathan named Turbuk, was killed in 1532 A. D. with most of his followers on the banks of the Bhareli, which was the western boundary of the Ahom kingdom.

His successor, Sukampha, enjoyed the throne for nearly 60 years (1552-1611), but he was unable to withstand the victorious armies of the Koch King Nara Narayan, who occupied Gargaon and extorted tribute from him. The triumph of the Koches were, however, but short lived and about 1614 A. D., Bali Narayan, the grandson of Sila Roy, Nara Narayan's brother, was compelled to apply to the next Ahom king Suchengpha or Protap Sing for help against the Muslims. The war dragged on in Lower Assam with varying success, but in 1637, the Nawab of Dacca sent up an overwhelming force which carried all before it. The Ahoms were driven out of Kamrup, and a treaty was made under which the Barnadi was accepted as the frontier between the Muslim and Ahom territory. Sutumla or Joydwaj Sing who ascended the throne in 1654 took advantage of the confusion that ensued on account of the deposition of Shajahan and drove the Muslims out of Kamrup and Goalpara. For a short time, the Ahoms were in possession of the whole of the Valley of the Brahmaputra. Mir Jumla, the Nawab of Dacca, was not the man to brook such aggression on the territory of the Mughal empire and in 1662, he started with a large force for the conquest of Assam. No resistance was offered to the Muslims during the initial stages of their march and they occupied the fort at Jogighopa, Srighat and Pandu near Gauhati itself, and Kajali on the western frontier of Nowgong, without striking a blow. Mir Jumla occupied Gargaon itself, the capital of the Ahoms. The subsequent history of Mir Jumla's expedition is not unlike that of Napolean's ill-fated eruption into Russia; rain and fever did for the Ahoms what frost and snow did for the Russians. After March, the rains set in with a severity exceptional even in this rainy land, converting the country into one huge swamp, rendering military operations impossible; and disease made havoc of the Muslims crowded together in their water-logged camps. The commencement of the cold season enabled Mir Jumla to resume offensive operations, but the determination of his followers not to remain another rainy season in Assam was so strong that he patched up a peace with Joydwaj Sing and retreated down the valley of the Brahmaputra. Mir Jumla himself did not survive the failure of his expedition and died on the river about a mile from Dacca. By 1667, however, the Ahoms had again established themselves at Gauhati. Godadhar Singh (1681-85) was the first Ahom king to definitely annex Kamrup to his territories from the Muslims, but the zenith of the Ahom power was reached in the reign of his successor Rudra Singh (1695-1714), who founded a new capital at Rangpur and waged

successful war against the Rajas of Cachar and Jaintia. He was the first of the Ahom kings to publicly adopt Hinduism. His son Sib Sing, whose name has come down to posterity as the excavator of the great tank on which the present subdivisional headquarters of Sibsagar stands, built the Rudreswar Temple at Gauhati in the memory of his father's death. By the middle of the 18th century, the Ahom power, however, began to decline. Lakshmi Sing's reign (1769-1780) was signalised by the outbreak of the Moamaria Insurrection ; after initial successes, the Moamarias were defeated and very cruelly dealt with. He was succeeded by his son Gaurinath (1780 95) in whose reign the Moamaria Insurrection broke out anew with increased violence. At first the king's troops met with some measure of success and orders were issued outlawing the rebels and authorising any person to kill any Moamaria he might meet, regardless of time, place, sex or age According to the Ahom Chronicler, "the villagers thereupon massacred the Moamarians with their wives and children without mercy." The rebels in their turn were not slow to make reprisals ; they plundered the country on every side and "the burning villages appear like a ball of fire". The ordinary operations of agriculture were suspended, no harvest could be raised and famine killed those whom the sword had spared. "The price of a katha of rice raised to one gold mohur and men starved in crowds under the trees, forsaking their wives and children".

In 1786, the Moamaria rebels under Bharat Singh inflicted a decisive defeat upon royal troops and took the capital Rongpur, by storm. The desolation of the country brought about by the Moamarians is thus described by the Ahom Chronicler, "The Mataks harried the temples and the idols of the gods and put to death all the sons and daughters of our people. For a great length of time, our countrymen had no home ; some took shelter in Bengal, some in Burma, some in the Dafla hills and others in the fort of the Bor Gohain who was fighting the Mataks for years and months together." In 1792, a small British force under the command of Captain Welsh was sent to the assistance of the Ahom king, who reoccupied Rongpur in 1794 after a decisive victory over the insurgents. Somedays after, Gaurinath died and was succeeded by his son Kamaleswar Singh in whose reign the country remained in a state of great disorder due chiefly to the attacks of the Daflas. He was succeeded by his brother, Chandra Kanta Singh in 1809. The Bor Phukan or Viceroy of Gauhati incurred the suspicion of the Bura Gohain or Prime Minister and fled to Burma via Calcutta. At the beginning of 1816, the Burmese army crossed the Patkoi, reinstated the Bor Phukan ; but shortly after their withdrawal, Chandra Kanta was deposed and Purandar Singh appointed in his stead. The banished monarch appealed to the Burmese, who, in 1818, returned with a large force and replaced him on the throne. They soon, however, made it clear that they intended to retain their hold in Assam. The Burmese were guilty of gross atrocities during their occupation of the country, burning and plundering villages. Assam groaned under the oppression and lawless tyranny of the Burmese, whose barbarous and inhuman policy depopulated the country of more than one half of the population, which had already been thinned by successive civil wars and Moamaria insurrections. Chandra Kanta fled to Goalpara and from British territory began a series of abortive attempts to recover his lost kingdom. In the meantime, however, causes of quarrel arose between the British and the Burmese and in 1824, war was declared by the British Government and a force sent up the Valley of Brahmaputra. The Burmese evacuated Gauhati without striking a blow, such fighting as there was taking place in the district of Sibsagar and Nowgong. Rongpur was occupied in 1825 and in the following year, by the treaty of Yandaboo, Assam was ceded to the East India Company. The above is but a brief account of the rise and fall of the Ahoms.

PEOPLE

The general public health of the district has been on the whole fair, as from the climatic point of view Sibsagar is a healthier place than any other place in Assam except Lakhimpur (as Sibsagar along with Lakhimpur is among the healthiest districts of Assam). Cholera made its appearance in some part or other of the district occasionally in an epidemic form in 1948 and 1949 within some portions of Golaghat Subdivision, but on account of the alertness of the Public Health Department, no great loss of lives occurred. Even before the beginning of the decade, from 1938, actually, Kala-azar was creating havoc in Golaghat Subdivision. In 1940 and 1942, as many as 2,584 and 2,128 cases were reported in this Subdivision accounting for a total mortality of 304 and 214 respectively in these areas. From the latter it was practically brought under complete control from 1944 when mortality was less than 100 from which it has dropped to less than 15 in the last two years of the decade in this Subdivision. Floods are an annual occurrence in the riverine areas, especially, in the Majuli islands. The Earthquake of 1943 did considerable damage to the property of the people but its effects were completely dwarfed by the Great Assam Earthquake of August, 1950, which did a tremendous lot of damage to the property both public and private, in the district.

The district has now a population of 12,12,224, second largest in Assam, even if we take into account the population of the district ignoring the influx of displaced persons as against its 1941 population of 10,40,428. It thus accounts for an overall increase of 1,71,796 during the last decade against 1,07,102 in the previous one, the smallest increase among the districts of this Natural Division excepting Goalpara. For the first two decades of this century Sibsagar enjoyed the primacy among the plains districts regarding total population which it has lost to Kamrup since 1931. It should, however, be noted that the increase in the decade 1931-41 has been artificially depressed by the removal of 34,313 persons from its 1941 population on account of the creation of the new district of United Mikir & North Cachar Hills. If this change were ignored, then the overall increase of the district will come to 1,41,415 for the decade 1931-41 and 1,73,388 for the decade 1941-51. Sibsagar has thus increased at the rate of 16.51% over its 1941 population. against 11.48% in the decade 1931-41. Its rate of increase in the present decade like its overall increase is higher than that of Goalpara only among the districts of this Natural Division, all other districts having increased at a rate higher than that of Sibsagar. Subsidiary Table I(ii) gives 11.48 as its percentage increase for the decade 1931-41. This figure is artificially low on account of the exclusion of Mikir Hills portion. which, if included, will force up the percentage increase for this decade to 15.1% and slightly bring down the percentage increase for the present decade to 16.13%.

The density of Sibsagar calculated according to the latest area figures submitted by the Surveyor General of India is 351 persons per square mile in 1951, an advance of exactly 50 over the last decade. The district which was the second densest in this Natural Division in 1931 (next only to Cachar) gave place to Kamrup also in this respect in 1941, whereas in the present decade it is surpassed in density by Cachar, Kamrup and Nowgong as well. The most thickly populated parts in the district are in the centre towards the south, viz., the thanas of Jorhat with a density of 650, Amguri 518 and Nazira 504, Sibsagar 444, Teok 432, Dergaon 409 and other thanas with a relatively high density, whereas the areas of lowest density are Bokakhat thana 161, Majuli 170 and Golaghat 245.

The district consists of three Subdivisions, Jorhat, Sibsagar and Golaghat. Among them the highest rate of increase has been recorded by Golaghat Subdivision, 19%, against only 2% in the

previous decade, followed by Sibsagar Subdivision with its 16% increase in the present decade against 13.6% in the previous one. Jorhat Subdivision has increased by 15·2%—a rate identical with that recorded in its previous decade. The percentage increased of Golaghat Subdivision for the previous decade is alarmingly low percentage of 2% giving rise to reasons of terrible epidemics or unprecedented natural calamities. The actual cause is, however, not so terrifying and is a simple one, viz. the reduction of a population of 34,313 from the 1941 figure for the Subdivision on account of this figure being taken over within the newly created United Mikir & North Cachar Hills district. If an allowance is made for these transfers, the percentage increase of Golaghat Subdivision for the previous decade will come to the more normal one of 14%. Though the increase registered by the district as a whole has been shared more or less evenly by all its police stations, Sonari thana with its 22.8% has registered the highest rate of increase, closely followed by Golaghat thana, 21·5, whereas the least increase is given by Dergaon, 10%, Teok 10.1% and Bokakhat 13%, all other thanas show a rate of increase round about 15%.

We learn from Subsidiary Table I (i) that no portion of the district has a density less than 150 or higher than 750. The largest proportion both of its area and population, 36.99 and 43.85% respectively, fall within the middle density group of 340-450. Majuli and Bokakhat thanas occupying 16·93% of the area inhabited by only 8·36% of the total population of the district fall in the low density group of 150-200, whereas the large Golaghat thana constituting more than one-fourth of the total area of the district now falls into the middle density group of 200-300. The district headquarter thana of Jorhat with its 8·7% of the area and 16·68% of the total population of the district is the only police station to fall in the high density group of 600-750, though two other thanas of Amguri and Nazira fall within 450-600 group. We find that nearly one-third of the total population is squeezed within only one-fifth of the total area, leaving the remaining four-fifths of the entire area for the remaining two-thirds of the population. To put it differently, we can say that one-fifth of the population is comfortably settled within nearly half the area of the district, which leaves for the remaining three-fourths of the population an area little more than the remaing half. The 1941 figures tell a more or less similar tale. Majuli and Bokakhat police stations occupying 17.55% of the area of the district were then still in the low density group 100-150, Golaghat police station spreading itself over 25.46% of the total area was within the low density group 150-200, while Jorhat police station remained within the group 450-600, with Amguri and Nazira yet in the middle density group 300-450. Another interesting feature revealed by the comparison of the figures for the two censuses is that while 60% of the population continued to remain at both censuses to live within the middle density group of 200-450, the area which it occupied shows a tremendous increase from 48% in 1941 to 64.66% in 1951.

Displaced Persons—Sibsagar has received the smallest number of refugees within its fold during the decade, only 7,514 while the still more distant Lakhimpur shelters 13,965. Only 854 refugees were censused in its four towns, Jorhat, Golaghat, Sibsagar and Nazira, the remaining 6,660 in the rural parts of the district. The largest number 2,130 among them, has gone to Sonari thana, followed by Golaghat 1,479, while Jorhat-Majuli tract accounts for a further 1,207. The figures for the remaining rural tracts of the district are as follows, Teok-Titabar 370, Nazira-Amguri 911, Sibsagar 229 and Dergaon-Bokakhat 334.

There is very little immigration of East Bengal Muslims into this district. Apart from the small increase of 7,514 contributed by the displaced persons, the increase is mostly due to natural increase with a small percentage accounted for by immigration of tea garden labourers into that district.

INTRODUCING THE STATISTICS

In the past, village statistics for each district used to be printed after the Census, giving the population of each village and showing the distribution of communities and of literate persons. In view of the importance of the 1951 Census, at which in addition to the usual population data, valuable information was collected concerning the social and economic life of the people, it was decided to publish a District Census Handbook containing the more important Census abstracts and tables.

The Primary Census Abstract gives the details of each village by the 8 Livelihood Classes. There are five general population tables of the 'A' Series, three economic tables of the 'B' Series, five household and age (Sample) tables of the 'C' Series, seven social and cultural tables of the 'D' Series and one table 'E' giving summary figures for the district and tahsils. As far as possible, these tables furnish district data with break-up for Census tracts within the district.

At the 1951 Census, the economic classification was substituted for the classification based on *religion*. The people have been divided into two broad livelihood categories, namely, the agricultural classes and the non-agricultural classes. There are four agricultural classes defined as below :—

I. Cultivators of land wholly or mainly owned and their dependants

II. Cultivators of land wholly or mainly un-owned and their dependants.

III. Cultivating labourers and their dependants.

IV. Non-cultivating owners of land, agricultural rent receivers and their dependants.

There are similarly four non-agricultural classes defined as persons including dependants who derive their principal means of livelihood from :—

V. Production other than cultivation.

VI. Commerce

VII. Transport

VIII. Other services and miscellaneous sources.

The above eight classes have been referred to as livelihood classes.

Each of the above eight livelihood classes has been divided into three sub-classes with reference to the economic status as below :—

(i) Self-supporting Persons ;

(ii) Non-earning Dependants ; and

(iii) Earning Dependants.

(i) A 'Self-supporting Person' is one who earns an income in cash or kind sufficient at least for his own maintenance.

(ii) A 'Non-earning Dependant' is a person who has no income of his own either in cash or in kind.

(iii) An 'Earning Dependant' is a person who earns a regular (not casual) income not sufficient even for his own maintenance. It includes seasonal income also.

All self-supporting persons are, ordinarily, economically active. But there are certain classes and groups which constitute an exception to this rule. These are mentioned below :—

(i) All self-supporting persons of Agricultural Class IV,

(ii) The following groups of self-supporting persons who are included in Non-Agricultural Class VIII, and derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity) :—

(a) Non-working owners of non-agricultural property,

(b) Pensioners and remittance holders,

(c) Persons living on charity and other persons with unproductive occupations, and

(d) Inmates of penal institutions and asylums.

Economically active persons engaged in industries and services are classified in economic table B-III into the ten divisions and 88 sub-divisions mentioned above, and are further divided into three sections, namely :—

(i) Employers,

(ii) Employees, and

(iii) Independant Workers.

A person should be treated as an 'Employer' only if he has necessarily to employ any person in order to carry on the business from which he secures his livelihood, provided that employee is regularly employed and derives his Principal Means of Livelihood by such employment. Part-time or casual employment which does not provide the Principal Means of Livelihood of the employee should not be taken into account. A person employing a cook or other servants for domestic services is not an employer.

An 'Employee' is a person who ordinarily works under some other person for a salary or wage in cash of kind, as the means of earning his livelihood. Managers, Superintendents, Agents etc. and all Government servants should be recorded as employees only even though they may have power of employing or appointing subordinate officers or assistants.

An 'Independent Worker' means a person who is not employed by anyone else and who does not employ anybody else in order to earn his livelihood.

The Age (Sample) tables were prepared from the original enumeration slips by taking a ten-per-cent sample in accordance with the following instructions of the Registrar General, India.

The 'D' Series social and cultural tables include Table D-V relating to the displaced persons giving particulars about their arrival into India. Table D-VI gives details of the non-Indian Nationals and Table D-VII is designed to show the distribution of educated man-power among the different livelihood classes.

Important population data for the district and the tahsils have been summarised in Table 'E' which also gives the classification of the people by livelihood classes.

The main Report of the 1951 Census for the States of Assam, Tripura and Manipur will be found in two parts entitled "Census of India 1951—Volume XII—Assam, Manipur and Tripura".

Part I contains an analysis of the statistics collected and Part II statistics arranged in different tables for the States, their natural divisions and districts.

In addition to these Volumes there are National Registers of Citizens prepared for every village and ward and maintained in manuscript giving important census details for each person. These registers are preserved as permanent records in the district headquarters.

From the data collected at the Census of the Small-scale Industries, three tables were prepared which are included in the District Census Handbook, giving village or wardwise distribution of small-scale industrial establishments, employment in textile establishments for Census tracts and employment in non-textile establishments for the same tracts.

While the accuracy in respect of the details actually recorded by the Enumerators during the Census of the small-scale Industries has been reported to be good, the District Officers were of the view that there was tendency towards under enumeration of the establishments, due to the failure of the enumerating staff to make *intensive efforts to discover all establishments* within the areas allotted to them. The figures in the tables for the small-scale Industries should, therefore, be regarded as *illustrative* of the nature of small industries prevalent in the different parts of the district and should not be relied upon as giving *accurate number* of specific type of establishments in different localities.

INSTRUCTIONS FOR TABULATION OF VILLAGE NOTES

The important information for every village was separately recorded on printed forms and has been incorporated in columns 3 and 4 of Primary Census Abstract using the symbols given below :—

1. *Floods*—Write "F" if it is liable to flood of any category.

2 *Epidemics*—For entries like Cholera, Small-pox, Kala-azar, Malaria, *write* Ch, Sp, Ka or Mal. For all other epidemics mentioned in this column, enter it in full.

3. *Water Supply*—

A. The village has a source of water supply provided by the Government or Local Board.
B. Natural sources of supply like rivers and bils.
C. Private supply.
D. Acute scarcity.

Underlined, it will indicate that quality of drinking water is bad.

4. *Medical Facilities*—

(a) The village has a Local Board or Government regular dispensary within 5 miles radius.

(b) There is no regular dispensary but a Public Health Dispensary within 5 miles radius.

(c) There is no dispensary but a private qualified doctor within 6 miles radius.

(d) No medical facilities of any sort.

5. *Educational Facilities* –

1. Served by a Local Board or Government School within 2 miles radius.
2. Served by a Private Venture School only within 2 miles radius.
3. No educational facilities of any kind (Mission Schools have been generally treated as private schools although in some areas where they get grant-in-aid they have been shown as Government Schools by Enumerators).

CENSUS TRACT—SAMPLE POPULATION AND DISPLACED PERSONS

Census statistics of the urban and rural population can be studied in various ways. The results of such studies in comparing the conditions and characteristics of the urban and rural people in the matter of births, deaths, sex composition, sanitation, levels of living etc., would be of great value in economic planning and development of social welfare work in the State and its different parts.

Each district was, therefore, divided for purposes of the Census into a number of rural and urban tracts according to the size of the population.

Preparatory to the sorting and tabulation of Census information, rural and urban areas of a district were grouped into Census Tracts on the basis of instructions issued by the Registrar General of India. With the approval of the Registrar General of India, the following rural and urban tracts were formed in the case of

Rural

Tract No.

36. Mazuli, Jorhat
37. Teok, Titabar
38. Amguri, Nazira
39. Sibsagar
40. Sonari
41. Bokakhat, Dergaon
42. Golaghat

Urban

9. Jorhat, Sibsagar, Golaghat & Nazira towns

In several Tables the term "Sample Population" has been used. This sample was drawn according to the following instruction of the Registrar General of India. Enumeration was done on pads of 100 slips each, a slip containing the record of an individual.

"Break each pad and stack the slips of the pad ; and "cut" the stack as in a card game. Place the lower portion above the upper portion and then deal the slips into the pigeonholes. You should deal the slips into pigeonholes *in the order* of 1, 2, 3, 4, 5, S, 6, 7, 8 and 9 successively. All the time, you should watch the slips of "Displaced Persons". If you come across any slip of a displaced person deal it in the pigeonhole separately labelled for 'Displaced Persons'. Thus there were three bundles ; (i) General Slips i. e. Slips combined for holes labelled for 1, 2, 3, 4, 5, 6, 7, 8 and 9 (ii) Sample Slips i. e. Slips in the hole marked 'S' and (iii) Displaced Persons.

Hence it will be seen that that the sample is not a sample of the total population but of the latter excluding the 'Displaced Population'.

The check factors for the sample population : –

1,000 S/G Rural Total	=	111
1,000 S/G Urban Total	=	111
1,000 S/G District Total	=	111

A "Displaced Person" was defined by the Registrar General of India as follows :—

"A Displaced Person" means any person who has entered India having left or being compelled to leave his or her home in Western Pakistan on or after the 1st March, 1947 or his/her home in Eastern Pakistan on or after the 15th October, 1946 on account of civil disturbances or the fear of such disturbances or on account of the setting up of the two Dominions of India and Pakistan."

PRIMARY CENSUS ABSTRACT

Number and name of District = (9) SIBSAGAR

Number and Name of Thana = 9·1 BOKAKHAT

Serial No.	Name of Village or Town/Ward	Area	Village Notes: Water supply, medical and educational facilities.	Village Notes: Floods and epidemics.	Number of occupied houses.	Population—1951: Persons.
