25 Volumes of District Census Handbooks in English

25 Volumes of District Census Handbooks in Marathi

Alphabetical List of Villages in Maharashtra (in Marathi)

A-1172—1-B

INTRODUCTION

This is the third edition of district census handbooks brought out largely on the basis of the material collected during each decennial census of our population. Earlier editions had appeared after the 1951 and the 1961 censuses. The present volume generally follows the pattern of its predecessors in presenting the 1971 census tables for the district and basic demographic, economic and general information for each village therein.

Particulars of the distribution of population down to the smallest administrative unit like village and town and their broad characteristics are required for purposes such as delimitation of electoral constituencies, adjustment of administrative boundaries, educational and man-power planning. The data provided for small areas serve as statistical frames for various surveys that may be taken up.

Part A of this handbook gives information relating to each village and town in the district. Revenue and municipal officials all over the district helped us in collecting the data for this section. Part B carries the 1971 primary census abstracts which present the population for each village and urban block. The items covered are area, population and its sex break-up, households, occupied houses, literacy, scheduled castes and scheduled tribes, workers and non-workers with a break-up of workers into broad industrial categories. The population figures given here have the sunrise of 1 April 1971 as the reference date.

Part C, which will be published separately this time, will have a general note on the physical features of the district, its administrative set-up, its demographic and socio-economic characteristics. It will include further census tables, detailed official statistics on climate, rainfall, agriculture, industry, education, health and the like.

In 1941, the population figures for villages and towns were exhibited according to communities, in the village handbooks published by the Government of Bombay. In 1951, the basis of census classification changed from a social to an economic one; census data for villages and towns were presented according to eight livelihood classes in the primary census abstracts published in the district census handbooks. This was the first occasion when district census handbooks were brought out. The handbook contained information about different amenities available in respect of each village and town.

During the 1961 census, the scope of the handbook was enlarged. In addition to the census data in respect of each village and town, other official statistics for each district were made available, with an introductory note explaining the salient features of the districts. The village directory published as a part of the 1961 handbook carried basic census data included in the primary census abstracts; it indicated the amenities available in each village and town by means of abbreviations. These included postal, medical and educational facilities, sources of water-supply and bazar day. It was found that the primary census abstract, which needed a large number of columns to present different data, allowed very little space for information on amenities. As a result, the district census handbook has been divided into three parts in 1971 as mentioned above.

The town and village directory of 1971 (Part A) gives information on amenities and facilities available in each town and village in the districts of Maharashtra. The particulars are presented tahsilwise under each district. The villages and towns are arranged according to their census location code numbers.

The particulars in the village directory were collected through the revenue agency of the district on a prescribed form. For the town directory, six statements were compiled. Statement I contains the 1971 census population data compiled by the census office. The non-census data in the other statements were supplied by the municipal councils for their areas and by the revenue agency for non-municipal towns.

For purposes of the census, districts are divided into urban and rural areas. The urban area (towns) is defined in detail; those areas which do not satisfy this definition are treated as rural areas (villages).

The following places have been treated as urban areas (towns): (1) every place having a municipality or a cantonment board irrespective of its population; (2) every other place which had (*i*) a population of at least 5,000 and (*ii*) at least three-fourths of its male working population engaged in non-agricultural pursuits; (3) any other place not falling under the above two categories but which possesses certain distinct characteristics to qualify for its being treated as urban such as its being a project area or a developing township.

A place is called a village if it does not satisfy any of the criteria prescribed above for its being treated as urban.

A 'village' for census purposes in Maharashtra has always been the 'revenue village' which is the ultimate unit of area in which the State is subdivided for land revenue administration. A few past censuses concerned themselves only with revenue villages which had some population and did not take into account deserted or uninhabited revenue villages. As in 1961, a village at the 1971 census is a revenue village having well-defined boundaries, a map and a separate set of land records irrespective of whether that defined area has any population or not and, if it has some population whether that population resides in one locality (gaothan) or is spread over one or more identifiable clusters of population known as wadis, padas or mazaras (hamlets). Each revenue village has a specified area marked as its own and its boundaries with other adjoining villages have always enjoyed a traditional sanctity. Hamlets do not have such defined boundaries or areas distinctly marked or allotted to them; nor do they have any locally recognised status.

Revenue villages which do not have any residential population are also included in the 1971 census definition of villages. They figure in the census list but are described as uninhabited to distinguish them from the remaining inhabited villages. The census definition of an uninhabited village differs slightly from the revenue definition of village in that the latter defines an uninhabited village as one having a population of less than 25.

Wherever a revenue village situated on the outskirts of a town is wholly or partly merged in that urban area, it has been treated as a separate village. The population residing in that area which is statutorily merged in the town limits has been treated as urban population of that town; the residual population, if any, residing in the area outside the limits of the town is alone treated as the population of that village. Thus, a few partly merged villages have returned some populations. The population for all fully merged villages has been treated as urban population.

While the 1971 census village is thus completely identified with the revenue village, forest villages make an exception. They are population centres situated within reserved forest areas. Their population consists mainly of forest labourers and their families. Most of them are permanent or semi-permanent localities and may have attached cultivated areas leased out by the forest department under certain conditions. The land records of such villages are not maintained by the revenue department. The census list of villages also includes all inhabited forest villages.

The district and tahsil maps show by name the district and tahsil headquarters, other towns and bigger villages. Smaller villages are indicated by location code numbers. An alphabetical list of villages and towns faces each map. Hilly regions and uplands are tinted. Rivers and communications are also shown.

Shri D. V. Rangnekar, deputy director of census operations (Hq.), laid the groundwork for the entire operation. His experience and guidance have been of great value at every stage. Shri G. A. Walawalkar and Shri M. D. Baride, deputy directors of census operations, and Smt. V. Y. Joshi and Shri D. S. Pilpile, tabulation officers, were mainly responsible for the collection and processing of data for Part A. Kumari V. T. Nimbalkar, tabulation officer, prepared Part B based on primary census abstracts. Shri S. Y. Pradhan, draughtsman, drew the maps included in this volume. Shri C. M. Kane prepared the manuscript for the press.

Shri R. B. Alva, Manager, Government Press and Book Depot, Nagpur, was of great help in getting the book printed during a period of stress and strain.

I am grateful to all of them.

TOWN DIRECTORY

Explanatory Note

The town directory is presented in six statements covering different aspects of urban life. The data contained in these statements fall into three broad groups, *viz.*, population data; municipal finance; physical aspects, location and amenities. The census data are included in statement I. Details regarding municipal finance are given in statement III. Physical aspects, location and different types of amenities available in the town may be found in statements II, IV, V and VI.

There are 289 towns (urban areas) in Maharashtra. Of these four are municipal corporations (Bombay, Poona, Nagpur and Sholapur), 221 municipal councils and seven cantonments. The remaining 57 are non-municipal towns. In the town directory, towns in the district are arranged tahsilwise and according to the census location codes which are serialised for the entire district. On an average there are 10 to 12 towns in a district; in each tahsil there are only one or two towns. Some of the tahsils do not have any town at all.

The data collected in these statements have largely been furnished by the municipal bodies. For non-municipal towns, the tahsildars have supplied the material. Wherever data were either not available or were deficient, government departments and offices concerned were helpful in rectifying the gaps. These included the state statistical bureau, revenue authorities, the Maharashtra state electricity board, the irrigation and power department, etc.

Statement I shows the status, growth history and functional characteristics of each town. The status of a town as in 1970 is shown as whether the town is a municipal corporation, a municipal council, a contonment or civil lines. If it does not fall in any of these categories but has been treated as a town because it satisfies certain criteria prescribed for treating a place as a town, an entry 'NM' is made in this column. The population of each town from 1901 to 1971 has been shown. Whenever a town has been declassified, this is indicated. The functional category of each town is shown in column 14; this relates to the predominant sector or sectors of economic activity. This is determined according to the following formula.

According to the 1971 census classification, workers are classified under nine broad categories of economic activity. These are described in the explanatory note on "village directory". These nine categories have been regrouped into five broad categories representing five main functions of towns such as (*i*) primary activity (industrial categories I, II, III and IV, (*ii*) industry (industrial categories V and VI); (*iii*) trade and commerce (industrial category VII); (*iv*) transport (industrial category VIII) and (*v*) services (industrial category IX). For each town the percentage of workers under each of these five classes of economic activity to total workers has been calculated and according to the percentage value the functional character of towns is determined. If workers under one of the occupations form 40 per cent of the total workers or above, then the town has been considered as a mono-functional town, *e.g.*, primary activity town or industrial town. If the percentage figure of one occupation is less than 40, the next predominant occupation is taken into account so that their total comes to 60 per cent or above. Such a town is classified as a bi-functional town, *e.g.*, primary activity-*cum*-industry or service-*cum*-industry town. If the total of two occupations does not reach 60 per cent, then the three predominant occupations are taken into account and such a town is termed as a multi-functional town, *e.g.*, service-*cum*-primary activity-*cum*-industrial town or transport-*cum*-commercial-*cum*-service town.

Statement II shows the physical aspects and location of each town. The former cover altitude, annual rainfall, minimum and maximum temperatures, the data in respect of which have been obtained from the meteorological department. The location of a town is fixed by the distances respectively from the nearest city, state, district, sub-division and tahsil headquarters. Communication facilities are shown by mentioning bus route, navigable river or canal and seaport. The last two items are shown only in cases where the distances between the town and the river or canal on the one hand or the seaport are less than 10 and 50 km respectively.

Statement III deals with municipal finance. The receipts and expenditure under broad classifications for the year 1968-69 are shown. For non-municipal towns data have been supplied by the gram panchayats.

Statements IV and V show amenities like medical, educational, recreational and cultural facilities that are available in the town. The road length within the town is split into pacca and kacha roads. The system of sewerage, if available, is shown with a break-up giving open gutters, underground drains etc. as also the types of latrines. Data about electric connections are broken up into domestic, industrial, commercial, street lights and others.

Statement VI relates to the trade and business activity of each town. The items covered are imports and exports of important commodities, manufacture of important items, existence of banks and agricultural and non-agricultural credit societies.

Statement VII showing the distribution of the 1971 population by religion (originally intended for inclusion here) will be incorporated in the state town directory. This state directory embracing all towns in Maharashtra (arranged alphabetically) will carry a note and an analysis of the various data included therein.

VILLAGE DIRECTORY

Explanatory Note

The village directory furnishes information for each village in 18 columns. The information falls into two broad groups—amenities available within the village (3 to 9) and land utilisation pattern (11 to 15).

Column 1 gives the location code of each village. All villages in a tahsil are serially arranged according to the code numbers assigned to them for the 1971 census. The series starts from the north-west corner of a tahsil and proceeds from left to right in a zigzag manner. An alphabetical list of villages faces each tahsil map in part B. This will enable the reader to find the location code number.

Column 2 gives the names of villages as maintained in the village records. As far as possible standard spellings which have been confirmed by the tahsil offices are used. Wherever villages are entirely merged in an urban area the entry 'included in urban area' is made against them and all other columns are blank.

The area of villages shown in column 3 represents the total geographical area according to the revenue records. There are differences between the figures of total area arrived at by the Surveyor general and by the village records. The former is calculated by planimetry from maps with the help of areas of quadrilaterals of 15 minutes' latitude and longitude already worked out. The latter are calculated by totalling the village returns.

Amenities available in each village are shown by abbreviations in columns 4 to 9. A list of abbreviations used in columns 4 to 10 and 17 is given on page 11.

Column 4 shows educational facilities like primary, middle and secondary schools and colleges existing in the village. If there are more than one institution of any type, its number is given within brackets against the abbreviation, *viz.*, P(4), S(2), M(3). In column 5 medical facilities such as hospitals, dispensaries, maternity and child welfare centres, health centres and family planning centres are shown. In column 6, the entry El shown against a village means that it is electrified. Column 7 shows the sources of drinking water supply within the village. The sources include tap water, well water, tank water, tube well water, river water, etc.

If a village is served by a railway or one or more roads within a distance of one mile from it, particulars such as pacca road, kacha road, railway station, navigable river or canal are shown in column 8.

Postal facilities like a post office, a post and telegraph office and telephones are shown in column 9.

Column 10 gives the staple food of the major population of the village during the major part of the year. This may be rice, jowar, ragi and other millets. If it is difficult to name clearly a particular grain as the staple food a combination of grains mainly used as staple food, *i.e.*, rice and jowar, wheat and maize, etc., is shown.

Details about land utilisation shown in columns 11 to 15 are classified in three broad groups, *viz.*, forest (11), cultivable land (12) to (14) and land not available for cultivation (15).

Column 11 shows all forested area in the village classed or administered as forest under any legal enactment dealing with forests, whether state-owned or private. If any portion of such land is not actually wooded but put to some agricultural use, that portion is included under the appropriate heading of cultivated or uncultivated land.

Columns 12 and 13 cover all agricultural land including the net area sown with crops and orchards and also current and other fallows. The latter implies all lands which were taken up for cultivation but are temporarily out of cultivation for a period of not more than five years. In column 12, the extent of irrigated land under different types of irrigation, *e.g.*, wells, rivers, canals and others (which includes tube wells and other types) is shown.

Column 14 shows the extent of cultivable land in the village which includes land fit for cultivation whether or not taken up for cultivation or once taken up for cultivation but not cultivated for more than five years in succession. Such lands may be either fallow or covered with shrubs and jungles which are not put to any use. They may be assessed or unassessed and may lie in isolated blocks or within cultivated holdings. Lands under thatching grass, bamboo and other groves for fuel, *etc.*, which are not included under orchards or forest are included in this category. All grazing land, whether permanent pastures or meadows or not, village common, and grazing lands within forest areas are included in this column.

Column 15 shows land not available for cultivation such as barren, unculturable land and land put to non-agricultural use. Barren and unculturable lands include rocky or hilly land or land which cannot be easily brought under cultivation except at a high cost. Land put to non-agricultural use includes land occupied by buildings, roads and railways or under water, *e.g.*, rivers and canals and land put to uses other than agricultural.

The added up area under columns 11 to 15 may not occasionally agree with the figure of total area given in column 3. This is because of double-cropping in parts of the cultivable land in the village concerned.

Columns 16 to 18 are filled in on the basis of local enquiry.

LIST OF ABBREVIATIONS

EXPLANATORY NOTE

The Primary Census Abstracts included in this part give village and urban block-wise summary information about basic items like area, occupied residential houses, number of households, general population and its sex break-up, the population belonging to the scheduled castes and scheduled tribes, literates and educated persons, workers classified into broad industrial categories and non-workers in 1971. The tables present for each tahsil in 38 columns the figures for total, rural and urban areas separately and also for each village, town and urban block. The figures are compiled from the 1971 census individual slip which included questions on essential demographic data like relationship to head of the household, sex, age, marital status, birth-place, last place of residence; social and cultural data like religion, literacy and mother-tongues; and economic data—covering the individual's main activity and secondary work, occupation and industry, also of worker and activity if not working. The figures are collected with reference to the time of sunrise on 1 April 1971.

The information presented in the abstracts can be divided into two broad groups—demographic and social data (columns 4 to 14) and economic data (columns 15 to 38). At the beginning the figures for total, rural and urban areas of a tahsil are presented followed by village-wise presentation; at the end information is furnished for each urban block.

The villages are arranged according to the 1971 census location code system evolved for convenience and identification of every unit of territory covered. Each district has a fixed number; within each district every tahsil or urban area (town) bears a distinct number; within each tahsil every village is allotted a number. Similarly each urban area within a district is given a number. The code numbers for tahsils have been given in such a way that the tahsil having the district headquarters located therein invariably received the first code number. The code number for other tahsils are assigned in such a manner that the tahsil to the north or north-east of the tahsil having the district headquarters received the next code number in the series which then continued in a clock-wise fashion for other tahsils. The lists of villages within a tahsil have been arranged according to the geographical contiguity of the villages as far as possible so that neighbouring villages can be grouped for supervision or administrative operation if necessary. The villages in the list generally follow each other in area of proximity starting from the north-west and continuing to the south-east. These lists also include urban areas (towns) by the names by which they are known in the revenue administration. If any village is partly merged in a municipal area, it is shown in the list without any location code for the village and only the portion remaining outside is given the code number. Uninhabited revenue villages are also included in the list and given a serial number.

In column (3) of the tables, the area of each village is shown in acres while that of town (municipal and non-municipal) is given in square kilometres. The area figures for villages are collected from the revenue records and for municipal towns from the municipal authorities.

Column (4) shows the total number of occupied residential houses, *i.e.*, houses, structures or parts of structures used as residences or put to residence-*cum*-other uses. An occupied residential house may have more than one household staying therein, but it has been counted only once.

Column (5) shows the number of households in each village and urban block. The connotation of a household differs slightly from that of a family. It is a group of persons who commonly live together in the same house and take their meals from a common kitchen unless the exigencies of work prevent anyone of them from doing so. A domestic servant residing and eating at his employer's house is considered as a member of the household. Similarly, a friend or a guest (related or unrelated) residing and eating with the household during the census period is treated as a member of the household. On the other hand, a son, a daughter or a relation residing outside the household in a hostel, etc., is not treated as a member of the household.

Columns (6), (7) and (8) give the total population including institutional and houseless population and its sex break-up. Houseless population includes persons who do not have any fixed place of residence but go on moving from place to place, camp at night or just live on the streets, in gardens or in open places without erecting a hut or a similar structure. They may include domestic servants and other workers who do not reside in any house. All such houseless persons were separately enumerated on the night of 31 March 1971. Institutional population includes persons enumerated in the penal, charitable or mental institutions, hostels, hotels, hospitals, boarding and lodging houses.

Columns (9), (10), (11) and (12) show the population of the scheduled castes and scheduled tribes with sex break-up. The figures presented relate to the totals of all scheduled castes and scheduled tribes and not their break-up by individual scheduled caste or scheduled tribe. The groups of scheduled castes and scheduled tribes do not include backward or other backward castes or tribes for which certain privileges and concessions are allowed by the State government. They include only those scheduled castes and scheduled tribes which are included in the President's order. In cases where a caste or a tribe is declared as a scheduled caste or a scheduled tribe for a specified area, that caste or tribe has been counted only for that specified area and not for any other area of the district or elsewhere.

Columns (13) and (14) show the number of literates and educated persons. A literate is a person who can read and write a simple letter in any language,

Columns (15) to (36) show the distribution of the working population into nine broad industrial categories. Category V (manufacturing, processing, servicing and repairs) is sub-divided into household industry and other than household industry.

The main economic activity returned by a person was the basis on which he was classified either as a worker or non-worker. A worker is defined as person whose main activity is participation in any economically productive work through his physical or mental activity. Work involves not only actual work but effective supervision and direction of work.

Where the main activity of a person qualifies him to be treated as a worker he has been classified according to the type of work. This categorisation is shown in the following nine broad economic categories :—

I cultivators,
II agricultural labourers,
III live stock, forestry, fishing, hunting and plantations, orchards and allied activities,
IV mining and quarrying,
V (a) household industry, (b) manufacturing other than household industry,
VI construction,
VII trade and commerce,
VIII transport, storage and communication,
IX other services.

Category I

This category includes both owner cultivators and tenant cultivators. Along with workers personally working on land are also included persons who are engaged in supervision or direction of cultivation. All persons working in cultivation of land wherein they have either ownership or tenancy rights are included in this category. Cultivation involves ploughing, sowing and harvesting and production of cereals, pulses, fibre crops and other crops like sugarcane, ground-nuts, but excludes fruit and vegetable growing, working of plantation crops.

Category II

Persons working on another's land for wages in cash or kind without holding any right upon the land are classified as agricultural labourers and included in this category.

Category III

Workers in live stock, forestry, fishing, hunting, plantations, orchards and allied activities.

Category IV

Workers in mining and quarrying.

Category V

A 'household industry' is defined as an industry conducted by the head of the household himself and/or mainly members of the household at home/or within the village in rural areas and only at home in urban areas. A household industry is not run on the scale of a registered factory. The main criterion for a household industry is the participation of one or more members of a household in rural areas. In the urban areas, household industry is confined to the residential house.

A household industry is related to production, processing, servicing, repairing or making and selling of goods. It does not include professions such as pleader, doctor, barber, waterman or astrologer. Persons working in another person's household industry as paid employees are also treated as workers in household industry.

Workers in manufacturing industry other than household industry include those engaged in all types of production, processing, servicing or repairing of goods.

Category VI

This category includes workers engaged in construction and maintenance of buildings, roads, railways, bridges, telegraph, telephones, water-ways, reservoirs, etc.

Category VII

This category includes workers engaged in any capacity in wholesale or retail trading activity and commercial transaction relating to imports and exports, real estate and property, stocks and shares, insurance, money-lending, banking, etc.

Category VIII

This category includes workers engaged in transport activity by air, rail, road or water and in services incidental to transport such as packing, carting, loading, unloading, etc. Workers engaged in storage, warehousing and communication services such as posts, telegraph, telephones, wireless signalling, information and broadcasting are also included in this category.

Category IX

This category includes (i) public utility services like electricity or gas or water-supply, sanitary services ; (ii) central, state or municipal employees ; (iii) professional services ; (iv) trade or labour associations, recreational services, etc.

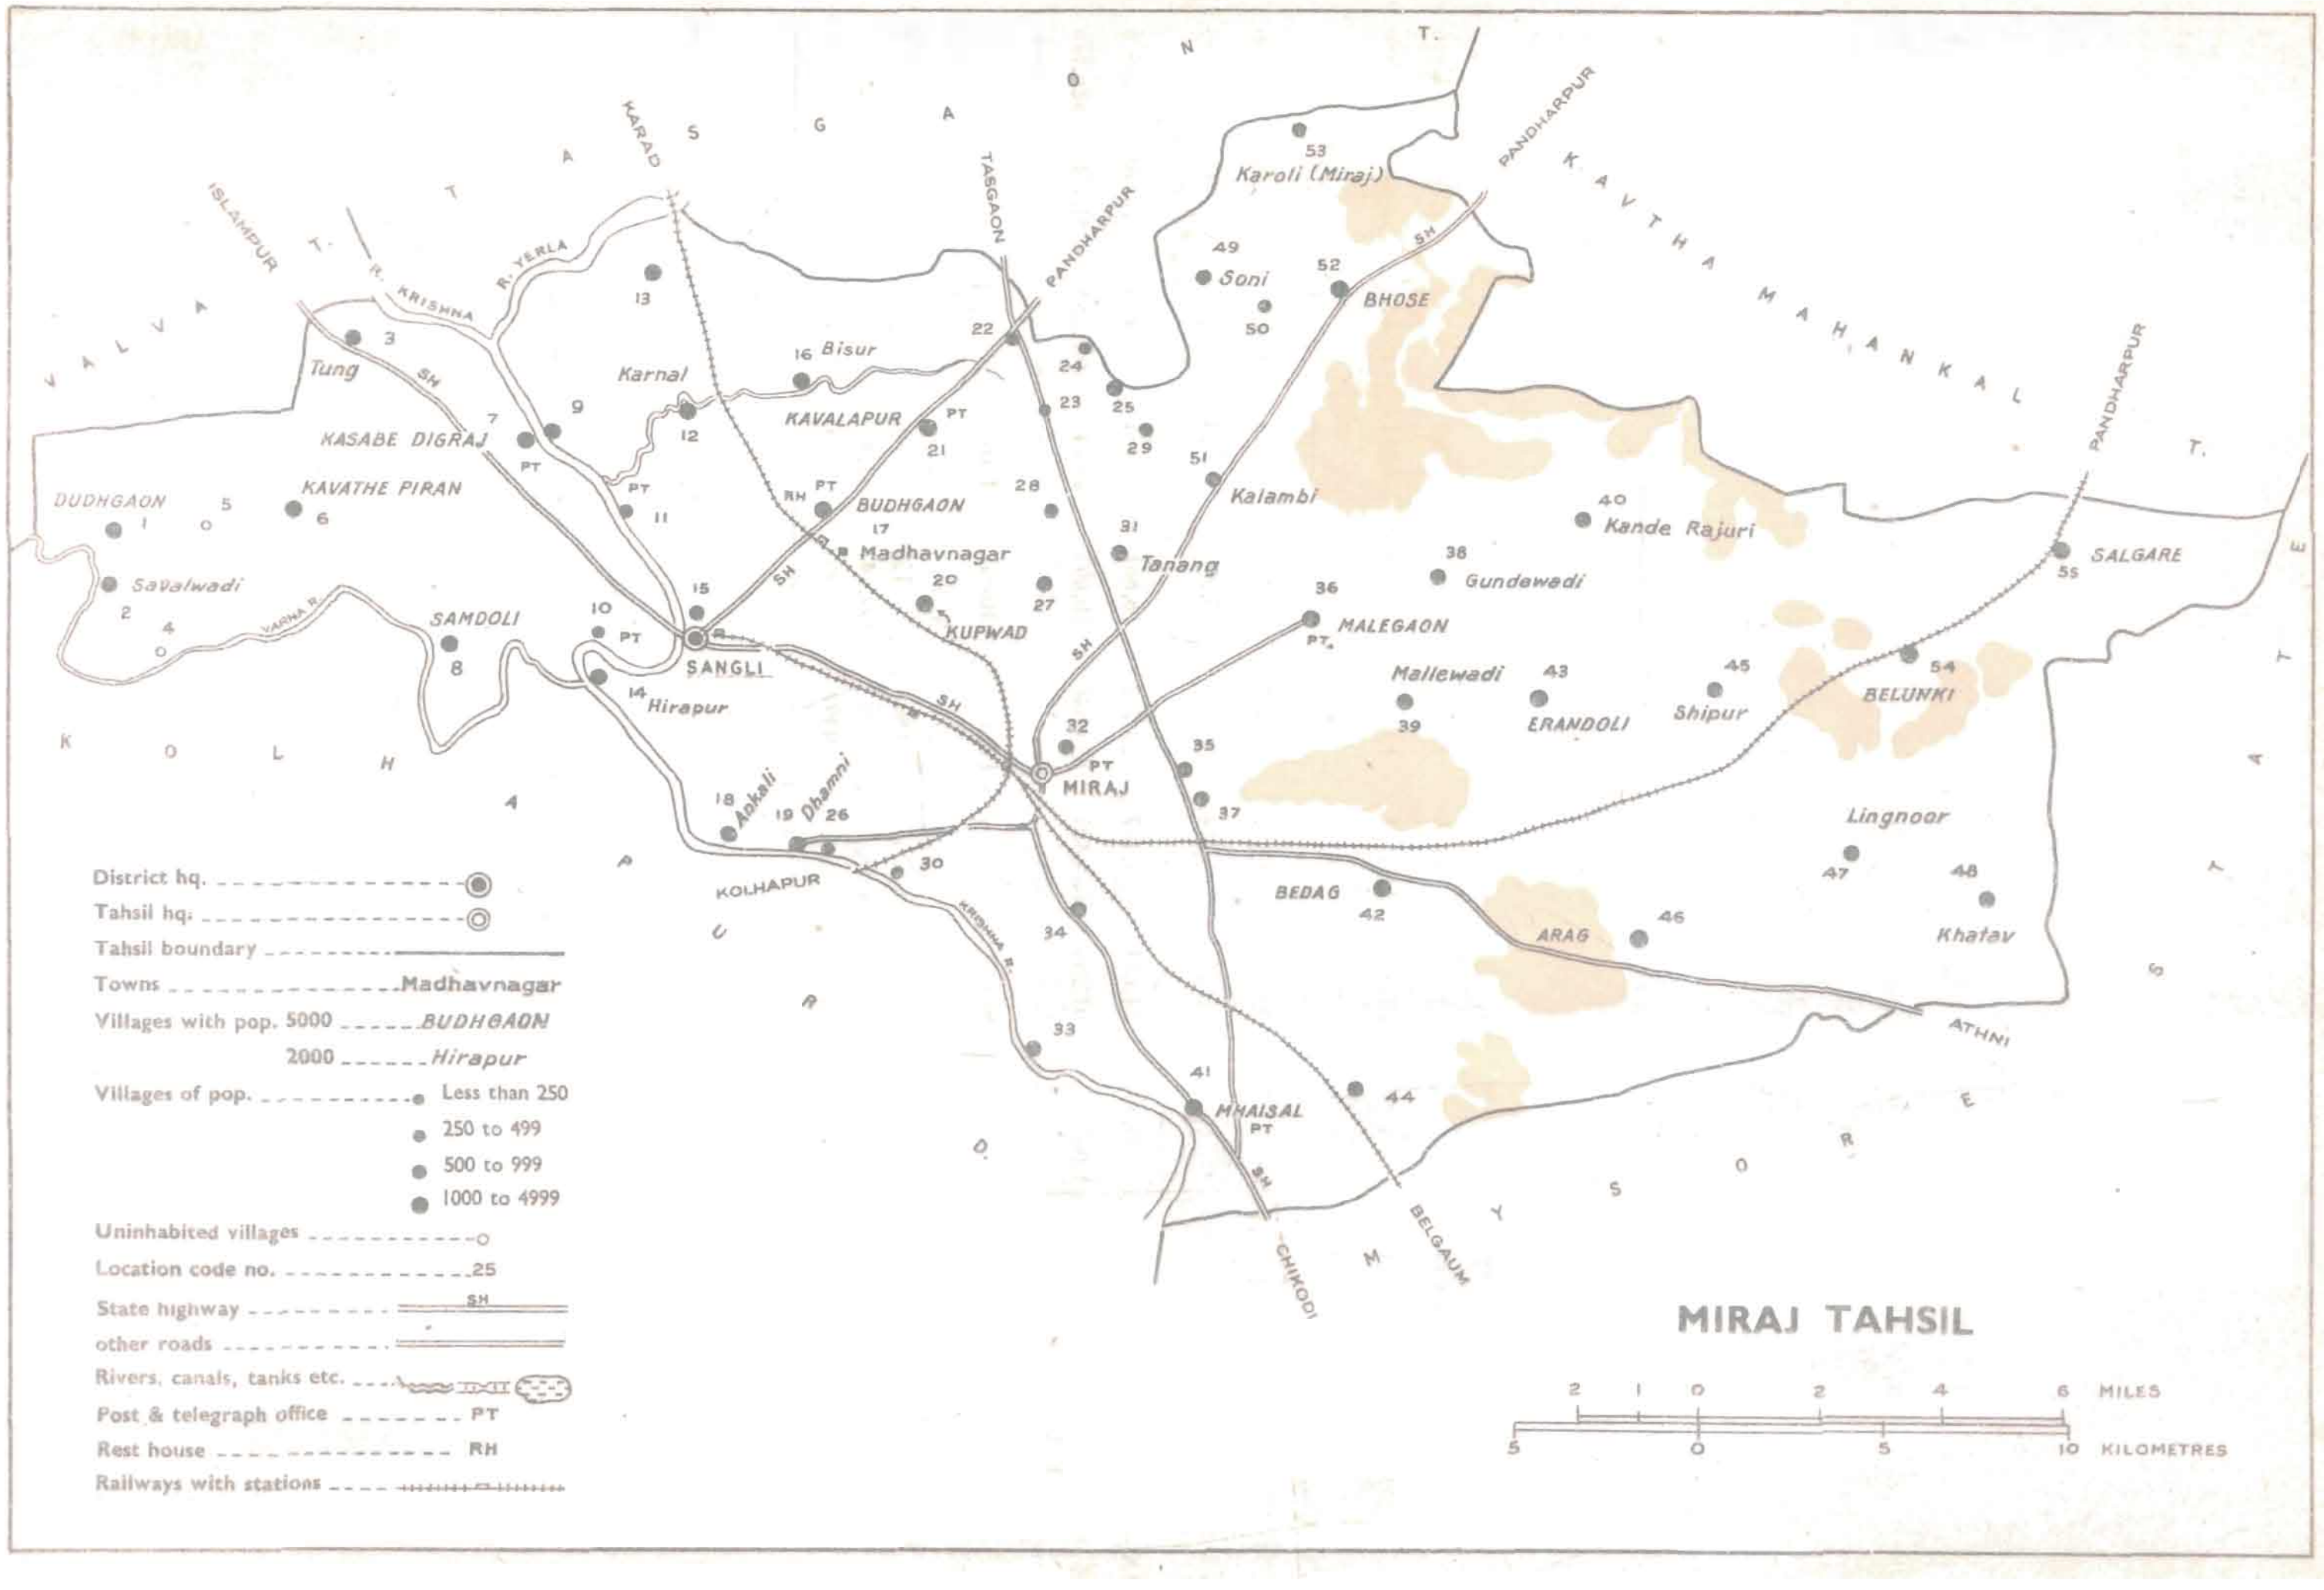

Category X—Non-workers

Non-workers are those who are not mainly engaged in any economically productive work. They comprise seven broad groups: (*i*) those basically engaged in unpaid household duties and doing no other work, (*ii*) all full-time students and children attending school, (*iii*) retired persons not employed again in some full-time work and rentiers (*iv*) all dependents such as infants and children not attending school, persons permanently disabled from work owing to illness, old age, etc., (*v*) beggars, vagrants, independent women without indication of source of income, those of unspecified sources of subsistence, (*vi*) inmates of penal, mental or charitable institutions, convicts in jails, and (*vii*) all non-workers who may not come under any of the above six categories but are seeking work.
