**TRADITIONAL MARINE FISHERIES - A COASTAL SCENE**

The picture on the cover represents a common sight that meets the eyes of any one who wanders about near the seashore in the coastal towns and villages of Uttar Kannad district. There is however nothing unusual in this, for such scenes are quite common all along the coast irrespective of the administrative division to which the place belongs. This picture on the other hand symbolises the unique importance of the age old profession of marine fisheries in the economy of Uttar Kannad district.

The coastal belt of Uttar Kannad district is a succession of estuarine plains connected by narrow coastal strips which lie within the limits of the taluks of Karwar, Ankola, Kumta, Honavar and Bhatkal as one moves down from the North to the South. The coastal line, covering a distance of about 114 Km, stretches down from Majali near Karwar to Gorte near Bhatkal. This part of the West Coast is known as the 'Mackerel Coast' and is known for its abundance of mackerels and sardines in particular. Along the coastal line of the district there are 16 prominent landing centres. By and large marine fishing has remained a preserve of the men belonging to the traditional fishermen communities such as the Ambig, Kharvi and Harkantra. The fishermen community as such constitutes a significant segment of the population of the coastal towns and villages and enjoys a distinctive place in the socio-economic and cultural life of the inhabitants of such villages and towns. The number of fishermen actually engaged in marine fishing is estimated at a little more than ten thousand.

The fishermen venture into the sea in their dug out canoes and plank boats and catch a variety of fishes by using different types of nets such as cast nets, gill-nets, hook and line and the giant sized rampani bale. In this district also there are at present a few purse-seine fishing units as well as a few mechanised boats or coastal trawlers which are mainly built for prawn fishery. The quantity and value of the fish catch realised in this district during 1979-80 were estimated at 46148 tonnes and Rs.619 lakhs. Since this entire quantity of the annual fish catch cannot be consumed fresh, it is estimated that about 65 percent is cured, about 8 percent is kept frozen and another 5 percent is canned before it is actually consumed. Further, a small proportion is converted into fish manure as well.

Since Marine fishing is a characteristic feature of the economy of Uttar Kannad district, several developmental programmes have also been launched in recent years. A special mention may be made of the Indo-Norwegian Project located near Karwar and the Indo-Denmark Project at Tadri.

Based upon Survey of India map with the permission of the Surveyor General of India.

The territorial waters of India extend into the sea to a distance of twelve nautical miles measured from the appropriate base line.

## PART - A : VILLAGE AND TOWN DIRECTORY

### Section I - Village Directory

| | | |
|---|---|---|
| Explanatory Notes | | 43-48 |
| Alphabetical list of villages | - Ankola Taluk | 51 |
| Village Directory Statement | - Ankola Taluk | 52-57 |
| Alphabetical list of villages | - Bhatkal Taluk | 61 |
| Village Directory Statement | - Bhatkal Taluk | 62-65 |
| Alphabetical list of villages | - Haliyal Taluk | 69-70 |
| Village Directory Statement | - Haliyal Taluk | 72-79 |
| Alphabetical list of villages | - Honavar Taluk | 83 |
| Village Directory Statement | - Honavar Taluk | 84-89 |
| Alphabetical list of villages | - Karwar Taluk | 93 |
| Village Directory Statement | - Karwar Taluk | 94-97 |
| Alphabetical list of villages | - Kumta Taluk | 101 |
| Village Directory Statement | - Kumta Taluk | 102-109 |
| Alphabetical list of villages | - Mundgod Taluk | 113 |
| Village Directory Statement | - Mundgod Taluk | 114-119 |
| Alphabetical list of villages | - Siddapur Taluk | 123-124 |
| Village Directory Statement | - Siddapur Taluk | 126-137 |
| Alphabetical list of villages | - Sirsi Taluk | 141-142 |
| Village Directory Statement | - Sirsi Taluk | 144-157 |
| Alphabetical list of villages | - Supa Taluk | 161-162 |
| Village Directory Statement | - Supa Taluk | 164-173 |
| Alphabetical list of villages | - Yellapur Taluk | 177-178 |
| Village Directory Statement | - Yellapur Taluk | 180-187 |

Appendix I - III

| | | |
|---|---|---|
| I | Talukwise abstract of Educational, Medical and Other Amenities | 190-193 |
| II | Land Utilisation data in respect of Non-Municipal Towns (Census Towns) | 192-193 |
| III | List of villages where no Amenities except Drinking Water are available | 194-196 |

### Section II - Town Directory

| | | |
|---|---|---|
| Explanatory Notes | | 199-206 |
| Statement I | - Status and Growth History | 208-209 |
| Statement II | - Physical aspects and location of towns 1979 | 210-211 |
| Statement III | - Municipal Finance, 1978-79 | 212-213 |
| Statement IV | - Civic and other amenities, 1979 | 214-215 |
| Statement IV A | - Civic and other amenities in Notified Slums, 1979 | 214-215 |
| Statement V | - Medical, Educational, Recreational and Cultural Facilities, 1979 | 216-217 |
| Statement VI | - Trade, Commerce, Industry and Banking, 1979 | 218-219 |

## PART - B : PRIMARY CENSUS ABSTRACT

| | | |
|---|---|---|
| Explanatory Notes | | 223-224 |
| District Primary Census Abstract | | 226-227 |
| Alphabetical list of villages | - Ankola Taluk | 231 |
| Primary Census Abstract | - Ankola Taluk | 232-235 |
| Alphabetical list of villages | - Bhatkal Taluk | 239 |
| Primary Census Abstract | - Bhatkal Taluk | 240-243 |
| Alphabetical list of villages | - Haliyal Taluk | 247-248 |
| Primary Census Abstract | - Haliyal Taluk | 250-255 |
| Alphabetical list of villages | - Honavar Taluk | 259 |
| Primary Census Abstract | - Honavar Taluk | 260-263 |
| Alphabetical list of villages | - Karwar Taluk | 267 |
| Primary Census Abstract | - Karwar Taluk | 268-271 |
| Alphabetical list of villages | - Kumta Taluk | 275 |
| Primary Census Abstract | - Kumta Taluk | 276-284 |
| Alphabetical list of villages | - Mundgod Taluk | 285 |
| Primary Census Abstract | - Mundgod Taluk | 286-289 |
| Alphabetical list of villages | - Siddapur Taluk | 293-294 |
| Primary Census Abstract | - Siddapur Taluk | 296-303 |
| Alphabetical list of villages | - Sirsi Taluk | 307-308 |
| Primary Census Abstract | - Sirsi Taluk | 310-319 |
| Alphabetical list of villages | - Supa Taluk | 323-324 |
| Primary Census Abstract | - Supa Taluk | 326-331 |

# FOREWORD

The district census handbook (DCH), compiled by the Census Organisation on behalf of the State governments, is one of the most valuable products of the Census. The DCH is constantly referred to by planners, adminsitrators, academicians and researchers. It is inter alia used for delimitation of constituencies, formulation of local level and regional plans and as an aid to District Administration. The district census handbook is the only publication which provides Primary Census Abstract (PCA) data upto village level for the rural areas and wardwise for each city or town. It also provides data on infrastructure and amenities in villages and towns, etc.

The district census handbook series was initiated during 1951 Census. It contained important census tables and PCA for each village and town of the district. During 1961 Census the scope of the DCH was enlarged and it contained a descriptive account of the district administrative statistics, census tables and a village and town directory, including PCA. The 1971 DCH series was planned in three parts. Part-A related to village and town directory, Part-B to village and town PCA and Part-C comprised analytical report adminsitrative statistics, district census tables and certain analytical tables based on PCA and amenity data in respect of villages. However, in some States it was confined to district census tables and in a few cases altogether given up due to delay in compilation and printing.

While designing the format of 1981 DCH series some new features along with the restructuring of the formats of village and town directory have been attempted. At the same time, comparability with the 1971 data has also been kept in view. All the amenities except power supply in the village have been brought together in the village directory with the instruction that in case an amenity is not available in the referent village the distance in broad ranges from the nearest place where the amenity is available may be given. The restructuring infrastructure aspect, particularly in relation to amenities and land-use pattern, is expected to further meet the need of microlevel planning for rural areas. It is expected to help not only in local area planning but regulating the provision of goods and services as well as to minimise the regional imbalances in the process of development. A few new items of information have also been introduced to meet some of the requirements of the Revised Minimum Needs Programme. Such new items of information as adult literacy centres, primary health subcentres, and community health workers in the village have been introduced in the village directory with this objective in mind. The new item on approach to the village is to have an idea about the villages in the district which are inaccessible. A new column, "total population and number of households" has been introduced to examine the correlation of the amenities with the population and number of households they serve. Addition of two more appendices listing the villages where no amenities are available and according to the proportion of scheduled caste and scheduled tribe population to the total population has also been made with this view in mind.

The formats of the town directory have also been modified to meet the requirements of the Minimum Needs Programme by providing information on a few new items. A new statement on civic and other amenities in slums in Class-I and Class-II towns (Statement-IV-A) has been introduced with this objective in mind. It is expected that this will help the planners to chalk out programme on provision of civic amenities for the improvement of slums. The columns on Scheduled Castes and Scheduled Tribes population in Statement IV relating to civic and other amenities and adult literacy classes/centres under educational facilities in Statement V are also added inter alia with this view. A significant addition is class of town in all the seven statements of the town directory. The infrastructure of amenities in urban areas of the country can be best analysed by taking the class of towns into consideration. The addition of the columns on civic administration status and population in a few statements also serves this purpose.

The format of the primary census abstract for the villages and towns has been formulated in the light of changes in the economic and other questions canvassed through the individual slip of 1981 Census.

In order to avoid delay in publication of 1981 DCH series it has been so designed that Part-A of the volume contains village and town directory and Part-B the PCA of villages and towns including the Scheduled Castes and SCheduled Tribes PCA upto Tahsil/ Town levels. At the beginning of the DCH a detailed analytical note supported by a number of inset tables based on PCA and non census data in relation to the infrastructure has been introduced to enhance its value. The district and tahsil/Police Station/C D block etc., level maps depicting the boundaries and other important features have been inserted at appropriate places, to further enhance the value of the publication.

This publication is a joint venture of the State Government and the Census Organisation. The data have been collected and compiled in the State under the direction of Shri B.K.Das, the Director of Census Operations, Karnataka, on behalf of the State Government which has borne the cost of printing. The task of planning, designing and coordination of this publication was carried out by Shri N.G.Nag, Deputy Registrar General (Social Studies) of my office. Dr.B.K.Roy, Deputy Registrar General (MAP) provided the technical guidance in the preparation of the maps. Data received from Census Directorates have been scrutinised in the Social Studies Division at the headquarters under the guidance of Shri M.M.Dua, Senior Research Officer, I am thankful to all who have contributed in this project.

NEW DELHI
26th April, 1982

P.PADMANABHA
REGISTRAR GENERAL, INDIA

# PREFACE

The Registrar General and Census Commissioner of India has in his foreword to this series of publications, not only provided the reader with the historical background of the District Census Handbooks but has also explained at some length the scope and coverage envisaged for this country-wide project. As uniformity in approach and comprehensiveness of data are distinctive features of this series every attempt has been made to adhere to the concepts and definitions adopted in designing the formats. These volumes contain the salient results based on the data gathered at the actual census count and, in addition contain a wealth of other than census information in respect of villages and towns of the district. It is hoped that these volumes would go a long way to meet the ever increasing demand for the micro-level data in this era of planned development.

The district census handbook is divided into two portions : while Part A contains the village and town directory Part B confines itself to the primary census abstract. Since combining of these two parts and presenting the same in a single volume enhances the utility of the volume and also because the districts of the State are not so large as to render such single volumes unwieldy in Karnataka, Part A and Part B of each district are being published together in a single volume. But, there is a major point of departure from the all-India pattern in so far as Karnataka is concerned. Owing to certain technical reasons all the particulars on Scheduled Castes and Scheduled Tribes proposed for publication in the DCHB as part of Primary Census Abstract and also the other derived statements have been pooled up separately and presented in the form of a Supplement. While such Supplements have been brought out as separate volumes in the case of Bidar and Mandya, in the case of the other districts this material also forms part of the single volume of the District Census Handbook and appears separately after Part B.

In the preparation of the district census handbooks the role played by the census organisation is that of data gatherer and the cost of publication is borne by the State Government. In accomplishing this task we have had the ready and whole-hearted cooperation of the staff at various levels of different departments of the State Government. For operational convenience the village directory was divided into two portions viz. that relating to area and land use pattern, and that relating to the amenities. The relevant formats were mailed to the Tahsildars and Block Development Officers respectively requesting them to furnish information on land use pattern and amenities. Much of the data so supplied by these field-level officers have been cross-checked with the data obtained from various departments and an attempt has been made to reconcile the descripancies as well.

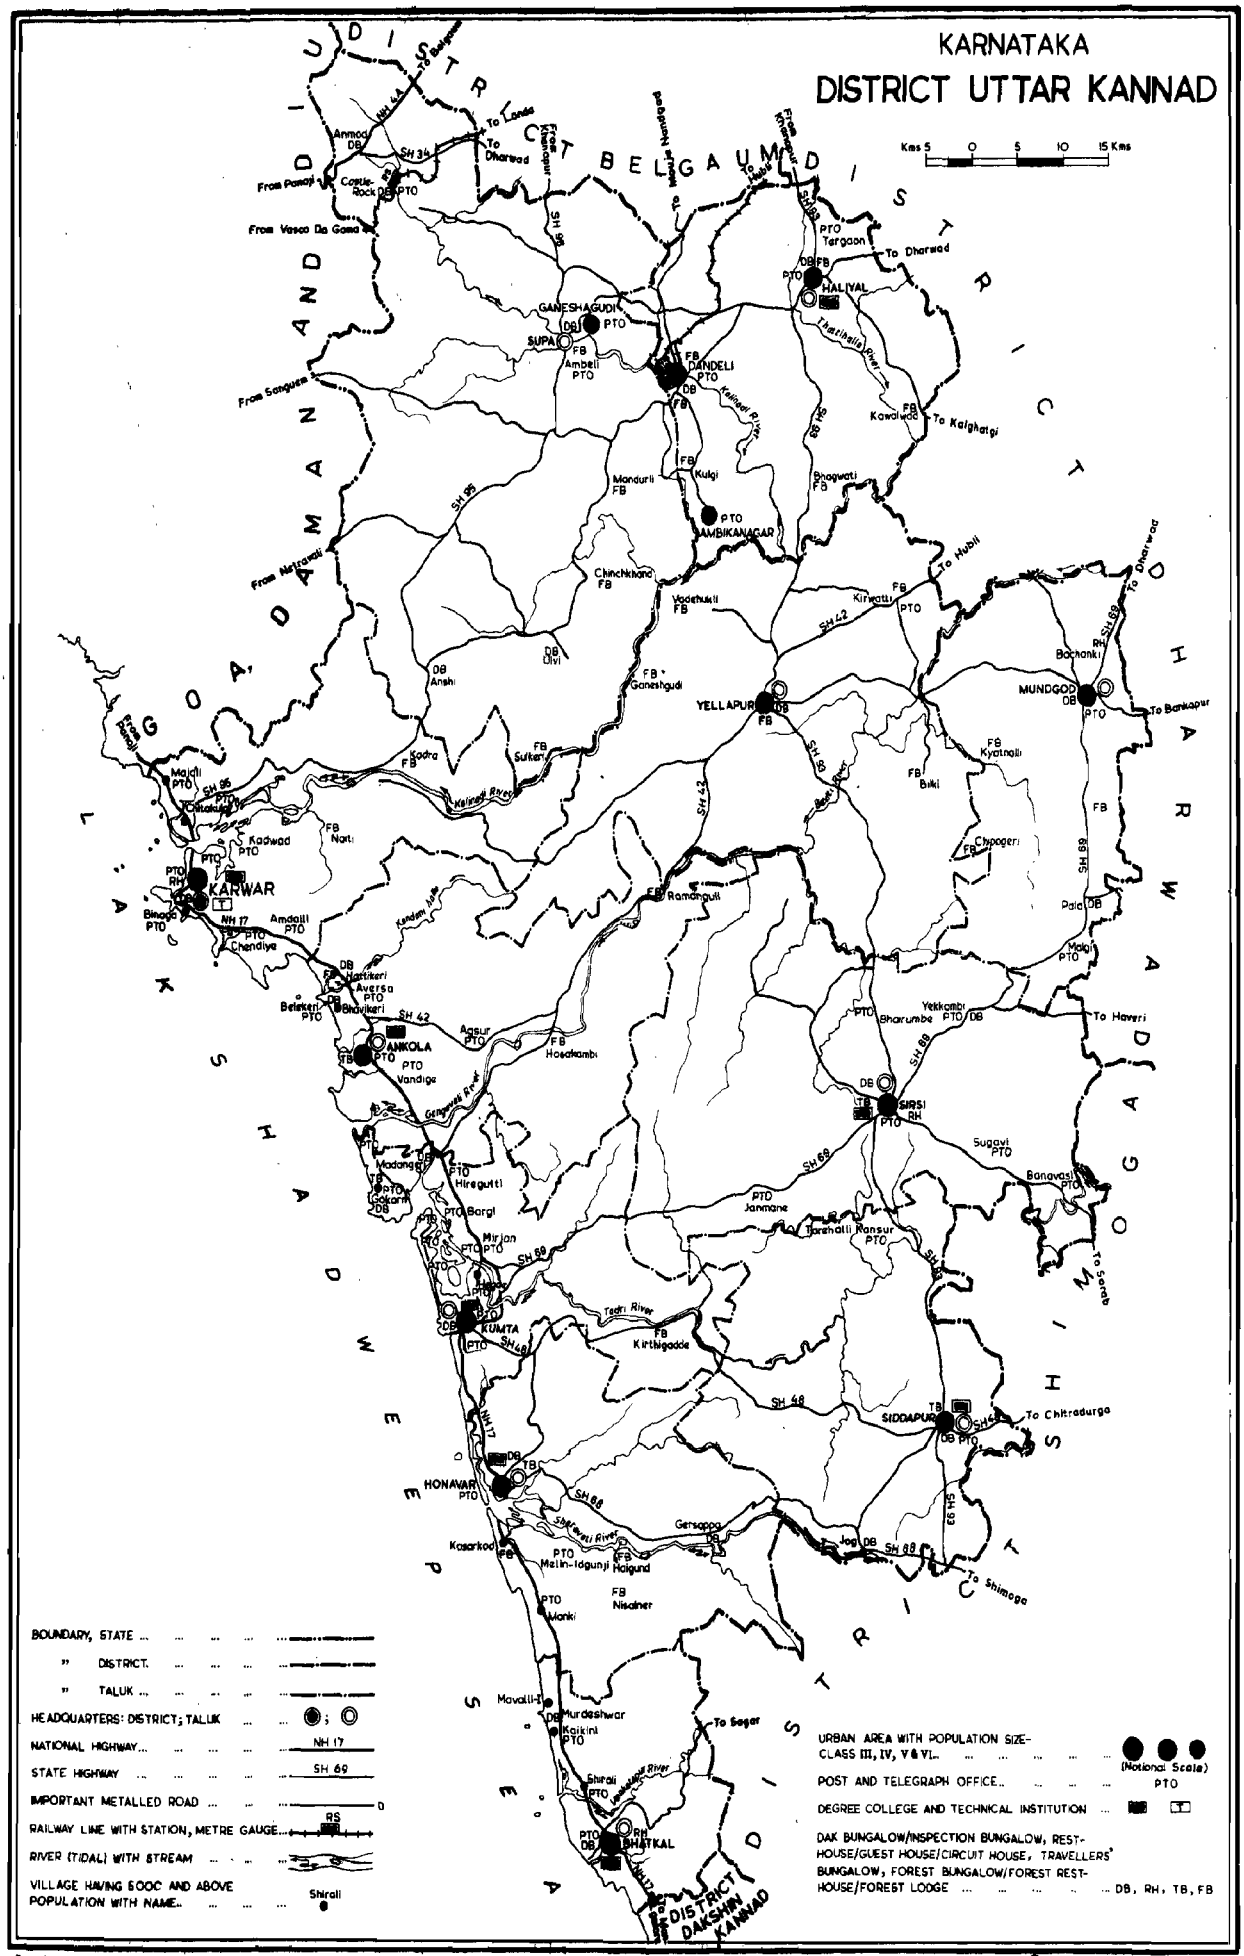

I take this opportunity to offer my greatful thanks to all the officers and officials who have been actively involved in the compilation and preparation of this volume.

I am deeply grateful to Shri P.Padmanabha, I.A.S. the Registrar General, India for the benefit I have derived by way of guidance and advice. I also express my thanks to Dr.N.G.Nag, Deputy Registrar General (Social Studies), Dr.B.K.Roy, Deputy Registrar General (Map) and Shri M.M.Dua, Senior Research Officer.

Lastly, I am thankful to the Government of Karnataka for having agreed readily to bear the cost of publication of the district census handbook volumes. The Director, Printing, Stationery and Publications, Karnataka has evinced keen interest in bringing out these volumes.

# ANALYTICAL NOTE

# ANALYTICAL NOTE

## BRIEF HISTORY OF THE DISTRICT CENSUS HANDBOOK :

The District Census Handbook was first introduced at the 1951 Census to meet the ever increasing demand for micro-level data by administrators planners and other Census data users. These series were primarily envisaged to replace the 'Part IV Taluk Tables' and 'Part V - Village Tables' of the earlier Censuses and to present the basic demographic and economic data at village level in the form of primary census abstract. In addition, these volumes were to contain a set of important census tables at taluk, town and district levels.

At the 1961 Census the scope of the volume was greatly enlarged by incorporating into it (i) a descriptive account of the district, (ii) a set of non-census tables dealing with administrative statistics of a decade, (iii) taluk and town level Census tables on economic and socio-cultural aspects and (iv) the village and urban block level primary census abstract. In a somewhat general way information on the availability of certain basic amenities like drinking water wells and schools was also furnished.

The 1971 Census witnessed an overall improvement in the matter of data compilation as well as in presentation of the results. A countrywide uniformity in approach and a comprehensive coverage are the hall marks of this series of publications. The District Census Handbook was split up into three parts: i) Part A consisting of land use data on villages and data on amenities and services available in villages and towns compiled in the form of village and town directory, ii) Part B consisting of district, taluk, town, village and urban block level primary census abstract, and iii) Part C consisting of an analytical note based on census as well as the non-census data included in the volume, a set of tables depicting the administrative statistics in greater details, census tables at district, taluk and town levels besides a set of tables generated on the basis of village-wise Census data and particulars on amenities. The main objective was to present a comprehensive and intelligible portrait of the district and an overall view of the results of a decade long developmental activities in the district. The publication programme too was phased out: Part A was planned to be released first to be followed by part B and then Part C which could be published only after the finalisation of various census tables that were to be included therein and analysed. In Karnataka, Part A and Part B were combined and published on time as a single volume for each district except in the case of Bangalore. Owing to reasons beyond control there has been an inordinate delay in the publication of Part C volumes.

The current volumes of District Census Handbook are thus the fourth in the series and at every succeeding census there has been an endeavour to enhance the utility of these volumes.

## 2. SCOPE OF 1981 DISTRICT CENSUS HANDBOOKS :

Regarding uniformity and comprehensiveness, the approach in 1981 is much thesame as in 1971. The contents have been slightly enlarged and the formats too are restructured to some extent to meet the requirements of the data users. The District Census Handbook has been divided into two parts: i) Part A consisting of town directory and village directory and, ii) Part B consisting of District, taluk, town village and ward level primary census abstracts besides the special PCA at taluk and town levels in respect of the Scheduled Caste and Scheduled Tribes. Compilation of administrative statistics has been abandoned altogether. Though divided into two parts, in Karnataka as a matter of fact both the parts are being presented in a single combined volume for each district. There is however a point of departure from the all India pattern: all particulars relating to Scheduled castes and Scheduled Tribes are excluded from the main volume of the district census handbook and are presented districtwise in the form of a supplement.

**i) Town Directory :** In the town directory section there are 7 statements in all to furnish townwise information on aspects such as: growth history; physical aspects and location; municipal finance; civic and other amenities in towns; civic and other amenities in notified slums; medical, educational, recreational and cultural facilities and trade, commerce, industry and banking. As compared to the 1971 series the statement about religionwise population has been dropped and an additional statement has been introduced in respect of urban areas with a population of 50,000 and more to furnish some basic data on slums. This apart, there are a few more variations mainly by way of inclusion of a few additional columns in each statement to indicate the size class of the town, population and also civic administration status with a view to facilitating an easier grasp of the data. In statement I, provision has been made to indicate the decadal growth rates, area and density of population as in 1981 and the sex ratio observed at the three successive censuses. The introduction of additional columns has resulted in the elimination of 2 columns which in 1971 presented comparative information on functional classification of towns. Statements II and III are very much the same while in statement IV additional information on water storage system with capacity has now been provided. In addition, in case of non-availability of fire-fighting station in the town itself reference to the nearest place with that facility has been given. In statement V too in case of non-availability of medical and educational facilities in the town information on the nearest place with such a facility has been provided. An additional column in this statement presents information on working women's hostel. Statement VI has remained almost unchanged except in the explanation regarding the imports and exports concerning the goods which simply pass through the town.

The towns in the district are arranged serially on the basis of their names in an alphabetical order and assigned location code numbers starting from 1. For presentation of data in the town directory statements the same order of the towns has been followed. The concept of urban agglomeration, introduced in 1971, has been

retained for use at the 1981 Census also. Where an agglomeration includes two or more independent towns, the names of the constituent towns are indicated in the correct sequence as per alphabetical arrangement of their names. But, the details to be furnished in the subsequent columns are skipped with a view to avoiding duplication. Instead, immediately after the name of the town, a cross reference is given by the legend "See..Urban Agglomeration" printed within brackets. The name of the core town of the urban agglomeration too would appear at its correct sequence with the legend as above and immediately below that the same name with the additional title ".....Urban Agglomeration" appears again without bearing any serial number. Against this line the cumulative totals for the urban agglomeration as a statistical unit are presented wherever such a procedure is relevant and meaningful. This line is followed by those relating to the constituent towns of the urban agglomeration starting with the name of the core city and followed by the others arranged in the alphabetical order of their names. This procedure is the same as that followed in 1971 and enables one to have a fairly good assessment of the data in relation to the smaller civic administrative units that form part of the large unit and also of the larger statistical unit itself simultaneously. In case there are outgrowths which are not 'urban' in their own right the particulars relating to such areas are merged with those relating to the concerned town and presented in the statement. Such towns having outgrowths are marked out by an asterisk mark and for all purposes the town includes not only its statutory limits but also all the outgrowths and together constitutes an independent statistical unit. In an appendix, the names of these outgrowths and the population thereof are furnished townwise. These outgrowths appear in the Village Directory also. However, in all such cases merely a legend to the effect that it is an outgrowth of such and such a town is recorded along the line instead of furnishing land use data and information on amenities. In the case of villages certain parts of which are regarded as outgrowth while the other parts are considered as rural the data relating to the outgrowth is included in the town directory statements and the data relating to the rest of the portion appears in the village directory. It may incidentally be mentioned that there are no such cases in Karnataka.

In statements II, III and VI where it is not relevant to combine the data for the urban agglomeration as a whole the legend 'see constituent units' is printed along the line instead of allowing the entire line blank.

**ii) Village Directory :**

In the village directory the columns regarding the land use pattern are very much the same while those relating to amenities have been slightly modified. Unlike in 1971, this time if a village is not having a particular amenity then the distance range within which that amenity is available and may be availed of has been indicated. This enquiry is however confined only to the basic level under each category of amenity. In other words, if a village is not having any educational institution at all then the distance that one has to cover to reach the nearest place having a primary school is indicated in ranges of less than 5 Km., 5-10 Km and 10+ Km. If a village is however having a primary school no attempt is made to provide similar information in relation to middle school, high school and college level in a progressive manner. Similar procedure has been followed regarding medical, postal and communication facilities. Regarding weekly markets too, if the village is not the venue of such a market the distance to the nearest weekly market is indicated in ranges.

In the village directory an additional column has been introduced to indicate the population of the village as well as the number of households therein. This juxta-positioning of population and amenities data would help one to assess at a glance the adequacy or otherwise of the amenities available within or in the immediate neighbourhood of the village. Another change with regard to the area and land use data this time is that these figures are furnished not in acres but in hectares upto two places of decimal. One more notable addition is the provision to indicate information about the proximity of the public transport facility such as bus stop and railway station in respect of each village. In 1971 though information on railway station (i.e., if available within one Kilometre from the village) was furnished in addition to the general condition of the road to the village under the column for communication, there was no reference at all to bus transport facility. This time, in the column about approach road the condition of the road that leads to or passes through the village is indicated. In the remarks column general information about the number of copies of newspapers circulating in the village as also about the number of different types of automobile vehicles available in the village is furnished.

In the case of uninhabited villages i.e., villages which have returned nil population at the 1981 Census, only the details in respect of land use are furnished and in the columns pertaining to amenities the word uninhabited has been printed. If there are any villages that are regarded as outgrowths of an urban agglomeration, then neither the land use data nor the data on amenities is furnished in this statement. After the location code number and name of the village a legend indicates the name of the urban agglomeration of which that village is a part. Practically this administrative unit has lost its independent existence having been merged in another unit for statistical purposes. But if only a portion of a village is so affected by inclusion in an urban agglomeration then information as may be relevant to the portion that has still remained in the rural fold as a village has been furnished in the village directory.

In order to facilitate easy reference, an alphabetical list of villages showing population figures according to the censuses of 1971 and 1981 is given in respect of each taluk. At the end, the following appendixes have also been included to provide an over all view of the district: talukwise abstract of amenities; list of inhabited villages not having any amenities; and land utilisation data for non-municipal towns if any.

**iii) Primary Census Abstract :**

As at the two previous censuses this time also the Primary Census Abstract is presented village-wise in the case of rural areas. But,in so far as the urban areas are concerned the practice of furnishing data upto urban census enumerator's block level has been given up and the particulars are presented upto ward or division level only. Within the district the taluks are arranged in the alphabetical order of their names in English and covered one after the other in that order. For each taluk after furnishing the taluk level data with the rural-urban break up the villagewise details are furnished and this is followed by the data relating to towns in the taluk.

In the Primary Census Abstract format itself there have been certain changes. Though fresh columns have been introduced to cover a new category of workers viz, marginal workers, the total number of columns is reduced in view of the elimination of details regarding workers engaged in activities other than cultivation and household industries. There are now hardly 22 columns in the statement i.e., excluding those related to Scheduled Castes and Scheduled Tribes which however appear separately in the Supplement. The workers are classified into main workers and marginal workers and the main workers are further classified into one of the four categories viz, cultivator, agricultural labourer, worker in household industry and 'other' worker depending on the nature of work done and the sphere of economic activity.

In the case of urban agglomerations the same procedure as has been adopted for presentation of data in town and village directories has been followed. That is to say, the urban agglomeration is regarded as a single statistical unit and the aggregate figures obtained by the addition of details in respect of each constituent town and outgrowth are noted against the name of the urban agglomeration which in itself does not bear a location code number. In the section dealing with the Urban Primary Census Abstract the core town with its location code appears first carrying the legend: 'See...urban agglomeration'. Immediately below that line the full name of the urban agglomeration appears and the aggregate figures for the urban agglomeration are furnished. This line is then followed by the constituent towns arranged in alphabetical order of their names along with their Location Code number and full details under various columns. If the core town or any other town for that matter were to have any outgrowths then the first line for the town would in fact be a sub-total as it includes data not only of the town but also of the outgrowths. Thereafter, the name of the town and its constituent outgrowths are given along with the relevant data.

In the rural portion of the Primary Census Abstract if an entire village were to form part of any urban agglomeration then only the name of the village is indicated along with the legend that this village is included in such and such urban agglomeration. In the case of villages partly included in an urban agglomeration details relating to only such portion as has remained under the rural category are given.

**3. BRIEF NOTE ON CENSUS CONCEPTS :-**

Census taking is a massive operation carried out in a short span of time with the active participation of a veritable army of enumerators. The reference moment for the 1981 census is the sunrise of March 1,1981 i.e., the census provides a snap shot of the population of the country as it existed at the sunrise of March 1,1981. Actual enumeration was spread over a period of 20 days from 9.2.81 to 28.2.81 followed by a revisional round up to 5.3.81 for updating of the population figures with reference to the sunrise of March 1, 1981. The questionnaire canvassed by the enumerators viz., the household schedule and individual slip are perforce brief in their wordings and this naturally implies the use of abstractions and concepts. With a view to ensuring uniformity in approach in understanding the various concepts and in properly eliciting and recording of the information, the enumerators and supervisory officers were imparted both practical and theoretical training intensively.

As a preliminary to the actual census the urban and rural areas were identified and listed out in respect of each administrative unit and thereafter geographical areas that could be conveniently covered by each census enumerator were carefully carved out to constitute the enumerator's blocks.

The second major step was the houselisting operation which was carried out in the State during May 1980. Thereafter, in order to adhere to the prescribed work-load norms the actual census enumerator's blocks were carefully demarcated on the basis of the lay out sketches and notional maps prepared for the houselisting operations. The detailed information on households and population collected at the houselisting operations was also quite useful in this task of formation of census enumerators blocks. Definitions and explanations regarding the important census concepts are given in the following paragraphs.

i) Urban areas: The definition adopted in 1961 and adhered to in 1971 has by and large been retained for the 1981 census also. There is however a minor modification regading the classification of fishing and forestry. These two activities have now been regarded as allied to agriculture unlike in the earlier censuses when these were treated as purely non-agricultural activities for working out the proportion of agricultural and other than agricultural workers. According to definition the urban areas include :

"i) All places with a Municipality, Corporation, Cantonment Board or Notified Town Area Committees etc.,

ii) All other places which satisfy the following criteria :-

a) minimum population of 5,000.
b) at least 75 per cent of male working population engaged in non-agricultural pursuits;
c) a density of population of at least 400 per sq.km. (1,000 per sq.mile)
d) all places which, though not satisfying the above criteria had pronounced urban characteristics"

Demarcation of urban areas was done at the preliminary stage itself. In the case of non-statutory towns the empirical test was applied on the basis of the population returns of the 1971

census and this was supplemented by consultation with the State Government authorities concerned. The changes such as declassification i.e., abolition of municipalities, constitution of new municipalities and such other civic bodies, coming up of large human settlements at construction sites and other centres, de-population of project areas and former labour camps etc., have all been considered while preparing the lists of urban areas. Urban areas with a population of 100,000 and more are called cities and the others are termed merely as towns.

ii) Urban agglomeration: This concept which in 1971 replaced the concept of town group has been retained for the 1981 census also. It has been observed that very often railway colonies, university campuses, port areas, military camps and large residential colonies etc., come up quite adjacent to but situated outside the statutory limits of cities and towns. Such areas may not by themselves qualify to be treated as towns. But, if they form a continuous spread with the town they are outgrowths of the town and deserve to be treated as urban. Such towns together with their outgrowths have been treated as one urban unit called 'urban agglomeration. An urban agglomeration may consist of : a) A city with continuous outgrowth (the part of outgrowth being outside the statutory limits but falling within the boundaries of the adjoining village or villages ; b) One town with similar outgrowth or two or more adjoining towns with their outgrowth as in (a); or c) A city and one or more adjoining towns with their outgrowths all of which form a continuous spread. It may further be noted that geographical contiguity with the statutory limits of the core town has been the main factor in determiningwhether or not a nearby satellite town or an outgrowth is to be included in the agglomeration. This is purely a statistical concept and for carrying out the actual census operations the administrative jurisdictions of the city or the towns concerned as well as the outgrowths situated in villages have been kept quite intact. The data have been pooled together only at the tabulation stage and presented in the combined form for the urban agglomeration as a whole and also severally for each one of the constituent units.

iii) Rural areas i.e. Villages: Areas which are not classified as urban according to the definition given above constitute the rural areas. The basic unit for rural areas is the revenue village which has definite surveyed boundaries. In the case of unsurveyed villages the boundaries as determined by the local usage have been adopted. The revenue village may consist of a single nucleated settlement or comprise of several hamlets i.e. human settlements or clusters of houses located at several places within the territorial limits of the village, or may be completely uninhabited. That is to say, the census village and the revenue village are identical in the matter of jurisdiction. However, there are a few exceptions to this general rule. These are for example:

1) When the main setttlement of the village with or without the surrounding lands is constituted into an urban area the remaining tracts of the revenue village are collectively treated as a separate unit for purposes of census enumeration, i.e. the truncated portion itself is considered as an independent village in itself.

2) When outlying portions of certain revenue villages are incorporated into the limits of urban areas by notification such areas, whether populated or not, are excluded from the revenue village concerned and for purposes of census operations the village boundaries are re-defined.

3) Revenue villages which are completely incorporated in the limits of urban areas or else, are submerged under reservoir projects but are still maintained in the jurisdictional lists of the survey and settlement authorities pending resurvey and such other procedures are taken note of as revenue villages but are omitted for census purposes. i.e. these are not treated as census-villages. The names of such villages if any in a taluk are given at the end without serial number but with due remarks.

4) If there are forest areas that do not form a part of any of the revenue villages then such areas are identified clearly and the smallest administrative unit in vogue such as Forest Beat, has been reckoned as the census village. A forest range may consist of several such census villages.

5) For purposes of local administration such as collection of land revenue a single revenue village may sometimes be found to be sub-divided into two or more units. Instead of ignoring such divisions, occasionally each such unit gets reported as a separate independent revenue village. In spite of efforts to eliminate such cases it is quite likely that a few may persist till the very late stage when necessary corrections cannot be carried out.

iv) Census Enumerator's Block: In urban as well as in rural areas the smallest unit adopted for enumeration is the Census Enumerator's Block. The town is generally divided into wards and divisions and wherever such units exist their distinctness has been retained. The geographical area comprised in each such ward or, the town in its entirety is constituted into several blocks in such a way that every bit of land stands included in one block or the other. If there were to be any islands then each island is treated as a separate unit and divided into one or more number of blocks as may be necessary. Generally in the urban areas each census enumerators block consists of about 130 households covering a population of about 650 persons. However, in view of the fact that each block should have clear cut boundaries recognisable on the field, smaller blocks have also been constituted. In constituting these blocks all the lands included in the statutory limits of the town are taken into consideration. In the case of non-municipal towns such as a Town Panchayat or a Group Village Panchayat the revenue limits of only that village which has been classified as a town on the basis of the empirical criteria have been considered as the boundaries of that census town. In other words, the panchayat jurisdiction and the census jurisdiction need not necessarily be identical in the case of non-municipal towns.

In the case of villages, irrespective of the population size every hamlet and every island has been constituted into a separate block. If the hamlet or the island is large the number of enumerator's blocks constituted therein may be two or even more. The work-load norm per block is 150 households with a population of about 750 persons

and this generally applies to large nucleated settlements having more than this fixed limit and therefore require division into two or more blocks. In each village care has been taken to ensure that no bit of land belonging to that village is left out of consideration while constituting blocks. That is to say the entire revenue jurisdiction of the village is divided into blocks in such a way that even the agricultural lands that may not contain any houses or households stand included in one block or the other. In other words, enough emphasis has been laid to ensure complete coverage of the territorial jurisdiction of each village.

v) Location code number : Every State in the country, every district in the State, every taluk or Town in the district, every village in the taluk and every ward or division in the city or town and every enumerator's block in the village or town is assigned a number for operational ease, in a particular order. When these numbers are written side by side in the same order starting from the state and separated by an oblique line the identity of any particular census enumeration block can be known quite easily. The numbers assigned are in international numerals except in the case of towns in which case Roman numerals have been adopted. The states, the districts, the towns and the taluks are arranged in an alphabetical order of their names for assigning these numbers. Taluk maps showing the boundaries of various villages therein are quite essential since these provide the basis for assigning location code numbers to villages. For purposes of revenue administration the villages of a taluk are usually organised into a few circles or Hoblis and each such unit will have a headquarters town or village. The identity of such units is maintained to the extent possible. Starting from the circle of which the taluk headquarter town or village happens to be the circle headquarter as well the villages in its jurisdiction are serially numbered by proceeding in a clockwise direction i.e. in a concentric manner around the headquarter village or town, or in a serpentine manner starting from the north-west corner. After exhausting all the villages of the circle the next circle situated in the clockwise direction to the first one is taken up and commencing from the headquarter village all the villages within its jurisdiction are numbered. Thereafter, the next circle is taken up and in this manner it is ensured that all the villages of the taluk as well as any other analogous units such as islands, reserve forest tracts not included in any revenue village etc., if any, are assigned location code numbers. The numbering of villages runs continuously for the taluk through the different circles or Hoblis. Taluk maps showing the boundaries of various villages along with their corresponding location code numbers are also presented in these volumes for reference purposes.

vi) Building : A building is generally a single structure on the ground. Sometimes it is made up of more than one component unit which are used or likely to be used as dwellings (residences) or establishments such as shops, business houses, offices, factories, worksheds, schools, places of entertainment, places of worship, godowns, stores etc. It is also possible that buildings which have component units may be used for a combination of purposes such as shop-cum-residence, workshop-cum-residence, office-cum-residence etc.

vii) Census House : A Census House is a building or part of a building having a separate main entrance from the road or common courtyard or staircase, etc., used or recognised as a separate unit. It may be occupied or vacant. It may be used for a residential or non-residential purpose or both.

viii) Household : A Household is a group of persons who commonly live together and would take their meal from a common kitchen unless the exigencies of work prevented any of them from doing so. There may be a household of persons related by blood or a household of unrelated persons or having a mix of both. Example of unrelated households are boarding houses, messes, hostels, residential hotels, rescue homes, jails, ashrams etc. These are called 'Institutional Households'. There may be one member households, 2 member households or multi-member households. For census purposes, each one of these types is regarded as a 'household'. If a group of persons who are unrelated to each other live in a census house but do not have their meals from the common kitchen, they would not constitute an institutional household. Each such person would be treated as a separate household. The important link in finding out whether there is a household or not is a common kitchen. There may be a household which does not at all have a house to live in and may temporarily dwell on the roadside, pavements, in humepipes, temples, mantaps, platforms etc, or move about from place to place resting underneath shade-bearing trees, pavements and verandahs of public or private buildings. Such households are for purposes of reference termed as Houseless Households.

ix) Criteria for enumeration of a person in a particular household :

a) All those who normally stay and are present in that household during the entire period of enumeration i.e. from February 9 to February 28, 1981 (both days inclusive)

b) Also those who are known to be normally residing and had actually stayed during a part of the enumeration period (February 9 to 28, 1981) but are not present at the time of enumerator's visit;

c) Also those who are known to be normally residing and are not present at the time of the enumerator's visit but are expected to return before February 28, 1981 and,

d) Visitors who are present in the household censused and are away from the place (s) of their usual residence during the entire enumeration period. For the purpose of enumeration, such visitors will be treated as normal residents of the household in which they are actually found during the enumeration period provided they have not been enumerated elsewhere.

x) Literate : A person who can both read and write with understanding in any language is to be taken as literate. A person who can merely read but cannot write is not literate. It is not necessary that a person who is literate should have received

any formal education or should have passed any minimum educational standard.

*xi) Workers and non-workers :* Depending upon the nature of his or her activity during the reference period every individual enumerated at the Census is classified as either a worker or a non-worker. By definition, a worker is one who has worked, that is, 'participated in any economically productive activity'. Such participation may be physical or mental in nature. Further, work involves not only actual work but also effective supervision and direction of work. The reference period for determining whether a person is worker or a non-worker is the full year preceding the date of enumeration. The criterion is somewhat liberal and, even a person who has participated in the production of economic goods and services for a very brief period will be categorised as 'worker'.

Among workers however there are two categories:

a) Main Workers:- Those who have worked for at least 183 days during the preceding year i.e. the entire reference period. (even though this may be in broken spells and in different occupations),

b) Marginal Workers:- Those who have worked for less than 183 days during the entire reference period.

For both the categories of workers further details on the sector of economy in which they have worked, their occupation (that is, the actual nature of work done) and employment status (that is whether employer, employee, unpaid family worker or own account worker) have also been ascertained. The industrial classification of workers as adopted at the Censuses of 1961 and 1971 has been retained at the 1981 Census also. The industrial classification categories are : (I) Cultivators, (II) Agricultural labourers (III) Workers in livestock, forestry, fishing, hunting, plantations, orchards and allied activities, (IV) Workers in mining and quarrying, (V) Workers in manufacturing, processing, servicing and repairs which are (a) run as household industry, (b) not run as household industry, (V) Workers in construction, (VII) Workers in trade and commerce, (VIII) Workers in transport, storage and communication, (IX) Workers in other services. For purposes of presentation in the Primary Census Abstract however the details in respect of main workers alone are considered and the industrial classification categories of III IV, V(b), VI, VII, VIII and IX are pooled together and shown under the heading 'Other Workers'. The broad classifications therefore are : I-Cultivators, II-Agricultural labourers, V(a)-Workers at house hold industries, manufacturing, processing, servicing and repairs and, III, IV, V(b) and VI to IX-Other Workers. Explanations regarding the broad categories are given below:-

a) Cultivators : For purposes of the census a person is working as Cultivator if he or she is engaged either as employer, single worker or family worker in cultivation of land owned or held from Government or held from private persons or institutions for payment in money, kind or share. Cultivation includes supervision or direction of cultivation.

A person who has given out his or her land to another person or persons for cultivation for money, kind or share of crop and who does not even supervise or direct the cultivation of land will not be treated as cultivator. Similarly, a person working in another person's land for wages in cash or kind or a combination of both (agricultural labourer) will not be treated as cultivator.

Cultivation involves ploughing, sowing and harvesting and production of cereals and millet crops such as wheat, paddy, jowar, bajra, ragi etc. It is important to note that for certain reasons the growing of certain crops is not considered as agriculture. If a person is engaged in the growing of such crops he or she will not be considered as cultivator or agricultural labourer.

The growing of the following crops is considered as cultivation :

1. Cereal and millet crops : Paddy, wheat, jowar, bajra, maize, ragi, barley, gram, etc.

2. Pulses : Arhar, moong, masur, urd, kesari etc.

3. Fibre crops : Raw cotton, jute, mesta, sunhemp and kindred fibre crops.

4. Oil seeds : Sesamum, ground-nut, rape, mustard, linseed, castor, etc.

5. Cash crops : Sugar-cane

The growing of the following crops will not be considered as cultivation :

1. Plantation crops : Tea, coffee, rubber, tobacco, pepper, cardamom, etc.

2. Edible nuts (Other than groundnut) : walnut, almond, cashewnut, etc.

3. Fruits : Bananas, apples, grapes, mangoes oranges, etc.

4. Coconut

5. Ganja, Chinchona, opium, and medicinal plants.

6. Arecanuts.

7. Flowers.

8. Roots and tubers, chillies and spices (other than pepper and cardamom).

9. Vegetables.

10. Other crops not specifically included under cultivation.

b) Agricultural Labourer : A person who works in another person's land for wages in money, kind or share is regarded as an agricultural labourer. He or she has no risk in the cultivation. The Agricultural labourer has no right of lease or contract on land on which he or she works.

c) Household Industry : Household Industry is defined as an industry conducted by the head of the household himself or herself and or by the members of the household at home or within the village in rural areas and only within the precincts of the house where the household lives in urban areas. The larger proportion of workers in a household

industry would consist of members of the household including the head. The industry should not be run on the scale of a registered factory which would qualify or has to be registered under the Indian Factories Act.

d) Other Workers : The type of workers that come under this category include factory workers; plantation workers; those engaged in trade, commerce, business, transport, mining, construction, political or social work; all government servants; municipal employees; teachers; priests; entertainment artists, etc. In effect, all those who work in any field of economic activity other than as cultivators and agricultural labourers or in household industry are categorised as 'Other Workers'.

xii) Marginal Workers : Though similar classification is possible in respect of the marginal workers also the Primary Census Abstract does not aim to present these details. The total number of marginal workers alone is indicated sexwise. In respect of such persons answers on how they have engaged themselves mostly during the reference period have also been elicited. That is to say, the concept of main activity as adopted in the 1971 census is kept in view and, as in the case of non-workers, relevant details about their activity have been ascertained.

xiii) Categories of non-workers : Depending upon the manner in which the non-workers have engaged themselves for most of the time during the reference period they are classified into one or the other of the six categories, mentioned below, at the time of the enumeration itself. However the Primary Census Abstract does not furnish details according to the categories of non-workers but indicates the total number of non-workers by sex.

a) Household duties : This covers all persons who are engaged in unpaid home duties and who do no other work or have not done any work at all during the last one year.

b) Students : This will cover all full-time students including children attending school.

c) Dependents : This category includes all dependents such as infants, children not attending school, and persons permanently disabled form work because of illness or old age. Dependents will include even able-bodied persons who cannot be categorised in any other category of non-workers but are dependent on others.

d) Retired persons or Rentiers : A person who has retired from service and is doing no other work i.e., not employed again in some full time work or not engaged in some other work such as cultivation business, trade, etc., or a person who is a rentier or living on agricultural or non-agricultural royalty, rent or dividend, or any other persons of independent means for securing which he or she does not have work, will come under this category.

e) Beggars : This will cover beggars, vagrants or cases such as persons without indication of source of income and those with unspecified source of subsistence who are not engaged in any economically productive work.

f) Inmates of Institutions : This will cover convicts in jails or inmates of a penal, mental or charitable institution even if such persons are compelled to do some work such as carpentry, carpet weaving, vegetable growing, etc., in such institutions. But an undertrial prisoner enumerated in a jail would be recorded for the work he or she was doing before he or she was apprehended. Similarly, a person temporarily in a hospital or similar institution would be recorded for the kind of work he or she was doing before he or she was admitted into the hospital or institution. But, for a long-term undertrial prisoner or convict in a prison or for long-term inmates of penal or charitable or mental institutions, the person's previous work would not be taken into consideration. A person will be considered as 'Long-term' inmate if he or she is in such an institution for 6 months or more.

## 4. BRIEF HISTORY OF THE DISTRICT :

Consequent on the publication of the Karnataka State Government Order No.RDF 6 TNV 76 dated 31st January 1977, the name of this district was changed into Uttara Kannada. In the census publications relating to the 1981 Census, however, the name of this district is spelt as Uttar Kannad in conformity with the spelling standardised by the Surveyor General, India. For more than a century and a half this district was known by the name North Kanara, or simply as Kanara, in the official records and the gazetteer compiled during the 1880's. The present change in name does not signify any material alteration in its name, for Uttara Kannada is nothing but the Kannada translation of the term North Kanara, the former anglicised name. It may be recalled that it was the Portuguese that first bestowed the name Kanara (also spelt as Canara) to this territory along with its southern counterpart. The British who took possession of these areas after the fall of Tipu Sultan in 1799 retained the name for the newly formed district. The entire coastal tract of the State, that is the present districts of Uttar Kannad and Dakshin Kannad including Kasargod which is now a part of Kerala State, formed part of the Madras Presidency from 1817 to 1862. For a brief period from 1800-1817 however this district stood bifurcated from its southern counterpart. In 1862 the composite Kanara district was not only bifurcated but the northern half was transferred to the then Bombay Presidency while the southern portion was retained in the Madras Presidency. Traditionally this coastal area of the State consists of the deshas or countries named Konkana, Haiga and Tuluva as one moves down from north to south.

The district, comprising of a narrow coastal strip, a section of the Sahyadri mountain range and an expansive tract in the table-land to its east, has a hoary past. The coastal area is supposed to have been created, that is retrieved from the sea, by Parashurama the sixth incarnation of Lord Vishnu. This tract, it is believed, formed part of Ravana's kingdom. According to tradition Ravana promised his mother that he would fetch the very Atmalinga of Lord Shiva from Kailasa and would instal it in his home to enable her to offer worship daily. He performed severe austerities and the appeased Shiva granted his desire, of course with certain conditions which Ravana had to observe before reaching his home. The gravity of the catastrophe which would befall the world was soon visualised by the gods and Lord Ganesha took upon himself the responsibility of thwarting Ravana's intentions. In disguise, Ganesha accosted the jubilant Ravana at the place where Gokarna now stands. As it was the proper time for Ravana to offer his evening prayers Ganesha offered his help to Ravana promising the latter that he would hold the Atmalinga of Shiva so that Ravana could offer his prayers. When Ravana moved over to the sea and was busy in his prayers Ganesha complained of the ever-increasing weight of the Atmalinga and, as had been already agreed upon, shouted thrice for help and finally dropped the Atmalinga on the ground even as the aghast Ravana came running to him. The mischief had been done and the Atmalinga got struck to the ground. Neither his superhuman strength nor his powerful prayers could enable Ravana to secure the possession of the Atmalinga again. He left the place greatly dejected. The place however had been rendered the holiest of the holy having become the abode of Lord Shiva on earth (Bhu Kailasa). The Ishvara linga here is now known as Mahabaleshvara. Kumbakarna, the brother of Ravana is said to have performed penance in the area belonging to this district. Yan, a place of pilgrimage, is known as Bhairava-kshetra and this is regarded as the site where the demon Bhasmasura was finally vanquished. Lord Shiva himself is said to have performed penance at Kavale cave here to overcome the ill effects cast on him by Shani (Saturn). Banavasi is associated with the episode relating to the slaying of the demons Madhu and Kaitabha by Lord Krishna.

Black and red ware pottery of the megalithic period discovered at Kantraji near Banavasi and the mesolithic tools found at several places between Gokarna and Karwar provide enough evidence to infer that certain parts of this district at least were inhabited by human beings during the pre-historic times. Excavations near Banavasi have brought to light the remnants of burnt brick structures, underground drainage pipes and several terracota figurines besides silver and lead coins. Mauryan emperor Ashoka, it is stated in Mahavamsha, deputed a Buddhist Missionary to Banavasi to propagate Buddhism in this region. Places such as Honavar have found a mention in the travelogues of Ptolemy the Greek geographer (150 A.D.). Undoubtedly, the district has an impressive historical past.

As may be inferred from the recently discovered stone inscription installed in memory of Shiva Siri Pulimavi this district was under the sway of the Shatakarnis during the earliest period of the known history. Gautamiputra Shatakarni is stated to have restored the fortunes of this dynasty and he was succeeded by Vasistiputra Shatakarni (130-159 A.D.). Coins of this period as well as that of a little later period when Chutus were ruling these parts have been discovered near Banavasi. During the second and the third centuries the Chutus, who were related to and were the feudatories of the Shatakarnis, were ruling from Banavasi. Four prakrit inscriptions and the lead coins unearthed bear testimony to this fact. The Madhukeshvara temple at Banavasi, it may be mentioned in passing, has within its precincts, the famous inscribed Naga-stone set up by Shivaskanda Nagashri. According to the Hiregutti and Arge plates Bhojas ruled certain parts of the coastal area as contemporaries of the Shatakarnis and Kekayas were their feudatories. Towards the close of the third century the Pallavas of Kanchi established their supremacy and retained power until they were driven out from these parts by the legendary Mayura Varma Kadamba. The founder of this dynasty is said to be Trinetra or Trilochana and the family got the name Kadamba on account of the Kadamba tree near its residential house. Mayura Sharma, a brahmin by birth, was the son of Bandhusena and the grand son of Vishnu Sharma. As an youngman, accompanied by his grandfather, he went to Kanchi, the capital of the Pallavas for higher learning. The events which took place during his sojourn at Kanchi inspired him to take to arms and establish a kingdom. According to Chandravalli inscription his sway extended as far as Chitradurga. Kakustha Varma is by far the greatest king of this dynasty. During the long period of his rule starting from 420 A.D. the kingdom reached the pinnacle of its glory. The sovereignty of the Kadambas came to an end in about 540 A.D. when they were subdued by Pulikeshi II of the Chalukyas of Badami, who conquered Banavasi and handed over the administration of Banavasi-mandala to the Alupas of Mangalore. In about 753 A.D. the Chalukyas were overthrown by the Rashtrakutas and Rajaditya was appointed as the governor of Banavasi province. The Rashtrakuta rule was followed by that of the Chalukyas of Kalyan who have left behind them numerous inscriptions in this district. During this period Banavasi was an important seat of administration and the headquarters of a governor. Vikramaditya VI was the governor of Banavasi province for quite some time. In fact he used this position as a springboard to ascend the throne at Kalyan. The next important dynasty which held sway over large parts of this district is that of the Yadavas of Devagiri. During this period the Kadambas of Hanagal who had virtually been recognised as the successors of the Kadambas of Banavasi controlled the eastern tracts while their counterparts on the west namely the Goa Kadambas held sway over Ankola and Karwar areas as these formed part of Konkan 900. Another branch of the Kadambas, known after Chandavara, administered the region comprising Kumta nd Honavar. The Hoysalas of Dwarasamudra tried to establish their supremacy over this district during this period as can be made out from the fact that in 1119 A.D. Vishnuvardhana conquered Hanagal and subdued the Kadambas, However, shortly thereafter, Vikramaditya VI sent forth Achugi who recaptured Hanagal and ensured the subjugation of the Kadambas to the Chalukyan throne. Once again in 1140-41, Vishnuvardhana took Banavasi. The fight for supremacy between the Hoysalas and the Chalukyas continued in this region upto 1300 A.D. With the fall of the Yadavas of Devagiri on the one hand and of the Hoysalas on the other, this district too came under the suzerainty of the Delhi empire. Honavar rose into prominence as the seat of a governor during this period and continued to retain its importance for a couple of hundred years.

This district too was greatly affected by the emergence of the Bahmani kingdom, especially its offshoot, the Bijapur Sultanate on the one hand and the founding of the Vijayanagara empire on the other. The Portuguese too entered the scene, especially on the coast, and exerted considerable influence on the political and adminsitrative set up. In 1347, Marapa of Vijayanagara invaded Banavasi and paid a visit to Gokarna the holy place of pilgrimage. Thereafter, Banavasi and the surrounding country began to be administered from Chandragutti. A little later Banavasi became the headquarters and was placed under the charge of Madhava Mantri, who is said to have conquered north western parts of this district from Goa Kadambas. In the initial stages the Saluvas of Gerusoppa and Haduvalli resisted the supremacy of Vijayanagara. Their resistance could not

last long and they too became the feudatories of the Vijayanagara empire. For about four centuries the Saluvas of Gerusoppa exercised control over the fertile tracts on either side of the river Sharavati. Channabhairadevi of the Haduvalli family was captured in 1608 A.D. by Shivappa Nayaka of Keladi. The other important dynasties of local chiefs are those of Bilgi and Sonda. The Bilgi Odeyas had their capital at first at Isur in Siddapur taluk and ruled the areas comprised in the present day taluks of Siddapur and Sagar. Chante Odeya shifted the capital to Bilgi which he fortified and then conquered Bedkani and Kondli. Sonda Nayakas had their capital at Sonda in Sirsi taluk and gained prominence during the latter half of the Vijayanagara period. These Nayakas patronised Banavasi and its Madhukeshvara temple. With the decline of Vijayanagara power, this district was gradually taken over by the Nayakas of Keladi, who continued their cordial and friendly ties with the Portuguese. This policy helped the growth of overseas trade and kept the economy of the district in a flourishing state. The Portuguese were permitted in about 1678 to establish factories and Churches at Mirjan, Chandavar, Honavar and Bhatkal. The English too made their presence felt by establishing factories at Karwar and Bhatkal. A mention may also be made of the Maratha incursions and the fact that for a brief period in 1675, Shivaji occupied the territory from Karwar to Gangavali. In 1763, the district was annexed to Mysore kingdom by Haider Ali. After him, his son and successor Tipu Sultan strengthened the forts, and retained full control over the district till he fell fighting the British in 1799. Thereafter the district came under the administrative control of the British. In 1800-01 there were some anti-British riots which were soon put down. Again in 1830-31 there was an uprising and this too was quelled. The district has secured for itself a creditable place in the freedom struggle, having been in the forefront of the Forest Satyagraha, Salt Satyagraha and the no-tax compaign.

With the advent of the British, this district became a part of the Madras Presidency. For more than a decade this area along with Kundapur taluk in the south had a separate collectorate and from 1817 to 1862 this formed part of the composite Canara district. Initially there were seven taluks named after Kundapur, Honavar, Ankola, Bilgi, Banavasi, Sonda and Supa. There were however several changes in the organisation of the district into taluks. In 1862 the northern division of the then composite Canara district excluding Kundapur taluk was transferred to Bombay Presidency. The headquarters of the district was shifted to Karwar from Honavar. The district comprised of the 8 taluks of Ankola, Honavar, Karwar, Kumta, Haliyal, Siddapur, Sirsi and Yellapur besides the 3 sub-taluks or Pethas named after Bhatkal, Mundgod and Supa. In 1947 with the dawn of independence this district continued as a part of the Bombay State. In 1948 Mundgod Petha was elevated to the status of a taluk. With the reorganisation of the States in 1956, Uttar Kannad district became a part of the Karnataka State. In 1960, the sub-taluks of Bhatkal and Supa were upgraded and constituted into full-fledged taluks thus bringing the total number of taluks in the district to the present tally of eleven. Since then there have not been any changes in the organisational set up of the district. For administrative convenience the eleven taluks are grouped into three revenue sub-divisions as follows : Karwar sub-division (Karwar, Supa and Haliyal); Kumta sub-division (Kumta, Honavar, Bhatkal and Ankola); Sirsi sub-division (Sirsi, Siddapur, Mundgod and Yellapur). The district itself comes under the jurisdiction of Belgaum Division.

## 5. LOCATION AND PHYSICAL ASPECTS :

Uttar Kannad district is situated in the north-western sector of the State and is bounded by the Arabian sea on its west. Covering an expansive area of 10,291 square kilometres this district lies between the latitudinal parallels of 13°55'N and 15°31'N and the longitudinal parallels of 74°03'E and 75°05'E. From north to south and from east to west the district spans a distance of 328 Km and 160 Km respectively. The southern-most portion of the district is only 10 Km wide and the district bulges out mainly towards the east as one moves north. After crossing the middle zone the eastern boundary line turns west and proceeds in an irregular manner towards the north-west. The western boundary line on the other hand follows the coast in the north by north west direction and after reaching the mid-zone turns east and proceeds in a north by north-easterly direction describing an arc. Thus the district is seen to be of an irregular shape. It is bounded on the north-west by the Union Territory of Goa, Daman and Diu; on the north by Belgaum district; on the north-east and east (upper half) by Dharwad district; on the east (lower half) and south-east by Shimoga district and on its southern tip by Dakshin Kannad district.

Topographically the district can be divided into three distinct zones : the coastal belt which is nothing but a succession of eastuarine plains connected by narrow coastal strips; the central belt consisting of the hills and valleys of the Sahyadri range and the eastern table land. Broadly speaking the district can be categorised as essentially an upland, that is a hilly malnad. More than 75 per cent of the lands of this district belongs to this category. The importance of the low lands and the coast in the economy of the district cannot however be under-estimated, for it is these areas which are fairly well developed and are also more densely populated. The eastern belt consists of a narrow transition zone of undulating lands and vast stretches of plains as one moves further eastwards. By and large the district is hilly in terrain and is covered by thick vegetation including some of the most magnificent forests.

In broad terms it may be observed that the taluks of Ankola, Karwar, Kumta, Honavar and Bhatkal have long stretches of coastal strips besides large areas of the low and rising hilly tracts; the central and western belts of the taluks of Siddapur and Sirsi and almost the entire Supa taluk consist of a hilly terrain; the taluks of Haliyal, Mundgod and Yellapur besides the eastern zones of Siddapur and Sirsi have undulating plains. As regards the hill peaks, it may be noted that Darshanigudda ( 915 m. MSL) is the highest peak and that this is located in Supa taluk at the trijunction of the districts of Uttar Kannad and Belgaum and the Union Territory of Goa. The other prominent peaks are : Kaltigudda (763 m) in Honavar taluk, Bhedsgave (763 m) and Gudehalli (549 m) in Sirsi taluk and Nishanigudda (457 m) in Yellapur taluk besides the smaller peaks of Shirve-gudda, Hukali, Mavinagundi, and Motigudda. Gudehalli and Kaltigudda have been recognised and developed as health resorts in recent years.

Kali, Bedthi, Aghanashini and Sharavati are the principal west flowing rivers of the district. The Kali river in fact consists of two streams which flow into each other near Supa. Pandri the main stream, also called Ujli, originates in the extreme north and flows at first in a south-easterly direction and loses its identity after its confluence with the other stream called the Diggi hole or the Kari (the Black) hole (stream) which too flows eastwards at first. The river thus formed continues to flow in a south by south-west direction for a distance of about 50 Km and then takes a sudden westward turn. At this place, called the Lalguli Falls, the west flowing Thattihalla stream also joins the Kali and river flows west by south-west and then directly westwards till it falls into the Arabian sea near Karwar. Before reaching the sea it is joined by the Nuji stream which itself has two tributaries named Kaneri halla and Yaki halla. The river is navigable from Kadra to Karwar for a distance of about 30 Km. Bedthi or Gangavali is also formed of two main streams - the Shalmali which originates near the Someshvara temple south of Dharwad and the Bedthi which has its origins near Hubli. These two streams join near Kalghatgi and flow west and south-west for a total distance of about 96 Km. On its meandering way to the Arabian sea the river dashes down the western face of the Sahyadri's in a cataract which has come to be known as the Magod falls. Beyond Harigadde the Sonda rivulet also flows into this river. At Gundabala the river meets the tidal waters and, from this place upto Gangavali a distance of 25 Km the river is navigable. Aghanashini, also known as Tadri river, flows into the Arabian sea about 10 Km south of Gangavali. This river too is composed of two major streams besides Benehalla. Two of these streams originate in Sirsi taluk and flow southwards at first. The other stream traverses almost across the entire breadth of Siddapur taluk in a west by north westerly direction and this is joined near Harigar by one of the streams from Sirsi taluk. A short distance to the west from here, near Unchalli, the river leaps down a precipitous rock and this has come to be known as the Lushington Falls. Further west, in the limits of Kumta taluk Benehalla also flows into it and the river finally meets the tidal waters at Uppinapatna, from where it becomes navigable for a distance of about 25 Km upto Tadri. From Mirjan, the river forms a lagoon parallel to the coast for a distance of about 13 Km. Near the estuarine mouth there is a narrow creek blocked by a rocky reef. Sharavati, also known as Banaganga rises at Ambutirtha near Kavaledurga in Shimoga district. It flows in a north westerly direction and receives Haridravati and Yenne hole. Near the border of the district after covering a distance of about 64 Km, the river bends to the west and for about 13 Km forms the natural boundary between Uttar Kannad and Shimoga. Near Kodakani the place where the river touches the district borders, it leaps over a precipice, about 260 metres in height, into a deep catarct. The river divides itself into four distinct cascades in this process and these are popularly known by the names Raja, Roarer, Lady or Rani and Rocket.

These falls present a magnificent spectacle and have acquired world fame as the Jog falls or the Gerusoppa Falls. From this deep pool the river resumes its westward journey to the sea in a rough terrain for another 30 Km till it reaches Gerusoppa. Between Gerusoppa and Honavar at the sea mouth for a distance of about 27 Km the river is navigable. About 8 Km east of the estuary the river widens into a 3 Km broad lagoon containing a few islands of which Mavinkurve deserves mention.

Besides these major rivers there are several streams and rivulets which are known after the villages near which they traverse. Varada and Dharma are the two important east-flowing rivers in the south-eastern sector of the district. Varada has its origin at Varadamula near Ikkeri in Sagar taluk and flows past Banavasi for a short distance in this district and finally joins the Tungabhadra at Galaganath in Haveri taluk. Dharma river issues forth as a small stream from a tank in Islur village of Sirsi taluk.

Geologically, the rock formations of this district belong to a most ancient period of earth's history and consist of archean complex - the oldest rock of the earth's crust. The rock formation is characterised by a system of ridges and a plateau on the west descending rapidly into a narrow strip of low lands covered by alluvial rocks. The eastern sector is hilly and consists of the Dharwars and the peninsular gneisses. The Dharwars are represented by chloritic schists which are younger to hornblendic types. Pegmatites and quartz veins also are known to occur in parts of the district. The archean granites and gneisses are capped by laterite at several places. The district, it may be broadly observed, lies outside the great flows of trap. Uttar Kannad district is quite rich in mineral wealth. Iron and manganese are the major items while limestone, quartz, bauxite, silica, lime shells, sand and clay are the other important minerals. The iron ore occurs mainly in the western half of the district in the taluks of Ankola, Honavar and Yellapur and a special mention may be made of the extensive reserves in Apsarkond area of Honavar taluk, Bisgod, Kalche and Kadlagaddeareas of Yellapur taluk and Kuntagani area of Ankola taluk. The iron content of the ore available at these places is estimated to vary between 58 per cent and 65 per cent. The Manganese ore of this district is characterised by a high manganese content coupled with low phosphorus and low electro-magnetic elements. The Manganese bearing region is divided into three divisions - Supa, Yellapur and the Sirsi-Kumta-Ankola. Limestone occurs in large quantities in the taluks of Supa, Yellapur and Kumta. White clay is found at numerous places the most important of which are : Castle Rock area and Kuntagani area of Supa taluk, Achave village of Ankola taluk, and Heravatta area of Kumta taluk. Bauxite is known to occur near Mundolli and Talgod of Bhatkal taluk while copper is known to occur near Kaiga. Glass sand is found near Bengre area and ilmenite sand is found at numerous places all along the sea-shore. A mention may be made of granite and laterite which are very useful as building material.

Uttar Kannad district is very rich in forest wealth and about 81 per cent of its total geographical area stands classified as forests. The slopes of the western ghats and the lofty peaks as well are clothed with dense vegetation stimulated by heavy to very heavy rainfall and the fertile soils. The teak wood available in the forests of this district ranks amongst the best in the world and is found highly useful in the ship building industry. The forests of the district can be categorised into the evergreen and the semievergreen which are rich in soft wood and packing-timber yielding trees; the moist deciduous which are rich in teak, rose wood, honne and other timber; the scrub jungle containing sandal wood trees among other species of tree growth and lastly the unwooded or sparsely wooded forests. There are reserved forests, plantations, protected forests and village forests. This forest wealth is being exploited over the decades and has now been greatly depleted. In spite of this, in the matter of forest wealth, Uttar Kannad happens to be the richest among the 19 districts of the State. The fauna of the district is also rich and varied. A wild life sanctuary covering an area of 5729 square kilometres was constituted in 1953 near Dandeli. The wild animals found here include the tiger, cheeta, bison, elephant, sambar, barking deer etc., The district is also noted for the marine and inland fishing activities and the variegated nature of its fish-wealth.

The western ghats which lie across the path of the south west monsoons cause heavy to very heavy rainfall over the coastal areas and moderate to heavy rains in the hilly malnad tracts. The elevation varies as one moves east and north and as a result the climate also varies as one moves westwards from the eastern plains through the hilly malnad and reaches the coast line. All round the year the humidities are high especially in the western sector. The year may be divided into 4 seasons The summer season lasts from March to May and is marked by the rising temperature. May happens to be the hottest month and at times the maximum temperature reaches 38°C. The weather during this period may be regarded as oppressive due to the moist heat. In the coastal areas however the cool sea breeze provides some relief during the latter half of the day and early evening hours. From June to September, which marks the monsoon or the wet season, the sky remains overcast and the day temperatures move down to tolerable limits. During this period there would be incessant rains in most parts of the district. This monotony is however broken a few brief dry spells which provide some relief to the people. The months of October and November mark the retreating monsoon and during this period the day temperature registers a slight increase while the night temperature gradually moves down. Since this period is free from incessant rainfall and the oppressive heat of the summer as well one can regard these two months as the most pleasant months of the year. Winter season sets in during December and lasts till the end of February. During this period the weather is dry with a clear bright sky and an agreeably low temperature as well as humidity. The district now has three meterological observatories and these are located at Shirali, Honavar and Karwar.

The district receives an average rainfall of 2741.7 mm per annum. Generally the rainfall is heavier in the coastal belt than in the uplands towards the east and the north. However the wettest areas are at the foot of the Sahyadris. The rainfall varies from 3854 mm in Bhatkal i.e. the south western coastal zone, to 1155 mm at Mundgod near the north eastern border. July is the month which records the heaviest rainfall. The number of rainy days varies between 114 in Bhatkal and 87 at Mundgod and the overall average for the district is 103 days. In the matter of rainfall Uttar Kannad is quite fortunate and is blessed by the presence of the western ghats. It does not suffer from any large scale variations in the amount of rainfall from year to year. Its location on the sea coast has however rendered it vulnerable to the havoc occasionally caused by the depressions and the cyclonic storms that are formed in the Arabian sea and the Indian ocean.

The topographical and the climatic features of the district are quite suitable for the production of agricultural crops especially rice and also horticultural crops like areca and coconut. The soils of the district may be divided into two clear cut zones based on topography:- the coastal alluvial soils and the upghat lateritic and granitic soils. Mixed laterites and traps are found in the taluks of Supa, Haliyal and Mundgod which contain certain patches of black cotton soils as well. The lateritic soils are highly leached, reddish brown in colour, shallow to medium in depth and loamy in texture. These soils are met with in the taluks of Karwar, Kumta, Honavar, Bhatkal, Sirsi and Siddapur. Red loamy soils are also found to some extent in the taluks of Supa, Mundgod and Haliyal. Red sandy loams are poor in bases and are well drained, being poor in moisture retaining capacity. Such soils are found in the taluks of Sirsi, Yellapur, Karwar and Ankola. In the coastal taluks there are numerous patches of gazni lands which contain a saline soil of light yellow or brownish colour. These lands are not quite suitable for cultivation even though the farmers have for long been accustomed to raise a crop of paddy of a particular variety in such fields also. As already pointed out, the forests cover very vast extents of lands in almost all the taluks and the net area sown works out to hardly 11 per cent. From the point of view of economic wealth, more than agricultural land it is the forest-clad land that seems to be more important. The importance of the sea and marine fishing in the economy of the district cannot be under-estimated.

**Administrative divisions and jurisdictional changes during the decade :-**

Uttar Kannad district is included in Belgaum Division which

is one of the four Revenue Divisions into which the State is organised. This district consists of eleven taluks which are, as already mentioned, grouped into three revenue sub-divisions with headquarters at Karwar, Kumta and Sirsi. The total number of villages in the district is 1359 according to the Director, Survey Settlement and Land Records and 1338 according to 1981 Census. During the decade 1971-81 the external boundaries of the district have remained unchanged. There have not been changes in the boundaries of various taluks and villages as well. Same thing cannot be said about the towns, for during this period new municipalities have been constituted and the boundaries of a few existing towns have been altered.

It may be mentioned in passing that towards the tag end of the decade the work relating to the Kalinadi Hydro-electric Project had achieved considerable progress and that the construction of the Supa dam had also progressed much. As a result submersion of certain villages either in full or in part and shifting and rehabilitation of affected families were quite imminent. It is quite likely that these features have not been fully reflected in the census results. The landscape of the district in the zone affected by the Kalinadi Hydro-electric Project too was undergoing a rapid change. This apart the district did not witness any major event of geological or geographical importance.

As compared to 1971 Census when there were 1356 villages and 8 towns, there are 1338 villages and 13 towns now. As compared to the number of villages as per the Director of Survey Settlement and Land Records also there are some variations. In the statement given below the talukwise details about number of villages and towns and also the reasons for the variation in the number of villages are furnished.

| Sl. No. | Taluk | Total Number of Villages according to the | | | Names of the Revenue Circles or Hoblis and Number of villages in each, shown in brackets (1981 Census) | | No. of towns as per 1981 Census list | Reasons for variations in the number of villages as shown in | |
|---|---|---|---|---|---|---|---|---|---|
| | | Survey Settlement and Land Records Dept. | Lists finalised for Census | | | | | Columns 3 and 4, | Columns 4 and 5 |
| | | | 1981 | 1971 | | | | | |
| 1 | 2 | 3 | 4 | 5 | 6 | | 7 | 8 | 9 |
| 1 | Ankola | 88 | 86 | 88 | Ankola<br>Balale<br>Bhasgod<br>Belekeri | (21)<br>(25)<br>(20)<br>(20) | 1 | Two revenue villages Ankola and Shedgeri are fully incorporated in the limits of Ankola town. Hence these villages are omitted in the Census list. | Ankola and Shedgeri villages of the 1971 list are fully incorporated in the limits of the newly constituted Ankola town. Hence these villages are omitted now. |
| 2 | Bhatkal | 62 | 64 | 64 | Susgadi<br>Mavalli | (54)<br>(10) | 1 | Revenue village Susgadi is fully incorporated in the municipal limits of Bhatkal town. Hence it is omitted in the census list. Revenue villages Bengre, Mavalli and Shirali are bifurcated into two parts by the revenue authorities for administration purposes. These are shown as separate units in the census list. | |
| 3 | Haliyal | 134 | 133 | 132 | Haliyal<br>Murkwad<br>Sambrani<br>Dandeli | (25)<br>(29)<br>(22)<br>(57) | 3 | Revenue village Haliyal is fully incorporated in the municipal limits of Haliyal town. Hence it is omitted in the census list. | A small portion of Dandeli village which is outside the municipal limits of Dandeli town has now been identified, constituted into a separate unit and added to the census list. |
| 4 | Honavar | 99 | 97 | 97 | Honavar<br>Mavinkurve<br>Manki | (24)<br>(38)<br>(35) | 1 | Revenue villages Karki and Haldipur are bifurcated into two and three parts respectively by the revenue authorities for administration purposes. These are shown as separate units in the census lists. | |
| 5 | Karwar | 61 | 58 | 59 | Baad<br>Savantwada<br>Ghadsai | (10)<br>(14)<br>(34) | 1 | Three revenue villages Kone, Kodibag and Kathinkon are fully incorporated in the municipal limits of Karwar town. Hence these villages are omitted in the census list. | Devagad island which was listed as a separate village in 1971 has now been regarded as part of Baad village. Kathinkon village of 1971 list is deleted as it is fully included in the town. Baithkol has now been added to represent that area of Baithkol village which is even now beyond the municipal limits of Karwar. |
| 6 | Kumta | 126 | 119 | 122 | Kumta<br>Mirjan<br>Kujalli | (31)<br>(42)<br>(46) | 1 | Seven revenue villages namely Kumta, Chikkolli, Haleherawatta, Hosaherawatta, Ippadi, Baggon and Vannalli are fully incorporated in the municipal limits of Kumta town. Hence these are omitted in the census list. | Hosaherawatta, Baggon and Ippadi of the 1971 list are now fully incorporated in the limits of Kumta Town. As such these have been omitted in the census list. |

| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
|---|---|---|---|---|---|---|---|---|
| 7 | Mundgod | 94 | 91 | 94 | Mundgod (38)<br>Pala (53) | 1 | Three revenue villages namely, Mundgod, Kelginkop and Malaginkop are fully incorporated in the limits of Mundgod town. Hence these villages are omitted in the census list. | Mundgod, Kelginkop and Malaginkop villages of 1971 list are now fully incorporated in the municipal limits of the newly constituted Mundgod town. Consequently these 3 villages are excluded in the census list. |
| 8 | Siddapur | 201 | 196 | 201 | Kondli (45)<br>Kodkani (71)<br>Umbalmane (80) | 1 | Five revenue villages namely, Kondli, Hanjibail, Hosur, Guddekop and Balikoppa villages are fully incorporated in the municipal limits of Siddapur town. Hence these villages are omitted in the census list. | Kondli, Hanajibail,Hosur, Guddekop and Balikoppa villages of 1971 list are now fully incorporated in the municipal limits of newly constituted Siddapur town. Hence these villages are now excluded in the census list. |
| 9 | Sirsi | 226 | 227 | 227 | Sirsi (46)<br>Banavasi (72)<br>Sampakhand (54)<br>Hulekal (55) | 1 | Hannondugadde which is not an independent revenue village but is amalgamated with Kyad gikoppa village as per survey settlement records has been reported as independent village by Revenue authorities and hence as a separate unit in the census list also. | |
| 10 | Supa | 140 | 140 | 140 | Supa (61)<br>Kumbarwada (42)<br>Castlerock (37) | 1 | | |
| 11 | Yellapur | 133 | 127 | 132 | Yellapur (51)<br>Manchikeri (76) | 1 | Six villages namely, Yellapur, Balgimane, Sabgeri, Kondemane, Sahasralli and Hittlakargadde are fully incorporated in the limits of Yellapur town. Hence these villages are omitted in the census list. | In 1971, Yellapur was a non-municipal town, with its jurisdiction over the revenue lands of Yellapur village only. But now it is reclassified as a Municipal town with its jurisdiction over the entire revenue areas of Yellapur, Balgimane, Sabgeri, Kondemane, Sahasralli and Hittlakargadde villages of 1971 list. Consequently these villages are deleted in the census list. |

## 6. MAJOR CHARACTERISTICS OF THE DISTRICT WITH REFERENCE TO ECONOMIC RESOURCES :

Amongst the 19 districts of the State, besides Dakshin Kannad, Uttar Kannad is the only district endowed with a coastal line. The twin districts are known for marine fishing and the export of fish as well as fish products. Inland water resources are also available to a considerable extent. Fishing as such forms a major economic and characteristic feature of the district. Uttar Kannad is rich in mineral deposits. The topographical and climatic features have all along been very conducive for the spontaneous growth of vegetation in almost all parts of the district. As a result, the district abounds in forest wealth. Much of the lands that are suitable for production of agricultural and horticultural crops have already been brought under the plough. Agricutlure and horticulture together constitute the backbone of the economy of the district. The abundence of rainfall has in a way obviated the necessity of artificially assured irrigation by a network of canals. However there are small tanks, irrigation wells and canals at several places. The river waters have however not been harnessed for irrigation purposes till now. In so far as utilisation of river waters for generation of power is concerned it may be noted that a beginning has first been made in the form of the giant Kalinadi Hydro-electric Project during the last decade. In the matter of industrial development also the district has of late been witnessing considerable progress.

With a coastal line of 114 Km from Majali near Karwar to Gorte near Bhatkal and a continental shelf of 65 Km, Uttar Kannad district has an expanse of about 10,000 square kilometres of fertile in-shore waters for exploitation. This part of the West Coast is popularly known as the Mackerel Coast and is known for its abundance of mackerels and sardines in particular. The potential yield is estimated at 4 lakh tonnes per annum. At present however, hardly one-tenth of this quantity is being hauled up every year and at current prices the value of this 40,000 tonnes comes to about Rs.8 crores. Obviously there is ample scope for further development of fisheries and for maximising the returns. Along the coast there are 16 marine fish landing centres, and these are : Arga, Bhatkal, Binaga, Chendia, Gangavati, Harwada, Honavar, Karwar, Keni, Kodar, Kumta, Majali, Manki, Murdeshvar, Shirali and Tadri. The inland or fresh water resources of the district include the 5 major rivers and their estuaries, numerous rivulets, 48 major and 1123 minor tanks and 2 reservoirs with a total water spread of about 80 square kilometres. Thus in this district marine as well as fresh water fishing are both important even though it has to be conceded, marine fishing is of greater significance. By and large, marine fishing has remained a preserve of the men belonging to the traditional fishermen communities such as the Ambig, Harkantra, Kharvi, Tandel, Gabit, Boyi, Dalji and Agers. Certain sections among Christians also have come to regard fishing as their hereditary and traditional occupation. Persons belonging to fishermen community form a significent proportion of the population of almost every village and town that dots the coastal line. According to the All India Census of Marine Fisheries 1980, this district has 70 centres of such a type and the total number of households of fishermen is estimated at 6646 with a population of 42065. The number of fishermen actually engaged in fishing is estimated at 10514.

Though a beginning has been made in mechanised fishing, a vast majority of the fishermen are attached to traditional fishing gear and the traditional practices. They use dug out canoes and plank boats for venturing into the sea and their

fishing gear includes different types of nets such as cast nets, gill nets, hook and line, and also rampani the giant shore-seine. There are a few purse-seine fishing units as also a few mechanised boats or coastal trawlers which are mainly built for the prawn fishery. The major contribution to the fish landings comes from the giant rampani which are operated by large out-rigger boats involving 60-80 fishermen for each unit. This traditional gear for the pelagic fishery, mainly mackerel and oil sardine, has an operational range of only upto 3 Km from the coast. For stabilising the fishery by bringing in some predictability on landings and to bring in additional resources under mechanisation as well as to reduce pressure on coastal trawl fishery, the Government introduced purse-seining in the State for the first time in 1975-76. Fishermen venture into the sea all through the year, except for brief spells during the monsoon months of June, July and August when the sea tends to be rough. They catch a variety of fishes including mackerels, sardines, sharks, sciaenids, cat fish, silver bellies, seer fish, pomfrets, mullets etc, and a major portion of the catch is sold on spot to local consumers and also to traders who arrange for further transportation and curing. All along the coast there are several curing yards, cold storage and ice plants, and transit centres. Honavar has now been developed into a fair-weather fishing harbour with a central assistance of Rs.4.59 million. About 65 per cent of the fish catch is cured and sun-dried, about 8 per cent is frozen, another 5 per cent is canned and a small proportion is converted into manure as well. Generally fish-curing is attended to by the womenfolk of the fishermen community. Small and medium sized fishes are usually sun-dried and salt-cured whereas in the case of large sized fishes dry curing is preferred. In this process the fish is slit through the dorsal line and then allowed to dry. Wet curing, called Ratnagiri curing, is also popular.

An idea regarding the importance of marine fishing in the economy of the district may be had from the following information about the quantity of fish catch and the estimated value thereof for three successive years :

| Year | Quantity (M.tonnes) | Value (Rs.in lakhs) |
|---|---|---|
| 1977-78 | 49,291 | 489.69 |
| 1978-79 | 30,942 | 380.90 |
| 1979-80 | 46,148 | 618.78 |

Obviously, the quantity of fish catch and the value thereof are subject to considerable annual variations since the yield from fishing depends upon the climatic conditions and other natural phenomenon which are beyond human control. However, with a view to maintaining the yields, several measures such as mechanisation, use of nylon nets, providing training to fishermen, etc, have been taken up. In view of the hazards of the occupation the Government has set up a fund called the "Fishermen Distress Relief Fund" and during periods of fish famine the Government has of late come forward to advance short-term interest-free loans to the poor and needy fishermen.

As early as in 1948, a Central Marine Fisheries Research Sub-station was set up at Karwar. During 1957-58 the process of mechanisation began when the State introduced two small mechanised boats in the State. Now Karwar has a fishermen training centre. Under an international project, in this district a 1160 metre long wharf, an ice plant, a cold storage plant, a boat building yard as well as an auction hall have come up. To improve communications and to facilitate traffic from the seashore several approach roads have been laid out. Curing yards, service stations and workshops have been set up. Since 1967, Indo-Norwegian Project-located west of Baithkol near Karwar-is active in exploration and experimental fishing, in construction of fishing harbours, in setting up of ice plants and cold storage plants, boat-building yards, development of marketing facilities and a variety of activities connected with the fisheries. The Indo-Denmark Project is active at Tadri fish landing centre. Recently the State Government introduced the Sagara Deepa Project and has also launched a special insurance scheme for the fishermen. In the economy of the district fisheries enjoys an unique place and any further development in this sphere is bound to bring in prosperity to the people associated with this activity.

Like fisheries, forest wealth also plays a singular role in the economy of the district. If the proportion of forests to the total geographical area of the district is reckoned as an index of the importance of forests, Uttar Kannad tops the list amongst the 19 districts of the State. The area classified as forests adds up to about 8300 square kilometres and this forms a little more than 80 per cent of the total geographical area of the district. These forests belong to different categories such as the evergreen, semi-evergreen, moist deciduous and dry deciduous and each zone makes its own contribution to the economy. The major items of forest produce are the soft wood, package timber, timber useful for building boats, construction timber, sandal wood and fire wood. There are reserved forests, plantations, protected forests and village forests and all these forests are being systematicaly exploited since several decades. There has been some amount of denudation of the forests in recent years as a result of the unauthorised and indiscriminate clearance of forests for purposes of cultivation by encroachers, setting up of rehabilitation centres for displaced persons and allotments of lands to the landless poor and submersion of forests under reservoir projects as well as loss of forests due to formation of new roads and widening of the existing roads. The loss in forest area is estimated at a little more than a thousand square kilometres. For purposes of administration the forest areas are constituted into 5 divisions with their headquarters at Haliyal, Honavar, Karwar, Sirsi and Yellapur. As a soil conservation measure cashew plantations have been systematically developed since 1950. Recently social forestry scheme was introduced in this district too. Availability of forest-based raw material has promoted the growth of several industries the most important of which is the West Coast Paper Mills at Dandeli. The Forest Plantation Corporation established in 1973 has been evincing considerable interest in rising eucalyptus and cocoa plantations while the Cashew Development Corporation is mainly concerned about propagating cashew cultivation. The Forest Industries Corporation has been maintaining a saw mill at Dandeli and has also set up a green grass dehydration and pelletisation plant.

Uttar Kannad is comparatively rich in mineral wealth. Iron and manganese are the major items of this wealth and both these are being exploited since quite a long period. Lime, quartz, bauxite, limestone, silica and sand are the other items of considerable importance. Iron ore deposits (estimated at 169 million tonnes) are found mainly in the taluks of Ankola, Honavar and Yellapur. The manganese ores of this district are characterised by a high manganese content with a low phosphorus and a low electro-magnetic elements. The manganese bearing regions are found at several places in the taluks of Supa, Yellapur, Sirsi, Kumta and Ankola and the deposits are estimated at about 25 million tonnes. Bauxite occurs at Tadri, Gokarna, Honavar, Apsarkand, Idagunji and a few other places and the estimated reserve is 11 million tonnes. Limestone, dolomite, steatite, glass-sand and clay are of considerable economic value. The availability of these minerals has promoted the growth of mining industry and has also resulted in the setting up of mineral-based industries such as the ferro-manganese plant, silicon-manganese plant and the caustic soda plant. However for want of proper rail and road communication and other infrastructural facilities the extent of exploitation of the mineral wealth has not reached the optimum level so far. The Mysore Minerals Limited-an undertaking of the Government of Karnataka is the lessee for exploitation of manganese ore. A quantitative idea regarding the yield from mining operations during the year 1980 may be had from the following:- Iron ore (30,142 tonnes : Rs.301,420); Manganese (156,104 tonnes : Rs.12,488,320); Limestone (17,820 tonnes : Rs.178,200); Moulding sand (4,460 tonnes : Rs.53,520); Lime shell (22,686 tonnes : Rs.794,010) and Quartz (1,104 tonnes : Rs.53,520).

Though fisheries, forests and mineral wealth are undoubtedly of great economic significance in Uttar Kannad, it is cultivable land that constitutes the backbone of the economy of the district. In the matter of average yields and general development of agriculture and horticulture, Uttar Kannad stands comparison with the districts of Mandya, Mysore and Shimoga - all of which are regarded as agriculturally advanced. According to the land use statistics for 1978-79, out of the total geographical area, forests account for 80.93 per cent; lands put to non-agricultural uses, barren and uncultivable lands besides lands

under miscellaneous trees and groves together form 5.79 per cent; cultivable wastes form 1.14 per cent while lands classed as other fallows and current fallows constitute 0.42 per cent and 1.04 per cent respectively. Thus, the net area sown is only 10.68 per cent. If the fallow lands are also reckoned as cultivated lands, then the lands that have been brought under the plough moves up a little to reach 12.14 per cent. This piece of information assumes significance when it is known that for the State as a whole the net area sown works out to 54 per cent and the fallow lands account for another 8 per cent. This phenomenon is mainly attributable to the mountainous terrain that is noticeable in a major part of the district. Nevertheless the above details emphasise the fragile base on which the agricultural economy of the district is resting and also explains the low population density noticed in Uttar Kannad. Within the district however, there are variations regarding the proportion of the lands that has been brought under the plough and also regarding the fertility of the soils, nature of crops grown and rainfall conditions. In the coastal strips there are patches of what are known as gazni gadde that is Khar lands. Since the 1960's consistent efforts are being made to put up bunds and reclaim such lands for effective cultivation.

Paddy is the principal agricultural crop of the district and is grown in all the taluks. In fact, Uttar Kannad is the fourth largest paddy growing district of the State. Sugarcane and groundnut are also important agricultural crops, and of these, while sugarcane is a traditional crop, groundnut is a recent introduction which has become popular during the past 2 decades. Sunflower cultivation too has been receiving considerable attention, especially since 1972-73. As regards the garden, that is, horticultural crops it may be mentioned that Uttar Kannad is well known for its production of arecanut, coconut, pepper, cardamom, cashew and pineapple besides plantains. In view of the heavy to very heavy rainfall experienced in most parts of the district, the yields are generally good. There are no major irrigation works. At several places barrages have been put up across streams to divert water for irrigating small stretches of lands. Wells and tanks are the main sources of irrigation. Agricultural and garden lands are held under the Raiyatwari tenure and small holdings are the rule. During the past two decades concerted efforts are being made to reclaim land and also to propagate intensive methods of cultivation. Use of improved seeds, chemical fertilizers and pesticides is now very common. Soil conservation measures such as terracing, improvement of Khar lands, specific schemes covering particular crops like sunflower, coconut, arecanut, pepper, cashew, banana, etc., have been taken up from time to time and implemented successfully. Multiple Cropping Scheme for example has been in operation since 1971 with the main objective of accelerating intensive cropping and streamlining input supplies as well as credit facilities. So also SFDA project was introduced in 1971 and the Agro-Industrial Corporation has also been functioning effectively in the district.

As in most of the other districts of the State here too animal husbandary is an economically important activity which is more or less an adjunct to cultivation. However since the climatic and topographical conditions are not quite conducive even though there is an abundance of green vegetation the livestock wealth of the district is not quite impressive. The cattle belong to a non-descript type locally known as malnad gidda. These are diminutive in size but are sprightly and known for their endurance and resistance to disease. These cattle provide the necessary power for agricultural operations and also the valuable farmyard manure which, when mixed with the leaf manure, forms a fine nutrient for the crops. Buffaloes are reared in relatively larger numbers in the eastern and north-eastern tracts and so also sheep and goats are confined to areas with moderate to comparatively lower amounts of rainfall. An idea about the growth of cattle wealth of the district may be had from the following statement based on the quinquennial census.

| Type | Number of livestock heads as per the Census | | | Percentage variation |
|---|---|---|---|---|
| | 1966 | 1972 | 1977 | 1966-1977 |
| 1 Cattle | 345881 | 370367 | 392959 | 13.61 |
| 2 Buffaloes | 96663 | 99802 | 97227 | 5.83 |
| 3 Sheep | 3672 | 5008 | 8060 | 119.50 |
| 4 Goats | 5977 | 9428 | 10781 | 80.37 |
| 5 Pigs | 802 | 936 | 1044 | 30.17 |
| 6 Poultry | 344456 | 443961 | 338228 | (-)1.81 |

In the taluks of Haliyal, Yellapur and Mundgod there are a significant number of people who belong to the Gowli community which regards cattle rearing as its traditional occupation. On account of various reasons most of them appear to have given up their traditional occupation some time ago. With a view to provide assistance to them a Dairy Development Scheme or the Gowli Rehabilitation Scheme was implemented in the district during the last decade. Other schemes which are in operation are the Hill Cattle Development Scheme besides the Applied Nutrition Programme. A large proportion of the milk produced in the eastern tracts of the district is exported to Hubli-Dharwad city. There are chilling centres at Bhatkal, Haliyal, Kirwatti, Mundgod, Siddapur and Sirsi. Regarding poultry keeping it may be noted that it is customary for most of the households, belonging to the communities accustomed to non-vegetarian food, to rear a small number of birds meant mainly for satisfying their domestic requirements. Eggs and chicken are also sold locally and in small quantities. However, large-scale poultry farms are not found in the district. Poultry development too has received adequate attention of the Government and at each one of the taluk headquarter towns a Poultry Production cum Demonstration Centre has been set up.

The peculiar topographical and climatic conditions, lack of proper communication and transport facilities and non-availability of adequate power have all along curtailed the industrial growth of the district. As a result Uttar Kannad has been categorised as industrially backward. In view of this, several special concessions have been offered to the entrepreneurs coming forward to set up industries. As a consequence, in recent years the industrial scene is undergoing a rapid change. The district can now boast of a couple large-sized industrial units. Traditionally, Uttar Kannad is known for sandal wood carving and cane work. Kumta and Karwar are the principal centres of wood craft and both have continued to maintain their reputation. The industries of the district can be classified into the four categories : agro-based, marine-based, forest-based and mineral-based. There are numerous rice mills, and Khandasari manufacturing units all over the district. There are four fruit processing factories (mainly pineapple) and six coir industrial units. The marine-based industries are concentrated in the coastal zone and consist of boat building, production of fish oil and fish manure, ice plants and freezing plants. Forest-based industries include the numerous saw mills, the plywood factory, veneers manufacturing unit and the paper mill. Ferro-manganese and silicon-manganese units as well as the caustic soda factory are the major mineral-based industries.

The forest department started a small saw mill at Dandeli in 1917 which has now been developed into a major saw mill of the district and is being run since 1975 by the Karnataka State Forest Industries Corporation Limited. It is engaged in the production of railway sleepers and defence equipments. The Indian Plywood Manufacturing Company Ltd., Dandeli is a public limited company which came up in 1944 with a capital investment of Rs.5.7 crores. The factory provides direct employment to about 923 persons. This company has in association with the Karnataka State Forest Industries Corporation helped in the founding of the Karnataka State Veneers Limited. This Company established a factory at Kavachur of Siddapur taluk and started manufacturing export-oriented veneers in 1977-78. Ferro-alloys constitute the backbone of steel industry. In 1955 a beginning was made at Dandeli to produce the ferro manganese alloy and a company named Electro-metallurgical Works came into being in 1957. This was the first factory of its kind in the country to use electric submerged arc reduction process in a furnace. Manganese ore which is available in the district is being effectively utilised here as a raw material and the factory produces special ferro-alloys. The year 1962, witnessed diversification and expansion by way of addition of a new furnace and the capacity was further augmented in 1975 by the addition of one more refining furnace. The West Coast Paper Mills, Dandeli is a private enterprise belonging to the Bangur Somani Group. This mill was set up in 1936 with an investment of Rs.928.51 lakhs and an installed capacity of 18,000 tonnes of paper per annum. Production began in 1938. This is an integrated plant and uses forest plants, chiefly bamboo, as the main raw material. Now the capacity has reached 60,000 tonnes a year and the factory provides employment to more than three thousand workers. The Karnataka State Forest Industries Corporation Ltd., established a green grass dehydration and pelletisation plant at Balekoppa near Siddapur in 1974 with a view to tackle the problem of fodder scarcity. It has a small farm to cultivate grass of various kinds such as Napier, Para, Green panic etc., and a pellet mill. The harvested grass

is dehydrated and then nutrients like molasses, mixed grain, oil cake etc., are added and the entire mixture formed into small pellets. This enterprise provides employment to one hundred persons. The latest addition to the list of industries is the caustic soda and chlorine production plant established in 1975 by the Ballarpur Industries Ltd., at Binaga near Karwar. The company has acquired about 12 square kilometres of marshy lands containing salts in Gujarat State and transports the salty earth as raw material for use at Binaga. This factory is the first of its kind and involved an estimated cost of Rs.23 crores. Production began in 1979 and while the caustic soda produced here is useful in aluminium factories, paper mills, soap factories and textile mills the chlorine is useful in the manufacture of paper and rayon. Phosphoric acid is also being produced here and the raw material for this purpose, which is Rock Phosphate, is presently being imported from Jordan and Morocco. This company provides employment to about 1000 workers. Apart from the above-mentioned major industries, the district has about seven hundred small scale industrial units. There are more than a dozen tile factories, 5 fish manure producing factories, coir factories, soap factories, numerous saw mills and units engaged in the manufacture of wooden furniture and fixtures, general engineering works, factories producing plastic articles, polythene bags, ink, gum, paraffin wax candles etc. The Khadi and Village Industries Board has been quite active in the district since a long period. Recently Industrial Estates have been developed at Dandeli and Sirsi and this development has intensified further industrialisation.

Uttar Kannad was a power starved district and till 1955 Karwar was the only place with a generator that produced electricity using crude oil and supplied power for local consumption. In 1955, power began to flow from Jog and Dandeli was among the most important centre to be linked up in the very initial stage. Thereafter gradually the important towns and villages came to be electrified. In the matter of power generation, the district has assumed great significance in recent years. In 1971, the Kalinadi Hydro Electric Power Project was cleared for execution and in 1979 December, the Nagjhari Power House was commissioned. A few salient details about this project would not be out of place at this juncture.

The Kali Project envisages the construction of a series of ten dams - five across the Kali river and 5 across its tributaries - a series of tunnels the total length of which would be 15 Km including the 9.4 Km long head-race tunnel, 3 pressure shafts, six penstocks and other water diversion tunnels, and a chain of six power houses. The project is proposed to be executed in three stages and the installed capacity envisaged for each stage is 910 MW, 278 MW and 128 MW which together add up to 1316 MW. The first stage consists of the construction of Bommanhalli dam, Tattihalla dam, Tattihalla-Bommanhalli water conductor system and the Nagjhari Power House besides and 101 metres high Supa dam and the Supa Power House at an estimated cost of Rs.288 crores. The Nagjhari Power House which was recently commissioned represents the completion of only the first phase of the I stage of the project. Phase II of Stage I contemplates the completion of the Supa dam and the small power house of 100 MW capacity at the foot of the dam, completion of the upper Kaneri dam and diversion tunnel besides the completion of the Tattihalla dam. Stage two of the project which is yet to be taken up comprises construction of tail-race dams at Dandeli, Kodsalli and Kadra on the Kali river with power houses using the tail race waters of the Nagjhari and Supa Power Houses along with the flow. This stage is expected to cost Rs.206 crores.

Another hydro-electric project which is on the anvil is the Gangavali Project, also called the Bedti Project. This envisages the construction of a dam across the Bedti near Yellapur and the installation of generators with a capacity of 210 MW. Yet another major development in the field of power generation is the selection of Kaiga village by the Atomic Energy Commission for the installation of power plants with a capacity of 235 MW. Kaiga is located amidst dense forests on the banks of the Kali river and the Kadra Reservoir nearby is expected to function as the necessary water supply source. The estimated cost of this project is Rs.2000 crores.

In the matter of transport and communication as well as trade Uttar Kannad is a backward district. The hilly terrain, excessive rainfall, numerous water-courses criss-crossing the landscape etc., have along hindered a proper development of the district in these spheres. In 1956, when the district became a part of the Karnataka State, the total road length was only 2420 Km. By 1966 this figure reached a tally of 3456 Km and now it is 5021. At several places bridges and culverts have been built and new roads have been formed. The West Coast Highway has now become a reality and the recent completion of a series of bridges along the coast has strengthened the road communication between the two coastal districts of the State and has resulted in a sudden and sustained spurt in through road traffic between important places located in these districts and beyond. Regarding railway it may be noted that it is only in the northern tip and in the north-eastern corner that some semblence of this facility is available. While the Londa-Marmagoa railway line passes through Castle Rock in the northern tip, in the north eastern corner the important industrial town of Dandeli is linked with Alnavar which lies on the main line linking Miraj and Hubli. The total length of the two railway lines passing through this district does not even add up to 50 Km. Since quite a long time there have been discussions about the construction of a railway line between Hubli and Karwar and each time the project has been shelved. Even during the last decade interest in this project had been revived for a brief period and this was linked up with the project of developing Karwar into an important all-weather port. Being a coastal district, Uttar Kannad has a few ports of which a mention may be made of Bhatkal, Belekeri, Honavar, Kumta, Tadri and Karwar, the most important port of the district. The State Government has recently taken up the project to develop Karwar as a minor but all-weather port. Items being exported from the ports of the district include minerals, fish and fish products. As regards the trading and commercial activities it may be mentioned that all the towns of the district have all along been functioning as important centres and that these activities make a significant contribution to the economy of the district.

## 7. MAJOR SOCIAL AND CULTURAL EVENTS, NATURAL AND ADMINISTRATIVE DEVELOPMENTS DURING THE DECADE :

The district has not witnessed any major social and cultural events during the last decade. There have not been any major administrative developments either. The social and cultural life of the people has been quite placid through out the decade. As already mentioned the road communication has been rendered easier due to formation of several new roads and construction of bridges. A special mention may be made of the long bridge across the Sharavati which was completed during the decade and established a road link between Honavar and Kasarkode. Construction work relating to the Kalinadi Hydro-Electric Project was commenced around 1971 and throughout the decade the work was in full swing. This project has necessitated acquisition of lands, submersion of lands particularly in Supa taluk and the consequent need for taking up rehabilitation measures. This apart, as in the other parts of the State and the country as well, in this district also several developmental programmes have been successfully implemented. The hilly tracts of this district are covered under the Western Ghat Development Project and have for that reason received greater attention. In view of the concentration of fishermen in the coastal areas, specific schemes for the betterment of their socio-economic conditions have been taken up. During the second half of the decade the twenty point economic programme was vigorously implemented and large sections of the people belonging to the weaker groups were benefitted to a significant extent. As in the past during this decade also fairs and festivals were held at numerous places with the traditional pomp and gaiety.

## 8. BRIEF DESCRIPTION OF PLACES OF RELIGIOUS, HISTORICAL OR ARCHAEOLOGICAL IMPORTANCE IN VILLAGES AND PLACES OF INTEREST IN THE TOWNS :

### 1. ANKOLA TALUK

1. L.C.No.59 : Bilehoingi : A locality of this village called

Gangavali is a small port and has a temple dedicated to goddess Ganga. On the occasion of Gangashtami (eighth day of Kartika) a large number of devotees congregate at this place because the darshan of the goddess on this day is regarded as highly rewarding. The processional image of Lord Mahabaleshvar is brought from Gokarna and ceremonially bathed in the river in front of this temple. The Karaneshvara linga near the Ganga temple is believed to have been set up at Vishvakarma, the celestial architect, when he performed austerities by which he gained a knowledge of divine architecture.

II L.C.No. 67 : Belekeri : This village is a noted health resort and a minor port.

III L.C.No. 68 : Aversa : The village has a ship-shaped shrine of Kantradevi the tutelary deity of the Kharvis (a fishermen community of the coast). The idol of this goddess, it is believed, was recovered from the sea and then installed in the shrine. During Dasara, the goddess is worshipped with great solemnity by the Kharvis and other Konkani speaking people of the neighbourhood.

## 2. BHATKAL TALUK

I L.C.No.35 : Hadvalli : In former times this village which is also known as Sangeetapura, was the headquarters of a small Jain principality and a flourishing town. The Saluvas were ruling this region during the 14th, 15th and 16th centuries. Now the village has the ruins of a few ancient buildings and a mention may be made of the Neminatha Basti, Chandranatha Basti and the Parswanatha Basti. There is a Haripeetha with white marble images of all the 24 Jaina Tirthankaras. The manasthambha here is considered to be the tallest in South India. The Padmavati temple has a bronze idol of Padmavati. There are innumerable hero-stones around Haripeetha and the Padmavati temple.

II L.C.No.56 and 57 : Mavalli : The village is famous for its Murdeshwar temple which is located on a lofty fortified promontory insulated by a narrow channel. This shrine is believed to have been built by Ravana who was an ardent worshipper of Shiva. Kandugiri temple, ascribed to the Jain chiefs of Kaikini, is noted in the neighbourhood on account of the annual fair held here under its auspices. The village which has several hero-stones and inscriptions appears to have been a prominent place in the bygone days.

III L.C.No.58 : Bailur : The village is known for its two ancient temples enshrining Markandeshvara and Goddess Lakshmi respectively. The Markandeshvara temple is said to have been got repaired by some Nayars during 1434 A.D., when they endowed the temple with some lands as well.

## 3. HALIYAL TALUK

I L.C.No.55 : Sambrani : Gemelli Careri, an Italian traveller visited this place in about 1695 A.D. and has recorded that this village was the headquarters of a Sonda chief named Kirana-raja and was surrounded by a mud walled fort. In 1799 A.D. this village witnessed a fierce battle that raged between the Maratha forces and the British.

II L.C.No.70 : Hosur : This village has four elaborately carved inscription stones of which one depicts a man being carried on litter. The inscriptions are effected.

## 4. HONAVAR TALUK

I L.C.No. 5, 6 & 7 : Haldipur : Basavarajadurga, better known as the 'fortified island' to the historians, is about 2 Km off the Haldipur coast and can be easily reached by boats. For a long period these areas formed part of the Bidnore or Keladi kingdom and Shivappa Nayaka is said to have fortified this island with an all round stone wall equipped with towers at vantage points to serve as bases for the guns. The fort is now in ruins. Haldipur was formerly the headquarters of Honavar Sub-division.

II L.C.No.14 : Chandavar : The village is believed to have been built by Sarpan Malik, apparently Sheriff-ul-mulk, the Bijapur general who conquered these areas towards the close of the 16th century. In 1608, Chandavar was occupied by Venkatappa Nayaka of Keladi who effectively resisted the invading forces from the north. The village has an ancient Roman Catholic Church dedicated to Francis Xavier.

III L.C.No.41 & 42 : Hulegar and Nagar Bastikere : These two villages are situated on the opposite banks of the river Sharavati and from here the river is navigable upto Honavar. A locality in Hulegar village bears the name Gerusoppa. This was once the capital of a line of chiefs who professed Jain religion and thus contains extensive ruins and relics of their times (1409-1610 A.D.). In its heyday this village is said to have contained a hundred thousand houses and 84 temples. The Gerusoppa chiefs were the subordinates of the Vijayanagara kings from whom they received good treatment and encouragement. Channa-bhairadevi was the last ruler of this dynasty and she was known as the 'pepper queen' to the Portuguese. Venkatappa Nayaka of Keladi annexed this chiefdom. The Italian traveller Della Vale who passed through this area in 1623 A.D. has described this place as the 'metropolis of a province'. The village is known for the Chaturmukha Basti which is of a later Chalukyan workmanship, is cross shaped and is, as its name implies, four-faced having four doors. In addition to this, this village complex has the ruins of several Jain shrines.

## 5. KARWAR TALUK

I L.C.No.6 : Binaga : Binaga is a small port with a harbour affording safe anchorage throughout the year. The port area is covered by rocky hills and thick vegetation and it is also sheltered from the north wind by the island of Anjidiv which lies in the sea about 3 Km off the coast. The main exports are fish and fish products. With the recent establishment of the Caustic Soda factory here the importance of the village has increased.

II L.C.No.11 : Chitakula : Basavalinga Nayaka, a Sonda Chief (1697-1745 A.D.), is said to have built the fort at Chitakula, which is located on the northern banks of the Kali river. He named the fort as Sadashivgad in memory of his father. This fort was occupied by the Portuguese for a brief period and was later surrendered in 1754 A.D. to the Sonda chief in lieu of a grant of four villages and permission to build a factory near Bhatkal. In 1763, Haider Ali's General Fazl-Ulla-Khan captured this fort. This fort is now partly ruined. About a Km to the east of Sadashivgad there is another fort, called Samvargad, on the top of the Samvar hills. Kurmagad is yet another interesting fortified island situated in this vicinity and its initial fortifications are ascribed to Shivaji. This island has a temple of Narasimha. In 1715 A.D. Basavalinga Nayaka is believed to have completed the fortification work and gave it the present name of Kurmagad. Chitakula has several religious institutions of which a mention may be made of the Kavalematha, Durga temple, Vivekananda Ashrama, an ancient mosque and an old church besides the dargah of Peer Kareemuddin.

III L.C.No.12 : Majali : Shiveshvar, a place of some historical importance is situated here. This place was fortified by Sherif-ul-mulk, the Bijapur general, in about 1606 A.D. In 1675, Fryer, the well known English traveller, passed through this area and has described Shiveshvar as a strong place just then conquered by Shivaji. Subsequently this area passed on to the hands of the Sonda chiefs and was conquered by Fazl-Ulla-Khan in 1763. The fortifications were pulled down in 1783 by a detachment of the British forces. After the advent of the British rule Shiveshvar continued to be a chief town of petty division under Ankola. The place has the ruins of the old fort and also the ruins of several temples dedicated to Shiva.

IV L.C.No.14 : Mudgeri : The village is noted for its temple dedicated to Naganatha under the auspices of which a car-festival is held every year in the month of May.

V L.C.No.32 : Kadra : This village is situated on the banks of the Kali river and from this place upto the sea near Karwar the river is navigable. This place is said to have been fortified by Sherif-ul-mulk, the Bijapur General in about 1610 A.D. The English traveller Fryer passed through this village during his tour in 1675 A.D. The fort was dismantled in about 1715 A.D.

by Basavalinga Nayaka, the Sonda chief and traces of this ruined fort are now extant. Local accounts indicate that about 5 Km north of Kadra at a place called Arbitembi there is a curious wall built out of loose granite slabs and enclosing a space with a perimeter of about one thousand feet. This is situated at the top of a spur of the Sahyadris and is believed to have been erected by a group of ship-wrecked Arab sailers who had taken to a life of brigandage. They were subdued by Sadashiva Raya, the Sonda chief (1674-1697 A.D.).

VI L.C.No.53 : Shirwad : A locality of this village, known as Sidhapur, and also as Saitanpur among Muslims, is believed to have been the capital of the Habbu kings in the past. The village contains the ruins of two forts called the Hale Kote (Old Fort) and the Lakdi Kote (Wood Fort).

VII L.C.No.57 : Sunkeri : This village, except for a small portion, stands incorporated in the limits of Karwar town. Sunkeri is renowned for its church of 'Our Lady of Conception' built in the beginning of the 19th century by Rev.Father Francis Xavier, a Carmelite Missionary. The roof of the church is supported on large masonary pillars which are 2 metres square at the base. The beautiful idol of Our Lady of Conception stands on a plain altar.

### 6. KUMTA TALUK

I L.C.No.6 : Aghanashini : The village has the temples dedicated to Kameshvara, Mahadeva and Ganapati. According to a local legend Kama (cupid) or Manmatha who was burnt to ashes by Lord Shiva and resurrected thereafter to exist in a bodyless form could not enter Gokarna in his accursed state. Therefore he installed a linga at Aghanashini and offered prayers to Lord Shiva who took compassion on him and brought forth the Ganga to this place so that Manmatha could have a dip in the sacred river, purify himself and then proceed to Gokarna. Thus at this spot the river is considered to be very sacred and a dip in it would wash off one's sins.

II L.C.No.11 : Gokarna : This is a famous place of pilgrimage and is considered as the Benaras of the South (Dakshina Kashi). This place has the renowned temple of Mahabaleshvara. The linga enshrined here is believed to be the Atmalinga of Lord Shiva, which he gave away to Ravana the king of Lanka in answer to the severe austerities performed by the latter. Having learnt of this catastrophic gift, the gods contrived a strategy to deprive Ravana of this most treasured Atmalinga. Accordingly, Ganapati appeared at this place in disguise, accosted Ravana and secured temporary custody of the Atmalinga, which he placed on the ground before Ravana could prevent him from doing so. The Atmalinga got firmly implanted at the spot and the mighty Ravana could not dislodge it. This Mahabaleshvar temple is built of granite and is in the Dravidian style with a shrine and an outer wall. A peculiarity of this linga is that its top portion of about 5 cm only is visible above the ground. In the outer hall of the temple there are the idols of Ganapati and Parvati. In honour of Mahabaleshvara an annual festival is held on the occasion of Mahashivaratri. In addition to this temple, there are 20 smaller shrines and 30 tirthas which are held in high reverence. Each one of these has its own legend to explain its sanctity. Near the Mahabaleshvara temple there is the temple of Ganapati which enshrines an idol of Ganapati which is represented as having two hands and is in a standing posture. This idol is believed to belong to the period of the Kadambas. The temples of Bhadrakali, Shankaranarayana, Venkataramana and Tamragauri are also of some importance. Koti-tirtha and Jatayu-tirtha are holy spots where the devotees have a dip to cleanse themselves of all impurities. It is customary for the devotees to bathe first at the Koti-tirtha and then in the sea at the mouth of the Tamraparni rivulvet, offer gifts to priests and mendicants, worship Ganapati and then proceed to have the darshan of Mahabaleshvara. Once in twelve years ashtabanda rites are performed at the Mahabaleshvara temple. This is a colourful fair and attracts a very large number of devotees from far and near.

Gokarna is a place of historical importance as well and has yielded a copper plate grant and 8 inscription stones. Lokaditya, a chief of Gokarna is said to have married a sister of Mayuravarma, the founder of the second Kadamba dynasty. Krishnadeva Raya of Vijayanagar is said to have got himself weighed against gold (Kanaka-tula-bhara) here in 1508 A.D.

III L.C.No.32 : Mirjan : This place is supposed to be the ancient Muziris, one of the chief centres of Greek and Roman trade with India during the first three centuries of the Christian era. Under the Vijayanagara kings this place was the headquarters of feudatory chiefs. In 1510 Albuquerque is said to have come over here to meet the chief of Honavar. During early 17th century this area also formed part of the Bijapur kingdom. It was during this period that Sarpan-Malik - a cow-herd who became a local chieftain - and came to be known as Sheriff-ul-mulk, built the forts at Mirjan and Ankola. In 1678, under a treaty the Keladi Nayakas permitted the Portuguese to build a factory and a church at Mirjan.

IV L.C.No.55 : Yan : Yana or Bhairavakshetra is an important pilgrim centre. It is situated in a beautiful valley between the Jaddi ghat and the Devimane ghat and has to be reached by trekking a distance of about 10 Km by foot amidst a thick forest. According to tradition Shiva destroyed the demons Raktaksha and Krishnaksha at this place. The hills provide a fine view of the Yan valley. Several great masses of earth and rock stand out further down in the ravine of which the rock near the upper end of the pass is considered to be very sacred. This hillock, rising about a hundred metres high, contains a large cave (about 40 metres long, 205 metres broad and 2.5 metres high) in which is found the shrine of Bhairaveshvara. Near the middle portion of this cave, from a small ledge or knob of rocks close to the roof, a small stream drips on the top of a granite linga. To the south, a little below, is a smaller cave with a bronze idol of Chaudiamma, a form of Goddess Parvati. Another tradition has it that Lord Vishnu destroyed the demon Bhasmasura at this place when the latter pursued Lord Shiva who had taken refuge here. The rock formation here is of a special type and colour and the local people describe this as the ashes getting accumulated after the destruction of Bhasmasura. On the occasion of Mahashivaratri, every year, a fair is held. This event attracts a large gathering of devotees.

V L.C.No.80 : Holegadde : Dhareshvar, a hamlet of this village has a temple of Mahadeva or Shiva. The walls of this temple are well ornamented with sculptures and there are a few inscription stones also in its precincts. The linga here is known as Dhareshvar or Doreshvar and legend associates it with the Atmalinga of Lord Shiva, which Ravana lost at Gokarna. The place has sacred ponds called Rudra kunda, Chakra-tirtha, Sankha-tirtha, Vasudha-tirtha and Naga-tirtha.

### 7. SIDDAPUR TALUK

I L.C.No.46 : Kodkani : The famous Jog Falls is located near this place. The Sharavati which has a breadth of about 70 metres leaps over a cliff of about 250 metres high in four separate channels. Two of the falls are in the hook or the curve nearly opposite to each other while the other two fall over the straight line or handle of the hook all from the same level into a pool about 38 metres deep.

II L.C.No.110 : Bilgi : This village has the ruins of a fort and a palace. The chief object of interest here is the Parshvanatha basti, said to have been built in about 1593 A.D., by Narasimha, the founder of this township. It was enlarged in 1650 A.D. and the idols of Neminatha, Parshvanatha and Vardhamana were added. The basti is in the minutely ornamented style. Two well preserved inscription stones dated in 1558 A.D. and 1625 A.D. record the grants of villages and lands to this temple. The village has a Virupaksha temple which is a plain building. During the 17th century Bilgi was the seat of a separate principality.

III L.C.No.146 : Unchalli : The famous water falls known as the Lushington Falls is located near this place. Lushington a collector of Kanara is said to have discovered this water falls in 1845.

### 8. SIRSI TALUK

I L.C.No.47 : Banavasi : Banavasi is a place of great antiquity. It is located on the left bank of the Varada river and ruins of a mud fort wall are even now extant. Mahavamsha speaks of Banavasi (250 B.C.) as the place to which a Buddhist missionary was sent by emperor Ashoka. This was the capital city of the Kadambas and was a prominent seat of administration for quite a long period. The main object of interest here is the Madhukeshvara temple which contains an inscribed Naga stone and a stone cot besides several inscribed stones. Recent

excavations have brought to light the ruins of a brick structure which may be that of a Buddhist stupa. At Gudnapura nearby, there is a large tank and a Veerabhadra temple. An inscription recently discovered here has clearly established that Mayura Sharma Kadamba was the son of Bandhusena and the grandson of Veerasharma. The inscription also mentions of Vasantotsava celebrated at the place to honour Kama. This village has yielded several rare idols and jaina icons also.

II L.C.No.176 : Sonda : Also known as Swadi, Sode and Sudhapura, this was the capital of a chiefdom (1590-1764 A.D.) the jurisdiction of which covered Sirsi, Haliyal, Ankola, Karwar and parts of modern Goa. In 1763-64, Sonda was destroyed by the forces of Haidar Ali and now a few relics of the past testify to its glory. The fort, now in ruins, stands on a high ground to the south of the Sonda brook. There are mathas belonging to the Smarthas, Vaishnavas and the Jainas and, as a result, this place is regarded as an important religious centre worthy of a visit by the devout pilgrims. The smartha matha called Swarnavalli matha is the headquarters of the guru of the Havik Brahmins. The Jaina matha, now in a ruined state, is said to belong to the eighth century. The Vaishnava or Vadiraja matha is held in special reverence as it contains the tomb of saint Vadiraja (1480-1600 A.D.) who was patronised by king Arasappa Nayaka. The Jaina tombs, Gadduge matha, Hunishehonda, Devarahole, Muttinakere, numerous inscriptions and the Shankaranarayana temple are the other objects of interest here. Nearby, the river Shalmali cascades from a height of about 91 metres and the place is known as Sivaganga Falls.

## 9. SUPA TALUK

I L.C.No.90 : Ulvi : According to a Jain version this place was formerly known as Vrishabhapur. There are several caves (Gavi matha) and one of these is named after Akkanagamma, sister of Basaveshvara. During the 12th century several Veerashaiva saints including Kinnari Bommaiah and Madivala Machideva stayed here. Basaveshvara is said to have fled Kalyan and reached Ulvi where he died. Channabasavanna is also said to have spent his last days at Ulvi. The Channabasava temple enshrines the image of a bull and several stucco figures representing Sharanas. Other objects of interest here are the Veerabhadrakere, Shiva-tirtha, Basaveshvara mandira, Rudramantapa, Baburayan kote, and a spring known as Budbud talab (bubble well). An annual fair held on the occasion of the Shivaratri is an important event which attracts thousands of devotees from all parts of the State.

## 10. YELLAPUR TALUK

I L.C.No.46 : Lalguli : Kali river cascades down a height of about 90 metres in different stages forming a series of picturesque water falls near this village. On a hill nearby there is the temple of Hanuman. During the period of the Sonda chiefs, it is said, the condemned prisoners were being ordered to be thrown into this gorge.

II L.C.No.112 : Magod : The village has the ruins of a fort, called the Holatikote, which is built in a circular form (Chakra Vyuha). Here, the river Gangavali (Bedti) forms a picturesque water-fall, leaping in series of cascades over the cliffs in three stages and presents an enchanting sight.

**PLACES OF INTEREST IN TOWNS** : Though there are 13 towns in the district it is only a few that have any places of tourist or historical or general interest. The towns are considered one by one in an alphabetical order and interesting details if any are indicated in brief. Ambikanagar is in itself an interesting place as it has come up in connection with the execution of the Kalinadi Hydro-electric Power Project. About 6 Km north west of this township, along the course of the Kali river there are a few caves and also an Iswara linga on the top of which water drips from above as if from the udders of a cow. This is an interesting picnic spot as well as a place of sanctity. Ankola was an important centre of trade and commerce in ancient times including the Vijayanagar period. It has the ruins of a fort and of some beautiful monuments of the Hindus, Jains, Christians and Muslims. The famous caves of Honnebail are at a distance of about 8 Km from this town. Babruwada, has a statue of Buddha of the Kadamba period. The town has the tomb shrine of Syed Abdulla Bagdadi. Kurve, a river island near the town is a pleasant picnic spot. Bhatkal was formerly a major trading centre, especially during the Vijayanagar period. In 1542 A.D. the town was burnt by the Portuguese and thereafter the town lost its importance. The Chandranatha basti built by Jettappa Nayaka is the largest Jain monument and among the temples in the town that of Kethapati Narayana is the finest. This small town contains as many as 8 mosques and is an important centre of Navayat Muslims. Near this town there are a few interesting islands called Jolly Kunda, Nethrani gudde and the Pigeon Island. Dandeli is an industrial township owing its origin and development to the West Coast Paper Mills, the Ferro-manganese factory, a plywood factory and a few other industries which have come up recently. Its surroundings are renowned for their abundance of forest and mineral wealth as also for spots of tourist interest such as Nagjhari view, Kawala caves, Synthery Rocks, Vincholi Rapids, Sykes Point and the suspension bridge across the Kaneri. It is regarded as a health resort also. Ganeshgudi has emerged as new township close to the Supa dam site and owes its origin to the Kalinadi Hydro-electric Power Project. The reservoir, the dam and the power house are the places of interest nearby. Haliyal has the remnants of an old fort and the temples of Hemavva, Dattatreya, Vithoba, Hanuman and Venkataramana besides an ancient mosque. Honavar is a place of great antiquity which finds a mention in the travelogues of early geographers. During the mediaeval times also it was an important trading centre and several foreign travellers who passed through the town have described its glory in great detail. The Portuguese opened a factory as well as built a church here during the early 16th century. On conquering these parts, in 1764, Haidar Ali, developed this place as a commercial centre with a naval dockyard. For a brief period Honavar was the headquarters of the district. A spring near the town is regarded as a sacred spot and is known as Rama tirtha. The town has the temples of Durga, Lakshminarayana, Vithoba and Rameshvara besides the church of San Saldone built about a century ago. The bridge across the Sharavati linking Honavar and Kasarkode is considered to be the longest in the State. About 8 Km to the south there is the famous shrine of Ganapati of Idgunji. Karwar town is surrounded on three sides by small beaches which are the delight of the sea bathers. In 1638, Sir William Counten opened a factory here and by 1660 this factory was manufacturing the finest muslins. In 1715 the town was taken by the Sonda chief and the old fort was pulled down and a new one was built at Sadasivgad. Karwar bay is remarkable for its scenic beauty. The chief merit of Karwar is its fine harbour which is fit for use during all seasons. Kumta town has a temple dedicated to Kumbheshvara and takes its name from this deity. Once upon a time this place was famous for its export of fine cotton and flourished as a trading centre. The town is famous for sandal wood carving - the handicraft practised by the Gudigars. Mundgod was an important fortified frontier town during the 18th century. Col.Wellesley, it is said, thought of stationing a British force here in view of its strategic importance. The Chachanaki reservoir is situated at a distance of about 5 Km from this town. Siddapur town is named after Siddamma, queen of Bilgi and contains the Siddi Vinayaka temple built by the Bilgi Nayakas. At Kondli there are ruins of an old fort which is surrounded by four ponds and there is a temple dedicated to Kalamma. About 9 Km to the west, there is a religious centre known as the Bhuvanagiri. Sirsi has the ruins of an old fort. A bazar area of the town is said to have been developed by Ramachandra Nayaka of Sonda and besides this, the town has another bazar known as Channapatna. The town is famous for its large Marikamba temple and also the fair which is held under its auspices during the month of Magha. This temple, contains beautiful wall paintings. Ganapati temple and St.Mary's church are the other historical monuments of the place. Sirsi is an important trading and commercial centre which is especially noted for its trade in arecanut, pepper and cardamom. Yellapur town is noted for its Durga temple under the auspices of which an annual fair is held.

## 9. BRIEF ANALYSIS OF DATA :

**Population and growth trends** : According to the 1981 Census, the total population of the district is 1,072,034 and this forms 2.89 per cent of the population of the State. During the latest intercensal decade there has been an addition of 222,929 persons and this figure is equivalent to twice the 1971 population of Sirsi, the largest taluk of the district. In conformity with the general trends Uttar Kannad district is also experiencing considerable additions to its population during the recent decades. A cursory examination of the growth trends since 1901 reveals

an interesting picture. During the earlier decades the district suffered a decline, gradually recovered and subsequently registered a sudden spurt and since then is maintaining a steady rate of growth. Between 1901-11 while the population of the State increased by 3.60 per cent that of the district decreased by 5.27 per cent. This loss was mainly felt in the rural areas and may perhaps be due to a massive outmigration from hilly malnad tracts of the district notably the taluks of Haliyal, Mundgod, Supa, Yellapur and Sirsi. In the urban areas however as against the 4.64 per cent decline in the State, this district witnessed a positive growth rate of 26.42 per cent. The next decade which was marked by the first world war and the outbreak of influenza in a virulent form all over the State, the population of the State itself declined by 1.09 per cent. Uttar Kannad too conformed to this general trend and suffered a loss in its 1911 population to the extent of 6.69 per cent. The rural as well as the urban areas were equally affected by this phenomenon. After 1921, this negative trend was reversed and the district began to experience a slow but steady growth. During the period 1921-31, the overall population of the State increased by 9.38 per cent. In contrast, Uttar Kannad district registered a decadal growth rate of 4.01 per cent. Frequent outbreaks of epidemics like Cholera and the ever present deleterious effects of the endemic malaria, especially in the hilly malnad zone, as well as the hazards of life amidst dense forest vegetation etc., appear to have cast a negative influence on population growth during these early decades. Gradually, public health conditions improved and population began to rise though slowly at first. Between 1931 and 1941 Uttar Kannad experienced a decadal growth of 5.58 per cent, which however fell short of the State average of 11.09 per cent. The trend of a positive growth intensified further and during the decade that ensued the district registered a growth rate of 17.37 per cent - a figure which stood quite close to the State average of 19.36 per cent. A notable feature of this decade is the spectacular growth of over 60 per cent in the urban population. During 1951-61, the Malaria Eradication Programme was vigorously implemented and there were signs of agricultural as well as industrial expansion in the district. As a result the population of the district registered a decadal growth rate of 33.17 per cent as against the State average of 21.57 per cent. The growth rate of the rural population of the district was of the order of 44.26 per cent and these rates were particularly high in the hilly malnad taluks of Supa, Mundgod, Haliyal, Yellapur, Sirsi and Siddapur. It appears that all the three factors, namely a high birth rate, a low death rate and addition by net migration, were responsible for this sudden spurt in population. However, it may be noted in passing that the performance of Uttar Kannad was somewhat less spectacular in comparison to that of the other malnad districts such as Shimoga, Chikmagalur and Kodagu. During the decade that ensued, namely 1961-71, the population of the district continued to increase but at a considerably lower rate. As compared to the State average growth rate of 24.22 per cent, Uttar Kannad witnessed a decadal growth at the rate of 23.14 per cent. Obviously the growth trends which set in during 1951-61 did not continue with the same vigour after 1961, for the process of consolidation of the gains seems to have set in thereafter. During the latest decade of 1971-81, the district has registered a decadal growth rate of 26.25 per cent and unlike in the previous decade this rate is quite close to the State average of 26.75 per cent. Compared to the previous decade the gap between the rates for the State and district has been considerably reduced. The long-term trend covering the past 80 years reveals that while the population of the district has increased by 135.88 per cent that of the State has moved up by 184.46 per cent. When the 19 districts are arranged in a descending order of the growth rate during the past 8 decades Uttar Kannad occupies the 18th place.

During the period 1971-81, the population of the district has increased by 26.25 per cent - a rate which is quite close to the State average of 26.75 per cent. In all the 11 taluks population has increased and in 5 taluks the decadal growth rates are higher than the district as well as the State average. In Haliyal taluk the decadal rate is as high as 55.75 per cent. A notable feature of this taluk is that it contains the industrial town of Dandeli which has now emerged as the most populous town of the district. Next to Haliyal, it is Supa taluk which has experienced a high growth rate of 46.01 per cent. This phenomenon of high growth may be partly attributed to the Kalinadi Hydro-electric Project which was taken up for execution during the latter half the decade. The aceretion to the population of these taluks with relatively higher growth rates might have come about on account of a sizeable in-migration of the people from the other taluks of the same district as also from outside. In Siddapur taluk the decadal growth rate is as low as 14.53 per cent. Among the coastal taluks, Kumta has returned the least growth rate of 16.46 per cent and Bhatkal has returned the highest rate of 35.22 per cent. In Karwar taluk which contains the district headquarter town of Karwar the growth rate is of the order of 20.25 per cent.

As in other parts of the State and the country, in Uttar Kannad district also the urban sector has registered a higher growth rate. The average growth rates for the rural and urban areas of the State are 19.07 per cent and 50.65 per cent. The corresponding rates for the district are 14.55 per cent and 80.60 per cent respectively. If the talukwise growth rates of the rural population are examined it is noticed that Siddapur taluk has suffered a decline by 0.77 per cent and that the growth rates are very low in the taluks of Ankola (1.52 per cent), and Karwar (2.24 per cent). In the case of Siddapur and Ankola the very low rate may be partly attributed to the fact that unlike in 1971, now both these taluks have an urban component consequent on the constitution of municipalities in the erstwhile large-sized villages of Siddapur and Ankola. The low growth rate in Karwar taluk may be on account of selective out-migration of the rural people to towns and to the Kalinadi Hydro-electric Project sites in quest of better prospects. It may be seen that Karwar town has registered a decadal growth rate of 70.00 per cent. The highest growth rate of 34.59 per cent is given out by Bhatkal taluk and this is followed behind by Supa taluk (32.24 per cent). It may be incidentally noted that in Supa taluk the urban component has emerged for the first time as a result of the classification of Ganeshgudi (Special Area) as urban. Mundgod is the other taluk which has a low rural growth rate and in which an urban component has emerged for the first time. In the case of the population the talukwise details reveal that the decadal growth rates are high in Haliyal (88.93 per cent) and Yellapur (87.92 per cent) and very low in the taluks of Honavar (21.54 per cent) and Kumta (22.36 per cent). While the towns of Haliyal taluk and Yellapur are located in the eastern sector which is a hilly malnad zone, Honavar and Kumta are coastal towns. As already indicated, Haliyal taluk contains the industrial town of Dandeli besides Haliyal a traditional town and the newly formed special area of Ambikanagar (KHEP Area). In the case of Yellapur, the town boundaries have been extended by incorporating a few villages which were already in existence and were lying within the jurisdiction of the former Yellapur Town Panchayat. Population growth is however a very complex phenomenon and the growth rates for different units such as taluk, rural areas, urban areas and towns tend to fluctuate from decade to decade. The commencement of the work relating to the Kalinadi Hydro-electric Project, industrialisation of certain areas in the eastern belt and the efforts to develop Karwar as an important minor port besides programmes taken up for helping the marine fishermen on the one hand and the inland farmers on the other have had a favourable impact on the population growth of this district.

**Trends of urbanisation :**

According to the 1981 Census the urban residents form 25.35 per cent of the total population of the district. As compared to 28.89 per cent, the overall average for the State, Uttar Kannad is obviously less urbanised. If the districts are arranged according to their respective proportions of urban population it is noticed that this district holds the 6th place amongst the 19. In 1971, with an urban component of 17.72 per cent, Uttar Kannad held the 12th rank and compared rather poorly with the State average of 24.31 per cent. During the intercensal decade therefore Uttar Kannad district has felt the impact of urbanisation to a greater extent. The data relating to the earlier decades disclose that in 1951 the urban component in the population of the district was of the order of 23.86 per cent - a figure which exceeded 22.95 per cent, the average for the State. Between 1951 and 1961 as a result of declassification of a large number of former towns all over the State the proportion of urban population decreased from 22.95 per cent to 22.33 per cent. In Uttar Kannad district however the impact

of this exercise was felt to a greater extent. The number of towns moved down from 13 to 9 and the urban component fell from 23.86 per cent to 17.53 per cent. The urban population of the district experienced a negative decadal growth rate of 2.18 per cent. During the next decade this loss was made good and though there was a reduction in the number of towns from 9 to 8 the urban component registered a marginal increase and moved up to 17.72 per cent. This figure was however very much below the overall average for the State. During the period 1971-81 the urbanisation trend received a tremendous push as it were for the number of towns has increased from 9 to 13 and the proportion of urban population has jumped up to 25.35 per cent. The decadal growth rate of urban population is of the order of 80.60 per cent which is far above 50.65 per cent growth registered by the urban population of the State. Two new townships namely Ambikanagar and Ganeshgudi have emerged in connection with the execution of the Kalinadi Hydro-electric Project. Ankola, Mundgod and Siddapur which have all along been the headquarters of the taluks known after their respective names have now become municipal towns. In addition, all the older towns have also registered substantial growths. With the commissioning of the Kalinadi Project Uttar Kannad may be regarded as having firmly set foot on the path of all round economic development and rapid urbanisation.

Among the 11 taluks of the district, Haliyal ranks as the most highly urbanised taluk, for it contains 3 urban units one of which happens to be the most populous town. The ratio between the number of towns and inhabited villages is 1:37 in Haliyal taluk as against the average of 1:99 for the district. From this point of view Sirsi is the least urbanised taluk, for in this taluk the ratio works out to 1:226. The four taluks of Ankola, Mundgod, Siddapur and Supa which were completely rural in 1971 have felt the impact of urbanisation during the decade and now each taluk has a town within its limits. When the urban content in the total population of each taluk is examined it is seen that the proportion of urban population varies between 9.43 per cent in Supa taluk and 53.57 per cent in Haliyal taluk. In seven out of the 11 taluks this proportion is less than the district average of 25.35 per cent. It is only in Haliyal taluk which is the most highly urbanised taluk of the district that a little more than one-half of the population dwell in towns. The rapidity with which this taluk became urbanised and the magnitude thereof may be visualised from the following details : (i) in 1951, the proportion of urban population to the total population of the taluk was 22.41 per cent - a figure lower than the then district average of 23.86 per cent. (ii) in 1961, the total population of the taluk registered a decadal growth of 71.61 per cent: while the urban population almost trebled itself, the urban component in the taluk population increased to 39.57 per cent (iii) between 1961-71 when the tempo of overall growth was greatly reduced (decadal growth 35.81 per cent) the urban population too was equally affected and in 1971, the proportion of the urban population to the total moved up to 44.17 per cent only (iv) between 1971 and 1981 this proportion shot up to 53.57 per cent. The main reason for this phenomenon is the founding of the industrial township of Dandeli in the latter half of the 1950s and the subsequent industrial growth experienced by this area which began to exert a tremendous pull and attracted people from far and near. Apart from Haliyal, Karwar and Sirsi are the other highly urbanised taluks. In these two taluks the proportion of the urban population comes to 37.58 per cent and 28.80 per cent respectively. Karwar taluk has in its limits the district headquarter town of Karwar which is an important administrative centre and is of late fast developing into a port-town as well as an industrial town. In this taluk the proportion of urban population which stood at 40.58 per cent in 1951 and registered a substantial fall (26.09 per cent) by 1961 due to declassification of two towns namely Chitakula and Majali and was then able to reach 26.09 per cent in 1971, has shot up during the decade that has just ended. Like Haliyal, Sirsi taluk also witnessed a sudden rise in its population after 1951, especially in the rural areas. The urban content which stood at 22.92 per cent in 1951, gradually moved up to 23.98 per cent in 1961, to 25.02 per cent in 1971 and has now reached 28.84 per cent. The rate of growth of urban population of this taluk is relatively low and this may be attributed to the fact that this taluk has the largest number of inhabited villages and is the most populous taluk of the district.

Villages and towns : Uttar Kannad district has 1338 villages of which 55 are uninhabited. The rural population is thus scattered amongst 1283 villages comprised in 11 taluks. These taluks are of a varying size both in terms of number of villages, geographical area and also population. In terms of inhabited villages Sirsi ranks first as it contains 226, the largest number, and is followed closely behind by Siddapur which has 194 villages. At the other end there are Bhatkal and Karwar with a tally of 63 and 55 villages respectively. The average number of villages per taluk is 117 and it may be of interest to note that the coastal taluks are comparatively smaller on this count. In terms of geographical area too the coastal taluks are relatively small. Bhatkal which covers an area of 349 square kilometres only is the smallest taluk. In 8 out of the 11 taluks the geographical area is less than the average area of 936 square kilometres per taluk. Supa is the largest taluk with an area of 1890 square kilometres and Sirsi (1320 Sq.Km.) as well as Yellapur (1301 Sq.Km) are also quite large. The hilly malnad taluks have large-sized villages which however are comparatively sparsely populated. The average population of an inhabited village is 624. An examination of the talukwise details indicate that this figure varies between a minimum of 345 in Supa taluk and a maximum of 1426 in Karwar taluk. The villages of Honavar and Bhatkal also have large populations of more than 1100 whereas those of Kumta and Ankola which are also coastal taluk have an average 839 persons and 820 persons respectively. On the other hand the villages of the hilly malnad zone have smaller populations. In case of Siddapur and Yellapur taluks the average comes to 378 and 380 persons whereas in Sirsi it is 426. These variations may be attributed to the topographical and climatic differences in these two distinct tracts of the district. The coastal areas and low lands contain relatively large settlements as compared to the hilly and forested malnad tracts of the district. Small villages dominate the rural scene and constitute 65.24 per cent of the total number of inhabited villages. In fact, villages with less than 200 persons each constitute the single largest group and account for as much as 33.05 per cent while those falling in the range of 200-500 account for another 32.19 per cent. Medium sized villages with 500 to 1999 inhabitants each constitute 28.22 per cent. Villages which are really large are indeed very few. In the entire district consisting of 1283 inhabited villages there are only 11 villages (0.85 per cent) having a population of 5000 or more and of these only 2 have 10,000 inhabitants or more. Thus, Uttar Kannad is essentially a district dotted with numerous small and very small villages interspersed with a sprinkling of a few medium sized villages and an occasional large sized village. Another important feature of the villages of the district is that each village usually consists of several small settlements that have come up all over its revenue limits at convenient places. It is only in the eastern-most parts that the villages resemble the large nucleated settlements of the maidan region. However small it may be each settlement or group of houses usually bears a name that helps in its identification.

Talukwise break up of the rural population of the district shows that amongst the eleven taluks, Honavar is the most populous taluk and Sirsi taluk comes next. The shares of these two taluks in the total population of the district are seen to be 14.10 per cent and 11.74 per cent respectively. Supa taluk has the smallest population and contributes only 5.91 per cent to the total. The taluks of Yellapur (6.11 per cent) and Mundgod (6.05 per cent) which are endowed with physiographical features similar to that of Supa also fall in the same category of very small taluks. The average rural population of a taluk of this district comes to 72,749 and this figure is less than one half of the average population of a taluk of the State as a whole which is 150,892.

The urban population of the district too is distributed amongst the eleven taluks. This is an important change in comparison to the position that prevailed in 1971, when 4 out of the 11 taluks did not have any urban population at all. Now the average urban population per taluk works out to 24708 whereas in 1971 the average came to 13682 only. Amongst the taluks Haliyal contributes the highest proportion (26.13 per cent) to the total urban population of the district and this taluk contains as many as 3 towns. Next to Haliyal, Karwar taluk has the largest share (17.37 per cent). With a meagre contributior

of 1.81 per cent Supa taluk takes the last place. The taluks of Mundgod, Yellapur, Siddapur and Ankola too have only small shares in the urban population of the district. The urban population is distributed amongst 13 towns and the average population per town is 20,907. Of these towns, two are special areas which have come up at the project sites and are strictly speaking not comparable with the other municipal towns. Populationwise, these two places namely Ganeshgudi and Ambikanagar are the smallest. Dandeli is the most populous town of the district (47625) and Karwar comes a close second (47,210) while Sirsi follows it with a wide margin. A classification of the towns by population size-groups reveals that none of the towns of the district qualifies itself for either Class I (100,000+) or Class II (50,000-99,999) category, 5 towns belong to Class III (20,000-49,999), 6 towns belong to Class IV (10,000-19,999) and one each fall under the category of Class V (5000-9999) and Class VI (below 5000). The break up of the urban population of the district by class of towns shows the following picture : Class III:- 67.25 per cent; Class IV:- 28.09 per cent; Class V:- 2.85 per cent and Class VI:- 1.81 per cent. These details emphasise the importance of small and medium sized towns in the district. In fact it is only in recent decades that the urban areas are experiencing sustained growth that too at considerably higher rates. This phenomenon may be attributed to the recent trends of industrialisation and modernisation.

**Density :**

The overall density of population in Uttar Kannad district is 104 persons per square kilometre. This figure is very low in comparison to the average density of 194 in the State as a whole. Among the 19 districts Uttar Kannad has the lowest density. In 1971 also the position was very much the same and with a density of 83 persons per square kilometre this district held the 19th rank. Topographical features and the low level of economic development appear to be responsible for this phenomenon. Within the district itself, at the taluk level there are considerable variations. The coastal taluks are more densely populated than their hilly malnad counterparts. The coastal taluk of Bhatkal which incidentally happens to be the smallest taluk in terms of geographical area, has the highest density of 278 and this is followed behind by the taluks of Kumta (202), Karwar (172) and Honavar (170) which are also situated along the coast. Though Ankola is also a coastal taluk it has a relatively low density of 88 persons per square kilometre. Amongst the taluks in the mountainous malnad region Haliyal has the highest density of 156 persons per square kilometre while Supa the largest taluk has the lowest density of 28 persons per square kilometre. In fact a couple of decades ago the densities were very much lower than these low figures. In 1951 for example there were hardly 10 persons per square kilometre in Supa taluk and 43 persons in Haliyal taluk. The emergence of Dandeli as a major industrial township and the associated changes in this region caused a considerable influx of people to these densely forested tracts and gradually there was an improvement in population densities. Liberal land grants policy and resettlement of displaced persons have also contributed for the rapid rise in the density figures of these malnad taluks. The higher density noticeable in Haliyal taluk is mainly due to the high urban component in its population and high urban density.

If the rural areas are considered separately it is seen that the density figures for the district and the State are 79 and 140 respectively. The rural areas of Uttar Kannad are evidently very sparsely populated. Among the taluks Bhatkal has the highest density of 207 and is followed behind by Kumta (166), Honavar (151), Karwar (109), Siddapur (87), Ankola (76) and Haliyal (74) as well as Mundgod (74). In Sirsi the second largest taluk there are 73 persons per square kilometre. In the rural areas of Supa taluk there are hardly 25 persons per square kilometre and in Yellapur taluk which has the next higher density there are 39 persons per square kilometre. A distribution of the 1283 inhabited villages by density ranges shows that there is a sprinkling of villages with very high densities exceeding 500 persons per square kilometre. These villages with relatively high densities are to be met with in the coastal taluks which have substantially large populations of fishermen communities. In 8.89 per cent of the villages the density is 10 persons per square kilometre or even less. In the next groups of 11-20 persons and 21-50 which too represent low densities the proportions are seen to be 8.73 per cent and 21.98 per cent. Thus villages with very low and low densities account for 39.60 per cent of the total number of inhabited villages. The density range of 51-100 contains the largest group of villages namely 290 out of 1283 and accounts for 22.60 per cent. Villages with medium densities ranging between 101 and 200 are also of considerable significance in this district for such villages constitute 19.64 per cent of the total number of inhabited villages. As already mentioned it is the coastal villages that are more densely populated than their counterparts in the hilly malnad region comprising the taluks of Supa, Yellapur, Mundgod, Siddapur and Sirsi.

In the case of urban areas the density figures for the State and the district are seen to be 2914 and 1581 respectively. Thus the urban areas of the district are also sparsely populated. At the taluk level, it is Bhatkal which has the highest density of 4907. Haliyal taluk (4808) takes the second place and this is followed behind by Sirsi taluk (4193), Supa taluk (3619) and Karwar taluk (3290). Yellapur taluk has the lowest density of 183 persons per square kilometre and presents what may be termed as an exceptional situation. If this case is ignored Siddapur taluk has the lowest density of 610. Such situations arise mainly because vast extents of agricultural as well as non-agricultural lands including waste lands are incorporated into the municipal limits at the time of constituting the civic bodies concerned. For example Yellapur was formerly administered by a Town Panchayat which had jurisdiction over a few adjoining revenue villages as well. When the Yellapur Municipality was constituted its limits were made coterminus with the entire jurisdiction of the former Town Panchayat area. Thus the area of this particular town is seen to be as high as 64.60 square kilometres. On the other hand if the built up area and its fringe areas likely to be used up for further development of the town alone were to have been carefully demarcated and notified as urban an entirely different situation would have emerged. Townwise data reveal that Ambikanagar Special Area is the most densely populated town (10,176) of the district and the industrial township of Dandeli comes next (5,590). In Karwar the district-headquarter-town there are 3290 persons per square kilometre of urban area. Yellapur has the lowest density of 183 and the place immediately above this is held by Siddapur which has a density of 610. The topographical features of the towns of this district are somewhat different as compared to those of the towns in the maidan region. Quite often the urban areas include vast extents of negative areas, that is lands which cannot be used for construction of houses, formation of roads etc.

**Sex Ratio :**

In Uttar Kannad district there are 958 females for every thousand males. This figure is less than the State average sex ratio of 963. When the districts are arranged in the descending order of sex ratio, Uttar Kannad takes the 11th place. In 1971 too the position was very much the same and the sex ratio was 957 - a figure which was identical with the overall average for the State. A casual examination of the sex ratio figures for the earlier decades reveals that except in 1941 and 1951 when the district had marginally higher sex ratio it has all along displayed a lower sex ratio. The situation in this district stands out in sharp contrast when compared to the situation prevailing in the coastal district of Dakshin Kannad which has all along been reporting a surplus of females. In keeping with the general trends, the rural areas of the district have a higher sex ratio, namely 965 as compared to 939 in the urban areas. The sex ratio figures for the rural and urban areas of the State are 978 and 926 respectively. When viewed with reference to the averages for the State, the rural areas of Uttar Kannad have a lesser proportion of females whereas the urban areas have a larger proportion.

Talukwise particulars reveal that the sex ratio varies between 885 in Supa taluk and 1037 in Bhatkal taluk. In a general way it may be observed that the sex ratio figures are relatively higher in the coastal taluks of Honavar (1010), Karwar (1000), Kumta (992) and Ankola (974). Like Supa, Mundgod taluk also has a very low sex ratio of 889. Amongst the hilly malnad taluks, Siddapur is seen to have a sex ratio of 938. The sex ratio of a taluk as a unit is considerably affected by the rural-urban composition of its population as well as the predominant nature of the economy of its rural and urban areas. The malnad tracts which are known for the areca gardens attract a sizeable number of male workers from the coastal areas, especially during the peak areca picking season and also during the monsoon months when the fishermen cannot venture into the sea and

seek alternate short-term work in fields. In fact movement of people from the low lands to the villages above the ghats has been institutionalised over the decades if not centuries. If the rural areas of each taluk are considered it is noticed that the sex ratio varies between 886 in Mundgod and 1064 in Karwar. Bhatkal taluk which has the highest sex ratio when considered as a unit gets relegated to the second place when the rural areas alone are considered, for the sex ratio in this case comes to 1017 only. Honavar is the only other with a surplus of females (sex ratio 1014). In Supa taluk, the rural sex ratio is 902 and this is higher than the sex ratio for the taluk as a whole. Haliyal is the only taluk with more than one town and where the urban sex ratio for the taluk is different with reference to the sex ratio noticed in the towns thereof. In this taluk whereas the urban sex ratio is 900, the sex ratio figures for the three towns contained therein are : Ambikanagar (802), Dandeli (903) and Haliyal (945). In the case of the remaining 10 taluks the sex ratio is seen to vary between 734 in Supa taluk, that is Ganeshgudi town, and 1094 in Bhatkal. Ankola is the only other town with an excess of females (1027) in its population. While the coastal towns of Honavar and Kumta have a sex ratio of 982 and 994 respectively. Karwar has a low sex ratio of 901 only. In 1971, Karwar had a higher sex ratio of 950. Obviously selective in-migration caused perhaps on account of the projects taken up in the town and its neighbourhood recently, accounts for the sudden drop in sex ratio. In the towns of the hilly malnad region the sex ratio ranges between 905 in Mundgod and 941 in Sirsi. In the case of Supa taluk the only town therein is a special area which has come up in connection with the Kalinadi Hydro-electric Project and contains a large proportion of sojourners and temporary in-migrants.

Literacy :

In Uttar Kannad district the literate constitute as much as 48.35 per cent of the total population. This general literacy rate is much above the State average rate of 38.76 per cent and when the districts are arranged in the descending order of their literacy rates Uttar Kannad occupies the fourth place. In 1971 also this district held the same ranking and the literacy rate was 40.65 per cent. Its relative ranking was the same in 1961 and also in 1951. Thus Uttar Kannad belongs to the group of districts with a traditionally high literacy rate. However a comparison of the decadal growth rates of literacy in the district and the State shows that these rates are on a gradual declining trend and also that the rates for the district are lesser than those for the State as a whole. During the periods 1951-61, 1961-71 and 1971-81, the growth rates for the State are 34.89 per cent, 24.09 per cent and 22.97 per cent and the corresponding figures for the district are 30.42 per cent, 21.56 per cent and 18.94 per cent respectively.

Within the district, amongst the taluks the literacy rate is seen to vary between 34.67 per cent in Supa taluk and 59.25 per cent in Karwar taluk. The literacy rates are comparatively low in the taluks of Mundgod (37.63 per cent), Bhatkal (39.30 per cent), Haliyal (42.39 per cent) and Yellapur (45.77 per cent). As between the coastal taluks and the taluks of the hilly malnad the differences do not conform to any set pattern. Sirsi taluk which is the most populous taluk, has the largest number of inhabited villages and shares the predominant hilly malnad characteristics has the second highest literacy rate of 57.37 per cent while Bhatkal which is purely a coastal taluk with a comparatively lesser population has a low literacy rate of 39.30 per cent. Likewise Siddapur the hilly malnad taluk has a higher literacy rate (50.27 per cent) than the adjoining coastal taluk of Honavar (48.51 per cent). The taluks in the north-eastern belt however have a relatively low literacy rate and as already mentioned these taluks are experiencing a higher population growth during the recent decades only as a result of developmental activities. But for the presence of the industrial township of Dandeli and the Special Area of Ambikanagar the literacy rate of Haliyal taluk would have been much lower than its present rate of 42.39 per cent.

The rural-urban break up shows that in all the taluks the urban areas contain a higher proportion of literates than their rural counterparts. This phenomenon conforms to the general tendency noticeable all over the State and the country. The literacy rates for the rural and the urban areas are 43.60 per cent and 62.32 per cent. Talukwise details reveal that in the case of rural areas Karwar taluk (52.76 per cent) tops the list and is followed behind by Sirsi taluk (52.42 per cent). The last two places are held by the taluks of Bhatkal (30.34 per cent) and Haliyal (29.25 per cent). Supa taluk, which holds the 11th rank when the total taluks are considered, moves up to the 8th place when the rural areas alone are considered. In the case of urban areas too Karwar taluk tops the list with a tally of 70.03 per cent and while the second place is retained by Sirsi taluk, Honavar taluk takes the third rank. The last two places are held by Haliyal (53.78 per cent) and Mundgod (48.68 per cent). Townwise details also reveal much the same position, for except in the case of Haliyal taluk, in all the other cases the literacy rates for the taluk-urban represent the literacy rates for the towns concerned. In Ganeshgudi which corresponds to Supa urban the literacy rate is 58.96 per cent. Amongst the three towns of Haliyal taluk Dandeli which happens to be the most populous town of the district as well, has the highest literacy rate of 54.83 per cent and Haliyal the traditional town has the least (51.04 per cent). Mundgod is the only town amongst the 13 towns of the district to have a literacy rate of less than 50 per cent.

Sexwise data reveal that in conformity with the general pattern, in Uttar Kannad district also the literacy rates for the males are higher than those for the females in all the taluks and towns. The sexwise literacy rates for the district are 57.36 per cent and 38.95 per cent respectively for males and females. These averages are far higher than the corresponding figures for the State which are 48.81 per cent and 27.71 per cent respectively. In the case of the male segment of the population the literacy rate varies between 44.77 per cent in Supa taluk and 68.95 per cent in Karwar taluk. Sirsi and Kumta are the only other taluks where more than 60 per cent of the males are literate. The percentage of literacy is less than 50 in the case of Bhatkal and Mundgod. When the situation in rural areas is examined separately the literacy rate for males is seen to range between 39.59 per cent in Bhatkal and 63.41 per cent in Karwar. In the taluks of Haliyal (41.35 per cent) and Supa (42.11 per cent) the corresponding rates are slightly higher than that given out by Bhatkal. In so far as the urban areas are concerned, Karwar has the highest male literacy rate of 77.44 per cent and this is followed by Sirsi (75.35 per cent) Honavar (72.38 per cent), Ankola (71.86 per cent) and Kumta (71.19 per cent). Male literacy rate is the least in Mundgod (56.13 per cent). A similar examination of the data in respect of the female segment of the population shows that in this case instead of Karwar taluk (49.35 per cent) it is Sirsi (50.32 per cent) that tops the list while Supa taluk (23.25 per cent) retains the bottom-most place. Once again when the situation in rural areas is examined Supa taluk (21.09 per cent) moves up and Haliyal taluk occupies the last place (16.32 per cent). Sirsi taluk (45.03 per cent) maintains a lead over Karwar taluk (42.36 per cent). In the case of urban areas also Sirsi has the highest rate of 63.52 per cent and is followed closely behind by Karwar (61.80 per cent) and Bhatkal (59.27 per cent). In Mundgod only 40.45 per cent of the females are literate and this happens to be the lowest urban female literacy rate. In a general way it may be observed that the literacy rate of any given place at a particular point of time depends upon several factors such as the size and composition of its population, availability of educational facilities, social, economic and cultural background of various sections of the population inhabiting the place, attitudes towards female education etc. Any attempt to find out the reasons for large scale variations in the literacy rates as has been noticed in this district require an in-depth consideration of the relevant factors including those mentioned above.

Generally when the villages are grouped into population size classes and the literacy rates are examined for each such group of villages it is noticed that the villages in the higher population ranges have a higher literacy rate. In other words larger the village in population size higher would be the literacy rate. In so far as Uttar Kannad district is concerned it is seen that the literacy rate (37.41 per cent) is the least for the very small villages having less than 200 inhabitants each and this increases to 42.07 per cent for the villages in the population size class of 200-499 and to 44.04 per cent for the

villages with a population of 500-1999. These three size groups contain a substantial number of villages. The literacy rate keeps on moving up for the next two size-groups of 2000-4999 (44.68 per cent) and 5000-9999 (45.57 per cent) which of course contain only 73 and 9 villages respectively and then drops to 42.27 per cent in respect of the 2 villages each with a population of 10,000 or more. In a general way, the data thrown out by the villages of this district lend support to the above mentioned hypothesis. Villages with larger populations enjoy better facilities and offer a better atmosphere for learning.

**Economic Activity :**

At the 1981 Census there has been a threefold classification of population, namely main workers, marginal workers and non-workers. Nature of one's activity and extent of participation in economically productive work are the decisive factors for such a classification. Levels of economic development of different regions within the district, availability of opportunities besides willingness to work especially among women, social attitudes towards working women, initiative and entrepreneurship evinced by the menfolk in general etc., are the factors that influence the distribution of population under these three categories. Uttar Kannad district is noted for marine fishing and related activities, forestry, mining as well as for its spice gardens and paddy cultivation. All these spheres of economic activity are labour-intensive and production depends on proper and effective utilisation of the available man power. However, the data thrown up by the 1981 Census indicate that those who are engaged in economically productive work constitute a relatively small proportion of the population.

**(i) Main Workers :**

In Uttar Kannad district the main workers form 34.02 per cent of the total population. In comparison to the overall average of 36.76 per cent for the State, Uttar Kannad has a very low proportion of workers in its population. In fact, when the 19 districts of the State are arranged in a descending order of the proportion of main workers Uttar Kannad occupies the 18th place. In 1971, too the proportion of workers in the population of this district (33.68 per cent) was less than that in the total population of the State (34.74 per cent) and the district held the 13th ranking. In relative terms there has been a slight decline in the proportion of workers in Uttar Kannad. Since the district is now exposed to developmental activities to a greater extent than in 1971, this phenomenon of declining proportion of workers appears to be somewhat unusual and requires a deeper study which is beyond the scope of this brief note.

There are considerable variations in the proportion of workers amongst the different taluks of the district and also between the male and female segments of population as well as between the rural and urban sectors of each unit. The sexwise details indicate that in this district 52.36 per cent and 14.88 per cent respectively of the male and female segments of population are main workers. Both these figures are lesser than the corresponding averages for the State which are 53.90 per cent and 18.95 per cent respectively. In the rural and urban areas of the district the main workers constitute 35.95 per cent (54.14 per cent among males and 17.09 per cent among females) and 28.34 per cent (47.19 per cent among males and 8.27 per cent among females) of the corresponding population. In the rural areas of the State 56.41 per cent of the males and 22.28 per cent of the females are main workers. On the other hand in the urban areas only 47.88 per cent of the males and 10.53 per cent of the females are main workers. Obviously in all the segments of the population the district has a lower proportion of main workers and this in a way suggests that the economic conditions are somewhat better. This may also signify the existence of economic disparity of a high order.

Taluk level data shows that the proportion of main workers is the highest (43.18 per cent) in Supa taluk and the least (27.91 per cent) in Bhatkal taluk. In the coastal taluks of Karwar, Kumta, Honavar and Ankola also the proportions of main workers happen to be lower than the district average of 34.02 per cent. The hilly malnad taluks have a consistently higher proportion of workers and next to Supa - the taluk in the limits of which the work relating to the Kalinadi Project has been in progress - Mundgod has the highest proportion (39.18 per cent). On the other hand Haliyal taluk which contains 3 urban areas including the industrial town of Dandeli has the lowest proportion of 34.96 per cent. If the situation in the rural areas of various taluks is considered it is noticed that in this case also Supa taluk (43.47 per cent) tops the list and is followed by Mundgod (40.57 per cent) and Haliyal (40.56 per cent). Instead of Bhatkal (30.72 per cent) Karwar taluk contains the least proportion of main workers in its population (29.56 per cent). The proportion of workers is lower than the district average of 35.95 per cent in each one of the coastal taluks. Likewise when the urban situation is examined, coastal taluks are seen to contain relatively lesser proportion of main workers. In Bhatkal taluk they constitute just 20.09 per cent whereas in Karwar they account for a little higher proportion of 28.19 per cent. In Haliyal taluk which lies in the hilly region and contains 3 urban units, the workers form 30.10 per cent. Amongst the other taluks of the hilly region the proportion varies between 28.23 per cent in Sirsi and 40.43 per cent in Supa taluk, that is in Ganeshgudi which is a special township.

In conformity with the general pattern, in this district too the male segment of the population contains a higher proportion of workers. Man is regarded as the principal bread winner of the family and the woman's role is regarded as supplementary and she is expected more to attend to domestic chores and looking after children than to engage herself in economic activities. This is particularly so in the case of elite and the so called upper castes and in urban areas. Thus while among males 52.36 per cent are reported as main workers among females such persons constitute 14.88 per cent only. For every female main worker there are 3.67 male main workers in the district. Taluk level details on the proportion of main workers amongst the males show that Supa taluk has the highest average of 62.19 per cent and Karwar has the least (44.70 per cent). In the rural sector also these two taluks take the extreme positions with 62.10 per cent and 44.06 per cent respectively. With a tally of 59.09 per cent Haliyal taluk takes the third place while Bhatkal (49.78 per cent) holds the penultimate place. In the urban sector also Supa taluk (62.98 per cent) tops the list and is followed by Yellapur (51.88 per cent). Bhatkal (37.40 per cent) and Ankola (42.50 per cent) occupy the last two places. In the case of females, the taluk level data disclose, the proportion varies between a minimum of 9.90 per cent in Bhatkal and a maximum of 22.95 per cent in Mundgod. In Supa taluk also the proportion is very high (21.95 per cent) and the coastal Kumta taluk (17.36 per cent) takes the third place. In the case of rural areas this proportion is lower than the district average of 17.09 per cent, in the taluks of Bhatkal (11.99 per cent), Honavar (12.51 per cent), Karwar (15.94 per cent) and Siddapur (14.95 per cent). In Mundgod and Supa the proportions are seen to be as high as 25.15 per cent and 22.81 per cent respectively. In the case of urban areas on the other hand the average for the district is 8.27 per cent and the proportion varies between a minimum of 4.28 per cent in Bhatkal and a maximum of 12.78 per cent in Mundgod. This proportion is fairly high in Yellapur (12.23 per cent) and also in Ankola (10.22 per cent) and comparatively low in Honavar (6.42 per cent). The factors that determine the extent of main workers in the population are too many and a detailed analysis requires an in-depth study of each one of the factors.

Among the main workers, 37.08 per cent are cultivators. 15.47 per cent are agricultural labourers, 2.93 per cent are engaged in household industry and remaining 44.52 per cent are 'Other Workers'. This last category includes the fishermen, and also forestry workers who are to be met with in a relatively larger proportion in this district. In comparison to the overall averages for the State, namely 38.25 per cent cultivators and 26.78 per cent agricultural labourers, Uttar Kannad district contains a lesser proportion of agricultural workers in its population. This may be attributed to the fact that in Uttar Kannad the cultivated area forms hardly 11 per cent of the total geographical area.

**(b) Marginal Workers :**

In the total population of the district those who have been classified as marginal workers constitute 4.41 per cent. At the taluk level, Sirsi is seen to have the lowest proportion of 2.69 per cent while Haliyal taluk has the highest rate of 6.12 per cent. In Supa taluk which has the highest proportion of main workers, the marginal workers form as much as 4.95

per cent and this is so in spite of the fact that none of those residing in the urban areas of this taluk, namely Ganeshgudi town, has been reported as a marginal worker. Unlike in the case of main workers, in this case the female segment contains a relatively higher proportion. It may be seen that in the male and female segments of the population of the district, the marginal workers form 1.38 per cent and 7.57 per cent respectively. In absolute numbers, for every male marginal worker there are 5.26 female marginal workers. Further, the incidence of marginal work is relatively higher in the rural areas and the sexwise differences are also more pronounced. As against 5.27 per cent in the rural areas, the marginal workers in the urban areas account for 1.85 per cent of the urban population. In the rural areas for every male marginal worker there are 6.36 female marginal workers. But in the urban areas the ratio works out to 1.78 female marginal workers for every male marginal worker. As is the case with other variables in this matter too there are considerable variations at the taluk level. For instance, in the urban areas of Supa taluk none has been returned as a marginal worker. At the other extreme, that is in respect of urban areas, there is Siddapur taluk with a tally of 5.22 per cent - a figure which is roughly thrice the district average. Sexwise details show that among males the lowest proportion of 0.23 per cent is reported from Ankola and the highest proportion of 2.71 per cent in Siddapur. In Mundgod taluk also the proportion of marginal workers in its male population is considerably high (2.43 per cent). Likewise among the females, the proportion is seen to vary between a minimum of 0.45 per cent in Bhatkal and a maximum of 7.94 per cent in Siddapur. In Ankola this proportion is slightly higher than the district average and so is the case in Karwar, Kumta, Mundgod and Yellapur. In the rural areas of different taluks too there are wide fluctuations. Among males for examle this proportion varies between a mere 0.50 per cent in Yellapur and 2.73 per cent in Karwar. Mundgod taluk is adjacent to Yellapur taluk. But here the proportion is 2.07 per cent - a figure which is the second highest amongst the 11 taluks. In Ankola, the urban areas of which contain the lowest proportion, it may be noticed that the rural areas have 1.52 per cent marginal workers - a figure which is higher than the district average of 1.41 per cent. Likewise among females Sirsi (5.78 per cent) and Haliyal (21.05 per cent) occupy the extreme positions. Apart from Haliyal, it is only in Supa (10.45 per cent) that the proportion exceeds 10 per cent. Though Yellapur also shares the characteristics of Supa and Haliyal it contains a very low proportion (6.90 per cent) of marginal workers. The foregoing discussion indicates that the incidence of marginal workers in the different segments of the population is subject to considerable variations and depends on numerous factors and this phenomenon is not amenable to any simple and superficial explanation.

**(c) Non-Workers :**

Those who are neither main workers nor marginal workers are classified as non-workers. These three categories are complementary to each other. In this district which contains a relatively low proportion of main workers and a slightly above-average proportion of marginal workers, it is quite natural that the proportion of non-workers is somewhat high. In the total population the non-workers form 61.57 per cent - 46.26 per cent among males and 77.55 per cent among females. The proportion of non-workers is the highest in Bhatkal taluk (68.58 per cent) and fairly high in Karwar (66.34 per cent) and also in Honavar (63.57 per cent) while it is the least in Supa taluk (51.87 per cent). In the urban areas the proportion of non-workers happens to be the highest (79.51 per cent) in Bhatkal taluk and the least in Supa taluk (59.57 per cent). In the case of rural areas the highest and the least proportions are noticeable in the case of Bhatkal (64.65 per cent) and Haliyal (48.40 per cent) respectively. It may also be noticed that it is only in Haliyal taluk that the non-workers account for less than 50 per cent of the population. Sexwise particulars disclose that amongst the males the proportion of non-workers is above 50 per cent in Ankola (urban), Bhatkal (urban), Honavar (urban), Karwar (both rural and urban) and Sirsi (urban). The lowest average is noticeable in the case of the rural areas of Supa taluk (36.94 per cent) and the proportion immediately higher than this is given out by the urban area of the same taluk (37.02 per cent). Among the females on the other hand the proportion of non-workers is not less than 66.74 per cent (Supa taluk rural) in any of the areas. In Bhatkal rural, the non-workers constitute as much as 95.27 per cent. The other areas where more than 90 per cent are non-workers are : Honavar (urban), Sirsi (urban) and Supa (urban). . The female segment of the population, especially in the urban sector, contains a relatively large proportion of those who are not engaged in any economically productive work.

**Availability of different types of amenities in villages and towns :**

Information on this aspect, is furnished in detail in the village and town directory statements and in a consolidated form in the appendix and also in the tables given at the end of this note. Sources of drinking water, mainly wells, have been reported from all the villages. It may incidentally be mentioned that the question on drinking water facility has not been examined in depth and factors such as sufficiency or otherwise, whether private or public, technical opinion regarding the potability of the available water itself etc., have not been probed into. This district is noted for its heavy rainfall and the mountainous terrain characterised by its numerous rivulets and streams. In the coastal plains also rainfall is abundant. The settlement pattern consists of small clusters of houses and isolated homesteads built near paddy fields and areca gardens. Wells constitute the main source of drinking water and in some of the large sized villages taps have also been provided. Recently tubewells have also been sunk and each one of these has been fitted with a handpump. It may be seen from the Appendix that 272 out of the 1283 villages have more than one type of water-supply source and that in 932 villages (72.64 per cent) it is the wells that constitute the only source of drinking water supply. Drinking water is being supplied through taps in all the towns of the district except Honavar. In addition, in every town a large proportion of the substantial houses have their own drinking water wells also.

**Educational Facilities :**

Out of the 1283 inhabited villages of the district 935, that is constituting 72.88 per cent of the total, have at least one primary school each within their respective village limits and thus offer educational facilities at least at the minimum level to the villagers concerned. Several villages however have more than one primary school and quite a large number have middle schools as well. From Appendix I it may be noted that on an average these 935 villages have 1.5 primary schools each which gives out an average of 1.1 primary school for every inhabited village of the district. Middle schools, more properly, the higher primary schools are reported from 384 villages and since there are 475 such schools the average per village with a middle school comes to 1.26 only. Amongst these villages 90 have high schools and 8 have junior colleges as well. There are considerable variations amongst the taluks of the district as regards the number of villages with educational institutions and also the proportion of population served. For the district as a whole the proportion of villages with at least a primary school is 72.88 per cent. This proportion varies between a minimum of 60.36 per cent in Haliyal taluk and a maximum of 90.91 per cent in Karwar taluk. The range of variation is indeed very wide. To some extent, the hilly terrain, dense forest growth, sparse population density and a relatively small average population per village besides recent influx appear to be responsible for the low coverage observed in Haliyal taluk. The taluks of Supa and Yellapur also belong to this category of below average coverage and more or less share the above-mentioned characteristics of Haliyal taluk. It appears strange that Bhatkal which like Karwar is a coastal taluk and is having a high density as well as large sized villages should have educational facilities in only 63.49 per cent of the inhabited villages. A little probing however discloses that it is the smaller villages of this taluk that are not having educational facilities and that the average population in the case of these 23 villages works out to a mere 94. In Haliyal taluk this average is 105, whereas in the taluks of Supa and Mundgod the average population of a village without educational facilities is as high as 139 and 140 respectively. Obviously the proportion of villages with educational facilities to the total in any area depends upon several factors including population size, settlement pattern, and nature of terrain. Amongst the taluks of the district Karwar is the best-served taluk and this is followed by Ankola (82.14 per cent), Sirsi (80.97 per cent), Kumta (79.46 per cent) and Honavar

(78.95 per cent). Though the topographical and other conditions in the taluks of Sirsi and Siddapur are quite alike there is a sharp difference between the proportions of villages with educational facilities : against the 80.97 per cent of Sirsi the coverage in Siddapur is only 67.53 per cent.

The aggregate population of the 935 villages having educational facilities constitutes 94.43 per cent of the rural population of the district. This proportion of population served too varies considerably amongst the taluks. Karwar tops the list with a coverage of 99.34 per cent and this is followed closely behind by the taluks of Honavar (98.74 per cent) and Ankola (97.30 per cent). In Bhatkal taluk which holds the last place from the point of view villages covered, the proportion of population served is 96.98 per cent - a figure which is fairly high in comparison to the district average and also the proportions noticed in as many as 7 taluks of the district. Likewise in Haliyal taluk which has the lowest proportion of villages with schools, the proportion of population served is 92.45 per cent and this figure is higher than that given out by the taluks of Sirsi (92.02 per cent), Yellapur (90.16 per cent), Siddapur (90.07 per cent) and Supa (86.21 per cent). Populationwise Supa is the smallest taluk of the district and it is in this taluk that the proportion of rural population served happens to be the least.

Villages not having any educational facilities naturally depend upon the educational institutions functioning in the nearby villages or towns. Out of the 1283 inhabited villages, 348 belong to this category. A classification of these villages according to the distance to be covered to reach the nearest place with the minimum level of educational facilities shows that the distance is hardly 5 km in the case of 305, that is 87.64 per cent and 5-10 km in the case of 9.77 per cent of the villages. In view of the dispersed nature of the settlements a distance of upto 5 km cannot be regarded as a real hurdle. Among the villages not having educational facilities quite a large number are located far away from any urban centre. Proximity to a town is an important factor which exerts a favourable influence. Among the 169 villages located within a distance of 5 km, 76.33 per cent have educational facilities. This proportion moves down to 73.98 per cent and 71.43 per cent respectively in the case of the 442 and 665 villages that are located in the distance ranges of 6-15 km and 16-50 km with reference to the nearest town and reaches 57.14 per cent in the case of villages situated beyond a distance of 50 km. Thus villages that are far away from a town are likely to be lacking in educational facilities. However, population size is a vital factor and it is generally the villages with small and very small number of inhabitants that would not have any schools. Amongst the 837 villages with a population of less than 500, those not having educational facilities constitute 40.50 per cent. This proportion drops to 2.49 per cent in the case of the 362 villages in the population range of 500-1999. All the 84 villages with 2000 or more inhabitants each have educational facilities. Unlike their small counterparts, these villages tend to have multiple institutions and also middle schools and high schools. All the towns of the district have adequate educational facilities.

**Medical Facilities :**

Medical institutions of one type or the other are reported from 146 out of the 1283 inhabited villages. As may be noticed from the appendix only 2 villages have a hospital each, 31 have primary health units, 22 have dispensaries, 10 have primary health centres with family planning centres attached thereto and as many as 96 have other type of institutions, namely the clinics run by registered medical practitioners. The proportion of villages with medical facilities to the total is 11.38 per cent for the district and amongst the taluks this varies between 5.41 per cent in Haliyal and 24.21 per cent in Honavar. Karwar is the only taluk, other than Honavar, which has a higher coverage (23.64 per cent). At the other end, the position of Siddapur (5.67 per cent) is almost the same as that of Haliyal. The taluks of Mundgod (6.33 per cent), Supa (6.57 per cent) and Bhatkal (6.35 per cent) also have a poor coverage may be for different reasons. The aggregate population of these 146 villages constitutes 31.90 per cent of the rural population of the district. Talukwise details indicate that the proportion of rural population served varies between as low a figure as 10.31 per cent in Siddapur and the highest average of 55.16 per cent given out by Honavar. The coverage is higher than the district average in two other taluks only, namely Karwar (51.21 per cent) and Kumta (49.16 per cent). Though Bhatkal is also a coastal taluk, like Karwar, Honavar and Kumta, the proportion of population served here is as low as 16.68 per cent, and this is a matter which cannot be easily explained. Amongst the 11 taluks Bhatkal takes the tenth place. The position of Ankola which too is a coastal taluk is slightly better, for it holds the sixth place. In Haliyal taluk though the proportion of villages with facilities is the least, the proportion of population served is 18.20 per cent. The medical institutions in villages serve not only the local residents but also those residing in nearby villages. Thus generally it is the larger villages that tend to have medical facilities. The proportion of villages with medical facilities is just 3.23 per cent in the case of small villages having less than 500 inhabitants each. This figure shoots upto 19.89 per cent and then jumps to 54.79 per cent in respect of villages in the population ranges of 500-1999 and 2000 to 4999 before reaching 63.64 per cent in the case of villages with 5000 or more number of inhabitants. Larger the village in population size greater are the chances that it has some medical facilities. When the locations of the 146 villages with facilities are examined with reference to the proximity of towns it is noticed that 67 are located in the 6-15 km range and another 67 are located beyond 15 km while only 12 are at a distance of 5 km or less. The proportion of villages with facilities to the total in the distance ranges of 0-5 km, 6-15 km and 16-50 km are 7.10 per cent, 15.16 per cent and 10.08 per cent respectively. Too close a proximity as also too great a distance from the nearest town are both disadvantageous and the optimum distance seems to lie between 12 to 15 km. All the towns of the district have medical facilities which can be availed of by the residents of surrounding villages also. Amongst the 1137 villages not having medical facilities, 577 (50.75 per cent) are situated at a distance of 5 km or less with reference to the nearest place with medical facilities. Those residing in 305 villages (26.82 per cent) have to cover a distance of 6 to 10 km and the residents of the remaining 255 villages (22.43 per cent) have to travel more than 10 km to reach the nearest place with medical facilities.

**Postal Facilities :**

Postal facilities are locally available in 371 villages, that is in only 28.92 per cent of the inhabited villages, and the total population of these villages forms 63.16 per cent of the rural population of the district. The proportion of villages with postal facilities to the total is the highest in Karwar taluk (56.36) and fairly high in the taluks of Honavar (49.47 per cent) and Kumta (40.18 per cent). Supa and Haliyal are the taluks at the lowest proportion of 16.79 per cent and 20.72 per cent respectively. Amongst the hilly malnad taluks, Sirsi has the highest coverage of 30.53 per cent. In the coastal zone Bhatkal taluk has the lowest proportion (23.81 per cent) of villages with postal facilities. In terms of rural population served too Karwar ranks first (84.63 per cent) and Supa holds the last place (41.89 per cent). The coastal taluks are in a comparatively better position as compared to their hilly counterparts for in none of the taluks of the latter category the proportion of population served comes any where near the district average. Amongst these 6 taluks, Haliyal is best-served taluk (52.38 per cent) and Yellapur (50.59 per cent) comes next to it. Topographical features of an area also appear to be of some relevance. Among the 837 small villages with less than 500 inhabitants each, only 10.75 per cent have postal facilities. This proportion increases to 55.80 per cent in respect of medium sized villages having 500 to 1999 persons and then moves up to 93.15 per cent in the case of 73 large villages with more than 2000 inhabitants before reaching cent per cent in the case of 11 villages each with a population of 5000 plus. Thus, population size is a vital factor and, larger the village greater are its chances of being provided with postal facilities. When the villages are grouped according to their proximity to towns and the proportion of villages with postal facilities for each group is examined it is noticed that the villages which are neither too near nor too far are in an advantageous position. The proportions work out to 30.18 per cent and 24.96 per cent respectively in the case of villages in the distance ranges of 0-5 km and 16-50 km. In contrast 34.84 per cent of the villages in the distance range of 6-15 km have postal facilities. Incidentally it may be noticed that such facilities are not available in any of the seven villages that are located beyond 50 km with reference to the nearest town. As in the case of other amenities in this case too, the

institutions cater to the needs of local residents as also those residing in surrounding villages. Postal facilities are not locally available in 912 villages and among these 680 (74.56 per cent) are located within a distance of 5 km with reference to the nearest place with such facilities while 166 (18.20 per cent) are located in the distance range of 6 to 10 km. Thus the distance to be covered to reach the nearest place with a post office is 10 km or more in the case of 66 villages (7.24 per cent) only. In view of the rugged nature of the terrain and incidence of heavy rainfall this distance factor quite often poses a real problem.

All the towns of the district have postal, telegraph and telephone facilities. Among the villages 245 have only post offices, 78 have post offices and telephone facilities and 43 have postal, telegraph as well as telephone facilities.

**Weekly Markets :**

All the towns of the district, and most of the large and medium sized villages have at least a few permanent shops which deal with the daily necessities. In some of the towns and villages weekly markets are also held and these cater to the needs of those residing in surrounding villages. In so far as the rural areas are concerned, weekly market facility is locally available in 15 villages that is in 1.17 per cent of the total number of inhabited villages. These villages are found scattered amongst 7 out of the 11 taluks of the district. Weekly market facility is not available in any of the villages in the taluks of Ankola, Honavar, Karwar and Siddapur. Of the 15 villages four are in Haliyal taluk, another four belong to Mundgod taluk and the taluks of Sirsi and Supa account for two villages each. In the matter of availability of weekly market facilities in villages therefore the talukwise disparities are highly pronounced. The proportion of villages with this facility happens to be the highest in Mundgod taluk (5.06 per cent) and the least (0.79 per cent) in Yellapur taluk. The aggregate population of the 15 villages with weekly markets constitutes a mere 5.49 per cent of the rural population of the district. From the point of view of the proportion of population served also Mundgod taluk (19.00 per cent) tops the list and this is followed behind by Supa (13.90 per cent) and Kumta (11.80 per cent). Though Kumta taluk has only one village with this facility, since it is relatively a large village the proportion of population served is comparatively high. Bhatkal taluk too has only one village with weekly market facility. But the proportion of population served here is only 4.91 per cent, which is the lowest average amongst the seven taluks. Sirsi taluk has the largest number of villages as well as a large rural population. Though weekly markets gather in two of its villages the proportion of population served is only 5.18 per cent. All the 15 villages with weekly market facility have more than 500 inhabitants each and of these 8 have a population of more than 2000 and in one village the population exceeds 5000. If the proportions for each population size group are examined it is seen to be nil in the case of small villages with a population of less than 500; 1.66 per cent in the case of villages in the size-group of 500-1999; 10.96 per cent and 9.09 per cent respectively in the case of villages coming under the population size classes 2000-4999 and 5000 plus. Generally speaking it is the larger villages that are more likely to be enjoying this facility. As already remarked such villages tend to have a few permanent shops also and thus function as important trading centres. Quite often these villages are found to be located at some considerable distance from urban centres. Of the 15 villages with weekly markets, 8 are located beyond the 15 km range, 6 are situated between 6 and 15 km and only one is located at a distance of less than 5 km with reference to the nearest town. Villages which are located quite close to urban centres or large villages are therefore not likely to have the weekly market facility. There are in all 1268 villages not having the weekly market facility and the residents of these villages depend upon the markets, either weekly or permanent, or both that are available at nearby centres. A grouping of these villages by the range of distance to be covered to reach the nearest market place shows that the distance is more than 10 km in the case of 59.46 per cent, it is 5-10 km in the case of 20.11 per cent and less than 5 km in the case of the remaining 20.43 per cent of the villages. The predominant settlement pattern of the district consists of isolated homesteads and small dispersed clusters. The residents of villages where weekly markets are held and also those having permanent markets have to cover some distance for shopping. This has been a traditional feature and in view of the recent developments in communication and transport facilities there has been a proliferation of trading establishments in towns and large villages.

**Communication Facilities :**

Communication facilities, mainly in the form of bus stop facility, are available in 38.66 per cent of the inhabited villages of the district. In Honavar taluk, 62.11 per cent of the villages are enjoying such facilities and Karwar taluk has the next highest coverage of 58.18 per cent. At the other extreme there is Supa taluk wherein only 17.52 per cent of the villages have communication facilities. Though Bhatkal is a coastal taluk its position is not at all comparable with the other coastal taluks and the proportion of villages with communication facilities noticeable here (25.40 per cent) is higher only in comparison to that noticed in Supa taluk. Amongst the hilly malnad taluks, Haliyal is the best served taluk (41.44 per cent). The total population of the villages with communication facilities constitutes 65.01 per cent of the rural population of the district. When viewed from this point of view Karwar taluk (82.64 per cent) takes a lead over Honavar (81.95 per cent) and Supa holds the last place with a coverage of only 38.93 per cent. It may incidentally be noticed that it is only in Supa taluk that the coverage is much less than the 50 per cent mark, in the taluks of Ankola, Siddapur, Sirsi and Yellapur it lies between 50 and 60 per cent, in the taluks of Bhatkal, Haliyal and Mundgod this figure lies between 60-65 per cent and in the case of the remaining three taluks the proportion of population served is slightly above 80 per cent. When examined with reference to proximity to an urban area, the coverage is seen to range between 31-43 per cent in the case of villages that are beyond the 15 km limit and 50 per cent in the case of villages situated in the distance range of 6-15 km. Amongst the villages that are located much closer to towns the coverage is 39.05 per cent. Villages which are neither too near nor too far away from a town are more likely to be provided with communication facilities. Further, as in several other matters in this case too population size is a vital factor. Larger the village greater are the chances of the availability of this facility. While among the villages with less than 500 persons each only 23.89 per cent are having this facility among those with a population of 5000 or more the proportion of villages with communication facilities is as much as 90.91 per cent. For the intermediate population size-classes to 500-1999 and 2000-4999 the respective figures are 62.43 per cent and 82.19 per cent. As the population increases the proportion of villages provided with communication facilities also increases. All the towns of the district are enjoying the bus route facility.

Villages not having any communication facilities depend upon those that are available at nearby places. Among the 787 such villages, in the case of 539 (68.50 per cent) these facilities are available at a distance of 5 km or less and while the case of another 157 (20 per cent) the villagers have to cover a distance of 5-10 km the residents of the remaining 91 villages have to travel more than 10 km to reach the nearest place with communication facilities.

**Approach Road :**

The facility of pucca approach road is available in the case of only 41.54 per cent of the inhabited villages. In this matter the coastal taluks are now somewhat better served than their hilly malnad counterparts. The proportion of villages with this facility is the highest (67.86 per cent) in Ankola taluk and fairly high in the taluks of Bhatkal (58.73 per cent) and Karwar (56.36 per cent). In Kumta taluk too the coverage is above the district average. On the other hand, in all the other taluks, except Siddapur, this proportion is lower than the district average. Among these taluks Siddapur has the highest tally of 43.81 per cent and is followed by Yellapur (42.52 per cent). This proportion is very low in the taluks of Sirsi (31.86 per cent) and Supa (31.39 per cent) and the least in Mundgod (29.11 per cent). These taluks are

densely forested and the terrain is hilly. In recent years however in view of the Kalinadi Hydro-electric Project and such other developmental works the conditions are fast improving. The villages that are lacking in this facility are generally small in population size. The aggregate population of villages with pucca approach road facility constitute 66.39 per cent of the rural population of the district. It is only in Sirsi taluk that the population served is less than 50 per cent and the coverage in this taluk (45.80 per cent) happens to be the least amongst the 11 taluks. This proportion is the highest in Ankola taluk (85.16 per cent) and fairly high in Bhatkal taluk (84.11 per cent)

Among the villages in the population range of below 500 only 28.32 per cent are having pucca approach roads. This proportion jumps up to 61.88 per cent and 83.56 per cent in the case of the villages belonging to the population size classes of 500-1999 and 2000-4999 respectively before reaching cent per cent in respect of the villages with a population of 5000 plus. Obviously the larger a village in population greater are the chances that it is provided with pucca approach road. In this matter proximity to an urban area too appears to be quite advantageous. The proportion of villages with this facility decreases as one moves from the group of villages that are in the close proximity to those that are further away. Amongst the villages which are very near the towns (0-5 km), 50.89 per cent have pucca approach roads. This proportion drops to 47.06 per cent and 35.64 per cent in the case of villages which fall in the distance ranges of 6 -15 km and 16-50 km respectively and reaches 28.57 per cent in the case of villages which are located at distances beyond 50 km with reference to the nearest town.

**Power Supply :**

Villages which are provided with electric power constitute 49.34 per cent of the total number of inhabited villages. This proportion is not quite impressive. Taluk level details reveal that in Honavar taluk 70.53 per cent of the villages are electrified. The coverage is quite high in Kumta (68.75 per cent) and Sirsi (68.14 per cent). On the other hand in Supa taluk the electrified villages form only 19.71 per cent and this figure is the lowest among the eleven taluks. In Yellapur taluk also this proportion is very low (30.71 per cent). When the proportion of rural population served is considered it is noticed that the average for the district is 76.53 per cent and that it varies between 47.46 per cent in Supa taluk and 94.31 per cent in Honavar taluk. In Kumta the coverage is 92.68 per cent whereas in Karwar taluk the rural population served is only 74.59 per cent - a figure which is lower than the district average. Comparatively speaking the position in Sirsi taluk (79.82 per cent) is better than that in Karwar. With the exception of Karwar, the other coastal taluks have a coverage of 89 per cent and above. In the matter of electrification too population size is a vital factor. All the villages with 5000 or more inhabitants are electrified. This proportion moves down to 95.89 per cent in the case of villages with a population in the range of 2000-4999 and then drops to 74.31 per cent in respect of villages in the population range of 500-1999. Amongst the small villages having a population of less than 500 each the electrified villages form 28.79 per cent only. Besides size, proximity to a town is also a favourable factor. Power supply is not available in any of the villages that are located beyond the 50 km limit with reference to the nearest town. On the other hand amongst the villages that are situated within a distance of 5 km from the nearest town 69.82 per cent are electrified. This proportion slides down to 61.09 per cent and then drops to 36.84 per cent in the case of the villages that are located in the distance ranges of 6-15 km and 16-50 km respectively. Thus, even within a taluk the village which is having a somewhat large population and is located relatively closer to an urban area stands a better chance of being supplied with electric power than that which has a small population and is relatively far away. All the towns of the district are electrified.

In a general way it may be observed that the larger villages enjoy better facilities and the availability of facilities in turn promotes further growth. The converse is also true to a certain extent : that is, if a smaller village is provided with facilities sooner than later it becomes a centre of attraction and its population also tends to increase at relatively higher rates. The needs of those living in larger groups generally receive more immediate and favourable response.

**BRIEF NOTE ON TOWNS :**

An idea regarding the growth history of the 13 towns of the district may be had from a perusal of the details furnished in Statement I of the town directory. Six towns are enjoying the urban status continuously from 1901, Dandeli and Yellapur emerged as urban areas in 1961 and 1971 respectively and the other five areas were classified as towns only at the 1981 Census. Among the latest additions, Ambikanagar and Ganeshgudi consist of townships which have come up at the project sites at the instance of the Karnataka Power Corporation and these are of a temporary nature. These are special areas recognised as towns for purposes of 1981 Census Operations. The other three, namely Mundgod, Ankola and Siddapur have all along been in existence as large-sized villages and have in fact been functioning as administrative centres being the headquarters of the taluks named after them. These places acquired urban status as a consequence of the abolition of the respective town panchayats and the constitution of the municipal councils to look after the civic administration of these places. This change occured soon after the 1971 census results became available, particularly in view of the fact that in these three places the number of inhabitants was more than ten thousand and that these places were functioning as the headquarters of the taluks concerned. Yellapur was classified as a town in 1971 and was then a Town Panchayat. It has retained its urban status and has also acquired the statutary urban status on account of its present civic administrative status as a municipality. During the intercensal decade this small town has registered a growth rate of 87.92 per cent - the highest decadal rate among the thirteen towns. Dandeli and its neighbouring area Kumbarkop were recognised as urban areas (Notified Areas) at the 1961 Census and together constituted a town group with a population of less than ten thousand. This developing industrial area retained its urban status in 1971 and witnessed a 218 per cent increase in its population. The population of this town has further increased during the latest intercensal period by as much as 87.31 per cent and its civic administration status has undergone a change from Notified Area Committee to a full fledged Town Municipal Council. This town owes its origin and subsequent rapid growth to the concentration of a few large scale industrial units in the area. In terms of population, Dandeli has now overtaken Karwar the district headquarters town and has emerged as the largest urban unit of the district.

The growth histories of the six older towns are quite varied in that they have experienced marginal decline, low to average growth and sometimes very high growth rates as well. In 1901, Karwar was the most populous town and had 9648 inhabitants. Kumta was the second largest town while Haliyal was the smallest. Sirsi too was quite a small town and ranked above Haliyal only. During the decade 1901-11, Kumta experienced a negative growth to the extent of 13.16 per cent. The towns of Bhatkal, Honavar and Sirsi registered marginal increases of less than 5 per cent each while the population of Karwar and Haliyal shot up by 88.22 per cent and 67.73 per cent respectively. Between 1911 and 1921, the decade marked by the ill effects of the first world war and the outbreak of influenza all over the State and beyond, the trends were somewhat different. Karwar which had gained considerably during the earlier decade lost as much as 29.18 per cent of its population. The situation in Haliyal town (-12.17 per cent) too was not much different. Similar fate befell the towns of Bhatkal, Honavar and Sirsi though in these cases the loss in population was quite marginal. During this decade Kumta witnessed a tremendous growth of 61.14 per cent and what was lost between 1901 and 1911 was more than made good. Temporary migration of people from towns to adjacent rural tracts perhaps accounts for such wide variations, especially very heavy loss in one decade getting compensated during the very next decade. From 1931 onwards all these towns have been experiencing a sustained positive growth. Between 1921 and 1931 the growth rate ranged from 2.43 per cent in Kumta and 24.41 per cent in Bhatkal. In 1931 too, Karwar was the largest town followed by Kumta while Sirsi and Haliyal retained their last two ranks respectively. The decadal growth rates

during 1931-41 varied between 47.01 per cent in Sirsi and 11.77 per cent in Karwar. Bhatkal too had an impressive rate of 23.39 per cent. During the next decade Sirsi retained the momentum it had gained earlier and registered a growth rate of 26.55 per cent - the second highest among the six towns. The growth trends in Bhatkal received a setback and the rate of 13.52 per cent noticed here was higher in comparison only to the rate of 8.67 per cent noticed in Honavar. In Karwar town the population increase was of the order of 24.99 per cent whereas in Kumta the rate was much lower (19.44 per cent). Sirsi town rose into prominence and emerged as the second largest town in 1961 while Kumta was relegated to the third position. During 1951-61, Sirsi registered an exceptionally high growth rate of 60.59 per cent and Haliyal ranked next to it with a growth rate of 26.38 per cent. It may be recalled that it was during this decade that this district became a part of Karnataka and that several developmental works, especially in the sphere of road communication, were initiated. In this process the importance of Sirsi as a transit town was greatly enhanced. During the next decade too, namely 1961-71, Sirsi continued to grow in an impressive manner and registered the highest growth rate of 34.54 per cent (that is, barring Dandeli town with its 218.25 per cent growth rate). As a consequence of its relatively high growth trends sustained over a period of three decades Sirsi emerged as the largest town of the district and Karwar the district headquarter ranked next to Sirsi. Dandeli however was a close third and had a higher potential for growth as is now evident from the fact that in 1981 it is the most populous town of the district.

During 1971-81, five new towns have been added. Amongst the older towns the growth rate is seen to vary between 87.92 per cent in Yellapur and 21.54 per cent in Honavar. The growth rate registered by Karwar (70.00 per cent) too is quite impressive and since Sirsi (36.15 per cent) did not measure up to this standard, now Karwar has a much larger population than Sirsi. The highest growth rate in Yellapur may be ascribed to the fact that in 1971, the boundaries of this panchayat town were coterminus with that of the revenue village of Yellapur only even though the limits of the town panchayat covered 5 other surrounding villages which were treated as rural as per definitions adopted at the 1971 Census. After 1971, the entire panchayat area has been constituted into a municipality and the present limits of the town include the 5 villages of 1971 also. There has thus been an addition of area as well as population. The West Coast Highway has now been commissioned and road transport between Mangalore-Udupi-Kundapur-Bhatkal-Honavar-Kumta-Ankola and Karwar has been greatly facilitated. Much of the traffic between Mangalore and Bombay now passes through the towns of this district as well. In a way this development has promoted the population growth in these towns. Karwar town has been benefited by other factors such as the recent trends in industrialisation and the efforts to develop Karwar into a major port, Dandeli has continued to gain in population due to the favourable trends in industrialisation and the simultaneous growth of the service sector. In a span of 20 years the population of this town has witnessed a five-fold increase. Amongst the six old towns, during the past 80 years, Sirsi has recorded the highest overall growth (535 per cent) and is followed by Karwar (389 per cent), Haliyal (303 per cent), Bhatkal (268 per cent), Kumta (207 per cent) and Honavar (118 per cent). These foregoing details reveal that population growth is a complex phenomenon and does not follow any steady or uniform or predictable trend. A period of sudden spurt is usually followed by a period of comparative lull during which the gains get consolidated.

Among the towns of the district Ambikanagar (0.76 Sq.Km) and Ganeshgudi (1.36 Sq.Km) are very small in terms of geographical area. These are towns of a special category and are therefore cases of exception. Amongst the rest, Bhatkal is the smallest (5.23 Sq.Km) and Yellapur (64.60 Sq.Km) is the largest. The range of variation is indeed very great. But if the case of Yellapur is ignored the gulf between the smallest and the largest among the municipal towns narrows down since the relevant figures are seen to be 5.23 Sq.Km in Bhatkal and 18.52 Sq.Km in Siddapur. The towns of this district are somewhat larger in area in comparison to the towns of the maidan region and since these are smaller in population size these appear to be sparsely populated. The density of population in towns is seen to vary between 183 in Yellapur and 10,176 in Ambikanagar. In a way both of these represent exceptional situations. If the other municipal towns are considered the density ranges between 610 in Siddapur and 5590 in Dandeli. Mundgod too has a density of below one thousand. In three towns the density figures lie in the range of 1500-1700. Next to Dandeli, Bhatkal is the most densely populated town (4907). In Karwar and Sirsi the second and third largest towns the densities are 3290 and 4193 respectively. Obviously, a larger town need not necessarily be more densely populated.

Sex ratio figures for towns indicate that there are only 734 females per thousand males in the population of Ganeshgudi. Like Ganeshgudi, Ambikanagar is also a project area township and here the sex ratio is 802. Both these places are qualitatively different from the conventional towns at present and contain a larger proportion of temporary residents, especially males. In the case of the remaining 11 towns, sex ratio varies between 901 in Karwar and 1094 in Bhatkal. Dandeli the most populous town has a sex ratio of 903 whereas Sirsi which too has a large population contains a higher proportion of females (941). Apart from Bhatkal, Ankola is the only town with a surplus of females. Data on sex ratio for 3 successive decades presented in the statement indicate that while the sex ratio has gradually moved down in the towns of Bhatkal (from 1220 to 1094), Honavar (from 1002 to 982) and Karwar (from 970 to 901), in Dandeli and Sirsi it has shown an upward trend and in two other towns it has shown signs of fluctuation. Dandeli emerged as a major industrial township in 1961 and as usually happens in such cases contained a very low proportion of females in its population. Once the population of the town got stabilised the sex ratio began to improve and it now seems to be approaching the optimum ratio. Sirsi on the other hand is an old town with a settled population. Between 1951 and 1961, this town witnessed a sudden influx of people (growth rate 60.59 per cent) which evidently contained a high proportion of working males and pulled down the sex ratio to 888. By 1971, the process of consolidation seems to have become operative and the sex ratio moved up to 920. The town experienced a moderate growth during this decade as well as the next and by 1981 the sex ratio improved further to 941. Sex ratio of any town is greatly affected by factors such as selective migration especially of working males either into the town for exploiting the new opportunities thrown up in the town as in the case of Sirsi or Karwar or to places outside the town in search of better prospects.

Amongst the 13 towns of the district ten are administrative centres being the headquarters of the taluks known after their names. Dandeli and Ambikanagar are located in the limits of Haliyal taluk and the road distance to Haliyal happens to be 24 km and 45 km respectively. Ganeshgudi belongs to Supa taluk and the distance between Supa and Ganeshgudi is about 3 km only. (The taluk headquarters has since been shifted to Joida and the distance from Ganeshgudi to Joida is about 20 km). With the exception of Ankola all the other 11 towns are located considerably far away from Karwar, the district headquarters. The road distance between Ankola and Karwar is 34 km only whereas that between Ambikanagar and Karwar is 180 km. The distance is in the 51-100 km range in the case of 4 towns and between 101-150 km in the case of another 4 towns. The district headquarter town is located in the north-western corner in the middle sector and is quite far away from the towns in the southern and eastern portions of the district. The hilly terrain coupled with heavy and incessant rainfall during the monsoon months has accentuated the problem of communications and till recently disruption of road traffic used to be a regular feature. Since the major rivers and streams have now been bridged and road maintenance is receiving greater attention this problem has now been overcome to an appreciable extent and all the towns are directly connected by bus service with Karwar. In the case of 11 out of 13 towns, Hubli-Dharwad Municipal Corporation happens to be the nearest city with a population of 100,000 plus. The intervening distance is only 47 km in respect of Mundgod and between 51 and 100 km in the case of 5 other towns. Honavar is located at the farthest distance of 186 km and the distance is beyond 150 km in the case of Karwar and Kumta. While Siddapur town is much closer (76 km) to Shimoga city, in the case of Bhatkal town the nearest city happens to be Mangalore (144 km). All the towns of the

district are located quite far away from Bangalore the State headquarters. The road distances lie in the range of 381 km (Muridgod) and 520 km (Karwar). Siddapur (383 km) too is comparatively nearer to Bangalore. The important towns of the district such as Karwar, Sirsi, Dandeli, Bhatkal, etc, are directly linked with Bangalore by good roads and are enjoying adequate public transport facilities. The coastal towns have close links with Mangalore City and the towns of the upland tracts have close links with Hubli-Dharwad Municipal Corporation and both these sets of towns are well served by public transport facilities. In the matter of railway station facilities, it may be noted, Dandeli is the only town with a railway station. In the case of the other towns the distance to the nearest railway station ranges from 12 km (Haliyal to Alnavar) to 164 km (from Kumta to Hubli-Dharwad). Honavar and Karwar are on the banks respectively of the Sharavati and the Kali which are navigable. Gangavali or Gangolli and Aghanashini are the other navigable rivers which flow close (8 km) to the towns of Ankola and Kumta respectively.

The details furnished in statement III provide an idea about the scale of financial transactions of the civic bodies governing the various towns of the district. Ambikanagar is a project township and the civic needs of the town-dwellers are being looked after by the project authorities. Ganeshgudi is a special area and it is also not having any civic body except the village panchayat which has been in existence since a long period. The remaining eleven towns have municipal councils. Dandeli the most populous town has the highest receipts (Rs.2,390,300) and is followed behind by Bhatkal (Rs.1,964,600) which is smaller in population as compared to Karwar (Rs.1,429,900) and Sirsi (Rs.1,825,400). This sort of disparity of a smaller town reporting higher receipts may be noticed in the case of Mundgod and Honavar also. The details furnished relate to one particular year and it is quite likely that a different picture would emerge if the data for some other year are compared. These details however indicate that a more populous town need not always have a higher income. In the matter of expenditure also Dandeli tops the list with Rs.3,023,200. Karwar comes next with Rs.1,469,600 and this is followed by Sirsi (Rs.1,460,300) and Bhatkal (Rs.639,800). The expenditure reported in Mundgod (Rs.488,700) is much more than that reported in a few towns having a larger population such as Yellapur (Rs.103,400) and Siddapur (Rs.383,800). A comparison of the per capita figures under receipts and expenditure would provide a better idea in this regard. The overall average receipts is Rs.42.38 and this is seen to vary between Rs.3.94 in Ganeshgudi and Rs.91.24 in Mundgod. If Ganeshgudi is ignored, Yellapur emerges as the town with the lowest per capita (Rs.8.96). Dandeli (Rs.50.19) which tops the list when absolute figures of receipts are considered takes the 4th place - below that of Honavar (Rs.53.92) and Bhatkal (Rs.76.55). In Sirsi and Karwar the per capita receipts are much lower. On the expenditure side however a different picture is seen to emerge. The highest per capita expenditure of Rs.63.48 is noticeable in the case of Dandeli town and this is followed by the towns of Honavar (Rs.49.33), Karwar (Rs.47.30) and Sirsi (Rs.37.53). Yellapur and Ganeshgudi occupy the last two places with a tally of Rs.8.77 and Rs.2.52 respectively. In Bhatkal which has the second highest per capita receipts the expenditure is quite low (Rs.24.93). Property tax and revenue derived from municipal properties and powers apart from taxation are the main and recurring sources of receipts in all the towns. The proportion of receipts from taxation varies between 21.65 per cent in Bhatkal and 89.01 per cent in Ankola. Amongst the other towns it is only Mundgod which derives less than 50 per cent of its receipts through this head. This proportion is fairly high in Yellapur (86.17 per cent) and Dandeli (73.15 per cent). The contribution from the head 'properties and powers apart from taxation' is seen to vary between a meagre 2.62 per cent in Bhatkal and 33.31 per cent in Karwar. This contribution is below 5 per cent in 4 towns, lies between 5 and 10 per cent in 3 towns, and above 20 per cent in the towns of Dandeli (20.18 per cent) and Karwar. Government grant is an important source, though the amount received varies considerably from town to town and from year to year. In Bhatkal for instance this source contributed 71.62 per cent of the total receipts. In Mundgod too the percentage is seen to be fairly high (43.55 per cent). Siddapur on the other hand has reported the lowest proportion of 5.49 per cent. On the expenditure side, general administration is an important recurring item and so are public safety and public health and conveniences. The proportion of expenditure on general administration varies between 23.33 per cent in Mundgod and 59.36 per cent in Ankola. In the three largest towns of Dandeli, Karwar and Sirsi this head accounts for 23.56 per cent, 26.15 per cent and 23.33 per cent respectively. In Haliyal on the other hand the expenditure on this head exceeds 50 per cent. The share of public health and conveniences is seen to range between 5.90 per cent in Haliyal and 37.81 per cent in Yellapur. While this proportion is less than 25 per cent in the towns of Ankola, Haliyal, Honavar and Siddapur it is fairly high in the towns of Karwar (37.67 per cent), Sirsi (36.25 per cent), Bhatkal (33.39 per cent) and Dandeli (31.84 per cent). Though each town incurs some expenditure atleast on public works the proportion of the amount spent to the total usually happens to be low, unless the civic body has taken up a major construction work. During 78-79 this head accounted for a substantial share in the towns of Dandeli (24.17 per cent), Sirsi (16.74 per cent) and Bhatkal (11.49 per cent) while no such expenditure was reportedly incurred by the Yellapur Municipality.

All the towns have pucca roads and katcha roads and roads that are maintained by the local bodies as well as those under the maintenance of the Public Works Department. The total road length in towns varies between 10 km in Siddapur and 54 km in Karwar. In Dandeli the most populous town, the road length adds upto 43 km. The road length is more than 30 km in the towns of Honavar, Yellapur and Kumta and between 21-30 km in the towns of Sirsi, Bhatkal and Honavar. If the road length per 1000 inhabitants is examined townwise the following picture emerges. Ganeshgudi has the highest ratio of 3.05 km and is followed by Yellapur (2.76 kms) and Honavar (2.31 km). In Dandeli and Sirsi which have a large population the road length per thousand population is seen to be very low being 0.90 km and 0.75 km respectively. Karwar which has the highest road-length among the 13 towns yields an average of 1.14 km. When examined with reference to the area of the town the road length per square kilometre varies between 0.51 km in Yellapur and 19.73 km in Ambikanagar. Siddapur town which too has a large area gives out an average of 0.54 km only. On the other hand in Ganeshgudi the average comes to 11.03 km and this town is followed by Dandeli (5.05 km).

Open surface drains have been provided in all the towns for draining out the excess water. In the towns of Ambikanagar and Ganeshgudi sewerage facilities are also available in addition. In Ganeshgudi pit system is also prevalent. There are water-borne or flush out latrines in all the towns. The number of such latrines however differs from town to town considerably. Sirsi has the largest number while Mundgod has the least. Karwar too has a fairly large number. Service latrines are not found in any of the towns and this in a way has obviated the necessity of removing the night soil manually. The flush out latrines are connected to sewers in Ambikanagar. In all other towns such latrines are connected to septic tanks. Pit type latrines (deep-well type) have been reported in small numbers from the three towns of Haliyal, Kumta and Siddapur. With the increasing popularity of the sanitary hand-flush latrines provided with septic tanks there has been a sudden drop in the number of pit type latrines in most of the towns.

In all the towns of the district excepting Honavar, drinking water is being supplied through taps. Water is pumped from a primary source and stored in overhead tanks, service reservoirs or ground level reservoirs, treated with bleaching powder and chlorine and then supplied through a network of pipes. The storage capacity varies from town to town depending upon several factors. In the towns of Sirsi and Siddapur the storage capacities are 2,047,500 litres and 10,000 litres respectively. Next to Sirsi, the towns of Dandeli and Bhatkal have the largest capacity of 1,137,500 litres. At the other end next to Siddapur, Yellapur town has lowest capacity of 54,600 litres. In most of the towns the quantity of water supplied daily to the consumers may be quite different from the storage capacity. Actual supplies depend upon several factors including seasonal conditions. Most of the substantial houses in the towns of the district have their own drinking water wells. Fire-fighting services are available at

Binaga near Karwar town (5 km), and in the towns of Dandeli, Kumta and Sirsi. The unit at Dandeli happens to be the nearest (about 24 km) in respect of 3 towns while that at Kumta and Sirsi are nearest in the case of 2 towns each. Ankola town can avail of the facility located at Binaga (30 km) while Mundgod has to depend on Hubli-Dharwad (47 km).

All the towns of the district are electrified and the number of connections of different types in towns vary considerably depending upon the population size and the functional characteristics of the town. Karwar, Dandeli and Sirsi have the largest number of domestic connections and Yellapur has the smallest number. In the matter of commercial as well as industrial power connections Sirsi tops the list and this is followed by Dandeli and Karwar. The project townships of Ambikanagar and Ganeshgudi have the smallest number of industrial and commercial connections. In the matter of street lights too there are considerable variations : Karwar and Sirsi have more than 1300 street lights as compared to 314 and 247 in the towns of Yellapur and Mundgod. It is quite likely that the number of connections of different types would substantially increase in each town soon after the commissioning of the Kalinadi Hydro-electric project.

Particulars about availability and the extent there of, of medical, educational and recreational facilities are furnished in Statement V. It may be seen that in all the 13 towns there are facilities for the treatment of inpatients also. Karwar, the district headquarters and Dandeli the pre-eminent industrial centre as well as the transit town of Sirsi have comparatively well equipped hospitals. The other towns have dispensaries or health units with a small number of beds and more or less these serve as referal medical institutions. The hospital and the T.B. centre at Karwar together have a bed strength of 90 and the institutions of Dandeli have a bed strength of 81. The number of beds per thousand population varies between 0.58 in Mundgod and 3.54 in Ankola. The position is fairly good in Honavar, Ambikanagar and Karwar. The medical institutions in towns serve the residents of the town as well as the inhabitants of the surrounding villages. So also the educational institutions cater to the needs of the people living in surrounding areas. All the towns have facilities for primary and middle school level and all but two have facilities for high school education as well. Ambikanagar and Ganeshgudi however do not have high schools and the residents of these towns depend upon the facilities available at Dandeli (24 km). The larger towns have better educational facilities both in terms of number of schools and the pupil strength. Junior colleges which provide facilities for pre-university education are functioning in 11 out of the 13 towns and as in the case of high school education in this case too the residents of Ganeshgudi and Ambikanagar depend upon the facilities available at Dandeli. Eight out of the 13 towns have degree level colleges and amongst these Karwar and Sirsi are the important centres. In the case of 3 towns, namely, Ambikanagar, Ganeshgudi and Haliyal the nearest degree college happens to be the one at Dandeli - a distance of about 25 km. Mundgod on the other hand is nearer to Hubli-Dharwad (47 km), the prominent educational centre of North Karnataka. Karwar has a polytechnic institute and this happens to be the nearest such institution only in respect of 4 towns. In all other cases Hubli-Dharwad is the nearest centre. In so far as engineering colleges and medical college are concerned Hubli-Dharwad is the nearest centre in the case of 11 out of the 13 towns. Bhatkal and Honavar are somewhat nearer to the institutions at Surathkal (engineering) and Manipal (medical). All the towns except Ambikanagar, Ganeshgudi and Mundgod have facilities for learning typewriting, shorthand institutes are available in 5 towns. Though all the towns have playgrounds of one type or the other mostly attached to the educational institutions - it is only Dandeli that has a modern stadium. Recreational facilities in the form of permanent cinema are available in all towns except Ambikanagar, Ganeshgudi and Siddapur. Auditorium or community halls are met with in all towns except Yellapur. Reading room and library facilities are reported from all the towns of the district.

Banking facilities are available in all the towns. So also there are co-operative credit institutions to cater to the needs of the agriculturists and also other categories of population. Ambikanagar and Ganeshgudi which are project towns do not however have any agricultural co-operative credit societies. Information about the commodities imported, exported and manufactured in towns furnished in Statement VI shows that each town has something or other to report under these heads. Foodgrains, sugarcane, wood, edible and non-edible oils, cloth, cotton yarn, construction material like cement and iron etc., are the main items imported by the towns. Likewise the important items exported are fish, paddy, arecanut, pepper, cardamom, cut-sizes of timber, plywood, tiles, paper, ferro-manganese alloys, etc; Ambikanagar and Ganeshgudi do not have any item to export and these towns are not having any manufacturing industries either. In Yellapur town no commodity has been reported under the manufacture head. Paper, cement pipes, washing soap, cut sizes of timber, iron nails, bolts and nuts, gold ornaments, tiles, Khandasari sugar and mango pulp are the most important items being manufactured in the towns. Kumta is however known for its sandalwood articles while Karwar is known for wooden furniture items, and Dandeli is a noted centre for manufacture of plywood and ferro-manganese alloys.

# PART A - VILLAGE AND TOWN DIRECTORY

(i) SECTION I - VILLAGE DIRECTORY
(ii) SECTION II - TOWN DIRECTORY

# VILLAGE DIRECTORY - AMENITIES AND LAND USE

## EXPLANATORY NOTE

As the title signifies the Village Directory aims to provide information on amenities and land use pattern in respect of each and every village with the reference period as the year 1979-80. In all there are 20 columns in this tabular statement and, out of these as many as 9 are allotted to amenities and services while another 5 are earmarked for data on land use. The remaining columns are concerned about location code number and name of the village area and population, its proximity to an urban centre and, remarks. Since most of these column headings are concise and represent certain concepts, a column by column explanation is furnished herewith. This would enable the reader at the very outset to recognise the scope and appreciate the limitations of the data presented under various columns.

**Column 1 : Location Code Number :-**

The concept of location code numbers has already been explained in the Analytical Note. The location code number thus assigned to the village is entered in this column. This number, runs serially starting from 1 for every taluk and the data are presented for villages arranged in an ascending order of their location code numbers. If there are any villages in the taluk that are fully incorporated into the limits of any urban area or are completely submerged under the back waters of any reservoir but are continued to be borne on the jurisdictional-lists of the Survey and Settlement authorities such villages are mentioned at the end without any location code number and in all such cases it may incidentally be pointed out, no further data except the name and the area are furnished in the statement. Similarly in the case of villages which are classified as outgrowths of towns, their names and area particulars alone are given treating them at par with villages fully incorporated in urban areas.

**Column 2 : Name of Village :-**

The name of the village corresponding to the location code number is given in column 1 is spelt out in English in this column. By and large the spellings adopted at the previous i.e. 1971 Census, have been retained even now. However, errors arising out of misreporting and misprinting if any in the 1971 District Census Handbooks have been taken note of and the correct spellings are now used. So also changes in village names duly effected by the Government with the sanction of the concerned authorities have been taken into consideration while finalising the spellings of villages names for 1981 census purposes. Further, if the name of the village has now been spelt differently as compared to the spelling given in the 1971 District Census Hand book for whatever the reason the spelling as adopted in the 1971 District Census Handbook is also furnished within brackets below the present name of the village in the alphabetical list of villages for the convenience of the data user.

A little more explanation appears to be necessary about the places which appear in the list of towns as well as in the list of villages. This phenomenon occurs particularly in the case of Taluk and District Headquarter towns which, as revenue entities are geographically large villages. The main village site areas including the peripheral developed areas would have for long been incorporated into the urban limits without any change whatsoever in Survey and Settlement records. In the Original Survey records and also at the Resurvey, the entire village inclusive of all the lands that are incorporated into the urban limits continues to be shown as a regular revenue village. In other words the portion constituted into a town is not taken out from the parent village and formed into a separate and independent unit in the jurisdictional lists. Every civic body, be it a municipal corporation or a town municipality or a notified area or a sanitary board defines its own jurisdiction confining itself mostly to the built up area and the fringe areas for enforcing municipal rules and regulations. With the administrative and legal sanction of the Government which issues a notification in this behalf the civic body secures statutory rights for administering the local area so defined. The incorporated areas may at times cut across village boundaries and may comprise of portions belonging to the revenue jurisdiction of two or more villages. In some instances entire revenue lands of a village or of several villages are incorporated into the limits of a town in which case for purposes of census operations these villages lose their independent identity and are omitted in the list of villages of the taluk. But it is only in case of villages of which only certain portions are included in the town, especially those that contribute their names to the towns concerned that this apparent duplication of names occurs. In such cases the jurisdiction of the town is very clear and it covers only a portion of village which is constituted into an independent entity as urban for census enumeration purposes. The remaining area too is constituted as an independent unit under the rural category i.e. as a village. In order to distinguish this unique situation, the name of the village bears the suffix Rural within brackets in the census village lists. Division of the village into urban and rural components and the suffixing of the names is a special procedure adopted for census purposes only. That is to say, if one were to ask the Officers of the Survey, Settlement and Land Records whether in their lists there are villages such as say Bellary (Rural), Belgaum (Rural), Bijapur (Rural), Chamarajnagar (Rural), Magadi(Rural) Mandya (Rural), Mysore (Rural), Raichur (Rural) etc., the answer would be a definite 'no' and then they would say that there are villages of the same name but without the suffix Rural. Similarly in the village maps and other records pertaining to the above named places, the lands that are incorporated into urban areas are also shown as part and parcel of the village concerned.

**Column 3 : Total area of the village (in hectares)**

The total geographical area of the village as per revenue records is furnished in hectares up to two decimal places. In Karnataka the basic records are still maintained in acres and guntas or acres and cents that is the units of measurements which were first adopted at the time of the cadastral survey. After the introduction of the decimal system however the equivalents of these figures are also indicated, in addition to the already existing entries in registers such as Akarband and Records of Rights. The area of each Survey number or part thereof is converted into hectares and ares and square yards too in some cases. Thus if these converted figures for each such small unit are added together for the village the resultant total area would normally be either less or more than the corresponding figures that one would derive by the addition of figures in acres - guntas/

acres and cents and conversion of that into hectares and ares. For purposes of presentation in this statement the village level area and land use figures which were furnished in acres-guntas or acres-cents by the Revenue Officers have been converted into hectares and ares and these figures may not therefore be identical with the area as may be found entered in hectares and ares in the records of some of the villages. The marginal differences would be due to the factors explained above. Further, in the case of villages of which certain portions are incorporated into an urban area the extent thus categorised as urban has been deducted from the total geographical area of the revenue village and for this reason the particulars presented here would not be in full correspondence with the total area of that revenue administrative unit as mentioned in the village records. If area figures are not available for any village the abbreviation 'N.A.' is entered in this column and a note at the bottom of the page explains the reason thereof also.

**Column 4 : Total Population and number of households :-**

The total population of the village according to 1981 census and the number of households therein are indicated in this column. In the case of villages with no inhabitants i.e. nil population, the word un-inhabited is written across the line.

**Columns 5 to 10 : Amenities available (if not available within the village, a dash may be shown in the column and next to it in brackets, the distance in broad ranges, viz.-5 Km, 5-10 Km and 10+ Km of the nearest place where the facility is available may be given):-**

As the main heading for these columns suggest if the basic amenity covered under any of these columns were to be not available within the village then, instead of simply stating that fact, an attempt is made here to indicate the minimum distance (in ranges) that one has to cover to avail oneself of that specific facility located in a nearby village or a town. At the data collection stage the name of such nearest place having that amenity as also the distance thereto from the referent village have been ascertained to ensure a higher degree of reliability in reporting. The abbreviations made use of in these columns are explained below column by column.

**Column 5 : Education :-**

All types of educational institutions functioning in the village irrespective of the levels of education offered, the medium of education and the status of the managing body are considered under this column. The abbreviations used to denote institutions with different levels of education are :

i) P : Primary or Elementary School :

Schools providing education form I standard and upwards upto and inclusive of IV standard are classified as Primary Schools. This would also include junior basic schools if any.

For purposes of reporting, schools which provide education not merely from I to IV but also for higher standards, called composite schools for easy reference, are split up into different levels of education and counted as an independent unit under each such level.

ii) M : Middle or Junior Secondary School :-

Schools providing education from V standard and upwards upto and inclusive of VII standard and classified as middle schools. In Karnataka as a matter of fact the term middle school is no longer in vogue. Primary education itself consists of seven years of schooling and the first four year duration of this course is called Lower Primary and the next 3 year period is termed as Higher Primary. As mentioned above a Higher Primary School with I-VII standard is treated as two units i.e. one Primary School and one Middle School for accounting purposes.

iii) H : Matriculation or Secondary School :-

Schools providing education from VIII standard and upwards upto and inclusive of X standard are classified as High Schools. A composite school with I - X standard is treated as three separate units and counted separately under the category of Primary, Middle and High School.

iv) PUC : Higher Secondary/Intermediate/Pre-university/Junior College :-

Schools and colleges that provide education for the XI and XII standards or as is more common in Karnataka for the I and II year of the Pre-University Course, fall under this category. There are Higher Secondary Schools with VIII standard and upwards covering the XII standard and on the other hand there are also degree colleges which provide education for PUC I and PUC II year. These composite units are as explained earlier, split up into different levels for reporting purposes.

v) C : College :

This would cover all educational institutions that provide post PUC level education leading to University degree in any subject or combination of subjects, and also post-graduate levels of education.

vi) I : Industrial School :

Industrial Schools if any in the villages are indicated by the abbreviation 'I'.

vii) TR : Training School :

All types of Institutes that provide vocational and professional training are covered by this abbreviation.

viii) AC : Adult Literacy Class/Centre :

This abbreviation is recorded in this column only if adult literacy classes were being conducted regularly in the village during the reference year.

ix) O : Others :

All other types of educational institutions such as Sanskrit Pathasala, Unani Madarasa, Makhtab etc., are included in this residuary category.

It is important to note that in this column whenever the number of institutions of a particular level or class exceeds one, only then the actual number is also reported immediately after the relevant abbreviation within brackets. That is to say the mere presence of an abbreviation without any numerical attribute signifies the existence of the facility,

in at least one institution for which that abbreviation stands. The numerals indicate the number of institutions or units of that level or type.

As explained already if a village does not have any educational institution whatsoever then a dash (-) is entered and thereafter, within brackets, the minimum distance that one has to cover to avail oneself of the primary level of educational facility is indicated. The emphasis here is on the most basic need i.e., the minimum level. In otherwords, if the village has primary school, but not middle school or high school then no further information is furnished in respect of the proximity of a middle school and upwards. Similarly for a village with primary and middle schools but no high school or a college no further information is furnished in respect of the proximity of high school and college level facilities.

It may again be recalled that the concept of village covers the entire revenue jurisdiction of that unit and includes all the hamlets i.e. human settlements located therein.

**Column 6 : Medical :-**

The abbreviations used to denote the existence of medical institutions of different types in the village are :

H : Hospital
MCW : Maternity and Child Welfare Centre
MH : Maternity Home
CWC : Child Welfare Centre
HC : Health Centre
PHC : Primary Health Centre
PHU : Primary Health-Unit
D : Dispensary
FPC : Family Planning Centre
TB : T.B.Clinic
NH : Nursing Home
RP : Registered Medical Practioner
SMP : Subsidised Medical Practitioner
CHW : Community Health Worker
O : Others

If the number of institutions of a particular type happens to be more than one then that number is also indicated immediately after the relevant abbreviation.

If the village does not have any medical facilities whatsoever then the minimum distance that one has to cover to secure the minimum level of medical facility is indicated here in distance ranges.

The abbreviation H which stands for hospitals implies the availability of facilities for the treatment of in-patients also. In several Primary Health Centres also such facilities do exist. Likewise Maternity Homes also entertain in-patients but then these are confined only to maternity cases. This apart in all other cases except private nursing homes arrangements exist for the treatment of out-patients only. In local parlance in certain areas however even a dispensary is referred to as a hospital and the clinic run by a private medical practitioner as a dispensary and a private nursing home as a hospital. This indiscriminate usage at times leads to confusion and in view of this every attempt has been made to eliminate such reporting errors.

All types of medical institutions, irrespective of the system of medicine practised therein are covered under this colum without any attempt to provide a further break up by systems of medicine.

About the Community Health Worker it may incidentally be mentioned that it does not refer to workers in extension programmes like Malaria Surveillance Workers, Basic Health Worker, Auxiliary Nurse Midwife etc., but refers only to the paramedical personnel who have been specially trained for dispensing medicines for minor ailments at the doorsteps of the patients. This is an altogether new scheme and has not been introduced in Karnataka.

**Column 7 : Drinking Water :-**

Following are the abbreviations used to indicate the different sources of drinking water that are available in the village. These sources of drinking water supply may be public property or may even be owned by private persons and institutions. If there are two or more sources then all these sources are mentioned one after the other but separated by commas.

T : Tap
W : Well
TK : Tank
TW : Tube Well
HP : Hand Pump
R : River
F : Fountain
C : Canal
L : Lake
S : Spring
N : Nallah/Stream
O : Others
NA : Information not available

If the village does not have any source of drinking water supply at all then, after a dash in this column, the distance range that one has to traverse to reach the nearest place with drinking water facility is indicated.

**Column 8 : Post and Telegraph :-**

In this column information on the availability of postal, telegraph and telephone facilities in the village is furnished using the following abbreviations.

PO : Post Office
TO : Telegraph Office
PTO : Post and Telegraph Offices
Phone : Telephone connection

Telephone connection need not necessarily indicate the availability of a public call office in the village, for even private telephone connections to subscribers have been taken into considerations while filling up this column. If a village has postal as well as telephone facilities then both these amenities are mentioned. Likewise if there is a PTO and telephone connection then both the abbeviations are entered in this column. On the otherhand if the village is not having any of these facilities then a dash is noted and next to it the distance to the nearest place having the minimum facility of a post office is indicated in ranges.

**Column 9: Day or Days of the Market/Hat :-**

This column refers to the weekly, bi-weekly markets i.e., the weekly shandy, held in villages with a view to cater to the needs of that village

and more so to the needs of the inhabitants of several surrounding villages. In local terminology such a weekly market is called Santhe and is quite popular in Karnataka. In the case of villages which host such shandies the actual day on which the shandy takes place is mentioned and in all other cases a dash is entered and thereafter the distance to the nearest place with a weekly market is indicated in ranges as specified in the column heading. The place where such weekly market gathers may be located in the limits of an adjoining taluk or district. The important matter for consideration here is the geographical proximity. In some cases where the nearest town or a large-sized village with a permanent market would serve the needs of the villagers, the distance ranges refer to such places with permanent markets only. In such cases obviously the nearest place where a weekly market is held would be very far away and will not be a matter of much significance.

**Column 10 : Communication :**

For purposes of this column only the means of public transport namely bus, railway and water transport system if any are considered. If the village is served by any mode of such public transport the fact is indicated using the undermentioned abbreviations :

BS : Bus
RS : Railway Station
NW : Navigable Water way (including river, canal, backwaters)

If a bus stop or a railway station is located within the territorial jurisdiction of a village then that villagae is considered as being served by that facility even if that bus stop or railway station is somewhat solitary and is located at some distance from the village-site. If more than one type of communication facility is available then all the relevant abbreviations are mentioned in this column. If no such facility is available at all then a dash is entered and thereafter the distance to the nearest place with a communication facility is indicated in ranges.

**Column 11 : Approach to village :-**

By approach to village is meant the type of road that leads to the village and this would indicate whether the village is accessible throughout the year or only during the fair season. The abbreviations used in this column are :

PR : Pucca Road
KR : Kachcha Road
NR : Navigable River
NC : Navigable Canal
NW : Navigable Waterway other than river and canal if any
FP : Foot path/Bridle path

If a village has a foot path or bridle path and also both pucca road and kachcha road then, only PR is recorded in this column as it would denote a higher level of facility of the same type. While kachcha road refers only to the unsurfaced mud road the term pucca road covers tar roads, cement roads water bound mecadum roads and metalled roads. But if in addition to either PR or KR the village has a waterway then information on the availability of a water way is also indicated.

**Column 12 : Nearest town and distance :**

The name of the nearest town, that is any urban area as defined for purposes of the 1981 Census, and the distance thereto from the village are indicated in this column. The town mentioned here need not be located within that very taluk or the district or even the State for that matter. The main point for consideration here is the geographical proximity. The distance however is reckoned not as a 'crow flies' but by some land route or water way. Further, when there is a cross country foot-path or a cart-track and a little more circuitious road from the village or its proximity to the town then the distance by road is reported here in preference to the distance by foot-path or cart track. Similarly, when there are natural hurdles like unbridged rivers or streams the distance is furnished by the more circuitious route that the villagers would usually prefer. The information on distance is based on local enquiry by the reporting agency. If the town mentioned in this column belongs to another state then the name of that state is also indicated along with the name of the town and distance thereto.

**Column 13 : Power Supply :-**

If the village is electrified, that is if power is actually available, whatever may be the form of its use, then the village is regarded as enjoying this amenity of power-supply. If the supply is expressly restricted for say agricultural or any other specific purpose then this point is clearly stated by using a specific abbreviation. On the other hand if electricity is being supplied for all purposes without any reservations then information on various purposes is not separately mentioned. The abbreviations used in this column are :

ED : Electricity for domestic purpose only
E.Ag : Electricity for agricultural purposes only
EO : Electricity for other purposes like industrial, commercial etc,
EA : Electricity for all purposes stated above.

**Column 14 : Staple Food :-**

Information on the staple food i.e. the cereals used by the majority population during the major portion of the year is furnished under this column. It may incidentally be mentioned here that no probing enquiries have been made to ascertain the exact situation in each and every village and that the details presented here are of a general nature. In several cases when it is not possible to determine the particular staple cereal, a combination of major staple foodgrains is given.

**Columns 15 to 19 : Land use (i.e. area under different types of land use in hectares up to two places of decimal) :**

The Ministry of Food and Agriculture, Government of India has recommended to the State Governments the following classifications of land use pattern for the maintenance of records and for

purposes of presentation here the same classification model has been adopted.

1. Forests,
2. Not available for cultivation,
   a) Lands put to non-agricultural uses,
   b) Barren and unculturable lands
3. Other uncultivated lands excluding fallow lands
   a) Permanent pastures and other grazing lands,
   b) Lands under miscellaneous tree-crops and groves not included in the net area sown,
   c) Culturable wastes
4. Fallow lands :
   a) Fallow lands other than current fallows,
   b) Current fallows
5. Net area sown.

Column 15 of the Village Directory corresponds to category 1 i.e., forest, while columns 16 and 17 put together represent the cultivated lands and correspond to the combination of categories 4 and 5 above. Similarly columns 18 and 19 respectively correspond to categories 3 and 2 of the above classification. The data furnished here are based on the village records and pertain generally to the year 1979. The total of the area figures reported under these columns tallies with the total geographical area of the village as noted in column 3.

**Column 15 : Forest :-**

This includes all lands classed as forests under any legal enactment dealing with forests or administered as forests whether State - owned or private and whether wooded or simply maintained as potential forest land. Lands transferred to forest department for afforestation as also the class C and D lands transfered thus by the revenue department are also classified as forests. Within the forest area itself there may ocassionally be cultivated patches or else there may be grazing lands. But such areas too are shown under column 15 only as forests. If within an area classified as forest some specific extents of lands have been expressly assigned for regular cultivation and the records have not been set right pending formalisation of grants and related processes of survey and settlement then such cropped areas are shown under column 16 or 17 as the case may be and the remainder alone is shown as forest under column 15. The processes of regularisation of land grants and effecting relevant changes in the basic records of survey and settlement are somewhat protracted and time consuming. Therefore the information merely based on records is, in some cases at least, likely to be different when compared with that based on the actual field situation.

**Columns 16 and 17 : Irrigated (by source) and Unirrigated :-**

These two columns cover all the agricultural lands and when added together would correspond to the net area sown plus the current and other fallows. The latter would imply all lands which were taken up for cultivation, but are temporarily out of cultivation for a period of not less than one year and not more than five years. All lands that are lying uncultivated as fallow for more than 5 years in succession are regarded as permanent fallows i.e., culturable waste and are covered under column 18. Area sown more than once during the same year, if any in the village,is counted only once under these columns. In column 16, a sourcewise break up of the irrigated area is furnished using the following abbreviations :

| | |
|---|---|
| GC : Government Canal | TK : Tank |
| PC : Private Canal | R : River |
| W : Well(without Electricity) | L : Lake |
| WE : Well (with Electricity) | Wf: Water fall |
| TW : Tubewell (without electricity) | O: Others |
| TWE : Tubewell(with electricity) | T: Total |

The concept of irrigation implies the existence of a source of water supply within a reasonable distance and an arrangement to regulate the supply of water according to the day-to-day needs of the crops raised in these fields. Naturally therefore all areas that are cultivated under purely rainfed conditions are treated as unirrigated. Though paddy is generally regarded as a wet crop, if it is raised purely as a rainfed crop as it very often is the case in heavy to very heavy rainfall regions, such areas are regarded as unirrigated for purposes of this column and shown under column 17. Similarly about garden crops, the area is considered for column 16 only if there is an element of irrigation. Sometimes it happens that the lands shown as dry and rainfed in the settlement records are in actual fact having irrigation facilities due to recent changes such as sinking of wells, introduction of lift irrigation or canal irrrigation on commissioning of a project etc. In such a case the actual situation is taken note of and despite its classification as rainfed in the records the area concerned is treated as irrigated Though rare, the opposite situation (where a plot of land originally shown as irrigated has ceased to enjoy that facility and is now yielding purely rainfed crops) is also met with and such a situation arises due to reasons such as breaching of tanks, drying up of irrigation wells and small tanks, defunct canal system and so on. The reporting agency has generally assessed the actual situation prevailing during the reference year 1979 while furnishing the data on irrigated lands. Regarding canal irrigation too it is the actual irrigated area and not the command area that has been reported here.

In column 17 the total extent of unirrigated lands, that is, dry lands cultivated as rainfed fields and the fallow lands put together is reported. As explained above, lands yielding rainfed paddy crop are considered as unirrigated.

**Column 18 : Culturable Waste (including gauchar and groves):-**

This category includes all lands available for cultivation whether not taken up for cultivation or taken up for cultivation once but not cultivated during the past five years or more in succession. Such lands may be either fallow or covered with shrubs and jungles which are not put to any use. These may be assessed or unassessed and may be in isolated blocks or within cultivated holdings. Lands under thatching grass, bamboo bushes and other groves which are not included under orchards or forests are also included under this category. Further, this includes all grazing lands irrespective

of whether they are permanent pastures and meadows or not. In several instances, lands that were at one time reserved for use as grazing fields and pastures and declared as assessed or unassessed wastes have over a period of time been brought under cultivation either fully or in parts as a result of gradual encroachments and also because of the Government policies regarding land grants. Thus, though in the records, the particular plot of land continues to be shown as a pasture the actual field situation would reveal that most of that land is actually under cultivation. In all such cases, to the extent possible, the actual field situation has been taken into consideration by the reporting agency.

**Column 19 : Area not available for cultivation**

In this column the total extent of land which is not available for cultivation in view of its being barren and unculturable as also that which is put to non-agricultural uses is reported. Mountains, deserts, rocky hills, quarries, ravines and the like as well as the lands that cannot be brought under cultivation except at a very high cost are included in the category of barren and uncultivable lands. The category of lands put to non-agricultural uses covers all lands occupied by buildings, roads, railways, parks and playgrounds, area under water viz., rivers, streams, canals, reservoirs, tanks, ponds etc., and land put to any other use which is apparently non-agricultural.

**Column 20 : Remarks including any place of religious, historical or archaeological interest :-**

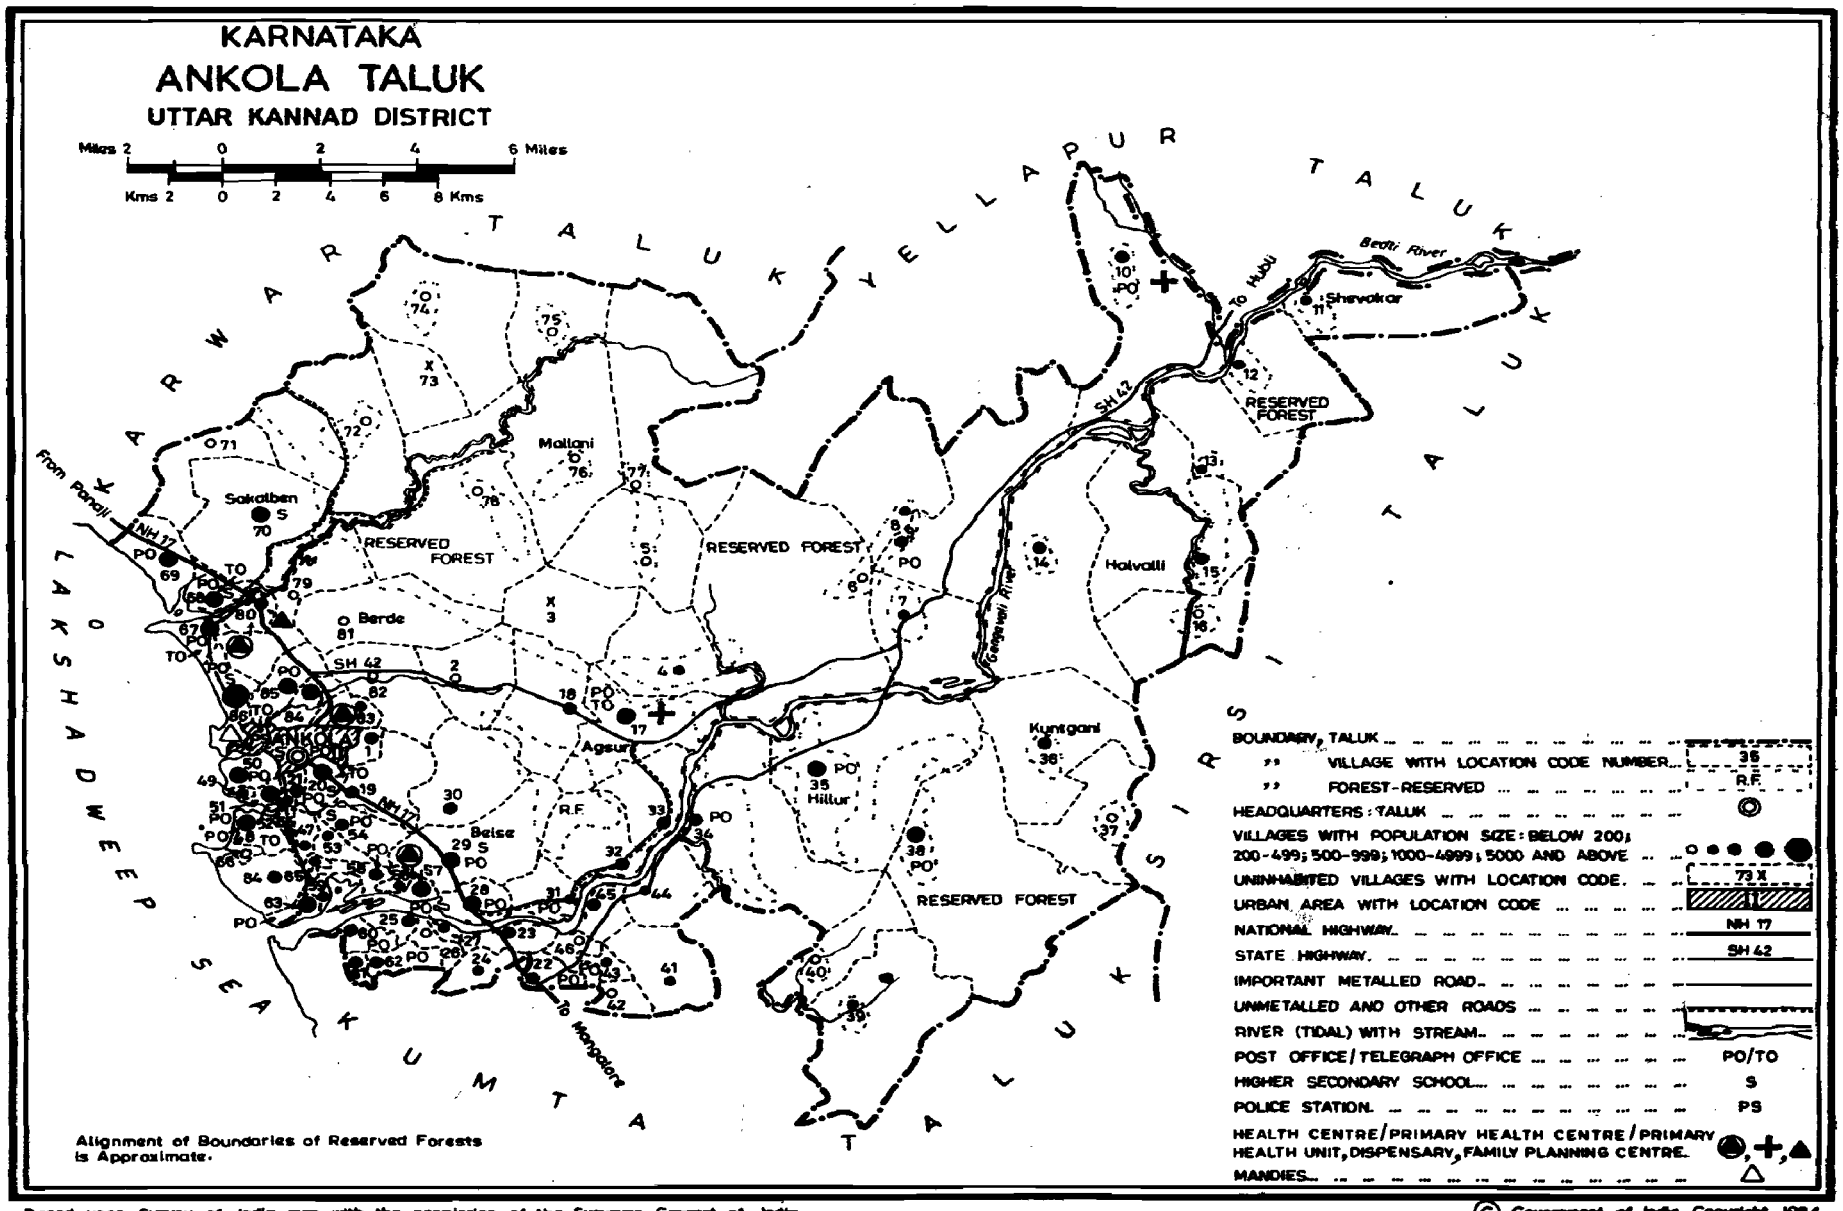

Though the heading does not reveal, in this column, information of general interest has been provided by reporting the number of news - paper copies circulated in the village, number of motor cycles and scooters, number of cars and jeeps as well as the number of tractors available in the village. The following abbreviations are used :-

N : Newspaper copies circulating in the village
M : Motor cycles/Scooters available in the village
C : Cars/Jeeps available in the village
T : Tractors available in village

Immediately after the abbreviations the number of units is indicated to provide a quantitative index to the data furnished. If in a village there is nothing to report on this topic i.e., on any one or more of these items, then the concerned abbreviations are not entered at all. In other words, the abbreviation if found mentioned in this column is always followed by a numerical attribute.

It is necessary to note at this juncture that the information is based on what may be regarded as superficial oral enquiries by the reporting agency and may therefore be considered as a rough estimate at a given point of time i.e. during the year 1979-80. In this column a numerical reference has also been given along with the abbreviation A in respect of the notes, provided elsewhere in the volume, about villages having matters of particular religious, historical or archaeological interest to report. Such notes have generally been prepared on the basis of published material.

# ANKOLA TALUK

Alignment of Boundaries of Reserved Forests is Approximate.

Based upon Survey of India map with the permission of the Surveyor General of India.

The territorial waters of India extend into the sea to a distance of twelve nautical miles measured from the appropriate base line.

## APPENDIX - III

### LIST OF VILLAGES WHERE NO AMENITIES EXCEPT DRINKING WATER ARE AVAILABLE

| Name of Taluk | Sl. No. | L.C. No. | Name of Village |
|---|---|---|---|
| 11. Yellapur | 3 | 32 | Lingadbail |
| | 4 | 40 | Nagarkan |
| | 5 | 44 | Hukli |
| | 6 | 45 | Gotguli |
| | 7 | 63 | Heggapur |
| | 8 | 64 | Bankasali |
| | 9 | 65 | Godlijogadmane |
| | 10 | 66 | Bendigeri |
| | 11 | 69 | Puratbhomnalli |
| | 12 | 70 | Yatgeri |
| | 13 | 72 | Mudangi |
| | 14 | 73 | Devarkallalli |
| | 15 | 76 | Hitlasar |
| 11. Yellapur (Contd.) | 16 | 81 | Savane |
| | 17 | 87 | Hasalmane |
| | 18 | 88 | Bellambi |
| | 19 | 89 | Bijankop |
| | 20 | 90 | Sampekop |
| | 21 | 92 | Kannor-Heggarni |
| | 22 | 103 | Hunsemane |
| | 23 | 113 | Holemadu |
| | 24 | 117 | Hulgaon |
| | 25 | 118 | Analgar |
| | 26 | 122 | Shigepal |
| | 27 | 125 | Belkhanda |

### ANNEXURE TO VILLAGE DIRECTORY

**Particulars of villages which are fully or partly included in the Urban Areas of the District**

**(Area in Hectares 0.00)**

| Sl. No. | Name of Taluk | Name of Town | Name of Village with L.C. No. | Total Geographical Area as per Revenue Records | Rural Component | Urban Component |
|---|---|---|---|---|---|---|
| 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| 1 | Ankola | Ankola (M) | - Ankola | 346.74 | - | 346.74 |

**********

# SECTION II - TOWN DIRECTORY

# TOWN DIRECTORY

## EXPLANATORY NOTE

Town Directory comprises of six tabular statements as applicable to all the towns and an additional statement regarding the slums, only in respect of towns with a population of 50,000 and above. These are numbered serially from I to VI and the additional statement bears the number IV A in view of the fact that it deals with the same type of information which is covered in statement IV. These statements contain several columns each with brief headings and for presentation of the data, abbreviations have also been made use of for the sake of brevity. These statements are taken up for consideration one by one and an explanatory note is given in respect of each column, with the exception of column 1 which refers to Serial Number and is self-explanatory.

### Statement I : Status and growth history

**Column 2 : Class, Name and Civic Administration Status of town :-**

The class to which a town belongs is determined on the basis of its population at the 1981 census count and it is indicated in this column in roman numerals. The classification criterion adopted now is the same as that adopted for analysis and explanations at the earlier censuses. The towns are divided into six classes :-

| Class | Population Size | Class | Population Size |
|---|---|---|---|
| I | 100,000 and above | IV | 10,000 to 19,999 |
| II | 50,000 to 99,999 | V | 5,000 to 9,999 |
| III | 20,000 to 49,999 | VI | Below 5,000 |

The concept of urban agglomeration has been adopted for presenting the demographic data at the 1981 census also. But, in Karnataka, unlike in 1971, at this census quite a large number of villages have been recognised as out-growths of the core town or of one of its contiguous constituent towns. In determining the class however, the population of the core town alone is taken into consideration in these cases also. That is to say, the population returned by the geographical entity recognised as a census town, on the basis of the definitions adopted, alone is considered for this classification.

The middle component of this column heading refers to name of the town which does not need elucidation. Name of the town, as adopted in the official records, is reported here.

The civic administration status of the town as on 1.1.1980 is indicated immediately after the name of the town, within brackets. The abbreviations used for this purpose are as follows :-

C : Municipal Corporation
M. : City Municipal Council
M : Town Municipal Council
CB : Cantonment Board
NAC : Notified Area Committee
SB : Sanitary Board
TP : Town Panchayat/Nagar Panchayat
P : Village Panchayat/Gram Panchayat
SA : Special Area

The Special Area in fact represents a case where there is no civic administrative body. These areas generally consist of townships or colonies purely under the administrative control of certain public sector factories or undertakings or under specific departments of the Government such as for example the State Public Works Department and the Power Corporation.

With a view to ensuring the fixity of boundaries of various administrative units, that is to ensure that the frame for census taking once finalised with reference to a cut-off date remains unchanged till the completion of the census count the State Government had been requested not to order any jurisdictional changes and not to give effect to any changes in the civic administration status either. However due to more compelling reasons it is quite possible that in some exceptional cases such a change in civic administration status has taken place during the period 1.1.80 to 1.3.81. Such cases if any are indicated by providing a note at the bottom of the concerned page.

**Column 3 : Location Code Number :-**

The significance as well as the importance of location code numbers has already been explained. Every town bears a distinct location code number consisting of 3 elements. The first element in this code structure indicates the State while the second and the third represent the numbers assigned to the district within the State and the town within the district. The numbers assigned to the towns in the district are all in roman numerals while those relating to the State and the district are in arabic numerals.

**column 4 : Name of taluk :-**

In Karnataka the term taluk is very much in vogue though the designation of the Revenue Administrative Officer has for long been changed from Amildar or Mamlatdar to Tahsildar. The name of the taluk within the jurisdiction of which the town is located is indicated in this column. There are a few instances wherein a particular town stradles portions belonging to two adjacent taluks. In such a case the town is considered to belong to the Taluk that contains a major portion of the town.

In the statement such cases are marked out by an index and a note at the bottom of the page explains the correct situation.

**Column 5 : Area (Sq. Kms) :-**

The geographical area of the town is furnished here in square kilometres upto two places of decimal. The area figures reported at first by the concerned civic bodies etc., were examined with reference to the respective town boundary notifications and the relevant village maps as well as the charge maps prepared for the 1981 census operations with a view to ensuring greater accuracy. The final area figures as adopted for the 1981 census are reported here.

**Column 6 : Number of Households (1981) :-**

The total number of households, including those consisting of institutional and houseless population, enumerated in the town at the 1981 census count is given here even though the same information appears again in the Primary Census Abstract. The purpose is to facilitate a better comprehension of the demographic situation, especially with reference to the population data presented in this statement.

**Columns 7 to 15 : Population and growth rate of the town at different censuses from 1901 to 1981 :-**

The population figures for the town as returned at the decennial census from 1901 through 1981 are furnished under these columns in order to provide an insight into the history of growth of the town. If in any particular census year the referent town did not enjoy the urban status that is if that place was reckoned as a village for that census its population is not reported under the column concerned and a dash mark is indicated in stead. In other words, the population figures are given here for the town only if it happened to be an urban area at that particular census year.

Thus, a glance at these columns reveals whether the referent town having been first classified as 'urban' has maintained that status continuously through the suceeding censuses or whether there have been subsequent declassifications. From column 8 onwards, the decadal growth rates of the town are indicated within brackets below the population figures in order to permit an easier grasp of the decadal growth trends and to facilitate a comparative analysis. Population variations are quite often associated with changes in the jurisdiction of the urban area and sudden spurts are sometimes due to incorporation of fast developing fringe areas to the town or amalgamation of adjacent towns with the core town during the inter censal period. Such cases are marked out in the statement and explained by way of a note at the bottom of the concerned page.

**Column 16 : Density (1981) :-**

For every town the density of population per square kilometre is presented in this column. The density figures are determined with reference to the area of the town in Sq Km upto two decimal places and the population returned at the 1981 census.

**Columns 17 to 19 : Sex Ratio 1961 to 1981 :-**

Sex ratio is expressed as the number of females for every thousand males and is based on the sexwise distribution of the population returned at the census. For each town these figures are furnished for the 3 successive censuses. This information would provide an insight into the changing pattern of sex ratio in urban areas.

**Statement II : Physical aspects and location of Towns 1979**

**Column 2 : Class and Name of Town :-**

This column is the same as column 2 of Statement I and does not need any explanation. Unlike in statement I here the civic administration status of the town is omitted.

**Columns 3 to 5 : Physical aspects :-**

These columns deal with the rainfall and temperature data. It is common knowledge that meteorological observatories have not been established in each and every town, even though most of the towns do have rain-guages and due arrangements have been made to record the rainfall data all through the year. The Director General of Observatories has furnished data on rainfall, maximum and minimumtemperature in respect of towns having observatories. These figures are standard normals based on the data for 30 years from 1931 to 1960, and are distinguished in the statement by placing an asterisk mark at the top right hand side of the figure. Information of this type is available only for a few towns.

In so far as the data on rainfall is concerned, for most of the remaining towns the particulars have been supplied by the local officers and cross-checked for acceptability with the data furnished by the State Bureau of Economics and Statistics. The rainfall figures are in millimetres and represent the annual average based on the actual figures relating to the preceding ten years. In cases of non-availability of even this type of information, the particulars relating to the nearest town are reported under this column with the distinguishing notation N being placed at the top right hand side of the figure.

In columns 4 and 5 information on temperature is presented in degree centigrade. As stated above the asterisk mark here indicates that the information has been furnished by the Director General of Observatories. Such information is not available for most of the towns. Instead of putting a dash in these columns for such towns the data furnished by the Director General of Observatories as pertaining to a town situated at almost the same altitude and in the proximity of the referent town are reported with the substitute notation N to denote that the data does not actually relate the town and should therefore be regarded as very approximate.

**Columns 6 to 12 : Name of and road distance from State H.Q; District H.Q; sub-division/Taluk H.Q; nearest city with a population of 100,000 and more; Railway Station; Bus route Navigable river or Canal (if within 10 Kms) :-**

The column headings are self explanatory and are intended to indicate the location of various important centres with reference to the town concerned. If the referent town itself happens to be mentioned in these columns the distance is recorded as '0' (zero) and in all other cases the road distances are given in kilometres. In column 8 the name of the sub-division to which the taluk (in which the town is located) belongs as well as the name of the taluk to which the town belongs are mentioned along with road distances in the same order one below the other. In column 9 the name

of the nearest city with a population of 100,000 and more according to 1981 census and road distance thereto is mentioned in respect of each and every town even if the referent town itself has a population of 100,000 and more.

The proximity by road alone is taken into consideration for filling up this column and as such cities belonging to adjacent states also find an occasional mention in this column.

Column 10 refers to the nearest railway station and distance thereto by road. In a few cases though the name of the railway station is the same as that of the referent town the distance indicated is other than zero because of the fact that the station is actually located beyond the jurisdiction of the referent town.

In case the referent town is enjoying bus route facility (i.e.road transport) the name of the town is mentioned in column 11 and the distance is recorded as zero. Names of bus routes passing through or originating from the town are not indicated here. If there is a navigable river or a navigable canal at a distance of 10 kilometres or less from the referent town then the name of the river or the canal is indicated in column 12. To differentiate between a river and a canal the abbreviations (R) and (C) are made use of and the distance from the town to the navigable waterway is mentioned thereafter. It may incidentally be stated that in Karnataka there are very few navigable rivers and practically no navigable canals.

**Statement III : Municipal Finance 1978-79**

As the title denotes, this statement deals with the actual income and expenditure of the civic body administering the town. An attempt has been made to present comparable data in the case of non-municipal towns like Panchayats and areas under the administration of public sector undertakings and the like. The data relate to the financial year 1978-79 and have been furnished by the local authorities concerned based on relevant records. It may also be stated here that no probing enquiries have been made and the particulars as reported by the civic bodies have been accepted after ensuring arithmetical accuracy.

**Colum 2 : Class and Name of Town :-**

This is same as column 2 of Statement II and as such does not require any explanation.

**Column 3 : Civic Administration Status (In 1980)**

As explained under column 2 of Statement I, the civic administration status of the town as on 1.1.80 is indicated in this column using the same set of abbreviations.

**Columns 4 to 10 : Receipt (In Rs. '00) :-**

The actual receipt realised by the civic body under various heads of income as well as the total for the year 1978-79 are indicated in hundreds in these columns. The opening balance for the year is not taken into account under any of these columns.

**Columns 11 to 17 : Expenditure (In Rs. '00) :-**

The actual expenditure incurred during the year is furnished here in hundreds. The various heads of accounts are grouped into 6 broad categories for each of which a separate column is provided. Public safety covers the expenses incurred for road lighting, destruction of rabid and stray dogs, besides that on fire fighting services, Similarly 'public-institutions' covers not merely the contributions made by the civic body to educational, medical and cultural institutions in the town but also the expenditure incurred for the maintenance of educational and such other institutions if any functioning under its direct control.

As in the case of receipt in the case of expenditure also the closing balance at the end of the year is not considered and therefore in almost all the cases the total receipt and the total expenditure are not balanced in this statement.

**Statement IV : Civic and other Amenities 1979**

**Column 2 : Class and Name of Town :-**

This is same as column 2 of statements II and III and does not need further explanation.

**Column 3 : Civic Administration Status :-**

Explanation furnished earlier for column 2 of Statement I and column 3 Statement III holds good for this statement also.

**Column 4 : Population :-**

The total population of the town according to 1981 Census is mentioned here with a view to facilitate a comparative analysis of the data.

**column 5 : Road length (In Kilometres) :-**

Generally in a town it is the civic authority that is responsible for construction and maintenance of roads. The term road as used here includes streets also and while the unsurfaced mud and gravel roads are categorised as Kachcha roads, the surfaced roads are classified as Pucca roads. In most of the cities and towns the district roads and highways under the control of the Public Works Department also pass through. The roads situated within the jurisdiction of the town and under the control of the civic authority are shown in one line against the code M and those under the control of the Public Works Department and the like are shown against the code 'PWD' in another line. In both the cases the road length is shown under two categories viz., KR (Kachcha Road) and PR (Pucca Road) as defined above. In order to have an idea about the total length of all types of roads in the town, therefore all these figures are to be added together. In cases where it has not been possible to ascertain the full details by type of road and agency responsible for maintenance the combined road length alone is furnished. The road length is given in kilometres and fractions are rounded off to next integer.

**Column 7 : System of Sewerage :-**

Generally sewerage system implies the network of mains and branches of underground conduits for the conveyance of sewerage to the final point of disposal. Sewers that carry only household and industrial wastes are called separate sewers while those that carry storm water from roofs, streets and other surfaces are known as storm water drains and those carrying both sewage and storm water are called combined sewers. In towns provided with such systems of underground sewerage also there would in addition be a surface drainage system to

cover the areas not served by sewerage system and also to drain out excess rain water all over the town.

However in towns that are not provided with sewerage system and such towns are far more numerous in the State, there would generally be open drainage system. Where even this system is not prevalent the householders would have made their own arrangements such as soak pits and cesspools. In this column therefore information is presented not only on sewerage system, but also on the drainage system. Like sewerage system, the drainage system is also of different types depending upon the construction material and also the shape of the drains. The two most important types of sewerage/drainage system are reported under this column in the order of their importance in the towns using the following abbreviations.

S : Sewers
OSD : Open Surface drains
BSD : Box Surface Drains
SD : Sylk pattern Drains
PT : Pit System

The box surface drains are also open drains but are built of size stone masonry and are also called Pucca gutters. The sylk pattern drains too are open surface drains only. The open surface drains category thus covers the Kachcha drains involving mere earth-work and also the drains constructed from out of oblong granite slabs or, out of pre-fabricated cement concrete blocks which need only joining and cement pointing after being placed in position. These drains are of U shape, L shape or V shape and to the extent possible these details have also been provided under this column.

**Columns 8, 9 and 10 : Number of Latrines :-**

Information on total number of latrines of different types as furnished by the concerned civic authorities is reported under these 3 columns. Both private and public latrines are covered here and the particulars in these columns and in column 11 are closely interlinked. The water-borne latrines include all types of flush-out latrines while service latrines refer to only those that are being serviced by manual scavengers either everyday or twice or thrice a week.

**Column 11 : Method of Disposal of Night-Soil :-**

The phrase disposal of night-soil is generally presumed to refer to the manner in which the garbage is finally disposed of by the civic body i.e. sale by public auction, used as manure etc. However, the main purpose of this column is to provide information on the method by which the night-soil is removed from the latrines, that is, the primary disposal of the human waste. A little elaboration on this aspect therefore appears to be necessary.

There are three systems of disposal of human waste, namely, (i) underground sewerage, (ii) sanitary water flush latrines with individual disposal systems like septic tank, leaching cess pool and collecting well, and (iii) dry type of latrines with manual scavenging.

The system of underground sewerage provides for the street sewerage with which are connected the sanitary latrines constructed in the houses having water closets and fitted with flushing cisterns (or hand flushing).

Through this sewer the faceal matter is transported without the need for scavenging. This system generally exists in cities and large towns besides industrial townships built and controlled by public sector undertakings and large companies and the like. Where the street sewer does not exist these sanitary water flush latrines are connected to a local septic tank with a sub-soil dispersion system or a leaching pit. Where the liquid wastes from the water closet could be disposed of locally in a leaching pit, a septic tank with a soil dispersion system is constructed. This dispersion requires an optimum travel through the pores of the soil which render the harmful liquid bacterially innocuous by the slow process of filteration through the soil traversed.

Where the soil is impermeable, collecting wells are constructed and the sanitary water flush latrines are connected with them. These wells are cleared at periodic intervals by a suitable device. The dry type latrines are of service type from where the human excreta has to be removed by scavangers who move from house to house, in most cases carrying the night-soil as head loads on their head, or shoulders or in baskets with handles or in wheel barrows. This waste is then collected in bullock carts or trucks and transported to dumping grounds at the outskirts of the town.

It may be mentioned in passing that in Karnataka the practice of carrying night-soil by head loads has been discontinued with effect from 15.8.73, consequent on the issuance of a Government order in this behalf. However in a few cases the town dwellers have sought the intervention of the courts and have been able to secure the status quo-ante in respect of the scavenging services that were being provided by the civic body concerned till that date.

The abbreviations used in this column are the following, and if more than one system is prevailing the two most important types are indicated one after the other :

S : Sewerage
ST : Septic tanks
WB : Wheel Barrows
B : Baskets (with handles)
HL : Head Loads

In case the town has latrines of other types that are neither of the sanitary type nor the service type this column does not apply at all and therefore a dash is entered.

**Columns 12 and 13 : Protected water supply source and capacity of storage system**

The sources of water supply in the town are indicated by using the following four abbreviations :

T : Tap
W : Well
TK : Tank Water
TW : Tube Well/Hand Pump

Supply through the taps implies a primary

source such as a river, stream, bore wells, curb wells, tank and reservoirs etc., which are of course not mentioned in this column. It may be incidentally stated that the term protected is used in a very liberal sense, and no attempt has been made to gather data on the methods of filteration and water purificatory treatment if any resorted to by the agency supplying water through pipes in the towns. The generally prevalent pratice in most of the towns is to pump raw water into the storage tank or reservoir, treat it with bleaching powder and then distribute that water for consumption through pipes.

If there are more than 2 sources of water supply in the town the first two which are regarded as most important are mentioned in that order separated by a comma. In column 13, the systems of storage of water are considered and the two that are most important in the referent town are indicated in that order and after each entry the storage capacity is also mentioned in litres within brackets. The abbreviations used in this column are :

OHT : Overhead Tank
SR : Service Reservoir
IG : River Infilteration Gallery
BWP : Borewell Pumping System
PT : Pressure Tank

The term capacity has its usual meaning, namely, the capacity to store or contain. It may further be clarified that the storage capacity does not necessarily indicate the quantity of water supplied daily to the inhabitants of the town. In some of the towns due to the inadequacy of water supply at the primary source for most part of the year the normal utilisation of the storage capacity would be of the order of 50 to 60 per cent only. On the contrary there are towns where water is pumped into the storage system and also distributed for consumption twice every day almost throughout the year and there are a few towns where the inlets and outlets of the storage systems would both be functioning simultaneously for most part of the day making it somewhat difficult to calculate the quantity of water supplied everyday under such a system.

**column 14 : Fire Fighting Service :-**

If fire fighting service is available in the town this fact is indicated by the word 'Yes' recorded in this column. In all other cases the name of the nearest place if in the same district or the name of the nearest district if in the same State or other State where such services are available is indicated along with the road distance in kilometres between the referent town and the place with fire-fighting service.

**Columns 15 to 19 : Electrification (Number of connections)-Domestic, Industrial, Commercial, Road Lighting (Points) and others :-**

In columns 15 to 19 information about the number of electrical connections (installation) for different categories of consumers in the town is furnished. The definitions of the terms used in the column headings are as follows :-

(i) Domestic : Connections to residential houses, bangalows, clubs, hostels and hospitals run on non-commercial lines, charitable, educational and religious institutions are all included in the domestic category, A.E.H. i.e., All Electric Home connections are also categorised as domestic.

(ii) Commercial : This category includes all connections for the supply of electricity to commercial establishments such as wholesale and retail shops, offices and business houses, hotels, resturants, tea stalls, photographic studios, X-ray installations, advertisements and exterior illumination, railway station, bus station, and the like.

(iii) Industrial : Power supply connections to industrial establishments are covered under this column. This would include small establishments such as power looms, flour mills, roasting, grinding, wet grinding, repair workshops using power operated tools and the like.

(iv) Road Lighting : The total number of street lights being maintained in the town is mentioned here.

(V) Others : Connections to all categories other than those cited above are covered under this heading. This would include temporary connections, connections to pumpsets, water works and such other installations.

**Statement IV A : Civic and other Amenities in Notified Slums, 1979**

This statement which may be regarded as an appendix to statement IV is confined to towns with a population of 50,000 and more i.e., class I and Class II towns. Information on slums that are officially recognised as slums (even if those are not notified in some cases) is presented under 14 columns apart from column 1 which relates to serial number and column 2 which relates to name and class of town.

**Column 3 : Name of slum :-**

The names of slums, if any, in the town are given in separate lines in the alphabetical order of their names.

**Column 4 : Area of slum :-**

The geographical area of each slum is given in square kilometres up to two plaes of decimal.

**Column 5 : Population of slum :-**

The population figures for this column are furnished by the civic authorities concerned. Slums as such have not been made independent units for census enumeration and as such 1981 Census data as applicable to the slums covered here are not available.

**Columns 7 to 12 : System of Sewerage, Number of Latrines and Method of disposal of Night soil :-**

These column headings are same as those appearing in the statement IV and have already been explained. The information is furnished here for each slum separately. The main heading latrines is subdivided into those that are privately owned and those that are for common use of the community i.e., public latrines.

**Column 13 : Number of tap points/public hydrants installed for supply of protected water :-**

The total number of public taps or hydrants if any in the slum is mentioned here.

**columns 14 to 16 : Electrification (Number of connections):-**

Total number of electrical connections in each slum provided for purposes of domestic use, road lighting and other than these two is reported seperately under these three columns. The meaning of the terms used in the column heading has already been explained.

**Statement - V : Medical, Educational, Recreational and Cultural facilities - 1979**

**Column 2 : Class and Name of Town :-**

This column is same as column 2 of statement IV and therefore calls for no further explanation.

**Column 3 : Population :-**

The total population of the town according to 1981 Census is noted in this column.

**Columns 4 and 5 : Medical Facilities : Hospital/Dispensaries/T.B.Clinic/Health centres/Nursing Homes etc., and number of beds in Medical institutions noted in column 4 :-**

The scope of these columns is confined to only such of the facilities that are offered by institutions run by or aided by government/semi-government or local bodies and charitable institutions or social service agencies like the missionaries. In other words data on the facilities provided in the town by private doctors i.e. registered medical practitioners either individually or in establishments where they work in groups,are excluded from the purview of these columns.

The abbreviations used in column 4 are :-

H : Hospital
D : Dispensary
PHC : Primary Health Centre
PHU : Primary Health Unit
FC : Family Planning Centre
TB : T.B.Clinic
NH : Nursing Home
O : Others

If there are two or more number of institutions of the same type then the number of institutions is also indicated within brackets immediately after the relevant abbreviation in the column.

Maternity homes, maternity and child welfare centres, leprosy clinics, chest clinics and veneral diseases clinic etc., if any are all included under the category of 'Others'. But even when a Family Planning Centre is attached to a Hospital or a Primary Health Centre it is treated as an independent unit and counted separately.

If the town has hospitals and dispensaries providing facilities under different systems of medicine such as allopathic, ayurvedic, unani and homoeopathic then this detail too has been included using abbreviations such as : A for Ayurvedic, U for Unani and Hom for the Homoeopathic system. The allopathic institutions do not have any additional abbreviation. Thus, a mere H or D would mean that the reference is to allopathic system; an entry "H (A-1,2)" would mean that 1 Ayurvedic hospital and 2 allopathic hospitals are functioning in the town and an entry like "D (Hom-2,1, U-1)" would imply the existence of 2 homoeopathic dispensaries, 1 allopathic dispensary and 1 Unani dispensary.

If medical facility is not available in the town then the name of the nearest place where it is available if in the same district, and name of the district if in the same State or other State is mentioned here along with the distance in Kilometres shown within brackets.

The number of beds with which the medical institutions noted in column 4 are equipped is indicated in column 5.

**Columns 6 to 15 :-**

These columns provide information regarding the educational facilities available in the town and are considered stage by stage.

**Columns 6 to 9 : Arts/Science/Commerce Colleges (of Degree level and above); Medical Colleges; Engineering Colleges; Polytechnics :-**

Particulars of colleges in the town providing general education facilities at degree level are indicated in column 6 using the following abbreviations.

A : Arts only
S : Science only
AS : Arts and Science only
C : Commerce only
AC : Arts and Commerce only
ASC : Combined for all three categories : Arts, Science and Commerce
L : Law

If the number of colleges of any particular category is more than one then that number is also given within brackets against the abbreviation concerned. It may incidentally be mentioned here that the educational institutions with a vocational and professional content such as pharmacy College, B.Ed., Agricultural College etc., are not covered under this but are shown included in the category of "Others" in column 10.

In columns 7, 8 and 9 the number of medical colleges, the number of engineering colleges and the number of polytechnic institutions are indicated.

In case the town does not have any of the colleges referred to in these 4 columns i.e., if the entry were to be a dash in any of these columns then the name of the nearest place with the facility along with the distance thereto is mentioned. If such a place is outside the district then the name and the distance to that place and if such a place is outside the State itself then the name of that State is mentioned in these columns. The same procedure is adopted regarding the other columns dealing with educational facilities.

**Column 10 : Recognised Shorthand, Typewriting and other Vocational Training Institutions :**

The term recognised would mean recognition by some statutory authority like the Educational Department, Commerce Department, Labour-Department etc., of the Government or semi-government or autonomous bodies or public sector projects. The Teachers Training Colleges, the Nursing College, the Pharmacy College, the College imparting education in Physical Education and the like are also shown under this column against the category of 'Others'.

SH : Shorthand
TYPE : Typewriting
Sh.Type : Shorthand and Typewriting
O : Others

If the number of institutions of any particular type is more than one that number is also indicated within brackets along with the abbreviation concerned.

**Columns 11 to 14 : Higher Secondary/Intermediate/ PUC (Pre-University College)/ Junior College/Secondary, Matriculation, Junior Secondary and Middle Schools and Primary Schools :-**

Information about the number of schools of different types functioning in the town is furnished under these columns. All schools irrespective of the medium of education and the type of administering agency i.e., all those run by or aided by Government or local bodies, as well as the unaided institutions run by private management are considered here for reporting. If there are composite institutions such as a college providing education at degree level and also at Pre-University level then such institutions are split up into degree college and PUC (i.e.Junior College) and separately counted as if they are independent units. Likewise, a composite Junior College which has facilities for providing education say from I to XII standard (i.e., from Primary I standard upto PUC) would be regarded as representing one Junior College, one High School, one Middle School and one Primary School and each of these units would be counted and reported under the relevant column as if each unit was an independent institution in its own right. Similarly a school with I to X standard would get counted under Primary, Middle and High School categories and a composite School with I to VII standard would be considered under the Primary school as also the Middle School category.

In Karnataka the term middle school is no longer in vogue as the primary education consists of 7 years of schooling leading to secondary level. However the first four classes (I - IV standard) are called lower primary classes and the next three are regarded as higher primary classes. There are schools with only I to IV standards. called LPS and also those with V to VII only (formerly middle schools) known as HPS and there is no difficulty in counting such institutions as separate primary and middle schools. But there are composite schools called the Higher Primary Schools having I-VII standards and such schools have now been split up into one Primary and one Middle School for purposes of reporting under these columns of the Town Directory. This method of accounting is therefore different from a simple counting of schools in the town.

**Column 15 : Adult literacy classes/centres and others (Specify) :-**

If adult literacy classes are being run at regular centres in the town the number of such centres is indicated in this column by the side of the abbreviations AC. Curukula, Madarasa (Arabic school) and such other quasi religious cum educational institutions if any in the town are also reported in this column under the category of 'others'.

**Column 16 : Number of Working Women's Hostels with number of seats :-**

Though there are hostels meant for students in almost all the towns, very few have hostels meant for working women. In this column the number of only such hostels that are exclusively meant for working women only are repoted along with the information on the number of seats i.e., its strength.

**Columns 17 to 19 : Recreational and Cultural Facilities - stadia, cinema, - auditoria/drama/community halls ;-**

Column 17 relates to the number of stadia if any in the town. Ordinary play grounds which one usually comes across in towns and cities are excluded from the purview of this column. The term stadium is used in its strict sense to refer to those constructed at considerable costs and are under proper upkeep.

In column 18 the total number of permanent cinema theatres in the town is indicated. Touring talkies i.e., cinema tents of a purely temporary nature are not taken into account for this column. If there are any auditoria, drama halls and community halls in the town the total number of such units is reported in column 19.

The number of public libraries and reading rooms are separately furnished by the side of abbreviation PL for Public Library and RR for Reading Room. Such facilities offered by educational and private institutions including those that are commercialised (called circulating libraries in local parlance) are not covered for reporting under this column.

**Statement - VI : Trade, Commerce, Industry and Banking 1979**

**Column 2 : Class and Name of Town :-**

This column is the same as column 2 of the preceding statement and therefore calls for no further explanation.

**Columns 3 to 8 : Names of three most important commodities imported and names of three most important commodities exported :-**

For purposes of these columns, commodities for which the town serves only as a transit centre by importing for the specific purposes of exporing the commodities **without any processing** are not considered either as imports or as exports. Agricultural and such other allied produce may be regularly brought into the town from the neighbouring villages and sold to commission agents and wholesalers at the regulated market for further export to areas outside the town. In such cases

the produce that is brought into the town is not considered as import. On the other hand if these items are mainly consumed within the town either as consumption goods or as raw materials by any manufacturing industry then the commodities would be regarded as imports. Thus the commodities imported are either locally consumed in the same form, or else processed further and thereafter either consumed locally or exported to other centres. This restriction apart there is no limitation concerning the nature and quantity of the commodities that may be considered for reporting under these columns. Importance in a town is restricted basically to the few or several commodities that qualify for consideration either as imports or as exports. By and large the commodidities reported under exports would coincide with the commodities reported as manufactured in the town because of the specific exclusion of transit goods. As a result, the image that some of the towns have built up over decades as traditional exporters of certain goods does not get reflected under these columns.

In these columns the importance of a commodity is reported in very general terms and decided upon in terms of the estimated volume of commodities transacted and is based on local enquiries by the civic authorities concerned.

**Columns 9 to 11 : Name of three most important Commodities manufactured.**

The order of importance is determined broadly by taking into consideration the volume of the total output of the commodities or the scale of operation and for these columns too it is the civic authority that has furnished the information after local enquiries. All types of manufacturing and processing irrespective of the sector to which they belong are considered and of these the three that are most important are reported.

**Column 12 : Number of Banks :-**

Information on this item has been supplied by the office of the Registrar General, India after ascertaining the details from the Reserve Bank of India. The data relates to the year 1979 and in conformity with the instructions issued in this regard, no attempt has been made to update the data. If a bank has two or more branches then each such branch is regarded as a separate Bank for computing the number of banks.

**Column 13 : Number of Agricultural Credit Societies :-**

The total number of agricultural co-operative credit societies functioning in the town, irrespective of the type to which they belong (i.e., primary, service, multipurpose, agricultural produce marketing etc) is reported under this column. In quite a large number of towns agriculture is an important means of livelihood for a number of persons and agriculturists of urban areas too have for long been influenced by the co-operative movement.

**Column 14 : Number of Non-agricultural Credit Societies :-**

Consumer co-operative societies which extend credit facilities to the members, and all other credit co-operative societies that cannot be classified as agricultural are considered for this column. Several groups of people belonging to specific categories might have formed co-operative societies to cultivate the habit of thrift and to make use of the benefit arising out of the encouragement given to the co-operative movement. All such co-operative societies are covered under this column.

# TOWN DIRECTORY STATEMENTS

## PART B - PRIMARY CENSUS ABSTRACT

(i) DISTRICT PRIMARY CENSUS ABSTRACT
(ii) TALUK WISE PRIMARY CENSUS ABSTRACT

# PRIMARY CENSUS ABSTRACT

## EXPLANATORY NOTE

The Primary Census Abstract furnishes in a nutshell as it were, vital information on the basic demographic and economic composition of the population. This statement, referred to as PCA, comprising hardly 16 main columns,summarises the whole mass of data gathered at the Census. The smallest geographical unit with a defined boundary identifiable on the field that has been delineated for ensuring cent percent coverage of area under the jurisdiction of various administrative divisions, is the census Enumerator's block. The details gathered in the household schedules and the individual slips in respect of each and every person enumerated in each such block have been meticulously tabulated to prepare this Primary Census Abstract. The tabulation has been done entirely by manual processing of the data at the Regional Tabulation offices. The village PCA is derived from the Block PCA and in case of urban areas, the Block PCA has yielded the ward and Town PCA. In turn the Taluk (Rural) and Taluk (Urban) as well as Taluk (Total) PCA statements are built up on the basis of Village-wise and Town-wise data. This process goes on until it yields the data for higher and higher administrative divisions culminating at the apex in the form of a single line statement for the country. The entire edifice thus rests on the information contained in the individual slips filled up by the enumerator.

In the pages that follow, the District Primary Census Abstract with the taluk level data giving rural-urban breakup is presented first. Thereafter for each taluk starting with Location Code No.1 the village level PCA and within each taluk wardwise PCA for each town are furnished. As already stated particulars relating to Scheduled Castes and Scheduled Tribes are omitted here. Though there are altogether 24 columns in the urban and village PCA statement, as many as 12 out of these are merely sub-columns to provide sexwise data. In essence therefore there are 12 columns only. Most of these column headings represent the census concepts and these have been explained in the Analytical Note. However, a brief description of the column headings is given here.

**Column 1 : Location Code Number :-**

The location code number assigned to the village or the town as the case may be is entered in this column.

**Column 2 : Name of Village/Town/Ward :-**

The name of the village or the town as finally adopted for the 1981 census purposes is entered in this column. The towns and cities are quite often divided into smaller geographical segments called wards, mohallas or divisions for purposes of administration. Such units bear distinctive locality names or specific numbers. It is this name or the number of the ward or its equivalent unit that is mentioned here in the case of towns.

Irrespective of whether a town is divided into administrative wards or not every town is invariably constituted into territorial divisions for the conduct of civic elections. This delimitation of constituencies is done as an essential and preliminary proess of civic elections scheduled to be held periodically. So, in some cases the name or number in this column refers to such territorial divisions and not to administrative divisions.

**Column 3 : Area of the village in hectares and of town in square kilometres :-**

These area particulars have already been furnished in village and town directory portions. For the villages the area is reported here in hectares upto two places of decimal and for the towns, as also the wards or divisions thereof, the area figures are furnished in square kilometres upto two places of decimal. If the area figures are not available for any reason the abbreviation NA is entered in this column.

**Column 4 : Occupied Residential Houses :-**

A 'Census House' could be wholly residential or else completely non-residential according to the use to which it is put. All census houses enumerated as either wholly or partly residential at the time of the census count are added together to get the data for the block and from thence to derive the data for higher units. Houses found vacant at the time of the census count are not reckoned as occupied residential houses. The information for this column has been compiled from the Abridged Houselists.

**Column 5 : Number of Households :-**

This information too is compiled from the Abridged Houselists. The actual total number of households including the normal, institutional and the houseless that were enumerated at the census count is mentioned in this column. Generally, the number of households in any unit would be equal or more than the occupied residential houses in that unit because of the houseless households that one may come across in that unit and also because of the occasional instances, of two or more households sharing a common census house.

**Columns 6, 7 and 8 : Total population (including Institutional and Houseless population) :-**

The total population as on the reference date is furnished in column 6 while in the next two columns the sexwise break-up is given. The institutional population refers to such of those who were enumerated in institutions like hostels, chummeries, hospitals, prisons etc., The houseless persons represent those enumerated on the night of 28th February at the places where they were found at that time, if they had not already been enumerated elsewhere.

**Columns 9 and 10 : Literates :-**

Sexwise break up of the total number of persons who are literate, irrespective of their levels of educational attainments and age, is given in these two columns. By definition a literate is a person who can both read and write with understanding in any language. It is important to note that by convention all children below 5 years of age are regarded as illiterate.

**Columns 11 to 20 : Main Workers :-**

These 5 pairs of columns deal with the main workers. Out of these, while the first pair provides only the total the other 4 pairs give out further break-up according to the sector of the economy in which these persons are working. The reference period for judging whether a person is a worker or not is the year preceding the day of enquiry. If a person had worked even for one day during this entire period he or she is entitled to be classified as a worker. If tor any such

worker the period of work is 183 days or more then that person is a main worker. On the other hand, if such period is less than 183 days then that worker is a marginal worker. In columns 11 and 12 the total number of main workers is furnished sexwise.

**Columns 13 and 14 : Cultivators (I) :-**

These two columns give out the number of male and female workers who satisfy the conditions laid down in the definition of a cultivator. A cultivator may be an employer, a single worker or an unpaid family worker. Participation in work may be by way of physical labour or by way of supervision and direction. The lands cultivated may be owned by the household or taken on lease for payment of money or kind or share in the produce. Cultivation as already emphasised involves ploughing, sowing and harvesting and allied activities in the production of cereals and millet crops, pulses, raw jute and kindred fibres, sugarcane, tapioca and oil seeds.

**Columns 15 and 16 : Agricultural labourer (II) :-**

A person who works in another person's land for wages in money or kind or share and does not have any lease or contract on the land on which he or she works is an agricultural labourer. In this case too the crops grown on the lands are quite pertinent and the difference between a cultivator and an agricultural labourer lies in the fact that the former works on his own or leased in lands as an independent worker while the latter works for wages having no right whatsoever on the lands on which he works. The sex-wise break-up of such workers is given in these two columns.

**Columns 17 and 18 : Household Industry (V (a)) :-**

Household industry belongs to the broad category of 'manufacturing, processing, servicing and repairs' and represents a particular sector therein. Household industry is generally conducted by the head of household himself or herself and or mainly by the members of the household, at home or within the village in the case of those dwelling in rural areas and only within the residential premises occupied by the household in the case of those living in urban areas. A person may be a labourer or a petty employee in the household industry run by some other household. By and large the household industry is carried on by individuals on a small scale with assistance of family members all of whom work as unpaid family workers and the entire earnings are treated as family income.

**Columns 19 and 20 : Other Workers (III, IV, V(b), VI to IX) :-**

All the other workers who are main workers but are neither cultivators nor agricultural labourers nor engaged in house hold industry are covered under these two columns. This is a broad category, covering all those who are working in fishing, forestry, plantations, construction of roads buildings etc., non-household manufacturing industries, trade and commerce, transport and storage and other services.

**Columns 21 and 22 : Marginal Workers :-**

Males and females who are workers but have worked to a marginal extent only during the reference year are reported under these two columns. Such workers, irrespective of the economic sector in which they work, are considered together and reported here.

**Columns 23 and 24 : Non-Workers :-**

Irrespective of age and sex all those who are not economically active are non-workers and a sexwise break-up of such persons is given in these two columns. The aggregate of the main workers, marginal workers and non-workers would be equal to the total population of that unit.

**Note :** 5 The area figures for the districts given under column No.4 against 'Total' represent "Geographical Area" and have been furnished by the Surveyor General, India. The figures for the urban areas are either those supplied by the concerned authorities of the towns or compiled in this Directorate on the basis of the records available pertaining to the delimitation of urban units. Area figures for Rural Areas are derived by subtracting the total urban area from the total area of the taluk/district. The total of the area figures of all the taluks in a district will not tally with the district figures (except for urban), because the former represent "Land use" area derived from the figures supplied by the Director of Survey, Settlement and Land Records in Karnataka.

6 Urban area given under column No.4 for the taluks is the total of the area of the respective individual urban units included under them rounded off to one place of decimal.

# ANKOLA TALUK

Based upon Survey of India map with the permission of the Surveyor General of India.

The territorial waters of India extend into the sea to a distance of twelve nautical miles measured from the appropriate base line.

# SUPPLEMENT

## INTRODUCTORY NOTE

This supplement to the District Census Handbook is devoted exclusively to the particulars relating to the Scheduled Castes and Scheduled Tribes. The District Census Handbook was first introduced at the 1951 Census to meet the ever increasing demand for micro-level data and since then this has remained the only census publication which gives out data at the village level in the case of rural areas and at the enumeration block level in the case of urban areas. The scope of this publication was enlarged in 1961 and also in 1971 so as to render it more useful by presenting in it a wealth of information on infrastructural facilities in villages and towns. The current volumes of the District Census Handbook are thus the fourth in the series and are marked by a greater degree of comprehensiveness and uniformity in approach. As compared to the 1971 series the village and town directory formats have been slightly modified. So also the Primary Census Abstract too has undergone certain changes. The previous practice of presenting the administrative statistics and the various district and taluk level tables has been given up. Apart from these general changes at the all India level, in so far as Karnataka is concerned, because of certain technical reasons all the particulars relating to the Scheculed Castes and the Scheduled Tribes envisaged for presentation in the District Census Handbook, have been pooled together and brought out in the form of a separate supplement.

These details are presented in the following sequence:-

Statement I : Total, Scheduled Castes and Scheduled Tribes population in the taluks and towns of the district. (These details form part of the General District Primary Census Abstract).

Statement II : District Primary Census Abstract - Scheduled Castes

Statement III : District Primary Census Abstract - Scheduled Tribes

Statement IV : Scheduled Castes and Scheduled Tribes population - (A) Villagewise and (B) Townwise (within town ward-wise (These details form part of the urban/village Primary Census Abstract).

Statement V : Total, Scheduled Castes and Scheduled Tribes population - Urban Block-wise (This corresponds to the Appendix to urban/village Primary Census Abstract).

Statement VI : Description of boundaries and details of areas included in census enumeration blocks- in the case of urban areas of the district (corresponding to the annexure to the Appendix to the urban/village Primary Census Abstract).

Statement VII : List of villages arranged according to the proportion of (a) Scheduled Castes and (b) Scheduled Tribes population to the total population of the village concerned by ranges. This would correspond to Appendix IV A and B to the Village Directory.

Statement VIII : List of Scheduled Castes and Scheduled Tribes.

The concept of Scheduled Castes and Scheduled Tribes as evolved by the Government of India and embodied in the Government of India Act 1935 section 309 for the first time and standardised later on for the purposes of the Constitution of the Indian Republic has all along been adopted for purposes of census operations as well. 'Scheduled Castes', means such castes, races or tribes or parts or groups within such castes, races or tribes as are deemed under Article 341 (of the Constitution of India) to be the Scheduled Castes

for purposes of the Constitution of India. No person who professes a religion different from the Hindu or the Sikh shall be deemed to be a member of a Scheduled Caste. Likewise, 'Scheduled Tribes' means such tribes or tribal communities or parts or groups within such tribes or tribal communities as are deemed under Article 342 (of the Constitution of India) to be the Scheduled Tribes for the purposes of the Constitution of India. Persons belonging to the Scheduled Tribes may profess any religion. Statewise statutory lists of Scheduled Castes and Scheduled Tribes were notified for the first time after Independence under the 'Constitution (Scheduled Castes) order 1950 and the 'Constitution (Scheduled Tribes) order 1950'. These orders have close links particularly with Article 46 of the Constitution which lays down that "The State shall promote with Special care the educational and economic interests of the weaker sections of the people, and in particular, of the Scheduled Castes and Scheduled Tribes and shall protect them from social injustice and all forms of exploitation".

These lists have subsequently been modified, supplemented or amended from time to time. As a result of the re-organisation of the states in 1956 involving transfer of territories from one State to another,a major change became necessary in most of the States. Consequently the Scheduled Castes and Scheduled Tribes (Modification) order 1956" was promulgated and the interests of these two sections of the society were adequately safeguarded. Twenty years later, in 1976, with the main objective of removing the area restrictions imposed within the states, the parliament enacted the Scheduled Castes and Scheduled Tribes order (Amendment) Act, 1976" (Act No.108 of 1976 dated the 18th September 1976). The lists of Scheduled Castes and Scheduled Tribes notified thereunder as applicable to Karnataka State have been adopted for purposes of the 1981 census operations. Copies of these lists, in English as well as in Kannada, were supplied to each and every census enumerator and supervisor. Necessary instructions for filling up answers to the questions relating to the members belonging to the Scheduled Castes and Scheduled Tribes were also issued. The following points were emphasized by way of clarifications:

"If the person belonging to a Scheduled Caste or a Scheduled Tribe returns his/her caste or tribe by a synonym or generic name of a caste or tribe, it should be reckoned as a Scheduled Caste or a Scheduled Tribe only if the name finds a place in the list furnished to you. Similarly, if the answer to this question is in general terms like Harijan/Girijan or Achut/Adivasi, you should not reckon the person enumerated as belonging to a Scheduled Caste or Scheduled Tribe as the case may be. In such a case you should ascertain the name of the caste/tribe fully and if that name finds a place in your list, you should reckon the person as belonging to Scheduled Caste or Scheduled Tribe as the case may be. If a person is negligent and insists on calling himself/herself merely 'Harijan' or 'Achut' or 'Adivasi' or 'Girijan', as the case may be, or repeats the synonym or generic name or a caste or tribe, please tell him/her that his description is not adequate for census purposes and persuade him/her to give the actual name of the Scheduled Caste or Scheduled Tribe. If the person merely claims to be a Scheduled Caste or Scheduled Tribe, but says that he/she does not belong to any of the notified communities applicable to the area, as reflected in the list supplied to you,he/she will not be reckoned as belonging to a Scheduled Caste or a Scheduled Tribe".

Analysis of Census Results : As compared to the earlier lists of Scheduled Castes and Scheduled Tribes which formed the basis for census enumeration at the censuses of 1961 and 1971, there has been a substantial change in the lists adopted for the 1981 census. The area restrictions that were prevalent regarding numerous castes and tribes included in the lists have now been removed. Therefore the 1981 Census results cannot be straight away used for any comparative analysis of growth trends and such other factors unless one delves deeper into the historical, social, economic and demographic aspects of life of these two categories of the population. Such an analysis is beyond the scope of this volume and has therefore not been attempted here. Salient data about the distribution of the Scheduled Castes and Scheduled Tribes in rural as well as urban areas of the district as also the pattern of distribution in administrative units of different levels within the district are included in this slender volume in the form of tabular statements.

## STATEMENT I : TOTAL, SCHEDULED CASTES AND SCHEDULED TRIBES POPULATION, 1981

§ Formerly North Kanara

NOTE : 1. Towns treated as such for the first time in 1971 Census, which continue as towns in 1981 Census are shown with an ( ¥ ) mark on their left.

2. Towns treated as such for the first time in 1981 are underlined.

3. The following abbreviations have been used within brackets against the names of the towns to indicate the civic status of the town.
M : Municipality SA : Special Area

4. Under column 3 the following abbreviations are used.
T : Total R : Rural U : Urban

5. * Scheduled Tribe figures would appear to include high returns relating to certain communities with nomenclatures similar to those included in the list of Scheduled Tribes consequent on the removal of area restrictions.

**Note** :1.(a) Towns treated as such for the first time in 1971 Census and which continue as towns in 1981 Census are indicated by asterisk on their left.

(b) Towns treated as such for the first time in 1981 Census are underlined.

2. The following abbreviations have been used within brackets against the name of the towns to indicate the civic status of the town.

M : Municipality

SA : Special Area

3. In column 1 the following abbreviations are used.

T : Total

R : Rural

U : Urban

* Scheduled Tribe figures would appear to include high returns relating to certain communities with nomenclatures similar to those included in the list of Scheduled Tribes consequent on the removal of area restrictions.
