Housing Census of Pakistan, 1960

Houses by type of structure, East Pakistan

Occupied institution—a boarding house.

A three-storeyed residential building comprising six houses.

FOREWORD

1. The Housing Census was taken in September/October, 1960 in conjunction with the 1961 Population Census of Pakistan. This replaced the House-Listing operation carried out before the 1951 Census and was the first full-fledged Housing Census in the Country. A Housing Census could not be planned before the 1951 Population Census as the same was organised hurriedly and no ambitious plan could have been successfully launched. The need for having accurate and up-to-date statistics in respect of housing conditions was felt ever since the creation of Pakistan as there were no statistics at all available on this subject. The problem of the settlement of displaced persons who came to Pakistan in millions after the partition of the sub-continent and the developmental activities carried out during the 15 years of the existence of Pakistan spotlighted the absence of reliable Housing Census data. The 1960 Housing Census is expected to fill up the gap to a large extent.

2. Like the Population Census, the Housing Census was also conducted by a large army of voluntary workers and this served as a large-scale rehearsal for them for a better coverage in the 'Big Count' in 1961. It helped them to understand the boundaries of the localities and the houses to be enumerated and also make a systematic approach for enumeration. Housing Census was designed primarily to collect information about the number and types of houses. The status of their occupancy and their density of population. The Census Schedule was divided into the following four parts :—

(i) Information about the housing unit-number, materials used in roofs and walls, static or mobile and number of rooms.

(ii) Information about occupants number and other details regarding children, parents, relatives and non-relatives.

(iii) Vital Statistics—births, deaths and infant deaths during the last one year.

(iv) Cottage Industry.

Although the last two inquiries do not ordinarily fall within the scope of housing census, they were included as a little extra effort on the part of the enumerator which could yield the much-needed information on these points. The rate of population growth in Pakistan has been a matter of controversy. Although the country has a vital statistics system, the results obtained have not provided any workable basis for computing the rate of population increase. It was, therefore, considered desirable to include in the Housing Census Schedule, some questions on births and deaths including infant deaths in the household during the one year immediately preceding the visit of the Enumerator. A special proforma on Cottage Industry was also attached to the schedule in order to obtain data with regard to this hither-to unsurveyed, but otherwise important, area of economic activity.

3. These operations involved more than 200,000 Enumerators who in turn were supervised by 16,000 Circles Supervisors, 2,000 Charge Superintendents and 210 District Census Officers.

4. The data were tabulated on punch card data processing machines in the Machine Sorting Centres at Karachi and Dacca. One card was punched for each household/structure (factories, institutions etc.) for all the urban areas and 10% were punched for the rural areas. A 100% punching was not done for the latter because the type of houses and structures were consi-

dered to have a more or less similar pattern in the rural areas. The rural figures were, however, raised to 100% after compiling the results to arrive at tehsils/subdivision and district totals. The total population shown in the Housing Census may differ from the actual figures of the 1961 Population Census because of the sample taken in the case of the rural areas as well as because of the different methods and timing of enumeration. The Machine Sorting Centres Karachi and Dacca, had to work in two shifts to produce these data. Processing was done by machines up to the sorting stage, but the compilation was done manually, which took a little longer time. The results were checked in the Census Commissioner's Office, Karachi.

5. The Housing Census operation was carried on under the guidance of Mr. M.H. Sufi, CSP., Mr. R.D. Howe, CSP., and Mr. A. Rashid, CSP., Census Commissioners, at the time of planning, field work and tabulation respectively. After the departure of Mr. A. Rashid, CSP., Census Commissioner, the Census Organization was placed under Mr. A.O. Raziur Rehman, CSP., Deputy Secretary, Home Affairs Division, and the editing and printing of the reports was done under his directions. We were also fortunate in having Col. E. H. Slade M.B.F.M.C., F.I.S., as Census Adviser. He was succeeded by Mr. Lowell T. Galt as Census Advisor on 13.6.62. Mr. Galt has continued to give us his valuable advice and has actually provided the descriptive part of this volume. This volume, therefore, reflects the cumulative effect of the able guidance and direction of the above mentioned officers and advisers. Mr. N. Shamsi, served as Deputy Census Commissioner up to the initial stages of the tabulation operations. Mr. Ghulam Mustafa, Statistical Officer, was intimately connected with the administrative and statistical planning of the housing census as well as establishment of the machine sorting centres.

6. Mr. A. Rashid, CSP., who later became the Census Commissioner was in-charge of the operations in East Pakistan as Provincial Director of Census. He was succeeded by Mr. H.H. Nomani, S.K. In West Pakistan, Mr. Aslam Abdullah Khan, CSP., Provincial Director of Census saw the work though from the initial planning to the last stages of tabulation. Mention needs also be made of Mr. Bahauddin Ahmad E.P.C.S., Joint Director of Census, East Pakistan, and Mr. S.M. Sharif, P.C.S., Deputy Director of Census, West Pakistan, who ably assisted their respective Provincial Directors of Census in various phases of the work.

7. For successful completion of the tabulation operations the Census Organisation acknowledges the services of Mr. Ruhul Amin, E.P.C.S., Deputy Director of Census, Machine Sorting Centre, Dacca, Mr. Wasi Ahmed Abbasi, Assistant Director of Census, Machine Sorting Centre, Karachi and Messrs Md. Abdus Satter Hanafee and Israr Ahmed, Chief Compilers and their staff.

8. The results were checked by Mr. Abdus Sattar, M.A., Statistical Officer, and Messrs. Shafiqur Reza and Habib Haider Zaidi, Statistical Investigators and their staff. They also compiled the tables for the All Pakistan Volume and saw it through the final stage of printing. Mr. Jalaluddin Ahmed Chowdhury, E.P.C.S., Assistant Director, Census and Mr. Riazuddin Ahmad, M.A., B.A. (Hons.) Statistical Officer looked after the printing of the Provincial volumes at Dacca, and Mr. S.M. Sharif, P.C.S., Deputy Director, Census, and Mr. Haq Nawaz Sheikh, M.A., Statistical Officer did the same at Lahore.

9. The Census Organization also owes its gratitude to the Controller of Stationery and Printing, Mr. N. H. Khandker, Messrs Qasim

Ali and Hamid Hossain, Deputy Controllers of Printing, Karachi and Dacca, and Mr. Anwar-ul-Haq and Mr. Rajab Ali Khan, Assistant Controllers of Printing, Karachi and Dacca and to the presses concerned for the ungrudging help and co-operation that they gave at all stages of the printing work.

10. Most of all, our thanks are due to the hundreds of thousands of enumerators, Census officials and other well-wishers who made this largest statistical operation in the country a success.

Karachi.

PART I

DESCRIPTIVE

CHAPTER I

INTRODUCTION

1.1 What is a Housing Census ?

According to the United Nations definition, a Housing Census is the total process of collecting, compiling, analysing and publishing statistical data pertaining to all housing units and occupants thereof in a country as of a specified time.(1) Pakistan's First Census of Housing was taken during the months of August, September and October, 1960 as antecedent to the 1961 Census of Population.

Like people of other countries, Pakistanis have many kinds of abodes, houses, apartments, huts, jhugies, house-boats, workers' camps, and institutional residences, to mention but a few. The **first objective** of the Census of Housing was to make an inventory of all these places of abode as they existed in the autumn of 1960.

The **second objective** was to classify these existing housing units by type and structural characteristics and by geographical location. The **third objective** was to count and classify the population found in these dwellings by household and family relationship and by limited demographic characteristics.

1.2 Relationship of Timing to the 1961 Census of Population

It is generally recognized that population and housing censuses of any nation should be taken either simultaneously or in close seqence with a deliberate effort to relate the two. The advantages of comparability are obvious and in fact to establish coverage control for a 'Big Count' of population it is essential to identify and list every habitable place. This control listing, with efficient planning, may extend an administrative by-product into a useful and economical Census of Housing.

Census date for the population count in Pakistan, was January 31, 1961. If an advanced control listing was to be undertaken prior to this time it had to be late in 1960 or during the month of January 1961.

Problems of communication in remote areas, climatic conditions, rainy season in East Pakistan, cold winter in upland West Pakistan—the time requirement for training enumerative field staff in the more complicated concepts of Population Census and the need to resolve any problems of a real definition which might have come to light during the listing—all indicated an autumn list—enumeration for the Housing Census. The scarce resource of headquarters staff was conserved by having successive field operations in the Provinces. The time-table called for :

	West Pakistan(2)	East Pakistan
Training of Field Staff	1st week August	3rd week September
House Numbering	10 August-10 September	1-15 October
Housing Census Enumeration	12-30 September	18-31 October

(1) General Principles for a Housing Census. U. N Statistical Paper, Series M. No. 28, New York 1958.

(2) Except Hyderabad and Khairpur where all activities were scheduled two weeks later.

It is of course, apparent that the occupancy count (of only resident population) obtained in this "rolling enumeration" would not be precise either, for internal or inter-provincial comparison, and since Pakistan's net population increases is a fact of life, the heads to be counted at the end of January, 1961 could be expected to exceed those found and recorded four to five months earlier. In spite of this, it is believed that the Census of Housing comes close to its objectives of identifying nearly all places where people might be living at the time of Big Count and providing descriptive inventory of the dwellings which they occupied (3).

1.3 Need for a Housing Census

The problem and need for adequate shelter antedates the history of mankind. The problem is now intensified in Pakistan by the dramatic displacement of populations from rural to urban areas, emigration and resettlement of persons coming from India and the sheer magnitude of population growth. Increasingly the Central and Provincial Governments of Pakistan must concern themselves with housing and community development programmes.

If housing schemes for urban areas, satellite towns and resettlement colonies are to serve practical needs, they must be based upon facts of existing conditions so that present and future needs may be assessed. A good census of housing provides accurate measurement of housing supply in both quantitative and qualitative terms. Better policy decisions on development programmes can be taken in the light of such basic information.

A housing census taken periodically serves as a bench-mark reference for current housing and construction statistics which need to be developed in Pakistan. It also provides a frame for sampling studies which may be used both to give greater detail than a general census can, and to keep the essential information up-to-date during the inter-censal period.

1.4 How the Housing Census was taken

(i) Organization

Coming closely before the 1961 Census of Population, and involving most of the same officials, the Census of Housing provided a massive test of the organization for census taking.

In brief, the organization consisted of a Directorate of Census in each province responsible for collection and control of data through the Provincial Directors to the Census Commissioner at Headquarters Office in Karachi. Each Province was divided into **zones** for purposes of lessening the reporting span (5 zones in West Pakistan and 5 in East Pakistan), each under a Joint or Deputy Director.(4) These in turn supervised operations in the **census districts,** each under a District Census Officer. Although a few census districts were conterminus with administrative districts of the Provincial Government, most because of population size, represented only parts of administrative districts (in East Pakistan they corresponded to administrative Subdivisions).

Reporting to each District Census Officer were several Charge Superintendents, each responsible for the census taking in an area the size of whole or a part of a Thana, Tehsil or Taluka in rural areas or a ward of a Municipality. Division of a Census District into Charges was

(3) For information, the comparative population recorded in the Housing Census vs. the Big Count was :

	Housing Census	Big Count
East Pakistan	5,15,25,807	5,08,40,235
West Pakistan	3,95,35,804	4,28,80,378

(4) The Central Zones in each province were a direct responsibility of the Provincial Directors of Census.

effected keeping in view mainly the administrative feasibility and not the population size of the area. First line supervision was provided by Circle Supervisors whose territory comprised a grouping of 10 to 12 blocks. The ultimate census taker was the Enumerator, each covering a block of about 150 houses.

To, and including, the level of Charge Superintendents, the field staff were responsible and experienced administrative officials of of Provincial, District and Municipal Governments who were given leave from other duties for greater or lesser time to assist in the census operation. Circle Supervisors were generally local officials with revenue or assessment background. Enumerators were invariably local citizens of some education who volunteered to visit their neighbours and to record the facts concerning all dwellings in their block.

(ii) Determination of Census Areas

Since census data are presented in terms of geographic area and since assignment control is maintained again by well defined territorial boundaries, it follows that a very basic preparatory operation for any census is to work out this plan of a real division. The prevention of missed households or duplicate enumeration depends to a large extent on the proper delimitation of enumeration areas. The nature of the geographic and cartographic work required for the census depends on the size and character of the territory and on the availablility of good maps with detailed culture symbols. While all areas of Pakistan had been mapped, the quality or even presence of detailed local area maps varied from district to district. For this reason the Census put its faith in a systematic and (hopefully) complete listing and numbering of all housing units. First step in delimitation of census areas was the preparation by each District Census Officer of a **Register of Census Division,** *i.e.* a complete listing of all villages and mauzas known to exist in each Thana, Tehsil, or Taluka (local governmental units of approximate country size, the main differences being regional,—Thana in East Pakistan, Tehsil in West Pakistan except in lower Indus Valley where known as Taluka). Villages were next divided into **Blocks,** the size of a block (about 150 houses) being considered a convenient assignment for each enumerator to get round in a few days time.(5)

Blocks were next grouped into **Circles** (10 to 12) this being considered the maximum effective span of control which Circle Supervisors could exercise. Care was taken to see that circle boundaries did not overlap those of local governmental units (*e.g.* Union Councils or Qanungo Circles) **Charges** were next formed by grouping the circles within Tehsils/Thanas/Talukas but if these administrative units were too large they were split into two or more Charges, care being taken again not to straddle administrative boundaries.

A similar but specially arranged plan of division was worked out to cover areas under control of the Defence Services.

Base maps were secured or drawn up for charges, and circles and block boundaries were drawn in. In the Census Manual of Instructions, Part I, it was indicated that Enumerators in cities and towns should be given rough sketch maps of their blocks. There was no specification for such mapping, however, and it was left to Charge Supertendents and Circle Supervisors

(5) Note however, that in the plan of division, a village was not to be split if it contained a total aproximated as 150—200 houses. In practice single village blocks sometimes contained several hundred houses and there were other cases where a village, though small was bifurcated because the area was not manageable by one enumerator (e. g. because of of intervening water courses).

to implement the instruction as they saw fit. Additional effort was made to avoid hiatus or overlap by requesting Circle Supervisors to prepare narrative descriptions of block boundaries in terms of lanes, streets, canals, railway lines or other recognizable and permanent land marks. It is hoped that these devices served as useful coverage controls during the Housing and Population Censuses, and that familiarity of the field staff (most of whom in West Pakistan were regular employees of the Land Revenue Department) with the local maps and records gave additional coverage assurance. Unhappily in successive office "close outs" many of the maps and narrative definitions of blocks have been lost and the geographical record of the censuses is therefore scanty.

(iii) Location Code

9 digits location code was used to denote Administrative District (2 digits), Census District (one digit), Charge (2 digits), Circle (2 digits), and block (2 digits). A complete list of location codes down to blocks was maintained at every Census office. The Circle Supervisors were instructed to have the Location Code Nos. readily available. The first instruction given to each enumerator was given to remember the location Code No. of his block. Space was provided in 5 boxes of the front page of the Housing Census Register in which the enumerators had to write the Location Code before he began the field enquiry. The Supervisors had to check that No. at each review. To avoid the possibility of any confusion at later stage, instructions were issued to all enumerators to write the name of block (village) also on the Register.

(iv) Training

Training of Enumerators and the Circle Supervisors was the responsibility of the Charge Superintendents. Each had (a) the **Manual of Instructions, Part I**, which dealt with census activities in the Pre-Enumeration period, (b) **Summarized House Numbering Procedure and Duties of theBlock Enumerators**(6) and (c) **Census Commissioner's Circular No. 11,** which was a brief training guide or outline for instructions. This letter reproduced as Appendix D to this report proved to be so helpful that it was translated into Urdu and Bengali and distributed to all the Enumerators. An additional aid to Enumerators was the front cover and middle page of the Housing Register copy No. 1, itself a constant reminder of key instructions and definitions.

(v) House Numbering and Enumeration

These operations were sequential, the house numbering being completed before interviews with households were begun. After making a preliminary personal inspection of the block to ascertain the general pattern of building concentrations and the location and direction of all roads and paths, the Enumerator was instructed to pick a house as starting point and to lay out a convenient route which would reduce back tracking but which would lead him to every possible place of habitation. Then, using the numbering materials provided him, the Enumerator systematically canvassed his route marking each building with a base number in serial order and assigning a sub-number for each housing unit found in the structure. Thus a building with four apartments would bear number as 26/1, 26/2, 26/3, and 26/4.

Although the instructions for house numbering were quite clear and most of the

(6) These two were printed on opposite sides of a "11× 7" card and one was given to each Enumerator (See Appendix A.)

enumerators followed them correctly yet there were a few cases in which the enumerators adopted their own system of numbering the houses. The sub-numbers which were used to differentiate different parts of the same building were in some cases used by the enumerators for different households residing in the same housing unit. Such errors were, however, caught and corrected before the tabulation cards were punched.

Enumeration followed numbering, the recording medium being the **Housing Census Register, 1960.** This was a listing book with each set of facing pages constituting a line schedule for reporting the particulars of each house hold, the ultimate unit of enumeration. These pages of the Housing Census Schedule are reproduced as Appendix B to this Report. Although item headings on the schedule were largely self explanatory, the possible entries each column were reviewed in the training seminars, using a dummy filled up schedule for illustration.

After recording information on the Housing Census Schedule for each household, the Enumerator was to ask whether any handicraft or cottage industry was carried out within the household. If so, he was to record the particulars on a separate **Cottage Industry Enquiry** (See Appendix C.)

Two copies of the Housing Census Report were given to each enumerator. They were required to take copy No. 1 (which had Cottage Industry Enquiry form attached to it) into the field as their enumeration document. 18 days were given to them to list on an average, 150 houses and the details of their occupants. They had to transcribe daily to copy No. 2 the entries made by them in copy No. 1 on completion of enumeration they were instructed to have a final round of their block to check whether any new structure had been built or any old structure removed from their block, correcting entries in the Housing Census Register accordingly.

Upon completion of each set of facing pages in the Register the Enumerator totalled the quantitative entries. These pages totals were posted to the back over of the Register at completion of enumeration to record the Block Total.

(vi) Field Control and Review

A fast moving, far ranging activity like a Census must be kept under constant surveillance and control to assure that operations are begun and finished in time and that gross errors in understanding or execution do not arise to qualitatively invalidate the effort.

Preparatory organizational steps of recruitment and office procurement were reported by the District Census Officers in their fortnightly reports.

As Charge Superintendents joined they also submitted reports on 5th and 20th of each month, recounting progress and problems on area delimitation and other operations as undertaken. House numbering was considered such an important control that Charge Superintendents and other inspecting officers were told to be on constant tour of inspection during these weeks, uncovering mistakes in numbering, "missed" habitations, etc.

As soon as each Enumerator completed the Housing Census Schedules for his block in duplicate he reported to his Circle Supervisor who reviewed the registers for completeness and who then was supposed to field check 20% of the entries to assure proper enumeration. Copy No. 1 of the schedules was turned back to the Enumerator (for later reference in the Big Count) and copy No. 2 was delivered to the

Charge Superintendent. The latter checked to see that block counts were not so large as to require further division before the upcoming population Census. They were also expected to make a 2% spot check of house numbering and accuracy of entry through re-interview in every circle in their Charge. The Superintendent then prepared a summary report giving total houses, households and usual inhabitants for each block and circle. These summaries together with the original registers were sent forward to the District Census Officer where duplicate copies of the Charge Superintendents Summaries were despatched directly to the Census Commissioner and (Via the Zonal Officers) to the Provincial Directors.

(vii) Compilation

Provisional results of the Housing Census were prepared by cumulation of the Charge Summary Reports and were released with the preliminary population figures in Census Bulletin No. 1, on the 28th February, 1961. Only numbers of households, occupied residential houses and unoccupied structures were given for Divisions, Districts and Principal Cities.

The Housing Registers themselves were forwarded from Charge Superintendents through District and Zonal Officers to the Machine Sorting Centres in Karachi and Dacca. There the data for each household in urban areas was punched into a sorting card. For registers from rural areas (much the larger in Pakistan) a systematic sample of ten percent of households were punched, taking every tenth line from the schedules, beginning with the 5th (*i.e.* 5th, 15th, 25th, on each 30 line page).(7) While in theory this technique can "short-change" the sample in representation of up to four last entries, it is difficult to see that any substantial qualitative bias has ensured. Estimates of numbers of houses and characteristics thereof for rural areas were in all cases obtained by multiplying by ten the numbers punched and tabulated from the sample.

(7) It may be noted from examining a copy of the Housing Census Register, Appendix B, that these lines were double thickness to aid punchers in selection of the 10% sample of households. Enumerators were not told the reason for these heavy linings.

(viii) Machine Tabulation.

All the Housing Census data were processed by Machines. Immediately after the completion of enumeration, instructions were issued to all the District Census Offices to despatch the Housing Census Registers of their respective Districts to the Machine Sorting Centres. These Centres were established, at Karachi and Dacca, in November, 1960. Card punching was started in January, 1961 the intervening time being devoted to training staff and arranging checking and editing the documents received from the District Census Officers. Simple hand operated, 40 Col. I.C.T punching and Verifying Machines were used at both centres. High speed counter-sorters were used to classify the cards for various characteristics. The following number of machines were installed in the two centres :—

Name of Machine	Machine Sorting Centre, Karachi	Machine Sorting Centre, Dacca
Punching	34	22
Verifying	22	18
Reproducing	1	1
Sorting	4	2

No Tabulator was used. The sorting scheme was so designed that the information to be shown in the Housing Census tables was directly available from Machine Operations recorded the information from the counters after each Run. The planning was done at Karachi.

Both the Centres worked in two shifts to get the work completed expeditiously. Tables were compiled by hand. Hand Calculators were used to raise the rural area figures to 100%

1.5 Housing Census Reports

In addition to provisional totals released in Census Bulletin No. 1, the Housing Census is being reported in three bound volumes, as follows :—

Volume 8—Housing Reports and Tables for Pakistan
Volume 9—Housing Reports and Tables for East Pakistan
Volume 10—Housing Reports and Tables for West Pakistan

It may also be noted that each of the 62 District Census Reports carry, as Part III, tables giving detailed housing data for small areas (subdivisions/tehsils/talukas and all urban places) within the district.(8)

A separate publication of the Census, Bulletin No. 6, summarizes the data collected on the Cottage Industry Enquiry.

1.6 Availability of Unpublished Data

Because the Housing Census of 1960 is the first to be taken in Pakistan, comprehensive and rather detailed publication programme was was considered appropriate. Not only are present needs of planners and local officials to be met but there needs to be a base for comparing growth and qualitative improvement in the interim between this and succeeding housing censuses and surveys.

In spite of such consideration it has been necessary to recall that resources for printing are not limitless and have, in fact to be carefully conserved to cover all the varied sectors of the decennial census programme. This means that some valuable information has been collected but not carried through tabulation and printing stages and other data have been tabulated (or perhaps cards punched only) without being published.

These unpublished data represent a resource for researchers and, in some cases, housing officials and town planners who need to go beyond the published product of the Census. For small geographic areas (circles and blocks) individually, the Census can provide hand tallies of totals from the Housing Census Registers which are in its custody. Precise maps with bounded areas may be matched with appropriate Census data but only where identity of the area can be readily established through existing census mapping materials. For larger groupings, cards may be punched up and machine sorts run off at nominal costs to the officials or business concerns requesting them.

The following may be made available to genuine users on the basis of formal request :

1. Numbers of all buildings by type.
2. Number of non-housing units (shops, mosques, offices, ware-housing, etc.) listed in each locality.
3. Block listings of households (available only to survey organization).(9)
4. Numbers of families by size and number of children in each locality.
5. Number of births reported for 12 months prior to the Census.

(8) In East Pakistan smallest area published is subdivisions. Thana detail has been tabulated, however, and is available on request at the Census Offices.

(9) The Census Act prohibits use these lists for any administrative or judicial proeedding and information contained in them may be used only for statistical purposes.

1.7 Related Inquiries

Housing Censuses do not ordinarily attempt to reflect vital events (*i.e.* birth and death occurrences in households) nor do they concern themselves with the economic activity which householders pursue. However, because of keen interest in Pakistan and little information to satisfy that interest with respect to (a) current rate of net population increase and (b) extent of cottage industry prevailing in Pakistani homes, it was considered worthwhile to make inquiries on these subjectes at the time that every household was identified and visited as a unit.

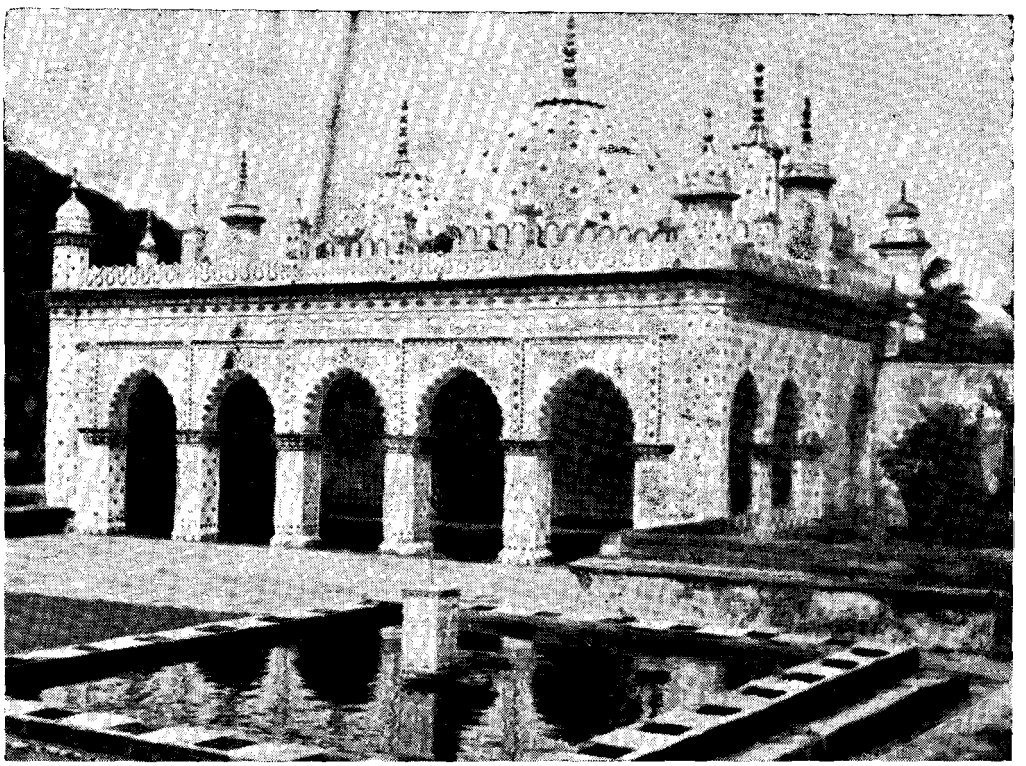

(i) Vital Events

Population growth rates of any country depend at any given time on the net difference between births and deaths and between persons immigrating and emigrating. The former, known as "vital statistics", are the summation of data obtained through birth and death registration systems. These systems in Pakistan have obviously under-reported both types of events as total census counts confirm each decade. Unhappily, the Housing Census attempt to provide correction factors for current reporting of vital events has not been demonstrably effective. The data as collected, however, are summarized in these Housing Census Reports.

(ii) Cottage Industry

The schedule for the Cottage Industry Enquiry was separate from the Housing Census Register, and while the Enumerator was told in training that he should remember to ask whether any handicraft was carried on in the household, it appears that many forgot to do so. Whether the question was forgotten, or not considered important by the Enumerators or whether schedules in fact filled up were mislaid or not accounted for in uccessive transmittals from Circle Supervisor to Charge Superintendent to District Census Officers to Hand Sorting Centres, the indication is that returns were far from complete and many of the schedules which were received showed obvious misunderstanding of the definition of Cottage Industry which for Census purpose was "one carried on wholly or mainly with the help of the membrs of the households working whole-time on a handicraft or in manufacturing articles of utility, decorative or artistic value or sale mainly outside the village or mohalla where they are manufactured". Repair and maintenance services were to be excluded as was the work of village artisans such as lohar, tarkhar kumhar, etc. unless they did special work falling under the above definition. This concept may have seemed difficult for the Enumerator to comprehend or explain and it is possible that consciously or unconsciously he tended to "slide past" the inquiry and get on to the next household.

With limitations noted, however, the Census staff, after careful review, have summarised the data from the Cottage Industry Enquiry which seemed most valid and these are being released as Census Bulletin No. 6.

Non-residential house—a mosque.

CHAPTER 2

CONCEPTS AND DEFINITIONS

2.1 House (Housing Unit)

A key concept to the objective of providing a housing inventory is that of the **housing unit.** The United Nations has suggested a uniform definition to promote clarity and international comparability.

["A housing unit is a structurally separate and independent place of abode. It may either (1) have been constructed, built, converted or arranged for human habitation, provided that it is not at the time of the Census used wholly for other purposes, and that in the case of mobile, improvised and collective premises it is occupied at the time of the Census, or (2) although not intended for habitation actually be in use as such as the time established as reference for the census. Consequently, a housing unit may be (1) an occupied or vacant house, apartment, independent room or group of rooms ; or an occupied hut, cabin, trailer, hotel, institution, camp, or (2) a barn, mail, a cave or any other shelter used as living quarters at the time of the census".(10)]

This rather generic definition was adopted in spirit by the Housing Census of Pakistan, though the term "House" was used to connote, housing unit as likely to be more generally understood by Enumerators and the public alike. The definition :

> ["A house is a structurally separate set of living premises with an entrance from outside the building or from a common hall-way or courtyard staircase".]

Thus the essential features of separateness and independence were specified. In training material it was made clear that both living premises intended for occupancy (though vacant at time of the Census) and those not intended for human habitation but nevertheless lived in at Census time were to be included.

In spite of the effort to strike on nomenclature, *i.e.* "House" which would be understood as a separate dwelling or place of abode, examination of small area tabulation (particularly from some rural areas of East Pakistan.) indicates that several several small huts (structures) within a compound, together comprising a house (proper census definition) were sometimes reported as several "houses" resulting in anomalous totals of more houses than households for some areas. Editing procedures in the machine tabulation programme made arbitrary correction to the consistent (though not necessary correct) total of households but the Village Charge Lists, separately compiled from the Charge Summary Sheets, may occasionally reflect this misinterpretation.

2.2 Building

[A building to the Census was "a separate structure which may consist of one or more houses"] It is clear from detailed instruction on numbering that a building might also have not house (*i.e.*, housing unit) in it. Appendix E of the Manual of Instructions Part 1, here also reproduced as Appendix E, gives this deteail on type of buildings and institutions to be numbered. It will be seen that very few structures (really only uninhabited barns, animal sheds, small outhouses, separate autogarages) were supposed to escape the coaltar of red ochre of the Enumerator's marking brush.

(10) 10c. cit. para 301.

2.3 Household & Head of Household

A household was defined as "a collection of persons living and eating in one mess with their dependants, relatives, servants and lodgers who normally reside together". The principal criteria, it will be noticed, was the one of common cooking and messing facilities. Enumerators were warned in training not to confuse house (a structural concept) with household (a collective human concept) and were told to use their own judgement in case they found peculiar living arrangement but to check it out with their Circle Supervisor at first opportunity. It is probable that some true households within houses were not so identified by Enumerators but in the main the concept seems to have been clearly understood.

For census purposes there must be a head of household. This was defined as "the person chiefly responsible for maintenance of the household". When husband and wife and married and unmarried children were living in the same house, the husband was to be reported as "head". When brothers and sisters comprised a household, the eldest brother was to be considered the head. When a household consisted of several unrelated persons sharing the facilities the Enumerator was instructed to "arbitrarily select the one he thought to be most reliable.(11) In hotels and institutional households the resident person in charge (Manager, etc.) was to be entered as "head". Name of the institution was also an acceptable entry.

2.4 Usual Inhabitant or Normal Resident

To qualify for inclusion in the household count a person was required to be a normal resident or usual inhabitant of that household. This was conceptaually defined as one "whose permanent place of residence is in the place there". Instructions on the front cover of the Housing Census Register told the Enumerators to exclude floaters, visitors and homeless persons from the count.

This definition would seem to have left a good deal to the judgement of the Enumerator or the understanding of the householder. For example, were children counted as normal residents of their parent's household although absent at boarding school for nine months of the year including time of enumeration. Instructions to Enumerators on the Housing Census Register also say that "Hotels, Serais, Boarding Houses and Hostels will report the average number of their total occupants (staff, permanent guests and temporary visitors) as their normal inhabitants." Was this same practice followed with respect to institutions, hospiltals, jails, orphanages, mental institutions ? What about persons with concurrent resident, e.g. a man working on a construction project and sleeping in a work camp five nights a week but returning to his family every week end ? Or a river-boatman who is normally away from home three or four nights a week ? Was he counted as occupant of a mobile unit wherever the Enumerator found him or reported by his wife as head of household at home ? "Visitor" is another term subject to varying interpretation. Was brother-in-law who had been "visiting" for five months in a household excluded ? Was a married daughter home to have her first child in her father's house considered a visitor ? And her child ?

The above questions all point up a cautionary note that counts of usual inhabitants cumulated from the Housing Census Registers should be coosidered as rough approximations of popu-

Office of the Census Commissioner, Karachi.

lation for areas and are not to be directly compared (even allowing for time interval) with the Big Count figures where a **de facto** effort was made to count all persons whether homeless or not and with or without normal residence.

2.5 Family

Family, for census purposes, was defined as "two or more persons mutually related who live together and share the same household." The Enumerator was not immediately concerned with this concept. As long as he correctly noted relationship to head of the household in making entries in columns 9-16 of the Housing Census Schedule (Appendix B) the coders had the basis for assigning proper family codes.

2.6 Type of House-Structural Material

Appendix E lists fourteen "types of building and institutions to be numbered". These, in one category or another, closely correspond to the uniform classification of housing units suggested by the United Nations.(12) In so far as the schedule form permitte, however, there were two broad categories **mobile** and (comprising the bulk) all **other,** the latter whether conventional, rustic, improvised or collective being classified by principal materials used in constructing outer walls and roofs of the structure. These material categories for walls were :—

1. Concrete/baked bricks/stone
2. Earth/Kutcha bricks
3. G.I./asbestos sheets
4. Wood
5. Bamboo
6. Thatch
7. Others.

(12) Loc. Cit. Paras 302—313.

categories for roofs were indentical except that **Baked tiles** were substituted for earth/kutcha bricks in the second classification.

This item was to be filled up by Enumerators on the basis of observation unless :

(1) the house, though occupied was still under construction and principal material for walls or roof was in doubt.

(2) It was difficult to determine the true nature of material.

In such cases the Enumerator was to inquire. Training instructions from C.C. Circular 11 specified that material used for ground floor walls should govern in case different materials were used for successive stories.

Definition of mobile housing units was broad in terms of transportability but after noting that it was difficult to number such units, Enumerators were told that they should do so **if the units were expected to stay at their particular place for six months or more.**(13) Uncertainty on this score may have resulted in an undercount of mobile units, particularly tent encampments and seasonally moving house boats.

2.7 Tenure

Enumerators were told to accept the respondent's own classification of whether the house was "owned", "rented" or "free". In case the respondent seemed uncertain about ownership the Enumerator was to explain that a house did not have to be fully paid for, that it might have a mortgage or other encumbrance but if in the name of any member of the household it was to beconsidered "owned".

2.8 Occupancy—Vaccancy

Occupancy or vacancy was indicated by the item entry in Column 8 of the Housing Census

(13) Para (iii) Appendix E of Manual of Instructions, Part I.

Schedule (Appendix B). If residentially occupied the name of the head of household was recorded. Non-residential buildings were so noted on the listing line as "Shop", Mosque", "Office", "Godown", etc. An entry of **Under Construction** was made for structures from the time the foundation was begun until the first occupant moved in. A house was **Vacant** if fully constructed and intended for occupancy. "Closed houses" fell in this category of Vacant though Enumerators were charged to make repeated visits before concluding that they were unoccupied.

2.9 Room

This concept in Pakistan's Housing Census was broadly set forth. In Manual of Instructions, Part I, room is defined as "normally a bed room, dining room, living room, or a room for servants". In recognition of reality of living arrangements the definition continues. "Attics, kitchens and other separate covered spaces which can be used for sleeping purposes are also rooms". The enumerator was further instructed on the front cover of the Housing Census Register to consider as room "a compartment of a House large enough to be slept in". If literally applied, this could include corridors, covered verandahs, store rooms and basement areas. This may be considered in comparing statistics on rooms with those of other countries using a more restrictive definition.

2.10 Household Facilities and Amenities

Housing Censuses frequently collect and publish useful information on the basic facilities available to householders, such as source of **water supply** (for example piped water either inside or outside shared with other households, wells, rivers, springs, etc) **toilet installation-cooking facilities,** and **source of fuel** for cooking or heating. Such data are of prime importance to development authorities and town planners. In addition, questions are often asked concerning presence of other amenities, for example, **electricity** for light or use to power cottage industry appliances, **refrigeration,** telephone, fixed **bath** or shower instsllation, etc. Inereasing frequency of such amenities as noted in comparing successive censuses is a measure of rate of increase in the standard of living of the populace.

In spite of considerable interest in such qualitative data on housing in Pakistan the census planners felt that this initial effort should be kept simple and made less difficult both for the volunteer Enumerators and the respondents. They took cognigance of the fact, also, that at this stage the presence of most amenities would be confined to urban centres and for the great bulk of household listing lines in villages there would be few entries to make in facility columns even if provided on the Housing Census Register. No doubt there was also the thought that such detail might be more efficiently collected in sample surveys where would opportunity to train interviewers more intensively. In retrospect, it seems unfortunate that at least a query on source of water supply was not included in the Census. This would seem to have been no more difficult to obtain than material of walls and roofs of houses and would be very useful information for regional and local development plans.

A residential house with walls of bamboo and roofs of bamboo/thatch.

A residential house with walls of wood and roofs of C. I. sheets.

Residential houses with walls of bamboo and roofs of bamboo/thatch.

Non-residential house—a club house.

APPENDIX—A

Census 61, P. No. 10.

DUTIES OF THE BLOCK ENUMERATOR
FIRST PHASE

(1) To get to know his BLOCK thoroughly and to ensure that its boundaries do not overlap or omit any areas between it and the contiguous Blocks.

(2) To read, learn and digest fully the Housing Census Schedule and the Cottage Industry Enquiry Form and the instructions supplied for completion thereof so as to be in the best position to derive full benefit from the Training classes, and to get his particular problems and difficulties resolved in the classes.

(3) To attend training classes (West Pakistan : 1st week of August and East Pakistan in 3rd week of September) to enable him to learn and understand thoroughly the method of completing the Housing Census and Cottage Industry Enquiry Schedules.

(4) To carry out complete house-numbering in his Block in accordance with the instructions on the subject imparted in the Training classes (first phase) and summarized on the reverse.

(5) To arrange public meetings in his Block and to explain to the residents in his Block the purpose of the Census shortly before the Housing Census and Cottage Industry Enquiry (which will be held in West Pakistan during the second half of September and in East Pakistan in the second half of October).

(6) When in doubt, to consult his Circle Supervisor and carry out his instructions at all times to the best of his ability.

(7) To remember that courtesy is the keynote to success and

(8) To complete the Housing Census Schedules in duplicate and the Cottage Industry Inquiry neatly and legibly as instructed in the training classes, and to hand them over to his Circle Supervisor on the due dates (3/10/60 in Eest Pakistan and 2/11/60 in East Pakistan).

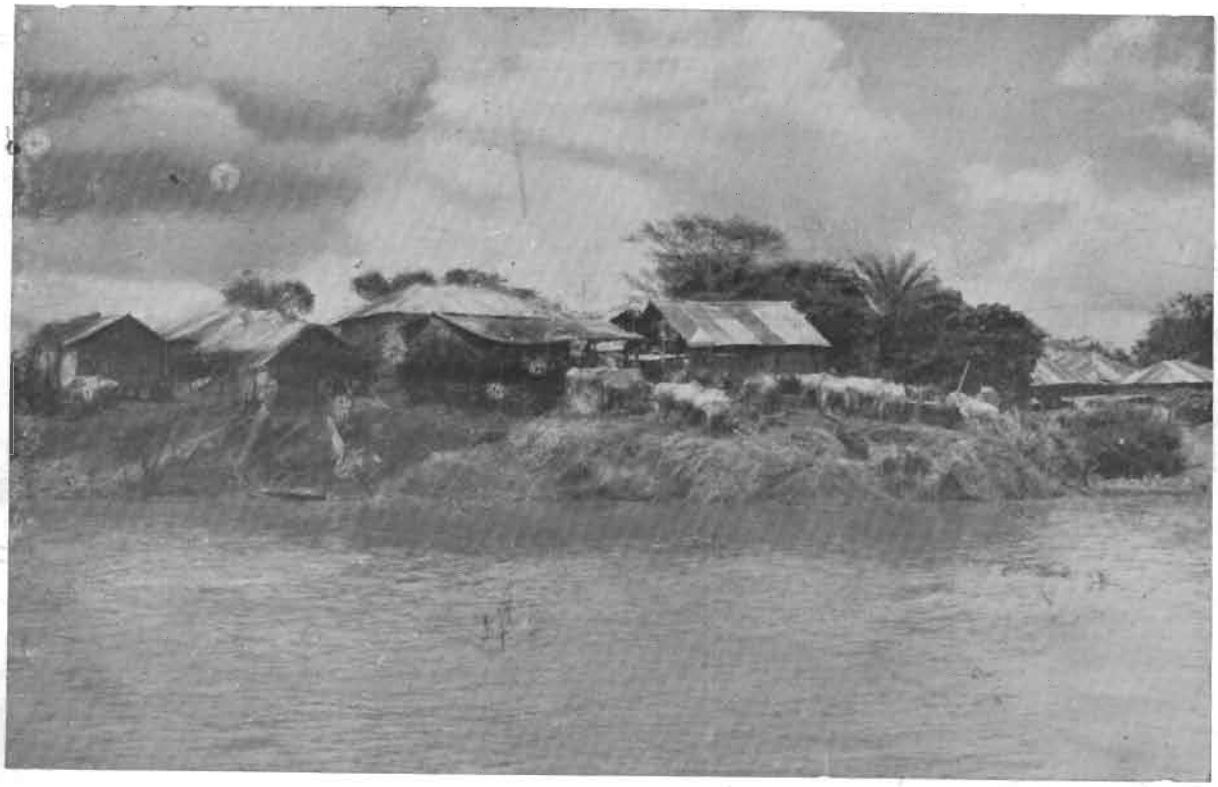

Further duties in connection with the "BIG COUNT" in January 1961 will be explained in the Enumerator's leaflets and in the Training classes (Second Phase).

SUMMARIZED HOUSE-NUMBERING PROCEDURE

All buildings in Pakistan must be numbered for the Census, but where a single household occupies more than one structure in a compact area *i.e.* forms a single housing unit, the same number should be given to such structures. When there is more than one house (residential) in a building, then each such house should be given a separate sub-number. In addition to all types of structures normally used for residential purposes, houses under construction, vacant houses, institutions, quarters in camps, barracks, static residential boats etc., should be numbered. Commercial buildings, shops, Government offices, Mosques, Temples and Churches should also be numbered. When in doubt, give a number.

2. The number should be painted on the building etc. so as to be conspicuous enough to ensure rapid identification and be out of reach of animals and children as far as possible. The material used for numbering should be made available locally and should be durable enough to remain legible for about one year. Suitable materials are red ochre, charcoal mixed with oil, coal-tar etc.

3. Before starting house-numbering, the enumerator should have got to know his Block and have made up his mind about the best way to start numbering so as to reduce to the minimum the distance he will have to travel in going fom house to house following his serial numbers from one upwards within his Block. In some Blocks (*e.g.* in towns) numbers may have been given already to the houses. If so, these numbers may be used for census pruposes as far as possible but in all other cases the enumerator himself should give numbers serially starting from one, in such a manner as to ensure that no house has been missed and that the boundaries of his Block are clearly defined with reference to the contiguous Blocks. Normally only one number (the House Number) need be affixed on each house, but in congested areas it will occasionally be advisable to affix both the Block number and the House Number on those houses on or near the boundaries of Blocks.

A cluster of houses with walls of bamboo and roofs of C. I. sheets.

APPENDIX—B

Copy No. 1
(To be handed over to the Supervisor after Housing Census and then to be secured back and retained by Enumerator until after 3-2-1961,)

HOUSING CENSUS REGISTER, 1960

Admn. Distt.	Census Distt.	Charge	Circle	Block

INSTRUCTIONS TO THE ENUMERATORS.

1. Study again the summarized House Numbering Procedure which you received with the list of your duties for the first phase of the Census.
2. Read these instructions repeatedly until you are completely familiar with them.
3. Study the Dummy interview sheet carefully and see if there are any particular types of houses/ households in your block which are not included therein, or if there is any aspect of it which you do not understand, so that you may get your difficulties resolved in the Training Classes.
4. Always carry your letter of appointment and introduce yourself by means of it, explaining to each Householder briefly the objects of the Census and the fact that all true information gained in the Census is strictly confidential in respect of all persons and can never be used in any manner against their interests.
5. Remember that the "Household" is the smallest unit in the Housing Census and enter the necessary information about each and every Household on a separate line in the Housing Census Schedule.
6. Ensure that every Building in your Block has been numbered.
7. Carry out completely the Housing Census and Cottage Industry Enquiry. The Housing Census Schedule to be completed in duplicate and only one copy of the Cottage Industry Enquiry Form.
8. The entries are required to be made of the total number of each sex regardless of age, who are "normal residents". At this stage no effort will be made to include figures of floating population like visitors to households, homeless folks etc., Hotels, Serais, Boarding Houses and Hostels will however, report the average number of their total occupants (staff, permanent guests and temporary visitors) as their normal inhabitants. Persons living regularly in Boats, Tents etc. will be included where they are found.

9. Be ready at all times for a visit of inspection by your Circle Supervisor.

10. *DEFINITIONS* :—(a) *Household* is a collection of persons living and eating in one mess with their dependents, relations, servants and lodgers who normally reside together.

(b) *Normal Resident or Usual Inhabitant* is a person to whom the house is his or her permanent home or regular lodging place. *Floating Population* means homeless folks or regular itinerants, visitors to households etc.

(c) *Room* is broadly a compartment of House large enough to be slept in.

(d) *Cottage Industry* : For purposes of this enquiry, a "Cottage Industry" is one which is carried on wholly or mainly with the help of the members of a household working whole-time or part-time on a handicraft or in manufacturing articles of utility, decorative or artistic value for sale mainly outside the village or *Mohalla* where they are manufactured. This will exclude repair and maintenance services, and will normally exclude village artisans such as the Lohar, Tarkhan, Kumhar, etc., unless they do special work so as to fall within the above definition.

DO NOT DETACH ANY PAPER FROM THIS REGISTER. IF THERE ARE MORE THAN 150 HOUSEHOLDS IN YOUR BLOCK STITCH IN EXTRA SHEETS, WHICH WILL BE SUPPLIED BY YOUR SUPERVISOR, IN THE MIDDLE OF THE REGISTER AFTER PAGE EIGHT. KEEP THIS REGISTER NEAT & CLEAN.

I have made the entries of all households in my block.	I have checked 5% of the entries in this register.	I have checked——— entries in this register.

METHOD OF RECORDING PARTICULARS IN THE ENUMERATOR'S REGISTER FOR THE HOUSING CENSUS :

1. You have been given two copies of this Register, one of which (Copy No. 1) contains Cottage Industry Schedule which is also to be completed while taking the Housing Census. Even if there is no Cottage Industry in your Block the Cottage Industry Form should still be returned with the word "BLANK" written across it.

2. Your "Location Code" should be completed on each copy of the Housing Census Schedule and on the Cottage Industry Form at home before going out in your Block to fill up the Schedule & Form. This copy of the Housing Census Schedule and the Cottage Industry Form (Copy No. 1) should be completed while out in the Block carrying out the actual Housing Census. The second copy (Copy No. 2) of Housing Census Schedule may be filled up at home by copying out neatly in ink on it each evening the entries you have made on the original (Copy No. 1), during the day.

Column (2) of Housing Census Schedule : The "Census House Number" given to the building or house should be recorded in this column. In a building there can be many houses. In such a case the building number should be recorded first, underneath the No. of the building, the No. of the house therein should be recorded separately. It should be remembered that in case more than one households are living in the same house, the particulars of each of the households will be recorded on a different line by writing "Do" in this column. For example, see dummy interviews.

Column (3) : Enter the number of one of the eight types of material used in walls and in case where more than one material has been used in different portions of the house, enter the number of the principal material used in outer walls of the Major portion of the house.

Column (4) : Enter the relevant number as in column 3.

Column (5) : If a household is living in a boat or in tent etc., then put the relevant No. (1, 2 or 3) in this column. Columns (3) & (4) will then be blank.

Column (6) : Give serial numbers to the households residing in the same house whose particulars are to be recorded on different lines. If there is only one household in the house, put (i) as in dummy interviews.

Column (7) : If the household is living in "owned", "rented" or "free " house enter the relevant No. (1, 2 or 3) in this Column. In the case of servant quarters, etc. allowed free of rent, write the No. of Free (i.e. 3).

Column (8) : Name of the head of the household has to be entered for all occupied houses. For institution, hotel, etc., enter its name. For any unoccupied dwelling write "Vacant Residential" or "Under construction residential" etc. For non residential buildings write Mosque, Primary School, Office, Ware House, Shop "Vacant Shop" etc., "Under Construction Shop" etc., as the case may be.

Columns (9) to (16) : Write the number in the appropriate column.

Columns (17) to (18) : For making entries in column to 17 and 18 the head of the household should be specifically asked to state separately the total number of males and females included in the household. This will serve as a check on any possible discrepancy due to the under-reporting of females which must be continually guarded against.

METHOD OF RECORDING PARTICULARS IN THE ENUMERATOR'S REGISTER FOR THE HOUSING CENSUS :

Column (19) : Write the number of rooms occupied by the household (See instruction 10 (c) ante for definition of "room").

Columns (20) to (25) : Write the number in the appropriate column.

A model completed Housing Schedule has been prepared as an example on page B-V & B-VI of this Register.

COMPLETION :

As soon as the Housing Census is completed, the Enumerator should add up on each page the total of columns 17 to 25 of the Schedule. He should also give on each page :—

(1) The total number of occupied (residential) houses ;

(2) The total number of un-occupied structures ; and

(3) The number of households.

On the last page of the Schedule, underneath the page totals he should then give Grand Totals for his Block as above.

Thereafter, he should report to his Supervisor that he has completed the work. The Supervisor should ensure that the Blocks are all exactly conterminous, omitting no part of his Circle, and should see that the Enumerator has properly filled in the Housing Census Schedule in duplicate and should check the entries by personal visits to 5 in every 100 of the households in very Block. He should detach the Cottage Industry Form and return the original copy to the Enumerator after signing it. The second (or fair) copy of the Housing Census Schedule together with the Cottage Industry Enquiry Form he should hand over to the Charge Superintendent after comparison of the former with the original. The Charge Superintendent will examine them and make sure that no Block contains so large a number of residents as to need to be split into two or more Blocks. The Charge Superintendent should make a point of visiting at least one in every fifty houses of every Circle, inspecting the house numbering and making a spot test of the accuracy of the entries of the Housing Census Schedules.

As soon as the Charge Superintendent has checked the additions and prepared his summary sheet in triplicate he will send the fair copy of the Housing Census Schedule along with Cottage Industry Enquiry Form and Summaries (in triplicate) to the District Census Officer. The District Census Officer will retain a Summary with him and will forward the 2nd copy to the Deputy or the Joint Director/Director alongwith a copy of the Housing Census Schedules & Cottage Industry Enquiry Forms. The 3rd copy of the Summary will be sent to the Census Commissioner by the District Census Officer direct.

IT IS IMPORTANT THAT THE HOUSING CENSUS SCHEDULE BE COLLECTED VERY CAREFULLY AND KEPT IN SAFE CUSTODY BECAUSE IN THE CENSUS METHOD ADOPTED IN PAKISTAN THESE SCHEDULES ARE THE ONLY SOURCE OF INFORMATION ON HOUSING AND THE SIZE OF THE HOUSEHOLDS.

C.C. Circular No. 11 (English)

GOVERNMENT OF PAKISTAN
MINISTRY OF THE INTERIOR

(Home Division)

OFFICE OF THE CENSUS COMMISSIONER, PAKISTAN

Karachi, the 15th July, 1960.

SUBJECT.—*Training Instructions for Housing Census.*

Introduce your subject by emphasizing that the Housing Census will be a success only to the degree that each Enumerator covers his whole area, visits each and every house and enumerates each household fully.

In the training class your aim should be to create a fully co-operative group working together as a unit, with a due sense of the great importance of their task and a feeling of responsibility for its successful completion.

Before the Training Class starts, you should ascertain that each of the trainees has the following :—

(i) Their Housing Census Register. (Copy No. 1 & 2)

(ii) One blank sheet of double foolscap paper.

(iii) Duties of the Black Enumerators (First Phase).

Enumerators should study very carefully all the instructions printed on the Housing Census Register. Any doubts or difficulties should be cleared by asking questions in the Training Class.

Enumerators will often be asked, "No Housing Census was taken before in this Sub-Continent. Why is it necessary to go the expense of a Housing Census now ?". The answer to this question is clearly outlined in para. 5.2 of the Manual of Instructions Part I. Explain those points and sum up as follows :-

(*a*) In recent years the rate of urbanisation has increased considerably. This has created a big Housing problem which can only be tackled properly if Housing Statistics are properly collected for the whole of Pakistan. Housing information aids in the making of housing plans and policy. Just as the Population Census provides for the recording of facts about people, so the Housing Census records facts about houses and households. These facts will give a picture of the conditions in which people of Pakistan live.

(*b*) Information regarding the composition of "Houschold" which is lost in the Individual Census Schedule will be collected in the Housing Census.

(*c*) For making out yearly estimates, one needs reliable Vital Statistics (Births and Deaths). These statistics will also be collected in the Housing Census.

The following are the responsibilities of each Enumerator :—

(1) To follow the training closely, making certain that all points of instruction are thoroughly understood. When in doubt, he should ask questions.

(2) To carry out these instructions fully during the Housing Census, and when problems arise, to obtain a decision from the Supervisor.
(3) To obtain complete and correct information for all questions in the Housing Schedule.
(4) The entries in the Housing Census Register will be made in ink. Write words definitely and firmly.
(5) To complete the Cottage Industry Enquiry.

Pre-Housing Census duties :

Point out that the LOCATION CODE in the Census Register must be entered prior to actual Housing Census.

Explain that this register contains a dummy interview sheet to guide the Enumerators in making correct entries in the Housing Census Register and show the dummy interview sheet to the trainees.

Stress again and again the importance of having the entries completed correctly in the Housing Census Register.

Have the trainees trained in the general instructions on the first page of the Register.

Stress the importance of becoming thoroughly familiar with these instructions, as well as those on other pages of the Register.

Remind the trainees that the entries are to be recorded finally in the first copy of schedule at the actual time of the Housing Census, and are not to be made subsequently from rough notes. Entries in the 2nd copy of the Housing Census Schedule should be copied in ink neatly at home every day.

Courtesy is essential :

Point out to the trainees that an Enumerator must at all times be courteous and amiable. He should create a general atmosphere of co-operative understanding and try to dispel any feeling of suspicion which the person being questioned may entertain on being approached by a stranger. If, in spite of his efforts, any respondent shows persistent antagonism and refuses to co-operate, the enumerator should politely break off the interview as soon as possible and proceed to the next house. All such cases should then be reported to the Supervisor.

Once the introduction to the household representative has been effected, the Enumerator will explain the purpose of his visit and will proceed to fill up each column relating to that household in the Housing Census Schedule in the Register.

Enumerators must ask all applicable questions. They are not to assume they know the answers to any question, even when enumerating someone they know.

The Questions :

Column No. 1 "Line No."	The Housing Census form is lined and the line numbers are printed. No action is needed by the Enumerators.
Column No. 2 "Building or House No."	Entries in this column will be copied directly from the House numbers already painted by the Enumerators on the houses.

For Census purposes :

(a) A Building is a separate structure which may consist one or more houses.

(b) A House is structurally separate set of living premises with an entrance from outside the building or from a common half way or courtyard and or staircase.

In building there can be many houses. In such a case the building number should be recorded first, underneath the number of the building the number of the house therein should be recorded separately.

It should be remembered that in case more than one household are living in the same house, the particulars of each of the households will be recorded on a different line by putting, a ditto in this column. For an example, *see* dummy interview sheet in the register.

Column 3 & 4 "Material of wall and material of roof."

Enter the number of one of the types mentioned above. In case where more than one material has been used, only the principal materials of the exterior wall and of the roof of the major portion of the house have to be taken into account. Instruct the trainees that they should make the entry in this column from their own observation, unless :—

(*i*) the house though occupied, is still under construction. In this case the respondent must be asked to name the material that will be used in the walls and roof.

(*ii*) It is difficult to determine the true nature of the principal material.

Point out that where one type of wall material is used for the ground floor and a different material for the upper stories, that used for the ground floor will be recorded as the principal material.

Column 5 "Mobile"

Instruct the trainees that they should enter the relevant number in this column on the basis of their own observation. There is very little chance of any mistake in it.

Column 6 "Household No."

This number will generally be (i), but where there is more than one household in a house, give separate serial numbers, starting with number (i) to the households residing in the same house whose particulars are to be recorded on different lines. For an example, *see* Dummy Interview Sheet in the Register.

For Census purposes a Household is a collection of persons living and eating in one mess with their dependents, relatives, servants and lodgers who normally reside together.

Warn trainees not to confuse :

(*i*) House which is structure, and

(*ii*) Household which is a collection of persons living and eating in one mess.

> Where you find peculiar living arrangements which do not fit the definitions, use your own judgement at the time, but consult your SUPERVISOR at the first opportunity.

Column 7 "Tenure"

Enter the relevant number. Explain that for practical purposes ownership by anyone in the household makes it "owned". Draw attention of the Enumerator to the fact that he has to accept respondent's own classification. Explain that to be considered own, a house need not be fully paid for ; it may even have a mortgage or other encumbrances. However Enumerators should not of course indulge in lengthy investigation or discussion on this matter.

In case of "Rented" or "Free house", respondent's own classification should be accepted.

Column 8 "Name of Head of Household".

Point out that under this heading structures are classified into three groups. Explain each, as followes :

(a) OCCUPIED—Residential houses are those which are being lived in at the time of your visit including those not yet fully constructed. Name of the Head of the household has to be entered for all occupied houses. The HEAD of the household is usually determined as follows :

	Household	*Head*
(*i*)	Husband & Wife .	Husband.
(*ii*)	Parents and unmarried children.	A parent (usually the father).
(*iii*)	A number of unrelated persons.	Select one to whom you think most reliable.

(b) INSTITUTIONS, HOTELS, ETC., ENTER ITS NAME.

(c) ANY STRUCTURE NOT MEANT OR NOT OCCUPIED FOR RESIDENTIAL PURPOSES.

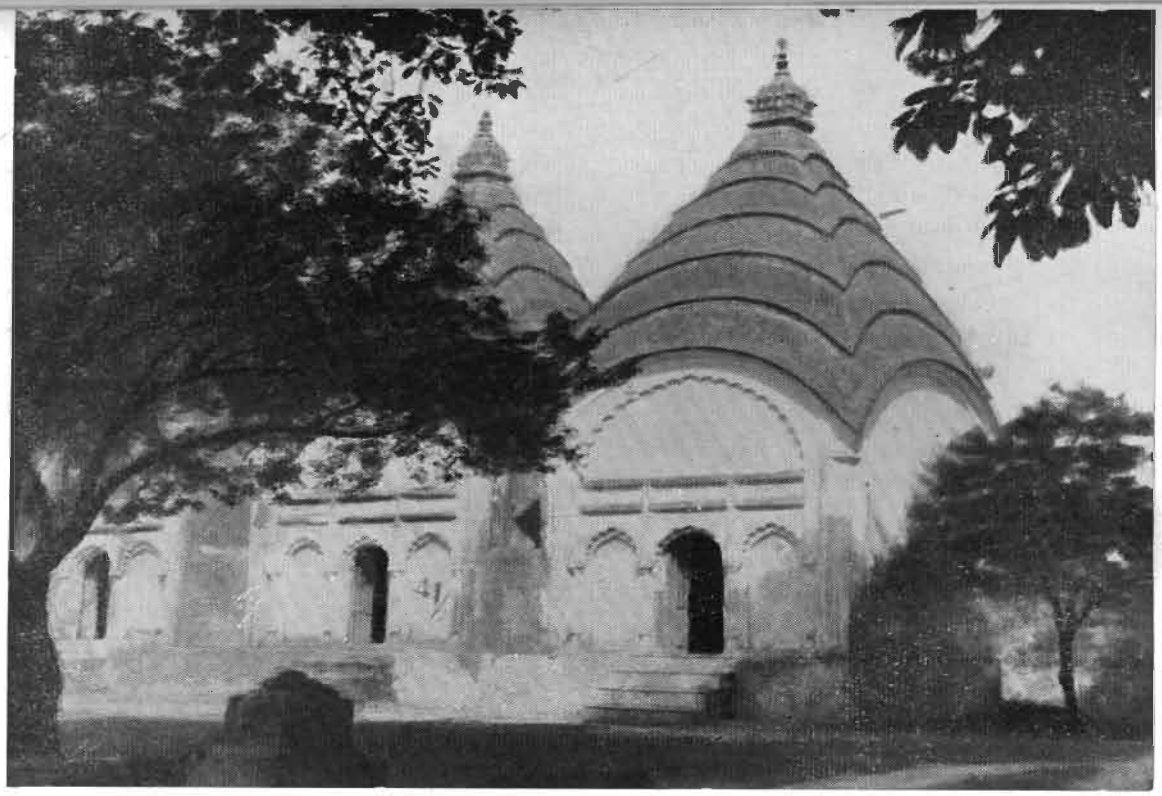

Write "Shop", "Mosque", "Office", "Ware house", "Vacant residential", "Vacant shop", "Under construction residential", "Under construction shop", etc.

A residential house with walls of bamboo and roofs of bamboo/thatch.

Mobile house—a hotel in a boat

Non-residential house—a temple.

A residential house with walls of mud and roofs of bamboo/thatch.

"Under construction" will be marked for structures from the time the foundation is begun until the first occupant moves in. No structure is considered as "Under Construction" which is occupied by a household

"Vacant" will be marked for all structures which are fully constructed but are not occupied. This includes "Closed" houses. But the enumerator should visit the "Closed houses" several times during the Housing Census period in order to ascertain that nobody is living in them.

Explain that after cearefully studying the above explanations, it will not be difficult to distinguish between various groups.

Column 9 to 16 "Number of usual inhabitants in the household".

Write the number in appropriate column.

Column 17 & 18

For making entries in columns 17 and 18 the Head of the households hould be specifically asked to state separately the total number of males and females included in the household. This will serve as a check on any possible discrepancy due to the under-reporting of females or infants or for any other reasons.

Column 19 "Rooms occupied by the household.',

Write the number of rooms.

Explain that this refers to the number of rooms occupied by the household.

For Census purpose a Room is normally a bed room, dining room, living room or room for servant. Attic-kitchens and other separate covered spaces which can be used for sleeping purposes are also rooms.

Column 20 to 25 "Births & Deaths during the last 12 months".

Write the number in the appropriate columns.

Due care should be taken to put the questions of "Infant mortality" (columns 22 & 23) and "Total deaths" (columns 24 & 25) to the respondents. Such questions are usually touchy and therefore should be asked very sympathetically.

COTTAGE INDUSTRY ENQUIRY.

This enquiry will be made along with the Housing Census.

In each household, the Enumerator will ask whether any handicraft is carried out in the household. If so, particulars should be recorded on the "Cottage Industry Enquiry" form attached in the Housing Census Register. (Copy No. 1)

For Census purpose a "Cottage Industry" is one which is carried on wholly or mainly with the help of the members of a household working whole-itme or part-time on a handicraft or in manufacturing articles of utility, decorative or artistic value for sale mainly outsdide the village or mohalla where they are manufactured. This will exclude repair and maintenances and will normally exclude village artisans such as the lohar, tarkhan, kumhar, etc., unless they do special work so as to fall within the above definition.

The Questions :

Column No. 1 "Line No". Cottage Industry Enquiry form is lined and the line numbers are printed. No action is needed by the Enumerators.

Column No. 2 & 3 "House No. or Household No." Entries in these columns should be made on the same lines as the entries made in columns 2 & 6 of the Housing Census Schedule.

Column No. 4 "Cottage Industry". Enter the name of the Cottage Industry e.g. "Toy making", "Basket making", "Mat making" etc. The name of the Cottage Industry should be recorded in the words of the respondent as distinctly and briefly as possible.

Column No. 5 "Name of Products". Whatever the product the household is making should be recorded in this column very distinctly and briefly.

Column No. 6 & 7. "Number of working Male & Female". Write the number in the appropriate column. Make it clear to the trainees that "workers" include both "full time" and "Part time".

ENUMERATION TECHNIQUE AND FIELD PROCEDURE

Points to cover	Procedure
1. Introduction	Have your Letter of Appointment ready to show on request always. Explain that to a large extent the success of enumeration depends upon the attitude adopted by the enumerator and the manner in which he conducts the interviews. Point out that no set pattern of interviewing will suit every situation, since the enumerator will be meeting all types of people. The following, however, are a few rules to go by :— (*a*) A pleasant, courteous, introduction. At each house the Enumerator should introduce himself in a pleasant and courteous manner. (*b*) Make use of your Letter of Appointment. An Appointment Letter will be provided for each Enumerator. This is the guarantee of his official status and must always be available. Show the group an Appointment letter. (*c*) Dress neatly and conservatively. (*d*) Make an effort to put the respondent at ease. If necessary, establish a friendly relationship by briefly discussing a topic of general interest. On the other hand, avoid being drawn into long, unnecessary conversations. Adopt a business-like attitude, where need be, to avoid wasting time in idle conversation. (*e*) In all circumstances, courtesy and thoughtfulness are essential. Always speak in a courteous manner, even though you may not always receive the same treatment. (*f*) If the call is made at an inconvenient time for the household, arrange to call back at another time.

Points to cover	Procedure
	(*g*) If possible avoid enumerating before a group. Stress the fact that the Census is confidential. Speedier and more accurate results will be thus obtained.
	(*h*) Do not accept information concerning the members of the household from a child. Avoid accepting information concerning other members of the household from servants.
	(*i*) When the necessary information is received, close the interview courteously. Thank the respondent for his co-operation and leave promptly.
2. How to deal with difficult cases.	Occasionally there will be persons who, for various resaons are difficult to enumerate. Following are suggested methods of dealing with such persons :— (*a*) If a person is reluctant to give the required information, due to a feeling that this is an intrusion into his private business, it should be pointed out that— (*i*) Census information is strictly confidential. (*ii*) All Census employees are sworn to secrecy. (*iii*) Under the Law, no use can ever be made of any Census return to the disadvantage of the individual. If this approach fails, attention should be drawn to the fact that all persons are required by law to give the necessary information to an authorised Census Enumerator. Should the Enumerator still be unable to get the required information he should— (*i*) make a note of the name and address of the persons refusing and (*ii*) report the matter to his Supervisor.

Poinst to cover	Procedure
	(*b*) Certain persons will attempt to draw an Enumerator into an argument either by questioning the value of the census or by bringing up some political topic. Nothing is gained by arguing with such persons. Rather humour him along, but under no circumstances become involved in a discussion on politics. Simply explain that as a Census Enumerator you must not discuss politics.
3. Detailed "Indoor" and "Outdoor" Training Programme.	Detailed "INDOOR" and "OUTDOOR" Housing Census Training Programme will be chalked out by the P.D.C., keeping in view the local conditions, prevailing in different areas.

R. D. HOWE, M.B.E., C.S.P.,
Census Commissioner, Pakistan.

APPENDIX—E

TYPE OF BUILDING AND INSTITUTIONS TO BE NUMBERED.

(i) Conventional (permanent) dwelling : A dwelling is a room or suite of rooms and its accessories in a permanent building or structurally separated part thereof and is intended for habitation by a private household and is not, at the time of the census in use for other purposes. It should have a separate access to a street or to a common space within the building like staircase, passage, gallery and so on. All such dwellings are to be numbered.

(ii) Rustic (semi-permanent) housing unit : A rustic housing unit is an independent enclosure which has been rudely constructed or erected (e.g. having mud walls, thatched roof etc. with locally available rustic materials such as stones, sun dried bricks, bamboo, palm, straw of any similar materials) for the purposes of habitation by a private household and is used as living quarters at the time of the census. All such housing units are to be numbered.

(iii) Mobile housing unit : A mobile housing unit is any type of living accommodation which has been made to be transported or which is a moving unit, such as a ship, boat, barge, caravan, vessel, tent, trailer, yatch etc. It is difficult to number such units. But if they are expected to stay at their particular place for 6 months or more, they should be numbered.

(iv) Improvised housing unit : An improvised housing unit is an independent makeshift, or structure built without a predetermined plan and made of assorted material, or any other unconventional arrangement utilized as living quarters. In this category are included Jhugies, caves. etc. They should be numbered.

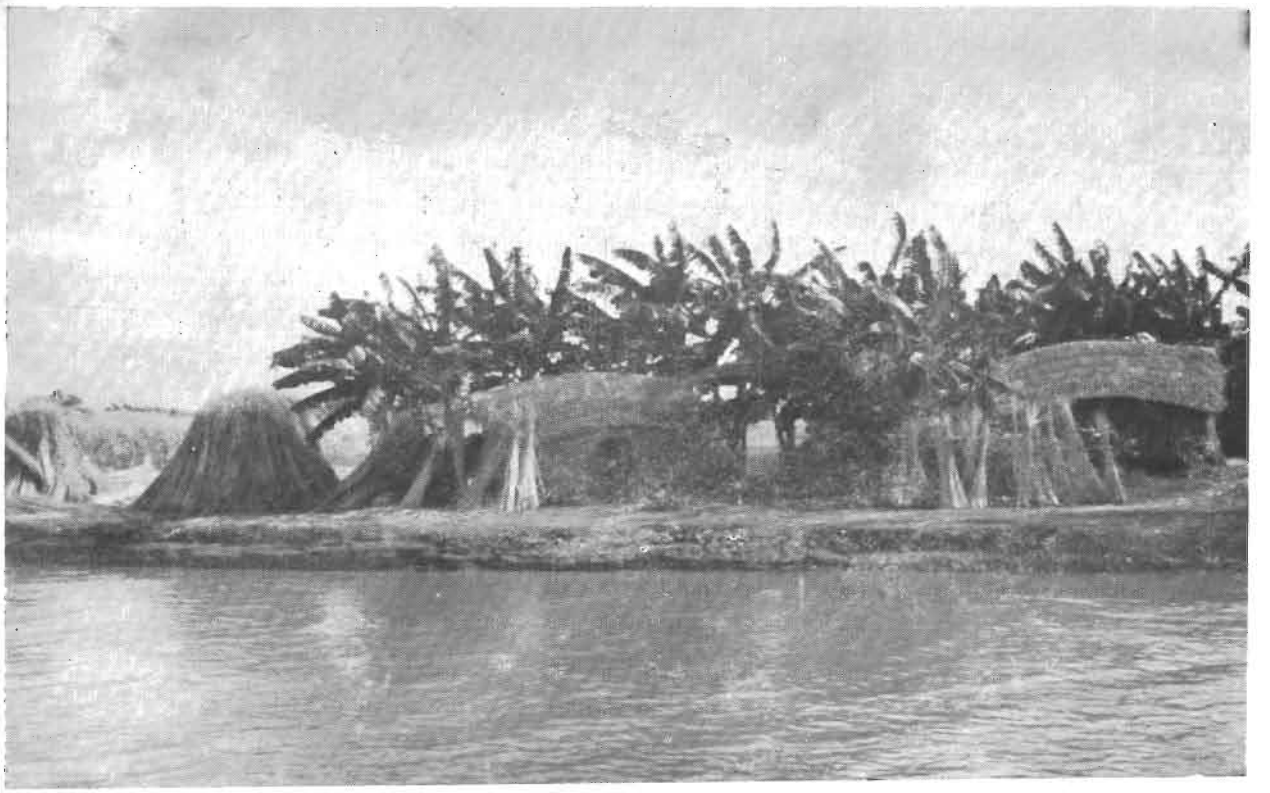

(v) Hotels, boarding houses etc : This group comprises permanent structures which are intended for the accommodation of travellers or persons who do not form part of a private household. In this category are included hotels, inns, boarding houses, lodging houses, residential clubs etc. They should be numbered.

(vi) Institutions : This group covers any set of premises in a permanent structure or structures designed to houses groups (usually large) of individuals who are subject to a common authority. In this category are included hospitals, military barracks, boarding schools, convents, prisons etc. They should be numbered.

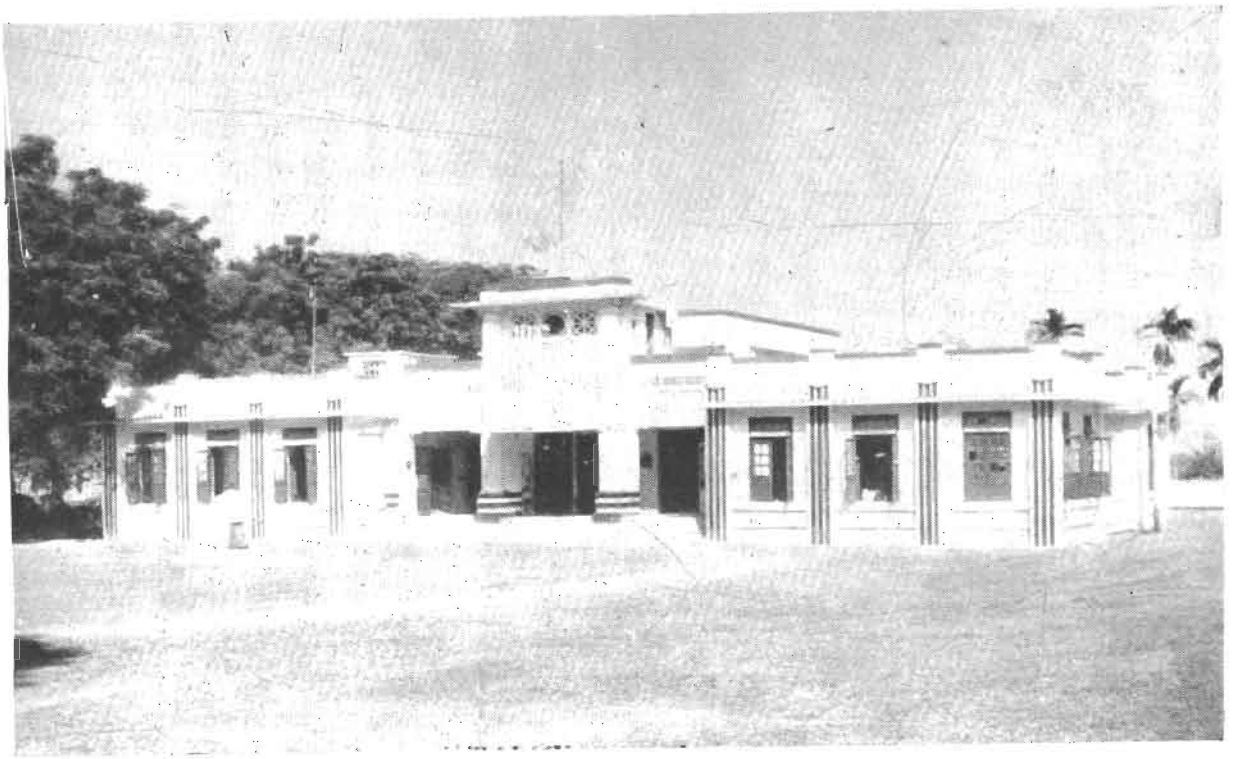

(vii) Camps : This group includes enclosures containing sets of premises intended for the transitory occupation of individuals with common activities or interests . In this category are included military camps and camps established for the housing of workers in mining, agriculture, public works or other types of enterprises. All the premises in such enclosures should be separarately numbered.

(viii) Housing units not intended for habitation : A housing unit not intended for habitation is one that has not been built, constructed or arranged for human habitation but which is, nevertheless actually in use as living quarters at the time of the census. Such a housing unit may be located in a permanent structure or may be a natural shelter. In this category are included stables, garages, warehouses, shops, etc. These units should be numbered.

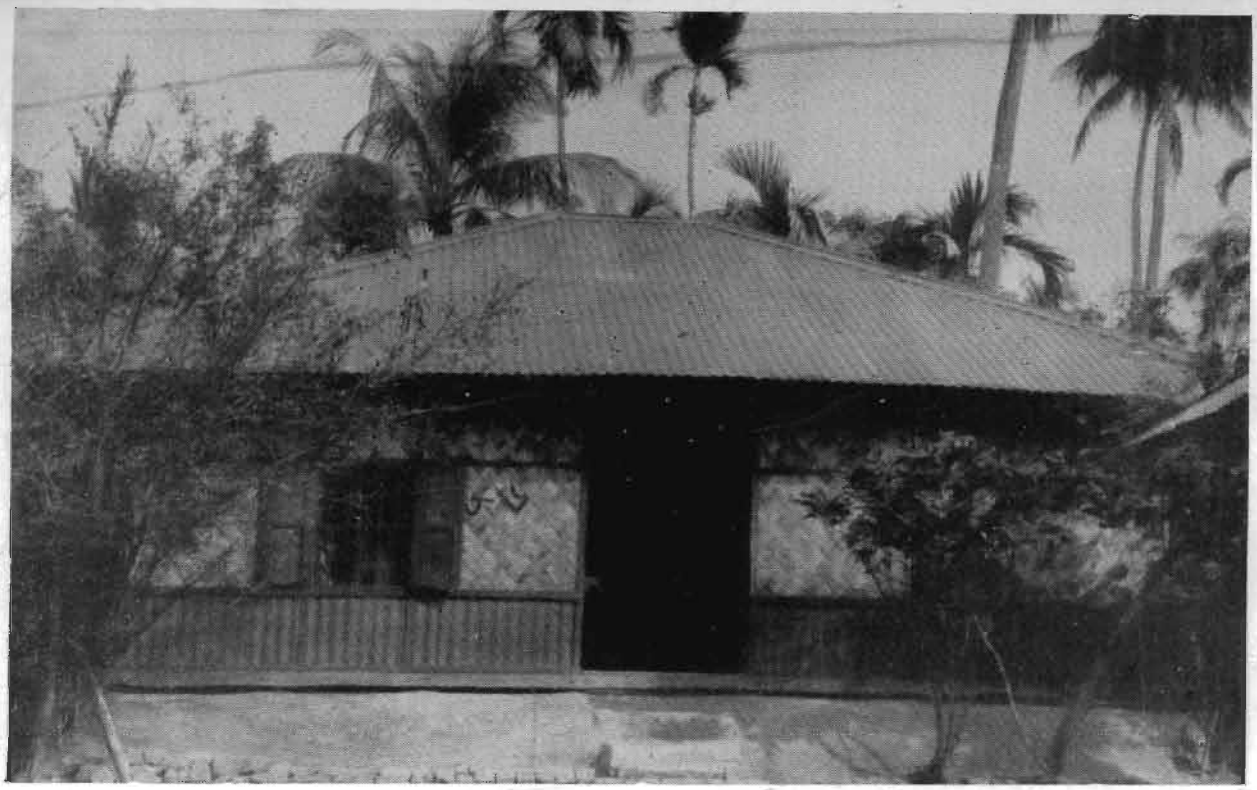

(ix) Commercial buildings (including offices, factories, Workshops and stores) : Each com-

Residential houses with walls of thatch and roofs of bamboo/thatch..

Non-residential house—an office.

A residential house with walls of bamboo and roofs of C. I. sheets.

Non-residential house—a government building.

mercial building is to be numbered at the main entrance.

(x) Government offices : To be numbered in the same way as commercial buildings.

(xi) Mosques, Churches and Temples : These are to be numbered. If there are detached houses within the compound of a mosque, church or temple each detached house is to be given a separate number.

(xii) Police barracks : Each barrack providing quarters for police personnel is to be given a census house number.

(xiii) Married quarters for police : Each separate dwelling with its own entrance is to be numbered separately.

(xiv) Hospitals, prisons, welfare homes, quarantine stations and other institutions Where the institution constitutes an entire reticulated unit, separate dwellings for staff are to be numbered separately. Each block of quarters for staff unaccompanied by their families, e.g. nurses quarters is to be given a census house number. Each block for patient or inmates in the institution is to be allotted a census house number. Hospitals and homes which do not constitute an entire reticulated unit are to be allotted one census house number for the whole institution.

PART II

TABLES

COMPILED BY

RUHUL AMIN Esq. E.P.C.S.

DEPUTY DIRECTOR OF CENSUS
MACHINE SORTING CENTRE,
DACCA.

NOTES

1. The figures included here represent the total count of houses and structures in Urban Areas and estimates prepared on the basis of a 10% sample of total count for Rural Areas.

2. Population fiigures given in this volume were collected in September- October, 1960 on household basis as part of the Housing Census and may be treated as estimates only. Theese figures are not necessarily comparable with the population figures which were obtained from actual enumeration of each individual during the Population Census in January, 1961

3. Housung Census data is also available for Thanas within each Subdivision but is not being published here. It can, however, be made available to genuine users by special arrangements.
