DISTRICT CENSUS HANDBOOK
1951

BULANDSHAHR DISTRICT

FOREWORD

Several States, including Uttar Pradesh, have been publishing village statistics by districts at each census. In 1941 they were published in U. P. under the title "District Census Statistics" with a separate volume for each district. In the 1951 census, when the tabulation has been more elaborate than ever in view of the requirements of the country, the district-wise volume has been expanded into a "District Census Handbook", which now contains the District Census Tables (furnishing data with break-up for census tracts within the district), the District Index of Non-agricultural Occupations, agricultural statistics from 1901-02 to 1950-51 and other miscellaneous statistics in addition to the usual village population statistics. The village population statistics also are given in an elaborate form giving the division of the population among eight livelihood classes and other details.

2. It may be added here that a separate set of district-wise volumes giving only population figures of rural areas by villages and of urban areas by wards and mohallas and entitled "District Population Statistics" has already been published. This separate series was necessitated by the urgent requirements of the U. P. Government for elections to local bodies. The printing of the District Census Handbooks involves colossal work and is bound to take some time.

RAJESHWARI PRASAD, I.A.S.,
Superintendent, Census Operations,
Uttar Pradesh.

INTRODUCTION

A—The District

1. The district of Bulandshahr is situated in the upper *doab* of the Ganga and the Yamuna. It lies between Meerut in the north and Aligarh on the south ; on the west it is separated from Delhi and the Punjab by the Yamuna and on the east from Moradabad and Budaun by the Ganga. The total area of the district according to the latest returns is 1,889* square miles and its population in 1951 was about 15 lakhs. There are four tehsils. Sikandrabad, the largest tehsil of the district with an area of 521 square miles, occupies a compact area on the north-west. Khurja, with 459 square miles, is a long thin strip stretching along the Aligarh border on the south from the Yamuna on the west to beyond the Kali *nadi* on the east. Bulandshahr, with 476 square miles, fills the north-east and centre of the district. Anupshahr, the smallest tehsil with 456 square miles is the eastern tehsil lying along the Ganga. The district has 13 parganas and 16 thanas.

Topography

2. The general surface of the country in this district presents an almost uniform level appearance with a gradual slope from north-west to south-east. The bulk of it lies on the upland between the valleys of the two great rivers on its borders, and the upland soil for the most part is a good firm loam, though here and there sandy outcrops appear, sometimes taking the form of actual sand hills. The general level is otherwise broken by two main drainage lines of which the most important is the Kali *nadi* running roughly down the centre from north to south ; the other is the Nim *nadi* which runs more or less parallel to the Kali *nadi*, between it and the Ganga. Other drainage lines are fairly numerous, but for the most part are purely beneficial and not marked, as these two are, by scoured soil along the banks. An exception is found in a tract in the east of parganas Baran, Shikarpur and Pahasu and in the west of parganas Anupshahr and Dibai, where a tributary system of the Nim, known as Choiya, is marked by stiff soil and some water logging as well as *usar* waste. Another rather inferior tract is that drained by the Kharon *nadi* in pargana Sikandrabad and Khurja and a small portion of pargana Baran, where saturation results in considerable patches of waste with an *usarous* taint. The sandy outcrops are most prominent in the north-east towards the Ganga in pargana Siana and Ahar, and in discontinuous lines in the tract west of the Kali in parganas Sikandrabad, Khurja and Pahasu. The edge of the upland towards the Yamuna valley in tehsil Sikandrabad is also marked by light soil and undulating *bhur*. All these tracts, however, make relatively small scars on an extensive fertile plain.

The lowlands of the district are comparatively small. Along the Ganga the *khadar* is narrow and largely sand and waste. It has also some good soil in patches. The descent to the *khadar* is generally marked by precipitous ravines and in places particularly in the north in pargana Ahar, the ravines extend two or three miles, or even more, inland. Towards the south the undulations are less pronounced. The descent to the Yamuna valley on the other side is not so abrupt. The Yamuna valley or *khadar* proper, is fairly wide on the north-west border but generally tends to narrow further south. The *khadar* is interspersed with patches of waste. Cultivation is shifting and uncertain. Some deterioration is caused in a portion of it by changes in the Bhuriya *nadi*, which has become practically the lower course of the Hindan. *Reh* and water logging prevail in the Hindan *khadar*.

Soils

3. The soils of the district are *seota*, *dakra*, *pilota*, *bhur*, *khadar* and *reh*. The upland soil for the most part is a good firm loam, locally known as *seota*. It responds well to irrigation and becomes dark and rich when highly manured. It yields all the best crops. *Dakra* or clay is found in depressions. It is often fertile but heavy to till and being liable to floods it usually grows only *rabi*. *Pilota* is yellow, light, sandy loam. It dries quickly and yields well only if it gets abundance of water. *Bhur* is mostly sand, generally in ridges or hillocks. *Khadar* is river alluvium. It is variable but commonly sandy, especially by the Yamuna. *Reh*, *shora* and *kallar* are the names of a disease of *seota* and *dakra* in lowlying tracts, its extreme form being *usar* waste. It is caused by stagnation and an unduly high water level and eats into fields thereby greatly reducing their yield. *Usar* land is specially found in Khurja. In this nothing grows except a little *dhak* and thorn jungle. The plains are white due to *reh*. The district contains much land capable of producing salt and saltpetre. These lands lie for the most part close to Yamuna but small saline patches are to be met with along the Kali *nadi* where the banks of stream are low. *Kankar* is common in this district.

---

*The figure has been supplied by the Surveyor General of India. The figure differs from that given in Table E (1,912 square miles) which is based on district land records surveys.

Classification of area

4. The figures of classification of area during the last 50 years are given in Table 2 of Part III of this volume. The proportion of area under the various categories works out as follows for 1950-51:

	Actual figures (in acres)	Percentage
Cultivated area..	926,545	75·8
Culturable waste (excluding current fallow)	114,510	9·4
Current fallow	31,123	2·5
Forest	..	..
Area not available for cultivation of which	150,208	12·3
(a) *Covered with water*	30,454	2·5
(b) *Under sites, roads and buildings*	38,915	3·2
(c) *Barren*	30,839	6·6

The figure in the above table regarding culturable waste taken from the Season and Crop Report is, however, misleading. The State Agriculture Department conducted in 1949-50 a detailed enquiry through the District Officers regarding the nature of this area in each district. The following analysis of the area resulted from this enquiry :

Particulars	Area (in acres)	Percentage
Total culturable waste (A+B+C)	**112,360**	**100**
A—Area under culturable waste land not available for immediate cultivation	28,585	25·44
(i) Forest under any legal enactment	..	..
(ii) Groves	9,538	8·49
(iii) Forests of timber trees	246	0·22
(iv) Thatching grasses, shrubs and bushes	14,290	12·72
(v) Land kept for grazing	4,511	4·01
B—Area under culturable waste land available for immediate cultivation but which could not be cultivated of which due to—	44,637	39·73
(i) *Kans* growth	84	0·08
(ii) Threshing floors	612	0·55
(iii) Malaria	..	..
(iv) Floods	1,165	1·04
(v) Lack of drains..	..	..
(vi) Lack of water	9,946	8·85
(vii) Distance from *abadi*	2,936	2·61
(viii) Damage from wild animals	1,241	1·10
(ix) Other causes	28,653	25·50
C—Area under culturable waste land that can be brought under immediate cultivation after improvements besides the area given against B.	39,138	34·83

From the above it will appear that of the total area recorded as cultivable waste, only 34·8 per cent. was really capable of being brought under immediate cultivation after some improvements.

Thus the land area cultivated and cultivable including current fallow *per capita* works out to 71·5 cents of which 63·8* cents have already been brought under cultivation and only about 2·6 cents can be further brought under the plough after some improvements. It is obvious that the saturation point for cultivation has already been reached in the district.

Climate and rainfall

5. The climate is of the type usually found in North India. It is extremely cold in winter. During the prevalence of hot winds in the later part of the spring and the beginning of summer the climate is dry and very hot but when the rains set in it is moist in the extreme.

*The figure also includes the area classed as current fallow.

The average rainfall for the last quinquennium was 30·7″. During the last 45 years the rainfall has been less than 15″ in only 4 years and has been usually over 20″. Bulandshahr tehsil is by far the wettest portion of the district. Generally speaking more rain is received towards the Ganga than towards the Yamuna.

Irrigation

6. Irrigation is derived from canals, tube-wells, other wells and other sources. In 1950-51 the irrigated area from canals was 45·7 per cent., from tube-wells 21·2 per cent., from wells 31·8 per cent. and from other sources 1·3 per cent. The important canals of the district are Upper Ganga Canal, Anupshahr Canal, Mat Canal and Lower Ganga Canal.

Crops

7. More acreage is sown under *rabi* crops than under *kharif*. The area under *rabi* in 1950-51 was 646,351 acres, under *kharif* 591,965 acres and under *zaid* crops 6,431 acres. The principal *kharif* crop is maize followed by juar and bajra. The principal *rabi* crop is wheat followed by barley. Sugarcane has now become an important crop. The area under it was 34 thousand acres in 1901-02 while in 1950-51 it was 115 thousand acres.

B—Analysis of the Statistics

Population : General distribution and density

1. The table below shows the two basic figures—land area and population—and the derived figures of land area *per capita* :

Tehsil	Population (in lakhs)	Density (number per square mile)	Land area (in lakhs of acres)	Land area *per capita*
Anupshahr	3·87	848	2·92	0·75
Bulandshahr	4·56	957	3·05	0·67
Khurja	3·40	741	2·94	0·86
Sikandrabad	3·17	609	3·33	1·05
Bulandshahr district	*15·00*	*784**	*12·24*	*0·82*

This district though twenty-sixth in order of area stands fourteenth in the State in respect of population. The density per square mile is 784 while the average density of the State is 557 only. The density of the district has not been to a very great extent inflated by the presence of large towns. The rural density of the district is also as high as 700 per square mile, the density of the rural parts of the tehsils being: Anupshahr 781, Bulandshahr 829, Khurja 646 and Sikandrabad 559. It is, however, evident that people in the district are not distributed among the different tehsils in any kind of orderly proportion to the land area. The Sikandrabad tehsil has a lower density on account of its large *khadar* area. The proportions of areas that are cultivated are larger in the Bulandshahr and Anupshahr tehsils. (*Vide* Table A-I and E)

Growth of population

2. The district had a rapid increase of population during the last fifty years. Its population in 1951 was 31·9 per cent. higher than what it was fifty years ago. Compared to this the increase in the population of the State during the corresponding period has been only 30 per cent. The table below exhibits the variation in the total, rural and urban population for the last five decades.

Census year	Population			Variation		
	Total	Rural	Urban	Total	Rural	Urban
1901	1,137,039	952,356	184,683			
1911	1,122,743	956,076	166,667	—14,296	+3,720	—18,016
				(—1·3)	(+0·4)	(—9·8)
1921	1,066,149	912,933	153,216	—56,594	—43,143	—13,451
				(—5·0)	(—4·5)	(—8·1)
1931	1,136,873	962,005	174,868	+70,724	+49,072	+21,652
				(+6·6)	(+5·4)	(+14·1)
1941	1,317,223	1,106,867	210,356	+180,350	+144,862	+35,488
				(+15·9)	(+15·1)	(+20·3)
1951	1,499,884	1,266,448	233,436	+182,661	+159,581	+23,080
				(+13·9)	(+14·4)	(+11·0)

* According to the area figures supplied by the Surveyor General of India, the density of the district works out to 794.

Between 1901 and 1921 the population of the district recorded a decrease of 6·2 per cent. when that of the State decreased by 4 per cent. only. During 1901—11 the district suffered from epidemic malaria and plague. The influenza of 1918-19 caused a decrease in the population both in the rural and the urban areas. Such abnormal deaths did not occur or were prevented from occurring in the post - 1921 period and the population of the district recorded an increase of 40·7 per cent. since 1921 against an increase of 35·5 per cent. in the population of the State during the same period.

Tehsil	Percentage variation 1941—51
Bulandshahr district ..	*+13·9*
Anupshahr	+13·9
Bulandshahr	+16·0
Khurja	+12·5
Sikandrabad	+12·4

The variations in the population of the tehsils during 1941—51 are shown in the marginal table. In Bulandshahr tehsil the larger increase is chiefly due to the rise of the Bulandshahr town. The growth in other tehsils needs no special comment.

The Vital Statistics

3. Births and deaths mainly account for the trends in population growth. Migration also is a factor though of lesser importance. The following table gives the mean decennial registered birth and death-rates and the calculated natural increase rates and population growth-rates of the last three decades for the district as a whole and for its rural and urban areas :

Particulars	Total	Rural	Urban
Mean decennial birth-rate			
1941—50	33·1	32·2	37·7
1931—40	42·9	44·0	37·3
1921—30	40·9	44·3	22·0
Mean decennial death-rate			
1941—50	20·0	19·1	24·9
1931—40	26·6	26·7	25·9
1921—30	30·9	33·1	18·8
Mean decennial rate of natural increase			
1941—50	13·1	13·1	12·8
1931—40	16·3	17·3	11·4
1921—30	10·0	12·2	3·2
Mean decennial growth-rate			
1941—50	13·0	13·4	10·4
1931—40	14·7	14·0	18·4
1921—30	6·4	5·2	13·2

There are large omissions in the registration of births as well as deaths and so the above rates do not represent the true picture at all. They may, however, be taken to be roughly indicative of trends. Both birth and death-rates have fallen during the last decade. Furthermore, the figures of natural increase and growth-rate suggest a loss of population by migration since 1921.

The average yearly mortality from various causes in the district during 1941—50 was as follows :

Causes	Number of deaths	Percentage of total deaths
Fever	24,869	88·1
Dysentery and diarrhoea	504	1·8
Respiratory diseases	844	3·0
Plague, cholera and small-pox	675	2·4
Others	1,333	4·7

As in the rest of the districts of the State 'fever' is responsible for a majority of deaths. But fever covers a large number of ailments which the reporters are unable to identify. (*Vide* Table I, Part III of this Volume)

Migration

4. About 89·2 per cent. of the people enumerated in the district at the census of 1951 were born there, 9·2 per cent. were born in other districts of the State, 1·2 per cent. in other parts of India and 0·4 per cent. came from other countries. Of the immigrants from the districts of the State as many as 134,939 (males 17,290, females 117,649) are from the other districts of the same natural division and only 2,332 (males 1,089, females 1,243) are from other parts of the State. The sex-proportion indicates that most of the migration from the neighbouring districts is marriage migration. Of 17,685 immigrants from the adjacent States 11,989 (males 2,350, females 9,639) are from Punjab, 3,946 (males 814, females 3,132) are from Delhi and 1,126 (males 405, females 721) are from Rajasthan. Most of this migration is also marriage migration.

Of the immigrants who have come from territories beyond India 5,774 (males 3,129, females 2,645) are from Pakistan and only 127 (males 77, females 50) are from other territories. The Pakistan-born are the displaced persons who number 5,279 in the district. Of the immigrants born in other territories 74 (males 50, females 24) are Nepal-born.

Of the three non-Indian nationals two are Nepalese and one is American.

Unfortunately the figures of emigration are not available. On the balance of migration according to Vital Statistics, however, the district lost about 39,600 persons during 1921—30, 20,000 during 1931—40 and 1,100 during 1941—50. But it should be borne in mind that the figures contain an element of registration error and are only indicative of trends. (*Vide* Tables D-IV and D-VI)

Decline of cultivation *per capita*

5. We may now analyse the growth of population in the district during the last thirty years in relation to the growth of cultivation during the same period. The figures are exhibited in the marginal table (figures of area shown under census years are quinquennial averages for the five years ending with the crop year immediately preceding the census year). It is obvious that cultivation has failed to keep pace with population. The cultivated area *per capita* has gone down to 61·0 cents in 1951 from 77·6 cents in 1921. The magnitude of this drop is about one-fourth of the 1921 level. It means that (other things being equal) every man, woman and child must expect to get less food and other agricultural produce from the land in 1951 than in 1921.

Census year	Population *	Net area sown (in acres)	Area of cultivation *per capita* (in cents)
1921	1,066,519	827,498	77·6
1931	1,136,885	854,726	75·2
1941	1,317,223	864,744	65·6
1951	1,499,884	916,806	61·0

Double crop area *per capita*

6. It may be examined whether this shortage has been compensated by an increase in yield per acre. Increase in yield can be brought about by more double cropping, more irrigation, better fertilization and better culture. The average (quinquennial) area sown more than once was 281,177 acres in 1921, it slightly decreased to 260,472 acres in 1931 ; again it slightly increased to 279,652 acres in 1941 ; and it further increased to 320,779 acres in 1951. The figures of double crop cultivation *per capita* in cents are as below :

Particulars	Quinquennial average for the year preceding			
	1951	1941	1931	1921
Double crop cultivation *per capita* in cents	21·3	21·2	22·9	26·4
Unirrigated double crop cultivation *per capita* in cents	15·4	11·3	13·0	15·9
Irrigated double crop cultivation *per capita* in cents	5·9	9·9	9·9	10·5

It is evident that between 1921 and 1941 the double cropped area did not keep pace with the growth of population. During 1941—51 it has been stationary but the irrigated double crop cultivation *per capita* has gone down appreciably.

Irrigated area *per capita*

7. The average area irrigated in the district was 415,692 acres in 1921. The figures were 426,230 acres for 1931, 441,097 acres for 1941 and 467,600 acres for 1951. The average area irrigated more than once was 111,892 acres in 1921, 112,652 acres in 1931, 130,996 acres in 1941 and 89,174 acres in 1951.

The figures of irrigation *per capita* are shown in the table below :

Particulars	Year			
	1951	1941	1931	1921
Irrigated single crop cultivation *per capita* in cents	25·2	23·5	27·6	28·5
Irrigated double crop cultivation *per capita* in cents	5·9	9·9	9·9	10·5

*The figures of population of the various censuses relate to the then lay-out of the district.

The trend since 1921 is towards a decline.

Cropped area

8. During the quinquennium 1916—21 74·9 per cent. of the cropped area was under food crops and only 25·1 per cent. was under non-food crops. Thirty years after, during 1946—51 the cropped area under food crops was 82·1 per cent. and that under non-food crops 17·9 per cent. The proportionate area under different crops between 1911 and 1951 was as follows :

Quinquennial average of	Total cropped area	Percentage of cropped area under							
		Rice	Wheat	Barley	Juar	Bajra	Maize	Gram	Others
1911—16	1,128,330	0·2	17·2	14·0	7·5	6·3	10·0	11·7	33·1
1916—21	1,093,580	0·3	16·2	14·0	7·0	7·7	11·2	9·9	33·7
1921—26	1,134,279	0·2	18·2	12·1	8·3	6·8	9·5	13·5	31·4
1926—31	1,114,100	0·2	17·4	14·8	8·7	7·1	10·3	7·3	34·2
1931—36	1,127,359	0·3	18·3	12·3	9·0	7·0	10·0	9·3	33·8
1936—41	1,155,332	0·3	18·6	13·0	9·0	6·2	11·9	8·0	33·0
1941—46	1,201,012	0·4	18·4	13·6	8·6	8·9	12·2	7·3	30·6
1946—51	1,238,660	0·9	17·1	12·8	7·4	9·3	11·6	9·2	31·7

The area under cotton, indigo and tobacco has decreased. Under cotton the area in 1901-02 was 88·7 thousand acres while in 1950-51 it was 18·7 thousand acres only. Under indigo the area in 1901-02 was 14,914 acres and in 1950-51 it has come down to 187 acres. Under tobacco the area in 1901-02 was 5,134 acres while in 1950-51 it was only 914 acres.

Live-stock, ploughs and carts

9. Live-stock in this country live for a large part of the year on by-products of agriculture supplemented by green-fodder crops. They have, therefore, to be co-related not only with the grazing available but also with the total area under cultivation which carries a major portion of the burden of supporting the cattle population.

As will appear from Table 3 of Part III the total number of cattle and buffaloes has been increasing ever since 1930. It was 586 thousands in 1930 and now it stands at 719 thousands.

The number of working cattle and buffaloes was 1·7 lakhs in 1935, 2·0 lakhs in 1944 and 2·3 lakhs in 1951. This number is governed by the number of ploughs and carts. The number of ploughs has gone up from about 0·8 lakh in 1935 to 1·0 lakh in 1944 and 1·1 lakh in 1951. It is due to the progressive fractionalization of holdings. The number of carts have also started rising since 1935 and it now stands at 45·6 thousands. The average net cultivated area per plough works out to 8·5 acres in 1951 as against 10·9 acres in 1935 and the average net cultivated area per pair of working cattle works out to 8·1 acres in 1951 as compared to 10·3 acres in 1935.

Breeding cows and she-buffaloes are also increasing since 1935. They were 2·0 lakhs in 1935, 2·4 lakhs in 1944 and 2·7 lakhs in 1951. The cows and female buffaloes in milk per 1,000 of human population were 27 and 61 respectively. Owing to the poor milk yield the share of milk per head is only a few ounces per day.

The number of sheep has been decreasing since 1935. The number was 33·2 thousands in 1935 and it now stands at 14·3 thousands. Goats also have gone down since 1944. They were 66·0 thousands in 1944 and now the number stands at 38·5 thousands.

The number of horses and ponies is almost stationary since 1944 and stands at 8·7 thousands. Donkeys during the same period have, however, increased from 14·0 thousands in 1944 to 15·4 thousands in 1951.

Poultry has also increased from 42·3 thousands in 1944 to 55·6 thousands in 1951.

Distributed on 1,000 of human population the figures of the main categories of live-stock in 1951 are as follows :

Cattle	Buffaloes	Sheep	Goats	Poultry	Others
267	212	10	26	37	32

10. To sum up, the population of the district is growing up at the biological natural rate since 1921 but on the other hand, the land area *per capita* has declined. There is, at the same time, no evidence that crop yield per acre has increased. The threat for the district, therefore, is the magnitude of the absolute numerical increase in relation to the practically stationary acreage under cultivation.

Villages and towns

11. The district has 1,524 villages and 22 towns. Out of 15·0 lakhs of people who were counted at the census of 1951, 12·7 lakhs were found in villages and 2·3 lakhs in the towns, i.e., there are as many as 844 people per 1,000 of population who live in the rural areas and only 156 live in towns. The corresponding figures for the State as a whole are : rural 864, urban 136.

The rural population per inhabited village works out to 831. The villages in the district generally comprise of a single compact size. There are only 1,906 hamlets in the district. The population per hamlet is 664. The medium-sized village with inhabitants numbering between 500—2,000 is the dominant type in the district. Of the rural population 65·5 per cent. live in such villages ; 13·1 per cent. live in small villages with a population under 500 ; 21·0 per cent. live in villages with population between 2,000—5,000 ; and only 0·4 per cent. live in villages of population 5,000 and over.

Towns vary in number of inhabitants even more widely than villages. The population per town is 10,611. 42·9 per cent. of the urban population live in towns of population of 20,000 and over (Khurja, Bulandshahr and Sikandrabad) ; 20·9 per cent. live in towns of population between 10,000—20,000 (Jahangirabad, Dibai, Shikarpur and Siana) ; 23·9 per cent. of the population live in towns of population between 5,000—10,000 (Gulaothi, Anupshahr, Jewar, Dadri, Aurangabad, Khanpur Gantu, Rabupura and Pahasu) ; and 12·3 per cent. live in towns of population under 5,000 (Bugrasi, Khalaur, Saidpur, Chhatari, Dankaur, Bilaspur and Kakore). It is significant that Bulandshahr, Gulaothi and Dadri have recorded an increase of 26·2 per cent., 24·8 per cent. and 50·9 per cent. respectively over 1941. The population of Jahangirabad and Anupshahr has also been increasing. The others are declining towns. (*Vide* Tables A-III and A-IV)

Occupations : Livelihood pattern

12. Out of the total population of 1,499,884 (rural 1,266,448, urban 233,436), 946,894 (rural 898,569, urban 48,325) or 63·1 per cent. depend on agriculture for their means of livelihood and 522,990 (rural 367,879, urban 185,111) or 36·9 per cent. depend on non-agricultural sources. The following table gives the distribution of 100 persons of the total, rural and urban population of the district under the different livelihood classes :

Description	Agricultural classes					Non-agricultural classes				
	Total	I	II	III	IV	Total	V	VI	VII	VIII
Total	*63·2*	*55·2*	*1·8*	*5·2*	*1·0*	*36·8*	*11·4*	*6·4*	*1·5*	*17·5*
Rural	71·0	62·5	1·9	5·7	0·9	29·0	9·5	3·2	0·9	15·4
Urban	20·7	15·3	1·4	2·5	1·5	79·3	21·7	23·6	5·2	28·8

It is obvious that the district is one of the less agricultural districts of the State. Here as many as 63·1 per cent. of the people depend on agriculture as against 74·2 per cent. in the whole State.

Of the total population of the district 956,653 persons (males 332,749, females 623,904) or 63·8 per cent. have been classified as non-earning dependants. The percentage of non-earning dependants in agricultural population is 64·0 and in non-agricultural 63·3. In the main they consist of the females. The male non-earning dependants are mostly children. 61,555 persons (males 17,901, females 43,654) or 4·1 per cent. of the population are earning dependants. Among the agriculturists their proportion is 4·6 per cent. and among non-agriculturists they form only 3·2 per cent. Agriculture is a family occupation and it provides work to women and grown up children in the family. The remaining 481,676 persons (males 446,664, females 35,012) or 32·1 per cent. of the population consists of self-supporting persons. Their proportion among agriculturists is 31·3 per cent. and among non-agriculturists 33·4 per cent. Of the self-supporting persons 296,733 (males 286,282, females 10,451) belong to agricultural classes and 184,943 (males 160,382, females 24,561) to non-agricultural classes. On an average a self-supporting person maintains 2 non-earning dependants.

Of the 184,943 self-supporting persons belonging to the non-agricultural classes 3,412 persons (rural 2,216, urban 1,196) earn their livelihood from non-productive sources. Of the remaining 181,531 self-supporting persons (rural 127,002, urban 54,529) 2,004 (rural 367, urban 1,637) or 1·1 per cent. are employers, 24,388 (rural 11,463, urban 12,925) or 13·4 per cent. are employees and 155,139 (rural 115,172, urban 39,967) or 85·5 per cent. are independent workers.

The distribution of 10,000 self-supporting persons of non-agricultural occupations classified according to the economic divisions is as follows :

Name of division	Self-supporting persons by divisions
All industries and services	**10,000**
0—Primary indu stries not elsewhere specified	284
1—Mining and quarrying	6
2—Processing and manufacture—foodstuffs, textiles, leather and products thereof	1,600
3—Processing and manufacture—metals, chemicals and products thereof..	199
4—Processing and manufacture not elsewhere specified	985
5—Construction and utilities	1,258
6—Commerce	1,535
7—Transport, storage and communications	403
8—Health, education and public administration	486
9—Services not elsewhere specified	3,244

Among the large scale industries ceremics and pottery is the principal industry in the district. Among the cottage industries the principal are calico printing, iron utensils, tin canisters, glass bangles, glazed pottery, ghee industries, basket making, *moondhas*, *chiks* and ropes, *ban* and *moonj*.

Variation in the livelihood pattern

13. The unfortunate fact is that the agricultural proportion was increasing from 1901 to 1921 and has only slightly gone down in 1951. It was 50·1 per cent. in 1901, 60·8 per cent. in 1911, 64·3 per cent. in 1921 and now stands at 63·1* per cent. The actual number of persons who depend on agriculture has increased to 946,894 in 1951 from 685,606 in 1921 or by 38·1 per cent. while the cultivated area has only slightly increased. This has resulted in progressive fragmentation and sub-division of holdings and pressure on impoverished soil. There appears to have been a gradual decline of village arts and handicrafts. The cumulative result is a fall in the proportion of workers and a corresponding rise in dependency. The proportion of workers in the total population in 1951 was only 36·2 per cent. (agricultural 22·7 per cent., non-agricultural 13·5 per cent.) against 45·8 per cent. (agricultural 28·0 per cent., non-agricultural 17·8 per cent.) in 1921. The proportion of non-earning dependants has consequently increased from 54·2 per cent. (agricultural 36·3 per cent., non-agricultural 17·9 per cent.) in 1921 to 63·8 per cent. (agricultural 40·4 per cent., non-agricultural 23·4 per cent.) in 1951. All this is an index of the increasing unemployment and under-employment. It is only by the diversion of the population to the cottage and other industries that the present disequilibrium in the economy of the district can be redressed. (*Vide* Tables B-I, B-II and B-III)

Houses and households

14. There were 240,154 occupied houses in the district—200,823 in villages and 39,331 in towns. That gives an average of 6,306 persons per 1,000 houses or 6·3 persons per house in the rural areas and 5,935 persons per 1,000 houses or 5·9 persons per house in the urban areas.

There were 288,810 households in the district, 238,496 in villages and 50,314 in towns. That gives an average of 5,303 persons per 1,000 households or 5·3 persons per household in rural area and 4,582 persons per 1,000 households or 4·6 persons per household in urban areas. The marginal table shows the development in the size of household since 1921. The rural household is increasing ever since 1921 and is bigger than the average rural household (5·07) in the State. The urban household has registered a marked decrease since 1941 apparently due to large gains by migration.

Census year	Persons per 1,000 households of	
	Rural population	Urban population
1921 ..	4,359	4,475
1931 ..	4,725	4,557
1941 ..	5,051	5,455
1951 ..	5,303	4,582

Out of 5,303 persons in every 1,000 rural household 2,813 are males and 2,491 females. There is male excess numbering 322 in every 1,000 households. Out of 4,582 persons in every 1,000 urban households 2,438 are males and 2,144 females. There is male excess numbering 294 in every 1,000 households.

*This figure includes earning dependants according to their secondary means of livelihood, while the figure 63·1 in paragraph 12 includes earning dependants according to their principal means of livelihood and hence the difference.

Information regarding types of household and household relationship was also collected at this census with the help of a sample of about 4 per cent. According to this, in every 1,000 sample households there are 5,255 persons (males 2,802, females 2,453) in the district. The corresponding figure for the total count is 5,178.

The table below shows the distribution by size of 1,000 sample households :

Description	Small with 3 members or less	Medium with 4—6 members	Large with 7—9 members	Very large with 10 members or more
Total	264	458	197	81
Rural	259	460	198	83
Urban	296	447	190	67

Medium households are the dominant type in villages as well as in towns.

Family composition of 1,000 sample households is as follows :

		Number in 1,000 households
A	Heads of households — Male (married)	699
	Heads of households — Male (widowers)	243
	Heads of households — Females	58
	Wives of heads of households	699
		1,699
B	Sons of heads of households	1,214
	Daughters of heads of households	729
		1,943
C	Male relations of heads of households (other than sons)	591
	Female relations of heads of households (other than daughters)	886
		1,477
D	Persons unrelated to the heads of the households : Males	55
	Persons unrelated to the heads of the households : Females	81
		136
	Grand total ..	*5,255*

Sons outnumber the daughters of the heads of households. The latter leave the homes of their parents after marriage. Female relations (other than daughters) outnumber the male relations (other than sons). Such females are generally those who become members of these households by marriage. (*Vide* Tables A-I and C-I)

Sex-ratio

15. In the district as a whole the sex-ratio was 881, i.e., there were 881 females to every 1,000 males. It varied among the tehsils. The lowest value was 872 in Sikandrabad and the highest value was 891 for Anupshahr. The ratio was 874 in Bulandshahr and 888 in Khurja.

The sex-ratio is smaller in the towns than in the villages. For the district as a whole the sex-ratio in villages is as high as 884 (mainly due to male migration) while that in towns is 864.

The corresponding figures of sex-ratio for the district were 896 in 1921, 882 in 1931, 909 in 1941 against 881 in 1951. The sex-ratio has decreased since 1941.

Age-structure

16. The number in each age-group in the district is shown below as a percentage of the total number of all ages in the total, rural and urban population separately :

Age-group		Total population			Rural population		Urban population	
		Persons	Males	Females	Males	Females	Males	Females
Infants and young children	0—4	14·8	7·6	7·2	7·7	7·3	7·3	6·7
Boys and girls	5—14	24·6	13·2	11·4	13·2	11·5	13·0	11·1
Young men and women ..	15—34	31·8	16·5	15·3	16·3	15·3	17·7	15·0
Middle-aged men and women	35—54	20·5	11·4	9·1	11.3	9·2	11·4	8·8
Elderly persons ..	55 and over	8·3	4·9	3·4	4·8	3·4	5·4	3·6

It will be seen that the population is progressive. 39·4 per cent. of the population is of age under 15 and only 8·3 of it consists of elderly persons. Again it may be noted that a larger proportion of persons in working ages (15—54) are found in the urban areas. This is the effect of migration of workers to the towns from the villages many of whom are unaccompanied by their families. (*Vide* Table C-III)

Marital status

17. Out of every 10,000 persons in the district there are 5,356 males and 4,644 females*. Among them 2,650 males and 1,809 females are unmarried. If we reckon males and females together, the unmarried people are 44·6 per cent. of the population.

Of the males 49·5 per cent. were unmarried, 43·5 per cent. were married and 7·0 per cent. were widowed or divorced. Among females 39·0 per cent. were unmarried, 51·3 per cent. were married and 9·7 per cent. were widowed or divorced.

Of the married males 1·6 per cent. were of ages below 15, 47·2 per cent. were of ages 15—34, 38·8 per cent. were of ages 35—54 and 12·4 per cent. were of ages 55 and over. Among married females 5·6 per cent. were of ages below 15, 59·1 per cent. were of ages 15—34, 30·4 per cent. were of ages 35—54 and 4·9 per cent. were elderly women.

Marriage is universal. Among males and females aged 35 years and over only 6·2 per cent. of the males and 0·1 per cent. of the females were found unmarried. Most of the females are married before they attain the age of 25. Child marriage is still prevalent though it is not very common. 1·7 per cent. of the males of ages 0—14 and 7·2 per cent. of the females of ages 0—14 were returned as married. (*Vide* Table C-III)

Languages

18. Over 99·7 per cent. of the people of the district returned Hindi, Hindustani or Urdu as their monther-tongue. Among the other mother-tongues spoken the main is Punjabi (0·25). Of the 15·0 lakhs of people in the district only 2,287 or 0·15 per cent. were bilingual (in an Indian language). Those whose mother-tongue is other than Hindi, Hindustani or Urdu are generally the migrants who are able to speak either of these as subsidiary language. Persons returning Hindi, Hindustani or Urdu as secondary language were 1,693 or 74·0 per cent. of those who were bilingual in some Indian language. (*Vide* Table D-I)

Religion and special groups

19. Out of 10,000 population of the district the number of persons belonging to different religions is : Hindus 8,204, Muslims 1,721, Sikhs 42, Jains 11 and Christians 21. Of 10,000 population in villages the numbers are : Hindus 8,540, Sikhs 42, Jains 2, Muslims 1,394 and Christians 21. Of 10,000 population in towns the numbers are : Hindus 6,384, Sikhs 45, Jains 56, Muslims 3,491 and Christians 24. Muslims, Jains, Sikhs and Christians are generally concentrated in the urban areas of the district as is the case in other units of the State.

There are 246·7 thousand Scheduled Castes in the district. Their number per 10,000 of population works out to 1,645. In villages they are 1,758 for every 10,000 and in the towns their number per 10,000 is only 1,030. There are 28 Anglo-Indians (males 7, females 21) in the district. (*Vide* Tables D-II and D-III)

Displaced persons

20. The number of displaced persons in the district at the census was 5,279 (males 2,847, females 2,432). Of them 81·1 per cent. have come from West Pakistan, 0·1 per cent. from East Pakistan and 18·8 per cent. from the districts which could not be traced. (*Vide* Table D-V)

Literacy

21. The percentage of male literacy was 17·9 in the district while that of female literacy was 3·1. As compared to this the percentage of literates among males in 1931 was 7·9 ; among females it was only 0·9†. On January 1, 1951 there were 510 primary schools in the district with enrolment of 52,787. (*Vide* Table D-VII)

C—Explanatory note on the Statistics

The statistics in this volume have been presented in three parts:

I—District Census Tables

II—Village, Town, Pargana and Thana Statistics

III—Miscellaneous Statistics

Parts I and II contain census data. A brief account of the system of sorting of census slips and preparation of tables and abstract therefrom is given below.

Part III contains statistics throwing light on special aspects of population and its growth. These have been derived from miscellaneous sources. Table 1, "Vital Statistics", has been prepared from the published and unpublished records of the Director of Medical and Health Services ; Table 2, "Agricultural Statistics", from the Annual Season and Crop Reports ; Table 3, "Live-Stock, Agricultural Machinery and Implements", from the published figures of Live Stock Census and Table 4, "List of Primary Schools", from information specially supplied by District Inspector of Schools.

*The corresponding figures for the total count are 5,316 and 4,684.

†The number per mille (of the 10 per cent. sample population) of each sex aged 5 years and over who were returned as literates are as below:

Males		Females	
1951	1931	1951	1931
211	94	35	11

Processing of census data

2. The census data presented here has been derived from the census slips by a process of sorting, compilation and tabulation. In previous censuses the slips were first sorted by religion and this division was maintained throughout so that all data was cross-tabulated by religion. This procedure has been abandoned at this census and substituted by a division based on economic characteristics of the population. The whole population has been divided into eight livelihood classes, four of which are of the agricultural category and four of non-agricultural category as follows :

Agricultural Classes—

I—Cultivators of land wholly or mainly owned ; and their dependants

II—Cultivators of land wholly or mainly unowned ; and their dependants

III—Cultivating labourers ; and their dependants

IV—Non-cultivating owners of land ; agricultural rent receivers ; and their dependants

Non-agricultural Classes—

V—Production (other than cultivation)

VI—Commerce

VII—Transport

VIII—Other services and miscellaneous sources

Another special feature of the sorting of this census was the separation, from the very start, of slips of displaced persons and of a 10 per cent. random sample from the remainder. This has enabled the data of displaced persons to be presented separately while the 10 per cent. sample has been utilized for the preparation of Age Tables.

The slips of this census have been copied by Households into a National Register of Citizens, which has been prepared village-wise for rural areas and mohalla/ward-wise for urban areas. Table C-I is based on a 4 per cent. sample extracted from this register.

Tracts

3. The slips were first sorted by villages for the preparation of the Primary Census Abstract. For the purpose of further sorting the State was divided into tracts consisting of (*a*) *rural tracts*, comprising the rural population of each tehsil, (*b*) *urban city tracts*, comprising the population of areas which had been declared as cities, (*c*) *urban non-city tracts*, comprising the population of urban areas of a district excluding areas declared as cities. Each tract was treated as a unit for sorting of slips. All data were compiled first by tracts and then by districts. This volume presents the tract-wise data for one district (with the exception of A and E Tables, which have been presented tehsil-wise) while the district-wise data for the whole State is contained in the following State volumes :

Part I-B—Subsidiary Tables

Part II-A—General Population Tables

Part II-B—Economic Tables

Part II-C—Age and Social Tables

Explanatory notes

4. Detailed explanatory notes are appended to each State table in the printed volumes of State tables. They apply to the tables in this volume also and should be referred to when necessary. A few notes of some of the tables are reproduced below :

Table A-I—Column 5 relating to " hamlets " has been introduced for the first time. Any distinctive cluster or agglomeration of houses has been treated as a " hamlet ".

A clear distinction has been made in this census between a " House" and a " Household ". A house is any human dwelling having a separate main entrance while a household is any commensal unit living in a census house. In previous censuses the figures under " Occupied Houses" used to be that of households, while the figures under columns 7—9 of the present tables refer to occupied census houses as distinct from households.

The Economic Tables—The Indian Census Economic Classification Scheme, 1951, together with the occupational division and sub-division adopted for this census are given in Part II-B of the Report.

Table B-I—Each of the eight livelihood classes mentioned above has been divided into three sub-classes, with reference to the economic status, as follows :

(i) Self-supporting persons;

(ii) Non-earning dependants; and

(iii) Earning dependants.

These were defined in the Instructions to Enumerators as follows :

" A ' self-supporting person ' is one who is in receipt of an income and that income is sufficient at least for his own maintenance. To be 'self-supporting' a person need not be able to support his family. All that is necessary is that he should be earning sufficient for his personal needs. For purposes of this question the person enumerated is the unit and not the family or household. Any one who is not a 'self-supporting' person in this sense is a 'dependant'. A ' dependant ' may be either an ' earning dependant ' or a 'non-earning dependant'. The test is whether he secures a regular (and not casual) income, even though it may be small. Such

income may be in cash or kind; it may be continuous or seasonal employment. When the income which he secures is not sufficient to support him that person is an 'earning dependant'. A person who does not earn any income either in cash or kind is a 'non-earning dependant'. Where two or more members of a family household jointly cultivate land and secure an income therefrom, each of them should be regarded as earning part of the income. None of them is, therefore, a non-earning dependant. Each of them should be classed either a 'self-supporting person' or an 'earning dependant' according to the share of income attributable to each. The same applies to any other business carried on jointly. The share of the income is what the head of household deems it to be. This does not mean that every one who works is necessarily a self-supporting person or an earning dependant. Thus, for instance, a housewife who cooks for the family, brings up the children or manages the household is doing very valuable work. Nevertheless, her Economic Status is that of a non-earning dependant, if she does not also earn an income, and should be recorded as such."

Economically active, Semi-active and Passive persons—All non-earning dependants are economically passive. They include persons performing house-work or other domestic or personal services for other members of the same family household. But they do not include "unpaid family workers" or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise.

All earning dependants are economically semi-active only. Though they contribute to the carrying on of economic activities, the magnitude of their individual contribution is deemed to be too small to justify their description as economically active. (Their contribution to economic activity is, however, taken into account in the tabulation of data based on secondary means of livelihood.)

All self-supporting persons are, ordinarily economically active with the exception of the following classes and groups :

(*a*) All self-supporting persons of agricultural Class IV.

(*b*) The following groups of self-supporting persons who are included in non-agricultural Class VIII and derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity):

(i) Persons living principally on income from non-agricultural property ;
(ii) Persons living principally on pensions, remittances, scholarships and funds ;
(iii) Inmates of alms-houses and recipients of doles ;
(iv) Beggars and vagrants ; and
(v) All other persons living principally on income derived from non-productive activities.

Table B-II—For a self-supporting person who has more than one means of livelihood the *secondary means* of livelihood is the livelihood next in importance to his principal means of livelihood. For an earning dependant it is the source from which he secures his own income, where there are more than one subsidiary occupations only the one providing the largest income has been taken into account.

Table B-III—"Employers", "Employees" and "Independent Workers" have been defined as follows in the Instructions to Enumerators :

An "employer" is only that person who has necessarily to employ other person in order to carry on the business from which he secures his livelihood. Thus if a person employs a cook or any other person for domestic services, he should not be recorded as an "employer" merely for that reason.

An "employee" is a person who ordinarily works under some other person for a salary or a wage in cash or kind as the means of earning his livelihood. There may be persons who are employed as manager, superintendents, agents etc., and in that capacity control other workers. Such persons are also employees only and should not be regarded as employers.

An "independent worker" means a person who is not employed by any one else and who also does not employ anybody else in order to earn his livelihood. (Sweepers, *dhobies, kahars* etc., who work for several masters are independent workers. If, however, any of them accepts whole-time employment under one master he becomes "employee". Daily wage-earners who work for different masters are likewise independent workers. But if they accept employment under one master, e. g. under a factory, they become "employees".)

Tables C-II, C-III, C-IV, and C-V—The figures presented in these tables are based on single year age returns and have not been smoothed.

Tables D-V (i) *and* (ii)—For the purpose of this table a "displaced person" has been defined as follows :

"A displaced person means any person who has entered India having left or being compelled to leave his home in Western Pakistan on or after the 1st March, 1947, or his home in Eastern Pakistan on or after the 15th October, 1946, on account of civil disturbances or on account of the setting up of the two Dominions of India and Pakistan."

PART I

DISTRICT CENSUS TABLES

A—GENERAL POPULATION TABLES
