IV. Towns classified by population with variation since 1901	94
V. Towns arranged territorially with population by livelihood classes	95
5.E—Summary figures for the District and Thanas	96
6. B—Economic Tables—	
I. Livelihood Classes and Sub-Classes (For total population)	98
(For Displaced persons)	102
II. Secondary Means of Livelihood (For total population)	106
(For Displaced Persons)	
III. Employers, Employees and Independent Workers by Industries and Services, Divisions and Subdivisions (For total population)	138
(For Displaced persons)	158
7. C—Household and Age (Sample) Tables—	
I. Household (Size and Composition)	175
II. Livelihood Classes by Age Groups (For Sample population)	177
(For Displaced persons)...	
III. Age and Civil Condition (For Sample population)	194
(For Displaced persons)	200
IV. Age and Literacy (For Sample population)	206
(For Displaced persons)	210
V. Single Year Age Returns (For Sample population)	214
(For Displaced persons)	219
8. D—Social and Cultural Tables—	
I. (*i*) Mother Tongue	228
I. (*ii*) Bilingualism	236
II. Religion	265
III. Scheduled Castes, Scheduled Tribes and Anglo-Indians	266
IV. Migrants	267
V. Displaced Persons by district of origin and year of arrival in India	275
VI. Non-Indian Nationals	316
VII. Livelihood Classes, by educational standards	317
9. F(*i*)—Tribes by Religion	328
(*ii*)—Indigenous Persons Land Holding	331
10. Census Abstracts of Small-scale Industries—	
I. Distribution of Small-scale Industrial Establishments in Villages and Wards ...	337
II. Employment in Textile Establishments for Census Tracts	337
III. Employment in Non-Textile Establishments for Census Tracts	338
11. Index of Non-Agricultural Occupations	340

CACHAR DISTRICT

PRIMARY CENSUS ABSTRACTS

(Showing distribution of population by Livelihood Classes, number of occupied houses and small scale industries in villages and towns/wards).

CACHAR

Introducing the District

Cachar (as constituted after November, 1951) is bounded on the north by the North Cachar Hills subdivision of the new district of United Mikir and North Cachar Hills ; on the east by Manipur ; on the south by the Lushai Hills district and on the west by the Sylhet district of East Pakistan. It has now a total area of 2692·0 sq. miles only, after the separation of the North Cachar Hills subdivision, with 3 subdivisions—Silchar, Hailakandi and Karimganj. Silchar is the district headquarters ; Hailakandi and Karimganj are the headquarters of their respective subdivisions.

General appearance :—It must not be supposed that after the separation of the North Cachar Hills subdivision, Cachar as now constituted is actually level land. The Silchar subdivision includes the southern section of the Assam Range, a belt of hilly country with an average width of 6 or 7 miles, containing peaks between 3 to 4 thousand feet in height. On the eastern frontier there is the Bhuban Range, covering a considerable area and rising in places to over 3 thousand feet above sea level, while on the west of the Hailakandi Valley, the Saraspur Hills stretch in a continuous line to the Barak. Almost the whole of the country north and south of the river is moreover, dotted over with low ranges or very isolated hills, or *tillas* which rise like islands from the dead level of the alluvium. On the western side of the Singla or the Chargola Valley, the Dohaliya or Protapgarh Hills stretch in a compact chain as far north as the Son Bil. Beyond this point, they break up into isolated *tillas* which continue right up to the Barak at Badarpur. The Protapgraph range is separated from the Patharia hills by the valley of the Longai. The Patharias are a tract of hilly country from 6 to 7 miles breadth, which runs almost due north as far as Latu.

The general appearance of the district is extremely picturesque. On the north, east and south, they are shut in by range upon range of purple hills, whose forest clad sides are seamed with white land-slips and gleaming water-falls. There are none of those wide stretches of unbroken plain, which form so tedious a feature in the landscape in many parts of India. Low hills crop up here and there above the alluvium rising like rocky islets out of a summer sea and in one direction or another mountains always bound the view. Karimganj subdivision is dotted over with huge saucer like depressions, ('haors') filled with water during the rains, which gradually drains off in winter. Here and there swamps and *bils*, with clumps of elephant grass and reeds, land variety to the view. The banks of the Barak which winds its way through the centre of the plain and whose surface is dotted with the white sails of country craft, is for the most part lined with villages looking fresh and green at all seasons of the year. Among the *bils* and swamps, the Bakri Haor and the Chatla Haor and the Kaliganj Haor in Karimganj are noteworthy.

Mountain System :—The Bhuban Hills are a continuation of the Lushai system and run almost north along the eastern boundary of the district to the junction of the Jiri and the Barak. The main range contains peaks varying from 2 to 3 thousand feet in height and throws out a continuous succession of spurs on either side to the east and west. The Rengti Hills, like the Bhubans, project from the Lushai system and are separated by the Bhubans by the broad valley of the Rukni and the Sonai. Shortly after entering the district they throw out a well-defined spur over Barunchara on the west, but the main range continues northwards and takes a sharp bend westward to Jafirband. Throughout the whole of its length the Hailakandi Valley is shut in between two ranges. The actual range which stretches northwards from the southern frontier of the district to the Barak and bounds the Hailakandi Valley on the east is known under the following names going from south to north :—Barunchara, Rupachara, Kalachara, Bandukmara and Mohanpur. Many of these hills have been cleared and planted out with tea, and tea is also grown on the low hills and *tillas* which are dotted about over almost every portion of the plains except the valley of the Sonai.

River System.—The principal river of Cachar is the Barak which rises a little to the east of Mao Thana on the Southern slopes of the Naga-Manipur water shed, the lofty range of which forms the northern boundary of Manipur. From there, it flows a westerly and southernly course to Tipaimukh, when it turns sharply to the north and for a considerable distance forms the boundary line between Cachar and Manipur. After its junction with the Jiri, it turns again to the west and flows a zig-zag course across the centre of the district till Badarpur and Haritikar. At Haritikar the river divides into two branches and the southern arm, which is known as the Kusiyara, crosses into Sylhet. The northern branch, which is known as the Surma, forms the boundary of Cachar as far as Jalalpur. Numerous small tributaries feed the Barak, the main ones being the Jiri, the Chiri, the Madhura, the Jatinga and the Dolloo on its north and the Sonai, the Dhaleswari, the Katakhal, the Rukni and the Ghagra on its southern bank. It finally empties itself into the old bad of the Brahmaputra near Bhairab Bazaar, after a course of 560 miles. The principal tributaries of the Kushiara in Karimganj subdivision are the Singla and the Longai. The Singla rises in the Lushai Hills and flows between the Chatachura and Protapgarh ranges northwards to the Son Bil. On emerging from this bil it is known as the Kochua and falls into the Kushiara a little to the east of Karimganj Town. The Longai also rises in the Lushai Hills and flows a northerly course between the Protapgarh and Patharia hills to within a few miles of Karimganj Town. Here it turns to the south-west and finally disappears in the Hakaluki Haor, but during the rainy season it is connected with the Kushiara by a channel known as the Notiakhal.

Climate.—The climate of Cachar is not so pleasant as that of Upper Assam. The rainfall is extremely heavy, but the temperature in the rains is considerably higher than in Dibrugarh and the winter is not nearly so cold and bracing as in the northern valley. Heavy rains in April and May prevent the development of anything in any way resembling hot weather of Upper India. The moist heat between June and September is far from pleasant. The average annual rainfall at Silchar is 120" but near the foot of Assam Range it is not far short of 170". The storm clouds sweeping up the valley are, however, stopped by the Barail and it is on its southern slopes that most of this aqueous vapour it precipitated in the form of rain of which very little is secured by its northern side.

Floods and Earthquakes.—Cachar, like the rest of Assam, is a seismic area and considerable damage was done by the shock which occurred on January 10, 1869. The earthquake was felt from Upper Burma to Patna over a total area of some 250,000 sq. miles, but Manipur and the eastern end of the Surma Valley were the places that suffered most severely from this visitation. The Barak rose in hugh waves and wrecked numbers of boats. At Silchar the Jail wall, the church tower, the cemetery gates and the military hospital were all thrown in ruins to the ground. The Great Earthquake of June 12, 1897, was felt over an area of 1,750,000 sq. miles, but Cachar was fortunate enough to escape with comparatively little injury as in this district its shock was less severe than that experienced in 1869. Hardly any damage was done to buildings in Silchar, but the residence of the S. D. O. and the Dak Bungalow, both at Hailakandi and Haflong, were rendered uninhabitable. Bridges over the Katakhal, the Dhaleswari and the Ghagra were damaged. The great Assam Earthquake of August, 1950 left it practically unscathed.

During the last two decades, Cachar was free from floods like the one which visited it in 1929, although the flood of 1938 did considerable damage to crops. There was a small flood in 1946, which inundated the district. On account of the wholesale de-forestation in the hills during the Wars, the slightest rains in the hills in Manipur, Lushai Hills or North Cachar means the rushing down of waters so rapidly that small floods seem to be an annual visitation. A scheme for training the Barak by means of a dam in its upper regions in the hills is the only real solution of this problem of annual floods.

Fauna.—Wild animals include elephants which are a course to this district, causing widespread damage to paddy crop. We also come across tigers, leopards, bears and various kinds of deers. Bison and mithen is found in North Cachar Hills.

Communications.—Cachar has a very widespread net of communications and possesses tolerably good motorable roads leading to every direction. There is a fine net-work of railways as well. One line connects Silchar with Karimganj and Calcutta *via* Pakistan. There is a branch line from Katakhal to Hallakandi and Lala, another from Karimganj to to Patharkandi and a third from Karimganj to Dullabchera ; last of all there is the Hill Section from Badarpur to Lumding connecting Cachar Plains with the rest of Assam. The Hill Section though only 113 miles in length contains a number of tunnels (24) and 74 major bridges, the longest being 650′ and the highest 113′ above the river-bed. The main line crosses the Barak on a magnificent bridge. 454 yards in length, and has the foundations of its peers carried to the depth of 80′ below the bed of the river.

There is a fine net-work of roads in the district connecting Silchar with Hailakandi and Katlichara, Kalain and Jalalpur, Bardarpur, Karimganj, and Patharkandi right up to the border of the district, *i.e.*, Patni Gate, Ramkrishnapur, Anipur and Patharkandi, Karimganj and Sutarkandi and thence to Shillong *via* Sylhet. The numerous tea gardens in Cachar have their own private motorable roads which add greatly to the facilities of communications any where in the district. In addition, Silchar has become the focus of new hhways Silchar-Haflong-Garampani-Jowai-Shillong, Silchar-Patharkandi-Dharnamagar Agartala, Silchar-Duarband-Aijal, Silchar-Bhagabazar-Aijal and Silchar-Jalalpur-Jowai-Shillong. Silchar-Lakhipur-Jirihat-Jiribam, projected Bishnupur in the Manipur State.

River communications.—River communications play a very important part in exporting tea from Cachar to Calcutta, The steamers of the India General Navigation and the River Steam Navigation Co., call at Badarpur, Sialtek, Jatingamukh and Masimpur. The tributaries of the Barak make a fine net-work of waterways. There is also a proposal of having a bridge over the Barak at Silchar on the Silchar-Haflong road. Silchar is now regularly connected with Calcutta by air services and possess a very fine air field in Kumbhirgram-only 14 miles away from the district headquarters.

Tea Industry.—Like the two districts Upper Assam, *viz.*, Sibsagar and Lakhimpur, the tea industry is the main string of Cachar. Cachar has nearly 230 tea estates with a total production of 47,057,457 lbs. of tea in 1950. It engages nearly 180,000 labourers and employs thousands of middle class families in-clerical employments. The total number of tea garden labour population will be about 3 lakhs.

Forests

There are about 1,130 sqare miles of Reserved Forests and 122 square miles of Unclassed State Forests in the District of Cachar. Besides these, considerable forest areas are included within proprietory estates of grants which together may account for about 250 to 300 square miles of forest areas. These forests mostly lie to the north, east and south ends of the district and practically form a continuous belt of variying depth, comparatively narrower to the south and east but very much deeper to the north. To the west of the District lie a solitary range of Hills *viz.*, Patharia Hills Reserve which forming a part of the inter-national boundary, falls partly within and partly outside Indian territory. It has been a term of contention between India and Pakistan after the partition and was one of the issues referred to the Bagge Tribunal on the Indo-Pakistan boundaries disputes. These Forests occupy the outlying ranges of Hills that project out from the main ranges of Naga Hills, Khasi Hills, Lushai Hills and Hill Tipperah and the topography of the terrain is necessarily of a highly undulating and broken nature. Isolated low hills and smaller ranges are the usual topographical features along the line of merging of these out-lying hill ranges with the alluvial flats, which latter are further marked by presence of large swamps and pools.

The forests are of a miscellaneous evergreen type, and contain a host of tree species important amongst which, from the utilisation and commercial points of view, are Sundis, Til (M. Champaka), Moricha (Alseodaphne Owdenii), and Champa (M. Montona), Sam (Artocarpus chaplasa) Gomari (Gmelina arborea), Rata (Amoora spp.) Kurta (Palaquium polyanthum), Korol (Kayea floribunda), Nageswar (mesua ferrea), Jarul (Lagerstraemia flosreginae) Jam (Eugenia spp) Jhoki (Bischofia javancia), Garjan (Dipterocarpus turbinatus) Jhalna (Terminalia myriocarpa) Jinari (Podocarpus neifolia) Gondro (Cinnamomudy cecidodaphne), Tula (Tetrameles nudiflora) Simul (Bombax malabariaum), Dhumoil (Bombax insigne), Bonak (Schima wallichii) Koroi and Moroi (Albizzia spp), Kadam (Anthocephalus cadamba), Kayengla (Bursera sertata) and Awal (Vitex spp.)

Besides timber the Cachar forests are very rich in minor forest produce which are numerous and varied. They have an inexhaustible stock of bamboos of various species occurring over wide expanses on hills and valleys and these are muli (Melocanna bambusoides), Dolu (Teinostachyum dullooa), Kbang (Dendrocalmus longispatnus), Kaligoda (Oxytenanthera nigrociliata) Pecha (Dendro calemus Hamilton-ii) and a climbing variety of bamboo of no economic value. Of the above Muli and Dolu have great commercial importance, the former for constructional purposes, fencing etc., and latter for mat industry. Lacs of Muli bamboos are annually worked from Cachar forests and about 90 per cent. of the out-put is exported to Sylhet and other East Bengal Districts. Millions of bamboo mats woven out of strips split from Dolu bamboos find their way annually to the Cacultta market and meet virtually the greater bulk of demand of the Calcutta market for this commodity.

The other varities of bamboos which are also available in considerable quantities in the Cachar forests, though not of much economic importance at present except for local use have good possibilities of coming to more economic use in future with the future, development of paper industry and improvement in the transport system.

Other minor produce of commercial importance occuring in these forests are :—Agar (Acquillaria agallocha) canes-Galla (Daemonorops Jenkinsianus), Jati (Calamus tenuis) Honua (Calamus latifolius), and Sundi (Calamus guruba). Gandhi (Homalomena tubescens), Patidal or chattipat (Licuala peltata), Patidoi,(Clinogyne dichotoma),Honey and myrabolam.

The forests of this District yield an approximate annual revenue of $4\frac{1}{2}$ lacs of rupees of which the share of the income derived from sales of minor forest produce may be as or higher than 50 per cent.

The technique of timber and bamboos extraction from Cachar forest is of a peculiar nature which does not obtain anywhere else in the State. The forest areas, being highly broken and interspersed with marshes and ravines no form of mechnical haulage of timber was either attempted for the past or is practicable even now. The traditional method of timber extraction has been by means of dragging by elephants and the same is being rigidly adhered to the present time. Trees are felled, logged to suitable lengths and Knotches cut at both ends of the logs on the upper face. A dragging chain is passed through one of the knotches and fixed to a peculiar type of loose neck-band for the elephant made of the ropes twisted out of jute fibres. The logs thus tagged to the neckband of the elephant are dragged to the nearest floatable stream and left there till sufficient pieces are collected when these are tied in pairs with round poles as cross pieces laid across and over the knotches at both ends. Bamboos 'Bungas (Tied bundles) are then placed on either flank of the logs and pushed under the cross pieces to buoy the logs up. Such frames are locally called 'Khotai'. These Khotais are then guided down-stream in high flood to broader and deeper water courses, collected together and joined into rafts according to necessity and rowed or floated down-stream to sale marts.

Bamboos are similarly cut and tied in bundles of 25, 50 or 75 according to the width of the channel through which 'Bungas' are to be floated down and to the availability of water in the upper reaches of the stream. For raising the depth of water in the channels sufficient to permit of floating of the 'Bungas', earthen bunds strengthened with palisading are then laid across the stream at suitable points leaving a gap of '3' to '4' in each of these, preferably at the deepest part of the bed. When sufficient bamboos are cut, collected and tied into suitable Bungas up-stream of earthen bunding, the gaps in the bunds down-stream are closed with bamboos struck in the bed in rows resting slantingly on supports placed across the top of the bund. Plaintain leaves are then spread over the up-stream face of the bamboos and a thick layer of mud plastered over to present oozing out of water that will be collecting up the bund.

Bunds are usually closed the evening previous to the day for floating of the bamboo and water is allowed to collect for about 16-20 hours by which time sufficient water will have been collected to permit of floating down of the bamboos collected up-stream. Bamboo bungas will then be guided down to the bund, kept arranged in a single file just in front of the gap now closed, with a man riding on each of the 'bungas' ready to move the moment the gap is opened again. The above preliminaries having been completed. the gate will be opened quickly at a signal, when by the force of the current of the demand up water the bamboo 'bungas' are propelled down stream, the riders guiding these in their downward journey. These processes will be repeated at every 'bund' down-stream till these reach wide channels with sufficient depth of water to permit floating of bamboos without going any more through the above processes. Small 'bungas' are then collected and tied together into suitable rafts and floated down to sale marts.

The above are in brief the extraction technique, which had been introduced in the district by the Pioneer local timber traders in the past is being followed even to-day.

About 30 square miles of land in the reserve forests are cultivated by an adult population of about 4,000 settled in about 100 Forest villages, which have a total population of about 25,000. The forest Department has provided for a forest dispensary and have some wells in several of the Forest Villages to provide good drinking water for the villagers. Numerous primary schools are also located in the forests reserves.

The Forest Department maintains about 125 miles of roads and paths in mortable condition during the cold season.

This Department has by now artificially regenerated about 16 square miles of reserved forests of the district mainly by the Taungya system which permits of growing of food crops with forest crops. This system enjoins on the 'Taungya' villagers the duty of raising and tending for 2 years of the forest crops free of cost, in return for which they enjoy the privilage of growing their food crops with forest crops on reserved forest land free of rent and are allowed free use of forest produce for their domestic requirements and of 4 bighas of land per adult free of rent for cultivation. These plantations have been raised mostly by sowing or planting of important indigenous timber species but exotics too of great commercial importance have also been introduced and tree found growing quite satisfactorily. Special mention may be made of Teak and Pynkado. The forms planted in the reserve under Dholai and Longai beats sometime in the years 1919 and 1923 have now attain girths well over 5' at places and Pynkado planted in the year 1940 at Loharbund has put in an averae girth of over and 2' and height over 50'.

During the last quinquennium there have been large scale incursion into the Cachar Forest Reserves by a tribe of people called Riangs causing large-scale damage to the Forests by their 'jhumming' involving cutting down of valuable tree and bamboo crops. During 1952, they were removed from these illegal settlements with the aid of Police forces fort on a rock over hanging the Barak. Near Badarpur also, there is the Sidheswar Temple, popularly believed to be of very old origin. There is an old Shiva Bari on the top ; of the Bhuban Hills, alone with a near by cave which goes right down into the hill.

Archaeology.—Cachar contains few archaeological remains of any interest. At Khaspur on the river Madhura, there are 4 temples and two other masonary buildings, but they are of comparatively recent date and possesss little archaeological merit. It has still some bathing ghats and manuments and some old temples of the Kachari Raj. At Badarpur, there are remains of an old fort

HISTORY

The Kacharis of Cachar or Dimasa as they call themselves are generally supposed to be a section of the great Bodo tribe. This powerful race is said to have had its origin somewhere between the upper waters of the Yangtshkiang and the Hoang-ho, and to have spread in successive waves over Assam. At one time they travelled as far as Gauhati, whence they finally settled at Dimapur. When the Ahom entered the Assam Valley in 1228 A.D., the Dimasa occupied the western part of Sibsagar and a considerable part of Nowgong, in addition to the valleys of the Kapili and the Dhansiri. Inevitably, hostilities frequently occurred between the two races. In the first collision, said to have taken place in 1490, the Kacharis were victorious, but were repulsed in 1524 by the Ahoms, when they raided the Ahom territory. By 1536, the Kacharis were shorn of all their possessions in the valley of the Dhansiri and north of the Kalang in Nowgong and were compelled to abandon Dimapur and fall back on Maibong on the Mahur river. Maibong too was taken and sacked by the Ahom Ruler, Rudra Sing in 1706. The Kachari Raja thereafter fled to Cachar Plains and settled at Khaspur by about 1750 A.D., probably in the reign of Dharmadwaj or Kartik Chandra. Little is known of the history of Cachar during the 18th century. The Kachari Raja seems in fact to have sunk to the position of the petty ruler of an unimportant tribe, living in a remote and jungly tract. An important historical event was the formal conversion of the Raja Krishna Chandra to Hinduism in 1790 A.D., whose example was followed by his people, as a result of which nearly all the Kacharis in the district now describe themselves as Hindus.

In 1809, Kartik Chandra allowed himself to be entangled in the web of intrigue that surrounded the throne of Manipur with results that were fatal to his own small principality. As a result of his entanglement, Cachar was invaded by Manipur forces in 1818. In the mean time, the Burmese who has driven away the ruler of Manipur expressed the intention of adding Cachar to their dominions, but the British Government were unwilling to see a powerful nation extending its territories right up to the frontiers of Sylhet. They expelled the Burmese and seated Gobind Chandra once more upon the throne on the payment of an annual tribute of Rs.10,000. He took up his abode at Haritikar, but in 1830 he was assasinated by the orders of the Manipuri Raja, Gambhir Singh. In the absence of natural heirs his territory lapsed to the British under the terms of an agreement executed in 1826. The district was formally annexed by proclamation on August 14, 1832.

Bounded as it is both on the north and south by the hills inhabited by tribes, the Kacharis suffered more than once from the incursions of these tribes. There were a number of raids on Cachar territories by the Lushais in 1849, 1869, 1871, 1892. The Lushai Hills being thereafter pacified, there has been no incursions into Cachar after 1892.

POPULATION

Cachar had a non-eventful decade from the public health point of view when in spite of floods of 1946 and 1947 no epidemic occurred there in any form on account of the vigilance and precautions taken by the Public Health Department. The 1946 flood attained a height of only 3 feet less than the 1929 flood which was the highest within living memory. It was, however, not so devastating as its predecessor, as the cultivators could grow their

crop immediately with the subsiding of water. One of the most important events in the history of Cachar during the last decade was its re-constitution after the partition of Sylhet following the results of the Sylhet Referendum held in July, 1947. This resulted in the thanas of Badarpur, Ratabari and Patharkandi, along with a portion of the old thana of Karimganj, tagged on to the old district of Cachar. The district underwent a second re-constitution by the separation of its hills subdivision of North Cachar Hills in connection with the new United Mikir and North Cachar Hills district. Though the second re-constitution took place after the census was over, we have shown the figures of Cachar as at present under instructions from the Registrar General. The first re-constitution is likely to have a most far-reaching effect on the future demographic history of the district because the partition of country of which it was a consequence has led to the arrival of a large number of refugees in the district, who now constitute almost 9 per cent. of its entire population.

Taking into account all the changes in the boundary of the district that have taken place during the last decade up to the present day, the population of Cachar has now constituted after the separation of North Cachar Hills subdivision stands at 1,115,865, showing an increase of 220,725 over its 1941 population of 895,140. Next to Kamrup and Sibsagar, Cachar has the third largest population of any district, plains or hills, in Assam, displacing Goalpara which enjoyed this position in 1941. However, this population contains such a large influx of refugees that if they are ignored Cachar will be relegated to the fifth position which is higher than only that of Nowgong and Darrang. During the last decade Cachar has added to its 1941 population a number larger than any district of Assam except Nowgong and Kamrup. Ignoring the large number of displaced persons, 93,177, this increase still comes to 127,548, which is 40 per cent. higher than 91,446, which was the total increase in the previous decade. Cachar thus shows an overall increase of 24·66 per cent. during 1941-51, a rate higher than that registered by no other district of this Natural Division except Nowgong. This is in striking contrast to its position in the previous decade when Cachar registered only 11·38 per cent. increase and stood at the very bottom of the Natural Division in this respect. This huge increase in Cachar's population has forced up its density from 333 in 1941 to 415 in 1951. Cachar as now constituted is therefore the most densely populated district in Assam and has been consistently so in all the three preceding decades as well, of which figures are given in Subsidiary Table 1·2. In the last decade alone its density has increased by slightly more than 25 per cent. over its 1941 figure. A glance at the density map of Cachar will show that the densest part of the district is a central belt consisting of the Police Stations of Karimganj with its huge density of 1,010, Badarpur 1,195, Hailakandi 777 and Silchar 744, embedded within a low density belt on all sides. The areas of lowest density are in the South, Katlicherra 158 and Sonai 269, with another belt in the North-East consisting of Udarband 264 and Borkhola 279. Lakhipur in the east 334, Katigora in the north 320 and Patharkandi and Ratabari in the south and west 328 and 354, occupy a middle position. The small thana of Badarpur is the most densely populated thana in the whole State, Karimganj with its density of 1,010 entitled to the second rank. The principal reason is for Badarpur having this high density is that it is a very small area of only 47 square miles and out of its total population of 56,156, includes within it a population of the large Badarpur Railway Colony, 5893. The density of Karimganj thana comes down to 884 if we take into consideration only its rural portion while that of Hailakandi and Silchar to 735 and 616, if the urban areas are omitted. The tremendous spurt in the density of the four densest thanas of Cachar from their 1941 figure of Badarpur 908, Karimganj 761, Hailakandi 665 and Silchar 565, is largely due to the heavy concentration of refugees in both the urban as well as the rural areas of these thanas. No Police Station in this district has a density lower than 250 per square mile except Katlicherra, which is due to the presence of a large area of reserve forest in this thana.

Present Cachar consists of three subdivisions, the Sadar or Silchar, Hailakandi and Karimganj. Among the three, Karimganj subdivision has increased at the highest rate of 29·9 per cent. in the present decade against 23·9 per cent. of Silchar and 17·5 per cent. of Hailakandi. This is exactly the reverse of the position in 1931-41 when Silchar registered the highest rate of increase, *viz.*, 13·1 per cent. against 10·3 of Hailakandi and only 9·5 of Karimganj. After the exclusion of North Cachar Hills subdivision, the district has become more homogenous in its soil and occupations. With the inclusion of the tea districts of the Chargola and Longai Valley within it, Cachar will now rank as one of the most important tea districts of Assam. Silchar subdivision is a surplus area with regard to paddy while Hailakandi may be called the granary of the district. Karimganj subdivision is, however, in a different position regarding rice and paddy. The large tea producing area of the old subdivision of Karimganj has come to Cachar, whereas its surplus rice producing areas have gone to East Pakistan. The crops in the low-lying areas of Karimganj thana, of Son Bil in Ratabari and Anair Haor in the Badarpur thana are susceptible to regular floods while those grown in the higher areas are greatly damaged by boars and wild Elephants. I have personally seen large areas in Ratabari and Patharkandi thanas laid waste by herds of wild Elephants which reduced in one night large smiling fields with green shoots of paddy into a flattened trampled down plain. The truncated Karimganj thana shows the highest rate of growth, 32·8 per cent. with Silchar 31·8, per cent. Badarpur 31·6 per cent. and Patharkandi 28·4 per cent. No Police Station shows a rate of growth less than 15 per cent. Among the thanas which show comparatively a smaller rate of increase are Borkhola 16·1 per cent. Hailakandi 16·8 per cent. and Sonai 18·1 per cent. This is in striking contrast with the 1941 position when the percentage rates of increase were as low as only 2·2 per cent. in Katlicherra thana, 5·3 per cent. in Ratabari, 6·7 per cent. in Borkhola, 7·2 per cent. in Udarband, 7·9 per cent. in Patharkandi and 9·6 per cent. in Lakhipur. Actually no thana in the entire district showed even the minimum rate of growth given by the present census, 16·1 per cent. with the sole exception of Sylhet which alone among all the thanas of the district registered an increase of 19·1 per cent. to be followed at a respectable distance by 13·4 per cent. of Hailakandi.

Subsidiary Table 1·1 reveals blank under the density groups under 100, 100-150 and 450-600. Apart from Nowgong, Cachar is the only plains district which has as large a proportion of its area 14·07 per cent. and population 31·07 per cent. in the highest density group of 750 and over. The largest proportion both of its area and population is found in the middle density group of 300-450. As 37·84 per cent. of the area of the district has only 21·25 per cent. of its total population, it can be easily realised that four-fifths of its total population has to remain content with an area even less than two-thirds. Concentrating our case on the highest density groups, reveals a striking fact that while one half of its population lives on one-fourth of the area only, the remaining one-half is able to spread itself over three-fourths of the area. Thus the position in this respect has remained more or less the same as that in 1941. In 1941, however, no part of Cachar was found in the middle density group of 300-450 while now as we have seen this group contains its largest proportion both of the area and population. The 200-300 density group in 1941 was more than two and half times in area and three times the population than now featuring in this group. In contrast with their present position Hailakandi and Silchar were still in the next lower group 600-750 and 450-600 respectively.

Displaced Persons. —As we have seen above, one of the principal reasons of the huge overall and percentage increase registered by Cachar is the tremendous influx of refugees from the neighbouring district of Sylhet soon after the Partition of India and in a greatly increased rate after the February, 1950 Communal disturbances in East Pakistan. The refugee population of Cachar at one time exceeded the 2-lakhs mark from which it has come down to its present still high figure of 93,177 on account of the Nehru-Liaquat Agreement Nearly one-fourth of the refugees has congregated in the three towns of Silchar.

Karinganj and Hailakandi, 22,855, the remaining three-fourths of their number spreading itself in the rural areas of the district. Out of 70,322 censused in rural Cachar, Karimganj-Badarpur tract accounts for the largest number, 19,732, followed by Patharkandi-Ratabari tract 17,897 and Katigora-Borkhola-Udarband tract 11,745, Rural Silchar 8,251, Hailakandi-Katlicherra 6,625 and Lakhipur-Sonai 6,072 complete the picture in their distribution in the different rural tracts of the district. It is principally the presence of this large number of refugees in all rural areas of the district that is responsible for the greatly increased percentage rate of variation of different thanas of Cachar, compared with their low increase in the previous decades. Apart from these Hindu refugees, Cachar also reports an influx of small number of Muslim immigrants from Pakistan. While I was in charge of the district, I used to hear grossly exaggerated reports of their arrival into Cachar in large numbers, one estimate put it as high as one and half lakhs to two lakhs; of which I saw no evidence at all. The census figures now reveal beyond the shadow of doubt that except a small trickle which might have tracked in lack of economic opportunities in the more backward East Pakistan the normal natural increase of Population and the influx of refugees are sufficient to account for the present growth in the district population. The communal situation in East Pakistan if stabilised enabling the hindu minority there to live in peace carrying out their respective vacations, the next census should reveal only a moderate rate of growth of population in this district.

Pressure of Population on Soil.—Mullan in 1931 was of the opinion that the moderate growth of only 7·5 per cent. in Silchar and Hailakandi was quite sufficient to make the pressure on the soil more noticeable. If so, the greatly accelerated rates of growth in the two subsequent decades 11·38 in 1931-41, 24·66 in 1941-51, in the entire district, which includes in the present decade the entire influx of refugees without any land or means of livelihood has now left no doubt about it. Even before the arrival of the displaced persons I found a universal demand from all sections of the people of the district to open up some of the large areas of reserved forests there. Though some of the demand came from a section of the people who wanted to increase their holdings, there was no doubt that the principal demand was from the indigenous persons who either had no land at all or had merely small uneconomic holdings. Government appointed a Special Officer to enquire how much of the reserved forests can be thrown open for settlement without detriment to the national forest wealth and produce. His report revealed that such available land is very small in area and will be quite unable to satisfy even a fraction of the huge demand.

INTRODUCING THE STATISTICS

In the past, village statistics for each district used to be printed after the Census, giving the population of each village and showing the distribution of communities and of literate persons. In view of the importance of the 1951 Census, at which in addition to the usual population data, valuable information was collected concerning the social aud economic life of the people, it was decided to publish a District Census Handbook containing the more important Census abstracts and tables.

The Primary Census Abstract gives the details of each village by the 8 Livelihood Classes. There are five general population tables of the 'A' Series, three economic tables of the 'B' Series, five household and age (sample) tables of the 'C' Series, seven social and cultural tables of the 'D' Series and one table 'E' giving summary figures for the district and tahsils. As far as possible, these tables furnish district data with break-up for Census tracts within the district.

At the 1951 Census, the economic classification was substituted for the clasification based on *religion*. The people have been divided into two broad livelihood categories, namely, the agricultural classes and the non-agricultural classes. There are four agricultural classes defined as below :—

I. Cultivators of land wholly or mainly owned and their dependants.

II. Cultivators of land wholly or mainly un-owned and their dependants.

III. Cultivating labourers and their dependants.

IV. Non-cultivating owners of land, agricultural rent receivers and their dependants.

There are similarly four non-agricultural classes defined as persons including dependants who derive their principal means of livelihood from—

V. Production other than cultivation.

VI. Commerce.

VII. Transport.

VIII. Other services and miscellaneous sources.

The above eight classes have been referred to as livelihood classes.

Each of the above eight livelihood classes has been divided into three sub-classes with reference to the economic status as below :—

(*i*) Self-supporting Persons ;

(*ii*) Non-earning Dependants ; and

(*iii*) Earning Dependants.

(*i*) A 'Self-supporting Person' is one who earns an income in cash or kind sufficient at least for his own maintenance.

(*ii*) A 'Non-earning Dependant' is a person who has no income of his own either in cash or in kind.

(*iii*) An 'Earning Dependant' is a person who earns a regular (not casual) income not sufficient even for his own maintenance. It includes seasonal income also.

All self-supporting persons are, ordinarily, economically active. But there are certain classes and groups which constitute an exception to this rule. These are mentioned below :—

(*i*) All self-supporting persons of Agricultural Class IV.

(*ii*) The following groups of self-supporting persons who are included in Non-Agricultural Class VIII, and derived their principal means of livelihood from miscellaneous sources (otherwise than through economic activity) :—

(*a*) Non-working owners of non-agricultural property,

(*b*) Pensioners and remittance holders.

(*c*) Persons living on charity and other persons with unproductive occupations, and

(*d*) Inmates of penal institutions and asylums,

Economically active persons engaged in industries and services are classified in economic table B-III into the ten divisions and 88 subdivisions mentioned above, and are further divided into three sections, namely :—

(*i*) Employers,

(*ii*) Employees, and

(*iii*) Independent Workers.

A person should be treated as an 'Employer' only if he has necessarily to employ any person in order to carry on the business from which he secures his livelihood, provided that employee is regularly employed and derives his Principal Means of Livelihood by such employment. Part-time or casual employment which does not provide the Principal Means of Livelihood of the employee should not be taken into account. A person employing a cook or other servants for domestic services is not an employer.

An 'Employee' is a person who ordinarily works under some other person for a salary or wage in cash or kind, as the means of earning his livelihood. Managers, Superintendents, Agents, etc., and all Government servants should be recorded as employees only even though they may have power of employing or appointing subordinate officers or assistants.

An 'Independent Workers' means a person who is not employed by anyone else and who does not employ anybody else in order to earn his livelihood.

The Age (Sample) tables were prepared from the original enumeration slips by taking a ten per cent. sample in accordance with the following instructions of the Registrar General, India.

The 'D' Series social and cultural tables include Table D-V relating to the displaced persons giving particulars about their arrival into India. Table D-VI gives details of the non-Indian nationals and Table D-VII is designed to show the distribution of educated man-power among the different livelihood classes.

Important population *data* for the district and the tahsils have been summarised in Table 'E' which also gives the classification of the people by livelihood classes.

The main Report of the 1951 Census of the States of Assam, Tripura and Manipur will be found in two parts entitled "Census of India 1951—Volume XII—Assam, Manipur and Tripura." Part I contains an analysis of the statistics collected and Part II statistics arranged in different tables for the States, their natural divisions and districts.

In addition to these Volumes there are National Registers of Citizens prepared for every village and ward and maintained in manuscript giving important census details for each person. These registers are preserved as permanent records in the district headquarters.

From the *data* collected at the Census of Small-scale Industries, three tables were prepared which are included in the District Census Handbook, giving village or wardwise distribution of small-scale industrial establishments, employment in textile establishments or Census tracts and employment in non-textile establishments for the same tracts.

While the accuracy in respect of the details actually recorded by the Enumerators during the Census of the Small-scale Industries has been reported to be good, the District Officers were of the view that there was tendency towards under emuneration of the establishments, due to the failure of the enumerating staff to make intensive efforts to discover all establishments within the areas allotted to them. The figures in the tables for the Small-scale Industries should, therefore, be regarded as illustrative of the nature of small industries prevalent in the different parts of the district and should not be relied upon as giving accurate number of specific type of establishments in different localities.

INSTRUCTIONS FOR TABULATION OF VILLAGE NOTES

The important information for every village was separately recorded on printed forms and has been incorporated in columns 3 and 4 of Primary Census Abstract using the symbols given below—

1. *Floods*.—Make no entry if the village is not liable to flood, *write* "f" if it is liable to flood of any category.

2. *Epidemics*.—No entry if the village is not subject to any epidemics. If you find entries like Cholera, Small-pox, *Kala-azar*, Malaria, *write* Ch, Sp, Ka or Mal. For al other epidemics mentioned in this column, enter it in full.

3. Water Supply—
   A—The village has a source of water supply provided by the Government or Loca Board.
   B—Natural sources of supply like rivers and bills.
   C—Private supply
   D—Acute scarcity.

   Underlined, it will indicate that quality of drinking water is bad.

4. Medical Facilities—
   (*a*)—The village has a local Board or Government regular dispensary within 5 miles radius
   (*b*)—There is no regular dispensary but a Public Health Dispensary within 5 miles radius.
   (*c*)—There is no dispensary but a private qualified doctor within 5 miles radius.
   (*d*)—No medical facilities of any sort.

5. Educational Facilities—
   1—Served by a Local Board or Government School within 2 miles radius.
   2—Served by a Private Venture School only within 2 miles radius.
   3—No educational facilities of any kind (Mission Schools have been generally treated as private schools although in some areas where they get grant-in-aid they have been shown as Government Schools by Enumerators).

CENSUS TRACT SAMPLE POPULATION AND DISPLACED PERSONS

Census statistics of the urban and rural population can be studied in various ways. The results of such studies in comparing the conditions and characteristics of the urban and rural people in the matter of births, deaths, sex composition, sanitation, levels of living, etc., would be of great value in economic planning and development of social welfare work in the State and its different parts.

Each district was, therefore, divided for purposes of the census into a number of rural and urban tracts according to the size of the population.

Preparatory to the sorting and tabulation of census information, rural and urban areas of a district were grouped into Census Tracts on the basis of instructions issued by the Registrar General of India. With the approval of the Registrar General of India, the following rural and urban tracts were formed in the case of—

RURAL

Tract No.

1. Kat'gara, Barkhola, Udharband.
2. Lakhipur, Sonai.
3. Silchar (Rural).
4. Karimganj, Badarpur.
5. Patharkandi, Ratabari.
6. Hailakandi, Katlicherra.

URBAN

1. Silchar, Karimganj, and Hailakandi, Towns.

In several Tables the term "Sample Population" has been used. This sample was drawn according to the following instruction of the Registrar General of India. Enumeration was done on pads of 100 slips each, a slip containing the record of an indiviidual.

"Break each pad and stack the slips of the pad ; and "cut" the stack as n a card game. Place the lower portion above the upper portion and then deal the slips into the pigeon holes. You should deal the slips into pigeon holes *in the order* of 1, 2, 3, 4, 5, s 6, 7, 8 and 9 successively. All the time, you should watch the slips of 'Displaced Persons' If you come across any slip of a displaced person deal it in the pigeon hole separately labelled for 'Displaced Persons'. Thus there were three bundles ; (*i*) General Slips, *i. e.*, Slips combined for holes labelled for 1, 2, 3, 4, 5, 6, 7, 8, and 9 (*ii*) Sample Slips, *i. e.*, Slips in the hole marked 'S' and (*iii*) Displaced Persons.

Hence it will be seen that the sample is not a sample of the total population but of the latter excluding the 'Displaced Population'.

The check factors for the sample population are—

1,000 S/G Rural Total	III
1,000 S/G Urban Total	III
1,000 S/G District Total	III

A 'Displaced Person' was defined by the Registrar General of India as follows—

"A 'Displaced Person' means any person who has entered India having left or being compelled to leave his or her home in Western Pakistan on or after the 1st March, 1947 or his and her home in Eastern Pakistan on or after the 15th October, 1946 on account of civil disturbances or the fear of such disturbances or on account of the setting up of the two Dominions of India and Pakistan."
