STATE PUBLICATIONS

DISTRICT CENSUS HAND BOOKS

District Census Hand-books for each of the 43 Districts in Madhya Pradesh

PREFACE

The publication of District Census Hand-books, which was begun in the 1951 Census, represents a significant step in the process of making census statistics available for the smaller territorial units basic to executive and developmental administration. Apart from the fact that the proper implementation of policy depends on the ability of the administrative authorities concerned to quantify accurately the variables involved, it is at these levels that policies get really thoroughly tested; also, policies can fail—and probably have failed—because their statistical basis was weak. It is undoubtedly necessary that gaps in statistics at lower levels be filled as rapidly as possible. It was not possible at this Census to base all census statistics on the development block as the unit mainly because in 1961 there were many areas not till then covered by blocks. The coverage had become complete by about the middle of 1963 and it is not unlikely that the 1971 Census will recognise the block as the basic field unit as much for purposes of presentation as for operational purposes.

2. What we have tried to do in the 1961 Census Hand-books is to make them more informative by the inclusion of as many categories of non-census statistics as possible; some of these are climate, agriculture, co-operation, industry, banking, education, health etc. There is also an introductory note to each Hand-book high-lighting the more striking fea ures. It has not been possible for the Census Organisation to check the accuracy of the figures supplied by various authorities; it is to be hoped that some other organisation, better equipped for the purpose, will take up this task.

3. For the seventeen districts of Mahakoshal (Part of erstwhile Madhya Pradesh) and for Panna and Tikamgarh districts of erstwhile Vindhya Pradesh, which are part of the present State of Madhya Pradesh, the area figures for districts and tahsils furnished by the Director of Land Records and presented in Table A-I are internally inconsistent in the sense that the tahsil areas do not add up to the district area. This inconsistency arose from the fact that, in the case of these districts, the district area includes, but the tahsil areas exclude, 'forest' area for which the tahsilwise breakup was not then available. Later on, while this Hand-book was in the press, the Director of Land Records brought out revised area figures for the year 1962-63 for tahsils and districts, which among other improvements, do not suffer from the defect of internal

inconsistency even in case of these nineteen districts. Revision of Table A-I on the basis of these area figures was not feasible at this late stage; the only alternative was to print these revised area figures also in this Hand-book.

4. One unfortunate fact about these Hand-books is that they became available to the users rather late in the decade. This is partly due to the considerable time required for the collection of information from various authorities and partly to difficulties in printing. Owing to the fact that State presses, with a heavy back-log of printing weighing down on them, would find it impossible to print all the District Census Hand-books themselves, arrangements have been made for printing them in private presses. If these Hand-books are to have a useful life of more than four or five years of inter-censal decennium, more expeditious methods for the collection of non-census statistics, for the preparation and checking of the manuscripts and for printing will have to be devised.

5. The Census Organisation is grateful to the Government of Madhya Pradesh for having been so kind as to undertake the publication of these Hand-books and to the Superintendent, Government Printing and his organisation—particularly the Assistant Superintendent, Printing, Government Regional Press, Indore and his staff—for the printing arrangements made. The inspiration behind this ambitious venture is that of our indefatigable Registrar General, Shri Asok Mitra, to whom we are all deeply grateful. Our thanks are also due to the various authorities who supplied us with all the necessary statistics.

NOTES AND EXPLANATIONS

This note gives the meanings and explanations of terms and concepts used in this Handbook. This is necessary because, without a proper grasp of the meanings of such simple concepts as building, house, household, worker, etc., it is not possible to appreciate the data presented in the Handbook. Thus, one who does not know that an unpretentious hut in the thick of Bastar forests with unplastered bamboo walls and a thatch roof and with space hardly enough for two cots is not a whit less of a building than the Indian versions of the skyscrapers in one of the metropolitan cities, or that a central jail housing all manner of criminals and shady characters is as much a household as the household of the most pious and god-fearing citizen in the State, may not be able to appreciate what exactly the figures represent. Besides explaining the terms and concepts, the note also contains brief notes on the salient and peculiar features of some of the Census tables presented in this Handbook.

Census.—The Census in India is a decennial operation taking place in February-March of the first year of every decade. It ensures coverage of *all* members of the population irrespective of age. The operations constituting a *Census* involve, besides counting of heads, the counting of numerous attributes of the person counted. These are demographic, social, economic and cultural in nature. The number of these attributes regarding which information is recorded has been increasing from census to census and is limited only by considerations of cost, time and organisation.

Population.—The important thing about a population is that it is dynamic. It is a constantly changing entity. These changes take place by the natural processes of birth and death as well as by migration. A statement of population has therefore little sense unless the point of time to which it relates is also stated. A population figure is correct only for a particular point of time; and, even though in practice one may omit to indicate this point of time, one should none the less be clear about it. The population figures presented herein refer to the sunrise of 1st March, 1961, unless otherwise stated.

Rural-Urban Classification:—Data collected at a Census is usually presented separately for the rural and urban areas. A 'town' or a 'town-group' constitutes an urban area. A 'town' in the 1961 Census was either (i) a municipality, cantonment or corporation; or (ii) a habitation with a population at least of 5,000 with atleast three-fourths of the adult male population being engaged in non-agricultural pursuits. The rural-urban classification, being operationally cardinal and prior in point of time to the census count, had to be tackled earlier and a list of 219 towns in the State was therefore, prepared much earlier than the census proper. This included 28 habitations which were tentatively treated as towns, the intention being that, after the 1961 Census data became available, their cases would be re-examined. Later on, however, no modification was made in the list, even though 7 towns did not satisfy either the minimum population criterion or the one based on the ratio of non-agricultural adult males being 75% or greater. These are Gogaon in West Nimar, Datla Bandhi in Chhindwara (both under 5,000 in population); and, Icchawar, Patan, Pendra, Akaltara, Arang respectively in Sehore, Jabalpur, Bilaspur, Bilaspur, and Raipur Districts (not satisfying the economic criterion). The reason for not disturbing the original list of towns was that as many as 14 habitations which did not satisfy one or the other of the criteria laid down earlier managed to sneak into the list of towns as municipalities, and inclusion of seven more such towns was not supposed to introduce greater demographic distortion than was already present. The cases of Chachaura-Binaganj town in Guna District and Sardarpur-Rajgarh in Dhar District are peculiar in that each of these two municipal towns consists of two distinct habitations separated by 2 miles in the first and 3 miles in the second case.

All areas, which were not urban were rural. They consisted of 'villages'. A very large majority of the census villages were 'revenue villages', which had well demarcated or recognised boundaries, and which included not only the inhabited portion (or portions) but also agricultural land and uninhabited waste (or other) lands. The census village was thus not synonymous with a habitation or a dwelling; in fact, a village could contain two or more distinct habitations separated by considerable distances known variously as 'tola' or 'mazra' or 'para'. Besides, in many districts there were forest villages, situated inside Reserved forests and without clearly demarcated boundaries. The areas entered against these villages in the Village Directory are thus only approximate. It is to be noted that being, as observed by Martin [Census Superintendent (old) Madhya Pradesh, 1911 and Census Commissioner for India, 1921] arbitrary and irregular units of

area, carved out chiefly for revenue and administrative purposes, there are many revenue villages which do not have any habitation. They are not, therefore, of much demographic interest, and their inclusion in the Village Directory is only for a proper tally of area aggregates.

A—General Population Tables:

There are four main tables and three appendices in this series.

Table A-1.—This table presents the basic figures relating to area, houses and population separately for the rural and urban areas of each district, each tahsil, and for each city, towngroup or town. The area figures used in the table for the district and the tahsils are those furnished by the State Director of Land Records. In case of the district, the area figures furnished in 1962 by the Surveyor-General, India are also given. The Surveyor-General does not furnish area figures for tahsils. In case of cities and towns the area figures are furnished by the local urban authority (if any) in charge of the municipal administration, or by the local revenue authorities. Except in case of Raipur and Sagar districts, there is no agreement between the area figures for the district furnished by the Director of Land Records and the Surveyor-General, India. These differences arise principally from the differences in the methods adopted by the two agencies in measuring and computing the area.

In the case of eighteen districts (Bastar, Raipur, Durg, Raigarh, Bilaspur, Surguja, Balaghat, Seoni, Chhindwara, Mandla, Narsimhapur, Jabalpur, Sagar, Hoshangabad, Betul, East Nimar, Tikamgarh and Panna), only the district 'total' and 'rural' figures for area include the forest area; the figures for forest area were not available for individual tahsils in these districts, and hence the tahsilwise area figures for these districts do not include forest area. This fact is important particularly for appreciating the district and tahsil population density figures of these districts. The population density (*i.e.*, persons per square mile) given in column 4 of the table is calculated on the basis of the figures of area supplied by the State Directorate of Land Records.

Occupied Residential House.—This is a Census house which was actually occupied at the time of enumeration for residential purposes either partly or fully. The concept of 'Census house' together with the allied concepts of 'building' and 'household' are dealt with later in this note.

Town Group.—The introduction of the concept of "towngroup" is a new feature of the 1961 Census. One kind of 'towngroup' has its basis in what may be called demographic prognosis, this being that a particular group of towns is situated in such a way, and exhibits some interconnecting features of such a kind, that they can be considered a single demographic entity whose organic nature is likely to become more and more evident in the future. Examples are: Bhopal City with Bairagarh in the West and Heavy Electricals Township in the East; and Durg Town and Bhilai Industrial Township. The other type of towngroup is a group only in name in the sense that it represents a group of localities which geography unites but definition separates. Examples are Sagar Towngroup consisting of Sagar Municipality and Sagar Cantt., and Jabalpur Towngroup (consisting of Jabalpur Corporation, Jabalpur Cantt. and Khamaria). In both these instances, the urban complex is single and continuous, but as each corporation or cantonment is a separate town by definition, it gets split up in the Census into more than one town. In Madhya Pradesh there are six towngroups in all; three of them belong to the first type: Bhopal in Sehore District: Murwara in Jabalpur District and Durg in Durg District; the other three belong to the second type, Pachmarhi in Hoshangabad District, Sagar in Sagar District and Jabalpur in Jabalpur District.

Houseless & Institutional Population:—"Houseless population" means those who did not live and were not enumerated, in Census-houses at the last Census. Obviously these swell the ranks of the social destitutes who, to speak in every day parlance do not have even a roof over their heads, but live under the shade of trees or bridges or on pavements. "Institutional population" means the population that was enumerated in institutions at the last census *i.e.*, in hostels, jails, boarding houses, hospitals etc.

Class of Towns.—Towns are classified into six classes as below according to their population sizes:—

Class	*Population range*
I	100,000 and above
II	50,000—99,999
III	20,000—49,999
IV	10,000—19,999
V	5,000—9,999
VI	Below 5,000

Towns of Class I are also known as Cities.

"Status" of a town means the authority in charge of its local urban administration. Thus a town could have a Municipal Corporation; a Municipality, a Cantonment Board, a Gram Panchayat, a Town or Notified Area Committee, etc.

B—(*i*) *General Economic Tables.*—This series includes 22 tables containing information on certain economic aspects of the population. The concepts involved have undergone significant changes as compared with the 1951 and earlier Censuses. In the 1951 and earlier censuses or at any rate in the last few censuses income or economic independence (and dependence) were treated as the criteria for denoting the economic status of a person. Separate account used to be taken of all persons who were economically independent and of those who were economically dependent. An intermediate category of economic semi-independence was also introduced in the 1931 Census. This consisted of the 'earning dependents' of the 1951 Census and even there the element of income was present. This income-based classification seems to have not infrequently resulted in a suppression of information relating to those who worked in household economic activities but did not actually earn any income like men other than the head of the household and women of the family or children working at the family cultivation or cottage industry but not earning any incomes. The 1961 Census introduced the concept of work and totally abandoned the 'income' approach. Thus all people who worked (*i.e.*, were "economically active") including family workers who were not in receipt of any income, & working children who did not earn enough for their maintenance were treated as workers. On the other hand such persons as a receiver of rents on immovable property, or of interest on securities deposited in a bank, and doing no other work, were treated as non-workers. Persons professionally engaged in anti-social activities (*i.e.*, thieves, robbers, prostitutes, beggars, etc.) were, however, not treated as workers. The approach to the concept of "work" was pragmatic and numerous illustrations were given to clarify the concept. The basis of work was held to be satisfied in the case of seasonal work *i.e.*, work at cultivation, livestock, dairying or household industry if the person has had some regular work of more than one hour a day throughout the greater part of the working season. In the case of regular employment in any trade, profession, service, business or commerce the basis of work was satisfied if the person was employed during any of the fifteen days preceding the day on which he was visited by the Census enumerator. A person who was working but was absent from his work during those fifteen days or for a longer period owing to illness or other causes was treated as worker. Work included not only actual physical work but also effective supervision and direction of work.

The Working Categories:—The primary classification of the population is by means of a simple dichotomy into workers and non-workers. The former is further sub-divided into nine sub-classes or working categories of the Census. These are listed below; the correspondence with the Standard National Industrial Classification is also indicated.

	CENSUS WORKING CATEGORY	CORRESPONDING DIVISION OR MAJOR GROUP OR MINOR GROUP OF NIC
I	Workers in cultivation	Minor Groups 000, 001, 002, 003, 004,
II	Agricultural Labourers ...	The same as in I above
III	Workers in mining, quarrying, live-... stock, forestry, fishing, hunting and plantations, orchards and allied activities	Major Groups 01, 02, 03 and 04 and Division 1; Minor Groups 005, 006, 007, 008, 009 (if not classifiable as household industry)
IV	Workers in household industry ...	Minor Groups 005 to 009, 013, 014, 015, 020 to 026, 031, 032, 040 to 048, 107, Divisions 2 & 3 (excepting Minor Groups 201, 217, 218, 232, 252, 260, 290. 324, 325, 338 and 380) if on a household scale
V	Workers in manufacturing other ... than household industry	Divisions 2 & 3
VI	Workers in construction ...	Division 4
VII	Workers in Trade and Commerce ...	Division 6
VIII	Workers in Transport Storage ... and Communications	Division 7
IX	Workers in other services ...	Divisions 5, 8 & 9

The only term requiring explanation is household industry, the others being self-explanatory. As regards household industry, a three-fold test was laid down, *viz*:—

(a) "Household Industry" should consist of manufacture, processing or servicing and may include sale but should not be confined simply to buying and selling. At least part of the goods offered for sale from the household should be manufactured or processed by members of the household.

(b) "Household Industry" should be on the household scale where the workers mainly will be the Head of the household himself and/or members of the household, the role of hired workers from outside being of secondary importance. Thus, in any Household Industry, members of the household should be in a position to lend a hand in the industry whenever they find the time in the course of their daily chores. Household Industry cannot, therefore, be on the scale of a *registered factory* but can use machinery and employ power like steam engine or oil engine or electricity to drive the machinery.

(c) Location also is important, for proximity decides participation by members of the household. In a village this participation is possible if the Household Industry is located at home or within the village because village organisation is such as makes it possible for members of the household to move about freely in the village to look after their work. In urban areas such free movement is not possible, and therefore, for household industry in urban areas we should consider only those industries which are located or at least the major part of whose work is located at home.

Class of Worker:—A worker, other than a cultivator, agricultural labourer or a worker at household industry could be: (i) an Employer, that is, who hires one or more persons in his work; (ii) an Employee, that is, who does his work under others for wages or salary in cash or kind; (iii) a Single Worker, that is, who is doing his work without employing others, except casually, and without the help of other members of the family, except casually (this includes workers working as members of a co-operative); and (iv) a Family Worker, that is, who is doing his work in his own family without wages or salary in cash or kind. A person could be an employee in a household industry also.

PRINCIPAL AND SECONDARY WORKER:

Table B-VII Part A and Part B involve the concepts of principal and secondary work. For every worker the principal work had to be indicated in the case of a person who was engaged in more than one work, and also the secondary work if he was engaged in two or more than two productive activities. The concepts of primary and secondary work had nothing to do with the income accruing to a person from his work. The principal work of a person was that activity which took up most of his time; similarly the secondary work (in case a person was engaged in two or more than two kinds of work) was that which took up less time than the principal work but greater than the other kinds of work. Unless specifically stated to the contrary in the table heading itself the tables in the Handbook are based on the principal work of a person.

Non-workers:—The non-working section of the population also was divided into eight classes according to the nature of their activities. Thus a non-worker could be (i) a full time student or child attending school, (ii) a person engaged in home duties (like a housewife or other adult female who does no other work) (iii) dependent including an infant or child not attending school, a person permanently disabled from work because of illness or old-age; (iv) a retired person who is not employed again, rentier, a person living on agricultural or non-agricultural royalty, rent or dividend, or any other person of independent means for securing which he does not have to work and who does no other work; (v) a beggar, vagrant or independent woman without indication of source of income and others of unspecified source of existence; (vi) a convict (not an undertrial who was to be recorded for the work he did before being admitted to Jail); (vii) persons who were seeking employment for the first time; and (viii) persons who previously had worked, but were out of employment, and were again seeking work.

Education Levels:—A person was treated as illiterate if he did not satisfy the test of literacy, this meaning the ability both of reading and writing. The test of reading was held to be satisfied if a person could read printed matter or easily legible manuscripts. The test of writing was the ability to write a simple letter. The minimum educational level is primary or junior basic, and this includes all persons who have passed this examination but have not passed the next higher level examination *i.e.*, matriculation or higher secondary. Persons who had formal schooling but had not passed the primary or junior basic level examination were literates without any educational levels. A person belonging to any particular educational level means a person who has passed the examination denoting that level.

INDUSTRIAL AND OCCUPATIONAL CLASSIFICATION OF WORKERS:

Workers have also been classified according to their occupation and industry. The concepts of 'industry' and 'occupation' are of fundamental importance in connection with all economic activity and it is necessary that they should not be confused with each other. By "industry" is meant the sector of economic activity in which a worker is engaged *e.g.*, the textile industry, mining industry, etc., whereas by 'occupation' is meant the exact function that a worker performs in that sector *e.g.*, fitter, carpenter, typist, etc. Occupation thus is "a trade, profession or type of work performed by an individual independent of the worker's industry, status or years of experience".

THE INDIAN STANDARD INDUSTRIAL CLASSIFICATION (I. S. I. C.):

The industrial classification used in some of the economic tables of this hand-book is the 'Standard Industrial Classification' prepared by the Ministry of Labour and Employment, Government of India. Under this scheme of classification, the whole range of economic activity is divided into nine 'divisions', and a code number is given to each. The first digit of the code number of any specific economic activity stands for the 'Division' under which that activity is classified. Each division is then divided into a number of major groups not exceeding ten. The first and second digits of the code number represent the division and the major group into which an economic activity is classified. Each major group is again sub-divided into a number of minor-groups not exceeding ten, and the first, second and third digits in the code number of any economic activity represent the division, the major group and the minor group into which it is classified. To illustrate, the industrial 'code', '261', represents an economic activity corresponding to minor group 261 in major-group 26 of Division 2. A reference to the Standard Industrial Classification will show that the minor group code stands for the economic activity 'Dying and bleaching of silk' in the major group 'Textiles Silk' of the Division: 'Manufacturing'. The 'Divisions', 'Major Groups' and 'Minor Groups' of the Standard Industrial Classification are printed immediately after this note as Appendix I.

NATIONAL CLASSIFICATION OF OCCUPATIONS (NCO):

Table B-V gives the occupational classification by sex of persons at work other than cultivation. This classification is based on the 'National Classification of Occupations' prepared by the Ministry of Labour and Employment, Government of India. Each *occupation* is represented by a code number containing a number of digits (extending in the NCO upto 5). We have used only the three digit Code number for classifying occupation. All occupations are divided into ten divisons to each of which a digit is allotted. The first digit of the code number of an occupation stands for the 'Division' into which it is classified. Each division is then sub-divided into a number of groups not exceeding ten. The first and second digits of the code number represent the 'Division' and 'Group' into which an occupation is classified. Each group again is divided into a number of families not exceeding ten and the first three digits of the code number stand for the division, group and family into which an occupation is classified. To illustrate, the code number 911 stands for the family 911 (Cooks, cook-bearers, domestic and institutional) included in the Group 91 (Housekeepers, Cooks, Maid and related workers) included in the 'Division' 9 (Service, Sport and Recreation workers). The Divisions, Groups, and Families of the National Classification of Occupations are printed after this note as Appendix II.

It may be mentioned that the three digit industrial code can easily be extended into a four-digit code on the principles illustrated earlier to secure greater precision in the classification of the economic activitity of a worker. This has in fact been done in case of workers at household industry, and these four-digit code numbers have been used in Table B XIV Part B.

B—(ii) Household Economic Tables:—Tables belonging to this series differ from others in two respects: (i) they have been prepared from information recorded on the household schedules, while the other tables are prepared from information recorded on the individual slips; (ii) whereas the other tables are based on the total population, the tables in this series are prepared from the data contained in a 20% sample of all households. The instructions for selecting the sample are reproduced below:—

"Every fifth household from the starting random household will be selected to make a 20% sample. The sample household will be marked continuously for rural areas of a tahsil/taluka and for urban areas of a district *i.e.*, households left over in a household pad should be carried over to the next household schedule pad for the selection of sample households.

"Before making the sample households the household schedule pads should be arranged in the order of location code numbers of villages in a Taluka or Tahsil in the case of a rural area and in the order of location code numbers of towns in a district for urban areas. The first sample household should be chosen randomly among the first five households in the first household schedule pad and stamped (s) as selected. This random number (random start) should be chosen separately for rural areas of each taluka/tahsil and for

the urban area of the district. From the first random household every fifth household should be continuously stamped as selected..... The sample should be continuously marked for all the pads of villages in a tahsil and urban areas in a district. If in a particular household schedule pad at the end, some households (these will be four or less) are left after marking of the sample household, the housedolds left over should be carried over to the next household schedule pad and the appropriate household in that pad should be marked as a sample household".

C.—Social and Cultural Tables:

This series contains 8 tables of which Table C-1 is prepared from data abstracted from the 20% sample of households.

Marital Status:—As regards marital status a person could be (i) never married, (ii) married, (iii) widowed and (iv) divorced or separated. The figures given do not necessarily indicate the legal position. Thus, persons who lived together as man and wife and who were regarded as such by society were treated as 'married' even though there might not be any legally valid marriage between them.

Age.—The age of a person was recorded in completed years as on the last birth day at the time of enumeration, so that a child who had not completed a year of its existence was recorded as of age '0' Inspite of the best efforts, distortion of ages is common phenomenon in Indian Census. This distortion is ascribable to the combined effect of a variety of causes like, for example, digit-preference, age-bias and estimation error and its most obvious manifestation is the heaping of the ages at digits ending in 0 or 5 and in even rather than in odd numbers.

Mother Tongue:—Mother tongue is the language spoken in childhood by a person's mother to the person, or mainly spoken in the household.

Religion:—Separate figures are given only for the six main religions: Hindu, Muslim, Jain, Sikh, Christian and Buddhist. Figures for persons professing other religions have been clubbed together under the head: Other Religions and persuasions'

Scheduled Castes and Scheduled Tribes:—In view of the constitutional safeguards guaranteed to persons belonging to scheduled castes and scheduled tribes with a view to ameliorate their social and economic condition, basic census figures are for the first time being published separately for each scheduled caste and scheduled tribe. A scheduled caste or a scheduled tribe means a caste or a tribe included in the Order issued by the President of India under Articles 341 (1) and 342 (1) of the Constitution, amended, if necessary in accordance with Articles 341 (2) and 342 (2) thereof. It should be remembered that the population of a particular scheduled caste or tribe as given in the tables does not necessarily mean the entire population of that caste or tribe in the district. This is so because scheduling of a caste or tribe under the Constitution is *territorial* so that a caste or a tribe scheduled in a district, (or a tahsil or tahsils of a district) is not necessarily a scheduled caste in other districts (or other tahsils of the same district). Thus Gond is a scheduled tribe in all tahsils of Jabalpur District except Jabalpur Tahsil so that the figures for Gond population in Jabalpur District exclude the Gonds of Jabalpur Tahsil. Secondly, some of the scheduled tribes have not been given independent status in some parts of the State by the Order but have been clubbed together with some major tribe, while, in other parts of the State, they have not been so clubbed but have been included as distinct scheduled tribes. Thus, in the districts of the Mahakoshal region of the State, the tribe Agaria has been clubbed, along with many another, with Gond as the latter's sub-tribe. In these districts, therefore, figures relating to Agaria tribe, whose ethnic identity with Gond is controversial, do not appear independently in the tables of these districts, but are included in the figures for Gond. In the Vindhya Pradesh region, however, Agaria is Scheduled tribe in its own right and in the districts belonging to that region Agaria population appears separately in the relevant tables.

Religion of Scheduled Castes and Tribes:—A scheduled caste can exist only in Hindu and Sikh religions and in no other religion. A scheduled tribe, however, may be found in any religion.

E—Housing Tables:—The Handbook includes five tables on housing. In using these tables, it should be remembered that they are prepared from the data on households abstracted from the 'Houselists'. Tables E-I and E-III are based on the full count while table E-II, E-IV and E-V are prepared from a 20% sample of households entered in the Houselists. Houselisting was non-synchronous with census proper, having taken place in the month of September-October, 1960, about five month before the reference date of the Census. Also, the population of households entered in the houselists is not necessarily identical with the population of households in respect of which household schedules were filled at the time of the Census. Thus the samples of households drawn from the household schedule, and from the house lists are different samples.

The instruction for drawing the 20% sample of households from the houselists are reproduced below:—

"Before marking the sample households the Houselists should be arranged in order of location code numbers in the case of rural areas for tahsil etc., and in the case of urban areas other than towns with population of 50,000 and over. In the case of towns with population of 50,000 and over the Houselists should be arranged in order of blocks. The first sample household should be chosen randomly among the first five households in the first Houselist. From that every fifth household from the first random household should be continuously marked..... The sample should be marked continuously for all the Houselists. If in a particular Houselist at the end two households are left after the marking of the sample households then these households should be carried over to the next Houselist and the third household in that list should be marked as sample households".

Census House and Census Households:—The concepts of "building" "house" and "household" are important and differ somewhat from their connotations in common speech. A building refers to the entire structure on the ground. A census house is a structure or part of structure inhabited or vacant or a dwelling, a shop, a shop-*cum*-dwelling or place of business, workshop, school etc., with a separate entrance. A census house was thus a building, or part of a building with a separate entrance. A census house could have a variety of uses, residential as well as non-residential; or it might be vacant (at the time of houselisting).

A household was defined as "a group of persons who commonly live together and would take their meals from a common kitchen unless the exigencies of work prevented any of them from doing so." A household necessarily lived in a census house or part of a census house. The definition of a household was broad enough to include all persons living together in a census-house and dining from the same kitchen, even if they were not related to one another. Such were the institutional households, like jails, hostels, hospitals etc. The house in which a household lived could either be owned or rented. All census-houses which were not owned by the households living in them were treated as 'rented' even though no rent was being actually paid.

"Factory" and "Workshop":—As is clear from its definition, a Census house could be a workshop. A workshop is a place where some kind of production, repair or servicing goes on, or where goods or articles are made and sold. A bigger workshop which was either registered under the Indian Factories Act or was of the scale of a registered factory was returned as a factory. For a manufacturing, repairing or servicing establishment to be registered under the Indian Factories Act, it should have ten or more workers if using power and twenty or more workers if not using power.

VILLAGE DIRECTORY AND ITS APPENDICES:

Village Directory:—The Village Directory corresponds to the Primary Census Abstract of the 1951 Census. It gives for each village of the district: (a) information relating to area, census houses, households, scheduled castes and scheduled tribes and literacy; and (b) the classification of the population into workers and non-workers, and again 'workers' into their 'Industrial Categories' separately for both the sexes. For facilitating comparison with the Census Handbook of 1951 the serial number at which the village is to be found in 1951 Handbook is also given. A new feature introduced in this Census is the presentation of additional information about each village relating to schools, hospitals, child and maternity welfare centres, medical practitioners, electricity, post and telegraph offices etc. This has been done by entering symbols against the name of each village. Another novel feature is the presentation in eleven appendices of useful information relating to villages and towns *i.e.*, industrial establishments, places situated on bus routes, or within five miles of a railway station, places having pucca wells, markets, public reading rooms, drains etc.

To enable the reader to locate the village in the Village Directory without much difficulty, an alphabetical index of village names is given. This gives for each village the 1961 location code number of the village (in the Village Directory, villages are arranged according to their Location Code Numbers); and its location code number in the 1951 Hand-book.

APPENDIX—I

STANDARD INDUSTRIAL CLASSIFICATION

This classification groups the industries into

9 Divisions

45 Major Groups

343 Minor Groups

The divisions, major groups and minor groups with their Code numbers are listed below.

Major Group (Code)	Description	Minor Group (Code)
	Division O—Agriculture, Livestock, Forestry, Fishing and Hunting.	
00	Field Produce and Plantation Crops:—	
	Production of cereal crops (including Bengal gram) such as rice, wheat, jowar, bajra, maize	000
	Production of pulses such as arhar, moong, masur, urd, khesari, other gram	001
	Production of raw jute and kindred fibre crops	002
	Production of raw cotton and kindred fibre crops	003
	Production of oilseeds, sugarcane and other cash crops	004
	Production of other crops (including vegetables) not covered above	005
	Production of fruits and nuts in plantation, vines & orchards	006
	Production of wood, bamboo, cane reeds, thatching grass etc.	007
	Production of juice by tapping palms	008
	Production of other agricultural produce (including fruits and nuts not covered by code number 006 & flowers) not covered above	009
01	Plantation Crops:—	
	Production of tea in plantation	010
	Production of coffee in plantation	011
	Production of rubber in plantation	012
	Production of tobacco in plantation	013
	Production of ganja, cinchona, opium	014
	Production of other plantation crops not covered above	015
02	Forestry and Logging:—	
	Planting, replanting and conservation of forests	020
	Felling and cutting of trees and transportation of logs	021
	Preparation of timber	022
	Production of fuel including charcoal by exploitation of forest	023
	Production of fodder by exploitation of forests	024
	Production of gums, resins, lac, barks, herbs, wild fruits and leaves by the exploitation of forests	025
	Production and gathering of other forest products not covered above	026
03	Fishing:—	
	Production of fish by fishing in sea	030
	Production of fish by fishing in inland waters including the operation of fish farms and fish hatcheries	031
	Production of pearls, conch, shells, sponges by gathering or lifting from sea, river, pond	032
04	Livestock and Hunting:—	
	Production and rearing of livestock (large heads only) mainly for milk and animal power such as cow, buffalo, goat	040
	Rearing of sheep and production of wool	041
	Rearing and production of other animals (mainly for slaughter) such as pig	042
	Production of ducks, hens and other small birds, eggs by rearing and poultry farming	043
	Rearing of bees for the production of honey, wax, and collection of honey	044
	Rearing of silk worms and production of cocoons and raw silk	045
	Rearing of other small animals and insects	046
	Trapping of animals or games propagation	047

Major Group (Code)	Description	Minor Group (Code)
	Production of other animal husbandry products such as skin, bone, ivory & teeth	048
	Division 1—Mining and Quarrying:—	
10	Mining and Quarrying:—	
	Mining of coal	100
	Mining of iron ores	101
	Mining of gold and silver ores	102
	Mining of manganese	103
	Mining of mica	104
	Mining of other non-ferrous metallic ores	105
	Mining of crude petroleum and natural gas	106
	Quarrying of stone (including slate), clay, sand, gravel, limestone	107
	Mining of chemical earth such as soda ash	108
	Mining and Quarrying of non-metallic products not classified above such as precious and semi-precious stones, asbestos, gypsum, sulphur, asphalt	109
	Division 2 & 3—Manufacturing:—	
20	Foodstuffs:—	
	Production of rice, atta, flour, etc. by milling, Dehusking and processing of crops and foodgrains	200
	Production of sugar and syrup from sugarcane in mills	201
	Production of indigenous sugar, gur, from sugarcane or palm juice and production of candy	202
	Production of fruit products such as jam, jelly, sauce and canning and preservation of fruits	203
	Slaughtering, preservation of meat and fish and canning of fish	204
	Production of bread, biscuits, cake and other bakery products	205
	Production of butter, ghee, cheese and other dairy products	206
	Production of edible fats and oils (other than hydrogenated oil)	207
	Production of hydrogenated oils (Vanaspati)	208
	Production of other food products such as sweet-meat and condiments, muri, murki, chira, khoi, cocoa, chocolate, toffee, lozenge	209
21	Beverages:—	
	Production of distilled spirits, wines, liquor from alcoholic malt, fruits and malts in distillery and brewery	210
	Production of country liquor	211
	Production of indigenous liquor such as toddy, liquor from mahua, palm juice	212
	Production of other liquors not covered above	213
	Production of aerated and mineral water	214
	Production of ice	215
	Production of ice-cream	216
	Processing of tea in factories	217
	Processing of coffee in curing works	218
	Production of other beverages	219
22	Tobacco Products:—	
	Manufacture of bidi	220
	Manufacture of cigars and cheroots	221
	Manufacture of cigarette and cigarette tobacco	222
	Manufacture of hookah tobacco	223
	Manufacture of snuff	224
	Manufacture of jerda and other chewing tobacoo	225
	Manufacture of other tobacco products	226
23	Textile—Cotton:—	
	Cotton ginning, cleaning, pressing and baling	230
	Cotton spinning (other than in mills)	231
	Cotton spinning and weaving in mills	232
	Cotton dyeing, bleaching	233
	Cotton weaving in power looms	234
	Cotton weaving in handlooms	235
	Manufacturing of khadi textile in handlooms	236
	Printing of cotton textile	237
	Manufacturing of cotton nets	238
	Manufacturing of cotton, cordage, rope and twine	239

Major Group (Code)	Description	Minor Group (Code)
24	Textile—Jute:—	
	Jute pressing and baling	240
	Jute spinning and weaving	241
	Dyeing and bleaching of jute	242
	Printing of jute textile	243
	Manufacture of other products like rope, cordage from jute and similar fibre such as hemp, mesta	244
25	Textile—Wool:—	
	Wool baling and pressing	250
	Wool cleaning and processing (scouring)	251
	Wool spinning and weaving in mill	252
	Wool spinning other than in mills	253
	Wool weaving in powerloom	254
	Wool weaving in handloom	255
	Embroidery and art work in woollen textile	256
26	Textile—Silk:—	
	Spinning and weaving of silk textile in mill	260
	Dyeing and bleaching of silk	261
	Spinning of silk other than in mills	262
	Weaving of silk textile by power loom	263
	Weaving of silk textile by handloom	264
	Printing of silk textile	265
	Manufacture of silk cordage, rope and twine	266
27	Textile—Miscellaneous:—	
	Manufacture of carpet and all other similar type of textile products	270
	Manufacture of hosiery and other knitted fabrics and garments	271
	Embroidery and making of crepe lace and fringes	272
	Making of textile garments including raincoats and headgear	273
	Manufacture of made up textile goods except wearing apparel such as curtains, pillow cases, bedding materials, mattress, textile bags	274
	Manufacture of water-proof textile products such as oil cloth, tarpaulin	275
	Manufacture and recovery of all types of fibres for purposes of padding, wadding, and upholstery filling	276
	Manufacture of coir and coir products	277
	Manufacture of umbrellas	278
	Processing and manufacture of textile products not covered above	279
28	Manufacture of Wood and Wooden Products:—	
	Sawing and planing of wood	280
	Manufacture of wooden furniture & fixtures	281
	Manufacture of structural wooden goods (including treated timber) such as beams, posts, doors, windows.	282
	Manufacture of wooden industrial goods other than transport equipment such as bobbin and similar equipment and fixtures	283
	Manufacture of other wooden products such as utensils, toys, artwares	284
	Manufacture of veneer and plywood	285
	Manufacture of plywood products such as tea chest	286
	Manufacture of boxes and packing cases other than plywood	287
	Manufacture of materials from cork, bamboo, cane, leaves and other allied products	288
	Manufacture of other wood and allied products not covered above	289
29	Paper and paper Products:—	
	Manufacture of pulp from wood, rags, wastepaper and other fibres and the conversion of such pulp into any kind of paper and paper board in mill	290
	Manufacture of pulp from wood, rags, wastepaper and other fibres and the conversion of such pulp into any kind of paper and paper board handmade	291
	Manufacture of products, such as paper bags, boxes, cards, envelopes and moulded pulp goods from paper, paper board and pulp	292
30	Printing and Publishing:—	
	Printing and publishing of newspapers and periodicals	300
	Printing and publishing of books	301

Major Group (Code)	Description	Minor Group (Code)
	All other types of printing including lithography, engraving, etching, block making and other work connected with printing industry	302
	All types of binding, stiching, sizing and other allied work connected with binding industry	303
31	Leather and Leather Products:—	
	Currying, tanning and finishing of hides and skins and preparation of finished leather	310
	Manufacture of shoes and other leather footwear	311
	Manufacture of clothing and wearing apparel (except footwear) made of leather and fur	312
	Manufacture of leather products (except those covered by Code Nos. 311, 312), such as leather upholstery, suitcases, pocket books, cigarette and key cases, purses, saddlery, whip and other articles	313
	Repair of shoes and other leather foot-wear	314
	Repair of all other leather products except footwear	315
32	Rubber, Petroleum and Coal Products:—	
	Manufacture of tyres and tubes	320
	Manufacture of rubber footwear	321
	Manufacture of rubber goods used for industrial purpose	322
	Manufacture of all kinds of other rubber products from natural or synthetic rubber including rubber raincoat	323
	Production of petroleum, kerosene and other petroleum products in petroleum refineries	324
	Production of coaltar and coke in coke oven	325
	Manufacture of other coal and coaltar products not covered elsewhere	326
33	Chemicals and Chemical Products:—	
	Manufacture of basic industrial chemicals such as acids, alkalis & their salts not elsewhere specified	330
	Manufacture of dyes, paints, colours and varnishes	331
	Manufacture of fertilizers	332
	Manufacture of ammunition, explosives and fire works	333
	Manufacture of matches	334
	Manufacture of medicines, pharmaceutical preparations, perfumes, cosmetics and other toilet preparations except soap	335
	Manufacture of soap and other washing and cleaning compounds	336
	Manufacture of turpentine, synthetic, resin, and plastic products and materials (including synthetic rubber)	337
	Manufacture of common salt	338
	Manufacture of other chemicals & chemical products not covered above (including inedible oils and fats)	339
34	Non-metallic Mineral Products other than Petroleum and Coal:—	
	Manufacture of structural clay products such as bricks, tiles	340
	Manufacture of cement and cement products	341
	Manufacture of lime	342
	Manufacture of structural stone goods, stone dressing and stone crushing	343
	Manufacture of stonewares, other than images	344
	Manufacture of stone images	345
	Manufacture of plaster of paris and its products	346
	Manufacture of asbestos products	347
	Manufacture of mica products	348
35	Manufacture of earthenware and earthen pottery:—	350
	Manufacture of chinaware and crockery	351
	Manufacture of porcelain and its products	352
	Manufacture of glass bangles and beads	353
	Manufacture of glass apparatus	354
	Manufacture of earthen image, busts and statues	355
	Manufacture of earthen toys and artwares except those covered by code No. 355	356
	Manufacture of glass and glass products except optical and photographic lenses and glass products covered above	357

Major Group (Code)	Description	Minor Group (Code)
35	Manufacture of other non-metallic mineral products not elsewhere specified	359
36	Basic Metals and their products except Machinery and Transport Equipment:—	
	Manufacture of iron and steel including smelting, refining, rolling, conversion into basic forms such as billets, blooms, tubes, rods	360
	Manufacture including smelting, refining of non-ferrous metals and alloys in basic forms	361
	Manufacture of armaments	362
	Manufacture of structural steel products such as joist, rail, sheet, plate	363
	Manufacture of iron and steel furniture	364
	Manufacture of brass and bell metal products	365
	Manufacture of aluminium products	366
	Manufacture of metal products (other than of iron, brass, bell metal and aluminium) such as tin can	367
	Enamelling, galvanising, plating, (including electroplating) polishing and welding of metal products	368
	Manufacture of sundry hardwares such as G. I. pipe, wire net, bolt, screw, bucket, cutlery (This will also include the manufacture of sundry ferrous engineering products done by jobbing engineering concerns which cannot be classified in major groups 36, 37, 38, and 39).	369
37	Machinery (All kinds other than transport) and Electrical Equipment:—	
	Manufacture and assembling of machinery (other than electrical) except textile machinery	370
	Manufacture and assembling of prime mover and boilers, other than electrical equipment, such as diesel engines, road rollers, tractors	371
	Manufacture of machine tools	372
	Manufacture of textile machinery and accessories	373
	Manufacture of heavy electrical machinery and equipment such as motors, generators, transformers	374
	Manufacture of electric lamps and fans	375
	Manufacture of insulated wires and cables	376
	Manufacture of all kinds of battery	377
	Manufacture of electronic equipment such as radio, microphone	378
	Manufacture of electric machinery and apparatus, appliances not specified above	379
38	Transport Equipment:—	
	Manufacture, assembly and repairing of locomotives	380
	Manufacture of wagons, coaches, tramways and other rail road equipment other than that covered by Code No. 363	381
	Manufacture and assembling of motor vehicles of all types (excepting motor engines)	382
	Manufacture of motor vehicles engines parts and accessories	383
	Repairing and servicing of motor vehicles	384
	Manufacture of bicycles and tricycles and accessories such as saddle, seat frame, gear	385
	Building and repairing of water transport equipment such as ships, boats, and manufacture of marine engines	386
	Manufacture & repair of air transport equipment including aeroplanes, aeroengines	387
	Repairing of bicycles and tricycles	388
	Manufacture of other transport equipment not covered above such as animal drawn and hand drawn vehicles	389
39	Miscellaneous manufacturing Industries:	
	Manufacture of optical instruments and lenses, opthalmic goods and photographic equipment and supplies	390
	Manufacture of scientific, medical and surgical instruments and equipment and supplies	391
	Assembling and repairing of watches and clocks	392

Major Group (Code)	Description	Minor Group (Code)
	Manufacture of jewellery, silverware and wares using gold and other precious metals	393
	Manufacture and tuning of Musical Instruments	394
	Manufacture of stationery articles not covered elsewhere such as pencil, pen-holder, fountain pen	395
	Manufacture of sports goods	396
	Manufacture and repair work of goods not assignable to any other group	399
	Division 4—Construction	
40	Construction:—	
	Construction and maintenance of buildings including erection, flooring, decorative constructions, electrical and sanitary installations	400
	Construction and maintenance of roads, railways, bridges, tunnels	401
	Construction and maintenance of telegraph and telephone lines	402
	Construction and maintenance of water ways and water reservoirs such as bund, embankments, dam, canal, tank, tubewells, wells	403
	Division 5—Electricity, Gas, Water and Sanitary Services	
50	Electricity and Gas:—	
	Generation and transmission of electric energy	500
	Distribution of electric energy	501
	Manufacture of Gas in gas works and distribution to domestic and industrial consumers	502
51	Water Supply and Sanitary Services:—	
	Collection, purification and distribution of water to domestic and industrial consumers	510
	Garbage and sewage disposal, operation of drainage system and all other types of work connected with public health and sanitation	511
	Division 6—Trade and Commerce	
60	Wholesale Trade:—	
	Wholesale trading in cereals and Pulses	600
	Wholesale trading in vegetables, fruits, sugar, spices, oil, fish dairy products eggs, poultry and other foodstuff (not covered else where)	601
	Wholesale trading in all kinds of fabrics, and textiles products such as garments, hessian, gunny bag, silk and woollen yarn, shirtings, suitings, hosiery products	602
	Wholesale trading in beverages, such as tea (leaf), coffee (seed and powder), aerated water	603
	Wholesale trading in intoxicants such as wines, liquors	604
	Wholesale trading in other intoxicants such as opium, ganja etc.	605
	Wholesale trading in tobacco, bidi, cigarettes and other tobacco products	606
	Wholesale trading in animals	607
	Wholesale trading in straw and fodder	608
61	Wholesale trading in medicines and chemicals	610
	Wholesale trading in fuel and lighting products such as coke, coal, kerosene, candle	611
	Wholesale trading in toilets, perfumery and cosmetics	612
	Wholesale trading in metal, porcelain and glass utensils, crockery, chinaware	613
	Wholesale trading in wooden, steel and other metallic furniture and fittings	614
	Wholesale trading in footwear	615
	Wholesale trading in tyres, tubes and allied rubber products	616
	Wholesale trading in petrol, mobil oil and allied products	617
	Wholesale trading in other household equipment not covered above	618
62	Wholesale trading in bricks, tiles and other building materials	620
	Wholesale trading in wood, bamboo, cane, thatches and similar products	621
63	Wholesale trading in paper and other stationery goods	630

Major Group (Code)	Description	Minor Group (Code)
	Wholesale trading in agricultural and industrial machinery equipment and tools and appliances other than electrical	631
	Wholesale trading in electrical machinery and equipment like motor, battery, electric fan, bulb	632
	Wholesale trading in all kinds of transport and storage equipment	633
	Wholesale trading in skins, leather and fur	634
	Wholesale trading in clocks, eye glasses, frames	635
	Wholesale trading in hardware and sanitary equipment	636
	Wholesale trading in scientific, medical and surgical instruments	637
	Wholesale trading in precious metals and stones, gold and silverwares and jewellery	638
	Wholesale trading in all goods not covered above	639
64	Retail Trade:—	
	Retail trading in cereals, pulses, vegetables, fruits, sugar, spices, oil, fish, dairy products, eggs, poultry	640
	Retail trading in beverages such as tea (leaf), coffee (seed and powder), aerated water	641
	Retail trading in intoxicants such as wines, liquors	642
	Retail trading in other intoxicants such as opium, ganja, etc.	643
	Retail trading in tobacco, bidi, cigarettes and other tobacco products	644
	Retail trading in fuel such as coke, coal, firewood and kerosene	645
	Retail trading in food stuffs like sweetmeats, condiments, cakes, biscuits, etc.	646
	Retail trading in animals	647
	Retail trading in straw and fodder	648
65	Retail trading in fibres, yarns, dhoti, saree, readymade garments of cotton, wool, silk and other textiles and hosiery products; (this includes retail trading in piecegoods of cotton, wool, silk and other textiles)	650
	Retail trading in toilet goods, perfumes and cosmetics	651
	Retail trading in medicines and chemicals	652
	Retail trading in footwear, headgear such as hat, umbrellas, shoes and chappals	653
	Retail trading in tyres, tubes and allied rubber products	654
	Retail trading in petrol, mobiloil and allied products	655
66	Retail trading in wooden, steel and other metallic furniture and fittings	660
	Retail trading in stationery goods and papers	661
	Retail trading in metal, porcelain and glass utensils	662
	Retail trading in earthenware and earthen toys	663
	Retail trading in other household equipment not covered above	664
67	Retail trading in bricks, tiles and other building materials	670
	Retail trading in hardware and sanitary equipment	671
	Retail trading in wood, bamboo cane, bark and thatches	672
	Retail trading in other building materials	673
68	Retail trading in agricultural and industrial machinery equipment, tools and appliances	680
	Retail trading in transport and storage equipments	681
	Retail trading in electrical goods like electric fan, bulb, etc.	682
	Retail trading in skins, leather and furs and their products excluding footwear and headgear	683
	Retail trading in clock and watch, eye glass, frame	684
	Retail trading in scientific, medical and surgical instruments	685
	Retail trading in precious stones and jewellery	686
	Retail trading in musical instruments, gramophone record, pictures and paintings including curio dealing	687
	Book-selling	688
	Retail trading in goods unspecified	689

Major Group (Code)	Description	Minor Group (Code)
69	Trade and Commerce Miscellaneous:—	
	Importing and exporting of goods and commodities	690
	Real estate and properties	691
	Stocks, shares and futures	692
	Providents and insurances	693
	Money lending (indigenous)	694
	Banking and similar type of financial operation	695
	Auctioneering	696
	Distribution of motion pictures	697
	All other activities connected with trade and commerce not covered above including hiring out of durable goods such as electric fan, microphone, rickshaw, etc.	699
Division 7.—Transport, Storage and Communication:		
70	Transport:—	
	Transporting by railways	700
	Transporting by tramway and bus service	701
	Transporting by motor vehicles (other than omnibus)	702
	Transporting by road through other means of transport such as hackney carriage, bullock cart, ekka	703
	Animal transporting by animals such as horses, elephant, mule, camel	704
	Transporting by man such as carrying of luggage, hand cart driving, rickshaw pulling, cycle rickshaw driving	705
	Transporting by boat, steamer, ferry, etc. by river, canal	706
	Transporting by boat, steamer, ship, cargo boat by sea or ocean	707
	Transporting by air	708
	Transporting by other means not covered above	709
71	Services incidental to transport such as packing, carting travel agency	710
72	Storage and Ware Housing:—	
	Operation of storage such as warehouses	720
	Operation of storage such as cold-storage	721
	Operation of storage of other type	722
73	Communication:—	
	Postal, telegraphic, wireless and signal communications	730
	Telephone communication	731
	Information and broadcasting	732
Division 8.—Services:		
80	Public Services (This does not include Govt., Quasi-Govt. or local body activities, other than administrative, in such fields as transport, communication, information and broadcasting, education and scientific services, health, industries, production, construction, marketing & operation of financial institution each of which is classified in the appropriate industry groups):—	
	Public Services in Union and State army including territorial corps and volunteer corps	800
	Public Service in Navy	801
	Public Service in Air Force	802
	Public Service in Police	803
	Public service in administrative departments and offices of Central Government	804
	Public service in administrative departments and offices of Quasi-Government organisation, municipalities, local boards, etc.	805
	Public service in administrative departments and offices of State Governments	809
81	Educational and Scientific Services:—	
	Educational services such as those rendered by technical colleges, technical schools and similar technical and vocational institutions	810
	Educational services such as those rendered by colleges, schools and similar other institutions of non-technical type	811
	Scientific services and research institutions not capable of classification under any individual group	812
82	Medical and Health Services:—	
	Public health and medical services rendered by organisations and individuals such as by hospitals, sanatoria, nursing homes, maternity and child welfare clinic as also by hakimi, unani, ayurvedic, allopathic and homeopathic particulars	820
	Veterinary services rendered by organisations and individuals	821

Major Group (Code)	Description	Minor Group (Code)
83	Religious and Welfare Services:—	
	Religious services rendered by religious organisations and their establishments maintained for worship or promotion of religious activities, this includes missions, ashrams and other allied organisations	830
	Religious and allied services rendered by pandit, priest, preceptor, fakir, monk	831
	Welfare services rendered by organisations operating on a non-profit basis for promotion of welfare of the community such as relief societies red-cross organisation for the collection and allocation of contribution for charity	832
84	Legal Services:—	
	Legal services rendered by barrister, advocate, solicitor, mukteer, pleader, mukurie, munshi	840
	Matrimonial services rendered by organizations and individuals	841
85	Business Services:—	
	Engineering services rendered by professional organisations or individuals	850
	Business services rendered by organisations of accountants, auditors, book-keepers or like individuals	851
	Business services rendered by professional organisations or individuals such as of those of advertising and publicity agencies	852
	Business services rendered by professional organisations or individuals such as of those rendered by news agency, news paper correspondent, columnist, journalists, editors, authors	853
86	Community Services and Trade and Labour Associations:—	
	Services rendered by trade associations, chambers of commerce, trade unions and similar other organisations	860
	Services rendered by civic, social, cultural, political, and fraternal organisations such as rate payers association, club, library	861
	Community services such as those rendered by public libraries, museums, botanical and zoological gardens etc.	862
87	Recreation Services:—	
	Production of motion picture and allied services such as processing editing etc.	870
	Recreation services rendered by cinema houses by exhibition of motion pictures	871
	Recreation services rendered by organisations and individuals such as those of theatres, opera companies, ballet and dancing parties, musicians, exhibitions, circus, carnivals	872
	Recreation services rendered by indoor and outdoor sports by organisations and individuals including horse, motor etc. racing.	873
88	Personal Services:—	
	Services rendered to households such as those by domestic servants, cooks	880
	Services rendered to households such as those by governess, tutor, private secretary	881
	Services rendered by hotels, boarding houses, eating houses, cafes, restaurants and similar other organisations to provide lodging and boarding facilities	882
	Laundry services rendered by organisations and individuals, (this includes all types of cleaning, dyeing, bleaching, dry cleaning services)	883
	Hair dressing, other services rendered by organisation and individuals such as those by barber, hairdressing saloon and beauty shops	884
	Services rendered by portrait and commericial photographic studios	885
89	Services (not elsewhere classified):—	
	Services rendered by organisations or individuals not elsewhere classified	890
	Division 9—Activities not adequately descirbed:	
90	Activities unspecified and not adequately described including activities of such individuals who fail to provide sufficient information about their industrial affiliation to enable them to be classified	900
	Fresh entrants to the Labour Market	999

APPENDIX—II

NATIONAL CLASSIFICATION OF OCCUPATIONS

(Code Structure)

Which classifies occupations into
331 Occupational Families (three-digit code numbers)
75 Occupational Groups (two-digit code numbers)
11 Occupational Divisions (one-digit code numbers)

Note I.—The Classification does not provide separate code numbers for Apprentices, Foremen and Instructors (in-plant only). These may be classified by giving the prefixes of "A", "B", or "C" respectively before the code number of the occupation which is being learned, supervised or instructed.

Note II.—n. e. c.—not elsewhere classified.

DIVISIONS, GROUPS AND FAMILIES

0 *Professional, Technical and Related Workers:*

00 Architects, Engineers and Surveyors:—

- 000 Architects
- 001 Civil Engineers (including overseers)
- 002 Mechanical Engineers
- 003 Electrical Engineers
- 004 Chemical Engineers
- 005 Metallurgical Engineers
- 006 Mining Engineers
- 007 Surveyors
- 009 Architects, Engineers and Surveyors, n. e. c.

01 Chemists, Physicists, Geologists and other Physical Scientists:—

- 010 Chemists, except Pharmaceutical Chemists.
- 011 Pharmaceutical Chemists
- 012 Physicists
- 013 Meteorologists
- 014 Geologists and Geophysicist
- 015 Mathematicians
- 019 Chemists, Physicists, Geologists and other Physical Scientists, n. e. c.

02 Biologists, Veterinarians, Agronomists & Related Scientists:—

- 020 Biologists and Animal Scientists
- 021 Veterinarians
- 022 Sliviculturists
- 023 Agronomists and Agricultural Scientists
- 029 Biologists, Veterinarians, Agronomists and Related Scientists, n. e. c.

03 Physicians, Surgeons and Dentists

- 030 Physicians and Surgeons, Allopathic
- 031 Physicians, Ayurvedic
- 032 Physicians, Homeopathic
- 033 Physicians, others
- 034 Physiologists
- 035 Dentists
- 039 Physicians, Surgeons and Dentists n. e. c.

04 Nurses, Pharmacists and other Medical & Health Technicians:—

- 040 Nurses
- 041 *Midwives and Health Visitors*
- 042 Nursing Attendants and Related Workers
- 043 Pharmacists and Pharmaceutical Technicians
- 044 Vaccinators
- 045 Physiotherapists, Masseurs and Related Technicians
- 046 Sanitation Technicians
- 047 Optometrists and Opticians
- 049 Medical and Health Technicians. n. e. c. (excluding Laboratory Assistants see 091).

05 Teachers:—

- 050 Teachers, University
- 051 Teachers, Secondary Schools
- 052 Teachers, Middle and Primary Schools.
- 053 Teachers, Nursery and Kindergarten Schools
- 059 Teachers, n. e. c.

06 Jurists:—

- 060 Judges and Magistrates
- 061 Legal Practitioners and Advisers
- 062 Law Assistants
- 069 Jurists, and Legal Technician (including Petition Writers)

07 Social Scientists and Related Workers:—
- 070 Economists
- 071 Accountants and Auditors
- 072 Statisticians and Actuaries
- 073 Geographers
- 074 Psychologists
- 075 Personnel Specialists
- 076 Labour and Social Welfare Workers
- 077 Sociologists and Anthropologists
- 078 Historians, Archeologists, Political Scientists and Related Workers
- 079 Social Scientists and Related Workers, n. e. c.

08 Artists, Writers and Related Workers:—
- 080 Authors
- 081 Editors, Journalists and Related Workers
- 082 Translators, Interpreters and Language Specialists.
- 083 Painters, Decorators and Commercial Artists
- 084 Sculptors and Modellers
- 085 Actors and Related Workers
- 086 Musicians and Related Workers
- 087 Dancers and Related Workers
- 089 Artists, Writers and Related Workers n. e. c.

09 Draughtsmen, and Science and Engineering Technicians, n. e. c.
- 090 Draughtsmen
- 091 Laboratory Assistants
- 099 Science and Engineering Technicians, n. e. c.

OX Other Professional, Technical and Related Workers:—
- OXO Ordained Religious Workers
- OXI Non-ordained Religious Workers
- OX2 Astrologers, Palmists and Related Workers
- OX9 Other Professional, Technical and Related Workers, n.e.c.
- OX4 Geographers

1 *Administrative, Executive and Managerial Workers:*
- OX3 Librarians, Archivists and Related Workers

10 Administrators and Executive Officials, Government:—
- 100 Administrators and Executive officials, Central Government (All Defence Services Personnel to be included in this family)
- 101 Administrators and Executive officials, State Government
- 102 Administrators and Executive Officials, Local Bodies.
- 103 Administrators and Executive Officials, Quasi-Government
- 104 Village Officials
- 109 Administrators and Executive Officials, Government, n. e. c.

11 Directors and Managers, Wholesale and Retail Trade:—
- 110 Directors and Managers, Wholesale Trade
- 111 Directors and Managers, Retail Trade

12 Directors, Managers and Working Proprietors, Financial Institutions:—
- 120 Directors, Managers and Working Proprietors, Banks
- 121 Directors, Managers and Working Proprietors, Insurance
- 129 Directors, Managers and Working Proprietors, Financial Institutions,

13 Directors, Managers and Working Proprietors other:—
- 130 Directors, Managers and Working Proprietors, Mining, Quarrying and Well Drilling
- 131 Directors, Managers and Working Proprietors, Construction
- 132 Directors, Managers and Working Proprietors, Electricity, Gas, Water and Sanitary.
- 133 Directors, Managers and Working Proprietors, Manufacturing
- 134 Directors, Managers and Working Proprietors, Transport and Communication
- 135 Directors, Managers and Working Proprietors, Recreation, Entertainment and Catering Services.
- 136 Directors, Managers and Working Proprietors, Other Services
- 139 Directors, Managers and Working Proprietors, n. e. c.

2 *Clerical and Related Workers:*

20 Book-keepers and Cashiers:—
- 200 Book-keepers, Book-keeping and Accounts Clerks
- 201 Cashiers
- 202 Ticket Sellers and Ticket Inspectors including ushers and Ticket Collectors (excluding those on moving transport)

21 Stenographers and Typists:—
- 210 Stenographers
- 211 Typists

22 Office Machine Operators:
- 220 Computing Clerks and Calculating Machine Operators
- 221 Punch Card Machine Operators
- 229 Office Machine Operators, n. e. c.

28 Clerical Workers, Miscellaneous:—
- 280 General and other Ministerial Assistants and Clerks
- 289 Miscellaneous Office Workers including Record keepers, Moharrers, Diaphers, Packers and Binders of office papers.

29 Unskilled Office Workers:—
- 290 Office Attendants, Ushers, Hall Porters etc. n. e. c.

3 *Sales Workers:*

30 Working Proprietors, Wholesale and Retail Trade:—
- 300 Working Proprietors, Wholesale Trade
- 301 Working Proprietors, Retail Trade

31 Insurance and real estate salesmen, sales men of securites and services, and auctioneers:—
- 310 Agents and Salesmen, Insurance
- 311 Agents, Brokers and Salesmen, Real Estate
- 312 Brokers and Agents, Securities and Shares
- 313 Auctioneers
- 314 Valuers and Appraisers
- 319 Insurance and Real Estate Salesmen, Salesmen of Securities and Services, and Auctioneers, n.e.c.

32 Commercial Travellers and Manufacturers' Agents:—
- 320 Commercial Travellers
- 321 Manufacturers Agents
- 329 Commercial Travellers and Manufacturers' Agents. n. e. c.

33 Salesmen, Shop Assistants and Related Workers:—
- 330 Salesmen and Shop Assistants, Wholesale and Retail Trade
- 331 Hawkers, Pedlars and Street Vendors
- 339 Salesmen, Shop Assistants and Related Workers, n. e. c.

34 Money-Lenders and Pawn-Brokers:—
- 340 Money-Lenders (including Indigenous Bankers)
- 341 Pawn-Brokers

4 *Farmers, Fishermen, Hunters, Loggers and Related Workers:*

40 Farmers and Farm Managers:—
- 400 Cultivators (Owners)
- 401 Cultivators (Tenants)
- 402 Farm Managers, Inspectors and Overseers
- 403 Planters and Plantation Managers
- 404 Farmers and Farm Managers, Animals, Birds and Insects Rearing
- 409 Farmers and Farm Managers, n.e.c.

41 Farm Workers:—
- 410 Farm Machinery Operators
- 411 Farm Workers, Animals, Birds and Insects Rearing
- 412 Gardeners (malis)
- 413 Tappers (Palm, Rubber trees, etc.)
- 414 Agricultural Labourers
- 415 Plantation Labourers
- 419 Farm Workers. n. e. c.

42 Hunters and Related Workers:—
- 420 Hunters
- 421 Trappers
- 429 Hunters and Related Workers n.e.c.

43 Fishermen and Related Workers:—
- 430 Fishermen, Deep Sea
- 431 Fishermen, Inland and Coastal Waters
- 432 Conch and Shell gathers, Sponge and Pearl Divers
- 439 Fishermen and Related Workers, n.e.c.

44 Loggers and other Forestry Workers:—
- 440 Forest Rangers and Related Workers
- 441 Harvesters and Gathers of Forest Products including lac (except logs)
- 442 Log Fellers and Wood Cutters
- 443 Charcoal Burners and Forest Product Processors
- 449 Loggers and other Forestry Workers n. e. c.

5 *Mines, Quarrymen and Related Workers:*

50 Miners and Quarrymen:—
- 500 Miners
- 501 Quarrymen

502 Drillers, Mines and Quarries
503 Short Firers
509 Miners and Quarrymen, n. e. c.

51 Well Drillers and Related Workers:—
510 Well Drillers, Petroleum and Gas
511 Well Drillers, other than Petroleum and Gas

52 Mineral Treaters:—
520 Mineral Treaters

59 Miners, Quarrymen and Related Workers, n. e. c. :—
590 Miners, Quarrymen and Related Workers, n. e. c.

6 *Workers in Transport and Communication Occupations:*

60 Deck Officers, Engineer Officers and Pilots, Ship:—
600 Deck Officers and Pilots, Ship
601 Ship Engineers

61 Deck and Engine-room Ratings (Ship), Barge Crews and Boatmen:—
610 Deck Ratings (Ship), Barge Crews and Boatmen
611 Engine-Room ratings, Firemen and Oilers, Ship

62 Aircraft Pilots, Navigators and Flight Engineers:—
620 Aircraft Pilots
621 Flight Engineers
622 Flight Navigators

63 Drivers and Firemen, Railway Engine:—
630 Drivers
631 Firemen

64 Drivers, Road Transport:—
640 Tramcar Drivers
641 Motor Vehicle and Motor Cycle Drivers
642 Cycle Rickshaw Drivers and Rickshaw Pullers
643 Animal Drawn Vehicle Drivers
649 Drivers, Road Transport, n. e. c. (including Palki and Doli Bearers)

65 Conductors. Guards and Brakesmen (Railway):—
650 Conductors
651 Guards
652 Brakesmen

66 Inspectors, Supervisors, Traffic Controllers, Despatchers, Transport:—
660 Inspectors, Supervisors and Station Masters
661 Traffic Controllers
662 Signalmen and Pointsmen

67 Telephone, Telegraph and Related Telecommunication Operators:—
670 Telephone Operators
671 Telegraphists and Signallers
672 Radio Communication and Wireless Operators
673 Teleprinter Operators
679 Telephone, Telegraph and Related Tele-Communication Operators, n.e.c.

68 Postmen and Messengers:—
680 Postmen
681 Messengers (including Dak Peons)

69 Workers in Transport and Communication Occupations, n. e. c.
690 Ticket Sellers, Ticket Inspectors, including Ushers and Ticket Collectors on moving Transport
691 Conductors, Road Transport
692 Workers in Transport Occupations, n. e. c.
693 Inspectors, Traffic Controllers and Despatchers, Communications
694 Workers in Communication Occupation, n.e.c.

7-8 *Craftsmen, Production Process Workers, and Labourers not elsewhere classified:*

70 Spinners, Weavers, Knitters, Dyers and Related Workers:—
700 Fibre Preparers, Ginners, Cleaners, Scourers, etc.
701 Blow-room Workers and Carders
702 Spinners, Piecers and Winders
703 Warpers and Sizers
704 Drawers and Weavers
705 Pattern Cards Preparers (excluding Printers)
706 Bleachers, Dyers and Finishers
707 Knitters and Lace Makers
708 Carpet Makers and Finishers
709 Spinners, Weavers, Knitters, Dyers and Related Workers, n.e.c.

71 Tailors, Cutters, Furriers and Related Workers:—
- 710 Tailors, Dress Makers and Garment Makers
- 711 Hat and Head-gear Makers
- 712 Furriers
- 713 Upholsterers and Related Workers
- 714 Pattern Makers, Markers and Cutters, Textile Products, Leather Garments and Gloves
- 715 Sewers, Embrioderers and Darners, Textile and Fur Products
- 719 Tailors, Cutters, Furriers and Related Workers, n.e.c.

72 Leather Cutters, Lasters and Sewers (except Gloves and Garments) and Related Workers:—
- 720 Shoe Makers and Shoes Repairers
- 721 Cutters, Lasters, Sewers, Footwear and Related Workers
- 722 Harness and Saddle Makers
- 729 Leather Cutters, Lasters and Sewers (except Gloves and Garments) and Related Workers, n.e.c.

73 Furnacemen, Rollers, Drawers, Moulders and Related Metal Making and Treating Workers:—
- 730 Furnacemen, Metal
- 731 Annealers, Temperers and Related Heat Treaters
- 732 Rolling Mill Operators, Metal
- 733 Blacksmiths, Hammersmiths and Forgemen
- 734 Moulders and Coremakers
- 735 Metal Drawers and Extruders
- 739 Furnacemen, Rollers, Drawers, Moulders and Related Metal-Making and Treating Workers n.e.c.

74 Precision Instrument Makers, Watch Makers, Jewellers and Related Workers:—
- 740 Precision Instrument Makers, Watch and Clock Makers and Repairmen
- 741 Jewellers, Goldsmiths and Silversmiths
- 742 Jewellery Engravers

75 Tool-Makers, Machinists, Plumbers, Welders, Platers and Related Workers:—
- 750 Fitter-Machinists, Tool-makers and Machine Tool Setters
- 751 Machine Tool Operators
- 752 Fitter-Assemblers and Machine Erectors (Except Electrical and Precision Instrument Fitter-Assemblers)
- 753 Mechanics-Repairmen (Except Electrical and Precision Instrument Repairmen)
- 754 Sheet Metal Workers
- 755 Plumbers and Pipe Fitters
- 756 Welders and Flame Cutters
- 757 Metal Plate and Structural Metal Workers
- 758 Electro-Platers, Dip-Platers and Related Workers
- 759 Tool-Makers, Machinists, Plumbers, Welders, Platers and Related Workers, n.e.c. (including Metal-engravers other than printing)

76 Electricians and Related Electrical and Electronics Workers:—
- 760 Electricians, Electrical Repairmen and Related Electrical Workers
- 761 Electrical and Electronics Fitters
- 762 Mechanics-Repairmen, Radio and Television
- 763 Installers and Repairmen, Telephone and Telegraph
- 764 Linemen and Cable Jointers
- 769 Electricians and Related Electrical and Electronics Workers, n.e.c.

77 Carpenters, Joiners, Cabinet Makers, Coopers and Related Workers:—
- 770 Carpenters, Joiners, Pattern Makers (Wood)
- 771 Shipwrights and Body Builders
- 772 Sawyers and Wood Working Machinists
- 773 Coach and Body Builders
- 774 Cart Builders and Wheel Wrights
- 775 Cabinet Makers
- 779 Carpenters, Joiners, Cabinet Makers, Coopers and Related Workers, n.e.c.

78 Painters and Paper Hangers:—
- 780 Painters and Paper Hangers

79 Bricklayers, Plasterers and Construction Workers n.e.c.:—
- 790 Stone Cutters, Stone Carvers and Stone Dressers
- 791 Bricklayers, Flasterers, Masons
- 792 Glaziers

793 Cement Finishers and Terrazzo and Mosaic Workers
794 Hut Builders and Thatchers
795 Well Diggers
799 Bricklayers, Plasterers and Construction Workers, n.e.c.

80 Compositors, Printers, Engravers, Book-Binders and Related Workers:—
800 Type-setting Machine Operators
801 Compositors
802 Proof-Readers and Copy Holders
803 Printers (Paper)
804 Printers (Textile)
805 Photo-Litho Operators, Photo-lithographers
806 Engravers, Etchers & Block Makers (Printing)
807 Stereotypers
808 Book Binders
809 Compositors, Printers, Engravers, Book-Binders and Related Workers, n.e.c.

81 Potters, Kilnmen, Glass and Clay Formers and Related Workers:—
810 Furnacemen, Kilnmen and Ovenmen
811 Potters, and Related Clay Formers
812 Blowers and Benders, Glass
813 Moulders and Pressers, Glass
814 Grinders, Cutters, Decorators and Finishers
815 Pulverisors and Mixers, Cement, Clay and other Ceramics
819 Potters, Kilnmen, Glass and Clay Formers and Related Workers, n.e.c.

82 Millers, Bakers, Brewmasters and Related Food and Beverage Workers:—
820 Millers, Pounders, Huskers and Parchers, Grains and Related Food Workers
821 Crushers and Pressers, Oil Seeds
822 Dairy Workers (Non-Farm)
823 Khandsari, Sugar and Gur Makers
824 Bakers, Confectioners, Candy and Sweetmeat Makers
825 Makers of Aerated Water and and Brewers
826 Food Canners, Preservers and Related Workers
827 Butchers
828 Coffee and Tea Blenders and Related Workers
829 Millers, Bakers, Brewmasters and Related Food and Beverage Workers, n.e.c.

83 Chemical and Related Process Workers:—
830 Batch and Continuous Still Operators
831 Cookers, Roasters and other Heat Treaters, Chemical and Related Processes
832 Crushers, Millers and Calenderers Chemical and Related Processes.
833 Paper Pulp Preparers
834 Paper Makers
839 Chemical and Related Process Workers, n.e.c.

84 Tobacco Preparers and Products Makers:
840 Curers, Graders and Blenders, Tobacco
841 Cigarette Machine Operators
842 Cheroot, Cigar and Bidi Makers
843 Snuff and Zarda Makers
849 Tobacco Preparers and Product Makers, n.e.c.

85 Craftsmen and Production Process Workers n.e.c.
850 Basketry Weavers and Related Workers
851 Tyre Builders, Vulcanisers and Related Rubber Products Makers
852 Plastics Products Makers
853 Tanners, Fellmongers, Pelt Dressers and Related Workers
854 Photographic Dark Room Workers
855 Makers of Musical Instruments and Related Workers
856 Paper Products Makers
859 Craftsmen and Production Process Workers, n.e.c.

86 Testers, Packers, Sorters and Related Workers:—
860 Checkers, Testers, Sorters, Weighters and Counters
861 Packers, Labellers and Related Workers.

87 Stationary Engine and Excavating and Lifting Equipment Operators and Related Workers:—
870 Operators, Stationary Engines and Related Equipment

871 Boilermen and Firemen
872 Crane and Hoist Operators
873 Riggers and Cable Splicers
874 Operators of Earth-moving and other Construction Machinery, n.e.c.
875 Materials-handling Equipment Operators
876 Oilers and Greasers, Stationary Engines, Motor Vechicles and Related Equipment
879 Stationary Engine, and Excavating and Lifting Equipment Operators and Related Workers, n.e.c.

89 Labourers, n.e.c.:—
890 Loaders and Unloaders
899 Labourers, n.e.c.

9 *Service, Sports and Recreation Workers.*

90 Fire Fighters, Policemen, Guards and Related Workers:—
900 Fire Fighters and Related Workers
901 Police Constables, Investigators and Related Workers
902 Customs Examiners, Patrollers and Related Workers
903 Watchmen and Chowkidars
909 Fire Fighters, Policemen, Guards, and Related Workers, n.e.c.

91 House-Keepers, Cooks, Maids and Related Workers:—
910 House-Keepers, Matrons, Stewards (Domestic and Institutional)
911 Cooks, Cook-Bearers (Domestic and Institutional)
912 Butlers, Bearers, Waiters, Maids and other Servants (Domestic)
913 Ayas, Nurse-maids
919 House-Keepers, Cooks, Maids, and Related Workers, n.e.c.

92 Waiters, Bartenders and Related Workers:—
920 Waiters, Bartenders and Related Workers (Institutional)

93 Building Care-Takers, Cleaners and Related Workers:—
930 Building Care-Takers
931 Cleaners, Sweepers and Watermen

94 Barbers, Hairdressers, Beauticians and Related Workers:—
940 Barbers, Hairdressers, Beauticians and Related Workers

95 Launderers, Dry Cleaners and Pressers:—
950 Laundrymen, Washermen and Dhobies
951 Dry-cleaners and Pressers

96 Athletes Sportsmen and Related Workers:—
960 Athletes, Sportsmen and Related Workers

97 Photographers and Related Camera Operators:—
970 Movic Camera Operators
979 Other Photographers

99 Service, Sports and Recreation Workers, n.e.c.:—
990 Embalmers and Undertakers
999 Service, Sport and Recreation Workers, n.e.c.

X *Workers and not Classifiable by occupation:*

X0 Workers without occupations:—
X00 Workers without occupations: Matriculates and above
X08 Workers without occupations: Literates
X09 Workers without occupations: Others

X8 Workers Reporting Occupation Unidentifiable or Unclassifiable:—
X80 Workers reporting occupations unidentifiable or unclassifiable

X9 Workers not Reporting Occupation:—
X90 Workers not reporting occupation.

INTRODUCING THE DISTRICT

by

G. N. Tiwari

Deputy Superintendent of Census Operations, Madhya Pradesh

West Nimar district lies in the south-west corner of Madhya Pradesh and the Indore division between 21°22′ and 22°35′ north latitude and 74°27′ and 76°14′ east longitude. Encased between the Vindhyas on the north, and the Satpuras on the south, with the Narbada flowing in between, the district with its eastern counterpart East Nimar comprises the territory that was known as the 'Prant Nimar' in the mediaeval and old days. With the exception of the Barwani and Rajpur tahsils, the western part of Sendhwa tahsil including the Pansemal and Khetia tract which have come mostly from the merger of the erstwhile State of Barwani, small portions of outlying pockets of Dhar State, and small interlocked territories of former Dewas State, the district consists of most of the Nimar district of former Indore State. The 1951 District Census Handbook gives complete details of the present constitution of the district and its tahsils. Prior to reorganisation of States on 1-11-56, the district was simply known as Nimar, and the prefix West is a post reorganisation addition to distinguish it from its eastern counterpart.

If we disregard the indentations, the district tends to assume the shape of a right-angled triangle, the northern boundary being the hypotenuse, and the southern and eastern boundaries being the other two arms making the right angle. The northern, eastern and southern boundaries of the district run almost east-west, north-south and east-west respectively, but the western boundary has a north-west south-east orientation. The south-western and southern boundary of the district marches respectively with the districts of Dhulia and Jalgaon of Maharashtra State. With the exception of a few miles of the boundary in the north-west which is along the Jhabua border, the districts of Dhar and Indore make the northern boundary of the district, the bulk of the former in the west and the latter in the east. The eastern boundary of the district runs with those of Dewas (north-east) and East-Nimar districts.

With an area of 5,178* square-miles, containing 3·0% of the State's total area, the district ranks seventh in size in State. The biggest district in the State, Bastar, is almost three times as big as West Nimar, while in its turn, the latter is about 6½ times as big as Datia, the smallest district in the State. Mandla (5,120 square miles) and Shahdol (5,352 square miles) are very near to West Nimar district in size.

Containing 3·0% of the State's population, the district's rank recedes to the 8th position in populousness in the State, but even then it is one of the most populous districts of the State. Bilaspur and Raipur districts which are the first two most populous districts in the State each contains more than twice as many inhabitants as West Nimar. Surguja, Raigarh, Bastar, Jabalpur and Durg are the remaining districts which are more populous than West Nimar. Some idea of the unevenness of population distribution among the districts in the State can also be had from the fact that West Nimar is nearly five times as populous as Datia, the least populated district in the State.

Administratively the district consists of eight tahsils, Barwani in the north-west, Rajpur and Maheshwar in the middle-north, the former towards the west and the latter towards the east; Barwaha in the north and east; Bhikangaon in the south-east, and Sendhwa in the south and south-west. The revenue and general administrative pattern of the district is now, more or less, the same as obtains in other parts of the State, with some minor differences regarding the location of the headquarters of some of the district heads of departments. As elsewhere, the Collector and District Magistrate is the executive head of administration in the district, and with the exception of the judiciary which was separated from the executive even in the old State days, all other heads of departments function under the general control of the Collector. The latter is assisted in general administrative, revenue and land records work by sub-divisional officers headquartered at Khargone, Mandleshwar and Barwani. Sub divisional officer (civil) at Khargone is in charge of Khargone and Bhikangaon tahsils, the one stationed at Mandleshwar of Maheshwar, Barwaha and Kasrawad tahsils and the third headquartered at Barwani of Barwani, Rajpur and Sendhwa tahsils. The sub-divisional officers are also executive sub-divisional magistrates having jurisdiction over the tahsils in their charge, exercising powers under the preventive sections of the Criminal Procedure Code. Each tahsil has a tahsildar for revenue, land records and general administrative work, who is assisted by one or more naib-tahsildars. Some of the naib-tahsildars are stationed at big villages having sub-treasuries, which are the headquarters of sub-tahsils. Thus in Sendhwa tahsil, a naib-tahsildar is posted at Pansemal and Warla, in Khargone at Segaon, in Barwaha at Sanawad etc.

Judiciary was separated from executive prior to reorganisation. Mandleshwar is the seat of the District and Sessions Judge of West Nimar, with three additional District and Sessions Judges stationed at

* Revised figures of D. L. R. for 1962-63.

Mandleshwar, Khargone and Barwani. Besides there are civil judges cum magistrates stationed at most of the tahsil headquarters and some sub-tahsil headquarters and some big places like Khetia. The headquarters of the District Medical Officer are at Barwani. As regards public works, the district has two executive engineers, both with headquarters at Khargone one in charge of buildings and roads and the other in charge of irrigation. For administration of forests, the district has recently been constituted into two forest divisions, the West Khargone Forest division with headquarters at Barwani and the East Khargone forest division with headquarters at Khargone.

Physical Aspects :

Physiographically, West Nimar includes most varied tracts of country; wild forest-clad hills, rich alluvial plains, and long stretches of barren plain and low rocky hills. A greater portion of the district lies south of the Narmada. From east to west parallel with the river lie well marked belts of the country. On the north of the rich Narbada valley is the great Vindhyan scarp while to the south of the valley lie hill systems of the Satpuras. The latter are generally 30 to 40 miles from the river except in Barwani tahsil where they approach within three to four miles of the river, but the Vindhyas approach within 14 or 15 miles.

Northern part of Maheshwar tahsil is covered by a belt of the Vindhyan hills about 2 to 3 miles wide, the hills generally rising from 1000' (at the base) to 2000 feet in height, but individual peaks even exceeding 2,000' leading to the great Malwa plateau in the north. The slope is from north to south, towards the Narmada. More than half of the tahsil in the south is 500 to 750 feet in altitude, while of the remaining, northern portion, a major portion is between 750 and 1000 feet in height.

The extreme northern portion of Barwaha tahsil is covered by forest clad hills and plateaus of the Vindhyan system, a continuation of the hills that cover north of the adjoining Maheshwar tahsil. Portion of Barwaha tahsil north of the Narmada, except the mountain chain in the extreme north, lies partly in the fertile alluvium of the river between 500 and 750 feet, girdled by the more extensive Vindhyan slopes on the north and the east. The eastern portion is also covered by low hills extending almost to Barwaha town, and it is out of this hill system that the Narmada cuts the isolated insular hill of Mandhata. South of the Narmada, a greater portion of the tahsil is included in the fertile Narmada alluvium, below 750' in height, but the extreme southern parts, adjoining Bhikangaon tahsil lie on the foot-hills of the Satpuras between 750 and 1,000 feet in altitude.

Bhikangaon tahsil is covered in the extreme south by the higher peaks of Satpuras, which are a continuation of the hills that occupy the northern portion of Burhanpur tahsil of East Nimar district. These hills are about 2,000' high and make the southern edge of the confused mass of hills, which is from eight to ten miles wide in the southern Khargone tahsil and in which many peaks rise to more than 2,750', and a few even more than 3,000' (Lanka peak is 3,177 feet high). Portion of the Bhikangaon tahsil between these hills and latitude 21° 45', consists of the southern slopes of the Satpuras, which in the north-east of the tahsil constitute a plateau of about 1000' height. The north-western portion of Bhikangaon tahsil including the tahsil headquarters Bhikangaon consists of a slightly lower, rolling plain between 750 and 1,000 feet high.

The southern part of Khargone tahsil consists, as already pointed out, of the mass of Satpura hills everywhere more than 2,000 feet in height, wider in the east, but getting narrower and bending northwards in the west when they enter the Sendhwa tahsil. In the extreme south-west, the hills dwindle in height and ultimately lead to the narrow valley (above 1,250') of the Aner river (lying in Sendhwa tahsil) that separates parts of Khargone and Sendhwa tahsils (Warla sub-tahsil) from the Maharashtra State. In the south-east of the Sendhwa tahsil the main mass of the Satpura drops in height northwards to rise again after a few miles to more than 2,000' in Khargone tahsil. This mass of hills extends between longitude 75° 15' and 75° 30' east in a narrow belt, with many peaks rising still higher like the Bijagarh fort (2,753'), Jalalabad (2,619') etc. North of these hills, the country drops, in a space of 4 to 5 miles by about 750 feet. Thereafter the descent is gradual, being about 250 feet in the next 4 to 6 miles northwards. The remaining and greater portion of Khargone tahsil lies in the trans-Narmada valley, a rolling plateau between 750 and 1,000 feet in altitude, broader in the east but tapering towards the river in the west. In fact, the 1,000' contour almost skirts Barwani town in the west which is only 3 miles from the Narmada.

The topography of Sendhwa tahsil is also varied. The main mass of Satpura hills more than 2,000' high in south-east of the tahsil is interrupted by the valley of the Aner river (flowing east-west) and is deflected northwards in the Khargone tahsil, the ranges thus deflected first depressing in altitude but rising again to more than 2,500' northwards in Khargone tahsil. The valley of Aner river, comprising part of Warla sub-tahsil of Sendhwa occupies the south-eastern strip of that tahsil and is for most part below 1,000' in altitude. Further west, the tahsil consists of a rolling plateau from 1,250' to 1,500' in altitude, reaching to the Goi river in the north, and the village of Newali in the west. Sendhwa town, headquarters of the tahsil lies in this plateau. South of this plateau is the narrow, main mass of the Satpuras between 1,500 and 1,750' in altitude. Further west these hills enter in and skirt the Maharashtra border for a few miles but in the south-west of village Nevali, this mass of hills bends northwards, and after the pass which contains the Sendhwa-Newali-Khetia road rises in height to more than 2,000'.

The Nevali-Rajpur road descends through the lower reaches of this mass of hills which, east of the road, merges in the Newali-Sendhwa plateau. This mass of hills continues west-northwards, getting broader and higher in the process. Southern cliffs of this mass of hills overlook the Maharashtra plain, below 750' in altitude, a small narrow strip of which, beyond the pass west of Nevali (referred to earlier) lies in the Sendhwa tahsil. The rich Pansemal-Khetia tract of Sendhwa tahsil lies in this plain.

Most of the Barwani tahsil excepting a small strip in the north-east of the tahsil bordering the Narmada (which lies in the fertile Narmada alluvium) consists of the confused mass of hills of the Satpuras that originate from the Sendhwa-Newali plateau. The Narmada almost washes the foot of these hills to the west of Barwani town. The hills (of course including plateaus and valleys) are from 15 to 20 miles wide, and continue westwards into Dhulia district of Maharashtra and Broach of Gujarat. Many peaks of these hills rise to more than 2,000'. The Bavangaja peak, southwest of Barwani town is 2,102', the Ramgarh fort (standing on a hill north of Newali-Khetia road, of more than 2,000' height and more than nine miles long in Barwani tahsil extending from east to west) 2,772', and numerous other peaks. This mass of hills encloses many plateaus of varying heights, decreasing in height in the north and east. The valley of Goi river, narrow in the east but broadening out as it approaches the Narmada to the north-west is about 1,000' in altitude and separates the main mass of the hills in the south and west from the scattered masses to its east, like the hills of Bavangaja. Many of the important villages of Barwani tahsil like Bedpuri, Silawad, and Pali lie in the Goi valley.

Almost the whole of Rajpur tahsil (except a small portion in the north which falls in the lower slopes of the Satpuras) which consists mainly of the erstwhile Anjar Parganah of Barwani State is in the fertile Narbada valley. This is also the case with its eastern neighbour the Kasrawad tahsil but in the case of this tahsil, there is a considerable stretch of country between the Narbada valley and the slopes of the Satpura, which is of poor fertility.

Rivers :

Rivers of the district, with the exception of a few small rivers like Gomi and its tributaries draining the extreme south and south-western part of Barwani, Sendhwa and Khargone tahsils (which is to the south of the Satpura watershed) into the Tapti, belong to the Narmada system, which drains it into the Arabian Sea. The Narmada enters the district from the East Nimar district and flows first through the middle of Barwaha tahsil and then makes the southern boundary of Maheshwar tahsil first with Barwaha and then with Kasrawad tahsils. Thereafter it makes the northern boundary of Kasrawad, Rajpur and Barwani tahsils with the Dhar district.

Choral, a tributary of Narbada, rises in the Vindhyan hills in Mau tahsil of Indore district; and for some distance flows along the Indore-Khandwa railway line in Barwaha tahsil. Barwaha town is on the bank of the Choral, and a couple of miles beyond it, it joins the Narmada. The Karen river, which makes the western boundary of Maheshwar tahsil with Manawar tahsil of Dhar district—also rises in the Vindhyan hills. Smaller rivers in Maheshwar tahsil joining the Narmada are the Maheshwari, the Malan and the Gomathi.

Among rivers that join the Narmada from the south are : (i) the Goi which flows through Sendhwa and Barwani tahsils and joins the Narmada near Baoti, (ii) Nanali river flowing in Rajpur tahsil, (iii) the Deb river flowing through Khargone, Sendhwa (it makes the boundary of the two tahsils) and Rajpur tahsils, (iv) the Satak in Kasrawad tahsil, (v) the Kundi river in Kasrawad tahsil, (vi) the Kharakia river in Barwaha tahsil (Sanawad town is on the bank of this river). The Kharak, a tributary of Kundi river flows through Khargone and Kasrawad tahsils. The town of Khargone is on the bank of this river.

As regards rivers of the Tapti system that drain into the Arabian sea, mention may be made of (i) Aner that bounds part of Khargone and Sendhwa tahsils with its tributary streams like Lori, Dudhkheda, Kanerde, and (ii) the Umri river which drains the Khetia-Pansemal tract with its numerous tributary streams.

***Flora and fauna** :

The forests of West Nimar were once very extensive and valuable but indiscriminate, perhaps illicit, felling has ruined most of the forests. The forests in the district are divided into two divisions; the West Khargone division with headquarters at Barwani and the East Khargone division with headquarters at Khargone. The former is divided into five ranges namely Barwani, Pati, Pansemal, Sendhwa, and Warla: together containing an area of 999·33 square miles (879·33 square miles of reserved forest, 20 square miles of protected forest and 100 square miles of other forest). The East Khargone division consists of seven ranges; Khargone Bistan, Bhikangaon, Sanawad, Barwaha, Balwada and Mandleshwar, together containing an area of 1,075·63 square miles (1,060·80 square miles of reserved forest and 14·83 square miles of protected forests).

Teak forests (i.e. forests in which teak crop is more than 20% in the overwood) are the general feature of all the forests of the western division. *Salai* occurs on hills slopes in all the ranges. There is dearth of younger age class in *salai (Boswellia serrata)*, and older age-class in teak (*Tectona grandis*). *Sadar* (*Terminalia tomentosa*) is the chief associate of teak in moister areas, and bamboo (*Dandrocalamu s strictus*) occurs in the understorey. Other trees occurring in the western

*Based on information furnished by the Divisional Forest Officers.

division are *dhaoda (Anogeissus latifolia)*, *mohini (Odina wodier)*, *biya (Pterocarpus marsupium)*, *shisham (Dalbergia latifolia)*, *kakad (Ganga pinnata)*, *shisham (Ougeinia dalbergioides)*, *tendu (Diospyros tomentosa)*, *palas (Butea frondosa)*, *kalam (Stephegyne parviflora)*, *dhoban (Dalbergia painenlata)*, *aonla (phyllanthus indica)*, *khair (Acacia catechu)*, etc.

In the East Khargone division, teak, *anjan (Hardwickia binata)*, *salai*, bamboo and mixed forests predominate. Mixed forests, with frequent understocked and bare grassy patches predominate in the Khargone range, where the main species are *kastar (Albizzia amara)*, *khair (Acacia catechu)*, *sajad* or *sadad (Terminalia tomentosa)*, *salai (Boswellia serrata)*, *mohini (Odina wodier)* and teak. In Bistan, Bhikangaon and Sanawad ranges, forests containing considerable proportions of teak, *anjan* and *salai* occur, the other species associated with these being *tendu, sadad, khair dhawara* or *dhawada, shisham, biya, haldu (Adina cardifolia)* and *mohini*. Bamboo (*Dandrocalamus strictus*) forests also occur in some portions of the range. In Barwaha and Balwada ranges teak, *anjan* and bamboo forests predominate, while in Mandleshwar range teak, mixed and *salai* forests are found.

Fauna :

In the past, forests of the district had a rich variety of animals. In Moghul days, wild elephants abounded in the forests, but these disappeared long ago. In more recent times, big game animals like tiger and bison were once common, but they are also rare now in all the forests. This has been the result of unchecked forest encroachments, and indiscriminate hunting by the aboriginal population dwelling in the forest areas. Even then, panther, *sambhar*, wild boar, *chital, hiran* etc. animals may still be found in the extreme interior of the forests of Sendhwa, Warla, Pansemal, Bistan, Bhikangaon, Barwaha and Mandleshwar ranges. Tigers are occasionally found in the deep interiors of the forests. *Kabutar* or pigeon, bhattiar, blue rock pigeon, whistling teal, *mor* or peacock, *guad* and sand grouse are some of the common birds met within the forests.

Rainfall :

The district gets rainfall from the precipitation of the Arabian Sea Monsoon. The onset of the monsoon generally takes place in the second or third week of June. July and August are the months of maximum rainfall in the year but the amount of rainfall varies from year to year. During the last ten years i.e. 1951 to 1960, the district average (based on the actual rainfall of the recording stations Barwaha, Maheshwar, Barwani, Rajpur, Khargone and Pansemal) fluctuated from a minimum of 401 mm. (15·8″) in 1952 to a maximum of 1,097.5 mm. (43.2″) in 1959. The average rainfall for the ten years 1951–60 is highest in the south-western Pansemal being 870·2 mm. (34·2″) and lowest (642·1 mm. or 25·3″) at Khargone. At Barwaha, and Maheshwar also the rainfall is, on an average, higher being respectively 804·7 mm. (31·7″) and 827.2 mm. (32·6″). Barwani and Rajpur stations seem to be low rainfall areas, the average for the ten years there being respectively 678·0 mm. (26·7″) and 662·1 mm. (26·1″). The average of these six stations, which may be called the district average is 747·4 mm. or 29·0″. West Nimar is thus a low rainfall area.

Climate :

West Nimar in the extreme north, and south consists of hills of the Vindhyan and Satpura systems respectively. The climate naturally varies with the elevation, the portions on higher altitudes being slightly cooler than the lowlying portions in the valley. The following table gives the averages (for the last nine or eight years as the case may be) of the mean-maximum, maximum, mean-minimum and minimum temperatures at the Thikri (Rajpur tahsil) observatory.

TABLE

Average mean maximum (A), maximum (B), mean minimum (C) and minimum (D) temperatures for each month.

Month	Temperature in centigrade			
	A	B	C	D
1	2	3	4	5
January	29·7	33·4	12·8	7·5
February	33·6	37·7	15·2	10·0
March	37·7	41·5	18·8	13·4
April	40·6	44·3	24·0	18·5
May	42·6	45·7	28·3	24·1
June	38·4	42·6	26·8	22·2
July	32·6	37·6	24·5	22·0
August	30·6	33·5	23·8	21·7
September	32·2	35·6	23·1	20·8
October	33·8	36·0	19·4	13·3
November	32·2	34·6	13·5	9·0
December	30·6	32·2	11·4	7·3

January and December are on an average the coldest months of the year. The nights seem to be cooler in December than in January, whereas the latter has cooler days. In fact, the later part of December and earlier part of January is the coldest part of the year. The lowest mean maximum temperature attained in January is 29·7° or 85·5°F. The average mean minimum temperature is reached in December, being 11.4°C or 57.5°F. Apparently, therefore, the district is warmer than many other parts of the State. After the month of January, the mean maximum, maximum, mean minimum and minimum temperatures start rising steadily till the month of May, which is the hottest month of the year. The mean maximum temperature in May is 42·6°C (108·7°F) while the maximum is on an average 45·7°C (114·3°F). On individual days the maximum temperature is even higher than this. The highest temperature 46·7°C or 116·6°F was recorded

in May, 1956. After May, the temperature starts declining steadily and the trend continues till August when the mean maximum temperature is 30·6°C or 87·8°F and the mean minimum temperature is 28·3°C or 82·9°F. Thereafter starts the curious phenomenon witnessing the transition of rainy to cold season of the day temperature rising, but the night temperatures continuing to fall. The mean maximum and maximum temperatures continue to increase till October. This latter month is thus warmer during day time than July, though the nights are cooler. After October, the mean maximum and maximum temperatures also start declining while the minimum temperatures continue to decrease. The lowest levels of the mercury are reached in December and January. During past eight or nine years mercury touched its lowest 5·0°C or 41°F in December, 1962.

The climate of the district is thus quite warm. The cold weather lasts only for about 2 months.

History :

In the third century A. D., the territories now comprised in the district were perhaps in the kingdom of the Haihaya or Kalchuries, whose capital Mahismati is identified with the town Maheshwar.* They first appeared at Maheshwar probably in the year 249 A.D., which is the starting point of the era founded by the dynasty. There is reason to believe that the Haihaya or Kalchuri tribe later moved eastwards towards Bundelkhand, though why and when they did so is not known. From the 9th to 12th centuries most of the territories comprised in the district were ruled by the Parmara Kings of Dhar as is apparent from inscriptions on copper plates of those kings found at Mandhata and Harsud in East Nimar district, and from the ruins of temples of Un, Harsud, Singhana and Deola. The Mohammadans under Alauddin first appeared in the district in 1294, when Malik Kafur marched through the region in 1306 but apparently without effecting any conquest. Tradition ascribes the rule over greater part of Nimar to the Gauli or Ahir Rajas in the 14th century†. The origin of these kings is however, not known.

In 1370 Firoz Tughlak made over the district round about Khandesh and Nimar to an Arab adventurer, Malik Raja Faruki. His successor Malik Nazir seized the Asirgarh fort (East Nimar district) from Asa, the Ahir chief of Nimar by treachery. Since then the region became more or less subject to Muhammadan rule. From 1401, most of the district was held by the independent Muhammadan kings of Mandu, and the southernmost parts by Faruki kings of Burhanpur till it fell to Bahadurshah of Gujarat in 1531. Nimar was included by Akbar in the Subah of Malwa, its territories being divided between the three Sirkars of Bijagarh (in West Nimar District), Handia (Hoshangabad district) and Mandu (Dhar district). A considerable portion of the district was a wild region at this time with herds of wild elephants inhabiting its forests. Greater part of the district was in Bijagarh Sirkar, the administrative headquarters being in the town of Jalalabad at the foot of the Bijagarh fort. The fort itself is said to have been built by a Goali Chief Bija in the thirteenth or fourteenth century. In Aurangjeb's days most of Nimar was included in the *Subah* of Aurangabad. In the middle of the seventeenth century, the district appaears to have enjoyed considerable prosperity, which lasted till, towards the end of 17th century, the Marathas entered the district carrying on their depredations as far as Dharampuri (in Manawar tahsil of Dhar district).

In 1720 the Moghul Emperor granted to the Peshwa the *chauth* and *sardeshmukhi* of the Deccan province, which included Nimar. In the same year Chinkhilichkhan, the first Nizamul-mulk seized this tract. Rustam Beg who governed the district then made over Bijagarh to the Nizam, the latter rewarding this by confirming him in his position of Governor.

The beginning of the eighteenth century, after the death of Aurangzeb, was also the beginning of the process which resulted in the disintegration and ultimate liquidation of the imperial authority of Delhi. It also witnessed the gradual strengthening of Maratha power over the Malwa region and hence over Nimar, which happened to be between Malwa and Poona, the seat of the Peshwa. In January 1738, the Nizam (who was appointed Governor of Malwa by the Delhi Emperor in place of Jaisingh of Jaipur with a view to curb the Marathas in Malwa, whose Peshwa had been conferred the Deputy Governorship of the Subah) was forced to agree at the convention of Duraha Sarai (Bhopal State), among other things, to grant the complete sovereignty of the territories between the Narmada and Chambal to the Peshwa. The Emperor, however, did not ratify the settlement until forced, in the time of Peshwa Balajirao in 1741, to issue a *ferman*, conferring the Deputy Governorship of Malwa on the Peshwa. This made the Peshwa the ruler of the portion of the district north of the Narmada. In 1751-52, by arrangement with Ghazi-ud-din, one of the sons of Nizamulmulk, all southern Nimar also passed absolutely to the Peshwa and was by 1755 entirely in the hands of his officers. In 1751, Ramchandra Ballal Bhuskute, who was in charge of the tract, suppressed the *Bhils*, who had overrun practically the whole of the district. He executed all those Bhils, who did not give security for good behaviour, at the *chabutares* in Khargone. The district, at this time, had thirty-two *mahals*, held by the Peshwa, Holkar and the Barwani and Dhar chiefs, though nominally it was all under the Peshwa. In 1768 the

*Indore State Gazetteer page 491. Some identify Mahishmati with Mandhata in East Nimar district and still others with the town of Mandla in the Mandla district.

†Ibid, page 491.

Holkar *mahals* (Sendhwa and Nagalwadi) were confiscated, but were restored to Ahilyabai in 1769. In 1778, the district, except the Kasrawad Parganah which remained with the Peshwa, passed entirely into the hands of the Holkar, Sindhia and the Pawar of Dhar. The Moghul parganah of Baswa (Basina) was also partitioned by the Peshwa into Sanawad and Silani, the first being retained by the Peshwa himself and the others going to Holkar and Sindhia. The period 1767 to 1795, when Ahilyabai aided by her able commander-in-chief Tukojirao ruled the district (excluding the parts, which have come from erstwhile Barwani State) was one of prosperity for the district. Tukojirao also died two years after Ahilyabai and his death proved disasterous for some time to the kingdom of the Holkars, as it gave rise to serious succession disputes between the sons of Tukojirao. In this dispute Yeshwantrao Holkar I, a son of Tukojirao by a mistress emerged with success, but the constant wars and raidings that followed his rise, reduced the district to the last stages of exhaustion. For a period of 20 years, upto the treaty of Mandsor between the British and Malharrao Holkar, bands of Pindaris and the armies of the Holkar and Sindhia swept through the district, and devastated its fields and drove away its inhabitants. In fact, most of the villages in the district became depopulated during this period. After the defeat of the force of Holkar in the battle of Mahidpur by the British the treaty of Mandsor was signed in January, 1818. By this, Mandleshwar, Kasrawad and some other portions of the district passed on to the British. In 1823, by the treaty of Gwalior, the parts of the district held by Scindhia also were placed under British management. The Nimar district (including the present East Nimar district also) under the British had its headquarters at Mandleshwar. The mutiny of 1857 affected the Holkar State also, but by and large, remained confined to Indore district. Tukojirao II, then Maharaja of Indore loyally supported the British. Between 1861 to 1868 the British made over Mandleshwar and Kasrawad parganas to the Holkar in exchange for certain territories held by the Holkar in the Deccan and elsewhere. After that, till 1947, the district (with the exception of most of the present Barwani and Rajpur tahsils) and a small pocket in Maheshwar tahsil that was held by Dewas remained in the domain of the Holkars.

Rajpur and Barwani tahsils of the present district are part of the erstwhile Barwani State. Ruling Chiefs of Barwani State were Sesodia Rajputs, traditionally tracing descent from the second son of Bappa Rawal*. The ancestors of the Chiefs migrated to this tract in the eleventh or fourteenth century and fixed their seat at Avasgarh, a hill fort. About 1650, Chandra Singh, the forty-first Rana in the line, moved the capital to Barwani. In the time of Mohan Singh, son and successor of Chandra Singh, the greater part of the State was seized by the Marathas. Thereafter, though the Barwani rulers managed to keep their independence, and they were never tributary to any of the great Malwa Chiefs, they were finally left with the small territory they held till its merger with Nimar district in 1950, instead of their former extensive domains.

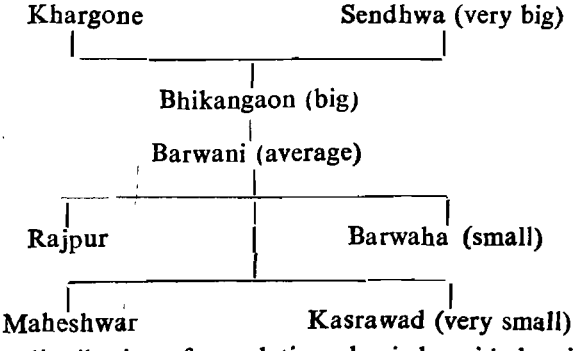

Distribution of area and Population :

The table given below gives distribution of the area and population of the district among its tahsils :

Distribution of area and population among tahsils, 1961.

District/tahsil	Area	Rank in area	Population	Rank in population
1	2	3	4	5
West Nimar district	100·0	...	100·0	...
Barwaha tahsil	10·5	5	11·2	4
Maheshwar tahsil	6·8	8	7·4	8
Barwani tahsil	12·0	4	10·6	6
Rajpur tahsil	9·9	6	14·3	3
Kasrawad tahsil	7·5	7	8·3	7
Sendhwa tahsil	19·5	1	16·1	2
Khargone tahsil	18·9	2	21·1	1
Bhikangaon tahsil	14·9	3	11·0	5

This table clearly brings out the somewhat uneven distribution of area and population among the tahsils. The biggest Sendhwa tahsil alone contains about one-fifth of the area of the district, and it is three times as big as Maheshwar, the smallest tahsil and almost twice as big as Rajpur the sixth biggest tahsil in the district. Khargone tahsil is comparable with Sendhwa in size. The uneven distribution of area in the district is strikingly brought out from the fact that Sendhwa, Khargone and Bhikangaon tahsils, between themselves contain 53% of the district's area; while the smallest three, that is, Maheshwar, Kasrawad and Rajpur contain less than one-fourth (24·2%). Had distribution of area been perfectly even, each group should have contained 37·5% of the area. Barwani tahsil very nearly approaches the average size of a tahsil in the district (on the assumption of equal distribution of area) and the bigger and smaller tahsils cluster round it as per the scheme shown below :

The distribution of population also is lop-sided as is evident from the fact that area-rankings and population

*Imperial Gazetter of India, Vol,VII, Page 90

rankings are generally not identical, except in case of the two smallest tahsils Maheshwar and Kasrawad. These two happen to be the smallest and least populous tahsils in the district. Sendhwa, the biggest tahsil in the district recedes to the second place in populousness, the reverse being the case with Khargone, which though second biggest in size, is the most populous tahsil. Bhikangaon, which is the third biggest tahsil, falls by two places in population-ranking, yielding to the smaller Rajpur and Barwani tahsils. Some idea of the uneven distribution of population among the tahsils can be formed from the fact that Khargone, the most populous tahsil, is about three times as populous as Maheshwar the least populated tahsil, or about 2½ times as populous as Kasrawad, the second least populous tahsil, and more than twice as populous as Barwani tahsil.

Another point to be noticed about the distribution of area and population among tahsils is that Barwaha, Maheshwar, Rajpur, Kasrawad and Khargone contain greater proportion of population than area of the district, the reverse, naturally being the case with the remaining tahsils. Obviously the latter are less densely populated than the district as a whole, while the first five are more densely populated. This only gives us a rough idea of concentration of population in certain tahsils. For a clearer picture, we must consider the population density index, that is, the number of persons per square mile in the district as a whole, and in each tahsil. This is done in the table below, which also gives the corresponding figures for the State as a whole.

Distribution of density, 1961 and 1951 for district and tahsils :

	Population per square mile							
	1961				1951			
	Total		Rural		Total		Rural	
District/Tahsil	Density	Rank	Density	Rank	Density	Rank	Density	Rank
1	2	3	4	5	6	7	8	9
West Nimar district	191	...	165	...	147	...	129	..
Barwaha tahsil	204	5	164	5	159	4	127	5
Maheshwar tahsil	208	4	170	4	170	2	135	4
Barwani tahsil	169	6	141	6	133	6	111	7
Rajpur tahsil	278	1	241	1	228	1	199	1
Kasrawad tahsil	211	3	196	2	164	3	164	2
Sendhwa tahsil	158	7	138	7	126	7	113	6
Khargone tahsil	213	2	178	3	156	5	136	3
Bhikangaon tahsil	141	8	136	8	89	8	89	8

In 1961, Rajpur with 278 persons to a square mile, emerges as the most densely populated tahsil in the district. The tahsil mainly lies in the fertile valley of Narbada, and has always been very thickly populated. Khargone, which includes portions of the Satpura, as also the trans-Narbada valley plains is the second most thickly populated tahsil in the district. The tahsil, however, sinks one rank below when only rural population is concerned, yielding the second place to Kasrawad tahsil (rural). This shows the pull of Khargone town in pushing up the total density of the tahsil. In fact, as regards total population, Khargone, Kasrawad, Maheshwar, and Barwaha, have very closely comparable population densities, varying from 204 to 213 persons to a square mile. Three of these lie mostly in the fertile Narbada valley. The four tahsils form a compact block of territory. The three tahsils of Barwani and Sendhwa in the south and west, and Bhikangaon in the south-east are much cut up by hills of the Satpura or lie on slopes thereof and all have low population densities Among themselves, Sendhwa and Barwani have very nearly equal population densities (all areas), but if we confine our attention only to rural areas, all the three tahsils have closely comparable population densities.

In the State context, West Nimar district almost represents the average position of the State as a whole as regards density of population, its density exceeding the State average only by one point (the difference as regards rural density is of two points). Twenty-three districts in the State have greater population densities than West Nimar. Among its neighbours Jhabua (196), Dhar (205), Indore (510) have greater population densities, while East Nimar (166) and Dewas (167) have smaller population densities than West Nimar.

The demographic parttern as it relates to density of population has seen a few changes during 1951–61. The most thickly populated, and the most sparsely populated tahsils have retained their 1951 rankings. So have Barwani, Kasrawad and Sendhwa, which continue to be sixth, third and seventh tahsils respectively in descending order of denseness of population. Barwaha, Maheshwar and Khargone have changed their 1951 ranks. Maheshwar has fallen from the

second to the fourth place and Barwaha from the fourth to the fifth place. On the other hand, Khargone tahsil, which was fifth in 1951 has now risen to the second position. This significant improvement in Khargone tahsil is, in no small measure, due to growth of its urban population, particularly the town of Khargone. In Maheshwar tahsil, the urban population has registered a paltry increase of 7·5% only during the decade and this perhaps explains its loss of rank in population density. That variable growth of urban population in the different tahsils—mainly by drawing immigrants—is responsible for the changes in population density rankings since 1951 also follows from the greater stability of rural population density rankings. In case of latter type of density except Sendhwa and Barwani, which have interchanged their ranks, no other tahsil has changed in its population density ranking.

Distribution of villages :

West Nimar district has 2,040 villages (including uninhabited villages), which add to 2·7% of all villages in the State. The district thus contains a little more than the average quota of villages per district, which should be 2·33% of all villages in the State. The distribution of villages among the tahsils is quite uneven. The highest population of villages is in Khargone tahsil. This tahsil has roughly one-fifth (18·6%) of villages in the district. To give some more idea of the unevenness of distribution of villages among tahsils, it may be stated that Khargone tahsil contains more than twice as many villages as Barwani (which contains 9·1% of all villges). Khargone tahsil contains almost twice the number of villages in each Rajpur, Maheshwar and Kasrawad tahsils. The distribution of the district's villages among the tahsils is given below :— Khargone (18·6%); Barwaha (15·5%), Bhikangaon (13·5%), Sendhwa (12·3%), Kasrawad (11·1%), Maheshwar (10·1%), Rajpur (9·8%) and Barwani (9·1%).

An interesting feature of the district is the very large number of uninhabited villages. In the district as a whole, uninhabited villages number nearly 1 in 6 (16%). Their frequency in the district is thus nearly twice as large as in State as a whole where they number 1 in 12 (8·4%). Among individual tahsils, the proportion of uninhabited villages is much bigger than that represented by the district average. It is more than one-fourth in each of the tahsils—Barwaha (27%), Maheshwar (26%), and Kasrawad (26%). In Khargone tahsil, the number is slightly smaller, but even then it is more than one-fifth (23%). Barwani, Rajpur and Bhikangaon have comparatively smaller proportions of uninhabited villages, ranging from 5% in case of Rajpur to 7% in case of Barwani tahsil. Sendhwa tahsil has only one uninhabited village. The 1931 Census Report of Holkar state has considered the question of these uninhabited villages in some detail and I can do no better than quote the relevant portions *in extenso* :

"The famine can be said to account for the depopulation of only about 200 villages; and the reasons for the depopulation of the remaining villages have to be sought elsewhere. The 1891 Census was taken in normal times, following a period of comparative prosperity; but, as even at that time the number of inhabited villages was no greater than in 1911, or at any subsequent census, it is clear that these villages must have become depopulated before 1891; it is difficult to say how long before that date depopulation actually took place. They must have existed—at least a very large number of them—at some time or other is certain. Nimar was once, we are told, a prosperous region, but was ruined by the warfare of the early years of the last century when the armies of the Holkar, Scindia and later on the British, were engaged in the struggle that finally broke up the Maratha Empire. A terrible famine, as disastrous in these parts as was the one following a century later in Malwa, preceded the turmoil that lasted for nearly 20 years and prepared the ground for almost complete desolation. It appears that the deserted villages of Nimar probably date from this period. A hundred years have passed since then, yet a large number of them has not revived. The prosperity of Nimar in the last 30 years blinds one to the fact that at the close of the eighteenth century the tract had probably more inhabited villages than it has to-day. We should also remember that what we know of the number of deserted villages to-day is far below the truth.....The former Sirkar of Bijagarh of Mogul days has its extensive central parts entirely deserted to-day, and its ruined village sites are unnamed, unnumbered and unknown."

Rural-Urban break-up of the population :

The following table gives a break-up of the population of the district and each tahsil by residence in rural and urban areas :

100 persons in the district and in each tahsil by residence in rural and urban areas, 1961.

District/tahsil	Total population	Rural	Urban	1951 Urban
1	2	3	4	5
West Nimar District	100	86·1	13·9	12·3
Barwaha tahsil	100	79 9	20·1	20·7
Maheshwar tahsil	100	81·5	18·5	21·0
Barwani tahsil	100	83·4	16·6	16·8
Rajpur tahsil	100	86·6	13·4	12·8
Kasrawad tahsil	100	92·8	7·2	...
Sendhwa tahsil	100	87·4	12·6	10·6
Khargone tahsil	100	83·0	17·0	13·6
Bhikangaon tahsil	100	96·0	4·0	...

Towns:

Including an urban component of nearly 1 in 7 in its population, the district is almost as much urbanised as the State as a whole. The rural urban ratio in the district is thus 6 : 1. Barwaha, the western-most tahsil is the most urbanised, with one-fifth of its population urban. Maheshwar, Khargone and Barwani tahsils are also highly urbanised tahsils in the district, each containing a greater urban component in its population than the district as a whole. The south-western Bhikangaon, with only 1 in every 25 of its population living in town stands at the lower extreme in the degree of urbanisation.

The district has improved its urban proportion since 1951 because of addition of new towns in Khargone, Kasrawad and Bhikangaon tahsils. Three tahsils, namely Barwaha, Maheshwar, Barwani, have suffered losses in their urban proportions since 1951.

The district has thirteen towns: (2 in Barwaha, 2 in Maheshwar, 1 in Barwani, 2 in Rajpur, 1 in Kasrawad 2 in Sendhwa, 2 in Khargone and 1 in Bhikangaon tahsils), which is the highest number for any district in the State. One of these (Khargone) is a town of class III, five (Sanawad and Barwaha in Barwaha tahsil, Anjad in Rajpur tahsil, Barwani and Sendhwa) of class IV, five (Maheshwar and Mandleshwar in Maheshwar tahsil, Rajpur in Rajpur tahsil, Kasrawad, and Khetia in Sendhwa tahsil) of Class V, and two (Gogaon in Khargone tahsil and Bhikangaon) of class VI. The range of variation of population living in the towns is very wide. Khargone, the most populous towns has 30,652 inhabitants, while the least populated Bhikangaon has 4,350 inhabitants. With the exception of Gogaon town in Khargone tahsil, which, a 1961 addition, is a *grampanchayat*, all the towns in the district are municipalities.

Inhabited villages :

The district contains 1,715 inhabited villages, which constitute 2·4% of all inhabited villages in the State. Of these, the highest proportion, one-sixth (17·2%) is in Khargone tahsil alone, while Maheshwar with 8·9% contains the least proportion. The distribution of the inhabited villages among the remaining tahsils is : Bhikangaon (15·1%) Sendhwa (14·5%): Barwaha (13·4%): Rajpur (11·0%); Barwani (10 0%) and Kasrawad (9·9%). The distribution of rural population does not respect the distribution of inhabited villages and is as follows : Khargone (20·3%), Sendhwa (16·3%); Rajpur (14·4%), Bhikangaon (12·3%), Barwaha (10·4%), Barwani (10·3%), Kasrawad (9·0%), and Maheshwar (7·0%).

The following table studies the inhabited villages from the standpoint of the size of rural population residing in them

100 inhabited villages in the district distributed by certain population ranges, 1961.

District/tahsil	All villages	Population residing in villages with population: Below 200	200-499	500-999	1,000-1,999	2,000-4,999	5,000+
1	2	3	4	5	6	7	8

Madhya Pradesh	100	37·2	38·1	18·2	5·4	1·1	...

The pattern of distribution of villages among the given population ranges in the district differs considerably from the State pattern. Very small villages (bottom range i. e. below 200 in population) are about 1½ times as frequent in the State as in the district. Villages of the next higher size i. e. villages with population 200 or more upto 499 (which may simply be called 'small' villages) are almost equally frequent in the district and the State. In all the higher population ranges of villages, the district proportions are distinctly greater than the corresponding State proportions. Thus, in a general way, we may say that villages in the district are generally bigger than in the State as a whole.

The pattern of distribution of villages among the various population ranges exhibits marked variation from tahsil to tahsil. 'Very small' villages are the most frequent in Barwaha and Maheshwar tahsils, accounting in case of each tahsil, for nearly two-fifths of all inhabited villages. These two tahsils, thus, approximate

to the State average as regards frequency of the least populous villages. At the other extreme is Rajpur tahsil where these least populous villages do not constitute even one-tenth of all inhabited villages. Barwani and Kasrawad tahsils are the nearest approach to the district average as regards the frequency of very small villages.

As regards 'small' (200–499) villages, the distribution in tahsils conforms more or less to the district average in case of Barwaha, Barwani, Kasrawad, Sendhwa and even Khargone tahsils. Both Rajpur and Bhikangaon tahsils exhibit equal, but rather high, frequencies of these villages. Maheshwar, on the other hand, has a distinctly low frequency which is about one-third of all inhabited villages—of these villages. Clubbing the two bottom classes together, we observe that in the district as a whole, 'small' and 'very small' villages form 64% of all inhabited villages, comparing with 75% in case of the State as a whole. In Barwaha tahsil, smaller villages with population below 500 are about as frequent as in the State as a whole, the frequency being highest among the tahsils in the district. At the other extreme is Rajpur tahsil, where these villages make a little more than half (54%) of all inhabited villages. In Sendhwa tahsil also, proportion of these smaller villages is considerably less and is comparable with their frequency in Rajpur tahsil.

Medium-sized villages (500-999) make a little more than one-fourth of the district's total of inhabited villages. The frequency of these villages ranges from a minimum of 17·4 in Barwaha tahsil (which is, however, comparable with the State's frequency of these villages) to a maximum of 32·9% or about one-third in Sendhwa tahsil. In Rajpur, Khargone and Kasrawad tahsils, these villages are much more frequent than in the State as a whole.

Big (1,000–1,999) and 'very big' (2000+) villages together contain 1 out of every 10 inhabited villages in the district comparing with a much smaller frequency of about 1 in 16 in case of the State as a whole. Rajpur tahsil has the highest frequency (among the tahsils) of these villages, nearly 1 in 7, with Barwani closely following. Khargone and Sendhwa tahsils also exhibit higher frequencies of these bigger villages. In Bhikangaon, Kasrawad and Maheshwar tahsils, these villages are distinctly much less frequent, as also is the case in the district as a whole.

To sum up, we may say that out of every four randomly picked up villages in the district, one is likely to be a very small village with less than 200 inhabitants, one a medium-sized village, and the remaining two villages with population between 200–500 or more than 1,000. Among themselves, the 'small' villages are about four times as frequent as the bigger villages.

Population residing in different sizes of villages :

It is also necessary to know the proportion of population residing in the different size-classes of villages. Such information is of significance from the planner's point of view, as well as from the point of view of the trading community. The following table gives the proportion of population residing in villages of different sizes.

100 persons in the district and in each tahsil classified according to residence in villages of different population ranges, 1961.

District/tahsil	Persons in rural areas living in villages with population					
	Below 200	200–499	500–999	1,000–1,999	2,000–4,999	5,000+
1	2	3	4	5	6	7
West Nimar district	5·4	26·0	37·3	22·9	7·8	0·6
Barwaha tahsil	10·9	30·0	31·2	22·4	5·5	...
Maheshwar tahsil	10·9	27·1	39·3	22·7	...	...
Barwani tahsil	4·8	23·8	34·6	31 9	4·9	...
Rajpur tahsil	1·9	24·7	34·9	25·2	13·3	...
Kasrawad tahsil	6·3	28·6	43·7	15·3	6 1	...
Sendhwa tahsil	3·7	24·0	41·4	23·3	7·6	...
Khargone tahsil	3·7	20·1	36·0	22·7	14·6	2·9
Bhikangaon tahsil	7·2	36·4	38·2	18·2	...	...
Madhya Pradesh	10·0	31·8	31·6	18·1	7·9	0·6

The table brings out clearly the difference in preference patterns of the rural population of the district and the State as a whole on the one hand, and the various tahsils amongst themselves on the other. Adopting the simplest dichotomy, we may observe that seven-tenth (three-fifth in case of the State) of the population of the district lives in villages with more than 500 population, and only three-tenth (two-fifth

in the case of the State) in villages with less than 500 population. Considering the smaller population ranges, we find that medium-sized villages are the most preferred by the rural population of the district, whereas in the State as a whole these are the second most preferred. Small villages with population below 500 are the next most preferred category of villages in the district, while in the State as a whole, they are the most preferred. The two highest population size-classes of villages are almost equally preferred in both the district and the State.

As regards tahsils, we may atonce underline the similarity in patterns of preference exhibited by Khargone, Barwani and Rajpur tahsils. In each of these tahsils the population is most partial to bigger villages with more than 1000 population; medium-sized villages with 500 to 999 inhabitants are preferred next, while the smaller villages with less than 500 population are the least preferred. The partiality for bigger villages is the most pronounced in Khargone tahsil, where two-fifth of the rural population resides in villages with more than 1,000 population. This tahsil also stands out clearly in its dislike for villages of population below 500, with less than one-fourth of its rural population choosing them for residence. Rajpur is next to Khargone tahsil in its preference for bigger, and dislike for smaller villages, while Barwani stands between the two.

Maheshwar and Kasrawad tahsils also exhibit a similarity in the pattern of distribution of their rural populations. In both these tahsils, medium-sized villages (500–999) are the most preferred, followed by smaller villages below 500 in population, and bigger villages with more than 1,000 population, the last mentioned being the least preferred. The preference for medium-sized villages is the most marked in Kasrawad tahsil where 44% of the population resides in them.

We can then group Barwaha and Bhikangaon tahsils in both of which smaller villages with less than 500 population are the most preferred, followed by medium-sized and the bigger villages, the last mentioned being the least preferred. The choice for smaller villages is clearly marked in Bhikangaon tahsil, where 44% of the rural population inhabit them.

Sendhwa tahsil stands apart from all other tahsils of the district as regards the pattern of preference for villages of various sizes. This tahsil shows a clear first choice for medium-sized villages, but instead of giving a second choice to smaller villages, it gives it to bigger villages with more than 1,000 population.

Average population per village :

Average populousness per village for the district and each tahsil is presented in the table below. Figures for the State as a whole and Indore division are also given for comparative purposes.

Average population per village in different size-classes, 1961.

District/tahsil	Average population per village in population range					
	All villages	Below 200	200–499	500–999	1,000–1,999	2000+
1	2	3	4	5	6	7
West Nimar district	497	108	337	703	1,334	2,736
Barwaha tahsil	386	104	333	693	1,325	2,450
Maheshwar tahsil	390	112	318	691	1,357	...
Barwani tahsil	511	102	328	707	1,276	2,146
Rajpur tahsil	651	129	362	729	1,410	2,718
Kasrawad tahsil	452	105	336	696	1,460	2,331
Sendhwa tahsil	558	135	333	701	1,296	2,646
Khargone tahsil	588	99	343	701	1,306	3,039
Bhikangaon tahsil	404	104	331	700	1,359	...
Indore division	409	109	329	683	1,335	2,777
Madhya Pradesh State	394	106	329	685	1,323	2,880

The table clearly demonstrates that villages in West Nimar district are much more populous, on an average, than villages in the State as a whole, or the Indore division. The greater populousness than that of the State extends to all the population ranges. In the district, villages in Rajpur tahsil are the most populous, followed by Khargone, Sendhwa and Barwani tahsils. The greater populousness in case of Rajpur tahsil extends to all population-ranges. Villages in Barwaha and Maheshwar tahsils are less populated on an average, than the State as a whole or the Indore division. Bhikangaon tahsil's villages are more populated, on an average, than the villages in the State as a whole, but less populated than those of the Indore division.

Settlement pattern in villages varies from the usual nucleated clusters met every where else to the dispersed, a single fenced 'homestead-in-the-field' type. The latter

is a peculiarly Bhil trait, the house standing on high ground in the field. This type of villages are met with on the slopes of the Satpuras in Sendhwa, Barwani, Khargone and Rajpur tahsils and also on the Vindhyan slopes in Maheshwar and Barwaha tahsils, these hills being the natural habitat of the Bhils. The more acculturated Patalia Bhils have however taken to the conventional type of nucleated settlements. In the plains, the villages are of the usual nucleated type, situated (most of the big villages are so situated) on the bank of a perennial or dry river or stream. This latter factor governing choice of village sites gains in importance because of dearth of water in the district.

Houses and households :

On Census day, the district had 171,482 occupied residential houses, in which 177,463 households lived. Thus, on an average 1·03 households lived in 1 census house in the district or 103 households in 100 census houses. In rural areas, 100 houses accommodated 102 households, but in urban areas the number rose to 110 households. In the State as a whole 100 census houses accounted for the residence of 106, 105 and 116 households respectively in total, rural and urban areas. Obviously, the position in West Nimar is better in this respect than in the State as a whole.

Houses by roof and wall-materials :

The tables inset below give a distribution of 100 households separately in rural and urban areas of the district according to their residence in census houses having specified wall and roof types. The tables are based on a 20% sample of all households that were listed at the time of houselisting, an operation which preceded the actual census by about four to five months. The table may, without much error, be taken to represent the distribution of the census households as it existed at the census count.

TABLE I

Distribution of 100 households in rural and urban areas classified by residence in census houses by predominant material of wall. 1961.

Predominant material of wall.	Proportion of households with walls of the materials indicated in col.1 to all sample households.			
	Rural		Urban	
	Proportion	Rank	Proportion	Rank
1	2	3	4	5
Grass, leaves reeds or bamboo	34·3	2	7·2	4
Timber	1·7	7	0·6	6
Mud	36·4	1	20·4	2
Unburnt bricks	16·3	3	53·7	1
Burnt bricks	3·8	5	16·8	3
C.I. sheets	Neg.	9	0·1	9
Stone	2·7	6	0·4	7
Cement concrete	Neg.	8	0·2	8
All other materials	4·8	4	0·6	5
	100		100	

TABLE II

Distribution of 100 sample households by residence in census houses of specified types as determined by predominant material of roof, 1961.

Predominant material of roof	Proportion of households with roof of material indicated in column 1 to all sample households.			
	Rural		Urban	
	Proportion	Rank	Proportion	Rank
1	2	3	4	5
Grass, leaves, reeds, thatch, wood or bamboo	7·9	3	6·0	3
Tiles, slate shingles	80·9	1	57·1	1
Corrugated iron, zinc or other metal sheets	10·2	2	32·4	2
Asbestos cement sheets	0·1	5	1·4	5
Brick and lime	0·1	6	0·8	6
Concrete and stone	Neg.	7	0·6	7
All other material	0·8	4	1·7	4

Mud is seen to be the most preferred material of wall in the rural areas of the district. More than one-third, but less than two-fifth of the sample rural households lived in houses with walls made predominantly of mud. These mud houses are found in villages in the plains. These are closely followed by houses with walls made predominantly of grass, leaves reed or shingle. Accounting for the residence of a little more than one-third of the sample rural households, these houses are made usually of bamboo wattle and are presumably those in the forested areas inhabited by the tribal Bhil people. This seems to be reinforced from the fact that the heavily forested and tribal Barwani and Sendhwa tahsils have 62·8% and 79·6% of households living in census houses with walls predominantly made of grass, reeds, bamboo etc. According to the Holkar State Gazetteer also the Bhils 'live in huts of wattle and daub surrounded by a bamboo fence.' Third most preferred type of houses in the rural areas are the semi-pacca type, with walls made of unburnt bricks, though frequency of households living in them is only 1 out of every 6 of the rural households. Pacca houses with walls made of burnt-bricks or of other more durable material like stone slabs or cement concrete are rather uncommon in the rural areas of the district with only 6·4% or one-sixteenth of the sample households using them as dwellings. The preference-pattern as regards wall material is considerably different in urban areas. Here, most frequent are semi-pacca houses with walls made of unburnt bricks, which were third most frequent in rural areas. More than half of the urban sample households live in such semi-pacca houses. Mud walls, which are the most

common type in rural areas recede to the second place in urban areas and account for the residence of one-fifth of the urban households. A distinguishing feature in urban areas is the good sprinkling of pacca houses with walls made of burnt bricks. One-sixth of all urban sample households live in such pacca houses. Houses with walls of grass, leaves, etc. which happen to be very common in rural areas accommodate only 7·2% of the urban households.

Houses by roof-material :

As regards roofing material, the preference pattern is similar in rural and urban areas, though the frequencies in different types show considerable variation. Thus most common in both rural and urban areas are houses with tile-covered roofs. These account for the dwelling of four-fifths of the rural, and more than half of the urban households. Next in frequency in both rural and urban areas are houses with roof covered with corrugated iron or other metal sheets, though amongst themselves, the urban frequency is more than thrice as great as the rural frequency of households living in such houses. Thatch or grass covered roofs are next in frequency in both areas, and the rural and urban frequencies are quite comparable.

Households with tenure-status of their dwellings :

85% of the sample households live in owned houses in all areas. In rural areas only, the proportion swells to more than nine-tenth (90·6%) of all rural sample households. The picture is ostensibly different in urban areas where roughly half (47·0%) of the households live in rented dwellings. This is indicative of the fact that roughly half of the urban households (hence also population) are immigrants.

Size of households, with dwelling accommodation ;

The table inset below gives the number of persons per household in each tahsil for total population :

District/Tahsil	Number of persons per household	
	Total	Proportion of scheduled tribes to total population of the tahsil
1	2	3
West Nimar district	5·6	40·4
Barwaha tahsil	5·0	0·2
Maheshwar tahsil	5·1	20·4
Barwani tahsil	6·4	68·2
Rajpur tahsil	5·8	52·8
Kasrawad tahsil	5·3	0·08
Sendhwa tahsil	6·2	64·5
Khargone tahsil	5·5	38·9
Bhikangaon tahsil	5·1	50·3
Madhya Pradesh State	4·9	20 6

An average household in the district is more populous than an average household in the State as a whole. Among tahsils, number of persons per household exhibits significant variation. The number is the least in the north-eastern, mostly plain tahsil of Barwaha, but even there it is slightly greater than the State average. Households are on an average of a bigger size in the western-most Barwani tahsil, the number in that tahsil being the highest among all the tahsils. In fact, as would appear from the above table, there is some sort of a correlation between the size of a household and the proportion of scheduled tribes (which may for all practical purposes be taken to be the Bhil group of tribes) in the tahsil. The proportionality or correlation is very consistent in the first three tahsils : Barwani, Sendhwa and Rajpur in which the size of household follows the proportion of tribal (mostly Bhil and allied tribes) population. Bhikangaon tahsil provides the sole exception to this observation. On the assumption of simple family units consisting of husband, wife and children, this evidence shows that in the predominantly tribal tahsils, the number of children per household comes to more than four on an average. It is difficult on this meagre evidence to propound that the tribal population in the district is more fecund than the population of the State as a whole, but as will be seen later, census superintendents in the past have explained the abnormal increases in the population of the district on the hypothesis of such a prolificity of the Bhils.

It may also be mentioned that average size of a household in the district has increased since 1951. In this later year, it was only 5·3 but in 1961, the average size of a household is 5·6. This fact suggests that the unusually high rate of increase attained by the district is perhaps due to addition of a more than normal addition of children to the population.

Number of rooms per household :

Table E–V in the Handbook is of considerable demographic interest in that it classifies the households by number of members and by number of rooms occupied. The relevant things to remember while appreciating the data presented in this table are (i) that the population of households and persons dealt with in this table refers to the houselisting operation, and (ii) that it is based on a 20%, random sample of these households. The data, however, can be applied, without sensible error, to the households obtaining at the time of the census.

Table E–V shows that the 35,540 sample households lived in 61,637 rooms, giving 1·7 rooms per household. Each room, on an average accommodated 3·1 persons. This should give a general idea of the living congestion existing in the households in the district. More than half (51·9%) of the households lived in census houses with only one room, with 4·8 persons, on an average living in that room. These households represent the maximum congestion in living space in the houses. Somewhat better are about one-third (30·6%) households, which have two rooms each. Each room of

such households accommodates on an average 2·9 persons. 11·8% of the households are still more fortunate living in census houses with three rooms each, and with each room accommodating 2·2 persons on an average.

Population variation 1901–61 :

West Nimar district has grown very fast during the past six decades, its rate of increase being more than twice the rate of increase of the State as a whole. The district has almost trebled its population during the period in question. The following table studies the growth in the population of the district from decade to decade during the sixty years 1901–61; corresponding State figures are also given for the sake of comparison.

Population variation 1901–61

Decade	West Nimar	Madhya Pradesh
1	2	3
1901–11	+36·5	+15·3
1911–21	+10·1	— 1·4
1921–31	+18·2	+11·4
1931–41	+15·0	+12·3
1941–51	+11·4	+ 8·7
1951–61	+30·6	+24·2

Significant features of population variation in the district are (i) that it has always grown faster than the State as a whole (ii) the very high rate of increase in 1901–11 (iii) the sizeable increase in population in 1911–21, when the population of the State as a whole decreased (iv) the very high rate of growth in 1951–61.

The high rate of growth of the district (excluding the present Barwani, and most of Rajpur tahsils) was also noticed by the 1911 Census Superintendent of the erstwhile Holkar State, who observed "The State as a whole has become more populous but a varying rate of progress is shown by different districts among which the Nimar district shows a very considerable increase."* The report also mentions that some scarcity was caused in the Nimar district in 1904, but the agricultural condition on the whole was good. It may be remarked that Nimar was one of the seriously affected districts during the famines of 1898–1900; causing heavy mortality among the old and the young. The high growth attained by the district was attributed by the 1911 Census Superintendent of Holkar State to "an abnormally high birth-rate and a low death-rate" resulting from the purging of the population of its weaker elements at the two extremes of life. He was clearly of the view that the excessive increase was not the result of migration but of actual increase.

During the decade 1911–21, the district increased its 1911 population by 10·1%. Holkar State, of which a major portion of the district then formed a part had also a comparable increase—9·4%—during the decade, though almost all other Central Indian States had shown a decrease in population. The Holkar State Census Superintendent of 1931, observing the high rate of increase in 1911–21, inspite of the deadly influenza epidemic, which affected all parts of the Holkar State remarked, "The stronger economic position of the people and the natural post-famine rebound, which continued from the previous decade, were the two chief factors working in favour of an increase in population, whereas in the bad agricultural years of 1917 and 1918 plague and influenza worked in opposite directions. The rise from 1,051,893 to 1,150,840 in the 1911–21 period has the appearance of a normal increase in a healthy population, and hides from view the extent to which the depleted population exerted itself to regain its original strength, as also the devastation wrought by influenza."† Thus, according to the past Census Superintendent of the erstwhile Holkar State, the increase during 1911–21 could have been much greater than it actually was had it not been for the influenza epidemic.

In the 1921–31 decade, conditions were generally favourable to a normal natural growth of population. The higher rate of increase in the population of Nimar district is ascribed by the 1931 Census Superintendent of the erstwhile Holkar State to the very great fecundity of the aboriginal Bhil and other tribes, that formed a very large proportion of some parganas of the district. The remarks apply equally well to the portion of the district coming from the erstwhile Barwani State, which had increased by 17·4%.

In 1931–41, owing to wartime economy, no census report was brought out. Even then, in view of the previous growth history of the district, the increase of 15%, though larger than the corresponding State growth, can only be termed modest and shows that the economic depression of the thirties could not have any effect on this district.

In 1951, the district had for the first time the political and administrative constitution it has to-day. During the decade, momentous historical changes took place in the country. The opening half of the decade were years of the 2nd world war with attendant effects on the economy of the country as a whole. The two years following the end of the war, were years of great political changes. They saw the end of British rule in the country as also liquidation of the erstwhile Indian Princely States and their merger with the rest of the country. This was also a period of rising prices, accompanied by rise in wages. The last three years of the decade witnessed the first phase of nation-building activities on which independent India launched soon after her emergence as a Nation. The decade was, however, uneventful from the point of view of public health in the district and conditions, as regards public health, were favourable for the growth of the population. The population of the district grew by 11·4% during the decade, but the figures of increase differed widely among the tahsils. The Barwani, Sendhwa, Rajpur

*Indore State Census Report, 1911, page 7.

†1931, Holkar State Census Report, page 28.

and Khargone tahsils, where primitive Bhil tribes preponderate, showed bigger increases whereas the remaining four tahsils recorded moderate to poor increases. In the former group of increases, the largest increase (18·7%) took place in Khargone, and then came Barwani (14·5%), Rajpur (13·3%) and Sendhwa (12·7%). The increase in the latter group was Bhikangaon (7·4%), Kasrawad (5·9%), Barwaha (5%) and Maheshwar only (4·6%).

The decade 1951–61 was a decade of high growth in the State as a whole. In keeping with its past demographic behaviour, West Nimar has outstripped the State as a whole in the size of rate of increase. In fact only three districts namely Sehore (abnormal growth of this is due to the location of State capital at Bhopal and its consequent expansion); Jhabua, West Nimar's north-western neighbour, and East Nimar, its eastern neighbour have higher rates of increase than West Nimar. Among other neighbours, the northern Dhar and Indore districts have increased respectively by 27·7 and 25·4 per cent respectively, and its north-western neighbour Dewas district by 29·4%. Thus, in the State, West Nimar is not singled out as a district of exceptionally high rate of growth, but is in a compact block of districts—East Nimar, West Nimar, Jhabua, Dhar, Dewas and Indore—which have witnessed comparable increases, all higher than the State rate of increase. Apart from such common factors conducive to the growth of population in the State as a whole, as a general increase in prosperity, and greater availability of medical help, and the more or less complete elimination or effective control of famine, and of epidemics, we must search for some special factors operating in this and other districts of the region that have resulted in their distinctly higher population increases. One such factor is that about all these districts (with the exception of Indore) have a large proportion of the primitive Bhil or Korku tribes, whose extra-ordinarily high fecundity has been referred to more than once by earlier Census Superintendents. In the case of West-Nimar district this is seen in the very high increase in the number of children below 5 years of age, (This is discussed in a later section) as also, the bigger size of households in tribal tahsils. It appears, though for want of vital statistics data it cannot be proved except in case of East Nimar, that there was a very high incidence of malaria in some of these districts.* The effective control of Malaria with the help of the National Malaria Eradication Programme that was launched in these districts in the earlier parts of the decade—has arrested the high death rate; so that, the naturally high prolificity of the tribes manifested itself in the very high rates of increase.

It is worthwhile to analyse the rates of increase in the district separately for the tahsils. This is done in the table below : —

Rate of increase by tahsils, separately for total, rural and urban areas, 1951—61.

District/Tahsil	Percentage rate of increase.		
	Total	Rural	Urban
1	2	3	4
West Nimar district	30·5	28·1	47·7
Barwaha tahsil	28·4	29·4	24·5
Maheshwar tahsil	22·2	26·1	7·5
Barwani tahsil	27·2	27·5	25·5
Rajpur tahsil	22·0	21·2	27·7
Kasrawad tahsil	28·1	18·9	Kasrawad treated as a town for the first time
Sendhwa tahsil	25·1	22·2	49·6
Khargone tahsil	36·4	31·0	70·5
Bhikangaon tahsil	58·4	52·1	Bhikangaon treated as a town for the first time

It is possible to divide the tahsils into three broad groups according to their rates of growth. These are (i) high rate of increase tahsils—Bhikangaon and Khargone, (ii) medium rate of growth—Barwaha, Kasrawad, Barwani and Sendhwa tahsils and (iii) tahsils with low rate of increase—Maheshwar and Rajpur.

As regards Bhikangaon and Khargone tahsils it may be noted that both of them adjoin the Burhanpur tahsil of East Nimar district, which had also experienced a similar, high population increase. Apart from the common factor of their large aboriginal population, all these tahsils have their greater portions covered by the Satpura hills and their slopes, with the notoriously high incidence of malaria. Since, the high rate of growth during the decade is a compound effect of high birth rate of the tribals and a reduction of malarial mortality, we find Bhikangaon (which is almost entirely in the malarial Satpura tract and its slopes) tahsil growing the most. Khargone and Burhanpur have both sizeable

* Shri D. B. Sinha, Collector, West Nimar, in a personal talk informed the writer that there was very high incidence of malaria in his district in the past, but that malaria has now almost been eliminated in the district.

portions in the fertile valleys of Narmada and Tapti respectively growing with a smaller rate. The tribal proportion in both these tahsils is smaller than in Bhikangaon tahsil. Though no tribe has been scheduled in Burhanpur tahsil, it has a sizeable Korku population. The higher rate of increase in Khargone tahsil is also due to the high rate of increase (48%) of Khargone town.

The very high rate of increase of population in Bhikangaon Tahsil almost certainly points to recent immigration. According to information furnished by Tahsildar Bhikangaon, this high increase is due to immigration of landless tribals from Barwani and Rajpur tahsils, a lot of surplus forest land being available in the tahsil. Full text of the Tahsildar's note, together with list of villages in the tahsil which have recorded very high increase is appended at the end of this note.

As regards the other tahsils, it is observed that the rate of increase is higher in tahsils, which include hilly portions or slopes of hills in them (like Barwani, Barwaha, Kasrawad and Sendhwa), and which were consequently more affected by malaria. On the other hand Maheshwar and Rajpur tahsils which lie mostly in the plains, have experienced the smallest growth. It may be remarked that Maheshwar and Barwaha have very small tribal population.

The very high rate of increase in urban population in Khargone and Sendhwa tahsils deserves attention. In the case of Sendhwa tahsil, it is attended by a comparatively lower rural growth, suggesting a rural to urban migration. In case of Khargone tahsil, the high urban increase is partly owing to the addition of a new town Gogaon, and partly to the high growth of Khargone town itself. The lower rural growth, as compared to the total growth, in Kasrawad and Bhikangaon tahsils is apparent and not real because of the exclusion of Kasrawad and Bhikangaon from the village list in 1961, but their inclusion in the village list of 1961.

Age and Sex :

The age and sex-structure of the population of the district is presented in the table below by quin-quennial (upto 70 years of age, whereafter all ages are clubbed together) age-groups, and by broad age-groups. Corresponding figures for the age and sex structure of the State as a whole are also given for directing attention on areas of differences, if any.

100 persons in the State and the district classified by quinquennial and broad age-groups and sex, 1961

Age-group	West Nimar district			Madhya Pradesh State		
	P	M	F	P	M	F
1	2	3	4	5	6	7
All ages	100·0	51·1	48·9	100·0	51·2	48·8
0 — 4	18·4	9·2	9·2	16·4	8·2	8·2
5 — 9	15·8	8·1	7·7	14·3	7·3	7·0
10—14	10·4	5·6	4·8	10·1	5·4	4·7
0 —14	*44·6*	*22·9*	*21·7*	*40·8*	*20·9*	*19·9*

A.N.S.	0·1	0·1	Neg.	0·1	0·1	Neg.

For a correct appreciation of this table it is necessary to point out that it is based on ages actually returned at the Census, without subjecting them to the 'purificatory', statistical process of 'smoothing' or 'graduating.' The quality of age-returns in the Indian censuses has been the subject of much comment by demographers as being subject to grow inaccuracies, arising from the universal ignorance about age. This ignorance is more particularly found in the rural areas, where strictly speaking, no age returns but age estimates are made by the enumerator. The general tendency is to return orestimate the age in round numbers, generally in decenniums or quinquenniums, or less frequently in even, rather than odd digits. The age-data, therefore, suffers from a digit bias, which will be apparent on drawing a graph of the single year age-returns. These will show peaks at 0, 5, 10, 8, 12, 15, 20, 25, 30 etc. ages.* In order to minimise (complete elimination is of course not possible) the distorting effects of age-heaping, quinquennial groupings have been adopted in the table so as to include one preferred age in each group. This crude grouping does suppress to some extent the effect of age-heapings, but it hardly needs an expert eye to be able to say that they are not entirely absent. Thus if ages were all correctly reported, frequency in successive age-groups (of equal widths of course) will go on decreasing in a smooth progression. A look at the foregoing table, however, shows that there are more persons in the age-groups 20–24 and 25–29 than in 15–19 and in 60–64 than in 55–59. This absence of smoothness is evidently due to the disproportionately large numbers returned at ages 20, 25 rather than at 15 and at 60 rather than at 55. Hence using the above data, even after the rough smoothing, will amount to walking on slippery, unsure grounds. We will, however, be on firmer, safer ground if we confine our scrutiny to the broad age-groups 0–14, 15–34, 35–59, and 60+, because in these wider age-groups the angularities may be presumed to mutually cancel out. We may also take these broader age-groups to correspond to childhood, youth, middle age and old age respectively.

The table shows that infants and children form the most numerous section of the population. In West Nimar they make much more than two-fifths of the proportion. As is natural, the next numerous is the age-group 15–34, corresponding to young persons. In the district, they add up roughly to three-tenths of the total population. The middle-aged segment of the population is still narrower, making one-fifth of the total population. Persons at the upper extremes of life i. e. those who have survived 60 years or more are the least numerous, being not even 1 in 20 in the population at large.

The table also brings out the dissimilarity in the age-structure of the populations of the district and the State as a whole. Thus, the population of the district has a much greater proportion of infants and children than the State as a whole. Correspondingly, the district has a smaller proportion of persons in the three higher age-groups. Going to the quinquennial sub age-groups (which in case of these youngest ages, are not as inaccurate as the older ages, because the memory about age is relatively fresh and hence more likely to be correct in case of children below ten years) of the broad age-group 0–14, we find that the differences between the district and State proportions are entirely due to higher proportions in the district as regards 0–4 and 5–9 age-groups. This perhaps affords an explanation of the very high rate of increase attained by the district (31% as against 24% in case of the State as a whole) during the decade 1951–61. For the increase in population during the decade is either due to natural increase or balance of migration. The latter factor can, of course be safely overlooked in view of the fact that population has increased at a high rate in the whole State, and particularly in the neighbouring districts East Nimar (30·9%), Jhabua (34·4%), Dhar (27·7%), Dewas (29·4%) and Indore (25·4%). So the most plausible explanation is that the increase has been mostly due to addition of children aged 0–9, who were born during the decade. The evidence also unmistakably points to the fact that fertility rates in West Nimar district are distinctly higher than in the State as a whole. This inference is also corroborated from a comparison of child-women ratio of the district and the State. (Please see the section on Vital Statistics for this).

Changes in Age-Structure 1951–61 :

Changes in age-composition of a population, if measured satisfactorily are indications of likely trends of its growth. The table inset below therefore gives the percentage distribution by broad age-groups of 100 persons in the district in 1951; the relevant proportion for 1961 are also given to focus attention on changes that have occured. It may, however, be pointed out that the 1951 data is based on a 10% sample of the population of that census, and in making the comparison with 1961 data (based on total population) we are making the assumption that the age composition in the sample (1951) represents the universe.

100 persons distributed by broad age-gruops, 1951–61.

Age-group	Population	
	1961	1951
1	2	3
All ages	100·0	100·0
0–14	44·6	41·0
15–34	31·3	34·6
35–59	19·1	19·2
60+	4·9	5·0
A. N. S.	0·1	0·2

*For a fuller discussion of the patterns of digital preference, the chapter on age and sex in the General Report of the State may be referred to

The table clearly brings out the important change in the age-composition of the district during the decade. The proportion of infants and children in the population in 1961 is higher than the 1951 proportion by 3·6 points. This confirms the inference drawn earlier regarding higher levels of fertility in the district. It also *inter alia* shows that chances of survival of children born have considerably improved, thus pointing to the general increase in prosperity of the population. There has been a corresponding decline in the proportion of youthful persons, which may not be taken as an indication of increased rate of mortality in age cohort 10–24 of 1951 census. The decrease is perhaps due to the broadening of the entire population base in 1961; to some extent, this may also be due to age-misreporting. The proportion of middle-aged persons has also recorded a decrease but that of old age remains almost unchanged. When it is remembered that the population base in 1961 is much broader than in 1951, this suggests that chances of survival of old persons have also improved.

Marital Status :

Marital status data of a population is of very great importance demographically. The importance is greater in a country like ours with its high rate of birth, leading to what is now sometimes called a population explosion. Firstly, all women in child bearing ages (15–44) are potential mothers. If all these enter matrimony, and no artificial means are used to prevent conception, the birth-rate is bound to shoot up to its biological limits. Conversely, if many women in this age-group are kept out of matrimony, either by late marriages, or by widowhood, the birth rate will show a downward trend. Age is also an important factor in fertility. Enquiries on fertility conducted in some States of the country have demonstrated that average size of a family decreases with an increase in the age at marriage.† The age-group 15–20 is believed to be most fertile. The next age-group is also fertile though less than the preceding one; but the reproducing power goes on decreasing with advancing age, till at about 45 year of age it is completely exhausted. Hence the significance of marital status data by age. There is yet another direction in which marital status data by age assumes demographic and sociological significance. That is the question of child marriages, because marriages of children of very young and immature ages is likely to impair their health and is to that extent contributory to fall in the true quality of the population. In the table below is furnished the data on marital status, by quinquennial and broad age-groups. In appreciating the quinquennial age-group data, remarks made earlier regarding age-misreporting should be borne in mind.

100 males and 100 females classified by marital status, 1961

Age-group	Total population		Marital Status: Never married		Married		Widowed		Divorced/ Separated

† India's Population Problem, Mamoria, P. 149.

Salient features of this table, with comments, wherever necessary, are given below :

(i) The universality of marriage in the population is clear from the fact that a little less than half of the males, and more than half of the females, in the population are either married, or are leading a widowed or divorced life. Since infants and children costitute roughly 44% of the population (as indicated *supra*), this shows that child marriages are prevalent in the district, the frequency being naturally more in the case of females. This is confirmed at once from a look at the figure against ages 0–14 and 10–14. It should be made clear at this stage that no sorting of marital status was done in case of persons below '9' years of age under the generally valid assumption that no marriages take place at those young ages. Hence, the marital status returns in age-group '0–9' showing the entire population never-married, is not strictly speaking correct. In most of the districts this assumption did not introduce much inaccuracy in the statistical sense; but in case of West Nimar, it appears from the sizeable returns in age-group 10–14, that it has perhaps suppressed information which had statistical significance. Even then, we may notice that about one-fifth of the girls in age-group 10–14, and one-twelfth of the boys in that age-group were married. In the broader age-group 0–14 representing infants and children generally, *atleast* 2% of the males and 4·3% of females were married. In case of males, these are all cases against the law of the land which prohibits marriages of boys below 18 years. In case of girls, a large majority of the reported marriages infringe the law of the land which prohibits marriages of girls below 14 years of age The data shows that incidence of child marriages is more than twice as great in case of females, as in case of males.

(ii) The proportion of married females is higher than the proportion of married males by 2·9%. In fact in the population at large, there is an excess of 4,406 married females. Now this may either be due to (a) immigration of married females into the district leaving their husbands behind (b) emigration of married males only from the district (c) bigamy. The first two possibilities are clearly ruled out, the one because it is improbable and the other because the very high increase in the population during the decade does not suggest any emigration. Hence, the data necessarily point to the existence, on a small scale (0.9% of the male population) of bigamous marriages.

(iii) **Age at marriage :**

In case of females, marriages start taking place when they are between 10-14 years of age, but most of them are married between 15 and 19 years of age and hardly any are left unmarried above 20 years. We may therefore say that generally girls are married at about 16 to 17 years of age. Beyond 25 years of age, proportion of never-married females assumes insignificantly small dimensions. In case of boys, marriages start taking place with some frequency between 15 and 19 years of age, most of them are married between 20 and 24 years of age, and not many are left out of the wedlock after 25 years of age. In their case, however, the never-married proportion does not sink to insignificant dimensions even at the highest ages, so that at least 2 in 100 are chronic bachelors even at ages between 35 and 59. No explanation of this high incidence of bachelorhood is available in the records, except the general deficit of females in the population as is clear from the low sex-ratio.

(iv) In the context of the 'population explosion' of the preceding decade, and the very difficult economic and food situation through which the nation is passing it seems imperative that birth-rates should be effectively curbed. In the light of maternity pattern disclosed by the preceding table (where not many females in the childbearing age are unmarried), and the prolific fertility, there is need for ensuring that girls are married at the age of 20 years and after, and boys are married at and after 25 years. Whether this has to be done by legislation, or by promoting a suitable social climate is a question of debate and is hardly relevant as regards this discussion. Also, judged at from this angle, a very large proportion of marriages of boys and girls in the district may be characterised as 'early'.

(v) **Widowed state :**

3 out of every 100 males and 9 out of the same number of females have been returned as widowed. The incidence of widowhood is thus thrice as great among females as in males. This is in the first place due to the wide gap–nearly 5 to 6 years as appears from the data in the ages of husband and wife at marriage, and the age-differential death rates. Secondly, it is due to more deaths among the husbands in the middle and old ages owing to the great burden of maintaining the family, and the concomitant mental tension and worries. The female of the species is generally spared this. Thirdly, males generally remarry till older ages, whereas in the case of women, remarriages stop after they lose their youth.

The proportion of widowed persons is very low till 34 years of age. This is because, as explained above, of lesser deaths and remarriages. After the age of 34 years, proportion of widowers and widows starts rising with advance in age, much more sharply in case of the latter than the former. In the middle-age segment of life, more than one-fifth of the women are widows; but in case of males, the proportion of widowed is about one in thirteen. In the upper extremes of life, more than two-thirds of the surviving females are without their spouses, but in case of males the misfortune (or, speaking in a cynical tone, fortune) of loss of spouses befalls only one-fifth of the males. This fact indicates the greater chances of survival of females in the higher ages, a phenomenon quite natural also, when considered in conjunction with the fact of their having successfully weathered the rough seas of early and improvident maternity.

Sex Ratio :

Sex-ratio or the number ot females for a given number (1,000 as regards the census) of males is an important demographic element in the composition of

a population. Common people generally believe a belief, perhaps, based on their expectation that males and females exist in equal numbers in the population. Quite contrary to this belief, the number of females relative to males differs not only from one locality to another, but from one period of time to another, or from one society to another society.

In the district as a whole, the sex-ratio is 958, which discloses a female deficit of 4 for 100 males. The ratio is, however, comparable with some of the neighbouring districts, Jhabua (958), Dhar (962). These districts, with West Nimar have one thing in common that they contain a high proportion of the Bhil group of tribes. The other neighbours, both western, of West Nimar show a higher female deficit. Those are East Nimar (939) and Dewas (937). Indore, the northern neighbour of West Nimar has a lower sex-ratio of 882. Among tahsils, the lowest sex-ratio (936) is to be observed in the easternmost Barwaha tahsil, and the highest (972) in the western, and most densely populated Rajpur tahsil. In other tahsils the sex-ratios are : Sendhwa (970), Khargone (967), Barwani (958), Kasrawad (946), Bhikangaon (946) and Maheshwar (939). These show how sex-ratio varies from tahsil to tahsil. Another factor influencing the proportion of sexes in a particular place is the degree of urbanisation. As a rule, an urban population has a greater imbalance in the proportion of the sexes than rural areas. This is not difficult to explain. Urban areas attract immigrant labour from outside, which in the beginning consists largely of males. There is a considerable time-lag between the immigration by males and their being joined subsequently by their women. Also, as long as a town continues growing, it goes on receiving migrant labour, and the female deficiency will consequently go on increasing. It follows conversely that the sex-ratio in rural areas will change so as to increase the proportion of females. In the district, we have a general demonstration of this, as will be seen from the table below, which gives the rankings of the tahsils in the descending order of the sex-ratio. The table shows that a high proportion of urban population is generally related with a lower sex-ratio i.e. the two are inversely related.

Rank in descending order of

Tahsil	Urban Population	Sex-ratio
1	2	3
Barwaha	2	8
Maheshwar	6	7
Barwani	5	4
Rajpur	4	1
Kasrawad	7	5
Sendhwa	3	2
Khargone	1	3
Bhikangaon	8	6

In the district as a whole, sex-ratio in the urban population is 911, which is more unbalanced than the general sex-ratio of 958. On the other hand, sex-ratio in rural areas of the district is 965, clearly showing the trend towards higher female ratio in the rural areas.

Sex-ratio 1901–1961 :

Changes occur in the sex-ratio over time also. This will be apparent from the following table which gives sex-ratio for the population of the district from 1901 onwards, corresponding state figures are also given for comparison.

Sex Ratio, 1901—1961

Year	Sex ratio in West Nimar			Sex ratio in Madhya Pradesh		
	T	R	U	T	R	U
1	2	3	4	5	6	7
1901	N. A.	N. A.	980	990	995	937
1911	64	962	990	986	991	913
1921	958	958	953	974	982	878
1931	954	956	933	973	983	872
1941	968	971	940	970	980	882
1951	971	973	958	967	975	907
1961	958	965	911	953	970	856

The table brings out in the first place the different patterns of changes in sex-ratio over time between the State as a whole and the district. In the former, the trend has been one of streadily increasing masculinity from census to census whereas in case of the district there is no such uniformity of change. In 1911 (when figures of sex ratio were available both for the district and the State) the State started with a greater feminity in the population than in the district. Between 1911–21 and 1921–31, both the State and the district registered declines in the number of females relative to males, with the State maintaining its lead

in feminity over the district. In 1931–41, while the sex-ratio in the district registered a sizeable increase, that in the State showed a slight decline. Still the population in the district was more masculine than the State as a whole. In the 1941–51 decade also, the district maintained the trend of an increasing sex-ratio, but this time the increase was rather small. The State however registered a further decline in the female proportion relative to males, and gained in masculinity over the district. In 1951–61, both the district and the State have registered sizeable decreases in the sex-ratio.

During the 50 years 1911–61, whereas the overall decrease in sex-ratio in the district is only 6, that in the State as a whole is 33. The relative scarcity of women is however a characteristic common to both the State and the district throughout the known census history of the past sixty years. This is the case with the sex-ratio in the country as a whole also.

Sex-ratio by age :

At the youngest age-group 0–4, there is a slight feminine preponderance. This, however, converts into a considerable male excess in the next two higher age-groups, so much so that in the wider age-group 0–14, sex ratio is as low as 948. The slight female excess in the lower age group 0–4 is not, in any case, evidence of greater female than male births. On the other hand, the truth is quite to the contrary. It is an accepted fact that in India, sex-ratio at birth shows a slight male excess. In case of West Nimar district, this is shown by Table 6B·1 in Part II of the Handbook which shows more males than female births in three out of the four years for which sex-wise figures of births were available.* In one year, the births were almost equal. Actually, it is in the condition after birth, as affecting the relative mortality of the sexes, that an explanation for higher female ratio in the lowest age-group is to be found. The table referred to above also indicates that the hand of death falls more heavily on male than female children, before they complete the first year of their birth. This greater male than femlae mortality in the first year of life is again a phenomenon generally true for the country as a whole. This phenomenon is explained by the supposed organic superiority of girls over boys. If this explanation as to the biological superiority of females over males in the struggle for existence is accepted, then the reduction in the females in later years of childhood can only be explained on the basis of a widespread social attitude of neglecting the female child and bestowing greater care on the male child. This attitude is generally true in case of the so called higher castes, the Rajputs, Brahmans, Banias etc., Some of these are reported to have practised even infanticide in the past. But as regards the vast sections of tribal and scheduled-caste population, perhaps this contention is not correct. Any way, the fact of somewhat higher female than male mortality in ages 5 to 9 has to be accepted, whatever the reasons for it may be.

In the age-group representing youth generally, females regain the position of numerical superiority with which they started in the lowest age-group (0–4), though the margin is very small. This shows that after the weeding away of the organically inferior of the species in later childhood years, the residue is composed of the mere sturdier type who successfully withhold the rough and tumble of earlier child-bearing period. Of particular notice is the deficit of females in the later years of their child-bearing period, and after the child-bearing period. Higher deaths in these ages is more common due to physical exhaustion that follows in the wake of premature and frequent child bearing. In the wider age-group representing middle age which includes the later child bearing, and post child bearing period of the females, their proportion is considerably reduced as is shown by the low sex-ratio of 888 in that age-group.

In the upper extreme of life, females again dominate the male in numerical strength. The reason for this also is that only the physically sturdier section of the sex survive the heavy strain of improvident maternity of later middle age, and those not unexpectedly have a better title to longer life.

Mother Tongues :

As many as seventysix speeches have been returned as mother-tongue in the district, with as many as ten of them claiming more than 1% of the total population as speakers. No language or speech claims an absolute majority of the population as speakers, the highest proportion claimed by any particular language being only 31%. In this respect, the picture presented in Khargone district is somewhat different from that obtaining in most other districts of the State where an overwhelming majority of the population speak only one language as mother-tongue, namely Hindi. Also, whereas in other districts, the multiplicity of mother tongues is more or less apparent because of the fact that a brutishly large proportion speak only two or three speeches, in case of West Nimar the multiplicity is real because as many as ten speeches have sizeable proportion of speakers. We may therefore, with some justice, refer to the district as a 'babel of tongues.'

The linguistic picture of the district becomes somewhat simpler when we consider the fact that ten languages referred to above, that is, Nimadi, Hindi, Barel, Bhilali, Bhili, Marathi, Urdu, Gujarati, Banjari and Marwari between themselves, account for 98·5% of the population. Thus the remaining sixtysix languages claim only 1·5% of the population as speakers. The picture becomes further simplified, when we note six of these sixtysix languages, to wit,

*It should be remembered, however, that registration of births and deaths in the district is grossly incomplete. However, since the incompleteness is random the figures may be used to indicate the general trend.

Bundelkhandi, Kathiawadi, Khandeshi, Malvi, Punjabi, and Sindhi between themselves claim 1% of the population as speaker. This leaves us only with sixty speeches which together claim 0·5% of the population as speakers. Of these, three that is, Burgundi, Hindustani, and Mankari have between 500 to 1,000 speakers each, and twelve, that is Bhuani, Brajbhasha, Charani, Gondi, Kalbeli, Kol, Mewari. Pardeshi, Persian, Purbi, Rajasthani and Telugu have between 100 and 500 speakers each. We are thus left with fortyfive speeches which have less than 100 speakers each.

A rationalisation of linguistic returns of the 1961 census has been done by the Language Division of the office of Registrar General, India. According to this classification, we can group many of the languages returned in the district in the following five groups (i) Bhili group (ii) Rajasthani group (iii) Hindi group (iv) Gujarati group (v) Marathi group. Bhili group includes, Baori, Barel, Bhili, and Bhilali speeches, which together account for 28·6% speakers. The Rajasthani group includes Nimadi, Banjari, Marwari, Malvi, Rajasthani, Gujari and Kalbeli languages and these together have 34·3% of the population as speakers. The Gujarati group including the Gadaria and Kathiawadi speeches accounts for 2·9% speakers, while the Marathi group consisting of Marathi and Mahari speeches accounts for 3·2% of the population. These five groups of speeches, together with Urdu, account for 98·9% of the population of the district.

Among individual speeches, the most widely spoken in the district is Nimadi. This language claims 31·2% of the population as speakers. Grierson commenting on Nimari, observes "In North Nimar .....Malwi has become so mixed up with Khandeshi and the Bhili language that it has become a new dialect called Nimari, and possessing peculiarities of its own." Nimari, Grierson observed, can hardly be called a true dialect in the sense Malwi. Marwari, Mewari, etc. are dialects of Rajasthani. It is rather a mixed patois made up of several languages with Malwi for its basis. Nimari is returned as the most widely spoken mother-tongue in the rural areas of Barwaha, Maheshwar, Rajpur, Khargone and Bhikangaon tahsils. In Barwani tahsil, though third most widely spoken speech, it has still quite a sizeable proportion of the population among its speakers, surprisingly enough, in Kasrawad which is hemmed in by tahsils where Nimadi is the prevalent mother-tongue, the proportion of Nimadi speakers is not much above, 1% of the rural population. This gives rise to the suspicion that in Kasrawad tahsil many persons have returned Hindi as their mother tongue in place of Nimadi. Another interesting thing is that the number of persons speaking Nimadi as mother tongue in 1961 is 95·7% (almost a 100% increase) more than the 1951 number.

Hindi, which has been returned as the mother tongue of 27% of the population is the second most widely spoken speech in the district. It has been returned as mother-tongue by a very large proportion of the rural population of Kasrawad tahsil. In the rural areas of Barwaha, Maheshwar, Rajpur, Sendhwa Khargone and Bhikangaon tahsils, Hindi is the mother tongue of the second most numerous group of persons. Hindi speakers are insignificantly small in proportion in the rural areas of Barwani tahsil. As compared with 1951, speakers of Hindi as mother tongue, have suffered a decrease of 2·7% in the district. This again points to some sort of confusion between Hindi and Nimadi returns of the 1951 and 1961 censuses because of the popular identification of Nimadi as a dialect of Hindi. The common man does not perhaps recognise that Hindi and Nimadi or even Rajasthani of which Nimadi is treated as a dialect by the Linguist, are separate languages but regards the other two speeches as dialects of Hindi.

Barel, a language belonging to the Bhili group of languages is the third most widely spoken speech in the district. It is not only the mother tongue of the highest proportion of the rural population of Barwani and Sendhwa tahsils, but has considerable proportion of speakers also in rural areas of Rajpur, Khargone, and Bhikangaon tahsils, in each of which it is the third most widely spoken mother tongue. This is the speech of the Barela sub-tribe of the Bhils. Again, another instance of the linguistic confusion that sometimes is found in census returns owing to predilections of the local people, there were no speakers of this speech in the district in 1951, obviously pointing to their inclusion in 1951 in the speeches Bhili and Bhilali whose speakers have declined by 70·4% and 34·8% respectively in strength since 1951. A better picture emerges, if we compare after grouping Barel, Bhili and Bhilali returns in 1961, and Bhili and Bhilali returns in 1951. This gives us an increase of 17·6% which compares with a population increase of 31% (general population). G.A. Grierson regards Bhili, "as a bridge between Gujarati and Rajasthani, and remarks that Bhili might with propriety be looked upon as an eastern dialect of Gujarat." The various dialects of Bhili i.e., Barela and Bhilali, have borrowed from the neighbouring Marathi but Khandeshi is more mixed with Marathi, which is said even to invade the grammatical structure of the language to small extent. Grierson was not able to say how far the dialect Barel and Bhilali differ from the standard dialect Bhili.

Urdu is the mother tongue of 2·9% of the population. Its speakers are concentrated to the extent of 79% or four-fifths in urban areas of the district. It is interesting to note that Urdu speakers have recorded a 164% increase over their 1951 number.

Speakers of Gujarati and Kathiawadi add upto 2·9% of the population. Speakers of Gujarati in rural areas are concentrated mostly in Rajpur, Barwani, Khargone and Sendhwa tahsils. They have increased by 38% since 1951, which even suggests some immigration.

Another speech which has a sizeable proportion of the population as speakers is Banjari. This is regarded as a language of the Rajasthani family, and accounts for 1·6% of the population. Banjari is a

mixed form of speech, with Rajasthani as its basis, the other element consisting of borrowing from the speech of the locality where the speakers of the language happen to dwell. The speech is apparently the mother tongue of the Banjara community. Speakers of this mother tongue have recorded an increase of 25·9% since 1951 which is commensurate with the general population increase.

Education and Literacy :

Levels of literacy and education prevailing in a population are significant indicators of the demographic quality of the population. Undoubtedly, a population which is better educated is better equipped to forge ahead on the way to progress, to which there is fortunately or unfortunately no alternative in this atomic age. Accordingly, our country is wedded to the ideal of cent per cent literacy, and education, at least upto the primary level. Considerable amount of money has been put in the educational sector with a view to achieve this end. The figures collected by the Census organisation enable us to find out how far have we forged ahead in our aim of complete literacy, and universal primary education. The most common method of judging the curret levels of literacy and education in the population is by means of a crude literacy rate, which is simply the number of literate and educated persons per 100 of the population.

In West Nimar, the percetage of literacy is 15·3%. No doubt this is much higher than the rates in its north-western and northern neighbours, Jhabua and Dhar, where percentages of literacy are respectively 6 and 13·5. But as compared to its north-eastern neighbour Indore (38·2% literacy) or the eastern neighbour East Nimar (24·5% literacy), the position of the district is inglorious. West Nimar is below the State level (17·1%) in education and literacy, and much lower than the national level which has a literacy percentage of 24%. So on the whole, West Nimar does not stand favourably in the field of literacy and education in the State and national context. It is worthwhile to try to find out the causes which are responsible for the district's backwardness in education.

Rate of literacy is lower 11·4% in rural areas of the district. This compares with a slightly higher rural rate of 12·7% in case of the State as a whole. Again rate of literacy is usually higher in males than among women, owing to social inhibitions on the latter's education particularly in the rural areas. In West Nimar, rate of male literacy is 24·5%, comparing with a slightly higher rate of 27·0% in case of the State as a whole. The rate of female literacy in the district is 5·8%, which compares with a higher rate of 6·7% in case of the State as a whole. Thus, the district is lower than the State in literacy in respect of total and rural areas separately, and also separately in case of males and females. It is useful to find out the areas of low literacy in the district. This is done in the table below which gives rates of literacy by tahsils, separately for total and rural areas, as also separately for persons, males and females.

TABLE

Percentage of literacy in tahsils, separately for total and rural areas, 1961

District/Tahsil	TRU	Percentage of literacy			Ranks		
		Persons	Males	Females	Persons	Males	Females
1	2	3	4	5	6	7	8
West Nimar district	T	15·3	24·5	5·8	...	...	...
	R	11·4	19·5	2·9	...	...	...
Barwaha tahsil	T	21·7	34·7	7·8	2	2	2
	R	16 2	28·9	3·0	2	2	5
Maheshwar tahsil	T	22·6	35·7	8·7	1	1	1
	R	18·0	30·6	4·7	1	1	1
Barwani tahsil	T	11·5	16·9	6·0	6	7	4
	R	4·7	8·2	1·2	8	8	8
Rajpur tahsil	T	14·4	23·1	5·4	5	5	5
	R	11·9	19·9	3·6	5	5	3
Kasrawad tahsil	T	17·3	29·0	4·9	4	3	6
	R	15·8	27·1	3·9	3	3	2
Sendhwa tahsil	T	9·5	15·1	3·8	8	8	7
	R	5·9	9·9	1·7	7	7	7
Khargone tahsil	T	17·9	28·6	6·8	3	4	3
	R	13·0	22·4	3·4	4	4	4
Bhikangaon tahsil	T	10·8	17·8	3·5	7	6	8
	R	9·7	16·3	2·7	6	6	6

The table at once brings out the important fact that, the three western and southwestern tahsils Barwani Sendhwa and Rajpur, together with the south-eastern Bhikangaon are educationally very backward. The first three form a compact block. Sendhwa is the last, and Bhikangaon last but one in literacy percentage for all areas. Barwani moves to the inglorious last rank in rural literacy, with Sendhwa and Bhikangaon in that order following closely behind.

The two northern tahsils Maheshwar and Barwaha are the most advanced in the field of literacy and education, being respectively 1st and 2nd in rank in literacy in total and rural areas. Khargone and Kasrawad tahsils, both above the district average in literacy, are yet clearly much below Maheshwar and Barwaha tahsils. Barwaha tahsils loses its second rank as regards female literacy in rural areas, Barwani and Sendhwa tahsils have the lowest female rural literacy in the district.

We have thus isolated tahsils with low levels of literacy and education. It is to be noticed that some of them have very high proportion of tribal population. It is therefore natural to enquire into the extent to which the scheduled tribal and castes population contributes in pulling down the general literacy rate. This is done in the table below :

Percentage of literacy in Scheduled tribes and castes, 1961

Class of population	Percentage of literacy		
	P	M	F
1	2	3	4
General population	15·3	24·5	5·8
Scheduled castes	8·8	16·4	1·0
Scheduled tribes	2·7	5·0	0·3

The table brings out strikingly the shockingly low levels of literacy prevailing in the scheduled tribal population of the district. The scheduled tribe females may be said to be generally illiterate. No wonder therefore that the district with a very high proportion of scheduled tribes population is backward in the field of education and tahsils Barwani, Sendhwa, Rajpur and Bhikangaon where the tribes add upto more than half of the totol population are the most backward in that respect.

Levels of Education :

As regards the qualitative aspect of education also, West Nimar does not have an encouraging story to tell. As large a proportion as 86% of its literate and educated are mere literates, that is, those who have not even passed the primary school examination. Most of them possess, perhaps, a bare ability of reading and writing. In the State as a whole, the proportion of those just literates is much lower 71·9%. About one-tenth—10·1%—of the literate and educated section of the population in the district possess primary or junior basic qualification. In the State as a whole the proportion is higher—21·9%. Most of these, perhaps might have studied in higher classes but they could not pass the matriculation or higher secondary examination. Only 3·6% of the literate and educated in the district have passed matriculation, and some of them even higher examinations. In the State as a whole, the proportion of this class of literate and educated persons is 6·2%.

Growth in literacy since 1951 :

In 1951, only 10·2% of the population of the district could claim to be literate and educated. In rural areas the proportion was still lower : 7·5%. The district has thus improved its 1951 proportion of literate and educated persons by about 50%, which is no mean achievement, though it is much below the achievement of many other districts in the State. This improvement in literacy has no doubt been possible owing to an unprecedented growth in educational institutions.

Growth of Educational Institutions :

Primary and Junior Basic :

The growth of educational institutions in the district is presented in table 5·1 of Part II of the Handbook. This table shows that in 1951, the district had 246 primary schools and no junior basic school. Till 1954, the number of primary schools grew rather tardily, but there was a spectacular increase in 1955. Thereafter the primary educational institutions continued to grow. In 1960, there were 644 primary and junior basic schools in the district which represents a 162% increase over the 1951 number of these institutions. During this period the number of scholars of either sex has also increased but it is not proportionate to the growth of primary schools failing to attain even a 100% increase by a small margin. This is indicative of the fact that attendance in schools has not been commensurate with the number of schools. This is not very surprising either because increase in attendance in the schools depends on the degree of popular response, which is generally slow in the beginning.

Also since most of the expansion of primary educational institutions took place in the later half of the decade it failed to be reflected proportionately in the literacy rate. In 1960-61, there was one school on an average between 2·8 villages (i.e. 3 schools between 8 villages), each school serving an area of 8·1 square miles on an average. The uneven distribution of literacy among the tahsils points to the need of such an analysis for each tahsil or even block, so that greater attention is paid to areas which stand in need of such attention. The literacy rate is a function of several variable factors, important among which are (i) area served per school, (ii) population served per school, (iii) number of villages per school, (iv) number of pupils per school, (v) proportion of population living in villages with more than 1,000 population,

(vi) proportion of relatively backward section among the population. The relationship between literacy rate and factors (i) to (iii) and (vi) is inverse in nature (i.e. if one increases the other decreases, while that between (iv) and (v) and literacy rate is direct i.e. they increase or decrease together. The table below gives, separately for each tahsil, some of the derivatives referred to above for December 1961.

Literacy rate, area served per school, population served per school, villages served per school, pupils per school, in the district and in each tahsil, 1960.

District/Tahsil	Literacy percentage	No. of schools	Area in Sq.mile per school	Population served per school	No. of villages inhabited per school	Number of pupils	Pupils per school	Percentage of tribal population
1	2	3	4	5	6	7	8	9
West Nimar district	15·3	668	—	—	—	27,945		40·4
Barwaha tahsil	21·7	60	9·1	1,852	3·8	2,730	46	0·2
Maheshwar tahsil	22·6	43	8·2	1,705	3·6	2,779	65	20·4
Barwani tahsil	11·5	67	9·3	1,573	2·6	2,142	32	68·2
Rajpur tahsil	14·4	129	4·0	1,101	1·5	4,301	33	52·6
Kasrawad tahsil	17·3	66	5·9	1,248	2·6	3,023	46	0·08
Sendhwa tahsil	9·5	109	9·3	1,459	2·3	3,531	32	64·5
Khargone tahsil	17·9	127	7·7	1,640	2·3	7,378	58	38·9
Bhikangaon tahsil	10·8	67	11·5	1,626	3·9	2,061	31	50·3

A study of this table leads to the following inferences :

(i) There is no relationship between the number of villages served per school and literacy percentage.

(ii) Likewise there does not seem to be any correlation between literacy percentage on the one hand and population served per school, or proportion of population living in bigger villages with more than 1,000 population.

(iii) The area served per school also does not seem to be related to literacy rate.

There is, however, evidence of correlation between the number of pupils per school and literacy rate, the two increasing or decreasing together; and an inverse relationship between proportion of scheduled tribal population and literacy proportion. The table clearly points to the fact that even though the tahsils Barwani, Sendhwa and Rajpur are better than Maheshwar, Kasrawad or Barwaha tahsils as regards the frequency of schools per village, they have not progressed in literacy because of poor attendance. This latter factor is of course, indicative of the lack of response from the people towards the education programme. This lack of response is clear also from the fact that the proportion of children attending primary schools to the proportion that should attend primary schools (i.e. children in age-group 6–10), is 19%.*

Higher Educational Institutions :

During the intercensal decade, the number of higher educational institutions has also taken big forward leaps. The number of middle and senior basic schools, which was 21 in 1951 has increased to 85 in 1961, that is, has more than quadrupled. Similarly the number of higher secondary schools has grown by more than three times since 1951. In 1961, the district had two degree colleges one at Khargone and the other at Barwani ,one teacher's training college and one training school for teachers.

Medical and public health :

Tables 6A·1 to 6A·4 in part II of the Handbook give information pertaining to administration of public health in the district. This has been furnished by the Civil Surgeon of the district. As may be seen from these tables, the number of hospitals and nursing homes, with the number of beds has remained unchanged, being 4 and 162 respectively from 1951 to 1961. The district did not have any primary health centre till 1956. Three primary health centres were established for the first time in 1957. In 1961, the district had six primary health centres with a total capacity of 32 beds. Besides the district had 16 dispensaries in 1960, which had a total bed capacity of 141. Thus in 1960, we had in West Nimar, one hospital or dispensary or primary health centre for a population of 21,074 on an average and one bed for 2,957 persons on an average. The figures are misleading in the sense that they do not take note of the distribution of the hospitals and beds among rural and urban areas of the district. The Civil Surgeon has not furnished such a break up but as will

* Based on information furnished by District Education Officer.

appear presently, it may be taken that most of the hospitals and dispensaries are in the urban areas.

It appears from table 6 A·1 that in 1960, the district had 66 registered allopathic practitioners, 40 registered ayurvedic practitioners and 47 registered nurses. From these figures, we find that in 1960-61, West Nimar district had a population-physician (both allopathic and ayurvedic) ratio of 9,344, a population-doctor (allopathic) ratio of 15,007 and a population nurse ratio of 21,074. As remarked earlier these ratios fail to bring out the differences that prevail in the distribution of services of the physicians and nurses as between rural and urban areas and are to that extent misleading. The census data, however, enables us to assess the unevenness of distribution of medical services over the rural and urban areas. This is done in the following paragraphs.

Table B-V of the Handbook gives us, among other things, information regarding persons who were following the occupation of physicians and nurses, and other occupations connected with public health. It appears from this table that in 1961, there were 72 allopathic physicians in the district, 58 in the urban areas and 14 in the rural areas. The difference between the figures given by the Civil Surgeon and the census is possibly due to some physicians in the district escaping registration, as also to the difference of about three months in the reference date. However, the figures are revealing inasmuch as they bring out the lopsidedness of the distribution of allopathic medical help between the rural and urban areas. More than three-fourths of the allopathic physicians are concentrated in the urban areas which contain less than one-seventh of the district's population. The doctor population ratio in rural areas is 60,885, whereas it is 2,381 in urban areas. West Nimar district does not come up even to the State average as regards allopathic medical help, because the latter has a doctor-population ratio of 41,580 for rural areas and 1,822 for urban areas.

According to table B-V there were 94 ayurvedic physicians in the district at the time of enumeration, while the Civil Surgeon's figure (referred to December 1960) is 40. To some extent, this is due to defective registration, but a part of the difference may also have to be attributed to the fact that in the non-allopathic systems, half or ill-qualified persons also are found to practise. Distribution of the ayurvedic physicians is slightly better, because more than half of them are in rural areas. Still, even here the unevenness is very much there. The census figures also show that there were in the district four homeopathic (all in urban areas) physicians, 7 dentists (all in urban areas) and 43 physicians (26 in urban areas) belonging to the unclassified category.

Vital Statistics :

Registration of births and deaths in the district is done in accordance with chapter II of the Health Manual.

Table 6B·1 in part II of the Handbook gives the registered births and deaths in the district from 1951 to 1960. Upto 1956, the figures do not give a sexwise break-up. The absolutely unreliable character of these figures is brought out from the fact that the figures give us a natural increase of 14,490 as against an actual census increase of 231,770 during the ten years to which the figures relate. The vital events are thus grossly underregistered. The figures given in the Handbook are thus not of any use for research and their publicaion is mainly to focus attention on the neglect of this important aspect of population study. The registered birth and death rates are ludicrously small, and do not have any relationship with the true vital rates at all.

We are, however, not ccmpletely helpess as regards assessment of fertility levels in the district. The census data enables us to do this two ways. Firstly, it enables us to have some idea of the minimum levels of birthrate from returns of children aged 'O' in the census tables. Birth rate is defined as the 'number of children born during the year per 1,000 population as existing at the mid-point of the year. The children age 'O' were all born during the year just preceding the census. Hence, if we divide this number by total population enumerated at census, and reduce it to a base of 1,000 we will get a crude estimate of birth-rate which will be a minimum estimate for the following reasons.

(i) The number of children born during the year in question but who died before enumeration does not enter into the calculation and hence the estimate is a lower estimate.

(ii) The population as at the end of the year has been used, which is greater than the population at the mid-point of the year. This also tends to lower the estimate.

Thus, on the method indicated earlier, we get for West Nimar district, a crude birth rate of 39·8%, which is much on the lower side. The true birthrate will be in the neighbourhood of about 45 to 50.

Another measure of fertility where vital statistics data is either not available or is grossly underreported is child-woman ratio. This is defined as the number of children aged 0-4 to 1,000 females in the child-bearing age-group 15-44. This ratio, has the high value of 447 for West Nimar district, comparing with a lower value of 384 for the State as a whole. The child-woman ratio in Indore division has the value 411. Only Jhabua, among West Nimar's neighbours has a higher (487) child woman-ratio. In other neighbouring districts, the ratio has the values as shown below : Dhar (440), Indore (378), Dewas (405), East Nimar (401).

Religion :

Important feature of the religious composition of the district as of the State as a whole is the overwhelming predominance of Hindus. They make 93·5% of the district's total population, the proportion being higher 96·7% in rural areas, but falls considerably in urban areas. But even in the latter, constituting 73·6% of the population, Hindus emerge as the most predominant group in the population.

Followers of the Muslim religion form the second

most numerous component of the population. Their proportion is 5·6% in all areas, but falls to half of that value in rural areas. The Muslims thus show a concentration in urban areas, where they improve their proportion to 22·9%. In rural areas, they appear to be slightly concentrated in Kasrawad, Khargone, Rajpur and Bhikangaon tahsils. They are very poorly represented in the Barwani and Maheshwar tahsils.

It is thus seen that Hindus and Muslims, between themselves, constitute 99% of the population, so that followers of other religions like Sikh, Jain, Christians and Buddhists make the microscopic minority of 1% of the total population. Even among these, roughly half are Jains, who being generally a trading community, show considerable concentration in urban areas. Sikhs form about 0·3% of the district's population and they are also gravitated towards the towns where roughly four-fifths of their population resides. Christians, and Buddhists, contributing respectively 0·14 and 0·08 per cent to the district's population, are the least represented religions in the population. The Buddhists have their roots in rural areas, and it is interesting that most of them reside in rural areas of the Sendhwa tahsil. Christians are mainly concentrated in urban areas. Followers of other religions number only 5 in the district.

Changes in Religions composition since 1951 :

The changes in the religions composition of the district since 1951 are brought out in the table inset below :

Table

Name of religion	Percentage to total population	
	1961	1951
1	2	3
Hindu	93·45	93·88
Muslim	5·62	5·41
Jain	0·45	0·45
Christian	0·14	0·06
Sikhs	0·26	0·19
Buddhists	0·08	...

The table at once brings out the reduction in: he proportion of the Hindus in the population during the interregnum. Their proportion has suffered a fall of 0·43 count. Most conspicuous has been the improvement in the proportion of Muslims, followed by Christians and Buddhists. The latter did not have any representation in the district's population in 1951.

Scheduled Castes and Tribes :

Scheduled castes and Scheduled tribes are those found in the President's Order "The Scheduled Castes and Scheduled Tribes Lists (Modification) Order, 1956," promulgated in 1956 just after the reorganisation of the States. It should be clearly understood that scheduling in respect of certain tribes (though not in case of castes as regards West Nimar), is territorial in the district, being confined only to certain tahsils. Thus whereas the Gond, Korku and Seharia tribes have been treated as scheduled throughout the district, in case of Bhils and Bhilalas, including Barela, Patelia and other sub-tribes, the scheduling does not extend to Kasrawad and Barwaha tahsils. Thus, as regards the population of these tribes, the district figures do not include members of those tribes, if any, residing in Kasrawad and Barwaha tahsils.

In the district 51·1% or just more than half of the population is included in the 'scheduled' category i. e. it belongs to scheduled castes and scheduled tribes. Among individual tahsils, the 'scheduled' proportion varies from 15·7%in Kasrawad tahsil to 75·3% in Barwani tahsil. In other tahsils the proportion has the values as follows -—Barwaha (16·8%), Maheshwar (38·2%), Rajpur (62·1%), Sendhwa (71·8%), Khargone (48·7% and Bhikangaon (58·2%). Thus the scheduled population shows a concentration in Barwani, Sendhwa, Rajpur and Bhikangaon tahsils and to a smaller extent in Khargone tahsil.

Scheduled Castes :

Out of a total of twenty-five castes scheduled throughout the district according to the Presidential Order referred to earlier, as many as twenty-one have been returned from the district. The four castes which have not been returned at all, though scheduled, are Banchada, Bhanumati, Dom and Sansi. Five more castes, though scheduled, have less than 100 persons each. These are Bedia, Chidar Dhed, Kanjar and Khatik. The first two of these have actually less than 10 persons each. Thus, only sixteen of the twenty-five castes scheduled in the district may be said to have some sizeable representation in the district. Even as regards these sixteen only seven, namely Balai, Bhangi or Mehter, Chamar etc. Koli or Kori, Mahar, Meghwal and Zamral have a strength of more than 1% of the total scheduled castes population of the district. Of the remaining nine, one has a population of between 100 and 200, while, eight have populations varying between 300 and 900.

Scheduled castes make roughly one-tenth (10·7%) of the district's population. Tahsilwise proportions show some variations. Sendhwa tahsil has the smallest (7·3%) proportion of scheduled castes in its population. Barwani (7·1%), Bhikangaon (7·9%), Rajpur (9·3%) and Khargone (9·8%) also have smaller scheduled castes representation in their populations. Maheshwar tahsil has the highest scheduled castes component of 17·8% in its population, with Barwaha (16·7%) and Kasrawad (15·7%) in close pursuit These three tahsils have a very low proportion of scheduled tribal population. On the basis of this statistical evidence, it may thus be observed that proportions of scheduled castes and scheduled tribes in the tahsils have an inverse relationship.

12·5% of the scheduled castes live in urban areas, the proportion of general population living in towns

being 13·9%. These proportions are not indicative of any significant differential as regards the degree of urbanization of the scheduled castes and the general population. Sex ratio among scheduled castes has the higher value of 992 as compared with the value 958 in the general population and we may thus observe that scheduled castes population in the district exhibits less masculinity than the general population.

Educationally, the scheduled castes are very much behind the general population. Percentage of literacy among them is 8·8% (16·4% in males and 1·0% in females) comparing with 15·3% (24·5% in males and 5·8% in females) in case of the general population. Of the literate and educated only 6·9% possess primary educational level, 0·7% possess matriculation or (rarely) higher educational level; while the bulk (92·4%) are merely literates without any educational levels.

57·1% of the population of scheduled castes takes part in economic activity, comparing with a much smaller proportion (52%) of the economically active among the general population. Agriculture is the mainstay of their economy, giving principal work to three-fourths (75·0%) of the working force. In agriculture, labourers outnumber cultivators by about 2 to 1, bringing out the economic backwardness of the scheduled castes. As shown by table SCT-V (part I) about half (51·1%) of the rural cultivating hoseholds of scheduled castes possess uneconomic, fragmentary holdings of less than 7·5 acres 'Other services', mostly general labour, accounts for 11·5% of the scheduled caste's workers. The scheduled castes have also a big proportion (9·3%) of workers in household industry. These are mainly the traditional caste-based industries like making of articles of split-bamboo or leaves, shoe-making, weaving etc. Other categories together account for only 4% of the working force and are unimportant in the castes' economy.

Important Scheduled Castes :

Balai—(Sex-ratio 996) :

This is the most numerous among scheduled castes in the district accounting for roughly two-thirds (65·3%) of the latter's scheduled castes population. The caste shows a concentration in rural areas, with only 5·8% of its population living in urban areas. The caste is more or less evenly dispersed among the tahsils, except Barwani, Sendhwa and Rajpur where its proportion is somewhat smaller.

Balais are a typical caste of central and southern Malwa and of the regions to the south of the Vindhyas which have received immigrants from Malwa. As observed by the Superintendent of Census Operations, 1931, of Holkar State "Chamars and Balais appear to have been members of one community, which later on, was divided into two sections."[1] According to the same source, the Balais who do not follow the socially unclean occupation of skinning dead animals, enjoys a better social status than the Chamars. The caste contributes most of the village messengers and watchmen.[2] Educationally the caste is very backward with a low percentage of literacy, consisting mostly of merely literate persons.

59% of the population of the caste is economically active. Agricultural labour and cultivation are the main economic activities of the caste, the two together making 84% of the caste's working force. 10% of Balai workers are in 'other services' mostly village watchmen and 3·6% in 'household industry.' Weaving of cotton cloth is perhaps the household industry followed by the caste.

Chamar and Synonymous Castes :
(Sex-ratio 977) :—

This, the third most numerous scheduled caste in the district, constituting about one-tenth (10·7%) of its scheduled caste population. The caste is somewhat less out of place in towns, where 25·8% of its population resides. Though returned from all tahsil (rural), the caste shows a slight degree of concentration in Barwaha and Maheshwar tahsils. On the other hand, Barwani, Sendhwa and Rajpur tahsils (rural) contain but small proportion of the caste.

Educationally the caste is slightly better than scheduled castes generally, having 10·5% of its population literate and educated. This is perhaps a result of the caste's greater concentration (than scheduled castes generally) in urban areas. In educational levels also, the caste presents a slightly better picture than scheduled castes generally, with 8·6% of its literate and educated possessing primary educational level and 0·7% possessing matriculation or higher educational levels.

Economy of the caste is not dependent on agriculture to the extent found in other scheduled castes or in the general population. Highest participation is in household industry, which accounts for 42% of the workers. The traditional household industry of the caste is shoe-making and making other leather articles required by the cultivators. Agricultural labour is next in importance in the caste's economy, giving principal work to 35% of its working force. 'Other services' employing 10% and 'cultivation' employing 9% of the caste's workers are also economically important.

Koli or Kori :
(Sex-ratio 991)

Castes returned as Koli or Kori are the second most numerous among scheduled castes in the district. They have also a more than proportionate representation in urban population, which includes 22·7% of the caste's population. Among tahsils, the caste is concentrated mostly in the rural areas of the western Barwani, Sendhwa and Rajpur tahsils. The caste is very poorly represented in the rural areas of the northern and eastern Barwaha and Maheshwar tahsils.

According to 1931 Holkar State Census Report

1 Holkar State Census Report 1931, page 250.

2 The Indore State Gazetteer, 1931, page 95.

(page 266), Koli and Kori represent two distinct castes, the former from the Deccan and the latter from the United Privinces (now Uttar Pradesh). The one speaks Marathi or its dialect, whereas the other speaks a dialect of Hindi. According to the same source, the Koli or Kori returns from Nimar district are made up mostly of Kolis. The Koris are traditionally weavers of cloth. As regards the Kolis, the 1931 Holkar State Report observes "The Kolis of the Deccan are also considered a low caste. When the Maratha power was on the wane, and gangs of plunderers roamed at large, the Kolis also acquired some reputation as thieves and robbers. But they have now settted down to a peaceful life, and become agriculturists or common labourers." The returns of 1961 show that four-fifths of Koli or Kori workers are in agriculture, and more than one-tenth in 'other services'. Only 1·3% of the workers are in 'household industry', which shows that this economic activity is not now of any importance in the caste.

Among the less numerous scheduled castes, the Meghwals account for 2·4%, the Zamrals 1·8%, the Mahars 1·7% and the Mehtars or Bhangis 1·5% of the district's scheduled castes population. The Meghwals, entirely concentrated in the rural areas, have been returned mostly from Barwani, Rajpur and Kasrawad tahsils. The Meghwals have not been returned from rural areas of Barwaha, Maheshwar and Bhikangaon tahsils. They are mostly workers in agricultural labour, category III (specific nature of activity not known), cultivation and household industry (specific nature of household industry not known). The Zamrals (spelt as Jhamrals also) are described as "small localised group of Basors in the Nimar portion of Malwa, divided into two endogamous divisions. They are here probably derived from the Vindhyan Bhils."[1] The Jhamrals who number 1·8% of the scheduled castes population and are concentrated to some extent in rural areas of Sendhwa and Khargone tahsils weave mats of *Khajur* or palm leaves, which is their traditional household industry. Household industry and agriculture absorb most of the working force of Zamrals. Mahar, "the well-known untouchable caste of the Bombay Presidency" are found 'outside Indore city and Mhow cantonment' only in Nimar.[2] The Mehtar or Bhangi concentrated mostly in urban areas (owing to the need for their scavenging and sweeping services in urban areas) add upto 1·5% of the district's population. More than 90% of their workers are in 'other services', mainly scavenging and sweeping.

The district also has small number of Bargunda (dispersed almost evenly in all tahsils except Barwani) who are considered to be a wandering tribe of Dravidian origin and mostly work in the household industry of mat-weaving from palm-leaves, Bagri or Bagdi, considered to be a criminal tribe from Rajputana descended from Rajput alliance from primitive tribes; Pardhi, reported to be a wandering caste of hunters and fowlers, Nat (Kalbelia and Sapera), a caste of professional acrobats.

Scheduled tribes :

Of the five tribes (including sub-tribes) scheduled in the district, four have been returned. The tribe not returned from the district though scheduled is Seharia. As has been remarked earlier scheduling with respect to Bhil (and sub-tribes) does not extend to Barwaha and Kasrawad tahsils, while that with respect to Gond and Korku tribes extends over the entire district. The four scheduled tribes (including sub-tribes) together add upto two-fifth (40·4%) of the district's population. The tahsilwise population exhibit considerable variation. Lowest proportion of scheduled tribes is 0·08% in Kasrawad tahsil, while Barwani tahsil has as large as 68·2% of its population among scheduled tribes. In other tahsils, the proportions of scheduled tribes to their respective general population are Sendhwa (64·5%), Rajpur 52·8%, Bhikangaon (50·3%), Khargone (38·9%), Maheshwar (20·4%) and Barwaha (0·2%). The Gond and Korku, numbering respectively 928 and 249 are concentrated almost entirely in Bhikangaon tahsil The two together thus constitute only 0·3% of the district's scheduled tribal population. Hence for all practical purposes, the district's tribal population may be considered as consisting of only Bhils and the sub-tribes included in it.

Only 1·5% of the district's scheduled tribal population live in towns, showing that the Bhils feel quite out of place in urban areas. Sex-ratio among the scheduled tribes is 982, comparing with 958 for the population generally.

Incidence of education and literacy in the scheduled tribes, that is, in the Bhils and sub-tribes is shockingly low, being only 2·7%, 5% for males and 0·3% for females. In fact as we saw earlier, the comparatively low rate of literary in the general population is ascribable to the horribly low rate among the scheduled tribes. As regards levels of education among literate and educated, the tale is equally distressing. 96·2% of the literate and educated among the scheduled tribes and among the Bhils are without any recognised educational levels, 3·6% possess the primary educational level and only 0·3% can boast of being matriculates or (rarely) of having higher educational qualifications.

Agriculture is the mainstay of the tribal economy in the district, 96% of the working force, being concentrated in agriculture, about four-fifth in cultivation and one-sixth in agricultural labour. This is an indication of backwardness of the economy. The remaining 4% of the workers are employed in 'other services' (2·2%) and category III (1·6%).

Bhils :

The figures against Bhil tribe in the Handbook include the figures for the sub-tribes Barela, Patelia, Bhilala, Rathia, Mankar, Nihal and Tadvi also. The break-up is as follows :

1 Central India Agency Census Report, 1931, page 229.

2 Holkar State Census Report, 1931, page 269.

Tribe or Sub-tribe	*Population*
Barela	158,706
Bhil	71,866
Bhilala	141,997
Mankar	9,119
Nihal	7,856
Rathia	2,341
Patelia	1,217
Tadvi	6,025

Sir J. Malcolm thinks (Central India, Vol. I, p. 519) that the Bhils have emigrated from Jodhpur and Udaipur to their present habitat in the Vindhyan and Satpura slopes. It is difficult to say whether they are autochthones or not. 122 Bhil septs have been recorded by Venkatchar in his report of 1931 Census of Central India Agency. These are all exogamous, having a tree or animal as totem. They live in huts of wattle and daub surrounded by a bamboo fence, each standing by itself on high ground. Adult marriages are the rule among Bhils, marriages in ages below 14 being less than 3% of all girls in the age-group 0–14. Marriage by capture used to be once common, and relics thereof are still discernible in the institution of Bhargoria hat. Widow remarriage is permitted.

Bhilalas :

The Bhilalas are twice as numerous as those returned as Bhil proper. They inhabit mainly the Barwani, Rajpur and Sendhwa and Khargone tahsils. The tribe is, in all probability, of a mixed origin from the Union of Rajputs and Bhils, and certainly enjoy a better social status than the Bhils proper. They now repudiate all connection with the latter tribe. Several of them are substantial landholders and hold the title of Rao or Ravat. In 1931, the Bhilalas numbered 76,149 persons in the entire Holkar State against 83,232 Bhils. Today, their population in Nimar district alone is 141,997 as against 71,866 of Bhils. The figures speak to the existence of a social movement among the Bhils, prompting them to return themselves as Bhilalas or Barela, the socially superior tribes.

The Barela section of the Bhils is concentrated mainly in rural areas of Barwani and Sendhwa tahsils, but has also sizeable numbers in rural Rajpur, Khargone and Bhikangaon tahsils. It is surprising that the Barelas who are now more than twice as numerous as the Bhils were not even returned as a separate tribe prior to 1921 Census. This again is significant as indicative of existence of social current leading to the diminution in the ranks of the parent tribe and their absorption in the Barela and Bhilala tribes who are considered to be more respectable.

Mankars are a division of Bhils. The term Mankar is an occupational one. They are, as a class, famous as trackers. They are also called Dhankwas by other Bhils but among themselves they are known as Nahal or Naik. The Nihals may be Mankar Bhils, Nihal being a variant of the word Nahal by which name the Mankars refer to themselves.

Like Bhilalas, the Patelias also seem to have an admixture of Rajput blood. They form a single endogamous group divided into many exogamous septs many of which have Rajput appellations like Sipra Parmar, Tandia Parmar etc.

The Rathia section of the Bhils was returned in 1931 from the erstwhile Barwani State. The origin of the name is perhaps from their long sojourn in the Rath county which forms a great part of the Alirajpur subdivision of the Jhabua district.

The Tadvi Bhils derive their name from Tad meaning a Bhil headman. In 1931 Census only 329 Tadvi were returned from the entire Holkar State and they were all Mohammadans. In 1961, their number is 6,025, showing that they have also increased by recruitment from other sections of the Bhil tribe. Strangely enough, in 1961, none of them has been returned as a Mohammadan by faith. The Tadvi Bhils have two further subdivisions : the Rathwi Tadvi and the Bhagori Tadvi; the former came from Rath and the latter from Dohad.

Bhagoria Hat :

Bhagoria Hat literally meaning the market of running away is one of the main attractions in the otherwise dull lives of the Bhils and Bhilalas in the district of West Nimar. The Bhagoria hat may in a way, be described as a mass *swayambara* where young people of either sex (but usually the males) choose their life-partner. The *hat* affords us one example of how the so called primitive people evolve ingenious customs to solve some of their social problems.

These markets are in the nature of small fairs, held on the regular market day immediately preceding the *Holi* festival. In the market, the unmarried youth, choose their partners. The procedure, in a nutshell, is that the boy falls in for a girl (whom he knows he may marry according to the tribal law of clan exogamy-infact, in many cases the boy and the girl are already welknown to each other) and follows her. On getting the suitable opportunity he applies *gulal* (red farinaceous powder) on her face. If the girl reciprocates the gesture by applying *gulal* on the boy's face, that is taken as acceptance by her of the boy's proposal. After this, the marriage ceremony is usually performed by the parents of the boy and the girl. Best Bhagoria in the district is held in village Palsud in Rajpur tahsil. Other places important for *Bhagoria hat* are Sendhwa Jhopali, Dhanora Bardalo in Sendhwa tahsil; Barla, Balwadi, Chacharia, Manbod under Barla Police station; Rajpur, Julwania, Palsud, Anjad, Bafphatak in Rajpur tahsil and Nagalwadi, Onjhar, Khetia, Newari, Mahenda and Pansemal also in Sendhwa tahsil.

Land use Pattern :

Pattern of land utilisation in West Nimar district for the ten years 1951–52 to 1960–61 is presented in table 2A·1 of part II of the Handbook. In this table, the district's total area is distributed over nine types of land uses, namely (i) forests (ii) land put to non-agricultural uses (iii) barren and uncultivable land (iv) culturable waste (v) fallow lands other than current fallows (vi) permanent pastures and other grazing lands (vii) land under miscellaneous tree crops and groves not included in the net area sown (viii) net area sown and (ix) current fallows.

According to this table areas under heads (ii), (iii) and (iv) showed wide variations from the year 1952–53 to 1953–54. No reasons are apparent from the table itself for these variations, except, perhaps, improvement in classification. It will be safer, therefore, as regards these heads, to consider these figures only from the years 1953–54 onwards.

It may be remarked that the figure for the total area of the district has itself increased by 53,548 acres between 1953–54 and 1960–61. In the last mentioned year, forests occupied an area of 456 square miles, or 12·4% of the total reporting area of the district. The forest area as given by the divisional forest officers of the district adds to 2,075 square miles which exceeds the area according to village papers by 1,619 sq. miles. This is too large a difference to be explained by possible mistakes of compilation on the part of two agencies. In this connection, it is interesting that the geographical area of the district as given by Director of Land Records (based on village papers) and the Surveyor General in Table A-I differs by 1,455 square miles, which is very nearly equal to the difference between the forest area figures given by the divisional forest officers and by the village papers. If we take note of the fact that 120 square miles of forest area in the West Khargone forest division were not handed over to the forest department at the time of merger of the Barwani State, and is possibly included in both the figures for forest areas, the difference reduces to one of 24 square miles only. This would suggest that the difference in the figures for area of the district as given by the Surveyor General, India and the Director of Land Records is principally due to non-inclusion in the latter's figure of a forest area of about 1,600 square miles.

Area not available for cultivation :

This includes (i) land put to non-agricultural uses and (ii) barren and uncultivable land. The two classes together accounted for 8·6% of the total area of the district in 1960-61.

Culturable wastes have decreased in area since 1953-54, by 77,174 acres. This is perhaps because of its being brought under the plough. In 1960-61, cultivable wastes accounted for 11·0% of the district's area.

7·7% of the area of the district in 1960–61 is shown as covered with 'permanent pastures and grazing lands'. Area under this head also has shown an increase by 44,827 acres since 1953-54. Area under old fallows has, shown a decrease. This area however is less than 1% of the district's area.

Net area sown :

Land used for growing crops has great demographic importance, especially in a growing population. This is because it is this land which directly feeds the population, and if the latter outstrips the former, considerable difficulties are bound to arise. It is seen that net area sown has shown a steady increase from year to year during the decade. In 1960-61, area recorded as 'net area sown' is 15·3% higher than the corresponding area in 1951-52. The population increase during this period has been of the order of 31%, which is more than double the rate at which net area sown has increased. This indicates that, unless the productivity per acre has increased, the demographic pressure on land has increased. Thus, whereas there was 1·6 acres of net area sown per *capita* in 1951-52, there is only 1·4 acres per *capita* in 1960-61. The land recorded as net area sown is 58·9% of the district's geographical area, which compares with 36·8% in case of the State as a whole. If we consider the area of the district as given by Surveyor General, the net area sown in 1960-61 comes to 42·5% of that area, which seems to be nearer the true picture.

Soils :

All soils cultivated in the district are generally divided into two types : *maletru* or dry and *piyat* or irrigated. Besides this general classification, the Nimar cultivator divides his soil into three broad classes, depending on its conformation, situation and the use to which it is put. Under the first system i.e. according to conformation; soils are classed as *Chauras* or even lying, *dhalu* or sloping and *chapera* or cut up by ravines and water courses. By situation, soils are classed as *gaonuru* or land near villages, and *bara* or manured land close to houses. Classified by use, the main divisions are *shialu* (or *kharif*) land which bears crops sown in the autumn, and *unhalu* (or *rabi*) which bears spring crops. Other divisions according to use are *salgatta* or low lying rice bearing land, *charnoi* or grazing land, *adan* or manured and irrigated, usually garden land, and lastly *bagh* or *amrai* or fruit bearing land.

According to their physical characteristics, the cultivators divide the soil into *chikkat* (also known as *kali* or *mar*), *pilotha* or *pili*, *pandhar*, *antharpatha*, *Kharadi*, *bardi*, and *talakh* or *kachhar*. The *chikkat* or *kali* is the well known black cotton soil which is sub-divided according to its depth and power of retaining moisture. This soil bears two crops in the year without irrigation. *Pilotha* or *pili* is a yellow soil of no great depth with a higher percentage of sand than *Kali*. The soil, without irrigation, is only employed for growing autumn crops. *Pandhar* is a grey soil of loose sandy texture, and generally shallow. It is generally found near villages and on old village sites and is suitable for the hardy millets only. *Antharpatha* also is a loamy soil but is very shallow, having rock close below it. It is common in the hills

and will generally bear cotton and juar. *Khardi* is a stony soil of a reddish colour of low fertility, on which only autumn crops are grown and it gets exhausted in two or three years. *Bardi* is a still poorer soil and will bear only *kodon, kutki,* and *tilli.*

The above system of classification ordinarily followed by the cultivator is adopted in settlement as well, where the classes adopted as regards dry land or *maletru* are *kali, khardi* and *halki. Kali* is sub-divided into four sub-classes, *kali AI* which is the best type of *kali, Kali I, Kali II* and *Kali III.* The lighter soils follow these rich earths, and are classed by depth only. *Khardi* is an inferior soil with a depth of about 20", *halki* with a depth of one span (about 9"). This classification is modified by various considerations, which graduate the soils between the main classes. These considerations are those dealing with slope or dhalu, prevalence of *kans,* proximity to village soils.

Irrigated or *piyat* land is also similarly dealt with. The classes adopted are *adan* I A, I, II and III each 25% below the preceding in the scale of agricultural value.

Soils :

Khargone district consists of parts of the erstwhile Holkar State, the Barwani State and some outlying pockets of Dhar State. In Holkar State Settlement operations were carried on in 1925–26, in Barwani in 1905–06 and in Dhar State in 1927–28. Information regarding soil types of agricultural lands in some of the tahsils as per last Settlement is presented below to the extent of its availability at the Collectorate.

Soil Types in each Tahsil

Name of Tahsil	Soil type	Area
1 Barwaha tahsil	Kali I-A	N.A.
	Kali I	N.A.
	Kali II	N.A.

Source—Collector, West Nimar.

Agriculture :

Agriculture is the mainstay of the district's economy. The agriculturists of Nimar are noted for their industry and often produce far better crops from less promising soils than their more favoured but less hard working brethren of Malwa. The implements used are heavier in make than those of Malwa, the soil being much stiffer.

Table 2 A·2 in Part II of the Handbook gives the acreage under some important crops in the district for the ten years 1951–52 to 1960–61. *Jowar,* cotton and groundnut are the main crops of the district. The following table gives a tahsilwise statement of the first three *Kharif* and *rabi* crops in each tahsil :

		First three Crops					
		Kharif			Rabi		
	Tahsil	I	II	III	I	II	III
1	Barwaha tahsil	Cotton	*Juar*	Groundnut	Wheat	Gram	*Alsi*
2	Maheshwar tahsil	*Juar*	Cotton	Groundnut	Wheat	N. A.	N. A.
3	Barwani tahsil	*Juar*	Cotton	Groundnut	Wheat	Gram	*Dadar* †
4	Rajpur tahsil	*Juar*	Groundnut	Cotton	Wheat	Gram	*Dadar*†
5	Kasrawad tahsil	Cotton	*Juar*	Groundnut	Wheat	Gram	N. A.
6	Sendhwa tahsil	*Juar*	Groundnut	Cotton	Gram	Wheat	*Dadar*†
7	Khargone tahsil	*Juar*	Cotton	Groundnut	Wheat	Gram	*Matar*
8	Bhikangaon tahsil	Cotton	*Juar*	Groundnut	N. A.	N. A.	N. A.

It thus appears that juar is the first *kharif* crop in five of the eight tahsils, and Cotton in three tahsils. Cotton is the second most important *kharif* crop in three, groundnut in two and *juar* in three thasils; while groundnut is the third *kharif* crop in six, and cotton in two tahsils. As regards the *rabi* crops, it may be stated that these are not very important in the district and are generally sown as catch crops. The following table gives a quantitative idea of the importance of each crop in the district and in each tahsil. The proportion presented in it relate to the year 1960-61 :

TABLE showing area under Crops in each tahsil of West Nimar District by Major Crops for the year 1960–61.

† Rabi juar is known as dadar.

Area under food-crops in the district is 63% of the net area sown. This is much smaller than the corresponding proportion (97%) for the State as a whole. In food-crops, foodgrains occupying 61·8% of the net sown area are important. Non grain foodcrops such as spices and condiments, and vegetables occupy only 1% of the net area sown. As regards area under food-crops, considerable variations exist between the tahsils. Sendhwa tahsil has as high as 87% of the net area sown under foodcrops which is the highest. Thus in Sendhwa tahsil the role of non-food crops is rather unimportant. At the other extreme are Barwaha, Bhikangaon and Khargone tahsils where food crops occupy only 53 to 56 per cent of the net area sown.

Among food-grains, cereals and millets cover most of the area in fact in the district as a whole the area under cereals and millets is more than three times the area under pulses. Area under cereals and millets ranges from a minimum of 40% in Barwaha tahsil to a highest of 64% in Sendhwa tahsil.

The most important among cereals and millets is *jowar*, which is staple foodgrain of the district. It occupies 31% of the net area sown in the district, the proportion varying between a minimum of 27% in Kasrawad and Barwaha tahsils to a maximum of 43% in Sendhwa tahsil. The increasing importance of this crop is clear from the fact that acreage devoted to it has more or less steadily increased during the intercensal decade, so that the area under the crop in 1960-61 is 43·2% more than the area under it in 1951-52. Except in the Pansemal and Khetia tract where *juar* is grown as a *rabi* crop and is known as *dadar*, the crop is every where else grown as a *kharif* crop.

Wheat is grown on 6% of the net area sown in 1960-61. In the tahsils of Narbada valley, that is, Maheshwar, Rajpur, Kasrawad and Barwaha, the acreage under wheat is higher than the district average. The wheat acreage is as high as 13% of the net area sown in Maheshwar tahsil, and is 9% each in the remaining tahsils. In the tahsils which are away from the Narmada, wheat acreage is smaller. Table 2A·2 in part II of the Handbook shows that the acreage under wheat has been fluctuating in the earlier years of the last decade, but the trend is one of increase in the area. The variation of wheat acreage in the last decade has been from a minimum of 35,889 acres in 1952-53 to 101,901 acres in 1959-60. Among varieties of wheat grown may be mentioned Jayavijaya, Malwi or dhola, hybrid 65, sharbati and Kathia, banshi bara and banshi-chhota etc.

Bajra is also an important crop in the district. It is a finer grain than *jowar* and requires good tillage. It is more important in the western Barwani, Sendhwa, Rajpur and Khargone tahsils, but is comparatively unimportant in the eastern tahsils. In the westernmost Barwani, *bajra* acreage is as high as 8% of the net area sown while it is lowest (1·7%) in the easternmost Barwaha tahsil.

Maize (*Makka*) is generally sown in adan or irrigated lands and in badas near the village sites, which can be mannured with village sweepings. Acreage under the crop is only slightly less than the acreage under bajra, like bajra, acreage under this crop, also increases as one goes westwards. Thus starting with a minimum of 1% of the net area sown in the eastern most Barwaha tahsil, the acreage under the crop goes on increasing in the western tahsils, attaining the highest value of 7·6% in the western most Barwani tahsil. There are two main varieties of maize, the sati or sathi (so called because it ripens in 60—salt days) and bari. Each variety is sub-divided into dholi (white) and pili (yellow) varieties. The latter is best for use in the green condition as 'bhutta' and the dholi variety for use as grain.

Pulses occupy about 14% of the net area sown in the district. Area under pulses is highest 22% in Sendhwa tahsil, and next highest 20% in Barwani tahsil, these are both the western most tahsils. The area under pulses is correspondingly lower in the eastern tahsils, being lowest (8% of net area sown) in Maheshwar and 10% in the easternmost Barwaha tahsil. Gram, tur or rahar, urad, mung, masur, are important pulses grown in the district. Area under pulses has also registered a more or less steady increase during the past decade, and is in 1960–61 about 25% more than the 1951–52 area.

Non-food crops play a very important part in the economy of the district. Most of the towns in the district owe their growth as towns to the considerable volume of trade in non-food crops that they handle. Non-food crops occupied 44% of the net area sown in 1960–61. The relative acreage under non-food crops shows considerable variation, the trend being to increase from west to east. Thus, starting with the lowest proportion of 31·6% and 36·6% in the two westernmost tahsils, the proportion rises to 50% of the net area sown in the easternmost Barwaha. The highest (51%) proportion of area under non-food crops is, however, in the central Khargone tahsil. Important non-food crops in the district are the fibre cotton, and the oilseed groundnut.

Cotton, the most important fibre crop in the district, occupies more than one-fourth of the net area sown in the district. Proportion of acreage under the crop is the lowest in the two westernmost tahsils, Barwani and Sendhwa, being respectively 12·5 and 12% and is highest (41·8%) in the eastern most Barwaha. In the other tahsils, the proportion has intermediate values, the trend being generally to increase from the western to eastern tahsils. The increasing importance of the crop is clear from the fact that area under it has generally been expanding from year to year. During the ten years 1951–52 to 1960–61, acreage under the crop varied from 319,715 acres in 1952–53 to 426,315 acres in 1955–56. In 1960–61, the area under the crop is 13% more than the corresponding acreage in 1951–52. One welcome feature is that this increase has not been at the cost of acreage under food-crops, which have also increased, but apparently from bringing new areas under the tillage (perhaps in case of the food crops). The Nimar variety is short stapled, but according to

Gazetteer it has got largely mixed up with the *roseum* seed from Akola.

Oilseeds are also very important among non-food crops of the district. Among oilseeds, almost the entire area is under groundnut. In 1960–61, this oilseed covered 17% of the net sown area in the district. Among tahsils, it fluctuates from a minimum of 7·3% in the Barwaha tahsil to a maximum of 24·8% in the Rajpur tahsil. The proportion of acreage under the crop is also high in Barwani, Khargone, Sendhwa, and Kasrawad tahsils while it is low in the Maheshwar and Bhikangaon tahsils. It is interesting to note that in 1927–28 *mungfali* or groundnut was unimportant, occupying about one-third the area under the *tilli* or seasamum crop. The position in 1960–61 is that groundnut has almost the entire area devoted to oilseeds in the district under it. Why and how this change has come about may make an interesting subject of study into the agricultural history of the district. Area under oilseeds showed a more or less decreasing trend till 1955–56, but after that year it started increasing, so that in 1960–61, the area under oilseeds in the district is about 60,000 acres more than in 1951–52.

Irrigation :

Irrigation is not much in vogue in the district, the percentage of area irrigated to net area sown in 1960–61 being 3·3% Even then, as will be seen from table 2A·3 in Part II of the Handbook, area under irrigation has been more or less consistently rising since 1950–51. The range of variation has been from a minimum of 26,881 acres in 1952–53 to a maximum of 51,174 acres irrigated in 1959–60.

Most of the irrigated area is under food crops, mainly under the cereal wheat. Of the total of 47,427 acres of area irrigated in 1960–61, wells irrigated as much as 38,267 acres, canals 6,357 acres, tanks 2,800 acres. Satak dam project in Kasrawad tahsil (estimated cost 49 lacs), Segwal dam project in Rajpur tahsil and gagan talao project in Maheshwar tahsil are medium irrigation projects in the district. The three together are expected to irrigate about 18,000 acres.

ECONOMY :

Workers

52% or roughly half of the population in the district is economically active, which is almost equal to the participation rate (proportion of workers to total population) for the State as a whole (52·3%). Separately for males and females in the district, the rate of participation is 57·2% (60·2% in case of the State) and 46·7% (44% in case of the State) respectively. There is thus smaller male participation in the district than in the State, and a correspondingly greater female participation in the district than in the State. The participation rate is higher in the rural areas, being 54·8% (comparing with 55·2% in case of the State); but is markedly lower 34·9% (comparing with 34·9% in the State as a whole) in urban areas The lower participation rate in urban areas is explained by the very low participation by women in those areas. In West Nimar female participation in urban areas is 18·9%, which compares with a still lower rate of 14·5% in the State as a whole. This phenomenon of a lower female participation in urban areas is a result of social taboos on women, prohibiting them from coming out and working for wages. To a small extent, the lower participation in urban areas is also due to somewhat higher age of entry into employment market, owing to spread of education.

Participation rate, among tahsils is highest in Bhikangaon tahsil, being 56·8% and lowest in Khargone tahsil (49·5%). In other tahsils, participation rates are : Maheshwar 51·6%, Barwani (52·6%), Rajpur (53·8%), Kasrawad 50·1% and Sendhwa 52·2%. It should however be remembered that participation rate is not a reliable index of the state of economy of the population though it may be taken as an index of willingness of the population to take part in economic activity. It is not a true guide of the state of economy because it lacks in two other essential dimensions—the productivity per participant and the time of participation. Production is a function also of the training and skill of the worker, and not merely of the number of workers. That mere rate of participation is not a true index of economic prosperity at once follows from the observed low rates of participation in urban areas, which have a more balanced and diversified and consequently stronger economic base than the rural areas.

Economic classification :

As has already been explained, according to census classification, the population of workers has been divided into nine broad categories of workers, each category including certain specific kinds of economic activities. The following table gives a classification of 100 workers in the district and in each tahsil by the categories of workers. Corresponding figures for the State are also given for comparison.

100 workers in the district and each tahsil classified by category of workers, 1961.

District/Tahsil	Degree of dependence on agriculture or land	Workers in category I	II	III	IV	V	VI	VII	VIII	IX
1	2	3	4	5	6	7	8	9	10	11
West Nimar district	83·9	64·5	19·4	1·8	3·9	1·1	0·6	2·4	0·4	5·9
Barwaha tahsil	77·7	52·0	25·7	2·1	4·5	2·5	0·9	3·6	0·8	7·9
Maheshwar tahsil	76·1	53·4	22·7	2·2	6·2	1·6	0·8	2·2	0·5	10·4
Barwani tahsil	80·6	74·6	6·1	4·8	2·6	0·5	0·8	1·9	0·4	8 3
Rajpur tahsil	84·2	68·5	15·8	1·7	4·5	0·7	0·4	2·5	0·2	5·7
Kasrawad tahsil	88·3	59·0	29·3	1·0	4·3	0·6	0·7	1·6	0·1	3·4
Sendhwa tahsil	87·5	71·0	16·5	1·6	2·8	0·9	0·5	2·4	0·3	4·0
Khargone tahsil	82·9	61·4	21·5	1·0	4·4	1·6	0 8	3·2	0·5	5·6
Bhikangaon tahsil	90·4	68·7	21·7	0·8	2·3	0·5	0·3	1·0	0·1	4·6
Madhya Pradesh	79·2	62·7	16·6	2·9	5·0	2·0	1·0	2·4	0·9	6·5

An important feature of the economy in the district is its high degree of dependence (as ascertained from proportion of workers in the different sectors) on agriculture. In fact, agriculture (categories I and II) giving principal work to 84% of the workers, is the mainstay of the district's economy. Having only 79% of the working force in it, the agricultural base of the economy of the State as a whole is somewhat narrower than that of the district. This trait, i. e. concentration of workers in the single sector of agriculture is the most pronounced in Bhikangaon tahsil where nine-tenths of the working force is in the agricultural working categories. The degree of dependence on agriculture or land is the lowest (76%) in Maheshwar tahsil and has a comparatively low level in Barwaha tahsil. The concentration of workers in one sector of the economy to the exclusion of others is a sign of economic backwardness. A strong economy requires a more diversified base, with wider and better developed secondary and tertiary sectors. In such an economy, pressure on land will be smaller. Looked at from this angle, Maheshwar and Barwaha, which have a greater dispersal of the working force among the secondary and tertiary sectors, can be said to be comparatively better off in the economic sense. On the other hand, such tahsils as Bhikangaon, Kasrawad and Sendhwa which have a lop-sided concentration of workers in agriculture have a weaker economic base.

Workers in agriculture are either cultivators, that is, persons who cultivate on their own account on owned or borrowed holdings (including unpaid family workers) or agricultural labourers, that is, those who work on other's land on behalf of others for wages in cash, kind or crop share. In West Nimar, cultivators form nearly two-thirds of the entire working force, the proportion among tahsils varying between a minimum of 52% in Barwaha tahsil to a maximum of 74% in Barwani tahsil. Agricultural labourers form one-fifth of the district's workers comparing with a smaller proportion of one-sixth in case of the State as a whole. The slightly higher proportion of workers in the district appears to be an effect of the labour-intensive cotton cultivation in some of the tahsils of the district. This seems to be supported from the wide range of variation of the proportion of agricultural labourers in the tahsils. Thus the westernmost Barwani and Sendhwa which have the lowest proportion of area under cotton have the smallest proportion of agricultural labourers. The proportion of workers in category II is on the other hand highest in the Kasrawad tahsil which has a very high proportion of area under cotton. The very low proportion of agricultural labourers in the westernmost Barwani tahsil also seems to be due to its large tribal population, who do not require the help of the usual type of hired labour in their cultivation.

Agriculture being the mainstay of the district's economy, it is worthwhile to enquire into it in somewhat greater details. Two aspects of an agriculture dominated economy which require special study are (i) prevalence of absentee landlordism and (ii) smallness of the size of agricultural holdings of the preponderance of uneconomic dwarf holdings. These aspects are dealth with in some details in table B-XI of the Handbook, which and other tables in the series 'Household Economic Tables' differ from the others in their treating the household itself as a unit of economic activity rather than the individual, who is the economic unit in other economic tables. This was considered necessary because such activities as agriculture or household scale industry are carried on more or less by the entire household working as a single unit, role of outside workers in them being of secondary importance. In considering data based on table B-XI, it has to be borne in mind that it is based on a 20% random sample of the households that were enumerated at the census and in respect of each of which a schedule was filled. The sample being random, and clearly a large one, the extension of observations made in connection with it to the whole universe of households is statistically justified.

As regards prevalence of sub-tenancy we have it from table B–XI that 6·5% of the rural cultivating households do their cultivation on holdings that do not belong to them. Yet another 11·4% of the rural cultivating households cultivate holdings, parts of which belong to them, but the parts have been taken from others on lease. Thus 17·9% of the cultivating households are affected by the practice of absentee landlordism. The proportion, though not alarming, is yet large enough.

As regards the other aspect of cultivation, that is smallness of the cultivated holdings, or dwarf holdings, it should first be made clear as to what is a small or a dwarf holding. The Revenue law of the land defines an agriculturist who holds 7 acres of dry, or 4 acres of irrigated land as landless. That is, the law of the land regards these as the lowest limits of the size of an operationally economic holding.

Considering the fact that irrigation is not commonly practised in the district and that many of the holdings lie on infertile hilly tracts we may generally regard holdings of less than 7·5 acres as 'small' and uneconomic holdings. The existence of these sub-marginal holdings is not operationally economic as it leads to wastage of human and cattle resources and impedes production. The table below gives a break-up of the cultivating (rural) households in the district according to size of holdings cultivated by them.

TABLE

100 cultivating households classified by size of holding.

Size of holding	Percentage of households cultivating holding of size given in Col. 1.	Percentage of households cultivating holdings below the upper limit of the size in Col. 1.
1	2	3
Less than 1 acre	0·5	0·5
1 – 2·4 acres	3·0	3·5
2·5– 4·9 ,,	8·4	11·9
5·0– 7·4 ,,	14·3	26·2
7·5– 9·9 ,,	10·7	36·9
10·0–12·4 ,,	14·6	51·5
12·5–14·9 ,,	6·2	57·7
15·0–29·9 ,,	32·4	90·1
30·0–49·9 ,,	8·0	98·1
50 and above	1·9	100·0

The above table shows that majority of the cultivating households cultivate bigger than mere economic holdings. Only about one-fourth of the cultivating rural households hold uneconomic holdings of less than 7·5 acres each. The district is, in this respect much better than the State as a whole where the proportion of households holding less than 7·5 acres is as high as 54·7%. Of these 26% holdings of the sub-marginal type, as many as half are of 5 to 7·5 acres each, about one-third are 2·5 to 5 acres each and the remaining are below 2·5 acres.

Between one-ninth and one-tenth of the cultivating rural households hold border line holdings of between 7·5 to 10 acres which may or may not be adequate for economic operation, depending on the quality of the soil and the size of the cultivating household. Yet another, about one-fifth of the cultivating households cultivate holdings of between 10 to 15 acres. These may be regarded as medium-sized holdings yielding fair return to the household. Highest proportion of households cultivate substantial holdings of 15 to 30 acres in size. All these households are decidedly better off economically. A small proportion (1·9%) of the rural cultivating households holds very big holdings of more than 50 acres each. These represent the prosperous section of the landholding community.

Mining and quarrying etc. Category III :

This category includes activities in the primary sector other than agriculture, that is, mining and quarrying, raising of garden crops, livestock and animal husbandry, forestry, fishing, hunting etc. Employment in the category in the district is fifth in order of size of participation (treating the two agricultural working categories as one), and is much less than the State level of employment in it. Among tahsils, Barwani has the highest participation in the category, which is more than $2\frac{1}{2}$ times as high as the participation in the district as a whole. It is difficult to say anything about the nature of the activities of these workers, because table B–IV Part C does not go beyond giving figures for 'divisions' of industry for the tahsils. On Local enquiry, however, it is found that most of these are engaged in pursuits coming under forestry like collecting and selling fuelwood, leaves of *anjan (Hasduickia binata)* which is a good cattle feed, cutting and selling of grass. The level of participation in the category is the lowest in the southeastern Bhikangaon tahsil, being less than half of the district average. It is also rather very low (lower than the district level) in Khargone and Kasrawad tahsils, and low (but still lower than the district average) in Sendhwa and Rajpur tahsils. Barwaha and Maheshwar tahsils have a higher level of participation in the category than the district average, but even in these tahsils, it is less than half of Barwani tahsil. The trend is thus, for participation in the category to increase from south to the north.

Break-up of the workers upto 'minor group' of industry is available in table B–IV Part C for the district as a whole. This table shows that exactly half of the workers returned in category III are in livestock, almost entirely in "the production and rearing of livestock i.e. cows, buffaloes, goats etc. for animal power and for production of milk." Nimar district, with the Narmada river and its numerous tributaries and with no dearth of grass has been a centre of cattle-breading for many centuries, the professional herdsmen being Ahirs and Gwalas; but other castes like Sendhias, Khatis and Gujars also engage in it. The cattle bred in the district are known as Nimari, the chief centres of breeding being Un, Chikalda, Dhengaon, Bhikangaon, Rajpur, and some other parts of Barwani The Nimar cattles are much larger than the Malwa breed and well adapted for slow, heavy road work. They are generally of a broken red and white in colour, though occasionally almost entirely red animals also are seen. The horns are thick at the bare, blunt at the point, and flattened

and curled over the head. Buffaloes and goats are also bred.

West Nimar district is rich in forest wealth. Next important economic activity in category III is therefore forestry, which accounts for more than one-fourth (27·5%) of its workers. Almost half of these (13·8%) of the category's working force are in "felling and cutting of trees and transportation of logs". The district is also abundantly in fodder grass, so that we find about one-fourth (6·8% of the workers in category III) of the workers in forestry engaged in "the production of fodder by exploitation of forests". According to the Gazetteer of Indore State, its forest department had started a regular grass industry as there were favourable conditions for its sale in Rajputana and Gujarat. A good proportion of workers in forestry (5·4% of the category's working force) is also employed in "planting, replanting and conservation of forests", mostly persons belonging to the forest department.

Fishing, entirely in inland waters is also an important activity in category III, employing almost one-sixth (16·1%) of its working force. A small proportion of workers (5·8%) of category III is engaged in production of "Field produce and plantation crops"-like vegetables, fruits, etc. Barud village in Khargone tahsil was known in the district for its *Pan* vines. These have, however now completely disappeared.

Household Industry-Category IV :

As already stated in the 'Notes and Explanations', by household industry is meant a small sized production unit, working in the house itself if the household lives in urban areas, or within the village boundaries in rural areas. The industry is mainly carried on by members of the household, the role of hired workers from outside being unimportant. Household industry ranks third in importance in the economy of the district, employing, as a principal worker, roughly one out of every twenty-five of its workers. In the State as a whole employment in household industry is 5·0% of the working force. Maheshwar tahsil leads in the district in having the highest proportion of participation in household industry. The level of employment in household industry is high (higher than the district level) in Barwaha, Rajpur, Kasrawad and Khargone tahsils. At the other extreme stand Bhikangaon, Barwani and Sendhwa tahsils that have rather low level of participation in household industry.

The following table gives, the first fourteen household industries in the district ranked according to descending order of size of participation :

TABLE

S. No	Code No.	Description	Proportion of household industry workers in it	Remarks
1	2	3	4	5
1	273	Making of textile garments	12·6	Carried on by tailors.
2	040	Production and rearing of livestock mainly for milk and animal power such as cow, buffalos, goat etc.	9·7	Carried on by Goalas Ahir, Gujar etc. castes.
3	288	Manufacture of materials from cork, bamboo, cane, leaves and other allied products	9·0	Carried on mainly by Bargunda and Zamral castes, also Nais.
4	350	Manufacture of earthenware and earthen pottery	7·9	Carried on by Kumhars.
5	311	Manufacture of shoes and other leather foot-wear	7·5	Carried on by Chamar Caste.
6	282	Manufacture of structural wooden goods such as beams, posts, doors etc.	6·9	Carried on by Barhai caste.
7	369	Manufacture of sundry hardwares such as G. I. pipe, wire, nut, bolt, screw, bucket, cutlery	5·7	Rural blacksmithy.
8	200	Production of rice, atta, flour etc. by milling, dehusking and processing of crops and foodgrains	5·5	
9	393	Manufacture of jewellery, silverware and wares using gold and other precious metals	5·4	Sunar or goldsmith caste.
10	235	Cotton-weaving in handlooms	4·8	
11	310	Currying, tanning and finishing of hides and skins and preparation of finished leather	4·4	Chamar caste.
12	207	Production of edible fats and oils	3·4	Carried on by teli caste.
13	340	Manufacture of structural clay products such as bricks and tiles	3·1	Carried on by kumhar caste.
14	231	Cotton ginning, cleaning, pressing and baling.	2·2	

As will appear from the above table, most of the household industries are of the traditional caste based type, carried on by certain functional castes. The tailoring industry, with one-eighth of the working force of household industry in it, emerges as the most important household industry. It is followed by workers in livestock and cattle-breeding mostly from the Ahir, Gowali or Gujar castes, who form nearly one-tenth of the working force. The Zamrals are principally workers in split bamboo, the Bargundas in palm leaves, while the Nais, make leaf platters. Workers of these castes make up bulk of the 9% workers returned in minor group 288.

Fourth in importance is earthen pottery, an industry carried on by the Kumhar caste. The 3·1% workers in minor group '340'—i. e. making of bricks and tiles also generally belong to this caste. Thus roughly 11% of the workers in category IV are engaged in making earthen pottery or bricks and tiles and come mostly from the Kumhar caste. Next in importance to earthen pottery is the household industry of making shoes, carried on by the chamar and synonymous castes. The industry involving making of finished leather, which absorbs 4·4% of household industry's working force also is associated with chamar caste. The chamar caste thus contributes about 12% of workers to household industry. The leather industry should thus come after the tailoring industry in importance.

Particular mention may however be made of the cotton cloth weaving industry, which employs 4·8% of the working force in household industry, because of its importance in the district. The industry is concentrated mostly in Maheshwar town, which owes its importance mainly to the industry. The local weavers known as Maru, turn out *saris, lugadus, dhotis, uparanas* etc. The coloured *saris* and silk bordered *dhotis* of Maheshwar enjoy more than local ruputation. More about this industry is to be found on a monograph published separately by the Census Organisation.* Dyeing and printing (minor group 233) carried on to some extent by the Chhipas at Barwaha, Sanawad, Khargone and Gogaon is also an industry of some importance. It employs 1·3% of the workers in category IV.

Manufacturing other than Household Industry : Category V :

This category includes workers engaged in the manufacturing industries of the registered factory scale, as also workers engaged in small industries that fail to qualify for inclusion in household industry owing to the 'location' criteria. Participation in category V in the district is 1·1% which compares with the State average of 2·0%. The range of participation in the category varies from 2·5% of the working force in Barwaha tahsil to 0·4% in Bhikangaon tahsil. In Khargone and Maheshwar tahsils participation in category V is greater than in the district as a whole. Kasrawad, Sendhwa and Barwani have comparatively lower participation in the category.

The following table presents the first eleven manufacturing industries in the district arranged in the decreasing order of proportion of workers.

TABLE

S. No.	Code No.	Description	Percentage of workers to total in Category V	Remarks
1	2	3	4	5
1	230	Cotton ginning, cleaning, pressing and baling	27·5	Concentrated almost wholly in urban areas
2	273	Making of textile garments	11·2	Tailoring industry
3	220	Manufacture of bidi	6·4	Concentrated entirely in urban areas
4	200	Production of rice, atta, flour etc. by milling, dehusking, and processing of crops and foodgrains	6·1	
5	340	Manufacture of structural clay products such as bricks and tiles.	4·5	Concentrated mostly in urban areas
6	209	Production of other food-products such as sweat-meat and condiments, muri, murki, Chira khoi etc.	3·9	Concentrated in urban areas.
7	207	Production of edible oils and fats (other than hydrogenated oil)	3·3	Concentrated in urban areas.
8	388	Repairing of bicycles and tricycles	2·7	Concentrated in urban areas.
9	282	Manufacture of structural wooden goods (including treated timber) such as beams, posts, doors and windows	2·6	
10	393	Manufacture of jewellary, silverware and wares using gold and other precious metals	2·5	Concentrated in urban areas.
11	235	Cotton-weaving in handlooms.	2·3	

* Census of India, 1961, Vol. VIII, Madhya Pradesh, Part VII, Handicraft Survey Monograph No. 2 "Handloom Sari Industry of Maheshwar" by K.C. Dubey and H.C. Jain

It would appear from the above table that the really large-sized industries in the district are agriculture and forest based. The district owes whatever industrial complex it has to its cotton cultivation, which has given rise to most of the towns with their cotton ginning and pressing factories, and a large volume of trade in the fibre. The importance of cotton in the manufacturing industries of the district is evident from the fact that cotton pressing and ginning factories alone absorb more than one-fourth of all the workers in category V. The booklet issued by the chief Inspector of Factories, Madhya Pradesh, in 1961, tells us that in the beginning of that year the district had 36 cotton ginning factories, and 18 cotton pressing factories located mostly in the towns of Barwaha, Sanawad, Khargone, Anjad, Sendhwa, Bhikangaon, and some bigger villages.

Tailoring industry which claims the next highest proportion of workers is not a registered factory scale industry. It has sneaked into category V owing to the workers in it failing to conform to the locational test of household industry. Biri-making a forest based industry, employs the third highest number of workers in category V. These are represented mostly in the four biri factories in the district, two each at Khargone and Sanawad. The agriculture-based industry covered in minor group '200' of the industrial classification is almost as important in numerousness of workers as the biri industry.

The district has an oil pressing industry of some size. This includes 3·3% of workers in category V, and is represented by the sixteen registered oil mills distributed between Khargone, Sendhwa, Maheshwar, Sanawad, Bhikangaon and Khetiya towns and a couple of large villages. These, ofcourse, do not take note of the smaller units engaged in the production of edible oils.

Among other industries of the registered factory scale, which do not qualify for inclusion in the first ten, mention may be made of eleven decorticating factories at Sendhwa, Sanawad, Khargone and Nimrani, the distillery at Barwaha, a trunk factory also at Barwaha, and a saw mill at Sendhwa.

Construction : Category VI :

With only 0·6% of the district's working force in it, 'construction' ranks second from the bottom in participation size. This fact, also indicates that there is not much of construction going on in the district. Proportion of workers in construction is the least in Bhikangaon, and highest in Barwaha tahsils. But even in the last mentioned tahsil it is less than 1%of the tahsil's working force.

Half of the workers in construction have been returned from minor group '400' i.e. 'construction and maintenance of buildings'. Of the remaining half, a very large number is employed in the construction and maintenance of roads, bridges etc. and a small number in the construction and maintenance of waterways, and water reservoires such as *bund*, embankment, tank etc.

Trade and commerce : Category VII

Workers in trade and commerce add to 2·4% of the working force and rank next to household industry in size of participation. The level of employment in trade and commerce is the highest--1½ times the district level-in the Barwaha tahsil, obviously because of its considerable trade in cotton. Khargone tahsil also has a high level of participation in trade and commerce. Rajpur, Sendhwa and Maheshwar more or less represent the district average in trade and commerce, while Bhikangaon with only 1% of its workers in trade and commerce is the most backward tahsil in that respect.

Wholesale trade employs 7·7% of all workers in trade and commerce. Of this about seven-tenths are in the wholesale trade of cereals and pulses. Of the remaining, a very large number are engaged in wholesale trading in cotton, and cotton textiles, wholesale *trading in food-stuffs mostly edible oils, wholesale* trading in tobacco products, wholesale trading in fuel and lighting products such as coal, kerosene etc. and wholesale trading in wood and bamboo and similar products. Sanawad, Khargone, Barwaha and Sendhwa, are to be noted for their cotton trade. These, and the other towns in the district are also important distributing centres for other goods. Maheshwar is famous for its trade in handloom *saris* and other products.

As is natural, because of their growing in response to the needs of the community, retail traders account for 88·2% of the workers. The fact i. e. the fact of their growing in response to the actual need of the community also determines the relative numerousness of the different types of retail traders. Thus food and other edible articles being the prime need of the community, most of the retail traders (46·9% of all retail trade workers) are engaged in trading in cereals, pulses, vegetables, fruits, oils, spices, etc. The next largest number of retail traders, including most of the halwais deal with retail trading in "foodstuffs like sweet-meats, condiments, cakes, biscuits etc." Cloth being the next important item needed by the community, the third highest (11·3%) concentration of retail trade workers is in minor group "650" i. e. "retail trading in fibres, yarns, dhotis, saris, readymade garments etc." Other branches of retail trade including sizeable proportion of workers are, in the descending order of their importance (i) minor group '644' i. e. retail trading in tobacco, bidi, cigarettes etc. represented by the numerous pan-biri shops, (ii) retail trading in animals (iii), retail trading in precious stones and jewellery (iv) retail trading in metal, porcelain and glass utensils (v) retail trading in fuel such as coke, coal, firewood and kerosene (vi) retail trading in intoxicants such as liquor and wine etc.

Most of the retail trading activity, outside the towns which have regular daily markets, takes place in markets. A list of these villages where these weekly markets are held, together with the days on which they are held, is given as Appendix X in part II of the Handbook.

4·1% of the workers in trade and commerce have been returned in major group '69' that is, "trade and commerce miscellaneous". Bulk of these are engaged in minor group '695', i, e. banking and similar type of financial operations and in minor group '694', that is "indigenous money lending".

Transport, Storage and Communications : Category VIII :

This sector of economic activity comes last in the district as regards size of participation which is as small as 4 in 1,000. In Bhikangaon and Kasrawad tahsils, proportion of workers in category VIII is the lowest, only 1 in 1,000 while it is highest, 8 in 1,000 in Barwaha tahsil. The figures thus speak to the somewhat undeveloped state of the district in respect of transport storage and communications. The district is particularly deficient in railway transport. The Khandwa-Indore meter gauge railway skirts the eastern border of the district, the towns of Sanawad and Barwaha being stationed on it. The district, however, tries to make up for its deficiency in railway communications in its extensive road mileage. But even then it remains very backward in the State average context. There is a network of roads in the district, which measures 584 miles of all weather roads under the maintenance of P. W. D. Including fair weather forest roads and village roads, the total linear road mileage increases to 947 miles. The district has the well-known Bombay-Agra road passing through it, which measures 54 miles in the district. Besides the district has 125 miles of State highways, 76 miles of major district roads, and 329 miles of 'other district roads.' The district has 113 linear miles of road per 1,000 square miles of its area, which compares with 129 miles in case of the State as a whole. Inclusion of village and forest roads increases the mileage per 1,000 square miles of area to 183 miles in case of the district and 184 miles in case of the State.

Of the 1,839 workers in category VIII, 87·9% are in transport. Railway transport draws only 6·1% of the workers in transport. As is to be expected road transrort absorbs most of the workers in transport. Minor group '701' i. e. transport by bus service absorbs the highest proportion (34·2%) of workers in transport followed by minor group '702' (Transport by motor vehicles other than omnibus—*i.* e. goods transport by motor trucks etc.) which has 25·4% of the workers in transport and minor group '703' (transport by road through hackney carriage, bullock-cart, tonga etc.) which includes 15·3% of the working force in transport. 11·4% of the workers in transport are in minor group, '705' represented by rickshaw-pullers, coolies, hand cart drivers etc.

About 10 to 11 percent of the workers in category VIII are in communications. These are preponderatingly in post and telegraph communications and a few in telephone communications.

The storage industry is as yet at a very undeveloped stage, having less than 2% of the working force of category VIII in it.

'Other Services : Category IX

These include workers in tertiary sector of industry. From the point of view of size of employment, 'Other services' rank after agriculture. The proportion of workers in other services ranges from a lowest of 3·4% in Kasrawad tahsil to a maximum of 10·4% in Maheshwar tahsil. Barwani and Barwaha tahsils have comparatively higher level of participation in 'other services' whereas Sendhwa, Bhikangaon, Khargone and Rajpur have lower participation in the category.

More than half (55·2%) of the workers in category IX belong to the unclassified category (major group 90) as they did not render sufficient information about their industrial affiliation to enable their classification under one of the known major or minor group of industry.

The following table gives a distribution of all workers in category IX, by major groups of industry.

100 workers in category IX classified by major group of Industry, 1961.
(In descending order of participation)

S. No.	Code No.	Description	Proportion	Remarks
1	2	3	4	5
1	90	Activities unspecified and not adequately described	55·2	...
2	80	Public service	11·7	...
3	81	Educational and scientific services	10·3	...
4	88	Personal services	8·9	...
5	51	Water supply and sanitary services	3·9	...
6	82	Medical and health services	3·7	...
7	83	Religious and welfare services	2·3	...
8	87	Recreation services	1·9	...
9	50	Electricity and gas	0·6	...
10	84	Legal services	0·6	...
11	89	Services not elsewhere classified	0·5	...
12	86	Community services and trade and labour associations	0·3	...

Of those who have been classified, most numerous are workers in 'public service' (5·7% in public service in administrative offices and departments of State Government, 4·4% in public service in Police and 1·5% in public service in administrative departments of quasi Government and local bodies). Educational and scientific service, (mostly represented by teachers in schools who form 9·4% of all workers in the category) are next in numerousness, making 10·3% of the category's working force.

Third in importance in 'Other services' are 'personal services'. Of these most numerous are barbars and hairdressers, who make 3·7% of the category's working force, followed by household servants such as cooks who form 2·2%, and launderers and washerman (1·5%) and workers serving hotels, boarding house etc. making up 1·3% of all workers in category IX.

Proportion of workers in other major groups is small and does not merit discussion by minor groups.

Electrification :

The district is as yet very backward in electrification. Till March 1961, electricity had not reached any of its villages. Of the thirteen towns also, only 10 had been electrified by March 1961.

SUMMING UP :

Situated in the extreme south-west corner of the State, West Nimar district stands apart from others in more ways than one. It has a hoary and rich past dating back to pre and early historic times when kings of the Chedi or Kalchuri clan ruled over its territories. It shot into preeminence in the medieval times because of being on the historic route to Deccan. Physiographically, West Nimar is one of the few districts which include hills of both Vindhya and Satpura systems. An extensive portion of the district, lying mostly in Barwaha, Maheshwar, Kasrawad and Rajpur tahsils is under the command of the rich Narbada valley. At the same time, most of the southern portion of the district is cut by straddling hills of the Satpuras, and their rather infertile slopes. Climate of the district is warm, with short winters, and to those who are not accustomed to its rigors, somewhat oppressive summers. Rainfall is low, being about 30″ on an average, and is suitable mainly for the cultivation of *Kharif* or wet crops. Containing 3% of the State's area, within its 5,178 square miles of territory, the district ranks seventh in size in the State. This area is distributed in an uneven manner among the eight tahsils, with the biggest Sendhwa containing almost one-fifth (19·5%), and the smallest Maheshwar containing only 6·8%. The remaining tahsils contain varying proportions of the district's area as shown below: Khargone (18·9%); Bhikangaon (14·9%); Barwani (12·0%); Barwaha (10·5%), Rajpur (9·9%), and Kasrawad (7·5%).

The district has a population of 990 thousand, which adds to 3·0% of the State's population. Its rank in the State as regards populousness is 8th, and thus it is one of the most populous districts in the State. As in case of area, distribution of population among the tahsils is also uneven; Khargone, the most populous tahsil contains more than one-fifth of the district's population, while the least populous Maheshwar tahsil contains only 7·4%. Distribution of population among other tahsils is : Sendhwa (16·1%), Rajpur (14·3%), Barwaha (11·2%), Bhikangaon (11·0%), Barwani (10·6%) and Kasrawad (8·3%).

As regards density of population, West Nimar almost represents the average position in the State, with its density of 191 persons to a square mile, being only one point above the State average. The district ranks twenty-fourth in the State in descending order of population density. Rajpur tahsil, with 278 persons to a square mile, is the most densely populated tahsil in the district. Barwaha, Maheshwar, Kasrawad and Khargone tahsils have closely agreeing population densities varying between 204 and 213 persons per square mile. These may be called medium density tahsils in the district. Barwani (169), Sendhwa (158), and Bhikangaon (141) are low-density tahsils. The last mentioned is the most sparsely populated tahsil in the district.

West Nimar district contains 2,040 villages which account for 2·7% of the State's total of villages. The district leads in the State as regards the frequency of uninhabited villages which is 16% of all villages in the district. The proportion of uninhabited villages is as high as 27,26 and 26 per cent respectively in Barwaha, Maheshwar, and Kasrawad tahsils. The high frequency of uninhabited villages in the district dates back to the first two decades of the 18th century when the district was for most time run over by the armies of Sindhia and Holkar, and the Pindari freebooters. The district contains 1,715 inhabited villages together having 852,387 inhabitants. An inhabited village in the district is much more populous, on an average, than a village in the State as a whole. Average population per village in the district is 497 comparing with 394 in case of the State as a whole. Populousness per village shows considerable fluctuation among the tahsils. Villages are on an average most populous in the most densely populated Rajpur tahsil, average population per village in that tahsil being 651. Khargone, Sendhwa and Barwani also have generally more populous villages than are found in the district as a whole. Population per village is the least (404) in Bhikangaon tahsil, but even there it is more than the average of a village in the State.

Like the State as a whole, West Nimar also is a district of small villages, the proportion of villages with less than 500 population each being 64%. The State as a whole contains a much greater frequency (75%) of these smaller villages. The smaller villages however contain only 32% of the districts rural population. Medium-sized villages, accommodating 37·3% of the rural population are the most preferred class of villages. About 31% of the rural population of the district resides in bigger villages with more than 1,000 population each.

14% of the district's population lives in urban areas comparing with almost the same proportion in case of the State as a whole. The urban component of the district's population has registered significant increase since 1951, when it was 12%. This is due mainly to the addition of three new towns in the 1951-61 decade; Kasrawad in Kasrawad tahsil, Bhikangaon in Bhikangaon tahsil and Gogaon in Khargone tahsil but also to some extent to the high rate of increase of population of Khargone town. In 1961, the district has thirteen towns, which is the largest number for any district in the State. These towns are Barwaha and Sanawad in Barwaha tahsil; Maheshwar and Mandleshwar in Maheshwar tahsil; Barwani in Barwani tahsil; Rajpur and Anjad in Rajpur tahsil; Kasrawad in Kasrawad tahsil; Sendhwa and Khetia in Sendhwa tahsil; Khargone and Gogaon in Khargone tahsil and Bhikangaon in the Bhikangaon tahsil. With the exception of Gogaon town which has a Gram Panchayat, all other towns have municipalities. The population of the towns varies from a minimum of 4,350 in Bhikangaon to a maximum of 30,652 in Khargone town.

An unique aspect of population variation in the district is that it has always exceeded the State's rate of increase. The district registered a sizeable increase of 10% in population even during the influenza decade 1911-21 when the state as a whole had lost 1·4%. During the sixty years period 1901-61, the district has just escaped trebling its 1901 population by a very narrow margin. Its rate of increase during the sixty years in question is more than twice the State rate of increase during the same period. The district had attained an all-time high increase of 36.5% in the opening decade of the century, and a more or less comparable increase of 30.6% during the last decade. The increase during the decade just gone by has been spectacularly high in Bhikangaon tahsil which has more than 1½ times the population it had in 1951. Khargone also registered a high rate of increase of 36%. The high population increase in these two tahsils are partly to be ascribed to tribal immigration presumably from Rajpur, Sendhwa and Barwani tahsils. There are numerous cases of unauthorised occupation of forest lands in Bhikangaon tahsil. Another reason for the unusually high increase of population in the district is said to be the prolificity of the Bhil group of tribes. The lowest rate of increse (22%) has been registered by the most densely populated Rajpur tahsil.

Age-composition in the district also shows considerable departure from the State pattern. The segment of children and juveniles is much wider in the district than in the State as a whole, the district proportion being 45% of the total population. This bears eloquent testimony to the high birth rates characterising the (mainly tribal) population of the district. The high birth rates are also reflected in the larger family size of 5·6 persons per household in the district which is perhaps the highest in the State. Among tahsils, size of households varies from 6·4 persons per household in the highly tribal Barwani tahsil to 5·1 persons per household in the Maheshwar tahsil which has smaller proportion of tribal population.

Sex-ratio or number of females per thousand males in the district is 958 which is not much different from the State average of 953. Rajpur tahsil has the highest (972) sex-ratio in the district, while the least sex-ratio of 936 is observed in the westernmost Barwaha tahsil. Tahsilwise variations in sex-ratio are related directly to the urban components in the population of the various tahsils. In 1951, the district had a sex-ratio of 971, so that there are now 13 females less per 1,000 males than there were in 1951. Fall in sex-ratio is observed in the State as a whole and in all the districts, and since the district's decline in sex-ratio is comparable with that of the State as a whole, we may not attribute it to growth of industrialisation or urbanisation as is usually the case. It may be noted that the demographic behaviour of the district as regards sex-ratio variation over time, departs significantly from the State's variation pattern during the last six decades.

The district departs from conformity with the average State pattern even as regards mother-tongues. Unlike the State as a whole, and most other districts, Hindi has not been returned as mother-tongue of majority of speakers. It is not even the mother-tongue of the largest group of speakers. Nimadi, a dialect of Rajasthani, with a speakership of 31·2% of the population, claims that distinction, being the most widely spoken mother-tongue in the rural areas of Barwaha, Maheshwar Rajpur, Khargone and Bhikangaon tahsils. Hindi the mother-tongue of 27% of the population, is the second most widely spoken language. Barel, Bhilala and Bhili, all speeches belonging to the Bhili group of languages, claim 28·6% speakers among the population. Other important speeches spoken as mother-tongue in the district are Urdu, Marathi, Gujarati and Banjari.

The district is below average as regards education and literacy. Its literacy percentage is 15·3 as against 17.1 in the State as a whole. The percentage of literacy varies between a minimum of 9·5 in Sendhwa tahsil and a maximum of 22·6 in Maheshwar tahsil. Barwaha, Kasrawad and Khargone are also above the district average in literacy and education. On the other hand, Barwani, Bhikangaon and even Rajpur represent weaker spots in education and literacy. The backwardness of the district in education and literacy is not relatable to a paucity of schools, because educationally advanced tahsils like Barwaha and Maheshwar have smaller number of primary schools than the educationally backward tahsils like Barwani, Bhikangaon or Sendhwa. The real cause of the district's lagging behind in the march of education is absence of response from its tribal—almost wholly Bhil—population among whom literacy proportion is as small as 2·7%. This small percentage of literate and educated in the tribals, seen in conjunction with the fact that scheduled tribes form two-fifth of the district's population, explains the inglorious position of the district in the field of education and literacy. The percentage of female literacy in scheduled tribes has the shockingly low dimension of 0·3 only in the district. It is, therefore, abundantly clear that the district's progress in the field of education is directly related to the success achieved in evoking better response from the tribal population.

A little more than half (51%) of the district's population belongs to the scheduled category. Scheduled castes alone account for about one--tenth (10·7%) of the population, their strength varying from a minimum of 7·3% in Sendhwa tahsil to a maximum of 17·8% in Maheshwar tahsil. Balai, the most numerous among scheduled castes, accounts for two-thirds (65·3) of total scheduled caste population. Koli or Kori are the second most numerous scheduled caste, followed by Chamar (and synonymous castes), Meghwal, Zamral, Mahar, etc. Educationally, the scheduled castes also are very backward with a literacy percentage of only 8·8. Their economy depends predominantly on agriculture which accounts for three-fourth of the working force. In agriculture, however, labourers outnumber cultivators by about 2 to 1. About half of the cultivating households in rural areas hold less than 7.5 acres of land.

Scheduled tribes are very numerous in the district forming two--fifths of its population. The district is the stronghold of the Bhil tribes, who find congenial homes on the heights, and the slopes of the Vindhyas and the Satpuras in the district. Scheduling with respect to Bhil and allied tribes does not extend to Maheshwar and Barwaha tahsils. Barwani has the highest proportion (68·2%) of scheduled tribes. Sendhwa (64·5%), Rajpur (52·6%), Bhikangaon (50·3%) and Khargone (38·9%) tahsils also have very high scheduled tribal components in their population. Kasrawad has the lowest (0 08%) proportion of scheduled tribes in its population. Bhils constitute more than 99% of the district's scheduled tribal population. Bhilala, Barela, Patelia, Tadvi, Rathia and Mankar etc. are sub-tribes of Bhils. As seen earlier, the tribes are very backward in education and literacy. Agriculture is the mainstay of their economy accounting for 96% of the tribal working force.

52% or more than half of the population in the district is economically active, which is approximately equal to the participation rate in the State as a whole. Economy of the district hinges about the main plank of agriculture, which absorbs 84%—64·5% as cultivators and 19·4% as agricultural labourers—of the working force. The working force thus shows a lopsided concentration in the primary sector, at the cost of the secondary and tertiary sectors. Participation in agriculture is highest—90·4%—in Bhikangaon tahsil and lowest—76·1% in Maheshwar tahsil. Participation in agriculture is smaller 79% in the State as a whole. Analysis of data on sample households shows that sub-tenancy or absentee landlordism is prevalent on a small scale. Thus 6·5% of the cultivating households in rural areas do not own the holdings cultivated by them, while 11·4% own only a part of their cultivated holdings.

Fragmentation of holdings in the sense of smallness of individual cultivated holdings per household is also prevalent, though on a small scale. 3·5% of the cultivating rural households cultivate fragmentary holdings of less than 2·5 acres each in size. However, the agricultural picture *vis a vis* size of holdings that emerges from the data before us is, on the whole, satisfactory. More than three-fourths of the cultivating households cultivate holdings of more than 7·5 acres each in size. About half of the cultivating (rural) households hold more than 12·9 acres of land each, while a little more than two-fifth cultivate even bigger holdings of more than 15 acres each.

Main products of agriculture in the district are juar, cotton and oilseeds, (mostly groundnut). These products shape to some extent the secondary sector in the district.

The secondary and tertiary sectors of econmy, together contain 14·3% of the workers. 'Other services' alone absorbs 5·9% of the working force, followed by household industry, trade and commerce and manufacturing other than household industry. More than half of the workers in 'other services' belong to the unclassified category of general labourers. Public services, educational services and personal services account for bulk of the classified workers in 'other services'. Household industries give principal work to 3·9% of the working force. Important household industries, as judged from number of workers, are tailoring, production and rearing of livestock for milk and animal power, basketry, earthen pottery, shoe-making, carpentry, blacksmithy, goldsmithy, cotton-weaving on handlooms, production of edible oils, and cotton ginning, pressing and baling. Special mention may here be made of the handloom sari industry of Maheshwar, the saris turned out by which have more than a local reputation. The industry however is dwindling in size, the support given to it by the Government notwithstanding. Many weaver families are reported to have migrated from Maheshwar town during 1951-61. The process has not yet stopped. Trade and commerce of the district deals mainly in cotton, foodstuffs, textile and oilseeds. Most of the towns in the district are important centres of cotton and oilseed trade in the district. The district does not have any sizeable industry except the agriculture and forest-based industries. Almost all its towns and some of the bigger villages have numerous ginning and pressing factories and oil mills. There is also a distillery at Barwaha.

Having comparatively a bigger proportion of its cultivated area under non-food fibre and oilseed crops, this border district is potentially a problem in times of food scarcity. The predominantly Bhil population inhabiting its southern and western parts is known to be no respector of forest conservation laws, a fact grimly borne out by the thinly forested, brown hills in those parts of the district. Even then, the district still remains rich in forest resources. Equally rich are its agricultural land resources. Given suitable developmental facilities and direction, the hardy Nimar cultivator has the capacity and will to produce much more from his land than what he does today. Development of road communications, consolidation of the expansion already achieved in the field of education and further development of the secondary sector, mainly the agriculture and forest-based industries is bound to take the district ahead towards a more prosperous and happier future.

IMPORTANT PLACES IN THE DISTRICT :

BALAKWADA : (Pop. 2,121)

A big village in Kasrawad tahsil on the left bank of Satak river, 10 miles from Kasrawad. The village had some importance in the past when it was a mahal under Bijagarh Sirkar, and later on headquarters of a pargana under the Holkars. The village has an old temple of Bhairva, where a fair is held on 15th of the bright half of Baisakh. The village has an old tank and a baori near the temple built by Ahilyabai. There are a few other old temples.

BALWADA (Pop. 1,579)

A large village in Barwaha tahsil, on the bank of the Kholar, at a distance of about a furlong from Mukhtyara railway station. It is also on the Indore-Khandwa road, 12 miles north-west of Barwaha. The village is in the jungle and derives importance from its having been a stage on the historic route to Deccan. An old sarai, and a big tank are other attractions of the village.

BARUD *(Pop. 5,065)

This is a very big village in Khargone tahsil, about 7 miles south-west of Khargone. It also lies on the metalled road connecting Khargone with Un *via* Sinkheda. The village is said to derive its name from a dense jungle of Baru (reed), which has been cleared. The place has historical importance as it was a mahal in the Mughal period and later on the headquarters of a parganah. A temple dedicated to Bhairva is situated about a mile from the village. The temple is the venue of a fair on the 2nd of the bright half of Magh. The village is also known for its pan vines, as also for the cotton ginning factories.

BARWANI : (Pop. 17,446)

Headquarters of tahsil and sub-division of the same name, Barwani is a neat, well laid-out town about three miles south of Narmada, where at Rajghat a bridge has recently been constructed. Formerly the town was the seat of rulers of the Barwani house. To the west and south of the town are hills of the Satpura. On the highest of these, known as Chulgiri (2102' high), about 5 miles from the town is a Jain temple containing foot-prints of a Jain Muni. This and a tall (84' high) monolithic statue of Ist Jain Tirthankar Rishabhdeo about midway down the hill are held in great sanctity by the Jains. The statue, carved out of single rock, is known as Bawangaja (literally meaning 52 yards). At the foot of the hill are a few relatively modern temples and sarais for the pilgrims

BARWAHA : (Pop. 11,188) :

A municipal town, and headquarters of the tahsil of the same name. It is situated on the east bank of Choral, on the Indore-Khandwa road and railway line, 48 mils from Khargone, the district headquarters. The town is said to have been founded in 1678 A. D. by Rana Surajmal under the name Babulikheda. It has many cotton ginning factories, a distillery, and a big trade in cotton. An old fort and two palaces constructed by the Holkar kings and an old temple dedicated to Jayanti mata are among historical attractions of the town. The town is also known for a perennial spring called Nageshwar-ka-Kunda.

BASWA (Pop. 1,490)

A big village on Indore-Khandwa road, 13 miles of Barwaha and 3 miles from Sanawad, which is also the nearest railway station.

BHIKANGAON (Pop. 4,350)

Headquarters of the tahsil of the same name, this town is situated on Khargone--Desgaon road. Khandwa, the nearest railway station is 30 miles away. It is 24 miles to the north-east of Khargone, connected with it by a metalled road. It has an old wall with gates, a mosque having two inscriptions dated 1643 A. D. and a baori said to have been erected by Ahilayabai. It was also a stage on the old Deccan route.

BIJAGARH :

It is an old hill fort in the Satpuras 20 miles to the south-west of Khargone, and 4 miles west of village Sangwi. The fort, which is now in ruins, was built according to Farishta, by Raja Bhoj; but local tradition assigned the fort to Bija, a Gauli Chief who ruled over Nimar in the 14th century. In Moghal times, Bijagarh was a sirkar in the Malwa subah with a haveli at Jalalabad, which lay at the foot of the hill on which the fort stands. The fort has five gates. Near the largest of the three northern gates are two tanks, both formed by excavations into the hillside and are underground. These are known as 'Ganesh tanka' and 'Amir tanka'. Three tanks are situated on the hill itself, near one of which stands the chhatri of a Gauli king. A temple dedicated to Tanakeshwar Mahadev to the east of the fort is the venue of an annual fair on 'Shivratri'.

BRAHAMANGAON (Pop. 1,408) :

This is a large village in Rajpur tahsil on the bank of Narbada, 36 miles to the north-east of Khargone. The village has historical importance. There are several ghats here on the Narbada, and numerous temples, two of which are said to have been built by Ahilyabai.

CHAINPUR (Pop. 797) :

This is a village in Bhikangaon tahsil in the bank of Beda river, 14 miles to the south of Bhikangaon. The village has a small fort on the arch of which there is a stone inscription in Urdu characters containing the name of Rana Raiba Singh, Zamindar of Pargana Chainpur.

CHOLI (Pop. 1,934) :

This is a large village in Maheshwar tahsil, 9 miles north-east of Maheshwar. The village was the civil

*From Holkar State Gazetteer Page 568.

headquarters (Maheshwar being the military headquarters) of the Choli Maheshwar mahal in Sirkar Mandu. After Ahilyabai fixed her headquarters at Maheshwar, the village started to decline. There are numerous old temples, including ruins of some Jain temples in the village. The village has a large tank.

DHARGAON (Pop. 1,993) :

This village is situated 10 miles to the north-east of Maheshwar town in Maheshwar tahsil. The village has historical importance and is also the venue of an annual fair.

GOGAON (Pop. 4,744) :

This has been treated a town for the first time in 1961. It is situated in Khargone tahsil, 11 miles north-east of Khargone on the Beda river. The village is a centre of trade, and is also known for the cloth-printing industry carried on by the chhipa caste.

JULWANIA (Pop. 1,676) :

A big village 27 miles from Khargone, connected by a metalled road. It is also an important station on Bombay-Agra road. Deb river is one mile to the east of Julwania.

KARAI (Pop. 1,238) :

This large village in Maheshwar tahsil is 16 miles north-east of Maheshwar. The village has a temple of Mahadeo built by Ahilyabai, and a reservoir called Ganga jheria near the temple. There is another temple dedicated to Nagnath in the village. The village is a centre of cotton trade.

KASRAWAD : (Pop. 5,927)

A municipal town and headquarter of the tahsil of the same name, it is three miles to the south of Narbada, and 22 miles to the north of Khargone with which it is connected by a metalled road. The town is of considerable historical importance.

KHARGONE : (Pop. 30,652)

This is the district headquarters, situated on the left bank of river Kunda. Nearest Railway station Sanawad is 42 miles from here. It is an old town, having risen to considerable importance in the times of the Mughal. A fort, palace and numerous tombs and mosques testify to the past glory of the town. The town is a big centre of cotton and oilseeds trade and contains numerous ginning factories.

KHETIA : (Pop. 6,838)

In the extreme south-west of Sendhwa tahsil, about 35 miles from the tahsil headquarters, this border town is the terminus of the Sendhwa-Pansemal-Khetia road. It is a trading centre and has several ginning and oil mills. The headquarters of a civil-judge cum magistrate are also located here.

KHUDGAON : (Pop. 675) :

This village in Bhikangaon tahsil, 7 miles to the north-west of Bhikangaon, is noted for an old mosque and several temples.

MAHESHWAR : (Pop. 8,089)

Headquarters of the tahsil of the same name, this village on the bank of the Narmada was the seat of the Holkars in Ahilyabais' time, who constructed numerous ghats and temples on the bank of the river. There is an old palace of the Holkars. The town is also famous for the handloom saris made by the local weavers. It has been identified by some historians with Mahismati of early historical days which was the former capital of the Chedi or Kalchuri rulers. The town contains several temples, chhatris and shrines.

MANDLESHWAR : (Pop. 5,481)

Six miles east of Maheshwar in Maheshwar tahsil, the town is also believed to be an old one. It is on the bank of the river Narbada. It is the headquarters of the Sub-Divisional Officer (Civil), the District and Sessions Judge and some other district level offices.

OZAR : (Pop. 3,309)

A village in Rajpur tahsil, two miles from Bombay-Agra road, Ozar is industrially advanced with two ginning factories and three oil mills.

PANSEMAL : (Pop. 3,331)

A village in Sendhwa tahsil, 27 miles from Sendhwa on Sendhwa-Khetia road, this border village is the headquarters of a sub-tahsil and also has a sub-treasury. It is situated in the richest, level tract of Sendhwa tahsil, known for sugarcane cultivation. The village has considerable trade.

PALSUD : (Pop. 3,748)

A big village in Rajpur tahsil, 15 miles from Rajpur on the Khetia-Newali-Rajpur road, this is situated on the slopes of Satpura on the bank of Goi river. The village is known for the Bhagoria hat of the tribal Bhil population, and is an important centre of trade.

RAJPUR : (Pop. 8,460)

A tahsil headquarter town, connected with Khargone by a metalled road *via* Julwania; noted for banana and 'papaiya' gardens.

SAHASTRADHARA :

These are famous falls in river Narbada three miles below the town of Maheshwar.

SANAWAD : (Pop. 11,130)

A railway station town in Barwaha tahsil, 6 miles from Barwaha on the Indore—Khandwa road. The town is a big centre of trade specially of cotton.

SEGAON : (Pop 1,498) :

A large village, on the bank of Borad river, 19 miles west of Khargone and connected with it by a metalled road to Julwania on Bombay-Agra road. Headquarters of a development block and sub-tahsil (tappa).

SENDHWA : (Pop. 13,247)

Headquarters of a tahsil of the same name, this town is on the Bombay-Agra road, 36 miles south-west of Khargone with which it is connected by a metalled

road *via* Un. There is an old fort, inside which there is a Mahadeo temple and six tombs of Muslim saints. In an old well behind the fort, there is an inscription dating back to 1790 A.D. It is a large trading centre particularly in cotton.

THIKRI : (Pop 3,074) :

A village 28 miles from Rajpur, tahsil headquarters on Bombay-Agra road. It has an observatory maintained by Meteorological Department, Poona. A mela known as Khanderao mela is observed every year for 15 days at the time of *holi*.

OAN BUZURG : (Pop. 2,871)

Situated on the Hatni river, 10 miles west of Khargone on Khargone–Julwania road in Khargone tahsil, this is an old village. It is of considerable archaeological importance, containing numerous remains of old temples. It is also a centre of trade in cotton.

WARLA : (Pop. 1,849)

This large village in Sendhwa tahsil, 20 miles south-east of Sendhwa, is known for a hot spring called 'Unabdeo'. There is also some trade in cotton. It is the headquarters of a sub-tahsil of Sendhwa tahsil.

Note of the Tahsildar, Bhikangaon tahsil, explaining the high increase of tahsil's population during the decade 1951-61.

People from Barwani and Rajpur tahsils migrated to Bhikangaon tahsil during the decade. The main cause of settlement in this tahsil was the availability of surplus forest land for bringing under plough. The rates of cultivable land were too low in this tahsil in comparison to Barwani and Rajpur tahsils. Most of the forest land has been encroached illegally by the Scheduled tribes population of this district. Bhils have got a tendency to settle near the forest and have migrated to this tahsil in sizeable numbers during this decade where there is abundance of forest land. This tract is full of mountaneous ranges and rich forest wealth of this district. This also tempted the tribes to shift to this area to earn better wages from forest products.

The list of villages, which have shown more than 50% increase in population during the decade, is also given.

Villages returning 50% increase in Population in 1961 over 1951.

Note—1 Under columns 3(a) and 3(b); (a) represents the area figures furnished by the Surveyor General of India; (b) represents the area figures furnished by the State Survey Department. The area figures of tahsils, total and rural, area based on the figures of the State Survey Department.

2 The urban area figures are collected by the Census Organisation.

3 Population per square mile has been calculated on area figures furnished by the State Survey Department.

4 Town treated as such for the first time in 1961 are printed in italics.

5 (M) stands for Municipality and (G.P.) Stands for Gram Panchayat.

APPENDIX—I

Statement showing 1951 Territorial Units constituting the present set up (Only those names/areas which have undergone changes since 1951 have been shown below)

Note :—No inter district change has taken place in this district.

APPENDIX—II

Number of villages with a population of 5,000 and over and towns with a population under 5,000

APPENDIX 1

INDUSTRIAL ESTABLISHMENTS

Note :—This appendix has been prepared from information abstracted from the houselists. It is arranged first districtwise; that is, under the name of the district have been arranged the industries in ascending order of minor groups; showing the total number of establishments within brackets next to each minor group. The information has been shown by total, rural and urban separately. The figures for the tahsil follow the figures for the district as a whole. The total, rural and urban figures for each tahsil for each minor group of industry showing the number of establishments in each in brackets have been presented first. Then follows the list of the villages in the order of their location code numbers with the location code number appearing first, followed by the name of the village. Against each village is shown the minor group or minor groups of industry found in the village with number of establishments in that minor group shown within brackets against each minor group. For towns, figures have been presented separately for each ward, the number of ward being given first, followed by the industrial code numbers etc., as in the case of villages.

The following examples will make the above Note clear :—

West Nimar District Total 200 (476) signifies that there are 476 establishments in West Nimar District pertaining to Minor Group 200, which stands for "Production of rice, atta, flour etc. by milling, dehusking and processing of crops and foodgrains." Barwaha Tahsil, Total 207 (67) signifies that there are 67 establisments in Barwaha Tahsil pertaining to Minor Group 207, which stands for "Production of edible fats and oils (Other than Hydrogenated Oil)." Village 13 Katkut 283 (2) signifies that in Village Katkut which has 13 as its Location Code Number there are 2 establishments pertaining to Minor Group 283, which stands for "Manufacture of wooden industrial goods other than transport equipment such as bobbin and similar equipment and fixtures." Barwaha Town, Ward No. 1 311 (16) signifies that there are 16 establishments located in Ward No. 1 of Barwaha Town pertaining to Minor Group 311, which stands for "Manufacture of shoes and other Leather footwear".

WEST NIMAR DISTRICT

PART II

OTHER DISTRICT STATISTICS

This part contains some useful official statistics pertaining to the district collected and compiled from various agencies (the agency or source is indicated below each Table or Statement) and from official publications. These are presented under the following heads :—

1 Rainfall and Temperature

2 Economic Statistics :—

(a) Agricultural

(b) Prices and Wages

(c) Live-stock and Taccavi

(d) Co-operation, Banking and Insurance

3 Administrative Statistics

4 Progress of Community Development Programme

5 Educational Statistics

6 Health, Medical and Vital Statistics—

(a) Health and Medical

(b) Vital Statistics

7 Communication Statistics

8 Miscellaneous
