PREFACE

Data on the economic characteristics of the population are presented in nine different tables in the 1971 Census. The economic tables for Tamil Nadu are brought out in three convenient volumes. The present volume is the second in the series and contains three tables viz., B-I Part-B, B-III and B-IV.

In Table B-I Part-B, details of female workers by broad industrial categories as also non-workers classified by marital status and age-groups are furnished for the State with rural-urban break up. Table B-III gives data on workers and non-workers by educational levels and is presented in two parts for urban and rural areas. The data would be of immense use for employment and educational planning. Table B-IV is presented in four parts and gives data on the industrial classification of persons at work other than cultivation, according to the branch of industry in the National Industrial Classification of 1970. Data on workers engaged in household and non-household industries, as also the distribution by class of worker, are available in these tables.

The three tables presented in this volume have been estimated from sample tables prepared on the basis of 10 per cent of rural and 20 per cent of urban individual slips, sampled systematically. The estimation procedure adopted has been outlined in a separate note, given at the end of this volume. Table B-III has been compiled for Tamil Nadu by both the processes, full count and estimation from sample tables. Both these tables are presented in this volume. A fly leaf explaining the features of each table is also presented before the tables. The detailed list of the National Industrial Classification of 1970 with Divisions, Major and Minor Groups is given along with the fly-leaf of Table B-IV for easy reference. The nature and scope of the questions on economic aspects relating to the 1971 Census have been detailed in the 'Preliminary note' incorporated in the first volume of the 'Economic Tables' Series, viz., Part II-B(i)—General Economic Tables and may be referred to for a fuller understanding of the economic concepts and its limitations.

I was ably assisted by Sarvasri T. V. Srinivasan, I.A.S., N. Rama Rao and M. Thangaraju, Deputy Directors and Sri M. Panchapakesan, Assistant Director of Census Operations in the compilation of the materials published in this volume. Sri S. Packiaraj, Tabulation Officer assisted by Sri R. Srinivasan, Research Assistant, Kum. S. Prema, Upper Division Clerk, Sri K. Sridharan, Sri S. Somasundram and Smt. P. R. Subbulakshmi, Assistant Compilers attended to the estimation and consolidation of figures from sample tables. The scrutiny of the tables and preparation of fly leaves were done by Sri R. Narayanan and Sri L. J. Christopher, Tabulation Officers. They were assisted by Sri R. Lakshminarayanan, Research Assistant, Smt B. Jayalakshmi, Statistical Assistant, Smt. G. Vasantha, Smt. R. Vanaroja, Smt. B. Santhanalakshmi, Kum. S. Ambujam, Kum. S. Philomina, Kum. V. Santha, Assistant Compilers, Smt. V. Lalitha, Lower Division Clerk and Kum. K. Kanchana. I wish to record my appreciation of the good work and co-operation extended by all the officers and staff mentioned above in bringing out this publication.

I am grateful to Sri R. B. Chari, I.A.S. former Registrar General and Sri P. Padmanabha, I.A.S., the present Registrar-General for their co-operation in the publication of this volume. Sri K. K. Chakravorty, Assistant Registrar General and his officers and staff deserve mention for early clearance of the data published and I wish to record my thanks to them also.

I also wish to thank the Manager and staff of the Govt. of India Press, Coimbatore for their co-operation in the printing of this book.

TABLE B-I PART B—FEMALE WORKERS AND NON-WORKERS ACCORDING TO MAIN ACTIVITY CLASSIFIED BY MARITAL STATUS AND AGE-GROUPS

FLY LEAF

This Table is one of the new tables introduced during 1971 Census. Data presented in this table relate to female population classified into workers and non-workers and cross-tabulated into five marital status categories and eight broad age-groups. The workers have been classified by the nine industrial categories while the age-group corresponds to Table B-I Part-A presented in the volume Part II-B (i)-General Economic Tables of Tamil Nadu, published earlier.

With increased participation of female workers in the country's economy, such a table for females is of special significance. The table presents data for total, rural and urban areas, at the State level. Data for this table have been estimated from a sample table prepared on the basis of 10% of Census individual slips for rural areas and 20% for urban areas. A note on the procedure adopted for estimation of figures is given at the end of the volume.

The categories of marital status adopted in this table are, "never married", "married", "widowed", "divorced or separated" and "unspecified". Never married refers to a person who has never been married at any time before. 'Married' represents currently married people, whether for the first or another time and whose marriage subsisted at the time of census enumeration with the spouse living, and includes persons who were recognised by custom or society as married and those in stable 'de facto' union. 'Widowed' signifies persons whose husband or wife is dead and who have not married again. 'Separated' are those who got separated from wife or husband and are living apart with no apparent intention of living together again or who are divorced either by a decree of a law court or by an accepted social or religious custom but not remarried. The marital status of a person was treated as unspecified when there was no mention of his marital status in the Census schedule.

The following statement shows the distribution of a sample of one thousand female population in the State, into workers and non-workers as also by marital status categories:

STATEMENT—1

Total Rural Urban	Total/ workers/ Non-workers	Total female population	Marital Status				
			Never married	Married	Widowed	Divorced or Separated	Unspecified
	1	2	3	4	5	6	7
Total	Total	1,000	459	425	109	7	N
	Workers	151	27	91	29	4	N
	Non-workers	849	432	334	80	3	N
Rural	Total	1,000	450	429	113	8	N
	Workers	176	31	107	34	4	N
	Non-workers	824	419	322	79	4	N
Urban	Total	1,000	481	414	100	5	N
	Workers	91	20	52	17	2	N
	Non-workers	909	461	362	83	3	N

N — Denotes negligible proportion.

It is observed that never married women form the highest proportion (45.9 per cent) closely followed by the married women (42.5 per cent). The widowed women constitute about 11 per cent of all females. Among female workers (who form a small proportion of 151 female workers per 1,000 women), married women are prominent while 'never married' and 'widowed' show smaller ratios. The same picture is observed in rural and urban areas. Among the non-working females, the never married are predominant and form over 40 per cent both in rural and urban areas. The contribution of divorced or separated women in the various categories is very little while that of the unspecified marital status is practically nil.

A statement giving the distribution of a sample of 1,000 female workers in each of the five marital status groups among the nine broad industrial categories is given below separately for rural, urban and all areas of the State.

It may be observed that in the rural areas, female workers in the various marital status categories are all concentrated in the primary industrial categories, like 'cultivators' and 'agricultural labourers'. In the urban areas we find that the 'manufacturing' sector or the 'other services' are the prominent categories and the agricultural sector provides the third important avocation. Such a variation in the urban sector is quite understandable as it is obvious that urban female employment is concentrated in manufacturing firms, trade and commerce as also governmental, medical and educational services. Comparatively more female workers under 'widowed' and 'divorced' categories are engaged in 'trade and commerce' and 'construction', and this distinction is more pronounced in the urban areas. The ratio of 'never married' female workers is the highest in 'other services', in urban areas (34.8 per cent). Another 36.3 per cent of urban 'never married' female workers are engaged in household and non-household industries engaged in manufacturing, processing, servicing and repairs.

TABLE B-III

PART A

CLASSIFICATION OF WORKERS AND NON-WORKERS ACCORDING TO MAIN ACTIVITY BY EDUCATIONAL LEVELS IN URBAN AREAS ONLY

PART B

CLASSIFICATION OF WORKERS AND NON-WORKERS ACCORDING TO MAIN ACTIVITY BY EDUCATIONAL LEVELS IN RURAL AREAS ONLY

B-III PARTS A & B CLASSIFICATION OF WORKERS AND NON-WORKERS ACCORDING TO MAIN ACTIVITY BY EDUCATIONAL LEVELS

Fly Leaf

This Table corresponds to Table B-III of 1961 Census and gives data on the educational attainments of the population for the State and districts. Data on illiterates as also literates with different levels of education (including literates without any educational level) are available in this table separately for males and females, for total population, total workers, each of the nine industrial categories of workers and non-workers. As in 1961, this table consists of two parts, Part A relating to urban areas and Part-B to rural areas.

In Part A of the table relating to urban areas, a more detailed nine-fold classification of the literates has been made. The classifications are: (1) Literate without educational level (2) Primary (3) Middle (4) Matriculation or Higher Secondary (5) Non-technical diploma or certificate not equal to degree (6) Technical diploma or certificate not equal to degree (7) Graduate degree other than technical degree (8) Post-graduate degree other than technical degree (9) Technical degree or diploma equal to degree or post-graduate degree sub-classified as (i) Engineering and Technology (ii) Medicine (iii) Agriculture, Veterinary and Dairying (iv) Teaching and (v) Others. For Table B-III Part-B relating to rural areas, the classification of literates has been restricted to seven; while the first six classifications are the same as detailed above for the urban table, the seventh one is 'graduate and above' which covers all persons who hold qualifications of a University degree or equivalent level and above technical as well as non-technical.

The educational levels adopted in 1971 Census more or less corresponds to those adopted in the 1961 Census. A new level, viz., 'Middle' has been included after 'Primary'. In the sub-classifications under 'technical degree or diploma equal to degree or post-graduate degree', presented for the urban table, engineering and technology which were separate in 1961 have been grouped together in 1971. Similarly agriculture, veterinary and dairying have been grouped into one category in 1971. In the rural table, data for seven levels of education are presented in 1971 as against only three in 1961 (viz., literate without educational level, Primary or Junior Basic and Matriculation and above).

Prior to 1951 Census, no table was prepared for livelihood classes by educational standards. In 1951, a table was prepared showing the distribution of literate population among the eight livelihood classes by educational standards. The figures were presented without any rural-urban break up. Apart from a more elaborate classification of the educational standards than the 1951 table the 1961 table was presented in two separate parts for urban and rural areas, and furnished details for the nine industrial categories of workers and for non-workers. The data now presented shows some more improvements as detailed in the above paragraph. A statement showing the variations in the educational levels for which data have been presented in similar tables in Censuses of 1951, 1961 and 1971 is given as an appendix to this fly leaf.

In 1971 Census, only persons who could both read and write with understanding in any language were considered as literates. A person who could merely read but cannot write was not treated as a literate. Formal education in any institution or pass in any educational standard was not insisted upon for treating a person as literate. Persons not satisfying the above conditions for 'literate' were treated as illiterates. Liatrates thus include those persons who do not possess any educational qualification but who can both read and write with felicity in any language with understanding, apart from others who possess different educational levels. The same definition was used during 1961 Census also.

It is noteworthy that literacy is higher, viz., 56 per cent in urban areas as against only 32 per cent in the rural areas. Males have a higher literacy ratio than females and again urban areas show a higher rate than the rural areas. Male literates form 67 per cent in urban areas and 45 per cent in rural areas. Females in rural areas have a low literacy percentage of only 19 while in urban areas, female literates constitute 45 per cent. At the various educational levels too, we find a higher ratio in the urban areas as compared to rural areas. About ten per cent of urban population are qualified upto or above the level of Matriculation or Higher Secondary. This ratio for rural population is hardly two per cent. While only one in a thousand holds a graduate or higher degree in the rural areas, about 12 out of every thousand in urban areas possess such qualifications. Persons with technical degree/diploma and graduate/post-graduate qualifications and professional degree holders are predominant in the urban areas.

Literacy is again higher among urban male workers (75 per cent) than among urban male non-workers (58 per cent). In the rural areas also, we find that literacy is more among male workers (49 per cent) than among male non-workers (40 per cent). Among females, however, it is noteworthy, that higher literacy rates are found among non-workers than among workers both in rural and urban areas. Among the rural female workers, hardly 10 per cent are literates. It may be observed from statements 3 & 4 given at the end of the note, that the literacy level as also ratio of individuals holding different qualifications at higher levels are generally high for male workers.

As per the 1971 Census tabulation programme, this table was to be prepared on the basis of a sample of 20 per cent of urban individual slips and 10 per cent of rural individual slips. The sample table has been prepared at first and then estimation of the table is made from this sample. In view of the importance of the literacy characteristic of the population, the table has been specially prepared on a full count basis also in Tamil Nadu. Both the tables, i.e. full count tables as well as estimated tables of B-III Parts A and B are therefore presented here, for the benefit of the data user. The sampling and estimation procedures are detailed in a separate note given at the end of the volume as Annexure.

Four statements showing the distribution of a sample of 1,000 persons as illiterates and literates with different educational levels, for males/females, as also workers/ non-workers are presented at the end of this note giving the ratios under the full-count and estimated tables, side by side.

It is seen from statement-1 that the difference in the ratio of persons falling under the different educational levels do not vary much in the urban areas, as between the full count tables and estimated tables. Illiterates form 437 per 1,000 in urban areas as per full count tables while they form 436 as per the estimated tables. The highest variation is noticed in the case of 'literates without educational levels' who form 161 per 1,000 under full count and 165 per 1,000 under estimated tables. The variation in this category is more marked for females than males. The difference between the two methods of tabulation for females is 5 per 1,000, the estimated table showing a higher ratio than the full-count table. In the case of literates with 'primary' level of education, the estimated table shows a lower ratio than the full count table and it is more pronounced in the case of males than in the case of females. In the case of 'matriculates' as also 'graduates' (other than technical degree holders), the estimated tables show a higher ratio than the full count tables, the difference being more significant in regard to males than for females. The ratio under estimated tables is less than that for full count tables under "technical degree or diploma equal to degree or post-graduate degree".

If we consider the educational level ratios in the case of rural tables, we do not find much difference in the two tabulation methods. There is no difference in the ratios of the two tables full count and estimated in regard to the population as a whole. There is a difference of only one in thousand in the case of males under the levels 'literate without educational level' and 'middle'. In the case of females, the difference is one in thousand in the case of 'literate without educational level' and 'primary'.

A similar distribution of a sample of 1,000 persons under different educational levels is shown for male and female workers as well as non-workers for urban and rural areas (vide statements 3 and 4).

It may be noted that though there are variations in the proportions in certain categories between the two tables—full count and estimated, these are not very high. On the whole, we see that the estimated and full count tables broadly agree and the differences in any particular classification do not appear sizable.

The Table B-III Part A prepared on full count basis is presented first followed by the table which has been estimated from the sample tables, and similarly for Table B-III Part B, the full count and estimated tables has been presented in that order.

TABLE B-IV INDUSTRIAL CLASSIFICATION OF PERSONS AT WORK OTHER THAN CULTIVATION AS MAIN ACTIVITY

FLY LEAF

General

This Table provides data on employment in the various industrial sectors, based on the National Industrial Classification, 1970. It corresponds to Table B-IV of 1961 Census and partly to Table B-III of 1951 Census. In the Censuses prior to that of 1951, the working population were classified on the basis of their occupations. In 1911 and 1921 Censuses, however, industrial statistics were presented in the Imperial Tables XV-E of 1911 and XXII of 1921. The industrial classification has been made on the basis of nature of the industry, trade, profession or services of the establishment, where the individual is working.

The industrial classification used in the earlier population Censuses differed from one Census to another and till 1951 Census, it was generally an amalgam of industrial and occupational features. The unit of classification was the individual in 1951 and it was based more on occupation than on industry. This classification was known as Indian Census Economic Classification. In 1961 Census, the unit of classification was the establishment and the basis of classification was the industry i.e., the sector of economic activity in which the worker was engaged as distinct from occupation which described the exact function the individual performed in that sector. Table B-III of 1951 roughly corresponds to the Table B-IV of 1961 in that, the division into employer, employee, independent or single worker, had been adopted. In 1951, the data for four non-agricultural livelihood classes were presented in 10 divisions and 88 sub-divisions. Under the system of Indian Standard Industrial Classification adopted in 1961 Census, the self-employed persons had been grouped under the industry to which their activity related and the others under the industry in which they were employed. According to that system, there were nine divisions, each division divided into a number of 'major groups' not exceeding ten, which in total amounted to 45, and each 'major group' again sub-divided into a number of 'minor groups' not exceeding ten, which totalled to 343. Three digit code numbers, the first representing the Division, the second the Major group and the third the Minor group had been devised and each industry was thus codified. The code system which was known as the 'Digit' system was closely related to international usage as recommended by the International Labour Organisation. During 1971, the National Industrial Classification of 1970 (N.I.C. 1970) which corresponds to the Indian Standard Industrial Classification of 1961 Census was adopted. The N.I.C., 1970 consists of 9 Divisions at first digit level, 66 Major Groups at the two digit level and 386 Minor Groups at the three digit level. The N.I.C., 1970 incorporates some of the major revisions contained in the International Standard Industrial classification of 1969 and signifies an improvement over the classification earlier adopted in 1961, viz., Indian Standard Industrial Classification. The National Industrial Classification, 1970 is given in an appendix to this fly leaf.

Part A:

Industrial classification of persons at work other than at cultivation as main activity by sex and Divisions, Major groups and Minor groups:

This Table presents the distribution of the population at work other than at cultivation, by Divisions, Major groups and Minor groups of the National Industrial Classification, 1970 (N.I.C., 1970) which has been adopted for this Census with suitable modifications wherever necessary. The data are presented for State and Districts for 'all' areas and 'urban' areas. The data user can arrive at the data for rural areas by deducting the data for 'urban' from the 'total'.

An appendix to this Table gives more details in respect of workers engaged in 'Manufacturing, Processing, Servicing and Repairing' classified by household and non-household Industry. This appendix is similar to Table B-IV Part C of 1961 Census.

As already discussed in the fly leaf of Table B-I Part A, the establishment is the unit on the basis of which the industrial classification of workers has been made. The self-employed persons are taken under the industry to which their activity relates. The rest of the workers have been grouped under the industry in which they are employed, the basic classification being the nature of the economic activity carried on in an establishment.

As per the National Industrial Classification of 1970, code numbers have been assigned to all industrial groups under the 'digit' system. This Table is a very important economic Table as it presents a detailed picture of the employment position in various sectors of the economy.

Part B:

Industrial classification of workers in 'Manufacturing, Processing, Servicing and Repairs' on 'Household Industry' basis as main activity by sex and class of workers:

This Table presents data on workers by sex at household industry for all areas as also separately for rural and urban areas for the State. The workers have been further classified by class of worker viz., employees and single workers. Information has been

furnished for Division 2 & 3 only and the Major Groups of this division. This Table corresponds to Table B-IV Part A of 1961 Census, the only difference being that in 1971 Census, information in respect of two classes of workers viz., employees and single workers alone have been presented. The number of family workers is not presented but can be easily derived from the Table itself by deducting the data on employees and single workers from the total workers. The terms 'status of worker' or 'class of worker' denote the position of the worker in the industrial activity, viz., whether he is an employer, employee or a single worker or a family worker. There is, however, no question of any employer in the case of 'household industry' and as such no separate column is provided for such class in this Table. The classes of workers are detailed below:

Employer:

An employer is a person who conducts his own economic enterprise and employs other persons to get the work done. Such a person is not only responsible for his own work, but also for the work of others employed by him. A person who is himself employed by someone, even if he has power to appoint any other person, is not treated as an employer. Persons who employ domestic servants for household duties are also not treated as employers.

Employee:

An employee is one who usually works under some other person for salary or wages in cash or kind. Persons employed as Managers, Superintendents, etc. and who in that capacity employ and control other workers on behalf of their employers are also treated as employees.

Single worker:

A single worker is one who does his work normally by himself. He is neither employed by others nor he employs anybody else, not even members of his family except casually. A person who works in a joint partnership with one or several other persons hiring no employees is also called a single worker. Each member of a producer's Co-operative Society engaged in work is also treated as a single worker.

Family worker:

A family worker is one who does his work in an industry, business or trade or service conducted by the family itself without receiving wages or salary in cash or kind. Members of the household who help only in household duties have not been treated as a family worker. For the purpose of this definition, members of the family may have been drawn for work from beyond the limits of the household by ties of blood or marriage. Family worker may not be entitled to a share of the profits in the work of the business carried on either by a person or head of the household or other relative.

The concept of houeshold industry and other definitions relating to the workers have already been explained in detail in the fly leaf to the Table B-I Part A.

Part C:

Classification of workers in non-household industry, trade, business, profession or service as main activity by class of workers, age and sex.

This Table is an innovation of the 1971 Census and presents data for total and urban areas at the State level. Data on workers engaged in non-household industry, trade, business, profession or service as main activity classified by class of workers viz., employers, employees, single workers and family workers are provided in this Table. Data by male/female break-up are given for the broad age-groups, 0-14, 15-19, 20-24, 25-29, 30-39, 40-49, 50-59, 60+ and age not stated.

The distribution of workers in the non-household industry, trade, business, profession or service as main activity by class of worker and sex per 1,000 males and females in each age-group for the State is given in Statement-1.

It could be observed that the 'employees' out-number all the other classes of workers in all age-groups except the age-group 60+. In the age-group of 60 and above, single workers are prominent and are followed by 'employees' with a lower ratio. While in the case of household industry, the large majority of workers come under family worker/single worker, in the case of non-household industry, etc. the important class of worker is the 'employee', and this aspect is clearly brought out in this Table.

Part D:

Industrial classification by sex and class of workers of persons at work in non-household industry, trade, business, profession or service as main activity.

This Table corresponds to Table B-IV Part B of 1961 Census and gives information on workers engaged in non-household industry, trade, business, profession or service as main activity classified by status of worker viz., employer, employee, single worker and family worker for Divisions and Major groups of N.I.C., 1970. The data are presented for total and urban areas of the State and districts.

Statement-2 furnishes the distribution of a sample of 1,000 workers in each sex by class of worker in each industrial division for the State as a whole.

It may be observed from Statement-2 that employees form a very high ratio of workers both among males

and females in all the industrial divisions, the sole exception being division 6 which relates to wholesale and retail trade, restaurants and hotels. In the division '0' on agriculture, hunting, forestry, fishing, etc., apart from employees, single workers and family workers form fairly good proportions. In division 4 relating to electricity, gas and water, almost the entire workers belong to the class of 'employees'. A somewhat notable ratio of employers is observed only in respect of divisions 6 and 8 relating to trade, restaurants/hotels and finance, insurance, real estate and business services.

National Industrial Classification (N.I.C., 1970)

(Three digit level of classification)

Major Group	Minor Group	Description
		Division 0—*Agriculture, Hunting, Forestry & Fishing*
00		*Agricultural Production*
	000	Cereal Crops (paddy, wheat, jowar bajra, maize, ragi, barley & gram, etc.).
	001	Pulses (arhar, moong, masur, urd etc.).
	002	Raw cotton.
	003	Raw jute, mesta.
	004	Sunn hemp and other kindred fibres.
	005	Production of oilseeds such as seasamum, groundnuts, rape, mustard, linseed, castor seeds, etc.
	006	Sugarcane.
	007	Roots and tubers, vegetables, pan, singhara, chillies and spices (other than pepper and cardamom) and flowers and parts of plants.
	008	Agricultural production not elsewhere classified.
01		*Plantations*
	010	Tea.
	011	Coffee.
	012	Rubber.
	013	Tobacco.
	014	Pepper.
	015	Cardamom.
	016	Edible nuts (excluding coconut and ground nut), walnut, almond, cashewnut, etc.
	017	Production of fruits, coconuts e.g. bananas, apples, grapes, mangoes, oranges.
	018	Production of ganja, cinchona, opium, etc.
	019	Crops of plantations, not elsewhere classified (*e.g.* Betal nuts, etc.).
		Division 0—*Agriculture, Hunting, Forestry & Fishing*—contd.
02		*Livestock Production*
	020	Cattle and goats-breeding, rearing, ranching etc. and production of milk.
	021	Rearing of sheep and production of wool.
	022	Rearing of horses, mules, camels and other pack animals.
	023	Rearing of pigs and other animals.
	024	Rearing of ducks, hens and other birds and production of eggs.
	025	Rearing of bees and production of honey and wax.
	026	Rearing of Silk-worms and production of cocoons and raw silk.
	029	Rearing of livestock and production of livestock products not elsewhere classified.
03		*Agricultural Services*
	030	Pest destroying, spraying, pruning of infected stems.
	031	Operation of irrigation system.
	032	Animal sharing and livestock services (other than veterinary services).
	033	Grading agricultural and livestock products.
	034	Horticultural and nursery services.
	035	Soil conservation.
	036	Scientific services like soil testing.
	039	Agricultural services not elsewhere classified (like land clearing, land draining etc.).
04		*Hunting, Trapping and game Propagation*
	040	Hunting, trapping and game propagation for commercial purposes (other than for sport).

Major Group	Minor Group	Description
		Division 0—*Agriculture, Hunting, Forestry & Fishing*—concld.
05		*Forestry and Logging*
	050	Planting, replanting and conservation of forests.
	051	Logging-felling and cutting of trees and preparation of rough, round hewn or riven logs (including incidental hauling).
	052	Production of fuel (including charcoal by burning) by exploitation of forests.
	053	Gathering of fodder by exploitation of forests.
	054	Gathering of uncultivated materials such as gums, resins, lac, barks, herbs, wild fruits and leaves by exploitation of forests.
	059	Other forest products not elsewhere classified such as munjh.
06		*Fishing*
	060	Ocean, sea and coastal fishing.
	061	Inland water fishing.
	062	Pisciculture—rearing of fish.
	063	Collection of pearls, conches, shells, sponge and other sea products.
	069	Fishing and allied activities not elsewhere classified.
		Division 1—*Mining and Quarrying*
10		*Coal Mining*
	100	Coal.
	101	Lignite.
11		*Crude Petroleum and Natural Gas*
	110	Crude Petroleum.
	111	Natural gas.
12		*Metal Ore Mining*
	120	Iron ore.
	121	Manganese.
	122	Chromite.
	123	Bauxite.
	124	Gold and Silver Ores.
	125	Copper Ore.
	126	Lead and Zinc Ores.
12	127	Limenite and Rutile.
	128	Wolfram.
	129	Metal Ores not elsewhere classified.
19		*Other Mining*
	190	Stone quarrying, clay and sand pits.
	191	Chemicals and fertilizer, mineral mining (such as soda ash, sulphur, phosphates, nitrates, etc.).
	192	Salt mining and quarrying including crushing, screening and evaporating in pans.
	193	Precious and semi-precious stones.
	194	Mica.
	195	Gypsum.
	199	Other mining not elsewhere classified (asbestos, quartz, tale and soap stone natural abrasives other than sand, graphite, etc.).
		Division 2 & 3—*Manufacturing and Repair*
20-21		*Manufacture of Food Products*
	200	Slaughtering, preparation & preservation of meat.
	201	Manufacture of dairy products.
	202	Canning and preservation of fruits and vegetables.
	203	Canning, preserving and processing of fish, crustacea and similar foods.
	204	Grain mill products.
	205	Manufacture of bakery products.
	206	Manufacture and refining of sugar (vacuum pan sugar factories).
	207	Production of indigenous sugar boora, khandsari, gur, etc. from sugar-cane, palm juice.
	208	Production of common salt.
	209	Manufacture of cocoa, chocolate and sugar confectionery (including sweetmeats)
	210	Manufacture of hydrogenated oils, Vanaspati, ghee, etc.

Major Group	Minor Group	Description
		Division 2 & 3—*Manufacturing and Repair*—contd.
20-21	211	Manufacture of other edible oils and fats e.g. mustard oil, groundnut oil, til oil, etc. (Inedible oils shown under 315).
	212	Tea processing.
	213	Coffee curing, roasting and grinding.
	214	Cashewnut processing like drying, shelling, roasting, salting, etc.
	215	Manufacture of ice.
	216	Manufacture of prepared animal feeds.
	217	Manufacture of starch.
	219	Manufacture of food products not elsewhere classified.
22		*Manufacture of Beverages, Tobacco and Tobacco Products*
	220	Distilling, rectifying and blending of spirits.
	221	Wine industries.

APPENDIX

A NOTE ON THE SAMPLING PROCEDURE ADOPTED IN THE 1971 CENSUS

Sample Size :

From the individual slips relating to the rural parts of a Tehsil/Anchal/Police Station, 10% sample of the slips was selected linear systematically with a random start. In the urban part of the district a 20% systematic sample of the individual slips was selected with separate random start. The sample sizes were adopted on consideration of required precision, available resources and operational convenience.

Selection Procedure :

The sample design adopted in 1971 census was stratified systematic sample of individual slips. For the purpose of sample selection, each district was divided into three sub-regions as follows :—

1. Tehsil/Anchal/Police Station (Rural)
2. Non-city Urban district
3. City (Urban unit with 1,00,000 and above population).

These sub-regions were termed as operational units. If, however, any of the operational unit was unduly large, it was divided into sub-operational unit so of at least 20,000 persons. Similarly, small-sized operational units were either clubbed together or tagged on to a contiguous larger unitso as to form an "effective operational unit" of the required minimum size. Adoption of these operational units ensured accuracy in sample selection maintaining at the same time stability in the sampling fraction with the tabulated areas. The procedure adopted has ensured effective control over sample selection within each block, as also in the entire operational units.

For the purpose of the Primary Census Abstract (PCA) the individual slips were sorted out according to ten broad industrial categories and nine broad age-groups for each of the sexes. The ten industrial categories of workers were as follows :—

Category	
I	Cultivators
II	Agricultural labourers
III	Livestock, forestry, fishing, hunting and plantations, orchards and allied activities
IV	Mining and quarrying
V(a)	Manufacturing, processing, servicing and repairs in *household industry*
V(b)	Manufacturing, processing, servicing and repairs in *other than household industry*
VI	Construction
VII	Trade and commerce
VIII	Transport, storage and communications
IX	Other services
X	Non-workers

The nine age-groups into which the slips belonging to each industrial category were sorted, were 0—14, 15—19, 20—24, 25—29, 30—39, 40—49, 50—59, 60 + and 'age not stated'. Thus, the individual slips of a particular operational unit were sorted out in $11 \times 9 = 99$ cells separately for males and females. Sampling was done in each of the operational units independently by taking separate random starts. The slips were then distributed into 10 (or 5) pigeon holes for Rural (Urban) samples and one pigeon hole was selected at random, the slips falling in the selected pigeon hole constituting the sample. For the operational details of the sampling procedure and instructions, 'Manual of instructions on sorting, compilation (manual processing) & sampling procedures' may be consulted.

Estimation procedure :

The tables prepared for each of the Districts/States from the 10% rural and 20% urban sample slips have been inflated to give the final estimated tables. Estimates have been obtained by making use of the cell frequencies (usually labelled as 'controls') available from the tables prepared on full count basis, namely, PCA and B-I Part A.

In order to ensure maximum possible inter-table consistency, it became necessary to use the estimated frequencies of a few of the final tables as controls for estimating some cell frequencies of other tables.

This way of estimating the cell frequencies ensured marginal totals of estimated tables tally with that of the full count tables. This is convenient to the user, because after adjustment, the identical marginal totals are found in tables having the same marginal specifications. "The adjustment diminishes the sampling variance to some extent; the more the controls the smaller the sampling variance of the adjusted frequencies[1]". Further, adjustment to known control totals has at the same time the effect of eliminating biases in the nature of inherent differences between the sample and complete count.

For the purpose of estimation of final tables, a set of multipliers was prepared for each table. A multiplier is the ratio of full count frequency of some characteristics (from PCA or Table B-I Part A) or some estimated frequency (from some already estimated table) and the corresponding sample frequency of the same characteristics (from the sample table). The following statement gives the level of presentation of the tables and the related controls on which the multipliers are based. The details will be presented in the report on sampling procedures to be published later.

Table	Level of presentation	Control based from Table
B I Part B	State	B I Pt A & PCA
B III Parts A & B	District	PCA
B IV Part A	District	B I Pt A & PCA
B IV Part A Appendix	District	B I Pt A & PCA
B IV Part B	State	B I Pt A & PCA
B IV Part C	State	B IV Pt D
B IV Part D	District	B I Pt A & PCA
B V Part A	State	B I Pt A & PCA
B V Part B	State	B V Part A
B VI Part A(i) & Part B(i)	District	B V Part A
B VI Part A(ii) & Part B(ii)	District	B V Pt A or PCA
B VII	District	PCA
B VII Appendix	State	PCA
B VIII	District	PCA
B IX A & B	State	PCA

Reliability of the estimates :

No exact formula can be given for the precision of the estimates in view of the systematic sampling design adopted. A very rough estimate of the relative standard error on the basis of simple random sample may be estimated as $\sqrt{(1-f)}\frac{1-P}{nP}$, where 'f' is the proportion sampled (0·10 in case of rural areas and 0·20 in case of urban areas) and 'p' is the estimated proportion in any cell and $n=\left(=\frac{N}{10}\text{ or }\frac{N}{20}\right)$ the sample size. The size of the universe for the various values of the proportion from 0·000001 to 0·9 by percentage relative standard error shown in table I and II will help in deriving quickly an idea of the level of precision of any cell. Since in the present census, slips were sorted by sex, industrial category and age-group before sampling, it is expected that the efficiency must be considerably higher than a simple random sample of identical size. Extensive studies conducted have indicated that systematic sampling of individuals is more efficient than random sampling specially when the slips were pre-sorted for most of the socio-economic characteristics covered in a census[2]. Thus the estimates prepared on the basis of the systematic sampling in the present census can be expected to be quite reliable. Hence the standard error indicated by the table should be treated as an upper limit.
