A NOTE ON THE SAMPLING PROCEDURE ADOPTED IN THE 1971 CENSUS

Sample Size : From the individual slips relating to the rural parts of a Police Station, 10% sample of the slips was selected linear systematically with a random start. In the urban part of the district a 20% systematic sample of the individual slips was selected with se arate random start. The sample sizes were adopted on consideration of required precision, available resources and operational convenience.

Selection procedure : The sample design adopted in 1971 census was stratified systematic sample of individual slips. For the purpose of sample selection, each district was divided into three sub-regions as follows :

1. Police Station (Rural)
2. Non-city Urban District
3. City (Urban unit with 100,000 and above population)

These sub-regions were termed as operational units. If, however, any of the operational unit was unduly large, it was divided into sub-operational units of at least 20,000 persons. Similarly, small-sized operational units were either clubbed together or tagged on to a contiguous larger unit so as to form an "effective operational unit" of the required minimum size. Adoption of these operntional units ensured accuracy in sample selection maintaining at the same time stability in the sampling fraction within the tabulated areas. The procedure adopted has ensured effective control over sample selection within each block, as also in the entire operational units.

For the purpose of the Primary Census Abstract (PCA) the individual slips were sorted out according to ten broad industrial categories and nine broad age-groups for each of the sexes. The ten industrial categories of workers were as follows :

Category

I. Cultivators
II. Agricultural labourers
III. Livestock, forestry, fishing, hunting and plantations, orchards and allied activities
IV. Minning and quarrying
V(*a*) Manufacturing, processing, servicing and repairs in *household industry*.
V(*b*) Manufacturing, processing, servicing and repairs in other than household industry
VI. Construction
VII. Trade and commerce
VIII. Transport, storage and communications
IX. Other services
X. Non-workers

The nine age-groups into which the slips belonging to each industrial category were sorted, were 0—14, 15—19, 20—24, 25—29, 30—39, 40—49, 50—59, 60+ and 'age not started'. Thus, the individual slips of a particular operational unit were sorted out in $11 \times 9 = 99$ cells separately for males and females. Sampling was done in each of the operational units independently by taking separate random starts. The slips were then distributed into 10 (or 5) pigeon holes for Rural (Urban) samples and one pigeon hole has selected at random, the slips falling in the selected pigeon hole constituting the sample. For the operational details of the Sampling procedure and instructions, 'Manual of instructions on sorting, compilation (manual processing) and sampling procedures' may be consulted.

Estimation procedure : The tables prepared for each of the Districts/States from the 10% rural and 20% urban sample slips have been inflated to give the final estimated tables. Estimates have been obtained by making use of the cell frequencies (usually

labelled as 'controls') available from the tables prepared on full count basis, namely, PCA and Part A.

In order to ensure mazimum possible inter table consistency, it became necessary to use the estimated frequencies of a few of the final tables as controls for estimating some cell frequencies of other tables.

This way of estimating the cell frequencies ensured marginal totals of estimated tables tally with that of the full-count tables. This is convenient to the user, because after adjustment, the identical marginal totals are found in tables having the same marginal specification. "The adjustment deminishes the sampling variance to some extent ; the more the controls the smaller the sampling variance of the adjusted frequencies"[1]. Further, adjustment to known control total has at the same time effect of eliminating biases in the nature of inherent differences between the sample and complete count.

For the purpose of estimation of final tables, a set multipliers was prepared for each table. A multiplier is the ratio of full count frequency of some characteristics from PCA or Table B—I Part A (or some estimated frequency from some already estimated table) and the corresponding sample frequency of the same characteristics from the sample table. The following statement gives the level of presentation of the tables and the related controls on which the multipliers are based. The details will be presented in the report on sampling procedures to be published later.

Reliability of the estimates : No exact formula can be given for the precision of the estimates in view of the systematic sampling design adopted. A very rough estimate of the relative standard error on the basis of simple random sample may be estimated as $\sqrt{(1-f)\frac{I-P}{np}}$, where 'f' is the proportion sampled (0·10 in case of rural areas and 0·20 in case of urban areas) and 'p' is the estimated proportion in any cell and 'n' the sample size, being equal to 10% of individual slips in rural areas and 20% in Urban areas. The size of the universe for the various values of the proportion from 0·000001 to 0·9 by percentage relative standard error shown in table I and II will help in deriving quickly an idea of the level of precision of any cell. Since in the present census, slips were sorted by sex, industrial category and age-group before sampling, it is expected that the efficiency must be considerably higher than a simple random sample of identical size. Extensive studies conducted have indicated that systematic sampling of individuals is more efficient than random sampling specially when the slips were presorted for

most of the socio-economic characteristics covered in a census. Thus the estimates prepared on the basis of the systematic sampling in the present census can be expected to be quite reliable. Hence the standard error indicated by the table should be treated as an upper limit.

Table B-I Part B

Female workers and non-workers according to main activity classified by marital status and age-groups

B-I PART B FEMALE WORKERS AND NON-WORKERS ACCORDING TO MAIN ACTIVITY CLASSIFIED BY MARITAL STASUS AND AGE-GROUPS

This table has been prepared on sample basis (10% rural and 20% urban) and presented at State level only. This table is an innovation in 1971 Census. It shows the distribution of only female workers and non-workers according to main activity classified by marital status and broad nine age-groups. It may be pointed out here that the age-group 0-14 under marital status "Married", "Widowed", "Divorced or Separated" and "Unspecified status" does not include the females of age 0-9 as all the females of this age-group 0-9 have been treated as unmarried and shown in the age-group 0-14 under marital status "Never married" only.

With the increasing participation of female workers in the country's economy, this table will be of great interest and will help in deriving the female participation rate in different age-groups under each marital status.

A person has been treated as "Never Married" if he or she has never been married at any time before. A person who has ever been married and the marriage is subsisting at the time of enumeration with the spouse living is recorded as "married". Persons who are recognised by custom or society as married and those who are in stable *de facto* Union are also shown as married. Even if a marriage is disputed in the locality, the person has been recorded as married if he or she says that he or she is married or in *de facto* Union. A person whose husband or wife is dead and who has not married again is recorded as "Widowed". A person who has been separated from wife or husband and is living separately with no apparent intention of living together again or who has been divorced either by a decree of a court or by an accepted social or religious custom but who has not been remarried is recorded as "Divorced or Separated"

Table B-III Part A

Classification of workers and non-workers according to main activity by educational levels in *urban areas* only

B-III PART A—CLASSIFICATION OF WORKERS AND NON-WORKERS ACCORDING TO MAIN ACTIVITY BY EDUCATIONAL LEVELS IN URBAN AREAS ONLY

This table relates to Urban population only. It has been prepared on 20% sample and presented at the State, Division and District levels. The table shows the distribution of population into 10 industrial categories of workers and non-workers. The workers under each industrial category and non-workers have been further classified by literacy and educational levels.

This table corresponds to table B-III Part A of 1961 Census. This table will help in making an idea of how the educated manpower is utilized in different types of economic activities in the urban areas of different districts and the State as a whole.

The levels of literacy and education are as follows :

(1) Illiterate
(2) Literate (without educational level)
(3) Primary
(4) Middle
(5) Matriculation or Higher Secondary
(6) Non-technical diploma or certificate not equal to degree
(7) Technical diploma or certificate not equal to degree
(8) Graduate degree other than technical degree
(9) Post-graduate degree other than technical degree
(10) Technical degree or dioloma equal to degree or post-graduate degree :

(a) Engineering and Technology
(b) Medicine
(c) Agriculture, Veterinary and dairying
(d) Teaching
(e) Others.

Literate (without educational level) includes figures of educational levels not classifiable.

1971 Census concept of literacy is as follows :

An illiterate person is one who can neither read or can merely read but cannot write in any language. Ability merely to sign one's name does not qualify a person to be treated as literate. He or she must have been able to write and read with understanding for being considered as literate. All children of age 4 years or less are treated as illiterate even if some of them are going to school and may have picked up reading and writing a few odd words.

A literate person is one who can both read and write with understanding in any language. It is not necessary that a person who is literate should have received any formal education or should have attained any minimum educational standard. The test for reding is ability to read any simple letter in print or in manuscript. The test for writing is ability to write a simple letter.

Table B-IV Part A

Industrial Classification of Persons at work other than cultivation as main activity by sex and divisions, major groups and minor groups

B-IV PART-A—INDUSTRIAL CLASSIFICATION OF PERSONS AT WORK OTHER THAN CULTIVATION AS MAIN ACTIVITY BY SEX AND DIVISIONS, MAJOR GROUPS AND MINOR GROUPS

This table has been prepared on the basis of 10% Rural and 20% Urban sample and presented at the State, Division and District levels. This table corresponds to some extent to table B-IV Part C of 1961 Census.

This table shows the distribution of persons at work other than cultivation by sex and Divisions, Major Groups and Minor Groups of the National Industrial Classification, 1970 (N.I.C., 1970). The data have been presented for Total and urban population. The figures for rural population can be derived by subtracting the figures of urban population from those of Total population.

This table is one of the most important economic tables. It will show a detailed picture of employment positions in the State of West Bengal and in its different districts in various sectors of the economy.

Distribution of workers in Manufacturing, Processing, Servicing and Repairs by Household Industry and Non-household Industry.

This table has been preperted on the basis of 10% rural and 20% urban sample and presented at the State, Division and District levels. It corresponds to table B-IV Part C of 1961 Census. This table presents the data for total and urban population and the figures from for rural population can be derived by subtracting urban total figures.

It shows the distribution of workers engaged in manufacturing, processing, servicing and repairs by Divisions, Major Groups and Minor Groups of National Industrial Classification, 1970 (N.I.C., 1970) and according to the N.I.C., This table is confined to Divisions 2 & 3 which ralate to manufacturing, Processing, Servicing and Repairs. Total workers of this table have been classified into Household Industry and Non-household Industry.

This table will help in measuring the proportions of workers employed in different types of industries in the secondary sector of economy in the State of West Bengal and its different districts. It will further indicate the relative roles & importance of Household industry in various types of industries.

Definition of Household Industry adopted in 1971 Census is as follows :—

A Household Industry is defined as an industry conducted by the Head of the household himself/herself and/ or mainly by members of the household at home or within the village in rural areas and only within the premises of the house where the household lives in urban areas. The industry should not be run on the scale of a registered factory. The main criterion of a Household Industry is the participation of one or more members of a household. A Household Industry should relate to production, processing, servicing, repairing or making and selling (but not merely selling) of goods.

Table B-IV Part B

Industrial Classification of workers in manufacturing processing, servicing and repairs on household industry basis as main activity by sex and class of workers

B-IV PART B—INDUSTRIAL CLASSIFICATION OF WORKERS IN MANUFACTURING, PROCESSING, SERVICING AND REPAIRS ON HOUSEHOLD INDUSTRY BASIS AS MAIN ACTIVITY BY SEX AND CLASS OF WORKERS

This table has been prepared on 10% rural and 20% urban sample and presented at the State level only for total, rural and urban areas separately by sex. This table broadly corresponds to table B-IV of 1961 Census.

This table shows the distribution of workers engaged in Household Industry by Divisions and Major Groups of the National Industrial Classification, 1970 (N.I.C., 1970). The workers under each Division and Major Group of N.I.C., 1970 have further been classified into the classes of workers, *i.e.* "Employees" and "Single worker" by sex.

This table indicates the proportion of class of worker, *i.e.* "Employees" and "Single worker" in different Divisions and Major Groups of N.I.C., 1970. It will clearly show in which types of Household Industries the "Single worker" or "Employees" concentrate heavily.

The definition of "Employee" and "Single worker" is given in Fly-leaf of Table B-IV Part C of this volume.

Table B-IV Part C

Classification of workers in non-household industry, trade, business, profession or service as main activity by class of workers, age and sex

B-IV PART C—CLASSIFICATION OF WORKERS IN NON-HOUSEHOLD INDUSTRY, TRADE, BUSINESS, PROFESSIONS OR SERVICE AS MAIN ACTIVITY BY CLASS OF WORKERS, AGE AND SEX

This table has been prepared on the basis of 10% rural and 20% urban sample and presented for total and urban areas separately at the State level only. This table is an innovation in 1971 Census. It shows the distribution of Total population and total workers into broad nine age-groups, *i.e.* 0-14, 15-19, 20-24, 25-29, 30-39, 40-49, 50-59, 60+ and Age not stated by sex for Total and Urban population separately. The Workers have further been classified into four classes of workers, *i e.* "Employers" "Employees" "Single Worker" and "Family Workers" under each of the above age-groups. Similar distribution of population and workers for rural areas can be derived by subtracting the figures of Urban areas from those of total areas.

The following definition of class of workers was used in 1971 Census :—

(*i*) Emyloyers--An Employer is a person who has to employ other persons in order to perform the work. That is to say, such a person is not only responsible for his own personal work, but also for giving work to others in his business. But a person who employs domestic servants for household duties or has subordinates under him in an office where he is employed by others, is not an employer, even if he has the power to employ another person in his office on behalf of his own employer or employers.

(*ii*) Employees—An Employee is a person who usually works under some other persons for salary or wages in cash or kind. There may be persons who are employed as managers, superintendents, agents, etc., and in that capacity employ or control other workers on behalf of their own emyloyers. Such persons are only employees as explained above, and are not regarded as employers.

(*iii*) Single worker—A Single worker is a person who works by himself. He is not employed by any one else and in his turn does not employ anybody else, not even members of his household except casually. This definition of Single worker will include a person who works in joint partnership with one or several persons having no employees, and also a member of a producers, Co-operative. Each one of partners or member of such producers' Co-opratives should be recorded as "Single Worker".

(*iv*) Family Worker—A Family worker is a member who works without receiving wages in cash or kind, in an industry, business, trade or service. For example, the working members in a family of "Dhobi" where they all participate and each does not receive wages separately will be family workers. There may be family workers in industry, trade or professions as well. For the purpose of this definition members of a family may be drawn from beyond the limits of the household by ties of blood or marriage. The family worker may not be entitled to a share of profits in the work of the business carried on either by the person or Head of the Household or either relative.

B-IV PART D – INDUSTRIAL CLASSIFICATION BY SEX AND CLASS OF WORKERS OF PERSONS AT WORK IN NON-HOUSEHOLD INDUSTRY, TRADE BUSINESS PROFESSION OR SERVICE AS MAIN ACTIVITY

This table has been prepared on the basis of 10% rural and 20% sample and presented at State, Division District levels for total and urban areas. The figures of rural areas can be derived by subtracting the figures of urban areas from those of total areas. This table corresponds to table B-IV Part B of 1961 Census.

This table shows the distribution of workers engaged in Non-household Industry, Trade, Business, Profession or Service into Division and Major Groups of National Industrial Classification, 1970 (N.I.C., 1970).

The workers under each N.I.C. Division and Major Group have further been classified into four classes of workers, *i.e.* "Employers", "Employees", "Single Worker" and "Family Workers" by sex.

This table will indicate the proportion of each class of workers engaged in different sectors of economic activities in the State and districts.

The definition of class of workers followed in 1971 Censes has been explained in the Fly-leaf of Table B-IV Part C of this present volume.

Table B-IX

Non-workers categorised as others aged 15 and above classified by sex, age-groups and educational levels in urban and rural areas separately.

B-IX—NON-WORKERS CATEGORISED AS OTHERS AGED 15 AND ABOVE CLASSIFIED BY SEX, AGE-GROUPS AND EDUCATIONAL LEVELS

This table has been prepared on 10% rural and 20% urban sample basis and presented at the State level only. This table has been divided into two parts. Part A relates to Urban areas and Part B to rural areas. These tables largely corresponds to tables B-VIII Part A and Part B of 1961 Census.

This table shows the distribution of "Others" non-workers (who are mostly unemployed) into age-groups 15-19, 20-24, 25-29 and 30^{+} and further classified into various educational levels. The educational levels are different in urban areas from those in rural areas. The difinition of literacy and levels of education have been explained in the fly-leaves of B-III Part A & Part B in this volume.

This table is very much useful in assessing the extent of unemplyment amongst the uneducated and educated persons and also the quality and extent of available man-power in the State.
