

CENSUS OF INDIA 1971

SERIES-I—INDIA

Part II—A(III)

GENERAL POPULATION TABLES

(STANDARD URBAN AREAS)

A. CHANDRA SEKHAR

Of the Indian Administrative Services
Registrar General & Census Commissioner, India

FOREWORD

It was recognized in India and in various international forums that the area constituting a town group, a concept adopted in 1961 census, or an urban agglomeration is subject to change from time to time depending on the spread of boundaries of the statutory core urban unit and the continuous outgrowth. To meet this situation, in 1971 census, a new category of settlement called 'Standard Urban Area' was introduced for the tabulation of certain urban data. This was a replacement of the concept of town group used in 1961 census. The concept of town group could not be used in a uniform manner by the states and hence became non-comparable.

The Standard Urban Area, unlike the town group, takes into account not only the contiguous urban spread but the intervening rural area as well and is designed to furnish comparable data for the three successive decades upto 1991 in respect of urbanisable area around large urban units. The importance of having census data available for three decades on a comparable basis for major urban areas in the country for urban and regional planning, needs hardly any emphasis. The data will doubtless offer more scope for research in comparative urbanisation trends. The utility of this delineation lies in the fact that even when statutory limits of existing towns are changed, that area will remain a fixed geographical entity.

The Census Organisation has not stopped at just presenting the data on Standard Urban Areas. Secondary analysis of the data thus thrown up has also been taken up simultaneously. The analytical note in this volume is only a preliminary step in this direction. I earnestly hope that the data thus presented will kindle the imagination of many academicians and scholars to do a meaningful analysis of the urbanisation trends in the country.

Right from the time the concept of Standard Urban Area was in its formative stage, the Census Organisation has worked in close collaboration with the Town and Country Planning Organisation. I take this opportunity to express my deep sense of gratitude to Dr.C.S. Chandrasekhara, the Chief Planner, and his associates in the Central and State Town Planning departments who have given their expertise in delimiting the Standard Urban Areas of the country. I also acknowledge with thanks the initiative taken by Shri A. Chandra Sekhar and the subsequent coordination done by Shri R.B. Chari, both my predecessors, in the formulation of this concept and its fruition which is the present volume. Dr. B.K. Roy Burman, Deputy Registrar General (Social Studies) took up the task of guiding the State Census Offices in the presentation of the data on Standard Urban Areas. I am grateful to him for his expert advice. Shri K.K. Chakravorty, Deputy Registrar General (Census), gave invaluable advice in organisation of data on Standard Urban Areas. Shri N.G. Nag, Deputy Registrar General (Social Studies) and his colleagues in the Social Studies Division, particularly S/Shri C.G. Jadhav and N.K. Banerjee have worked earnestly in compilation of the relevant data and the preparation of this volume. I acknowledge their contribution with gratitude.

P. PADMANABHA

Registrar General, India

PREFACE

The 1961 Census of India provided data regarding urban areas both in terms of individual towns and cities and also in terms of 'clusters' of population called as 'town groups'. This was done with a view to identify functionally linked urban units located close to one another, urban spills beyond the municipal administrative boundaries of urban units and metropolitan conurbations. The town group was made up of independent urban units not necessarily contiguous to one another but to some extent independent. The concept of town group was expressed as a group of towns situated so close together that in course of time the intervening rural areas were likely to gradually merge in the urban areas to form ultimately a single city or town comprising the various units of the group and the intervening rural areas. Towns situated within reasonable proximity of a municipal town or where more municipal towns than one were closely situated, and all such towns and such non-municipal towns as lie close to them were taken into account for the purpose of that grouping. However, in actual practice, the State Census departments sometimes adopted varying definitions of town group and followed somewhat different procedures and criteria for their delimitation with the result that the data on town groups lacked uniformity both in conception and definition, and thus became uncomparable with one another. Apart from the variations in the definition, the constituent units of a town group were not always contiguous to one another and thus not related to a fixed territory. In actual reporting only towns falling within a radius of 3.2 to 6.4 (and sometimes 8 kilometres) [2 to 4 (and sometimes 5 miles)] of the periphery of the principal central town were included within the town group and the interstitial rural areas were omitted. Thus the town group concept did not always represent a spatially contiguous set of urban and rural settlements and, therefore, could not be mapped conveniently.

Again, the town group data could not be directly used for calculating urban densities and other indicators needed for economic and physical planning. At the international level, the town group data could not be compared with the data for 'Standard Metropolitan Areas' and similar concepts adopted in other countries.

Further, the town group concept did not effectively tackle the problems involved in urban statistical reporting in respect of urbanized or urbanizable areas in the near future outside the jurisdiction of the existing towns, viz., the problems of changing municipal jurisdiction, spillover growth and the accretion of population by annexation. Since the administrative boundaries of statutory towns change from time to time, the data thrown up by the successive censuses of the individual towns or the town groups were not strictly comparable.

It was found that these shortcomings reduced the utility of the town group concept as a statistical reporting unit. These difficulties were discussed at a pre-Congress Symposium of the International Geographical Congress held in Delhi in December 1968. The sysmposium recommended that a more suitable statistical unit may be evolved for the purpose.

For the 1971 Census, therefore, it was decided to modify the town group concept to enable the representation of urban statistics on a more uniform basis by having a fixed area covering a large core town as well as the adjoining areas, which at the same time would ensure comparability of the census data from one decade to another by keeping constant the area for at least three decades and with similar data available from other countries for urban development planning. The Office of the Registrar General, India and the Office of the Town and Country Planning Organisation in consultation with the various statistical and demographic organisations in the country evolved the concept of 'Standard Urban Area'. It was decided to delineate the contiguous rural and urban areas which were then under intensive influence or which were likely to be under intensive influence of all towns and cities with population of fifty thousand and above in the different states.

The Standard Urban Area (SUA) is defined as the projected growth area of a city or town having 50,000 or more population in 1971 as it would be in 1991, taking into account not only the towns and villages which will get merged into it but also the intervening areas which are potentially urban. Such a tract will include all extra-municipal urban growth such as the suburbs (industrial and residential), railway colonies, civil lines and cantonments and also such of these villages and towns within the proximity of the main town which are likely to be urbanised by 1991. The SUA will thus be an area which will extend beyond the main city or town and would contain all likely developments upto 1991. Thus it will remain as a statistical reporting unit during the three successive censuses—1971, 1981 and 1991— irrespective of the changes in the boundaries of the local administrative units within the tract. The SUA is identified by the administrative units it encompasses, namely, city, town, thana or village. The boundaries of the SUA are the administrative boundaries of the peripheral rural or urban administrative units.

The characteristics of the SUA are :

(i) a core town generally with a population of 50,000 and above;

(ii) predominant urban land use;

(iii) intensive interaction with the urban centres as reflected in commutation for the purpose of work and secondary education facilities, extension of city bus service, sale of commodities like milk, dairy products, vegetables (other than those transported by rail or truck haul) and purchase of food-grains, clothes and general provisions, etc. by the consumers directly;

(iv) anticipated urban growth as a result of locational decisions relating to industry, market, transport and communication, administrative and servicing functions; and

(v) existence of big villages with a large proportion of working force engaged in non-agricultural industrial categories.

After the adoption of the SUA concept, the Office of the Registrar General, India and the Office of the Town and Country Planning Organisation in cooperation with the Offices of the Directorate of Census Operations and Departments of State Town Planning delineated 304 towns with their neighbouring villages having the characteristics as stated above as SUAs for 1971 census.

In delimiting the SUAs, the following objective considerations were adopted:

(a) The population or growth trends of the principal town or city were carefully analysed, in order to make a proper appraisal of the magnitude of growth of population of the city by 1991. The Town and Country Planning Organisation's long-term population projections for the towns and cities to be covered by 1971 census were used for this purpose. In making use of these figures, note was, however, taken of short-term migration trends as well as any important locational decisions that were in the offing and which were likely to affect the town's growth in the foreseeable future. Further, if any projections of population had been carried out for drawing up a development plan for the city or town, they were also taken note of.

(b) Note was taken of the trends in the urban spread of the principal central town or city, the extent and direction of urban growth and physical constraints such as topography, water bodies, marshes, etc., if any, to urban expansion.

(c) The rate and character of growth of the villages and towns on the periphery of the principal town or city and the prospects for their coalescence in future with the principal town, taking note of the projections of their population and extent of physical growth for 1991, were assessed.

(d) Inclusion of interaction between the principal town or city and its adjacent units, strength of economic linkages and similar considerations leading to the inclusion of a village or town in the vicinity of the principal city or town within the SUA were also looked into.

(e) In including the villages, the entire revenue area of the villages was brought within the SUA and not merely the village site (*Abadi* or *gaothan*).

We are presenting in this volume Table A-V (Standard Urban Areas) for India and the Primary Census Abstract (PCA) for the SUAs of the States/Union Territories.

In Table A-V only basic data like rural and urban components of SUA, civic status of core town, area, density, occupied residential houses, number of households and sexwise break-up of houseless, institutional and total population and population according to the last two censuses relating to SUAs are presented. The principle in presentation of data in this table is slightly different. Any SUA for which data are presented in this table is a compact fixed territory which represents a potential urbanisable area. Not all of its components have been treated as urban for the 1971 census. Some of them are as yet rural but are considered potentially urbanisable. Data have been presented in this table not only for each SUA as a whole but also for each of its urban components and for total rural components. The components have been grouped as urban or as rural according to their classification in 1971 census. Totals have been struck for each of the two groups of components. As far as possible an attempt has been made to relate the population figures in respect of an urban component for the past censuses of 1951 and 1961 not merely to the urbanised area of the component at the respective census but to the entire area which it now represents, even though part of it might have been rural at that census. This is a sequel to its being treated as a definite fixed territory which is to be taken as a statistical reporting unit for censuses upto 1991.

The PCA data for SUAs are given for the state as a whole in order to avoid repetition of data which are presented in state volumes.

I am grateful to Shri C.S. Chandrasekhara, Chief Town Planner, for the guidance given by him and his colleagues in delineation of Standard Urban Areas. In fact, this volume is the result of the joint efforts put in by the Census Organisation and the Town and Country Planning Organisation. I must also express

my sense of gratitude to Shri A. Chandra Sekhar and Shri R. B. Chari, the former Registrar Generals, and Shri P. Padmanabha, the present Registrar General, for their help and encouragement in the completion of this project. The initiative in formulating this concept was taken by Shri Chandra Sekhar and compilation and tabulation rigorously followed by Shri Chari. The further encouragement received from Shri Padmanabha helped in consolidation of this volume. In an equal measure I am indebted to all the Directors of Census Operations for their cooperation. I am particularly grateful to Dr. B. K. Roy Burman, Deputy Registrar General (Social Studies) and Shri K. K. Chakravorty, Deputy Registrar General (Census) for their expertise and guidance in the accomplishment of this task. The compilation of this volume was actually started under the direct supervision of Dr. Roy Burman.

In preparing this volume S/Shri C. G. Jadhav and N. K. Banerjee, Research Officers, have played important roles. Shri Banerjee initially supervised the compilation and scrutiny of tables, while Shri Jadhav is responsible for preparation of 17 inset tables and the analytical note thereon. These officers have been ably assisted in compilation and tabulation of data by Shri Sudesh Chander, Statistical Assistant, Smt. S. Sherman and Smt. S. Marwaha, Computors and Shri V. P. Manocha and Shri Yogeshwar Prasad, Assistant Compilers, who have worked ceaselessly with enthusiasm on the project. Shri K.K. Kalra prepared the charts and diagrams. Their contribution to the successful presentation of this volume is gratefully acknowledged.

N. G. NAG
Deputy Registrar General

FLY LEAF

1. The following abbreviations are used to denote the civic status of towns; in the case of towns having no civic status column 3 is left blank :

M. Corp., C.	Municipal Corporation, Corporation
M., M.C., M.B., M.T., M.Cl.	Municipality, Municipal Committee, Municipal Board, Municipal Town, Municipal Council
Cantt., C.B.	Cantonment, Cantonment Board
N. or N.A., N.A.C.	Notified Area, Notified Area Committee
T.C., T.A.,T., T.B.	Town Committee, Town Area, Town, Town Board
P.,V.P., T.P.,N.P.	Panchayat, Village Panchayat, Town Panchayat, Nagar Panchayat
S.B., S.A.	Sanitary Board, Special Area
N.M.	Non-Municipal
E.O.	Estate Office
C.T.	Census Town

2. Density for India total has been worked out by excluding the population of Gujarat, Kerala, Punjab and Tripura; for India urban excluding the population of Gujarat, Punjab and Tripura; and for India rural excluding the population of Kerala and Tripura since the total area figures of the SUA for these states are not available.

3. Except in column 3 where it is used to denote a specific civic status (Notified Area), N.A. elsewhere in the table stands for 'Not Available' and O.G. stands for 'Out Growth'.

4. The Population of 1951 and 1961 in columns 16 and 17 respectively in regard to Goa, Daman & Diu refers actually to 1950 and 1960 when the census was taken there by the Portuguese. The reference date during both the censuses was the midnight of 14—15 December of the respective census year. It is only for convenience that the population of this Union Territory for these two census years has been taken to refer to 1951 and 1961 respectively.

5. The details of rural components will be available in the respective State/Union Territory volumes. In this table for the sake of convenience only total of rural components have been provided and the total number of such rural components has been indicated in parenthesis.

ANALYTICAL NOTE

It was originally planned to present in this volume only the statistical data relating to Standard Urban Areas on the pattern of the state volumes. It was, however, appreciated that these data contained very useful information whose analysis will throw light on the levels and future trends in urbanisation which will help both planners and administrators alike in planning for the development of backward regions and in rural re-construction. Realising the above potential of these data as well as its importance in evolving suitable concepts in relation to delineation of rural and urban settlements in the light of emerging situations as well as examining correlations between availability of amenities and infrastructural elements, like the size of the urban units, growth rates, literacy, etc., it is proposed to carry out detailed studies in future. On the basis of some interesting features contained in Table A-V in this volume, however, a rapid appraisal of the data given in it and the accompanying PCA has been attempted here. The main features of the above data are presented in the form of inset tables. The broad features, as revealed by the analysis of these inset tables, are briefly discussed below.

Number and Population of SUAs

There are 304 SUAs with a total population of 8,41,13,851. This population of SUAs forms 15·35 per cent of the total population of the country. Out of this population, 7,31,63,247 (86·98 per cent) live in urban components of SUAs and 1,09,50,604 (13·02 per cent) live in rural components of SUAs.

The statewise distribution of the 304 SUAs and their population in the urban and rural components is indicated at Annexure 1. The largest number of SUAs is found in Uttar Pradesh (41), followed by Tamil Nadu (32), Andhra Pradesh (29), Madhya Pradesh and Maharashtra (25 each), and Gujarat and West Bengal (20 each). The other states/Union territories have less than 20 SUAs each with Goa, Daman & Diu three, Jammu & Kashmir two, and Himachal Pradesh, Manipur, Meghalaya, Nagaland, Tripura, Chandigarh, Delhi and Pondicherry one each.

The largest percentage of population living in rural components of the SUAs is found in Manipur where 56·60 per cent of the total population of the single SUA of the state lives in rural area. In Tripura, the corresponding figure is 47·62 per cent, in Kerala 32·89 per cent, and in Assam 31·71 per cent. In all other states the percentage is less than 30 with Maharashtra having the smallest percentage (4·44) of SUA population living in rural area, followed by Madhya Pradesh (6·34 per cent), Rajasthan (6·54 per cent) and Delhi (6·91 per cent).

Composition of SUAs

At the all India level the 304 SUAs contain 1,123 urban units and 7,958 rural units. Of the urban units 781 are towns and other urban components and 61 are towns with outgrowths, the number of outgrowths being 281.

The total population in the urban components of the SUAs at the all-India level is 7,31,63,247 constituting 86·98 per cent of the total population of SUAs and 67·06 per cent of total urban population of the country. The total population in the rural components of the SUAs in India is 1,09,50,604 constituting 13·02 per cent of the total populaton of SUAs and 2·50 per cent of total rural population of the country. The details are given in Annexure 2.

Density in SUAs

Density in column 5 of Table A-V has been worked out on the basis of 1971 census population. Where area figure is not available in respect of any unit, it has been shown as not available (n.a.). Figures shown in column 5 have been worked out by excluding the population of the component unit(s) for which area figure(s) is/are not available.

Density for India total (urban+rural) has been worked out by excluding the population of Gujarat, Kerala, Punjab and Tripura; for India urban excluding the population of Gujarat, Punjab and Tripura; and for India rural excluding the population of Kerala and Tripura since the total area figures for these states are not available.

The overall density in SUAs of India is 2,357 persons per sq. km., it being 4,732 persons per sq. km. in urban components of SUAs and 451 persons per sq. km in rural components of SUAs. This is much more than the overall density in the country as a whole which is 177; 2,505 in urban area and 148 in rural area.

The highest overall density in SUAs is in Pondicherry which has 4,765 persons per sq. km. followed by West Bengal with 4,009 persons per sq. km. and Delhi with 3,880 persons per sq. km. In Maharashtra it is 3,183 in Meghalaya it is 2,349 and in Goa, Daman and Diu it is 2,236 persons per sq. km. The lowest overall density in SUAs is in Nagaland with 422 and Himachal Pradesh with 510 persons per sq. km. The remaining states and Union territories are having density around or more than 1,000 but less than 2,000 per sq. km. The density for SUAs in all states and Union territories except Chandigarh is much more than the overall density for all areas of these states and Union territories. This is obviously because Chanidgarh is a planned city with no outgrowth and not much of intervening rural area.

The density in SUAs is also much more than the overall density for urban areas of these states and Union territories except in case of Nagaland where the overall urban density is 1,230 while the density for SUA is 422 and Orissa where the overall urban density is 1,113 while the density for SUAs is 988. This is because of the inclusion of other towns in calculating the overall density. As is well-known in hill areas of North-eastern India the towns act as the growth centres of all activity. Of late, the development of Dimapur and Mokokchung in Nagaland has attracted a large number of people In Orissa, too, the development of other towns, especially project towns such as Hirakud and Paradip, has attracted a large number of persons there. The highest density in urban components of SUAs is for Delhi with 8,172 persons per sq. km. followed by West Bengal with 7,875 and Maharashtra with 5,986 persons. The lowest density is for Nagaland with 782 and Orissa with 1,921 persons per sq. km.

The density for the rural constituents of the SUAs is also more than that for the rural areas for the state as a whole in all states/Union territories except Chandigarh where the density for the rural constituents of SUA is 367 as against the territory's overall rural density which is 431. The highest density for the rural constituents of SUAs—4,498 persons per sq. km.—is for Goa, Daman and Diu followed by Pondicherry with 1,896 and Manipur with 1,196 persons. The lowest density is for Rajasthan with 111 persons followed by Himachal Pradesh with 156 persons. The details are given in Annexure 3.

Household Congestion Index in SUAs

The household congestion index is calculated by dividing the number of households by occupied residential houses. The household congestion index for all SUAs taken together is 1·2. For urban constituents of SUAs also it is the same while for rural constituents it is 1·1. For India as a whole considering all territory it is 1·1 for both total and rural and 1·2 for urban area. The index for SUAs is highest in Himachal Pradesh (1·4) followed by Andhra Pradesh, Jammu and Kashmir, Madhya Pradesh and Punjab (1·3 each). For Assam, Gujarat, Manipur, Meghalaya, Nagaland and Chandigarh it is 1·0, the lowest. The overall household congestion index for all areas is highest for Bihar and Uttar Pradesh (1·2 each) and lowest for Assam, Himachal Pradesh, Kerala, Manipur, Nagaland, Rajasthan and Chandigarh (1·0 each).

If urban components of SUAs are considered, the index is highest in Himachal Pradesh (1·5) followed by Tripura (1.4). It is lowest for Assam, Gujarat, Manipur, Nagaland and Chandigarh (1·0 each). For all urban areas including SUAs it is highest for Jammu and Kashmir and Tripura (1·3 each) and lowest for Assam, Gujarat, Manipur, Nagaland and Chandigarh (1·0 each).

In rural components of SUAs the index is highest in Meghalaya (1·4) and Maharashtra (1·3) and lowest in Assam, Himachal Pradesh, Kerala, Manipur, Nagaland, Rajasthan and Chandigarh (1·0 each). For all ural areas it is highest for Bihar and Delhi (1·2 each) and lowest for Assam, Gujarat, Himachal Pradesh, Kerala, Manipur, Nagaland, Rajasthan and Chandigarh (1·0 each). The details are given in Annexure 4.

Sex Ratio in SUAs

The overall sex ratio in SUAs is 842. In urban components of SUAs it is 836 and in rural components it is 889. For the country as a whole the sex ratio is 930; 858 for urban areas and 949 for rural areas. The highest sex ratio in SUAs is in Kerala (989) followed by Manipur (985) and Pondicherry (977). The lowest sex ratio is in Nagaland (518) followed by Himachal Pradesh (705) and Assam (741). The sex ratio in urban components of SUAs is highest in Kerala (984) followed by Manipur and Pondicherry (978 each) and lowest in Nagaland (477) followed by Himachal Pradesh (668) and Assam (709). The highest sex ratio in rural components of SUAs is again in Kerala (999) followed by Manipur (990) and Pondicherry (965) and lowest in Nagaland (641) followed by Chandigarh (737) and Goa, Daman & Diu (763). The overall sex ratio is higher for all areas including SUAs than for SUAs as such in all states and union territories except in Manipur and Chandigarh where it is marginally low. The overall urban sex ratio is also higher for all areas including SUAs than for SUAs as such in all states and union territories except in Meghalaya, Nagaland and Tripura where also they are marginally low. If the rural components of SUAs are compared with the rural areas in general, the same picture emerges except in case of Manipur and Chandigarh where they are marginally low. The details are given in Annexure 5.

Growth rate in SUAs, 1961-71

The overall growth rate in SUAs during 1961-71 is 35·43 per cent. This compares well with the overall urban growth rate of 38·22 per cent for the country as a whole. In urban components of SUAs it is 35·57 per cent and in rural components it is 34·52 per cent. The growth rate is highest in Nagaland (127·67 per cent) followed by Chandigarh (112·34 per cent). If these rates are compared with urban growth rates in general, the same picture emerges. Nagaland has an overall urban growth rate of 168·28 per cent and Chandigarh of 134·67 per cent. In all other states and union territories the growth rate of SUAs is less than 50 per cent except Goa, Daman & Diu (67·15 per cent), Orissa (56·61 per cent) and Delhi (53·68 per cent). The lowest growth rate is in Punjab (24·13 per cent) followed by Meghalaya (24·61 per cent). These two states also register the lowest overall urban growth rate (25·27 per cent each). The growth rate in urban components of SUAs is also highest in Chandigarh (144·90 per cent) followed by Nagaland (115·99 per cent). In all other states and union territories it is less than 50 per cent except Orissa (64·61 per cent) and Delhi (52·59 per cent). The lowest growth rate is in Goa, Daman & Diu (15·55 per cent) followed by Meghalaya (19·88 per cent).

The growth rate in rural components of SUAs is highest in Nagaland (166·25 per cent) followed by Goa

Daman & Diu (80·53 per cent) and Delhi (70·03 per cent). Besides these only Maharashtra (63·23 per cent), Meghalaya (62·55 per cent) and Tripura (50·50 per cent) have growth rate more than 50 per cent. The lowest growth rate is in Chandigarh (24·76 per cent) followed by West Bengal (26·03 per cent) and Uttar Pradesh (27·86 per cent). The details are given in Annexure 6.

Scheduled Castes in SUAs

There are 9·52 per cent persons belonging to scheduled castes in SUAs of India. In urban components of SUAs they number 8·18 per cent and in rural components they number 18·43 per cent. In the SUAs of Himachal Pradesh there are maximum proportion of persons belonging to scheduled castes, their percentage being 17·25, Punjab with 16·45 per cent and Delhi with 15·50 per cent follow next. There are no scheduled castes in Nagaland. Manipur has the least percentage (0·36) of scheduled caste population in its SUA. It is followed by Meghalaya (1·03 per cent) and Goa, Daman & Diu (2·08 per cent).

In the urban components of SUAs Delhi with 14·55 per cent has the highest proportion of population belonging to scheduled castes followed by Punjab with 13·41 per cent and Himachal Pradesh with 13·23 per cent, Manipur (0·43 per cent), Meghalaya (1·21 per cent) and Goa, Daman & Diu (2·25 per cent) have the minimum percentage of scheduled caste population.

In the rural components of SUAs Punjab has the highest percentage (37·49) followed by Himachal Pradesh (28·53) and Delhi (28·24). Meghalaya has just one scheduled caste person in its rural components Manipur 0·31 per cent and Goa, Daman & Diu 0·74 per cent. The details are given in Annexure 7.

Scheduled Tribes in SUAs

There are 0·98 per cent persons belonging to scheduled tribes in the SUAs of India. In urban components they are 0·75 per cent and in rural components 2·50 per cent. The maximum percentage of scheduled tribe persons are found in Meghalaya (42·97 per cent) followed by Nagaland (22·11 per cent) and Orissa (6·68 per cent). There are no scheduled tribes in Haryana, Jammu & Kashmir, Punjab, Chandigarh, Delhi and Pondicherry. The minimum percentage of schedule tribe population in SUAs is found in Himachal Pradesh and Tamil Nadu (0·09 each) followed by Uttar Pradesh (0·12) and Goa, Daman & Diu (0·16). This is in keeping with the overall population of scheduled tribes in these States/Union Territories.

In the urban components of SUAs, in Meghalaya the scheduled tribe population constitutes 41·47 per cent. Nagaland comes next with 13·05 per cent. The minimum tribal population is in Tamil Nadu (0·07 per cent), Uttar Pradesh (0·13 per cent) and Goa, Daman & Diu (0·16 per cent).

The scheduled tribe population forms 51·84 per cent of total population in the rural components of the SUAs of Meghalaya and 46·40 per cent in the rural components of the SUA of Nagaland. In Orissa this percentage is 14·55. The minimum percentage is in Uttar Pradesh (0·05) followed by Goa, Daman & Diu (0·18) and Tamil Nadu (0·25). The details are given in Annexure 8.

Literacy in SUAs

In India as a whole 52.86 per cent of the population (inclusive of 0-4 age-group) living in SUAs is literate. This compares well with the overall urban literacy which is 52.44 per cent. In urban components of SUAs 55.47 per cent persons are literate and in rural components of SUAs 35.41 per cent are literate. As can be expected the literacy in the rural components of SUAs is higher than the literacy in the rural areas of the country as a whole (23.74 per cent). The state level figures in Annexure 9 shows a wide spectrum of variation. It varies from 34.71 per cent in Jammu & Kashmir to 66.97 per cent in Kerala. This lowest and highest range is also seen in overall urban literacy with Jammu & Kashmir having 38.17 per cent literates and Kerala having 66.31 per cent literates. In fact, both in urban components and rural components of SUAs Jammu & Kashmir occupies the lowest position with 38.53 per cent and 18.43 per cent literates respectively. Where as the maximum percentage of literates in urban components of SUAs are in Himachal Pradesh (68.85), in rural components they are in Kerala (64.96). It is thus found that in Kerala there is not much difference in the percentage of literates in urban components (67.95) and those in the rural components (64.96). On the other hand, in a number of states like Himachal Pradesh, Madhya Pradesh, Rajasthan, Tripura, Uttar Pradesh and Chandigarh the disparity is quite marked. In Chandigarh the percentage of literates in urban components is 66.31 while in rural components it is 33.61. In Rajasthan the corresponding figures are 48.13 and 19.27. The details are given in Annexure 9.

Participation Rate in the Working Force in SUAs

The participation rate in the SUAs is 29.73 per cent of the total population of SUAs. In the urban components of SUAs it is 29.53 and in the rural components it is 31.08. For the general population these rates are 32.92 for total, 29.33 for urban and 33.81 for rural.

The maximum participation is in Nagaland where 45.64 per cent of total population of SUA are workers (for urban population of the state the percentage is 50.38) followed by Himachal Pradesh (40.64 per cent-34.20 for general population) and Goa, Daman & Diu (35.90 per cent-32.40 for general population). The minimum participation is in Tripura (25.18 per cent), Pondicherry (26.18 per cent) and Jammu and Kashmir (26.47 per cent). For population in urban areas among the states and Union territories it is lowest for Tripura (24.25 per cent) followed by Pondicherry (25.62 per cent) and Haryana (26.31 per cent). If urban components of SUAs are considered, the maximum participation is again in Nagaland (48.41 per cent) followed

by Himachal Pradesh (38.38 per cent) and Goa, Daman & Diu (35.07 per cent) and the minimum again in Tripura (24.32 per cent) followed by Pondicherry (25.99 per cent) and Rajasthan (26.27 per cent). In the rural components of SUAs Himachal Pradesh has maximum percentage of workers (46.95) followed by Goa, Daman & Diu (42.28) and Andhra Pradesh (39.57). The minimum percentage of workers in rural components is in Tripura (26.13) followed by West Bengal (26.56) and Kerala (27.70). The details are given in Annexure 10.

Sectoral Distribution of Workers in SUAs

In the SUAs of India 53.75 per cent workers are engaged in tertiary sector, 33.26 per cent in secondary sector and the remaining 12.99 per cent in primary sector. This compares well with the pattern in urban areas of the country with 54.90 per cent workers engaged in tertiary sector, 31.32 per cent in secondary sector and 13.78 per cent in primary sector. This pattern is more or less true for all states and Union territories except Bihar, Himachal Pradesh and Tripura where the lowest percentage of workers is in secondary sector in spite of highest being in tertiary sector and Manipur where highest percentage is in secondary and not in tertiary sector and lowest in primary sector. If the urban workers as a whole are considered, only Bihar deviates from this pattern and has the lowest percentage of workers in secondary sector in spite of highest being in tertiary sector. Meghalaya and Chandigarh have over 74 per cent workers in tertiary sector followed by Delhi which has 66.93 per cent of its workers in that sector. The pattern is more or less same for urban workers in general in these areas. The lowest percentage of tertiary sector workers is in Manipur (40.57) followed by Bihar (42.98) and Pondicherry (47.52). This pattern is also more or less same for urban workers in general in these areas.

In the secondary sector Maharashtra, Gujarat and Manipur have over 41 per cent of workers and Pondicherry 40 per cent. Himachal Pradesh has only 12.64 per cent workers in that sector, Tripura 13.01 per cent and Meghalaya 14.72 per cent. The highest percentage of secondary workers in urban areas among states and Union territories is found in West Bengal (37.66 per cent), Maharashtra (37.58 per cent) and Gujarat (36.39 per cent) and lowest in Nagaland (11.24 per cent), Tripura (12.34 per cent) and Meghalaya (15.82 per cent). Workers in primary sector in SUAs are maximum in Bihar (32.75 per cent) followed by Tripura (22.55 per cent) and Himachal Pradesh (22.41 per cent) They are minimum in Delhi (3.56 per cent), Maharashtra (5.51 per cent) and Chandigarh and West Bengal (over 8 per cent each). The maximum percentage of urban workers in primary sector among the general population is also to be found in Bihar (28.84 per cent), Manipur (20.28 per cent), and Orissa (19.61 per cent) and the minimum in Delhi (1.60 per cent), Chandigarh (1.70 per cent) and West Bengal (5.52 per cent). The details are given in Annexure 11.

If the sectoral distribution of urban workers in SUAs is considered, it can be seen that in all States and Union territories a uniform pattern is visible. Workers in tertiary sector, secondary sector and primary sector follow the same descending order as for the total workers with not a single exception. The percentage of urban workers in tertiary and secondary sectors in the SUAs of India is slightly more than that of total workers. There are 58.42 per cent urban workers in tertiary sector, 34·95 per cent in secondary sector and only 6.63 per cent in primary sector. Himachal Pradesh has 82·33 per cent urban workers in tertiary sector followed by Tripura and Chandigarh each with over 81 per cent. Pondicherry with 49.39 per cent has the lowest percentage of urban workers in tertiary sector followed by Bihar with 49.86 per cent and Maharashtra and Gujarat with 52 per cent each.

Gujarat with 42.72 per cent, Maharashtra with over 42 per cent and West Bengal and Pondicherry with over 39 per cent have the highest percentage of urban workers in the secondary sector. The lowest percentage is in Himachal Pradesh (13.62 per cent), Tripura (13.90 per cent) and Meghalaya (15.51 per cent).

The highest percentage of urban workers in primary sector of SUAs is in Bihar (over 23 per cent), Kerala (over 12 per cent), Pondicherry (over 11 per cent) and Andhra Pradesh (over 10 per cent). In all the other States and Union territories the percentage is lesst han 10 with Chandigarh having the lowest (only 0.97) followed by Delhi (1.60) and West Bengal (3.11). The details are given in Annexure 12.

The proportion of rural workers engaged in primary sector in the SUAs of India is 53.61 per cent, in secondary sector 22.53 per cent and in tertiary sector 23.86 per cent. Rajasthan has the highest percentage of rural workers engaged in primary sector—it being 71.62. Madhya Pradesh with 70.37, Bihar with 69 per cent, Himachal Pradesh with over 64 per cent, Uttar Pradesh with 62 per cent, Andhra Pradesh with 61 per cent and Tamil Nadu with more than 60 per cent follow in that order. In the remaining States and Union territories the percentage is less than 60, the lowest being in Pondicherry 20.72 followed by Goa, Daman & Diu (22.74) and Kerala (30.44).

In the secondary sector Pondicherry has the highest percentage of rural workers (47.11) followed by Manipur (43.76) and Goa, Daman & Diu (40.90). In the remaining States and Union territories the percentage is less than 35, the lowest being in Rajasthan (9.80), Meghalaya (10.08) and Himachal Pradesh (10.39).

In the tertiary sector the highest percentage is in Meghalaya (52.89) followed by Tripura (46.89) and Assam (44.74). The lowest percentage is in Madhya Pradesh (15.39) followed by Bihar (17.16), Tamil Nadu (17.55) and Gujarat (18.34). The details are given in Annexure 13.

Civic Status of Core Towns of SUAs

Out of 304 SUAs, 31 (10.20 per cent) have core towns with Municipal Corporation, 261 (85.85 per cent) have core towns with municipalities or municipal boards or

municipal committees, five (1.64 per cent) have notified areas or notified area committees and one (0.33 per cent) each has a sanitary board, town committee and cantonment. One core town is non-municipal and three (0.99 per cent) core towns' civic status is not known. The details are given in Annexure 14.

Size-class of Core Towns of SUAs

Out of 304 SUAs, 134 have core towns with population of one lakh and above each, 145 have core towns with population between 50,000 and 99,999 each, 23 have core towns with population between 20,000 and 49,999 each and two have core towns with population between 10,000 and 19,999 each. The state-wise distribution is furnished in Annexure 15.

Main Function of Core Towns in SUAs

Out of 304 core townsi n SUAs of India, 74 are mono-functional, 81 are bi-functional and 149 multi-functional.

There is no mono-functional town with commerce as its function. There are no mono-functional towns in Assam, Jammu & Kashmir, Manipur, Nagaland, Delhi and Pondicherry. The only towns of Himachal Pradesh, Meghalaya, Tripura and Chandigarh are mono-functional. Similarly, most of the towns of Punjab and Goa, Daman & Diu are mono-functional. There is no bi-functional town with mining as the main function. There are no bi-functional towns in Himachal Pradesh, Meghalaya, Tripura, Chandigarh and Goa, Daman & Diu. Both the towns of Jammu & Kashmir and the only towns of Manipur, Delhi and Pondicherry are bi-functional. Most of the towns of Haryana are bi-functional.

There are no multi-functional towns in Himachal Pradesh, Jammu & Kashmir, Manipur, Meghalaya, Tripura, Chandigarh, Delhi and Pondicherry. Most of the towns in Andhra Pradesh, Bihar, Gujarat, Kerala, Mysore, Tamil Nadu, Uttar Pradesh and West Bengal are multi-functional. An almost equal number of towns in Madhya Pradesh, and Orissa are both bi-functional and multi-functional and in Maharashtra and Rajasthan both mono-functional and and multi-functional.

Most of the mono-functional and bi-functional core towns in SUAs are industrial towns. Service towns come next. In the multi-functional category, however, most of the towns have service as their main function. These are followed by those which are having industry as their main function. If main function of these towns is considered, we find that 138 are industrial towns, 115 service towns, 34 commercial towns, 9 primary activity towns, 6 transport towns and 2 mining towns. There are no towns with industry as the main or only function in Assam, Himachal Pradesh, Meghalaya, Nagaland, Tripura, Chandigarh, Delhi, and Goa, Daman & Diu. There are no service towns in Manipur and Goa ,Daman and Diu. Commercial towns are only in Andhra Pradesh, Assam, Bihar, Gujarat, Kerala, Mysore, Punjab, Tamil Nadu, Uttar Pradesh, West Bengal. Primary activity towns are only to be found in Andhra Pradesh, Bihar, Kerala, Mysore, Tamil Nadu and West Bengal. Transport towns are one each in Andhra Pradesh, Bihar, Madhya Pradesh, Maharashtra, West Bengal and Goa, Daman & Diu. Mining towns are one each in Andhra Pradesh, and Mysore. The details are given in Annexure 16.

Deviant Cases in SUAs

Since the delineation of SUAs was done on the basis of projections based on 1961 census figures, when the 1971 census was taken there were found certain deviations from the accepted criteria of delineating the SUAs. There were ten towns including a town group which had a projected population of 50,000 each but were not considered for delineation. Six of these towns are in Maharashtra and two each in Gujarat and Tamil Nadu. There were five towns including a town group which, though listed in the list of SUAs, failed to register a population of 50,000 each in 1971. Two of these towns are in Madhya Pradesh and one each in Bihar, Gujarat and Kerala.

There were 20 towns which had each a projected population of less than 50,000 and yet included in the list of SUAs on special consideration such as growth potential. Nine of these have registered a population of 50,000 each in 1971—three in Madhya Pradesh, two each in Andhra Pradesh and Orissa and one each in Assam and Uttar Pradesh. Eleven have failed to register a population of 50,000 each in 1971—three in Madhya Pradesh, two each in Assam and Orissa and one each in Andhra Pradesh, Uttar Pradesh, West Bengal and Goa, Daman and Diu.

There were 16 towns which had a projected population of less than 50,000 each and hence were excluded from the list of SUAs. However, when 1971 census was taken they registered each a populaton of 50,000 and above. Four of these are in Mysore, two each in Andhra Pradesh, Gujarat, Maharashtra, Tamil Nadu and Uttar Pradesh and one each in Bihar and West Bengal.

There were six towns for which projections were not done. Two of these were excluded from the list of SUAs but they registered each a population of 50,000 and above. One town is in Bihar and another in Tamil Nadu. The remaining four were delineated as SUAs on special considerations such as growth potential but failed to register a population of 50,000 each in 1971 census. Two of these towns are in Goa, Daman and Diu and one each in Haryana and Nagaland. The details of deviant cases are given in Annexure 17.

ANNEXURES

*In order to make valid comparisons, the population—total, urban and rural —has been adjusted, wherever possible, in case of India and some states for 1961 and 1971 for this Table. This is done because in the states concerned, for certain urban and/or rural constituents the population is given as 'not available'. If the population of these constituents is taken for one census year, say 1971, and omitted for want of the same) in another census year, say 1961, the comparison will not be appropriate. Hence the procedure.
